—"In the Grisons," continues our correspondent, "the number of Romanic writers is still considerable. In the Engadine dialect the two best-known poets are Simon Caratsch (who, until lately, has passed his winters in Turin, where his works have mostly been published, and his summers in his native village of Schanfs), and G. F. Caderas of Samaden. In the Oberland dialect the best-known poetical writer is Prof. J. A. Bühler of Chur, the translator of Schiller's 'Wilhelm Tell' and the author of a great number of short tales. Among critics and philologists may be mentioned Caspar Decurtins, a Deputy in the Swiss Parliament, who has edited many early Romanic texts in Ascoli's *Archivio Glottologico*, Gröber's *Zeitschrift*, and the Montpellier *Revue des Langues Romanes;* E. Pallioppi, Protestant pastor at Pontresina, who is occupied with the continuation of a Romanic lexicon begun by his father; Prof. J. C. Muoth of Chur; Prof. J. Candreja, librarian of the cantonal library at the same place. For some years there has existed at Chur a well-managed Societad Rhæto-Romanscha, with upwards of 500 members, which issues a handsomely printed yearly 'Annalas.'" Our correspondent also mentions a useful list published by Dr. Eduard Böhmer of the University of Strassburg (1883), and the complete, classified short-title catalogue of the cantonal library at Chur (1885). His own very considerable collection, we are glad to add, is destined for a well-known American college library.

—It is rather amusing to see how the Swiss press, intoxicated with the success of the recent anniversary festivals, indulges in magnifying the artistic importance of the literary efforts called forth by this occasion; a very respectable Bernese paper, for instance, going so far as to declare in all earnestness that the only parallel to the patriotic play performed at Berne during the late memorial days was the Attic drama. But, if we leave such naïve comparisons aside, it cannot be denied that there must have been something truly refreshing and genuinely poetical in these popular performances, which have sprung forth like wild flowers all over Switzerland during this autumn. Everywhere it was the people themselves who acted in them, everywhere they took place under the open sky, everywhere there was a most intimate sympathy and coöperation between actors and spectators, the whole audience in most places taking part in singing patriotic songs interwoven into the action of the plays. The most impressive of all these plays seems to have been the Bernese "Festspiel," performed on Saturday and Sunday, August 15 and 16, by some 900 persons, and before audiences of some 20,000 people. The text of this dramatic piece, the author of which is Dr. H. Weber, pastor in Höngg, is by no means without native poetical power. Its chief defect is a necessary lack of unity, the different scenes being so many different episodes in the seven centuries of Bernese history. But one is almost made to forget this defect by the impassioned sense of freedom which animates the whole, and the sturdy, artless language which carries away even the over-critical. There are six principal scenes: the foundation of the town by Duke Berchtold of Zähringen; the defeat of the landed aristocracy in the battle of Laupen; the struggle with Charles the Bold; the religious reformation; the overthrow of Berne by the armies of the French republic; the present reign of peaceful liberty. In the last scene "Berna" herself is seen surrounded by her loyal and contented people, when the chief figures of the former scenes, the heroes of the past, appear in solemn procession to do homage to the beloved mother. They are reverently greeted by the chorus of citizens:

> "Die Männer nahen vergangner Zeit,
> Der Heimat unsterbliche Helden,
> Sie, deren Ruhm Jahrhunderte weit
> Viel edle Zungen melden.
> Sie sind gestorben und leben noch,
> Sie haben gerungen und glänzen hoch,
> Des Landes reiner Ehrenschild,
> Hohen Muth's unsterblich Bild."

Each of them says some fitting word, each of them lays some tribute at the feet of "Berna," who on her part embraces them and blesses them as her children.

—We have received the first part of the fifth revised edition of Friedrich Kluge's 'Etymologisches Wörterbuch der Deutschen Sprach.' (Strassburg: Trübner.) It reaches from *A* to *Bursche*, and has been enlarged from forty-seven pages in the fourth edition to sixty pages. New articles have been added, treating mostly of foreign words, such as *abonnieren*, *absolvieren*, *Accent*, *Appetit*, *Aprikose*, *Atlas*, even *apropos* and *boycotten*. But many native compounds and dialect words have also been taken up, such as *abschätzig*, *Abstecher*, *Abstimmung*, *Adamsapfel*, *Altweibersommer*, *aufhören; beiern*, *Best* (with a long *e*), *Bitze*. These additions are very welcome. The foreign words are generally relegated to a dictionary of foreign words, and such a dictionary is generally compiled by dilettanti who attend chiefly to pronunciation It is easy to criticise the including of some words and the excluding of others. We agree with Dr. Muss-Arnolt that *bethätigen* and *Branntwein* will be missed. *Amulet*, which had been dropped, has been justly restored to its place. *Bibel* deserved a separate article even if its congener *Fibel* be treated more fully in the fifth edition than in the fourth. Each article has evidently been carefully revised. We find little additions, as *Aach* under *A*, and great additions, as where the article *Aar* is lengthened from nine lines to almost a whole column. *Auerhahn* and *Auerochs* have been separated as they should be, since *Auer* is not the same in both words. *Aufwiegeln* has now a separate article. We had been referred under it to *wiegeln*, and this was omitted. *Behörde* is treated too briefly. Heyne has a good article upon it. *Belt* is much improved: it does not mean *any* strait, but only the Danish straits of the Baltic, with which the word is etymologically connected. *Der Balz* is a technical hunting term, and very rare. Its cognate *die Balze* is more common. Weigand is interested in this word because it is "Wetterauisch." Heyne has only *die Balz*. Under *Baas* the English "boss" might have been mentioned. Under *besser*, the attempt to connect it with an Aryan stem has been given up. Only the noun *Bagger* is mentioned. This is a new High German formation after the verb *baggern* had been taken from Low German.

—Kluge has been working of late years upon late Middle High and early New High German, as is seen in his separate book 'Von Luther bis Lessing.' His dictionary has greatly profited by these investigations. More exact dates have been given after careful study of sixteenth and seventeenth-century word-lists, dictionaries, and grammars. Take, for instance, such articles as *Arzt*, *Artischoke*, *Assel*, *Auster*, *Bernstein*, *bieder*. For *Bücking* Kluge very wisely does not accept Paul de Lagarde's statement to which Dr. Muss-Arnolt curtly refers him, viz., "It was so called because Bücking was the name of the man who first smoked herring." Is it possible that the great theologian and Semitic scholar, De Lagarde, was taken in by Heinrich Heine? The poet says in his 'Harzreise,' that he had for dinner in Klansthal "a kind of smoked herrings, called *Bückinge* after the name of their inventor, Wilhelm Bücking, who died in 1447, and was so honored by Charles V. on account of this invention that the latter journeyed from Middelburg to Biervliet, in Zeeland, in the year 1556, merely to see there the grave of this great man." Kluge and Franck, in his Dutch etymological dictionary, think that *Bücking* comes from Dutch *bokking*, and this from *bok*, Engl. *buck*, G. *Bock*. We cannot agree with Kluge that the German secondary form, *Bückling*, sprang up through association with *Bückling*, "bow," from *biegen*. Can Kluge have thought of the German conundrum, Which is the most polite fish? When we look at the various forms of this word, such as *Böckling*, *Pückling*, *Pökling*, *Pickling*, we cannot help associating Bückling with the verb *pökeln*, to "pickle," because this herring is pickled first and then smoked. A typographical improvement has been made in the new edition. Homonyms have been printed thus: *Asche*[1], *Asche*[2], instead of 1. *Asche*, 2. *Asche*. This arrangement is that of the great Murray and 'Century' dictionaries. The dialect and slang words are marked with a dagger. Clearly author and publisher vie with each other to keep this invaluable work up with the times. It is different with the English Dictionary of Skeat, which has been followed by a supplement but has no revised edition. Skeat put in some antiquated matter at the start, and much has become antiquated since it was published. It seems a pity that the fourth edition of Kluge was translated into English, and that Janssen's valuable indices were made to the same. This fifth edition is the one to index and to translate.

—'Defensio Populi ad Populos; or, the modern missionaries considered in relation to the recent riots,' is the title of a remarkable pamphlet in English, recen ly issued in Shanghai. Its author is believed to be an educated Chinaman, formerly connected with the diplomatic service, and well acquainted with foreign countries. From the abstract given in the London *Times*, it seems to be a bold demand for the withdrawal of Christian missionaries from China, or at least some radical change in the missionary system. This demand is justified by the fact that what the author calls the avowed objects of missionary labor have not been reached—the moral elevation, the intellectual enlightenment of the people, and works of charity; and that to have aroused the intense hatred of the whole people against them is a danger and injury to the Empire. It is unnecessary to follow him in the familiar arguments against Christianity and the thoroughly unjust depreciation of what the missionaries have accomplished, especially in bringing through their publications to the educated Chinese the thought and progress of the West. Though his general argument is weak and his conclusions false, yet in one important point he seems to us to have taken an impregnable position. He asserts that the common people believe that Christianity is being forced upon them in the same way and by the same means that they are compelled to open their ports and rivers to foreign ships and traders. The all-sufficient justification for their belief is the

fact that the missionary is backed by the gunboat as the trader is. Is it strange, then, that they hate the teachers of a religion in aid of which there are possible arguments of shot and shell? Is it not a thoroughly inconsistent position for the messengers of the Gospel of Peace to be placed in? In the interests of the missionary himself, and the end he is striving to obtain, we are strongly inclined to support the author's suggestion that all foreigners who engage in missionary work should give up their nationality and become amenable only to the laws of the country. This has been the practice for many years with the priests of a French Roman Catholic Missionary Society who have labored in the southwestern provinces of China with far greater success, though with far more privation, suffering, and persecution, than their gunboat-protected brethren, whether Catholic or Protestant.

RECENT POETRY.

THE extract from a letter of the late Mrs. Helen Jackson ("H. H."), prefixed to the second series of Emily Dickinson's poems (Boston: Roberts Bros.), suggests the curious difference in the careers of these two gifted women, both natives of the same small inland town of Massachusetts. They were playmates and schoolmates; both began to write after early girlhood had passed, and for the utterance of deep personal feeling. But the one easily obtained fame, friends, recognition, influence; she had varied social experience; with many sorrows, she obtained much of what was best and most enjoyable in life, and died in the maturity of a conspicuous literary career. The other died absolutely unknown, even by name, beyond her own domestic circle, and yet this nameless woman was at once uplifted into an extraordinary prominence by the simple publication of her poems, after death. Some added light is thrown on this curious transition by the preface contributed to the present volume by Mrs. Todd, but it leaves many questions to be asked. It, however, brings out clearly a point overlooked by many who have discussed Emily Dickinson's poems. Mrs. Todd has recalled attention to the fact that they should be viewed rather as sketches than as finished works. We can never know what changes the author might have made in them had she seriously addressed herself to putting them in print. Up to the point where she left them, her chief solicitude had clearly been with the phrase, not with the verse or the line. She would make many alterations to secure precisely the adjective or substantive she needed; but the minor changes required to perfect a rhyme or to avoid a repetition were sometimes postponed for some moment of leisure, it may be, or in other cases spurned as unimportant. Even her peculiarities of grammar seem like mere short cuts or abbreviations, as when one takes notes in shorthand. We all know that a really fine poem is rarely struck off at a single sitting; there are usually several stages of completion, at any one of which, up to the very last, the work would seem still imperfect if published. The peculiarity is that almost all of Emily Dickinson's compositions are taken at that intermediate stage; and they are, in short, to be viewed as sketches, not works of conscious completeness. With this interpretation, it may fairly be said that those contained in this second series are quite as remarkable as those in the first. Perhaps they are even more remarkable; at any rate, there are more of them.

They are divided into the same four departments, viz., Life, Love, Nature, Time and Eternity. It is to be noticed, however, that the department of love-poems is, in this volume, more scanty than in its predecessor, as if the author's little tale of experience, in that direction, were soon told. There is no loss of quality, however, even in that department, and in the other directions both quantity and quality are sustained. There is, in the first volume, for instance, no nobler strain of ethics than this (p. 199), which is also full of verbal felicities:

TRIUMPH.

Triumph may be of several kinds.
There's triumph in the room
When that old Imperator, Death,
By faith is overcome.

There's triumph of the finer mind
When truth, affronted long,
Advances calm to her supreme,
Her God her only throng.

A triumph when temptation's bribe
Is slowly handed back,
One eye upon the heaven renounced
And one upon the rack.

Severer triumph, by himself
Experienced, who can pass
Acquitted from that naked bar,
Jehovah's countenance!

Note, for instance, the fineness of touch in the word "slowly," in the third verse, indicating the greatness of the struggle by the fact that even the utmost heroism cannot instantly decide it. A characteristic effect is also produced by employing the strong Roman "Imperator" instead of the cheapened word "Emperor," and thus placing death as a sovereign of sovereigns. In the following verses we have a haunting picture, not easily to be dropped from the mind:

THE FORGOTTEN GRAVE.

After a hundred years
Nobody knows the place,—
Agony, that enacted there,
Motionless as peace.

Weeds triumphant ranged,
Strangers strolled and spelled
At the lone orthography
Of the elder dead.

Winds of summer fields
Recollect the way,—
Instinct picking up the key
Dropped by memory.

The poems on Nature in this volume indicate the same peculiar intimacy always shown by Emily Dickinson; it seems as if she had been in at the very birth of her birds and flowers, as in the following verses (p. 72):

FRINGED GENTIAN

God made a little gentian;
It tried to be a rose
And failed, and all the summer laughed.
But just before the snows
There came a purple creature
That ravished all the hill;
And summer hid her forehead,
And mockery was still.
The frosts were her condition;
The Tyrian would not come
Until the North evoked it.
"Creator! shall I bloom?"

The editors have put at the beginning of the volume two verses which seem—unlike all the rest—to show some objective aim in the poems; and they close with these four terse lines, which might well suffice for Emily Dickinson's own epitaph:

"Lay this laurel on the one
Too intrinsic for renown.
Laurel! veil your deathless tree,—
Him you chasten, that is he!"

The fact that Mr. Douglas Sladen, in his 'Younger American Poets' (Cassell Publishing Co.), makes no allusion to Emily Dickinson, shows how important it is that the editor of such a compilation should be on the spot and should have the latest information. The earliest information, if that is desirable, may certainly be said to be possessed by a compiler who heads his list of juvenile rhymers with the name of Paul Hamilton Hayne, who would, were he living, be over sixty. The mere selection thus seems so liberal that it is almost a disappointment to find that Whittier and Holmes are omitted. In the distribution of space, too, there is a waywardness which can only partly be explained by the whims of publishers; thus, Stedman has sixteen pages, Ella Wheeler Wilcox nine, and Aldrich one and a half. But, with all its faults and its wilderness of misprints—including, for instance, "Borjeson" for "Boyesen" (p. 665), and "Lamer" for "Lanier" (p. 666), the book affords a fairly good collection of the works of American poets less than sixty-one years old; and the appendix containing Canadian poets, and edited by Goodridge Bliss Roberts of St. John, N. B., is distinctly valuable and useful. We should not neglect to add that there is prefixed to the volume a dedication to the citizens of Boston, and a sonnet to "The American Fall at Niagara," both by Mr. Sladen and in a Tupper-like vein.

A far more modest and far better executed collection of miscellaneous poems, from English and American sources, is that called 'Sunshine in Life: Poems for the King's Daughters' (Putnam), selected by Florence Pohlman Lee. The selection is good, the typography beautiful, the dates of birth and (if need be) of death are mentioned in connection with each author, and several good indexes are supplied. For the benefit of that part of the public to which the order of the "King's Daughters" is but a name, it might have been well to intimate their aims and functions. Another book of poetry, no less valuable for not being new, is a new edition of Sidney Lanier's Poems (Scribners), with the well-known memoir by Wm. Hayes Ward. Good books, like good runners, possess what may be called their first and second wind; most sink down breathless when their first wind is exhausted, usually at or before the death of their author. If, however, an author's fame really survives him, it is likely to hold out for a long time, and such seems destined to be the fame of Sidney Lanier.

Of volumes wholly new, we find that of Helen Gray Cone incontestably the best: 'The Ride to the Lady, and Other Poems' (Houghton, Mifflin & Co.). The title-poem is the strongest poem of action and movement ever written by an American woman; and, as Emerson said of "H. H.'s" poems, perhaps we might as well omit the "woman." Since Scott there has been no terser handling of the ballad measure, mingled with fine spiritual touches that Scott could not have given. Read now the story of the *Orient* at Nelson's sea fight of Aboukir (p. 37):

THE STORY OF THE "ORIENT."

'T was a pleasant Sunday morning while the spring was in its glory,
English spring of gentle glory; smoking by his cottage door,
Florid-faced, the man-o'-war's-man told his white-head boy the story,
Noble story of Aboukir, told a hundred times before.

"Here, the Theseus—here, the Vanguard"; as he spoke each name sonorous—
Minotaur, Defence, Majestic, staunch old comrades of the brine,
That against the ships of Brueys made their broadsides roar in chorus—
Ranging daisies on his doorstone, deft he mapped the battle-line.

Mapped the curve of tall three-deckers, deft as might a man left-handed,
Who had given an arm to England later on at Trafalgar.
While he poured the praise of Nelson to the child with eyes expanded,
Bright athwart his honest forehead blushed the scarlet cutlass-scar.

For he served aboard the Vanguard, saw the Admiral, blind and bleeding
Borne below by silent sailors, borne to die as then they deemed.
Every stout heart sick but stubborn, fought the sea-dogs on unheeding,
Guns were cleared and manned and cleared, the battle thundered, flashed, and screamed.

Till a cry swelled loud and louder—towered on fire
the Orient stately,
Brueys' flag ship, she that carried guns a hundred
and a score;
Then came groping up the hatchway he they counted
dead but lately,
Came the little one-armed Admiral to guide the fight
once more.

"Lower the boats!" was Nelson's order. But the
listening boy beside him,
Who had followed all his motions with an eager
wide blue eye,
Nursed upon the name of Nelson till he half had det-
ified him,
Here, with childhood's crude consistence, broke the
tale to question "Why?"

For by children facts go streaming in a throng that
never pauses,
Noted not, till of a sudden, thought, a sunbeam,
gilds the motes.
All at once the known words quicken, and the child
would deal with causes:
Since to kill the French was righteous, why bade Nel-
son lower the boats?

Quick the man put by the question. "But the Orient,
none could save her;
We could see the ships, the ensigns, clear as day-
light by the flare;
And a many leaped and left her; but, God rest 'em,
some were braver;
Some held by her, firing steady till she blew to God
knows where."

At the shock, he said, the Vanguard shook through all
her timbers oaken;
It was like the shock of Doomsday—not a tar but
shuddered hard
All was hushed for one strange moment; then that
awful calm was broken
By the heavy plash that answered the descent of
mast and yard.

So, her cannon still defying, and her colors flaming,
flying,
In her pit her wounded helpless, on her deck her
admiral dead,
Soared the Orient into darkness with her living and
her dying.
"Yet our lads made shift to rescue threescore souls,"
the seaman said.

Long the boy with knit brows wondered o'er that
friending of the foeman;
Long the man with shut lips pondered; powerless he
to tell the cause
Why the brother in his bosom that desired the death of
no man,
In the crash of battle wakened, snapped the bonds
of hate like straws.

While he mused, his toddling maiden drew the daisies
to a posy;
Mild the bells of Sunday morning rang across the
churchyard sod;
And, helped on by tender hands, with sturdy feet all
bare and rosy,
Climbed his babe to mother's breast, as climbs the
slow world up to God.

Had that been written by a man—Rudyard Kipling, for instance—all the critics would have said, "How virile!" But the woman in the writer has given us that last verse, in which the "virile" is merged in the human, which is better. Another volume of good verse is 'A Handful of Lavender,' by Lizette Woodworth Reese (Houghton, Mifflin & Co.), showing her well-known quality of fine sympathy with nature, penetrated by a charm of execution which may easily become mannerism unless she has a care. James Whitcomb Riley has also a very close intimacy with nature, as seen in his 'Old-Fashioned Roses' (Longmans), but he will always suffer in the eyes of serious critics from having first appeared on the comic stage, thus forfeiting the associations of seriousness; so that the reader still turns first to "Griggsby's Station" and "Little Orphant Annie." Miles I'Anson, in 'The Vision of Misery Hill' (Putnams), has some of the coarser California flavors; while Harry Fenn's illustrations of the same book are coarser and cruder still.

There is good local coloring in 'Wildwood Chimes' (Cincinnati: Clarke), by Emma Withers, who has for material the beautiful mountain woods of West Virginia. On the other hand, there is in 'An Idyl of the Sun, and Other Poems,' by Orin Cedesman Stevens (Holyoke, Mass.: Griffith), no local coloring at all—not even that of the sun—and while there are good touches, there is nothing which might not have been written anywhere. 'Lyrics of the Hudson,' by the late Horatio Nelson Powers (Boston: Lothrop), have a mediocre excellence above which rises these rather striking lines on that miracle yet unsung, the phonograph (p. 69):

THE PHONOGRAPH'S SALUTATION.

I seize the palpitating air. I hoard
Music and speech. All lips that speak are mine.
I speak, and the inviolable word
Authenticates its origin and sign.

I am a tomb, a paradise, a throne,
An angel, prophet, slave, immortal friend:
My living records in their native tone
Convict the knave and disputations end.

In me are souls embalmed. I am an ear
Flawless as Truth; and Truth's own tongue am I.
I am a resurrection, and men hear
The quick and dead converse, as I reply.

A most curious and interesting little book, which might well have been much larger and more annotated, is a volume of poems and translations in Pennsylvania Dutch: 'Drauss un Deheem: Gedichte in Pennsylvänisch Deitsch bei 'm Charles Calvin Ziegler von Brushvalley, Pa.' (Leipzig: Hesse & Becker). There is no regular glossary, but there is a very careful appendix illustrating the pronunciation of the dialect, and some notes as to the influx, constantly increasing, of English words. The best illustration of the result may be given by quoting two verses after Longfellow's 'The Reaper and the Flowers' (p. 38):

"Es is'n Schnitter—dar Dod heesst aer—
Sei Sens hot 'n scharfer Schnitt;
Die zeitig Frucht refft ar hi' un haer
Un die Blumme dekschwische mit.

"'Soll ich nix scheenes hawwe?' saagt aer;
'Die zeitig Frucht—is sel all?
Dar Geruch vun de Blumme liew' ich wol sehr,
Doch gew' ich sie widder bal.'"

Several recent American poets look away from local coloring at home and turn to Greece, that second home of all lovers of the ideal. Mrs. Lillah Cabot Perry, author of 'The Heart of the Weed' and of a remarkable volume of translations from Turgeneff, gives us a delightful collection of versions from the endless treasures of the Greek Anthology, under the title 'From the Garden of Hellas' (U. S. Book Co.). It may be questioned whether she has done well, in some cases, to make her translations rhyme; but even this is felicitously done, and there is a prevailing simplicity which is an improvement on the somewhat mincing and Leigh-Huntish style of the Andrew Lang school of translators. 'The Songs of Sappho,' by James S. Easby-Smith (Washington: Georgetown University), errs in the same way. Sappho's celebrated ode has been so often rendered in the Sapphic measure that it seems almost like doggerel when we read (p. 22)—

"Thou immortal Aphrodite, high-enthroned
Child of Zeus, thou all beguiling,
Hither come, I pray thee, smiling,
All my pains and woes exiling,
O thou love-enzoned";

but the book offers a faithful and patient piece of work by an undergraduate, and, as it gives the original of every fragment of Sappho, will be a valuable possession to those for whom Wharton's beautiful volume is too expensive. 'Homer in Chios: an Epopee,' by Denton J. Snider (St. Louis: Sigma Publishing Co.), is not a translation, but a poem with Homer for its hero. Mr. Snider is fond of Greek themes, and has several times daringly essayed them.

The year has yielded a good many English volumes in verse, most of which contribute, like the average of such volumes, a few translations from the classics, a few sketches of English country scenery, and some reminiscences of foreign travel. Among those by well-known authors, there are two more volumes of the reissue of Alfred Austin's works, 'Lyrical Poems' and 'Narrative Poems' (Macmillan). They are, like all that he has written, varied in theme, patient in execution, and singularly uninspired. Mr. F. W. Bourdillon's 'Ailes d'Alouette' (Boston: Roberts Bros.), is more disappointing, because one expects more from him. He is like that hero in Stockton's tale who ruined his literary career by a first success. All this graceful volume is filled with poems in two short verses; and among these the following perhaps comes nearest to the perfect finish of "The night has a thousand eyes":

SIGHT AND INSIGHT.

By land and sea I travelled wide;
My thought the earth could span;
And wearily I turned and cried,
"O little world of man!"

I wandered by a greenwood's side
The distance of a rod;
My eyes were opened, and I cried,
"O mighty world of God!"

'Lapsus Calami,' by J. K. S. (Cambridge, Eng.: Macmillan & Bowes), has already a guarantee of fame for having offered to the public, amid its numerous clever skits and college jokes, a single couplet which has touched the universal heart. We quote the whole poem of which this beneficent couplet forms the close (p. 3):

TO R. K.

Will there never come a season
Which shall rid us from the curse
Of a prose which knows no reason
And an unmelodious verse:
When the world shall cease to wonder
At the genius of an Ass,
And a boy's eccentric blunder
Shall not bring success to pass:

When mankind shall be delivered
From the clash of magazines,
And the inkstand shall be shivered
Into countless smithereens:
When there stands a muzzled stripling,
Mute, beside a muzzled bore.
When the Rudyards cease from Kipling,
And the Haggards Ride no more?

A slender and modest volume entitled 'The Shorter Poems of Robert Bridges' (London: Bell) contains many tender and thoughtful lyrics taken from his previous volumes and in some instances from his comedy, "The Humours of the Court." So the volume called 'Love's Looking-Glass' (London: Percival), is largely made up of poems previously published in a volume called 'Love in Idleness,' the joint production of H. C. Beeching, J. W. Mackail, and J. B. B. Nichols. They cover a wide range, from the Greek Anthology to the London "sweaters," and they seem mainly such poems as cultivated young gentlemen of leisure should write easily. 'The March of Man,' by Alfred Hayes (Macmillan), is a long poem on human progress in blank verse of a somewhat monotonous description, but with a generous tendency and some strong passages. It proceeds, apparently, from Birmingham, and is dedicated to the memory of Priestley. But a more gifted poet of progress shows himself in one already dear to many hearts, childish and mature, Walter Crane. His 'Renascence, a Book of Verse' (Macmillan), charmingly and quaintly illustrated by himself, has many graceful and ardent strains in it, including one sonnet "On the Suppression of Free Speech at Chicago." This following poem (p. 57) expresses more fully the range of his hope, and defines reciprocity in a far wider sense than that of Mr. Blaine:

HYMN OF FREE PEOPLES.

O kindreds! peoples strong!
That earth's large arms enfold,
Against the powers that work ye wrong
In common cause make bold.

From North, from East, and West;
Beneath the southern star;
In bonds of slavery opprest,
In cruel arms of war;

From East, and South, and North;
From desert-cities' shade,
From living tombs of toil, come forth,
Where rich man's gold is made.

. . . . . .

And far and wide proclaim,
Defying tyrants' ban,
Writ in all hearts, like tongues of flame—
The Brotherhood of Man!

A HANDFUL OF GREEK BOOKS.

The Students' Manual of Greek Tragedy. Edited, with notes and an introduction, from the German of Dr. Munk's 'Geschichte der Griechischen Literatur,' by A. W. Verrall. London: Swan Sonnenschein & Co.; New York: Macmillan. 1891. Pp. xxiv., 324.

A Short History of Greek Philosophy. By John Marshall. London: Percival & Co., New York: Macmillan. 1891. Pp. 253.

Longinus on the Sublime. Translated into English by H. L. Havell. With an introduction by Andrew Lang. Macmillan. Pp. xxxi., 101.

Talks with Athenian Youths. Charles Scribner's Sons. 1891. Pp. xx., 178.

THE 'Manual of Greek Tragedy,' edited by Dr. Verrall, contains some interesting and novel matter contributed by the editor himself, and may be serviceable in other respects to the beginner. It presents, however, a curious example of a book which is intended for the unlearned and ingenuous reader, and which will, nevertheless, in respect of one-third of its matter and opinions, leave his mind in a state of great bewilderment. The cause of his puzzle and perplexity will be the character and merit of Euripides. Dr. Munk, whose popular history of Greek literature furnishes the substance of the chapters that are translated for the 'Manual,' takes a view of Euripides so old-fashioned that it may fairly be called not conservative but *passé*—the patronizing and depreciatory view of Hermann and Schlegel. "Euripides," says Dr. Munk, "had not formed any steady and consistent conception of poetic drama. . . . He lacked the sense of artistic combination. Certain plays are poor and careless in execution throughout. . . . If the dramatic situation of the 'Alcestis' is imperfect, that of the 'Andromache' is absolutely offensive." Dr. Verrall, on the other hand, says: "I desire to warn the reader that when we study one of the works of Euripides, we had best forget everything except this, that if we do not admire it, then, from the circumstances of the case, it is a thousand chances to one that the fault is in ourselves." Between these two doctors who disagree so extremely, the unlearned reader whom they address will shake his head in a quandary and ask himself, Now what am I to think of Euripides?

This, we believe, is a candid description of the situation. Of course, Dr. Verrall gives his reasons, or some of them, at least, in his preface, and states them in a most able and interesting manner. He takes the "Andromache," whose doom Dr. Munk pronounces in the words we have quoted, and shows that the play may be so interpreted as to evince the most perfect artifice and constructive faculty—in what manner, we cannot in this brief notice detail. At any rate, Dr. Verrall's explanation is very ingenious, very plausible; and the only wonder is that, if the explanation is right, we did not all see the situation at a glance, as the quick-witted Athenian audience are presumed to have done. The preface, which deserves to be read by other than ingenuous readers, seems to show that, with regard to the "Andromache," Dr. Munk was egregiously wrong. But at the close of his essay, Dr. Verrall once more consigns his tyro to the guidance which he has so vigorously discredited. "Dr. Munk," he says to the beginner, "presents a prevalent but mistaken view of Euripides. I leave you with him for the future, but I warn you to be on your guard"; and he accordingly enters certain brief caveats from time to time in the notes of the appendix.

Now, all this is interesting and stimulating, but it is not edifying. It is an infelicitous method for the beginner, who needs facts and information as a preliminary to discussion. The mature and careful reader, it is true, might discover, with a little reflection, that Dr. Munk, in his strictures, is sometimes weak and sometimes inconsistent, and sometimes, indeed, naïvely furnishes the material for his own refutation. We pass over instances of this in his remarks on the "Alcestis" and the "Electra," to cite the following remarkable objection: "His entire treatment of a story is often completely conditioned *by the narrow limits of common life.*" Fie on Euripides, we say, who so early fell into an error that has been repeated by Shakspere and many a modern playwright! Aristophanes long ago detected the innovation, and he might be excused for censuring it; but it has spread irrevocably, it has grown the height of fashion, and we simple-minded, retrospective classicists shall never be able to recall it. This one sentence, in fact, shows most clearly the hinge of Dr. Munk's misapprehension. He does not judge the art and creed of Euripides in the light of the historical evolution of the drama. Dr. Verrall's introduction and notes give occasional intimation of this fact, but they offer no comprehensive and positive outline; and hence we say that, for the benefit of the student, Dr. Verrall should himself have written the sketch of Euripides.

The chapters on Æschylus and Sophocles will serve their purpose sufficiently, though it is well to remember that Prof. Jebb's 'Primer of Sophocles' covers part of the ground in a masterly manner. The introductory chapter on the Greek theatre and the development of tragedy is, for its compass, one of the most useful in the book, and is made more useful by Dr. Verrall's corrections of certain antiquated errors. Among these corrections we observe no allusion to the statement (p. 21) that the dramatic prize was a tripod. It is now generally held that the tripod was awarded only to victors in the dithyrambic contests.

Dr. Marshall's sketch of Greek Philosophy is distinguished by an endeavor to treat the subject in a manner so free from technicalities that it may be grasped by any thoughtful reader, and yet so freshly drawn from original sources as to be serviceable to the student of the Greek. It follows generally the order of Ritter and Preller's 'Historia Philosophiæ Græcæ,' and the corresponding sections of that work are noted in the margin. The author in this way anchors himself fast to the original authorities, for which he provides a serviceable commentary, a skilful condensation, or an occasional literal translation of some interesting fragment. He tries to show how much reason lay at the bottom of the vague physics of Thales and Anaximenes; he parallels the melancholy of Heraclitus with that of Dante or of Carlyle, and supplies a corollary to the philosophy of Parmenides by a quotation from the "In Memoriam." This is interesting and legitimate illustration, but the habit shades off at rare intervals into an occasional page of reflection which borders on preaching—wholesome enough, it may be, and germane to the subject, but clearly superfluous and misplaced. There is something curious in praising (p. 65) the logical inconsistencies of great thinkers as if these somehow mirrored the truth of the universe instead of the imperfection of human faculties. The sketch of Socrates is slightly tinged with the same spirit, and the Socratic doctrine of the coincidence of virtue with knowledge assumes a transcendental meaning and color which Aristotle could not have contemplated in his criticism. The work closes with an account of the Stoics, omitting mention of the Pyrrhonists, the New Academy, and the Alexandrian School. In the main the work makes good the purpose expressed in the preface—it is at once lucid and sympathetic, interesting and authentic.

A new translation of Longinus is desirable and timely, because that author is no longer read in our schools and colleges, while his merits as a critic remain perennial. One of the earliest Greek books printed in this country was Zacharias Pearce's 'Longinus,' edited by Prof. Wilson of Columbia College; and this was probably read by many American boys who knew next to nothing of the great classic writers discussed in its pages. So great was the vogue of the critic that he had won precedence over his masters—a precedence which he himself would have utterly disapproved and laughed at. It was well enough to change this order of things; and the young student of Greek could afford to postpone indefinitely a writer who, whatever his other merits, was not a classic in style. For his style, though strong, vivacious, and characteristic, is, on the whole, difficult and strange, occasionally crabbed and obscure. It is dignified always and eloquent; but it lacks the grace and transparency of the classic period, which preceded it by many centuries. Longinus would never have dreamed of offering his periods as a substitute for those of Herodotus and Plato and Xenophon.

The reader who is not an expert may therefore well spare the original, particularly when he is served with so good a translation as that of Mr. Havell. It would be a great pity to put aside on the shelf a writer who has helped to lay the foundations of literary criticism, and who is just as sound by the canons of Sainte-Beuve and Matthew Arnold as he was in the eyes of Pope and Boileau. If reference to his authority would seem old-fashioned in the present day, we must remember that his principles have become absorbed into our highest literary creed and can never really be out of fashion. Sincerity, moderation, good sense, and the elevated tone which springs from lofty living and thinking were to him the essence of good style, as they must remain to us, so long as we accept the maxim, "Le style c'est l'homme même." The details of his criticism possess an interest that is not merely antiquarian. Quite modern in its manner is his ridicule of fine writing, bombast, and false sentiment. It is delightful to see how, with plain good sense, he pricks the bubble of Isocrates's rhetorical pretensions; and his observations on Sappho's famous ode contain the very gist and solution of the whole dispute between realism and idealism in literary art.

These enduring merits are presented clearly enough in Mr. Havell's translation, which is at once spirited, flowing, and readable, and shows, in passages, very dexterous handling of the Greek. For reasons we have glanced at, his task was by no means easy. A close rendering would have been unreadable—indeed, impossible; and if at times the translator takes more liberty than is necessary, with a result bordering on paraphrase, yet the condensed phrases and allusiveness of the original seem constantly to call for a certain amount of recasting and expansion. "The great Emathian Conqueror" (τοῦ Μακεδόνος) is felicitous; "the learned world of to-day" (οἱ νῦν) a little verbose, as is also the phrase "wishing to say something very fine about Alexander,"

where the original has simply ἐπαινῶν. Mr. Andrew Lang's easy and discursive prelude points the moral of the treatise with many modern instances.

The small volume entitled 'Talks with Athenian Youths' is the latest of a series which we have commended highly from time to time for the good taste, scholarship, and judgment with which it is edited. The present selections illustrate certain cardinal points of the Platonic philosophy, and are taken from the "Charmides," "Lysis," "Laches," "Euthydemus," and "Theætetus." The translation is a little closer than Prof. Jowett's, its flavor slightly less idiomatic. The preface and the notes skilfully place the reader *en rapport* with his author; it is, however, beyond the resources of the best skill and taste to dismember an artistic structure like the "Theætetus" and unite the fragments with perfect success. But Plato is a preacher as well as an artist and philosopher; he is a much greater lay-preacher than Mr. Huxley himself or the Duke of Argyll—and this quality does not vanish in an abridgment. The faithful reader who begins to grow tired of the sermons and arguments in the *Nineteenth Century* or the *Contemporary Review*, will find something surprisingly fresh and inspiring in these selections from an author whose spirit will never be antiquated.

Life of Archibald Campbell Tait, Archbishop of Canterbury. By Randall Thomas Davidson, D.D., Dean of Windsor, and William Benham, B.D., Hon. Canon of Canterbury. 2 vols. New York: Macmillan & Co.

THE interest of these volumes is much less in their individual subject than in the course of ecclesiastical events with which his life was mingled, and in which he took an active and an honorable part. The book is feeble in its presentation of the man in any of the more intimate aspects of his life. The most intimate of these were dwelt upon in the Archbishop's own memorials of his wife and son, who died in 1878. The Archbishop, who was born in 1811, died in 1882, on Advent Sunday, the same day on which his wife had died four years before. In their common life there was one awful tragedy—the death in March and April, 1856, of their five little girls. His nature was not weak upon the personal side. He was evidently a man of bright and strong affections, but they did not express themselves in letters to his family and friends. This was partly, no doubt, because of the magnitude of his official correspondence: his biographers mention 62,500 letters on his files. And it is true, as they contend, that his official correspondence had a more personal accent than is common with such writing. But we feel the lack of any friendly correspondence in these volumes. It looks as if the thing he greatly feared had come upon him—the withering of his friendships in the fierce light that beat upon his episcopal throne. There is a painful evidence of this in his letters to Temple about the 'Essays and Reviews.' He hoped that he could keep the ecclesiastic and the man apart. He could in his own feelings, but not in the judgments of his friends. His success was greater with Dean Stanley than with any one else. The appearance of Stanley in these pages is always like a flash of sunlight brightening a sombre day. The fragments of the Dean's correspondence and his speeches make us sure that, if his own life is written faithfully, it will be much more entertaining and inspiring than the one we have in hand. For Archbishop Tait, with many admirable qualities fitting him for the high positions that he held, had little marked or striking in his character. His mind, while calm and clear, was cold and colorless. His humor is reported, but the only argument for it in these pages is that of Douglas Jerrold: "He must have a great deal in him, he lets so little out." It is not claimed that he was a great preacher or scholar. He was a diligent reader of books sacred and profane, and he sets down the reading he has done in his journal with much satisfaction. It proves a marvellous diligence, especially in the two months before his last; but the comments on his reading, especially the more serious, are remarkable only for their banality. Yet they were too evidently written with a view to being drawn upon at some time for publication. The diarist "with this clause" is apt to make his drudgery quite other than divine.

For all these limitations, we rise from the perusal of these volumes feeling that the man's ecclesiastical advancement was no matter of mere favoritism, but was so justified by the event that those with bishoprics to give must have divined his quality as the reader cannot do from any matter furnished him. A crippled boyhood gave the inward turn which marked him for a theological career. Presbyterian birth and training made the evangelical bias of his churchmanship secure. Educated at Glasgow and Oxford, he became a fellow and tutor of Balliol. From 1842 to 1849 he was Head Master of Rugby. Nothing is more significant of something in him which his biographers do not and perhaps could not reveal—an impression of high character and force and dignity—than such an appointment at the age of thirty-one, and immediately following Arnold's death and his exaggerated fame. His was no slavish following of Arnold's methods. He doubted the wisdom of encouraging the seventh-form boys to feel that theirs was "the care of all the churches." But his headship of Rugby was a real success, and the dreadful illness which compelled him to give it up only deepened the affection in which he was held. Dean of Carlisle from 1849 to 1853, the position which seemed to mean retirement from all active labor was only a step to the bishopric of London, the largest in the world. Here was another testimony to some stuff in him which, in the book, is only afterwards declared; for in 1853 he had had no experience in ecclesiastical administration, and no one for 200 years had been made Bishop of London who had not been the Bishop of some other diocese. In 1868 he was made Archbishop of Canterbury, and held the Primacy until his death. Both as Bishop and Primate he was a great administrative officer, a liberal Evangelical; to Shaftesbury, the great evangelical "boss," at first only the least abominable of the Arnold set; strongly averse to ritualistic tendencies, but doing ample justice to the sincerity and devotion which often marked the Ritualist clergy, often bringing upon himself at once the wrath of the Evangelicals and the Ritualists, less often that of the Broad Churchmen; but, as presented here, with few exceptions carrying himself with eminent justice and fairness, holding his personal preferences subject to the law of the Church and Nation. Too much cannot be said in praise of the manner in which his biographers have dealt with him in the various controversial relations of his life. The other side has always been allowed to speak, and sometimes its speech is very rude and harsh. There is little advocacy of the Bishop's side, and no panegyric or eulogium in the book. One might go far to find a better field for the study of ecclesiastical politics. The Bishop of London's salary of £10,000, and the Primate's of £15,000, seem less exorbitant in the light of what is here rather revealed than stated nakedly. It was no bed of roses that the good man lay upon for thirty years.

These volumes are particularly interesting as a history of the controversial life of the Church of England for half a century. There was no controversy of this period in which Tait had not some part. That he was not carried away at Oxford by the Tractarians marks both his sober common-sense and the depth to which his Presbyterian roots went down. Yet Oakeley and Ward, who outdid Newman in their Romanizing bent, were his best friends at Balliol; Oakeley was his tutor, and Ward's fellowship was of the same year as his own. Of Newman he saw little, and never felt his spell. He was one of the four tutors whose protest against Tract 90 marked the beginning of the Tractarian collapse. In the famous Hampden controversy he stood manfully on Hampden's side. Temple and Stanley found it hard to reconcile his episcopal action against 'Essays and Reviews' with his private inability to find anything seriously wrong in Temple's, Jowett's, or Pattison's essays. But if at first he yielded something to the tide, he braced himself against it as it rose and swelled. He could not sympathize with Bishop Colenso, yet he succeeded in making himself anathema to Colenso's violent opponent, Bishop Gray of Cape Town, and to all the latter's friends. But the controversies concerning ritualism were those which taxed most heavily the Bishop's and the Primate's temper, time, and skill. If they did not present certain humorous aspects they would be very wearisome. Much as he would have liked to "put down ritualism," his treatment of it, if these pages do not greatly misrepresent him, was as generous as it was just. The lengths the Ritualists often went towards Rome will be surprising to the average reader. The controversy reaches the acme of absurdity in the fuss made about the carrying off of a consecrated wafer by a communicant of Bordesley that he might produce it in court against his vicar. When the Archbishop recovered it from its legal deposit and "reverently consumed it" there was great rejoicing in the Ritualist camp, while in Lord Shaftesbury's there was ineffable disgust. But the full account of these things must be read by those who crave for understanding. The two pictures of Tait, one taken at Rugby, the other in 1878, afford a painful illustration of his sorrowful and anxious life. But, if the development in the man is fairly exhibited by the pictures, the price he paid for it was not perhaps too great.

The Watering Places of the Vosges. By Henry W. Wolff. Longmans, Green & Co.

THE reader will find in this little book a serviceable account of the leading mineral springs which are classed as belonging to the Vosges, namely, Plombières, Contrexéville, Vittel, Martigny, Bourbonne-les-Bains, Luxeuil, Bains-les-Bains, Bussang; while the concluding chapter gives some account of the less-known but attractive spas of Alsace. The account of each resort includes a sketch of the history of the place, of its topography and geography, the chemical analysis of its leading waters, and an outline of the treatment employed. The book is well brought down to date, and contains all that is needed in a popular manual of the subject. When we add that it is written in a fluent and agreeable style, we fear that we shall have placed another temptation in the way of those who read and run—that is to say, of the very considerable number

of daring invalids who take the responsibility of choosing their spring for themselves. The right selection of a mineral water is quite as delicate and expert a choice as that which the physician makes between any other medicinal appliances; but it is one which the patient, eager to find himself at an attractive health-resort, too often makes to his injury.

The springs of the Vosges are no less than seventy-six in number, comprising every class of mineral waters, and among them are natural curiosities not dissimilar to some of those which we ourselves have noted heretofore in speaking of the mineral springs of Auvergne. Thus at Contrexéville, our author observes, "there are two totally different springs issuing from the ground, not a foot apart." France is richer than any adjoining country in mineral waters, and among its springs may be found the counterparts of Homburg, Baden-Baden, Ems, Püllna, Teplitz, Gastein, and Wildbad. In the Vosges the establishments have reached the greatest perfection and comfort, especially at Plombières and Contrexéville. Their recent development is due in large part to patriotic homekeeping since the Franco-German War; and from year to year increasingly large numbers repair to them. We may add that, among all the resorts of the Vosges, Bussang is the place of the most exquisite natural beauty. Situated almost in the heart of the mountains, and close upon the frontier line of France, its excellent hotel, two thousand feet and more above the sea, commands enchanting views; and the walks in the direction of Gérardmer, or to the neighboring Ballon d'Alsace, reveal some of the finest scenery in the Vosges. From the summit of the Ballon d'Alsace in particular, we have seen at sunrise nearly the whole range of mountain Switzerland—Savoy, Mont Blanc, Monte Rosa, the entire Bernese Oberland, and peaks far eastward of the Jungfrau; while the mountainous sweep of the Black Forest rose through the mists on the farther side of the valley of the Rhine. For a summer vacation in a watering-place of the more quiet order, with the noblest scenery at easy command, it would be hard to rival Bussang. As to the tonic waters, the physician must decide. The intending traveller to any of these resorts will find this book practically helpful as to details of travel and accommodation, while Mr. Wolff's comments upon the social atmosphere of the different resorts, as more or less retired, gay, serious, fashionable, invest it with a somewhat special interest.

The Wordsworth Dictionary of Persons and Places. By J. R. Tutin. Hull, Eng.: J. R. Tutin. 1891.

A PLURAL title would have been more truly indicative of the contents of this volume. The dictionary of persons is in four sections and alphabets; that of places, in ten. Add dictionaries of birds, and of trees, plants, and flowers. There is, besides, a selection of familiar quotations, with an index; a list of the best poems of Wordsworth, in the compiler's estimation; and a hitherto unpublished draft of the "Ode to Duty." With reasonable care in the preparation, therefore, it will be seen at a glance that this is a reference-book which every Wordsworthian would desire to have at hand; and, as a matter of fact, Mr. Tutin shows himself very painstaking and accurate.

Undeniably there is a gain resulting from his divisions, in the fact that they readily reveal the poet's larger tendencies and predilections. Take the persons "contemporary and historical" whom he mentions or alludes to—and this is one very useful side of Mr. Tutin's labors—and it appears that Dorothy Wordsworth among his kindred, and Sir George Beaumont among his friends, are most frequently commemorated. Coleridge follows close behind. On the other hand, Milton decidedly leads the historical group, with Shakspere for the nearest second, the twain being mentioned together in three instances. Pan, as might have been expected, is the favorite among the "mythical and legendary" personages. Among what are called "characters of fiction," Lucy, Matthew, and Emma are names which occur most often.

The gazetteer of places is really extensive, and we can but approve Mr. Tutin's putting the English Lake District ("Wordsworthshire") by itself, prefixing a good outline description of it, copied from a local guide. Grasmere here predominates, with the Rydals next in frequency, and Helvellyn and Skiddaw and the Derwent succeeding at a good interval. Of "other parts of England," London and the Thames take the lead; the River Cam and Coleorton exceeding what remains. Scotland far surpasses Wales; Wales, the Isle of Man; the Isle of Man, Ireland. On the Continent, the order is: Rome, the Rhine, Calais, the Alps, etc. America is mentioned chiefly in her rivers, and but seldom after all.

The text of the familiar quotations is that which received Wordsworth's latest revision. The arrangement is strictly chronological, with scrupulous record of the date of composition. Mr. Tutin gives notice that he has dropped some from Mr. John Bartlett's series, as not being "familiar" to English people, and has added a great many. His list numbers 305, with the close of "Scorn not the Sonnet" as 283 (*anno* 1827); the last twenty-three years of Wordsworth's life thus yielding but twenty-two quotations, and the years after 1845, nothing. Mr. Bartlett allows but seven to this barren period. If the sum of these quotations could be taken as an accurate measure of the worth of the whole of Wordsworth's poetry, then we should, perhaps, say that after 1814, the year of the "Laodamia," the production was relatively of no consequence. Mr. Tutin's calendar of "best poems" would then be judged too long, for he gives fifteen pages to the earlier and twelve to the later period.

Little need be said of the Wordsworthian birds, with the eagle at the fore, and with much evenness of attention to cuckoo, nightingale, owl, raven, redbreast, skylark, and thrush; or trees and flowers, led by the oak and the daisy respectively. The volume is handsomely made, with but few addenda and corrigenda. To the last we will contribute Brugès and Liege on p. 190; perhaps a printer's error in correction.

The Relation of Labor to the Law of To-day. By Lujo Brentano. G. P. Putnam's Sons. 1891.

PROF. BRENTANO is apparently so much captivated with his theories concerning the mediæval guilds, although their untrustworthiness has been made evident by competent authorities, that he has determined to apply them to the modern trade-unions. In his view, the wages paid to laborers are arbitrarily determined by employers. The laborer must be satisfied with any wages whatever, and submit to all conditions that the employer chooses to exact. The employer never has to seek for laborers. He establishes his business where he chooses, and the laborers have to come to him. The employer alone determines not only the price of labor, but also "whether the laborer shall receive this price in money or commodities, whether he shall spend it where he pleases or in the store or saloon of the employer; he determines how long a time the laborer shall work for this price, in what workshop, and by the side of what kind of companions."

But if trade-unions are formed, all this is changed. Although individual laborers have no accumulations upon which they can live when out of work, the unions have such accumulations. They keep wages up by limiting the number of apprentices, by refusing admission to those who are not capable workmen, and by turning out those who become incapacitated. Prof. Brentano neglects to add that this would have no result unless the unions were able to keep free workmen from getting employment. Where the unions are able to do this, of course they can get monopoly prices for themselves. As to the fate of those who are deprived of the means of existence by this trade-union policy, Prof. Brentano calmly tells us that they often sink into the class of criminals and furnish the contingent for mobs. There is no room for them in this world, according to his theories, and he does not even attempt to explain what is to become of them.

It would be a tedious undertaking to expose all the fallacies which are to be found in this treatise, and many of them are so puerile as to need no consideration. Not the slightest pretence of establishing the author's assertions by evidence is made, and the ambiguity of his terms indicates that the requirements of scientific proof would not be easily understood by him. The confusion of thought is aggravated by the obscurities of the translation. The book cannot be regarded as a serious contribution to our knowledge of the subject indicated by its title.

The Renaissance: the Revival of Learning and Art in the Fourteenth and Fifteenth Centuries. By Philip Schaff, D.D., LL.D. G. P. Putnam's Sons. 1891.

THIS "treatise" of Dr. Schaff was offered at the last year's meeting of the American Society of Church History, and printed in its report. It now appears in book form, and may, therefore, fairly be criticised as an independent work. It contains 132 pages, and is divided into thirty "chapters," some of which occupy only a page or two. The titles of these chapters, which might much more properly be called "paragraphs," are large enough to warrant something like a complete treatment. The name of the author and the acceptance of the paper as worthy of publication by a society of scholars would justify the expectation of some originality, at least, if not of completeness.

In a prefatory note the author says: "This treatise on one of the most interesting chapters in the history of the Middle Ages was prepared in Rome with the use of the libraries of the Vatican, of Victor Emmanuel, and of the German Archæological Institute on the Capitol, and in daily view of the immortal monuments in architecture, sculpture, and painting of the Renaissance." Surely one ought to find some trace of all these vast resources. In fact, the booklet is a meagre abridgment of Georg Voigt's 'Wiederbelebung des classischen Alterthums,' with occasional bits from two or three other well-known works, and a very small deposit from the author's general reading. The style is in great part that of a cyclopædia. To those who can use the books digested, this abridgment can have no value, and to one unfamiliar with them it

can convey very little idea of the subject whatever. The book is the more disappointing because there is room at present for an intelligent treatment, in comparatively brief compass, of the very interesting phases of the Renaissance movement. The great works of Voigt, Symmonds, and Burckhardt have never yet been exploited for this purpose as they might have been. They contain and refer to a mass of information upon which the right man may yet build up something which will deserve the name of "treatise." The elegance of its outward appearance and a few bibliographical references alone redeem this book from entire insignificance.

Austin Phelps: A Memoir. By Elizabeth Stuart Phelps. Charles Scribner's Sons. 1891.

THIS volume contains an autobiographic fragment forty pages long and about a hundred pages of Prof. Phelps's letters. They possess all that is of real value in the book. His daughter's chapters seem like the fulfilment of an unconscious prophecy of her father's.

"By the way," he wrote, "speaking of the honor paid to good men, is it not time to plead for a reform in the writing of biographies? Do you ever see one that seems to your sober sense strictly true? They are my favorite reading, yet I am amazed at their exaggerations. And those of good men, and written by good men, are among the most brilliantly fictitious."

Mrs. Ward's filial devotion to her father's memory unfits her for the patient and impartial analysis which alone could give his very complex nature an appearance of real life, while her exuberantly rhetorical style blurs even the inadequate outline she attempts to draw.

Prof. Phelps was a man of a marked literary gift and an introspective habit of mind. That there was in him a touch of that madness which is said to be near allied to great wits, we think there is general consent among his friends, though his daughter flies into a passion at the mere suggestion. He wielded a great influence as a trainer of preachers for many years. This fact lends additional suggestiveness to what he says in his autobiographical sketch of the great mistake made of putting men into the pulpit before they are intellectually mature: "My experience there is a very sad proof of the need of well-educated *mind* in the pulpit. Without some good degree of thorough education, which shall give a man confidence in his own mental operations, nothing but ignorance of himself and of his work can give him religious confidence." He also comments with great shrewdness in his letters upon some other aspects of ministerial life. Of the man himself we get no living and consistent image in the book.

Forty Years among the Zulus. By Rev. Josiah Tyler. Boston: Congregational Sunday-School and Publishing Society. 8vo, 300 pp.

THE most interesting chapters in this book are those in which Mr. Tyler gives an account of his work as a missionary to the Zulus. They are written in such a fresh, simple way as to make one regret that he has not given a continuous narrative of his life from the time he landed in Natal in 1849 till the day he left, forty years after. His description of his trip up country, the founding of his station, his early experiences with the people, his day's routine, bring the life of an African missionary very vividly before the reader. These chapters, unfortunately, are few in number, and the greater part of the book is taken up with accounts of the Zulus, their dress, manner of life, and superstitions, and with brief biographies of his fellow-missionaries. In addition, there are a few chapters descriptive of the country, together with a short and somewhat confused sketch of Zulu history from the time of Chaka to the downfall of Cetywayo. There is little that is fresh or original in this part of his work, Mr. Tyler evidently being entirely destitute of the scientific tastes which have led other missionaries to valuable ethnographical and geographical researches.

He writes very frankly and clearly in regard to his missionary work, and it is easy to see the difficulties under which he labored to make converts. The chief obstacles appear to have been polygamy, ancestral worship, and witchcraft. What he calls ancestral worship, it should be noted, differs materially from that of the Chinese. It consisted chiefly in sacrificing an ox to the newly dead to avert the evil which the dead, who were generally supposed to assume the form of a serpent, might bring upon them. This was done immediately after death and apparently not again. Mr. Tyler gives numerous instances of the conversion of natives, with sketches of the lives of several native preachers and teachers, and he writes confidently of the success of the Gospel among the Zulus; but the impression left by his book is, that the mission, in its outward aspects, has not been very successful. Progress at first was certainly slow, one missionary laboring "eleven years before he saw any fruit." Mr. Tyler's own experience does not appear to have differed greatly from this. We suspect that too much time and labor was given to preaching and teaching and the preparation of books in the Zulu language. Possibly there was lacking a judicious mixture with this of instruction at the various stations—not at the schools only—in agriculture and the industrial arts. Still, it should be said that Mr. Tyler dwells far more upon the scenes of his earliest labors than upon those of his latest days, and the unfavorable impression may be due to this fact. There are several interesting portraits of missionaries and converts, together with a few illustrations of the scenery of Natal.

Geodesy. By J. Howard Gore, Professor of Mathematics in Columbian University. [The Riverside Science Series.] Boston: Houghton, Mifflin & Co. 1891.

OF Prof. Gore's competence to treat of ancient geodesy, it is sufficient to say that he makes Sanskrit the scientific language of Chaldæa. But he is well informed in regard to the modern history of higher geodesy, and writes his own language with unusual grace and ease. A less promising subject for popularization than that which he has chosen could not be conceived; but in a space equal to ninety pages of *Harper's Magazine* he has contrived to sketch its history in a manner which will carry along any reader with a taste for questions of precision. He does scant justice to our Coast and Geodetic Survey, and to the manner in which it has been supported by our Congress. No man of sense or of conscience in the position of Bache, Peirce, Patterson, or Hilgard, could have asked the Government to measure an arc of the meridian from Canada to the Gulf. As much as it was right to ask was asked for and accorded; and the works of these geodesists will, when completed, constitute a great contribution to our knowledge of the figure of the earth. It is a problem which was steadily pursued by them, as it is by the present head of the Survey.

QUARTERLY REVIEW.—ORIGINAL Edition. $4.00 per year. LEONARD SCOTT PUB. Co., 231 Broadway, New York.

TWILIGHT PARK IN THE CATSKILLS.

The name is a happy one, and the region filled with romantic associations, and suggestive of tonic air and noble views. Every city and seaboard resident longs, like Charles Lamb, for the glory and uplifting of the mountains, which, as Ruskin says, "are the beginning and end of all natural scenery."

Should you not like a little log cabin—a rustic nook in the woods—free from housekeeping cares, with meals in a central club-house; where you can "loaf and invite your soul" at small cost, and with congenial company?

That is our scheme—simple, inexpensive, homelike.

Send for a circular.

CHAS F. WINGATE,
119 Pearl St., New York.

Keeping Abreast of the Young People.

The Chautauqua Reading Circle is largely made up of parents who are reading for the sake of their children. They can not bear to permit that separation in tastes and sympathy which is inevitable when young people are studying constantly and parents are mentally inactive. You can surely spare forty-five minutes during the day. A busy mother writes: "I gave up waiting for time, and took it." Next winter the Chautauqua course includes American History, Government, and Literature, subjects which appeal to all patriotic Americans. Begin to make up your minds now. Don't put the matter off. Write to *The Chautauqua Office*, Drawer 194, Buffalo, N. Y.

CHAPTERS FROM THE

Religious History of Spain.

Censorship of the Press. Mystics and Illuminati. Endemoniadas. El Santo Nino de la Guardia. Brianda de Bardaxi.

By CHARLES HENRY LEA, LL.D.

In one 12mo volume of 522 pages. Cloth, $2.50.

"The width, depth, and thoroughness of research which have earned Dr. Lea a high European place as the ablest historian the Inquisition has yet found are here applied to some side issues of that great subject. We have only to say of this volume that it worthily complements the author's earlier studies in ecclesiastical history. His extensive and minute learning, much of it from inedited manuscripts in Mexico, appears on every page."—*London Antiquary, Jan.*, 1891.

"It is a work of such painstaking scholarship, such mastery of detail, and shows such long and laborious research that we feel that we are doing it injustice to dismiss it with a brief review. It contains a mass of unpublished and inedited material and is the most valuable contribution to the intricate period it treats of that has yet been given to English readers."—*The Church Review, Oct.*, 1890.

"All who have read Dr. Lea's earlier works will be prepared to welcome this book in the well-founded assurance that they will find it full of learning, and that its learning, so far from burdening its pages, will serve to give them life and interest. A delightful volume."—*London Saturday Review, Jan.* 31, 1891.

LONGMANS, GREEN & Co.'s LIST.

ARCHDEACON FARRAR'S NEW BOOK.

DARKNESS AND DAWN:

OR, SCENES IN THE DAYS OF NERO.

An Historic Tale. By the VENERABLE ARCHDEACON FARRAR, D.D., F.R.S.

Author of 'The Life of Christ,' etc., etc.

One volume, large crown 8vo, gilt top, $2 00.

"The purport of this tale is no less high and serious than that which I have had in view in every other book which I have written. It has been the illustration of a supreme and deeply interesting problem, the causes, namely, why a religion so humble in its origin and so feeble in its earthly resources as Christianity, won so majestic a victory over the power, the glory, and the intellect of the civilized world."—*Extract from Preface.*

MR. BRANDER MATTHEWS'S NEW BOOK.

WITH MY FRIENDS.

TALES TOLD IN PARTNERSHIP.

By BRANDER MATTHEWS.

With an Introductory Essay on the Art and Mystery of Collaboration.

12mo, cloth extra, $1 00.

Six tales written in partnership with Mr. H. C. Bunner, Mr. G. H. Jessop, Mr. W. H. Pollock, and Mr. "F. Anstey," with an Introductory Essay, reprinted from *Longman's Magazine.*

A MANUAL OF THE SCIENCE OF RELIGION.

By P. D. CHANTEPIE DE LA SAUSSAYE, Professor of Theology at Amsterdam. Translated by Mrs. COLYER-FERGUSON (*née* Max Muller). Revised by the author. Crown 8vo $3.50.

This is the first attempt to give a general outline of the science of religion, and it is intended as an introduction to the comparative study of religions. The translator has been aided by her father, Prof. Max Müller, and by the author, who has revised the text.

THE INHERITANCE OF THE SAINTS:

Or, Thoughts on the Communion of Saints and the Life of the World to Come. Collected chiefly from English writers by L. P. With a Preface by the Rev. HENRY SCOTT HOLLAND, M.A., Canon Residentiary of St. Paul's. Crown 8vo, $2.00.

ESSAYS, REVIEWS, AND ADDRESSES.

By JAMES MARTINEAU, LL.D., D.D., D.C.L. 4 vols., crown 8vo, each $2.50.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 28.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.

For references and circular address Mrs. E. L. HEAD, Germantown, Pa.

Teachers, etc.

A YOUNG LADY ACCUSTOMED TO teaching desires a position as governess or companion. Qualified to teach English branches, French, drawing, and painting. Address "M. J. C. T.," the *Nation*.

Part III. The Central Nervous System. Fifth Edition. 8vo, $1.75. *Next week.*

Part IV. The Central Nervous System (Cont'd). The Tissues and Mechanisms of Reproductions. 8vo, $2.00. Sixth Edition. *Next week.*

Part I. Comprising Book I. Blood—The Tissues of Movement—The Vascular Mechanism. Fifth Edition. 8vo, $2.60. *Shortly.*

Part II. Comprising Book II. The Tissues of Chemical Action—Nutrition. Fifth Edition. 8vo, $2.60. *Shortly.*

"The present edition is more than largely revised. Much of it is rewritten, and it is brought quite abreast with the latest wave of progress of physiological science. A chief merit of this work is its judicial temper, a strict sifting of fact from fiction, the discouragement of conclusions based on inadequate data, and small liking shown towards fanciful though fascinating hypothesis and the avowal that to many questions, and some of foremost interest and moment, no satisfying answers can be yet given."—*New England Medical Journal.*

Science in Plain Language Series.

Food, Physiology, etc.

By WILLIAM DURHAM, F.R.S.E. 12mo, 50 cents.

Thucydides, Book V.

Now ready. New Edition. Vol I. 12mo, $1 25.

SERMONS

Preached in Lincoln's Inn Chapel.

By F. DENISON MAURICE. In six volumes. Vol. I. 12mo, $1.25.

Just Published. Part VI (Clo-Consigner). 4to, $3.25.

The Oxford ENGLISH DICTIONARY

on Historical Principles. Edited by J. A. H. MURRAY. Part VI. Clo-Consigner. 4to, $3.25.

The History of Human Marriage.

By EDWARD WESTERMARCK, Ph.D., Lecturer on Sociology at the University of Helsingfors. With a Preface by Dr. A. R. WALLACE. 8vo, $4.00.

A treatise based upon exhaustive research, in the course of which the author has been led to adopt conclusions somewhat different from those put forward by Tyler, McLennan, and other previous writers on this important subject.

Marcus Aurelius Antoninus.

THE THOUGHTS OF THE EMPEROR.

Reprinted from the Revised translation, with Notes, Biographical Sketch, and Introductory Essay by GEORGE LONG. Printed on hand-made paper. 18mo, $1.75.

Messrs. Macmillan & Co. are the Agents in the United States for the publications of the Oxford and Cambridge University Presses, and for Messrs. George Bell & Sons, London. Their new Illustrated Holiday Catalogue will be sent free by mail to any address on application.

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 22, 1891.

The Week.

ANYBODY who attempts to verify Mr. Blaine's "facts" will find himself in difficulties. In his letter to the editor of the Bucyrus (Ohio) *Journal* the other day, Mr. Blaine said:

"Germany, without negotiating a formal treaty, has removed the prohibition on pork, and our Government, in consideration thereof, has left her sugar on the free list. This opens to us an entirely new market, and $15,000,000 to $20,000,000 of American pork will be consumed per annum, where not a pound has been taken for ten years."

We had the curiosity to look at the Commerce and Navigation Reports in order to see what our exports of pork to Germany were before the prohibition began. We found them as follows for the years 1880 and 1881:

Exported to Germany.	1880.	1881.
Bacon and hams.....	$1,786,494	$1,670,326
Pork.....	79,364	108,218
Total.....	$1,865,858	$1,778,544

If the prohibition had never existed, we should have exported to Germany in *ten* years about as much as Mr. Blaine says we shall export to her *each* year hereafter. This is about as near as Mr. Blaine ever comes to a fact that is in any way concerned with mathematics. It is a misrepresentation also to say that the removal of the prohibition by Germany had any connection whatever with the reciprocity clause of the McKinley tariff, or that it had any relation to any tariff. Germany is at liberty to put a duty of a dollar a pound on pork tomorrow if she chooses to do so. What we objected to, and the only thing we objected to, was the prohibition of our pork while other pork was admitted. Congress passed a law on this particular subject on the 30th of August, 1890, and it was in consequence of this law that the prohibition was removed. The McKinley Bill, either with or without reciprocity, had nothing to do with it.

Mr. Blaine attempts to spike the gun he himself loaded when he wrote his famous letter to Senator Frye about the McKinley Bill. He now says that his condemnation of it was written before the reciprocity clause was put in, and that that removed all his objections. But it is to be remembered that the reciprocity clause of the bill is notoriously not what Mr. Blaine wanted it to be and tried to make it. He wanted the duty on sugar left on, and one on hides put on, so that he could actually have some concessions to offer instead of, as now, only a threat to make. He also adds that "the reciprocity provision is proving very useful, especially in farm products, and more particularly in the case of the two articles mentioned in the paragraph quoted, pork and flour." In this he differs from the last campaign document put forth by the Bureau of Statistics, in which it is admitted that "it is not to be expected that the results of the treaty with Brazil will be very marked as yet." He differs still more from the *Dry Goods Economist*, which says in its issue of October 17: "In the face of a reciprocity treaty now in operation with Brazil, it will surprise most people to learn that exports of cotton cloth to that country have fallen off nearly 50 per cent. in value." And the reduction on flour in Cuba is not yet in effect, while not a pound of pork has yet been exported to Germany under the new inspection laws. But the letter will serve its main object, which undoubtedly was to show that Mr. Blaine does not propose to let the President steal his reciprocity thunder, and that he by no means wishes to be considered as a "neglectable quantity," politically. But what a strange state of things it is which makes it necessary for him to go into an elaborate argument to prove that he is "not opposed to the McKinley Bill," when that bill is about all there is to present-day Republicanism!

Such a gathering of representative Methodists as has been in session in Washington the past fortnight could not fail to bring out some of the typical characteristics of the denomination. We do not think it unfair to say that the intellectual note of Methodism was sounded in the opening address of Bishop Hurst, when he said: "Our Articles of Faith stand precisely to-day as in the last century, which makes us think that, like Minerva from the brain of Jupiter, they were born full-grown and heavily armed." It is to be hoped that it was not as characteristically revealed in the naïve acknowledgment of the author of the leading paper on "The Influence of Modern Scientific Progress on Religious Thought," that he "did not affect to have had any training either in science or theology." While by no means depreciating education, and possessing many excellent institutions of higher learning, Methodism has, after all, put more emphasis on feeling than knowledge, and has exalted practical results above other considerations. This has helped to develop a certain headlong exuberance which is popularly associated with the Methodist church. The intensely practical trend of the organization has led it to take a more open and active part in public affairs than any other denomination, unless it be the Catholic. In certain sections of the West, the political world used to be classified as Republicans, Democrats, and Methodists. The heated injection of English politics into one day's deliberations of the Conference showed that Great Britain knows something of this. Yet, with all this, there is ample justification for the pride with which Methodism points to its great growth and achievements in this country. With an ecclesiastical system excellently adapted for the purpose, it has gone into the waste places of the land and been always in the front ranks of the pioneers of the West, a conservative and civilizing force.

It was not, perhaps, to be expected that the foreign delegates to the Methodist Conference should have been accurately acquainted with the status of the Pan-American arbitration scheme. Hence it excites no great surprise to find that several of them made inexact statements about it on Saturday last. But what shall be said of the misleading remarks on the same subject made by President Harrison? He said: "In the recent conference of American States at Washington, the proposition was distinctly made and adopted by the representatives of all, or nearly all, of the Governments represented, that, as applied to this hemisphere, all international disputes should be settled by arbitration.' What are the facts? The Pan-American Congress had no power to establish such a "proposition" as the President referred to. What it did do was to agree to recommend to the several Governments the negotiation of a treaty for international arbitration. Ratifications of that treaty were to be exchanged at Washington by May 1, 1891; if they were not exchanged by that date, the whole project was to lapse. So far as our information goes, it has been agreed to only by Ecuador and Bolivia. It was not agreed to by the United States. It has therefore completely lapsed, and all comes back to the expression of the personal and unofficial views of the Pan-American delegates. Why complain of European Governments for having "shelved" the proposition when laid before them? It has been shelved all around, even in the country of its origin. President Harrison must have known all this, but it could never be gathered from his misleading language.

President Harrison went on to say that international arbitration was not availab'e in cases where a nation was imbued with an aggressive spirit and moved by a desire for aggrandizement. In such cases it was for a Christian sentiment to remove the causes of dispute, *i. e.*, the bad spirit, and when this was out of the way the principle of arbitration would find easy acceptance. He expressed the desire of America for peace with the whole world, and concluded with the elevated conception that

"There is a unity of the Church and of humanity, and the lines of progress are the same. It is by this great Christian sentiment, characterized not only by a high sense of justice, but by a spirit of love and forbearance, mastering the civil institutions and gov-

ernments of the world, that we shall approach universal peace and adopt arbitration methods of settling disputes."

Although these remarks were received with applause by the assembly, the clergy could not have been much edified by being told that arbitration is only for the good, and that war, as a means of settling international disputes, will be abolished as soon as nations are peacefully inclined. If, instead of these stupidities, he had said, "I promise to use my best endeavors to bring to peaceful arbitration every dispute that now exists, or may exist during my term of office, between this country and any other on either hemisphere," he would have uttered words that would have resounded around the world. Such words would have left him ample margin for difficulties foreseen or unforeseen, and would have committed him no further than he is already committed by our part in the Pan-American Congress. But as the pledge of a particular man always goes further and awakens more echoes than the same man's share in a joint resolution—especially when he is President of the United States—we can but regret that Mr. Harrison neglected so grand an opportunity to pledge himself personally to follow the Christian precepts which he found so admirable for mankind in the aggregate.

The Keystone Bank mystery has had another phase added to it by the dismissal of the Government experts who were examining its books. It was announced on September 10 that the work of these experts had been brought to a standstill at its most interesting point because of failure of the Government's appropriation for such service. The Committee of Fifty of Philadelphia citizens at once offered to pay the salaries of the experts until their work was completed, and Secretary Foster accepted the offer and told the experts to go ahead. It was said that they had just got in sight of most interesting revelations when they stopped work. They were supposed to have begun again at this interesting point when they resumed their labors on September 15, a month ago. Now comes the news that they have been dismissed because they have failed to keep their agreement to make weekly reports of their discoveries to Secretary Foster, having, in fact, made no report since August 9, sending the Secretary since that time nothing whatever except a statement of their salaries and expenses. There are many queer things about this. If their last weekly report was made on August 9, there were four other weekly reports due when they were stopped by the Government on September 10, yet failure to make these reports was not the excuse given at that time for stopping the work. Possibly it is made the excuse now because they have failed for four weeks longer. It is complained also of them that they had too much other work on hand and were not attending as they should to this. Mr. Reeves, the Chairman of the Committee of Fifty, says of the experts: "Their duty was to endeavor to ascertain if any criminal act had been committed, and as soon as they found this they were to notify the Department. This is what the present men are looking after in the books, and if any one has committed a crime, I have no doubt that the evidence will be brought out against him." By present men we presume Mr. Reeves refers to the experts employed by the local authorities. We trust his hopes will be realized as to the discovery of the criminals, but the chances are against it, for a paralysis of one kind or another has fallen upon every investigator just as he was on the point of making this discovery.

A meeting of the signers of the address against Quay methods in Pennsylvania was held in Philadelphia on Wednesday week, and a permanent organization was effected with Herbert Welsh as President, Henry C. Lea and Justus C. Strawbridge, Vice-Presidents, Charles Richardson, Secretary, and an Executive Committee of twenty eminent Republicans. It was decided to call the organization the "Reform Republican League of Pennsylvania," and to declare its object to be "to break up boss rule and dishonorable political methods in Pennsylvania, and to restore to the people the control of their public affairs." The Executive Committee was directed to continue the work of organization, and to establish branches in all parts of the State. Although the members of this organization have declared repeatedly that their movement had nothing to do with the present campaign, being aimed solely at the proposed reëlection of Senator Quay, that persistent defender of Republican rascality, the Philadelphia *Press*, declares: "The agitation against Mr. Quay at this particular time has the suspicious look of a movement against the Republican party much more than against the junior Senator." Would it be possible, O sixty-per-cent. friend of Bardsley, to find any "particular time" for starting an agitation against Quay which you would not at once deprecate as a movement against the Republican party? Are not Republican rascalities and the Republican party synonymous terms with you? What "particular time" and what "particular measure" with a reformatory object have ever suited you and your kind?

The *Times* makes a strong point against Mr. Fassett's sincerity in his promise to give the State pure government, and, indeed, his perception of what honest government really is, when it recalls the fact that, as Secretary of the Republican National Committee, he reported the sickening resolutions of endorsement and eulogy for Quay and Dudley when those worthies retired from the Committee last July. A man who believes that the robber of the Pennsylvania State Treasury has "placed the cause of good government under deep obligation," and who considers the "blocks-of-five" business a proof of "manliness of purpose and patriotism as a citizen," thereby "gives himself away" as one who does not understand what good government and patriotism mean. If the question in the pending canvass were between the endorser of Quay and Dudley and a Democrat who had distinguished himself by fighting the Quay and Dudley tendencies in his own party, there would be no room for doubt as to the duty of the independent voter. As it is, Mr. Fassett will have only himself to blame if he finds that this unconscious revelation of his character costs him enough votes to lose him the election.

The result of the municipal election in Indianapolis on October 6 is cause for rejoicing to all who believe in independent voting and the application of business methods to public affairs. The contest was between a representative of the Republican Machine and the Democratic incumbent, who, during his first term, had shown that he was nobody's man. The vote was remarkably large—25 868, against only 21,074 in the preceding city election—and Mayor Sullivan was reëlected by a majority of 2,728, against 1,791 in 1889. Mr. Sullivan ran far ahead of his ticket by reason of the fact that many Republicans supported him in preference to an unfit candidate of their own party. The *News*, the Independent journal of the city, which supported Harrison for President in 1888, was an earnest advocate of Mayor Sullivan's reëlection.

The meeting of the American Board last week signalized the complete disappearance of the so-called "Andover question." It appears not to have made so much as a ripple on the surface this year. The result marks the entire victory of the liberals. In the election of corporate members they were given the fullest recognition. Without any need of debating or struggling, they have come quietly into the rights for which they were vainly battling five years ago. This, of course, was inevitable from the start, given the conditions of the case. There was a palpable absurdity in the setting up by an instrument of the church of a more rigid standard of orthodoxy than that enforced by the church itself. This abnormal and intolerable condition of affairs has now been brought to an end, and, whatever one's views about the theological questions involved, he must concede that it is a good thing to have the denomination put in a straightforward and consistent position all around. To Dr. Storrs, and the liberal policy which he has enforced as President of the Board, belongs a great deal of the credit for bringing about this quiet revolution.

The prediction made by our London correspondent a fortnight ago that Mr. Balfour would succeed Mr. W. H. Smith as leader of the House of Commons, is already ful-

filled by official announcement. Mr Goschen intimated as much in his speech at Cambridge last Thursday. The place ought in the natural course of things to have fallen to Mr. Goschen himself, who is an older man and a far more experienced politician than Mr. Balfour, and has for three years filled the most important office the Ministry has at its disposal in the lower house. But he was disqualified by the fact of being one of the Liberal Unionists, to whose possession of good offices the rank and file of the Tories have never been reconciled, and by the not less important fact that as a fighting man he cannot compare to Balfour. When thoroughly roused, he goes to pieces, says what he ought not to say, and leaves unsaid what he ought to have said. For this reason Sir William Harcourt delights in stirring him up. His worst failure came on him at the hands of "Tim" Healy, the Home-Ruler, who pointed out, with the utmost politeness, at the last moment, that Mr. Goschen was cut off from making a certain disposition of money he had raised by a liquor tax, by a previous bill of his own passed early in the session. The expression of Mr. Goschen's countenance when the Speaker ruled that "Tim's" point was well taken, is said to have been a wonderful study in facial indication of the emotions.

The renewal of strikes among the London dockers, this summer and fall, shows how futile was the interference of Cardinal Manning and the other philanthropists at the time of the great strike two years ago. The Labor Commission created by Parliament has taken considerable testimony on the subject of the present condition of the 'longshoremen, especially of the casual laborers employed on the docks. Mr. Ben Tillett, the General Secretary of the Dockers' Unions, told the Commission that "things were worse for the casual worker since the strike," and he was corroborated on this point by other witnesses. The great investigator of London poverty, Mr. Charles Booth, is of the same opinion, and so expresses himself in his last volume. One cause of this result is the action of the dock proprietors in increasing the number of their permanent hands and in classifying the rest in three divisions. Those in the first division have the first chance at any extra work, and those in the last are called upon only after the offer has been made to all the others. In this way the great overcrowding of the business was made palpable to all, and the obvious absurdity shown of expecting the dock companies to employ more men than they needed, or to pay higher wages than the business would admit, even when there were thousands of men eager to take the lower wages. The affair of 1889 was hailed at the time as a great triumph of the forces of philanthropy over the laws of trade; but, as is the case with all such triumphs, the real victory was on the other side.

A remarkable incident in the Baring liquidation has just been made public. Among the assets of the firm were $10,000,000 in 6 per cent. bonds of Uruguay, which the Barings had taken from the Government of that country, but had never marketed. They seemed to the liquidators little better than waste paper, in view of Uruguay's critical financial situation and threatened default on her other outstanding bonds. Still, the bonds were estimated at one-half their face value, and the attempt was made to market them. But they would not go by themselves, and so a scheme was devised to dovetail them in with Uruguayan securities already on the market. The thing was finally done as follows: It was proposed to Uruguay that the interest on her entire foreign debt should be scaled down from 5 to 3½ per cent., on condition that these Baring bonds should be "unified" with the new consolidated issue. The proposition is still pending, but is almost certain to be accepted. The financial objections to it are almost as strong as the moral, and it can be justified only on the plea of the necessity of putting the Barings on their feet again. But if it succeeds, it will be at the expense of innocent and helpless holders of Uruguayan bonds, and will be but one more proof of the loss brought by the Barings on thousands of English investors in South American securities. Besides, the precedent would be a terribly dangerous one, and would be almost sure to be followed by other distressed republics in Spanish America. We are glad to be able to add that the Barings protested against this reduction of interest on their property, which was assented to by the banks which held as collateral the bonds in question.

When the last military bill was passed in France, there was a loud cry from the clergy and the clerical newspapers that a new outrage had been perpetrated upon the Church. The law provided that the theological students in the French seminaries should be enrolled, and that they should be held to a certain amount of military service with the colors. This, in the eyes of ecclesiastics, exposed them to grave dangers of insult from their godless companions, and of loss of faith or of moral tone from garrison life. The first year of service for the seminarists has just come to an end, and none of these direful results seem to have been realized. The seminarists have lived in camp or in barracks as undisturbed as if they had been so many atheists. Their religion has been respected, and their faith and morals appear to be as sound as ever. Some go back to be ordained; others take their old places at St. Sulpice and elsewhere. It is hardly possible that they will not be all the better priests from this brief experience of the world and of the life of men of their own generation. They will have learned many lessons from the tolerance and respect that they have received from companions who neither knew anything nor cared anything for the special studies in which good seminarists are absorbed, and who did not agree in the least with their religious opinions. They can hardly fail to be better patriots after serving under the flag, and perhaps also better republicans. And they will have had the great gain of a breath of fresh air. This was much needed, for the students in the French seminaries are cribbed and confined on every side by a set of minute rules and regulations such as are quite unknown anywhere else in the world, save, perhaps, in some boarding-schools for young ladies.

Russia's financial agents have announced, with a flourish of trumpets, that their new $100,000,000 loan has been satisfactorily placed. They have further embellished their report by the announcement, which was duly cabled over the world in the press despatches, that the loan has been subscribed for seven times over. This assertion is, of course, absurd, especially in view of the fact that, two days before it was made, subscriptions had been so scanty as to render necessary an extension of the advertised time limit. In fact, the Parisian bankers through whom the new loan was offered, have been busily engaged all the week in offering the bonds on the Bourse at a discount—a policy scarcely compatible with an over-subscription of any magnitude. The truth of the matter seems to be that Russia has followed the recent example of borrowing-corporations the world over in paying to bankers a handsome bonus for "underwriting" the loan — that is to say, for assuming it on their own account, with the purpose of selling it out, from time to time, either "over the counter" to actual investors, or through brokers on the Bourse. It is therefore at least doubtful whether the Russian Government will be able for some time yet to control its full $100,000,000. But as Russia habitually borrows three or four times the amount of its immediate needs, it is not likely to be embarrassed by this consideration. A London correspondent informs us that $40,000,000 have come to hand in bona-fide private subscriptions; itself a highly remarkable achievement, all things considered.

Meantime it may well be asked what is to be the end of all this astonishing financiering on the part of the Czar's Ministers. The present year had already been signalized, before the present loan was advertised, by the calling in of nearly $100,000 000 credited to Russia in the various European banks. This enormous sum was an unused surplus left over from previous loans, and its recall was the immediate occasion of the urgent demand for our gold by the bankers of London and Paris. Yet, scarcely has the gold all been gathered in at St. Petersburg when another equal sum is asked for. It is always a conceivable explanation that Russia is making final preparation for a European war; but it is more likely that she is preparing for a large deficit of revenue consequent upon the failure of the present harvest.

PREPARATION FOR 1892.

ONE of the most surprising things in the present political canvass in this State is the indifference of the Democrats to ballot reform, as displayed in the open repudiation of the blanket ballot in the platform. It is the more surprising because it is displayed by men who try to persuade us that the coming State election is chiefly important on account of the influence it will have on the Presidential conflict in 1892, and who say they wish to win now in order to show the doubters and trimmers that they can win in the larger field one year hence.

This election can be made, or could have been made, a real preparation for the Presidential contest in one way, and in one way only—that is, by forcing the Legislature to amend the Ballot Act so as to provide the blanket ballot this coming winter. This would be worth more than the "prestige" of a dozen State victories; and the failure to see its importance on the part of leading State Democrats outside Tammany is something very odd.

The explanation of this importance is very easy. The chief issue of the coming Presidential campaign, it is now admitted on all hands, will be the tariff. The silver craze is rapidly subsiding, and will probably have been killed—as it was essentially a debtors' and speculators' craze—by the good harvest and resulting sense of prosperity long before the conventions meet. Now the chief supporters of the tariff are the great employers of labor, who have money invested in it, and who treat this legislative power of taxing their neighbors in order to swell their own profits as property to be defended, like any other property, by any weapons which the occasion may make necessary. They profess to believe, and probably in many cases do believe, that those who seek to lower the tariff are really robbers, who are trying to despoil them of their lawful possessions, besides plunging the country into misery. They have, therefore, ever since the tariff became a political issue, poured money into the hands of the Republican managers, in enormous sums, and asked no account of the disposition made of it. In addition to this, they have intimidated all their employees or dependents into voting the Republican ticket by such means as seemed best suited to the purpose. The Norwich manufacturer who frankly said that "he would mortgage his mill," if necessary, to prevent the return of David A. Wells to Congress, revealed both the state of mind and the *modus operandi* of the whole class.

The effectiveness of these methods was fully exemplified in the election of 1888. No intelligent Democrat, we are sure, and very few intelligent Republicans, doubt that the defeat of Mr. Cleveland was achieved, under the direction of Quay and Wanamaker, by corruption on a tremendous scale, backed up by the covert and open intimidation of the working class by the manufacturers and their customers. Nor is there the smallest sign that these methods have been abandoned, or that any of those who used them or profited by them are ashamed of them, or will hesitate to resort to them again in 1892. The fulsome eulogies heaped on Quay and Dudley by the Republican National Committee when those worthies became too notorious to be allowed to act as Chairman and Treasurer of the Committee any longer, show that the confidence of their party in their system still remains unshaken.

Now with these facts before their eyes, it is surely the first duty of the Democrats to procure before 1892, if possible, the passage of a genuinely secret ballot law, such as the Australian ballot is, in every State in the Union. This duty has been fully recognized by the Democrats in many other States. In nine States Democratic Legislatures have passed ballot laws with the blanket ballot; and in two others strongly Democratic, Texas and Kentucky, Constitutional amendments have been adopted directing the Legislatures to frame such laws. In Vermont, Maine, Pennsylvania, and Illinois the united stand of the Democrats in favor of such laws forced the Republican Legislatures to enact them.

The opposition of the Republicans in all these States and also in Indiana and Ohio showed clearly what effect they expected it to have on their political fortunes. The corruptionists and intimidators, in fact, understand the measure thoroughly, and the trial of it, wherever it has been made, has fully justified their apprehensions. It has raised the Massachusetts Democrats, for instance, out of the slough of despond, and is giving them a strong hope of carrying the State in 1892. It gave Indianapolis, the very fountain-head of Republican corruption, to the Democrats a few days ago by the largest majority they ever polled.

Under these circumstances, it is Flower and not Fassett who ought to stand for the blanket ballot in this State. It is the Democratic, and not the Republican platform which ought to call for it with vehemence, and the loudest-mouthed supporters of it should be those who think the State election a sort of preliminary ballot for the Presidency of the United States This, and not vague blather about "prestige" and "influence" and "first guns" and "forerunners," would be real preparation for the fray of one year hence. The emancipation of the wage-earning class is, in fact, the first and great condition of Democratic success in the Federal field. The Republicans have, through the tariff, an immense corruption fund to fall back on, and great power over the lives of an immense body of voters, and there is no way under heaven of destroying this fell influence but the provision for the poor and the humble of an absolutely free and untrammelled ballot.

To what do we owe this extraordinary failure of the Democratic party, in this great State, to perform the very first duty of the crisis? Simply to a desire to "placate" Tammany. To this organization, which, as Mr. Curtis truly said in his recent letter, is "a national disgrace," as well as a disgrace to the city and State, we owe the absurd spectacle of a Democratic hostility to a secret ballot, and Democratic support of a system which enables bribers and employers to follow their slaves to the polls, and see that they fulfil their contracts and do their bidding when they cast their votes. It is Tammany, and not the party, which profits by the "paster ballot." Without some means of following the voter and seeing that he obeys his orders and carries out "deals," the Society could not long survive even in this city. So that, as a matter of fact, we are actually witnessing the sacrifice, as far as this State is concerned, of State and national interests of the highest importance to enable a parcel of worthless adventurers and criminals to live on the city taxes. That so many Democrats of light and leading should connive at concessions so shameful and disastrous, is the great puzzle of the day.

HISTORY OF THE PRESENT SILVER LAW.

As the late Secretary Windom came to his death while making a speech at a public dinner against the free coinage of silver, he has been in some sort canonized among the apostles of sound money. And such he was undoubtedly at heart. Nevertheless he was, if not the father, certainly the grandfather, of the present silver law, of July 14, 1890 He was also the undoubted father of the present Republican conceit that the Government ought to buy the entire product of *American* silver mines. The Republican politicians and newspapers are saying that their party was constrained to pass the present law in order to head off free coinage. What are the facts? What is the history of that law?

In 1878 a silver agitation, headed by Mr. Bland, culminated in the passage of a free bimetallic coinage bill in the House, for which even Mr. McKinley voted. It was rejected in the Senate. The outcome of the conflict between the two houses was the illogical compromise of 1878, which Mr. Allison proposed, and which became a law over the veto of President Hayes. That enactment has been the prolific parent of our subsequent silver anxieties. It initiated the compulsory purchasing and coining of fractional silver by the Treasury, with a limited legal-tender faculty that was devised for minor coins in 1853. The law of 1878 was that of 1853 with the legal-tender restriction removed. Silver had fallen from $1 30 in 1873 to $1 20 an ounce in 1878. The law of 1878 compelled the Treasury to purchase and coin not less than two and not more than four million dollars' worth of silver bullion per month. Every Secretary stood on the minimum quantity, but, nevertheless, when Mr. Cleveland was inaugurated, over 250 millions of silver dollars had been coined. On February 27, 1885, President-elect Cleveland wrote to Mr. Warner of the peril of the continued purchasing and coining of silver, and urged a repeal of the law of 1878. He said:

"These being the facts of our present condition, our danger and our duty to avert that danger would seem to be plain. I hope that

you concur with me, and with the great majority of our fellow-citizens, in deeming it most desirable at the present juncture to maintain and continue in use the mass of our gold coin, as well as the mass of silver already coined. This is possible by a present suspension of the purchase and coinage of silver. I am not aware that by any other method it is possible. It is of momentous importance to prevent the two metals from parting company; to prevent the increasing displacement of gold by the increasing coinage of silver; to prevent the disuse of gold in the custom-houses of the United States in the daily business of the people; to prevent the ultimate expulsion of gold by silver."

Congress would not stop the purchasing. To avert the then impending crisis, the Associated Banks of New York loaned the Treasury (July 30, 1885) ten millions of gold, on the collateral security of fractional silver coins, and the crisis was averted. Secretary Manning in two annual reports urged the next Congress to stop the silver-purchasing and coining. He urged it to prevent the hoarding, hiding, and deporting of gold coins, and also to promote international bimetallism. Congress turned a deaf ear, and silver-buying and coining went on at two millions a month till Mr. Harrison was inaugurated On November 1, 1889, we had bought some 300,000,000 ounces of silver and coined therefrom 343,638,001 silver dollars. In 1878 fine silver was $1 20 an ounce, but in 1889 it was only 93 cents, a fall of over 20 per cent.

When Mr. Harrison and Mr. Windom came into power, there was no real demand for an increase of Government purchases of silver. On the contrary, sound business men, coinage experts, and currency reformers asked that no more Treasury purchases be made. But what did the new Administration do? Secretary Windom gave up one-quarter of his annual report of December, 1889, to the silver question, which was not then at all "in the air" or a burning question. What did he say? He condemned compulsory purchasing *and coining*, as Cleveland and Manning had done, but upheld purchasing. He showed how futile it had been to arrest the fall of silver. He advocated the use of both metals as full legal-tender money, and declared the problem to be the attainment of such use. He went over six plans and condemned each and all. He said that "public sentiment" moved in favor of international bimetallism, but "some of the most powerful nations are not yet ready to act." He declared that nobody approved of the present policy of purchasing and coining only twenty-four millions a year. He opposed the purchasing and coinage of forty-eight millions a year, under the law of 1878, but only because he had a better plan. He denied that there was any contraction of the currency, and showed that it had increased by six hundred millions of dollars since 1878. He opposed free coinage; he opposed a heavier silver dollar as impracticable, and the issuing of certificates to depositors of silver bullion because that would be in effect free coinage for depositors. What did he propose as a solution of the silver problem? The proposition he urged was this:

"To open the mints of the United States to the *free deposit of silver*, the market value of the same (not to exceed $1 for 412.5 grains of standard silver) at the time of deposit to be paid in Treasury notes; said notes to be redeemable in the quantity of silver which could be purchased by the number of dollars expressed on the face of the notes at the time presented for payment, or in gold, at the option of the Government, and to be receivable for customs, taxes, and all public dues; and when so received they may be reissued; and such notes, when held by any national-banking association, shall be counted as part of its lawful reserve."

He advised that the *notes* be full legal tenders. The Republican House adopted that plan, but the Republican Senate substituted for it a free-coinage measure, and the law of 1890 emerged out of the conflict beween the two houses. There is little substantial difference between the faults of Windom's plan and the faults of the law of 1890.

GOVERNMENT RAIN-MAKING.

THE more fully the history of the Government rain-making expedition to Texas develops itself, the more ridiculous does it become. Now that the inner facts have leaked out, our readers can draw instruction, reproof, or amusement from the spectacle, as they deem meet. The project of sending a special expedition all the way to Texas to go through an ordinary Fourth of July celebration, for the sole purpose of bringing down rain upon the parched fields of that State, looks theatrical enough in itself. Taken in connection with the fact that a few hours' examination by a competent person would have shown that great battles had been without influence on the weather, vague surmises to the contrary notwithstanding, it becomes ludicrous.

To show how groundless is the notion that there is any relation between cannonading and rain, one need hardly go further than the little book in which Mr. Edward Powers tried to prove the contrary. By painstaking research he showed that during our civil war a great many "battles," "artillery fires," "gunboat firings," "attacks," and "naval actions," one-tenth of the whole number, perhaps, were followed by more or less rain, either next day, or in two, three, or four days. A farmer who should go out and blow his horn every Monday morning for a year would make a better showing than this, for his tooting would surely be followed by rain in two or three days oftener than one time in ten. Considering that we commonly have May showers through the whole early summer, and that actions of the kind which Mr. Powers most largely brings in were going on every week, not to say every day, coincidences of rain and battles were hardly possible to avoid. Every one who has given attention to meteorology knows that the atmospheric currents which bring rain are in almost constant motion, generally from west to east, at the speed of a railway train. The great mass of air which was over the heads of the combatants during a battle would, next day, be hundreds of miles away, to be replaced by another mass from an equal distance. If a cannonade brought rain at all, it would do it in a few minutes; if we wait hours, we have a new mass of air coming from a distance of hundreds of miles.

We have asked a mathematical expert to calculate for us the probable weight and force of an aerial current such as the explosions of a few balloons were expected to start or guide. He says, in substance, that the weight of the air is such as to press upon every square inch with a force of about fourteen pounds. This makes a weight of a little less than a ton to every square foot, and about 25,000,000 tons to every square mile. Multiplying by the area of Texas, we find that the aerial current over that State weighs more than five millions of millions of tons. The effect of the jump of one vigorous flea upon a thousand-ton steamship, running at a speed of twenty knots, would be vastly greater than that of the explosion of a ten-foot balloon upon this current. Indeed, the flea project would be the more sensible of the two, because the force of an explosion in the air goes out equally in every direction, and so would neutralize itself, whereas if the flea was made to jump off from the stern of the ship, the reaction of his feet would really push the ship along.

An appropriation for rain-making was inserted in the agricultural bill by the last Congress in connection with the Forestry Division of the Department of Agriculture. Several months passed away without either the Forestry Division or the Weather Bureau showing any sign of a desire to avail itself of the chance of immortality so temptingly held out. Indeed, we suspect that the chiefs were chuckling over the embarrassment of the honored head of their department in deciding what to do with the money. Then Senator Farwell, the putative father of the whole scheme, suggested the employment of a Washington attorney named Dyrenforth to take charge of the business. This gentleman had the indisputable qualification of absence of bias, being quite innocent of meteorology or of any other branch of science outside of his profession, and was therefore willing to take hold of the business seriously, instead of laughing at it, as all the scientists of the poor Secretary were suspected to be doing. How good a man he was from this point of view is evinced by the fact that, although he was going to make rain, he did not take a rain-gauge with him to measure it. Whether this was because he had never heard of such an instrument, or because such unpoetic conceptions as inches and hundredths would spoil the artistic beauty of his report, we do not know.

The expedition set out with many good words from the newspapers, who sought to add éclat to it by dubbing its chief "General," although this campaign against the sky was his maiden effort in the military line. It arrived on August 5, with the car-load of materials for the manufacture of dynamite and explosive gases so graphically described by the "General" in the *North American Review*. At first the weather was dry, but on the 10th there was a shower—how much of a shower no one

can tell, as the estimates vary from a few hundredths of an inch, hardly enough to wet the ground, all the way up to two inches, which is the General's own estimate. To have a rain come on its own account when his preparations for compelling it were not half made, would have been rather annoying had he not remembered that he had been trying his dynamite the day before, and had made quite a number of explosions. The cause of the rain was evident to the General, who would have been much surprised by the information that the air from which the rain fell was hundreds of miles away at the time of his explosions. The first telegraphic report ran: "Preliminary explosions made yesterday; raining to-day." In the *North American Review* it is expanded into a brilliant success, with nearly two inches of rain.

The preparations went on apace, but in a few days it became evident that a rainy season was setting in. Although the mornings were clear, the afternoons were cloudy, and the clouds were blacker and more threatening every day. Everything was ready for a regular battle on August 17, and next day the ground batteries roared almost constantly for twelve hours, while the explosion of oxyhydrogen balloons added terror to the scene. Just how much attention should be given to the assertions of an official of the Weather Bureau that a rain area covering 800,000 square miles was formed to the north of Texas before the roar of the batteries began, we leave to the judgment of the reader. The admitted fact is that rain commenced before night. One reporter says it was a light shower, but the General says "a drenching rain, which fell in torrents for two and a half hours" over several counties, and flooded the roads under four to forty inches of water.

Another brilliant success was scored on the 25th of August, when the weather-maps showed a repetition of the wide area of rain. Simultaneously with the formation of this area, the General began to discharge his batteries, and next day another brilliant success was scored. The chief had to leave for home after this triumph, but his lieutenants were still operating at the last accounts, so far as weather would permit them. They have found that in the absence of their General the clouds do not heed their artillery except "under favorable conditions," which persistently refuse to occur. In dry weather it is no use to bombard, because the weather keeps dry, as they have at last found by experience; and when a rainy spell sets in, what is still the use? It is evident that they lack the practical skill of their chief, who, as he himself says under his own signature, had a special line of explosives "to keep the weather in an unsettled condition."

All this may seem very funny, but it has more than one serious side. The unsophisticated farmers of Texas cannot imagine that the Government of the United States would spend thousands of dollars in sending a party two thousand miles away to indulge in the silliest performance that human ingenuity could devise; and they are contributing freely of their hard-earned money to supplement the work of the Government. What will they think when they find out "the true inwardness" of the affair? And, if our Government can be conceived to have a soul, should it not be ashamed of allowing such a deception to be practised upon its citizens? The least it should in honor do is to appropriate a fund for reimbursing the farmers.

Then, what possibilities are opened up in the event of a foreign war! If the Government can publicly organize and send out such an expedition as we have described, with the approval of its scientific authorities, what shall we say of the kind of men it enlists in its service? If, as we have every reason to believe, these authorities disapproved of the project from the beginning, and refused to take any part in it, and yet the project went on, what limit can we set to the possible absurdity of its operations against a public enemy? If Mr. Secretary Tracy should send out the North Atlantic Squadron to melt the icebergs on the Banks by bombarding the Gulf Stream off New York, his act would not be a whit more absurd than that of his colleague in sending his rain-making expedition to Texas.

THE POPULATION OF THE GLOBE.

To estimate the population of the globe at any given period with any approach to accuracy is a difficult, not to say an impossible, task. Only about one-half of the human race has been made the subject of systematic enumerations; the dates of the most recent enumerations in different countries are six years apart; and even then the official statistics are not always calculated to inspire unlimited confidence. A striking case in point is offered by our own census of 1890, which, although taken at the lavish outlay of more than eight millions of dollars, and with the aid of a vast army of enumerators and other officials, bristles with errors of which it is safe to say that more and more will come to light as its results are submitted to a more rigorous scientific analysis. If results obtained by such elaborate and expensive machinery are open to so many grave suspicions, it is by no means surprising that in the case of countries whose population can only be estimated, or, in plainer language, more or less plausibly guessed at, there should be the widest discrepancies between the various estimators or guessers. An extreme example is presented by the Chinese Empire, for which the estimates of reputable statisticians vary from 250,000,000 to 430,000,000. The difficulties of the task, however, have not deterred the experts in statistics from attempting its solution; and, by a patient and detailed examination and elimination of the manifold sources of error, figures have been arrived at which can lay claim to at least a temporary validity, and may be safely used for practical purposes.

Among the most highly esteemed and most trustworthy of such compilations have been the tables of population of Behm and Wagner, of which seven successive editions appeared between 1872 and 1882, when they were interrupted by Behm's death. After an interval of nine years this useful publication is now resumed, under the editorship of Hermann Wagner and Alexander Supan, in a quarto volume of 271 pages of statistics brought down to August, 1891, and including the British census of April 6 of this year. It bears the imprint of Perthes in Gotha and Westermann in New York. Other recent similar works are those of Émile Levasseur (1886-'87) and Hübner-Juraschek (1889).

The extant statistical material concerning the area and population of the habitable globe is submitted by Profs. Wagner and Supan to a minute and highly intelligent criticism, and their conclusions are in every case supported by reasons which are weighty and convincing. They estimate the total population of the globe at 1,480 millions, of which Europe has 357, Asia 826, Africa 164, America 122, Australia 3, the Oceanic Islands 7½. More than one-fourth of the human race is found in China and Japan, the former counting 350,000,000 and the latter 40,000,000; more than one-fifth is in India, 324,000,000, of which 286,000,000 belong to British India. Comparing the chief European States with ours, the only one that exceeds our 63,000,000 is Russia, 93,000,000. The others range as follows: the German Empire 49,000,000, Austria-Hungary 41,000,000, France 38,000,000, Great Britain and Ireland 38,000,000, Italy 30,000,000, and Spain 17,000,000.

The density of population is greatest in Europe, which averages thirty-seven inhabitants to the square kilometre, against nineteen in Asia, five in Africa, and three in America (2,823 square kilometres = 1,090 square miles). It will thus be seen that if the American and the Asian continents were as densely populated as Europe, the former would hold nearly the whole of the present population of the globe, and the latter a far greater population. The comparative densities of the principal countries, beginning with the most thickly populated, are as follows: Belgium 207 to the square kilometre, the Kingdom of the Netherlands 138, Great Britain and Ireland 124, Italy 105, Japan 105, the German Empire 91, China 90, British India 76, Switzerland 72, France 71, Austria 66, Denmark 57, Portugal 48, Spain 35, West Indies 22, United States 7. The order of precedence is somewhat changed if Germany and Great Britain are viewed, not as entities, but as composite States, and the States composing them are taken separately. In that case the kingdom of Saxony appears as the most densely populated country in the world, having 233 inhabitants to each square kilometre; and next comes England, with 209, and after that Belgium as above. If we take the separate States of our Union, we find at the top Rhode Island with 106, and Massachusetts with 104, ranging about even with Italy and Japan; next is New Jersey, 71, the same as France and Switzerland; Connecticut 57, the same as Denmark; New York 47, and Pennsylvania 45, a little less than Portugal.

An endless series of interesting comparisons suggests itself, but we will here confine ourselves to a few selections which may afford crumbs of comfort to the despondent publicists who view with so much alarm the increasing army of immigrants. The area of the United States is very nearly equal to that of all Europe, which has a population of 357,000,000; the State of Texas alone has a greater area than either Germany or Austria, whose populations are respectively forty-nine and forty-one millions. If that State were as densely settled as Massachusetts, it would hold nearly seventy millions—as much as France and Great Britain together. The area of the Middle Atlantic States is a little in excess of that of Italy, and, with a population as dense as that of Massachusetts, could find room for all the Italian people. In order not to go to extremes, we refrain from deducing the startling results that could be obtained by using the population of England or of Belgium as a basis, although there is no good reason why considerable portions of our country should not maintain as thickly settled a population. The very moderate assumptions made above are sufficient to show how little we are in danger of being crowded out of house and home, even if one entire half of all Europe and of all China were to be dumped upon our shores as fast as the steam fleet of the world could bring them here.

THE CORRESPONDENCE OF PAUL DUDLEY WITH THE ROYAL SOCIETY.

As the son of one Governor of Massachusetts, and the grandson of another Governor of that Province, the Hon. Paul Dudley was born with such advantages as attach to social standing in a colony. He was himself Attorney-General of the Province from 1702 to 1718; then a judge, becoming Chief Justice in 1745. It is in his character as a savant in the early years of the last century that we must concern ourselves with this old worthy of New England, whose name is commemorated in the Dudleian lecture of Harvard University.

The early papers of the Royal Society of England not only have been preserved, but are very accessible by means of a printed Index. If the Index had been brought down to a later date, it is quite possible that something fresh might be gleaned from the correspondence of Franklin with the Royal Society. The letters from which the subjoined extracts have been made were written by Dudley to the Secretary for the time being of the Society, and, of course, do not appear in the published Transactions of that body.

Writing from Boston on the 20th of June, 1719, Dudley says, referring to maple sugar, he cannot renew his correspondence with John Chamberlayne "on a sweeter subject (pardoning the pun)." To his chapter upon maple sugar he has nothing to add but that "our Physitians look upon it not onely as good for the common use as the West Indie sugar, but to exceed all other for its medicinal virtue." If his first essay prove acceptable, he may proceed further, and he says, "in particular I believe I could furnish you with some curiositys with respect to locusts (I mean the Insect) which would surprise you." Stepping aside from scientific subjects, Dudley touches upon matters of general interest. "We are just now rejoicing to hear of the defeat of the Spanish Invasion." . . . "On the other hand, I am greatly distressed to hear that Arrianisme (however it may be softened or disguised) prevails so much in the Nation, and especially among the Clergy of the Dissenters. The Church had need to pray now more than ever that He who walks in the midst of the golden candlesticks would hold the Starrs in his own right hand." Chamberlayne is requested to favor him with a particular account of that affair, and with "the true state of the controversy, and what means are taken to prevent the spreading of the Infection." Dudley mentions that his father "grows an old man apace."

On the 15th of March, 1720, he writes that the "Journall of Mr. Kellogg's Trading voyage from Canada to Missasipi is what I took from his own mouth and then digested into the method you see." Dudley says he has sometimes thought it might not be improper to communicate Kellogg's "corrections and observations to Mr. Hammond, sometime of the Navy, to whom Mr. Senex's map of North America is dedicated, or to Mr. Halley of the Royal Society, to whom that of South America is addressed, and who, indeed, corrected it." He makes a present to the Royal Society of a moose, "as being a Royal beast." Should it be in his power, he will send a live moose. He would have sent some further curiosities from New England, along with the moose, but that he was afraid of falling under the censure of Chamberlayne and Dr. Mather for sending them "by Douzens." Then he adds, "I hope my poyson wood tree came safe to your hands without harm."

Bearing Paul Dudley's signature, but without the date of transmission, there is "An Account of the Cataract or Falls of Niagara, taken at Albany, October the 10th, 1721, by P. Dudley from Monsieur Borassaw, a French native of Canada."

In a letter dated at Roxbury on the 14th of April, 1722, Dudley sends an account of a new island that rose up among the Azores in November, 1720, with Capt. Robertson's observations and draughts, also "a small piece of the cynders or pumice stone." He desires that Chamberlayne should offer the draught to Mr. Professor Halley, "who is the father of all charts or Mapps of the sea."

On the 2d of November, 1721, Paul Dudley was elected a Fellow of the Royal Society. Writing from Roxbury on the 3d of November, 1722, to the Secretary of the Society, the new Fellow says: "It is with great sincerity I acknowledge my unworthiness of the great honour the Society have done me, as in admitting me one of themselves so in accepting any of my performance, and to use the Poet's words:

"'Haud equidem tali me dignor honore.'

The diligent and ingenious Mr. More has lost no time in his searches after the productions of nature in this country since his arrival, and it has been a great pleasure to me to have given him some assistance therein." Our New England scientist then proceeds to make full acknowledgment of an awkward mistake he had made: "I cannot finish this letter without making a public acknowledgment of a great mistake I committed in my account of the poison wood tree, when I acquainted the Society that it bore no berries, for I now find it to be beauteous, and have sent some of the very berries. This last summer I sent a box of that poyson wood by one Capt. Cutler, who left it, as he tells me, with a brother-in-law of his in London, Mr. Callowell, who may be heard of at the Exchange in London."

Writing on the 6th of July, 1723, to Dr. Jurin, the Secretary of the Royal Society, Dudley says: "The miscarriage of my poyson wood by Mr. Callowell was some little mortification to me, because, as I remember, I put into his box a Draught of the late new Island that rose out of the sea near the island of Fayal, which, if the Society have not yet seen, I can recover, for I kept an exact copy of what the shipmaster presented to me, who, indeed, was the first Englishman that discovered it. Our friend Mr. More is gone to the neighbouring Colony's with all the recommendations we could possibly give him from hence."

On the 3d of October, 1724, he writes from Roxbury: "I have now presumed to send you a few observations on the plants of New England, as a gleaning after Mr. More's greater harvest, which I hope he has long since spread before the Society. I am endeavouring after a short natural history of our Whales, which I hope to send you some time this winter, with a box of some few curiosities to amuse you with. I did myself the honour some months since of sending you the relation of an extraordinary cure by sweating in Turf, but do not yet know whether it ever arrived."

On the 10th of October, 1724, he says: "This is my second and short letter, by the King's ship, and serves only to tell you that I have done myself the honour to present the Society, by Capt. Darell's hands, with a cane made out of the jawbone of a spermacoeti whale, and also a tooth taken out of the same fish, of which creature I hope in my next to give the Society a very particular account."

From Boston he writes, on the 11th of December, 1724, that he hopes in the spring to send a further account of some remarkable cures by a new way of sweating "practised by some of our physitians." He has observed among the English prints an advertisement of a new treatise of philosophy in opposition to Sir Isaac Newton, and wishes for the opinion of the secretary of the Royal Society upon the book, and whether it be worth sending for.

A letter of the 19th of December, 1724, is by way of introducing Dr. Zab. Boylston, as regards whom he writes: "I dare not pretend to be a judge in his profession, but he is in high esteem in his own country, for his great skill, long experience, and happy success in surgery, and I know him to be an ingenious and worthy man; and God made him a singular blessing in our late terrible small pox. While some hundreds died in the natural way, he was the happy instrument of saving many scores of lives by the new method of Inoculation." . . . "I understand his design in his present voyage is to improve himself yet further in the new and happy way of cutting for the stone."

On the 2d of April, 1725, he writes from Roxbury: "I beg the favour that nothing may be published as from the Royal Society about Ambergreese till you receive my account of that secret, for I have taken no small pains to be a master of that matter, and the Society may depend upon the account I shall send them, having got it from the most capable persons in this Country." From Roxbury, on the 5th of April, 1725, Dudley forwarded 'An essay upon the Natural History of Whales, with a particular account of the Ambergreese found in the Sperma Coeti Whale. In a letter to y^e^ Publisher by y^e^ Honourable Paul Dudley, F.R.S.' "I have been much assisted herein," he says, "by the Rev. Mr. Greenleafe of Yarmouth, near Cape Cod, and Mr. J. Coffin, sometime of the island of Nantucket, both of them places famous for the Whale Fishery." In this paper Dudley first published the conclusion at which the Ameri-

can fishermen had arrived, that ambergris was produced in whales by disease. In a patriotic spirit he wrote: "I hope the Society will accept of this first Essay, and allow my poor country the honour of discovering, or at least ascertaining, the origin and nature of ambergreese." After mentioning that he was enjoying "a little ease from his gravely pains," he proceeds: "I observe the Cambridge Dictionary spells Sperma Coeti, Parmacity. If you judge it best to write the word so, I must pray you to see it altered where it occurs."

From Roxbury, on the 7th of November, 1725, he writes: "I should be glad to tell you that I had undertaken, according to your desire, observations on the weather. I have yet no Barometre, but expect one in the Spring, and when it comes I am afraid my riding the Circuit, and frequent absence from home, will render it impracticable for me to be constant in my remarks." . . . "Mr. Roby (?), sometime a fellow of our college at Cambridge, tells me that he has lately sent over to the Royal Society three or four years observations on the wind and weather."

On January the 21st, 1726, he writes from Roxbury: "Mr. Greenwood, one of this Country, who has spent some years in London under Dr. Disaguliers, is lately returned to us, and I hope will make and transmit such observations in Natural Philosophy and occurrences of that nature as may deserve the Society's acceptance."

The sage of Roxbury sent quite a budget of contributions to the Royal Society, on the 21st of January, 1726. There is "A remarkable cure of a person sweating in malt in New England, October, 1724." The heroic cure described by Dudley was applied to Thankful Fisb, a young woman of Falmouth in New England, who was subject to faintings. Next is a cure of severe rheumatism by "Sweating in Rum," effected in the person of the wife of Mr. Richard Dummer of Newbury. Then comes "An Account of a stone taken out of a horse, at Boston, in the year 1724." The stone weighed 5⅛ lbs., and measured 17 inches one way, and 17¾ inches another way. After this is "A relation of a man's ear, remarkably Fly-blown, and cured, 1724." Mr. Jeremiah Fuller of Newton, near Boston, a farmer of good credit, was the subject of this experience. To this follows "A short account of the Aurora Borealis that appeared on the 27th day of March, 1726, at night in Roxbury, and many other places in New England." Two other papers complete the contribution. These are "A surprising instance of the nature and effect of Lightning, June 24th, 1724," and, "Salt Water, or the Spray of the sea, carried many miles into the Country," etc.

On the 13th of November, 1727, Dudley communicated an "Account of the several earthquakes which have happened in New England, since the first settlement of the English in that Country, especially the last which happened on Oct. 29, 1727."

The last letter was written at Roxbury on the 12th April, 1733, and is addressed to Dr. Mortimer. In it Dudley writes: "I have endeavoured after my poor fashion to observe the seasons and have now sent them. Mr. Greenwood, our mathematical professor, who lives but five miles from me, acquaints me that he likewise does the same."

Besides his contributions already referred to, Paul Dudley furnished the Royal Society with papers upon the following subjects: "A description of the Moose deer in America," "A method lately found out in New England for discovering where the Bees hive in the Woods in order to get their honey," "Of a new sort of Molosses made of apples," "Of the degenerating of smelts," "Account of the rattle snake."

When that disreputable self-dubbed Knight, Sir James Hill, after failing to get admission to the Royal Society, wrote his abusive 'Review of the Works of the Royal Society of London,' he did not fail to attempt to throw ridicule upon Dudley. Referring to Dudley's contribution respecting ambergris, the self-styled Sir James characterized the New England observer as "the ignorant introducer of an ignorant paper of somebody's else, to a society who were ignorant enough to do both of them honour for it." This was not bad by way of abuse; but, the disappointed medico notwithstanding, Dudley's explanation of the origin of ambergris is that which holds good to-day. Hill's venom had need to vent itself still further upon our early New England scientists, and hence the following biting snarl: "The third [paper] is by the Honourable Paul Dudley of credulous memory, a gentleman damned to fame by many a well-intended but ill executed paper: one of the first encouragers and supporters of this now immortal Society, and who seems to have had a very great share in the establishing, by example, the principle since so happily introduced into the Body—that it is not necessary for a Member of the Royal Society to understand the subject he writes about."

PAUL BOURGET IN ITALY.

PARIS, September 30, 1891.

ONE of my friends, who is somewhat paradoxical, said to me some time ago: "I have a great admiration for Pierre Loti, and, besides, I am extremely grateful to him." "Why?" asked I. "He has killed the *genre descriptif*, of which I am heartily sick. This profuse, minute, elaborate, photographic, continuous description of things big or small, important or unimportant, becomes in the end very fatiguing. Now Loti has pushed the art of description as far as it can go. He has been a painter in words more than anybody. Who can think of describing the sea after the 'Pêcheur d'Islande'? Who will dare paint Japanese flowers, the chrysanthemums, after him? I think the French Academy would do well to offer a prize, and a very large one, to any one who can write a volume of three hundred pages without using a single adjective or adverb." It is quite true that the art of description has been carried very far in our time. There is a realistic school in literature as well as in painting, and I am sometimes amazed on reading, in some of the light papers which are open to literature, articles which display a curious and almost morbid talent for description.

I made these reflections before opening a new book by Paul Bourget, which bears the singularly characteristic title of 'Sensations of Italy.' Mark the word sensations—not impressions. It is all the more characteristic of the time in that Bourget is not, like Guy de Maupassant, a materialist: he is essentially a spiritualist; he delights in analyzing the most delicate shades of thought, of passion; he lives, so to speak, in the human heart, especially in the feminine heart. But even he must sacrifice to the gods of the hour. In the novels which have made his reputation, and which are striking and sometimes very deep studies of the weaknesses, the failings, the complexities of the human heart, he must here and there indulge in elaborate descriptions of furniture, of dresses; the thinkers must make room for the *tapissier* and the *couturier* (for there is now such a word in our tongue). To be sure, even these materialistic and to my mind somewhat vulgar descriptions of the surroundings of his heroes and heroines have an object—the influence of the *milieu* must be felt. A poor and weak man, suddenly thrown among all the luxuries of our millionaires, and among the women who are the costly flowers of our Parisian parterre, is a curious object of study. Still, Bourget sometimes goes too far, and he gives the painful impression of caring too much for wealth and the surroundings of wealth himself. A man of the world ought never to care for his clothes, to give a thought to them: when they are new, they must be worn as if they were old. Balzac has long, very long, descriptions, but they always prepare you for the drama; they are intensely suggestive. The descriptions in Bourget's novels have too much sameness. One fine drawing-room must resemble another fine drawing-room; and the description of them seems very dull to those who are accustomed to live in fine drawing-rooms. The play of passion, the dialogue, ought to fill almost completely the modern novel.

My criticism, of course, cannot apply to a book of travels. A traveller must perforce be descriptive, and therein lies the great difficulty in writing a good book of travels. This difficulty increases tenfold when you have to write on Italy, a country which more than any other has been visited and described; and Bourget felt it when he began his work with these words: "Reader, have you preserved, notwithstanding the present political misunderstandings, a passionate fondness for Italy, and in Italy for the corners which are more refractory to our levelling cosmopolitism? Once across the Alps, have you, in consulting your guide-book, thought of those little towns which have only two or three pictures, but divine pictures, whose legendary name evokes some great historical memory?" And so he goes on, and almost begs pardon for giving us his notes of a journey undertaken in the autumn of 1890, across Tuscany, Umbria, the Marches, Otranto, and Calabria, outside of the great classical centres.

I am so fond of Italy, and have spent so many happy hours in that country, that I have read every line of these 'Sensations.' The circumstances in which the journey took place (Paul Bourget was married last year, and took his wife with him on his journey) contributed to increase the natural sensibility of the author; he becomes in some pages almost a poet. But, strange to say, his usual sadness does not seem to be relieved—for Bourget is essentially sad; the comic vein is entirely wanting in him; he has no humor; he is always depressed, and his novels are pervaded with an almost painful melancholy.

His 'Sensations' begin at Volterra, and from Volterra we are taken to Colle, Siena, Monte Oliveto, Pienza, Montepulciano, Chiusi, Città della Pieve, Orvieto, Perugia, Assisi, Ancona, Foggia, Lucera, Bari, Brindisi, Lecce, Taranto, Cotrone, and Reggio—not a banal itinerary, as you see; a ramble through parts not in the ordinary current of tourists. Bourget makes no pretension to be an archæologist or even an art critic. His notes are condensed. I quite approve of his method of not trying to *do* everything, and to remain always under a powerful and strong impression left by some great work of art. It is so pleasant to leave an Italian city, and to say to one's self, "I will come again," though perhaps we never shall come again. But notes taken in this spirit are apt to become mere pretexts for fine writing. Bourget's 'Sensations' generally end in some

psychological meditations and analyses; his mind is bent in this direction, and, as Milton has said, "the mind is its own place."

Bourget expresses some opinions which deserve to be noticed. At Orvieto he criticises the mania for restoration which has seized upon the architects of all countries, especially in Italy. There is now in Italy, as there has been in France for a long time, a "Commission on Historical Monuments." This Commission propose to make such changes in the Duomo as will completely reëstablish the plans of the primitive style:

"O the barbarism of the archæologists, who do not understand that the sort of vegetation added by centuries to the first lines of a building gives it the charm of a living thing! Men have lived here since the architect built the house. They have prayed here. They have touched this building with their pious hands. . . . What people call a restoration only introduces the coldness of death, since in the place where life was palpitating, life which is always complex, incoherent, and too full, but which is life, . . . Will there ever be a time when the truth of the ironical words of Goethe will be admitted: 'The spirit of history, why, it is the spirit of these gentlemen'? Then it will be forbidden modern painters to give youth to a picture or to a frieze, as they have done in the Campo Santo of Pisa, to the irreparable damage of Orcagna and of Gozzoli: the old pictures of these noble masters have become *peinturlurages* of a horrible brilliancy. Then it will be forbidden the archæologists to clean a ruin."

Bourget goes, perhaps, too far: some restorations of monuments, discreetly made, have been very successful; but it is quite true that many others have been very unfortunate. It is equally true that it is childish to suppress in a church, for instance, where the primitive design is kept in the monument itself, pictures, altars, bronzes which have been added by each generation, and which form a sort of transition between the present and the past. To imagine that a church built in the Roman style must have nothing in it which is not Roman, has always seemed to me a mistake.

The pages written on the old Convent of Monte Oliveto are among the best in the book. The old abbey is preserved from complete ruin only by a decoration of Signorelli and of Sodoma which has given it the deserved honor of being classed among the national monuments. Only a few monks remain in it since the secularization of church property in Italy. Bourget found in the library a big folio, the treatise of Saint Irenæus against the Gnostics:

"Ah!" says he, "the marvellous psychology of the work, and how it throws in the shade all our poor essays. The pride of the mind, rising to the most sterile dilettanteism or to the most desperate revolt, the pride of life punished by the follies of sensualism—these are the two great maladies of the modern soul, its two great sins. Nihilism is the end of it now as it was then. This old convent, red among its black cypresses, which has lasted for several centuries, teaches us a possible remedy for these miseries, if it were only by telling us who they were that have inhabited it. The inscriptions which we read, here and there, on these walls tell us to believe first—that is to say, to humble ourselves before the unknowable Cause of the world, to accept the mystery which surrounds us as a mystery, to take as incomprehensible what is incomprehensible; but with the confidence that some day this sorrowful darkness will be lighted. Resignation with hope—'s not this, amid all the contradictions of creeds and dogmas, the common ground of all piety?"

Here we have the true Bourget, the man who carries in his heart a deep wound, and who goes through life, looking at pictures, at palaces, at churches, as if all these were immaterial things, mere symbols, mere expressions of some inner thought. The traveller is as sad as the novelist; the novelist sees deceit at the bottom of every passion, and remorse and sorrow; the traveller looks with a weary eye on the world as if it were but "a fleeting show."

These 'Sensations' would have been better named 'Impressions,' because the whole tone of the author's reflections is idealistic. It is pessimistic also; and if a man is a pessimist in Italy, what will he be under our northern skies? On the whole, you leave this little volume with a curious mixture of pleasure and pain. The writer has won your pity more than your admiration; but is not "la pitié suprême" the end of all our philosophy?

Correspondence.

STATE AND NATIONAL POLITICS.

To the Editor of The Nation:

Sir: Your interesting article with the above title has furnished food for thought. Why is it that State politics have lost their interest and become absorbed in national? In the history of European countries, the hardest thing has been to get the people to give up their local prejudices and interests in favor of the central Government. Before the war, State politics had their full share of interest, while, as you point out, the State Governments are really of much more importance to the people than the Federal. I find the explanation in the completely colorless character of State politics as at present organized. All those things which deprive national politics of any real interest—the committee system, with its secrecy and want of responsibility; the absence of personal leadership; the scramble of private and local interests; and the rule of the lobby—are repeated with perfect exactitude in all the forty-odd States. But there is a further evil. In nearly, if not quite, every State the chief executive officials are elected separately from the Governor, which is fatal to anything like efficient administration. In some States, as in Massachusetts, this has resulted in setting up a number of commissions to do the work which properly belongs to the executive. In others it has produced pretty nearly an administrative deadlock. The result in either case is that the people know nothing about State affairs, or who is responsible for anything.

In the Federal Government, on the other hand, there is a chain of subordination from the President down to the day-laborer, with one man for each place. Not only, therefore, is the Federal Administration thereby rendered infinitely better than that of any State, but it appeals more powerfully to the imagination. Besides that, the President occupies one of the most conspicuous positions in the world; he is regarded as the personal head of this enormous machinery. For many years the possession of the offices was almost the sole basis of the Republican and Democratic parties, while now that this has been weakened by civil-service reform, and the names have little or no meaning, the most frantic efforts are put forth by politicians to keep the parties together, and especially by striving to drag the States at the tail of the national cart.

But just as the defects of government are really more dangerous in the States than at Washington, it is just in State politics that attempts at reform are also most needed. I have always maintained that the rule of the lobby is to be overcome at Washington by giving the Cabinet officers seats in Congress. Exactly the same thing for the same purpose is wanted in the State legislatures. But for this purpose also another thing must be brought about which already exists at Washington, and that is that the Governor should have the power of appointment of his "cabinet" instead of their being elected separately from him. The effect of this would be to do away with the government by commissions, just as there have been none, at least till very recently, under the Federal Government.

There is no hope in this direction from the State legislatures any more than from Congress, but I have for many years believed that a strong man who, as Governor, should go straight to the people, explain the difficulty, point out the remedy, and ask for their support, would receive it to an extent which would compel the Legislature to yield. Hence the intense interest which I feel in the present election. Gov. Russell, in his inaugural message, urged upon the Legislature action both as to the lobby and the commissions. That body has opposed him as far as it could, and paid no attention to him for the rest. I do not think he is as clearly convinced as myself as to the character of the necessary remedies, but at any rate he has shown the point of attack, and is following it up gallantly in the campaign. If he should run much ahead of his ticket, he will be almost compelled to move onward.

Meantime, the Republicans have imported numbers of the leading national politicians as speakers, have set up a candidate for Governor who will be as wax in their hands, and are making desperate efforts, in this purely local election, to swamp the State with the McKinley and Silver Bills. Massachusetts is, I believe, the first State which, by an investigating committee of the Legislature and by a message of the Governor, has attempted a formal resistance to the lobby, and—by the action of the Governor at least—to the government of the State by executive commissions. Therefore it is that I say deliberately that not only to this State, but to every State in the Union, it is of more importance who is elected Governor of Massachusetts this year than who is next year elected President of the United States. Gamaliel Bradford.

Boston, October 17, 1891.

THE LAW OF "VIS VIVA."

To the Editor of The Nation:

Sir: In your review of Herbert Spencer's 'Essays: Scientific, Political, and Speculative,' occurs the following sentence:

"Besides, the law of *vis viva* is plainly violated in the phenomena of growth, since this is not a reversible process."

The words "law of *vis viva*" seem from the context to be used as synonymous with "law of the conservation of energy." Does your reviewer really mean to assert that in the phenomena of growth we are presented with a *plain* violation of the law of the conservation of energy? Such an assertion would be so astonishing that I cannot refrain from asking for further explanation. L. M. Hoskins.

Madison, Wis., October 12, 1891.

[It ought not to be necessary to remind a professor of mechanics in a reputable university that the law of *vis viva* was familiar to mathematicians for much more than a century before the law of the conservation of energy was heard of. The one is a principle of molar mechanics, the other of general physics. The kinetical theory of mat-

ter, which is intimately associated with, but is not involved in, the law of the conservation of energy, supposes that when the motions of molecules are taken account of, the law of *vis viva* is not violated in the action of viscosity, etc., where, considered as relating to *molar* motions, it is violated. As we referred to this, there is little excuse for saying that our context seems to confuse the two propositions. But since our correspondent is astonished at our saying that growth is an irreversible process, and therefore plainly violates the law of *vis viva*, and since, as professor of mechanics, he is familiar with the theorem that every action under a conservative system of forces is reversible, it appears that he would say that growth (including reproduction and the evolution of new species) is a reversible process in the sense in which the actions of viscosity, etc., are not reversible.

We said nothing about the law of the conservation of energy, which is the grandest discovery of science. Still, as a scientific generalization, it can only be a probable approximate statement, open to future possible correction. In its application to the ordinary transformations of forces, it has been pretty exactly verified. But as to what takes place within organized bodies, the positive evidence is unsatisfactory, and, in connection with the question of the will, we cannot feel sure the principle holds good without assuming a partisan position which would be unwise and unscientific. In an age when the axioms of geometry are put in doubt, it would not be astonishing to hear any physical principle challenged; but we repeat that our remark looked only to explaining the irreversibility of growth, in the same way in which inorganic irreversible processes are explained, by the application of probabilities and high numbers.—Ed. Nation.]

AN ISRAELITE ON THE GRIEVANCES OF ISRAEL.

To the Editor of The Nation:

Sir: In the London *Anti Jacobin* there is a paper—the second, I believe, of a series—by "An Israelitish Wanderer," on "The Grievances of the Jews in Russia," which I would commend to those who are willing to see the truth about the Jewish question. According to this Israelite, the grievances consist much more in the vexatious action of certain local officials than in the iniquity of the laws. However, he concludes thus:

"It is deplorable that public opinion in Russia should so largely approve of the expulsion of the Jews, even when it is done under cover of ordinances doubtfully applicable. But who can honestly say that it is unnatural? Beyond all doubt, economic causes, trade rivalry, business competition, are at the bottom of much of the hostility against the Hebrew. If a dozen Jewish traders settle in a town where a dozen Christians have been carrying on business, the whole trade will be transferred to the Jews within a measurable period of time. It may be argued that this is done to the advantage of the community at large; but yet it is not easy to persuade the worked-out Christians of that, or their neighbors of their own race and country. It takes a deal of delight in political economy to make up to a man for the loss of his bread; and we who are Jews should be the last to decry the sympathies of race or to deny that blood is thicker than water."

The whole paper confirms the view that this is a social and economic question, not a case of religious persecution, to which not the slightest allusion is made.—Yours faithfully,

Goldwin Smith.

Toronto, October 16, 1891.

JOHN ROGERS OF PURLEIGH.

To the Editor of The Nation:

Sir: Mr. Whitmore's letter, published in the *Nation* of October 8, led me to inquire of the New York libraries for any of John Rogers's works, and I was rewarded by finding a copy in the library of the Union Theological Seminary, in the keeping of Mr. Gillette, who courteously permitted me to use it. The copy is, unfortunately, somewhat imperfect, the title and eight leaves being wanting; but the former owner had supplied them in manuscript. I was surprised to find that the titles given in Drake's Catalogue and in Lowndes's 'Manual' were different from the title as copied into this volume—*Ohel* or *Beth shemesh* being the heading to one of the divisions of the work. The true title is:

Dod or Chartran
The Beloved; or
The *Bridegroom* goeth forth for his *Bride*.
And looking out for his Japhejaphita, his
Faire One, or his *Church* adorned with
double
Beauty and Excellence,
viz.: *Spirit* and *Truth* in these *latter days*—

and much more to the same effect.

The work, a quarto of 596 pages, is in fact nothing more than a "red-hot" Puritan diatribe, masquerading as a manual of church discipline; and its dedication to Cromwell and the epistle to the Commissioners of Parliament in Ireland prove the writer to have been a politician of no mean pretensions. Its composition was begun in Ireland about 1652, and completed in London, the second Epistle being dated from "My study, Thomas Apostles, 17th day of Zin, 2nd month of 1653." The style is that of a bitterly partisan pamphleteer, employing the well-nigh unintelligible jargon of the Puritans of that age of controversies, and crowded with puns and italics, metaphors, Biblical quotations, and references to all manner of things. "When you can take a turn or two in this Treatise," he wrote to Cromwell, "among such trees of Righteousness as are of the Lord's own planting (in his gardens) which will lead you with delight (if the Lord give but light) to James's (the Apostle) yea, beyond; till you come to make Sion-house for your Excellencies' habitation," etc. He must have thought it necessary to lighten the reading a bit, and so inserted some execrable poems by ministers in praise of the author and his treatise, calling them "some amber of Ingenuity dropping out in the following verses," etc. Even then Cromwell, if he "took a turn or two," must have been peculiarly constituted not to have been led astray; and at this very time was more anxious to reach Parliament House than Sion-house. This copy lacks the portrait that is mentioned by Lowndes.

It is in the autobiographical items that the book becomes of interest to us, but the language in which the writer relates his "experience" should be read, to appreciate the man's earnestness and uncouth expressions. He was a school-boy at Malden, in Essex, when he was first "rouzed" by the teaching of Fenner and Marshall. When aged ten, he slept in church, and was awakened by the minister's awful pictures of hell and its torments, and this produced a great effect upon his mind, incidentally leading him to evolve a recipe for keeping awake in church, which is duly recorded. His father, Nehemiah Rogers, who wrote on the parables, had some influence upon him, and he preached in Huntingtonshire when he was eighteen or nineteen. It was at this period that he seriously takes up Puritanism, disgusts his relatives and friends by his preciseness, is turned out of doors, with about three shillings and sixpence in his pocket, to "wander up and down a strange country"; applies to several colleges for admission as a poor scholar but is refused; is subject to dreams and has them carefully interpreted; is twice saved, of course by some special providence, from "self-murther"; drifts to Brudenel's house in Huntingtonshire, where he teaches school, as he also does in the free school at St. Neotts; and is sent for and settles in Essex. This is a bald account of what occupies many pages in his quarto, loaded with much that is odd and characteristic. The entire absence of dates makes it difficult to follow his narrative, especially as his "experience" ends with his call to Essex. We must depend upon other parts of the book for further information.

He went to Ireland, and was involved in some bitter controversies there. He appears to have made some enemies, one in particular, against whom he harbors a malignant spirit. He says, in metaphor, he embarked in a vessel (the church) with others, and hoisted the sail in a fair wind. But a storm arose, and "one vessel which was in our ship was full of stinking liquor, and yielded an ill savor"; and he wished they had thrown it overboard, but the storm hindered. The storm referred to the religious controversy of the time, in which the author took an active part, and, as a reward, was slandered in England and Ireland, but was countenanced by the commissioners sent out by Parliament. We give his own account as a sample of what the 596 pages are largely made up of:

"It is time to rescue my name and reputation from those *Bum-baylies* that have arrested, and roughly handled it, at the *Devil's suit* out of *malice* (which was like *rennet*, the *older*, the *stronger*). I have met with men like *Colledge Butlers*, who have set up a pace upon *honest* men's names, and charged them to the *full* (with full maliced and foul-mouthed aspersions) which they will never wipe *off* again without I pay them (soundly) for it (which in time I may doe more fully, before good witness too). . . . So did one in Dublin, aspersing my person, and traducing the truth, possessing some people with *strange opinions* of me, as if I held many errors, who therefore looked upon me as an outlandish man, made up of strange fashions. . . . But one great one amongst them, that had this spleen in his soul so passionately, that the smelling of it made his other parts to languish lamentably and apparently in the eyes of all; and to break out ulcerously in his language against me and others, with noisome words, which were of the worst savour."

So it may be concluded that Rogers did not lack the excitement of persecution: refusing to "dance after the pipes and adore the pride" of some great man—perhaps the same represented as the vessel—he was called a "poore, empty, silly fellow." Evidently Ireland became too hot for him, and he found a resting-place in London. As he states that he began the Treatise "about a yeare ago," *i. e.*, say in 1652, his Irish career must have been short, for it was in August, 1649, that he was directed to pay to Mrs. Washington a part of the Purleigh tithes. This may account for his mention of the "oppression of that Babylonian brazen yoke of tythes, which ought to be removed." The only mention of Purleigh I found was an "experience of John Osborne, of the Church at Purleigh."

Worthington C. Ford.

Notes.

PART vi. of the 'New English Dictionary' has been ready for some months and will soon be here. We are informed that it will contain matter especially interesting to Americans under *Congregational, Congress, Conepatl, Colin, Cockle, etc.*

Additional announcements of Macmillan & Co.'s fall publications are 'The Last of the Giant-Killers,' by the Rev. J. C. Atkinson; 'Some Aspects of the Greek Genius,' by Prof. S. H. Butcher; 'The Inferno of Dante,' translated by A. J. Butler, and completing his version of the 'Divine Comedy'; 'English Literature at the Universities,' by J. Churton Collins; 'A History of Early English Literature,' by the Rev. Stopford A. Brooke; Historical and Miscellaneous Essays, in two volumes, by Prof. E. A. Freeman; 'The Present State of the Fine Arts in France,' by P. G. Hamerton; 'The New Calendar of Great Men,' edited by Frederic Harrison; 'Battles, Bivouacs and Barracks,' by Archibald Forbes; 'The Government of Victoria (Australia),' by Prof. Edward Jenks; 'The Pioneers of Science,' by Oliver J. Lodge, with portrait and other illustrations; 'British Seas,' by W. Clark Russell; 'Historical Outlines of English Syntax,' by the Rev. R. Morris and Dr. L. Kellner; 'England and the English in the 18th Century,' by William Connor Sydney; 'Mahdiism and the Sudan,' by Major F. R. Wingate; and the novels of Thomas Love Peacock, edited in nine volumes by Richard Garnett.

The Duchess d'Uzès, whose devotion to the Orleanist cause made her the easy dupe of Boulanger, and also brought upon her a good deal of what must have been very annoying publicity, belongs to the class of noble dames who, like the Queen of Rumania, seek for occupation, or for fame, in the following of art. Such women are often clever; but they are far more apt to do "a little something" in several arts than something in any art. The Duchess d'Uzès paints, and composes music, and works in sculpture, quite to the satisfaction of her many friends. She "writes, too," under the pseudonym of "Manuela," and the new novel, 'Julien Masly,' which Ollendorff has just published, is from her pen. She wrote it (as she says in an interview) because she "wanted to try." Whatever the literary quality of the book may be, it will be sure to have in Paris a success of curiosity and of esteem.

A book which will be of a certain interest to readers in general, and of a special interest to some, has just appeared in M. L. Baudry de Saunier's 'Histoire générale de la Vélocipédie.' The author shows a good deal of research in his treatise, which conducts the reader from the rudimentary vehicle of Ozanam in the seventeenth century through the *célérifère* of the Revolution, and the *draisienne* of the Restoration, and the inventions of the Second Empire to the bicycle of to-day. The book contains many illustrations, reproduced from old engravings, both serious and jocose.

The correspondence of Eduard Mörike and Theodor Storm, edited by J. Baechtold, is announced by the publishing house of Göschen in Stuttgart.

The discussion of the authorship of the 'Imitation of Christ' seems to be as lively now as when it began, two hundred years ago. The latest English addition to the already enormous literature of the subject is Mr. Leonard A. Wheatley's 'Story of the Imitatio Christi,' one of the volumes of the "Book-Lovers' Library" (A. C. Armstrong & Son). The author, who is a staunch maintainer of the claims of Thomas à Kempis, here gives an expansion of the matter contained in his article "Kempis" in the 'Encyclopædia Britannica.' The question is now so far narrowed down that, though the hypotheses are numerous, the only important claimants of the authorship of the 'Imitation' are Thomas and the Chancellor Gerson. The arguments on both sides are fairly given in this beautifully printed little volume, in which we have also a list of the manuscripts of the 'Imitatio,' and a chrestomathy from the other works of Thomas, the resemblances pointed out being held to be an important factor in the critical problem. The theory supported by Michelet and others, that the 'Imitation' is an impersonal work, a collection of reflections composed by various writers, is not considered by Mr. Wheatley; it seems, however, to be worthy of examination so long as the absence of all distinct historical statements makes the reference of the book to any particular man difficult, if not impossible. As a popular introduction to the critical study of the 'Imitatio,' Mr. Wheatley's book is admirable.

A critical history of the canonical Hebrew literature from the modern scientific point of view has long been a desideratum. Kuenen has done the work admirably for the Hexateuch, but a general survey of the field has been lacking. This has now been accomplished by the Oxford professor, Canon S. R. Driver, in his 'Introduction to the Literature of the Old Testament' (Charles Scribner's Sons), which forms the first volume of the "International Theological Library," edited by Professors Briggs and Salmond. Prof. Driver's critical position is that of the modern school (represented by Kuenen and Wellhausen), and he holds that critical conclusions do not touch either the authority or the inspiration of the Old Testament. His collection of materials is full enough to enable the reader to form a judgment for himself; and his method of presentation is so cautious and fair that one must respect his argument even when one cannot accept his result. His book should supersede all others in this field. The mechanical execution of the American edition is not good; the binding is inconvenient, and the English small print is not clear. The Hebrew print is excellent.

We have had occasion, within the past few months, to note the appearance of several manuals designed for use in the moral education of children, at home or in school, and now comes another, in many respects the best of them all, Prof. C. C. Everett's 'Ethics for Young People' (Ginn & Co.). With very little of formal division, the author devotes the best part of his forty-six chapters to the treatment of the smaller moralities, as they are called, remembering (what many writers forget) that these are of much greater concern to a child and his teacher than more generalized and abstract conceptions of duty. The first ten chapters are expository and historical, and of most value, perhaps, for the older heads, but what follows could be put with great advantage in the hands of children at the beginning of the reading habit. This does not mean that the style is lowered for the supposed needs of childish minds; it is throughout dignified and serious, while simple, and no more cast in the hortatory vein than was, perhaps, inevitable. Such chapter-headings as "Ambition," "Self-Respect," "Usefulness," "Good Temper," "Fun," "Kindness to Animals," "Industry," and "Temptations" (this last peculiarly excellent), will indicate the "lowliest duties" dwelt upon. The whole makes a book deserving of praise and use.

Mr. Henry Adams's position as an historian is so well established that the collection of his fugitive writings, 'Historical Essays' (Charles Scribners' Sons), is certain to be read with interest. They are nine in number, and appeared at intervals in various periodicals. Perhaps the one on the New York Gold Conspiracy attracted most attention at the time of its appearance, but there are others of more permanent importance. The essay on "Primitive Rights of Women" contains some suggestions of interest both to anthropologists and to social reformers; and that in which Mr. Adams attempts to trace the connection between the tortuous diplomacy of Lord John Russell at the outbreak of our civil war, the Declaration of Paris, and the formerly strong leaning of England to belligerent as against neutral rights, is very curious.

Mr. Theodore Child's papers on South America are too fresh in the minds of readers of *Harper's Monthly* to require detailed notice now that they have been collected into a sightly volume, 'The Spanish-American Republics' (Harpers). They are able to bear the test of consecutive reading, and show that, for the territory covered, Mr. Child is the most competent and keen-eyed observer we have had of late years. If they are deficient on any side, it is on that of the literary aspirations of the people, kept up in reverence of the old traditions, and the elaboration of social ceremonial common to Spanish-speaking races. Both of these matters, however, Mr. Child expressly and judiciously disclaims authority to speak upon, rightly saying that insight into them can be gained only by prolonged residence. In view of the fact that he visited only five or six of the Spanish-American republics, the title of his book could have been made more exact; as it is, some may possibly be misled by it.

'The Fine Arts,' by G. Baldwin Brown, Professor of Art in the University of Edinburgh (Charles Scribner's Sons), is one of the University Extension Manuals, and may be recommended as an eminently clear and sound brief statement of the aims and conditions of art, especially in the three forms of architecture, sculpture, and painting. It is likely to be really valuable to that large number of people who, while unable to give much time to the study of art, are yet interested in the subject and would like some guide to the better understanding of the artist's aims and ways of feeling, and some explanation of the main conventions of art. It is necessarily brief and not carried far in detail, but is admirable as far as it goes. Particularly good are chapter ii. of part ii., on "The Work of Art as Significant," in which the ultra theories of the apostles of art for art's sake are discussed, and chapter i. of part iii., on "Architectural Beauty in Relation to Construction." On both of these points the author's views seem to us to be exceedingly moderate and just.

A second, enlarged edition has just appeared of a work useful both from a literary and from a linguistic point of view, viz., Prof. Augusto Romizi's 'Paralleli Letterari tra Poeti Greci, Latini e Italiani' (Leghorn). It is in thirty-seven chapters.

The British Museum reports particularly rich acquisitions of Bibles during 1890. Among them was a Frankfort Bible of 1534, containing the woodcuts of which those in the Coverdale Bible of 1535 were an imitation. Notable also was a Madagascar Bible, printed in Malagasy in 1830–35 at Antananarivo. The rarity of perfect copies of this Bible arises from the fact that the impression was destroyed in the persecution, while the few copies which survived were mostly cut into small portions for the sake of concealment. Another treasure added during the same year is the "Sex quam

elegantissimæ epistolæ," letters which passed between Pope Sixtus IV. and the Republic of Venice in 1482-83. Edited in England by an Italian priest, they were printed by Caxton in 1483. By this acquisition "the number of Caxton's known publications not to be found in his own country has been reduced to two."

There has recently been an interesting find of Luther MSS. in the town library of Zwickau, Saxony. Among them are numerous sermons preached as early as 1512 and reported by his friends. This was when his views upon justification by faith were beginning to take shape, and they are said to show very vividly the workings of his mind and conscience at that time. Earlier than these are notes in Luther's own handwriting on Augustine, Peter Lombard, and Tauler. There are also notes of a course of lectures delivered at Wittenberg in 1516 on the Book of Judges. Some of these documents have already been published.

From an article in the Milan *Perseveranza* of Sept. 26 it appears that the introduction of compulsory gymnastics in the secondary schools has not been attended with success, and that medical certificates of disability are readily obtained in too great numbers. It occurs to the editor that the element of amusement and recreation must be sought after, and he holds up the English games and sports for emulation, just as the French reformers are now doing. He would thus supplement the gymnastics, not abolish them.

It is significant of the professional recognition which women physicians have attained to in Great Britain, that, for the first time since its inception in 1874, an account of the London School of Medicine for Women appears in the student's number of the *Lancet*, for the current season of 1891-92. This leading but conservative medical journal describes this admirable school for women in its list of "those metropolitan schools that have a complete curriculum, and give a medical education capable of enabling their students to present themselves to all the examining boards that give licenses to practise medicine and surgery."

Another magazine is, together with the *Overland Monthly*, to afford expression to the writers of the Pacific Coast. The *Californian Illustrated Magazine* is published in Los Angeles. For its illustrations it depends wholly (so far) on "process" cuts. The most readable article is that on the Mount Wilson Railroad, a very great enterprise by which the astronomer and the tourist will both profit. Dr. Walter Lindley begins a series of articles on the climatic conditions of the Pacific Coast. We must also mention, for text and illustrations, the paper on the Desert Sea—the Salton Sea in the Colorado Desert—which was the sensation of the day a few months ago. A map and photographic views greatly aid the narrative.

—The current issue of the *American Journal of Science* contains in full the highly suggestive Presidential address delivered before the American Association, in August last, by Dr. George L. Goodale of Harvard, on "Some of the Possibilities of Economic Botany." Dr. Goodale had lately returned from the meeting of the Australian Association for the Advancement of Science at Christchurch, New Zealand, at which he represented the American body, and his preliminary remarks dealt with this interesting gathering. He next compared the total number of species of plants known to botanical science or probably existing—upwards of 110,000—with that of plants and trees either cultivated for their multifarious properties or utilized in their wild state; the latter being less than one per cent. of the former. The question arises whether there is any probability of important additions to our short list of vegetables, fruits, cereals, fibres, dyes, flavors, drugs. Prof. Goodale traced the history of our present cereals, and estimated that if a universal blight should overtake them, and them alone, our experiment stations could, from those left untouched, develop equivalents in half a century; and he named the wild rice of the lakes and some seashore grains as already worthy of experiment. Taking up vegetables, he enumerated the clearly distinguishable varieties of our commonest, which are surprisingly many, and quoted from Vilmorin a most striking illustration, in the case of the cabbage, of the range of variation and obscurity of indications as to the available possibilities of the wild plant. The progress of the tomato from the highlands of Peru furnished another instance. From Japan Prof. Goodale thinks we may borrow certain beans and roots and salads. What he had to say as to fruits was most captivating in the hope held out of eventually raising seedless berries and grapes, coreless apples and pears, stoneless cherries and plums, propagated by bud division as in the case of bananas and pineapples. In this department, too, Japan will help us out. The address closed with an indication of the way in which promising plants should be systematically investigated under exhaustive conditions, in the interest of commercial botany. Dr. Goodale bespeaks the communication of "any facts of interest regarding the local or exceptional uses of any plants, especially of those wild plants which have not yet found a place in the economic lists."

—The interest in Celtic folk-lore seems to be on the increase, and, thanks to the researches of H. Zimmer, a firm footing has been gained for the study of certain cycles. One of these is the Finn cycle, and a number of interesting tales clustering around it have recently been published in the third volume of the Argyllshire Series of 'Waifs and Strays of Celtic Tradition,' edited by Lord Archibald Campbell (London: David Nutt). The first volume of the series contained 'Craignish Tales,' by the same collector, and the second was 'Folk and Hero Tales,' by the Rev. D. MacInness (one of the publications of the English Folk-Lore Society). In these volumes the original Gaelic text is given with a translation and notes by Mr. Alfred Nutt. The stories themselves are extremely interesting, and those relating to Finn have a certain epic grandeur. As we have already remarked apropos of Celtic popular tales, they afford the usual themes found in the tales of other countries, but the connection is so loose and irregular that few close parallels can be given. An interesting example is found in the present collection, p. 145: "A Tale of the Son of the King of Ireland and the Daughter of the King of the Red Cap." The theme is the quest of the Swan-Maiden Bride, with which is combined the kiss taboo, etc., but the arrangement of the episodes makes it impossible to cite any close parallel. So also with (p. 222) "A Tale of the Son of the Knight of the Green Vesture," in which occurs the theme of the Grimm story of "Donkey Cabbages." Mr. Nutt's introduction is a sensible view of the various theories of folk-lore, and the collector has appended many valuable notes.

—The results of recent researches in Bible lands are so widely scattered in books and periodicals, and so often inaccessible to the general reader, that Mr. George St. Clair must be considered to have done the public a great service in collecting them in his 'Buried Cities and Bible Countries' (Thomas Whittaker). As lecturer for the Palestine Exploration Fund, he has had special opportunity and occasion to get correct information, and his book has the great recommendation of being trustworthy in its statements of recent discoveries. The greater part of his space is devoted to Palestine, though he has much to say of Egypt and Mesopotamia. The reader will here find a good account of the extraordinary discovery of mummies in 1881, of the excavations of Mr. Petrie and M. Naville, of the astonishing revelation made by the El-Amarna cuneiform tablets found in 1887, of the work done in Jerusalem by Warren and his assistants, of the geographical surveys of Conder, Merrill, and others, of Mr. Petrie's investigation of the site of ancient Lachish (1890), and of the explorations in Babylonia and Assyria. This last is the least satisfactory portion of the book, omitting, for example, the mention of the Cyrus tablets, which throw such a flood of light on the character and policy of that monarch. Mr. St. Clair holds to the literal historical accuracy of the narratives in Genesis and Exodus, and assumes a good deal that the historical facts do not warrant; his main interest in the discoveries he details is based on the illustrations they give of the Bible history, and these illustrations he is everywhere concerned to bring out. He assumes Joseph's Egyptian career and the realness of the oppression, but he gives no Egyptian evidence in their favor. This feature of the book does not, however, diminish the value of its archæological information; it is undoubtedly one of the most interesting and useful of recent publications in this field. It may be mentioned that the author holds that Amenhotep IV., the last king of the eighteenth dynasty (who is supposed to have been under Semitic influence), was the last favorer of the Hebrews, and that the "new King who knew not Joseph" was Ramses I., the first king of the nineteenth dynasty. Good lists of authorities are appended to the various sections, and the printing (done in Edinburgh) is excellent.

—It is very good news that M. Alphonse Daudet, whose ill-health during the last few years has given his friends cause for grave apprehensions, has come back to Paris after a long season in the country, full of literary activity. He is busy in finishing two plays, the title of one of which, 'Soutien de Famille,' gives a clear glimpse at its character. The other is a pastoral, of the sort of 'L'Arlésienne,' "sans farandoles, mais toute de fièvre," and, as Daudet says, "en demi-larmes." The pastoral will be given at the Odéon. As to the other play, the only thing settled about it is that it will not be offered to the Comédie Française, nor played there. Since 'L'Arlésienne' was refused at that theatre, Daudet has sworn that no other of his pieces shall ever be represented there, and he has taken toward the Rue Richelieu the same attitude that he maintains toward the French Academy. Besides these plays, he has just finished a short novel, of a couple of hundred pages only, the theme of which, "enfants dans le divorce," seems to forebode more heart-wringing of the sort that was accomplished by 'Jack.' There is also another novel nearly done, 'La Caravane,' a long work, which is said to have given Daudet much trouble in the making. Still another book, which was announced several years ago under the title of 'Mes Douleurs,' is yet upon the stocks with its name changed to 'La Doulou.' Daudet says that he works upon this every day, since he suffers every day, but that he probably will never publish

it. Perhaps it is better that the world shall miss the poignant spectacle of the sufferings of a keen mind and a good heart.

—The controversy excited some ten years ago by the publication of Prof. Bugge's studies on the origin of the Norse sagas shows no signs of abatement. Most of the older Germanists still reject the views of the Norwegian professor, and the venerable but fiery Dr. Sepp of Munich does not hesitate to denounce this attack on the genuineness and integrity of the Edda as "an outrage on the national religion," and a sacrilege sufficient to kindle the wrath of the manes of Jacob Grimm. The younger generation of Germanists discuss the difficult questions involved more calmly and dispassionately, and are inclined, for the most part, to accept Bugge's conclusions. At any rate, they have the immense advantage of perceiving that scientific problems cannot be solved, but are rather obscured, by vituperation. Among the latest and most important contributions to the subject are Dr. Mogk's 'Abriss der deutschen Mythologie,' a portion of which has already appeared in Paul's 'Grundriss der germanischen Philologie' (vol. i., pp. 982, sqq.), and E. H. Meyer's 'Völuspá' (Berlin: Meyer & Müller, 1889, pp. 298), and 'Die eddische Kosmogonie' (Freiburg i. B.: Mohr, 1891, pp. 118). Meyer maintains that the 'Völuspá' is of foreign origin, and paraphrases in the popular style of the sagas the theological notions current in the Middle Ages concerning the genesis of things, and that it was written by the Icelander Sæmund early in the twelfth century. Of course he does not affirm that these ideas concerning the creation of the world and its final destruction are originally and exclusively Christian: they are common to the traditions and speculations of all the nations of antiquity, and can be traced back to the Assyro-Babylonian cosmogony as their primitive source. All that he asserts is, that they came into Iceland as the result of the Christianization of that country through the school at Oddi, of which Sæmund was the head and through which Snorri Sturluson borrowed the cosmogonic and mythological conceptions embodied in the so-called Snorra Edda. Thus, for example, he regards the Norse trinity of Odhin, Vili, and Vé as an imitation of the Christian Trinity of the Father, Son, and Holy Ghost, and thinks that this is evident from the etymology of the names and the mutual relations of the three persons.

MACHIAVELLI'S PRINCE.

Il Principe. By Niccolò Machiavelli. Edited by L. Arthur Burd, with an introduction by Lord Acton. Oxford: Clarendon Press; New York: Macmillan. 1891. Pp. xl, 403.

It is with equal pleasure and surprise that we welcome this admirable edition of a great Italian classic from the hands of an Englishman hitherto unknown to us; for English scholars are still somewhat negligent of Continental masterpieces, often devoting their critical talents to the study of a third-rate Latin or Greek author rather than to a first-rate modern. But Mr. Burd's edition of 'The Prince' is not only remarkable as being the work of an Englishman, but as being the edition for which the world has been looking for three hundred and fifty years. He has at last made it possible for any reader to form an unprejudiced opinion of the meaning of Machiavelli's famous treatise. With all the patience, industry, and research of a German, he has collected his materials, and he has set them forth with a clearness and terseness to which but few Germans attain. The service which he has thus rendered must be as permanent as is the interest of 'The Prince' itself, for he has at last moored to the solid rock of fact that work which has, during ten generations, been drifting to and fro on the conflicting tides of opinion. How important this achievement is hardly needs to be explained here, because every one who knows anything about Machiavelli knows that, as the ablest exponent of one of the great theories of political authority and ethics, he has not been and cannot be superseded. Machiavellianism is an element which human society has not eliminated, a force whose working can be as clearly traced to-day as in the days of the Borgias.

Regarded as an artistic creation, Machiavelli's Prince has had no peer in modern literature except Goethe's Mephistopheles; the former is the personification of the selfishness of a State, as the latter is of the selfishness of the individual who denies all obligations to God or man, and seeks only to gratify his passions, whatever may be the injury he inflicts on his fellows. But Machiavelli had no poet's creation in view when he drew his portrait of the Prince; his aim was intensely practical, and he trusted to observation, to facts, not to sentiment or imagination, for the substance of his work. Seeing Italy harassed by a multitude of petty tyrants, and constantly overrun by foreign invaders, he believed that her only hope lay in the expulsion of the "barbarians," and in the gradual consolidation of her distracted provinces under the sway of one ruler. But what sort of a man must such a ruler be? What are the means by which princes acquire and hold States? These are the questions Machiavelli asks himself, and to find answers to them he examines the actual methods and characteristics of the princes of his own and former ages. He discovers that not devotion to the common weal, but to self-interest, not justice but success, not right but might, are the great forces and considerations which determine the actions of monarchs. Therefore, a prince who would succeed must excel his rivals in the employment of craft or cruelty; morals no more concern him than they concern a general in battle; his one duty is to conquer, and, if he conquer, victory excuses all his crimes. Indeed, the Prince (or State) cannot truly be said to commit crimes, being a law unto himself. "I do not describe what ought to be, but what is," Machiavelli would retort to his critics. "You may prefer a world which you would call more moral, but this is the world in which we are placed, these are the tricks and forces which dominate it. It is as idle to complain that a monster like Alexander VI. occupies the chair of St. Peter, or that ruffians like the Sforza lord it over Lombardy, as that water runs down hill. The facts are as I have stated them: strength prevails over weakness though the strong man be wicked and the weak be virtuous; shrewdness and guile impose upon simplicity; it is not a question as to which is ideally worthier, but as to which succeeds."

The best proof of the accuracy of Machiavelli's portrait is the storm of abuse that it provoked. He had blabbed an open secret, and from both princes and peoples came an indignant denial. The former protested that they were not the villains, the latter that they were not the fools, he painted them. They branded him as a blasphemer of human nature, as a cynic and reprobate who imputed to mankind the basest motives. His enemies, not content with assailing his maxims, loaded his memory with evil insinuations that he was personally a depraved man—as if to imply that his horrid opinions were the natural outcome of his life. Even his apologists dared not defend the literal interpretation of his treatise, but they insisted that it had a hidden meaning which justified it and exonerated its author. Cardinal Pole, one of the earliest and most virulent of Machiavelli's critics, states that when he attacked 'The Prince' before Machiavelli's fellow-citizens, they always replied,

"as they said M. himself did, . . . that in the book he had regard not only to his own feeling, but also to that of the man to whom he was writing. Now this man [Lorenzo di Piero de' Medici] he knew for a tyrant by nature, and so he put in things which could not fail to please such a nature exceedingly. Still he, like every other writer on the education of a king or prince, was of opinion, and experience verifies it, that these very things would, if carried out in practice, make the tyrant's reign a short one. Now this was exactly what he desired, for his heart was all afire with hatred of the Prince to whom he wrote, and he had no other object in the book except this—by writing to a tyrant things which a tyrant loves, to hurl him, if possible, headlong to self-destruction."

Another school of defenders maintained that Machiavelli did not so much aim at hastening the downfall of princes by instigating them, by his disingenuous counsel, to commit fatal blunders, as to put in the minds of the people a knowledge of the cunning by which they had been duped, in order that they might thenceforth be duped no more. This latter, which we may call the "antidote theory," since, according to its advocates, Machiavelli, in describing the effects of political poisons, suggested their remedy, has been, on the whole, the most popular of all the various apologies; and it is worth recording that the Italians, during their long struggle to oust the Austrian "barbarian" and to shake off their native despots during the present century, quoted, after Dante, none of their bygone great men more often than Machiavelli. But, on the other hand, the army of his enemies, large from the first, have kept up a persistent fire down to the present time, varying their points of attack and adopting different weapons, but holding fast to their detestation of "Old Nick." To abominate him and his doctrines has long been an easy way to win reputation for superior virtue; but might it not be cited as evidence of the skill with which Machiavelli dissected human nature? It is significant that the Company of Jesus, which has persistently followed the teachings of 'The Prince,' and that Frederick the Great, a Machiavellian monarch if ever there was one, have been among the loudest to denounce and deny their master. The attitude of the world towards Machiavelli reminds us of that of a camp meeting at which the revivalist preacher requests those of his hearers who hate the devil to stand up—and all rise.

But this is not the place in which to record and examine the great mass of prejudices and opinions which have, for three centuries and a half, prevented 'The Prince' from being dispassionately viewed; merely to indicate them will suffice for our present purpose, which is to express deep satisfaction that, with the publication of Mr. Burd's book, any excuse for misconceptions in the future is removed. He indulges in no empty or Pharisaical abuse, he does not hold up his hands in holy horror, nor believe that by declaring that he detests lying and killing he has "answered" Machiavelli. Wisely leaving the Ten Commandments to defend themselves, he aims simply at giving the reader every possible help to understand exactly what Machiavelli meant, and he does this by furnishing ample historical information about the period in which the Florentine

Secretary lived, and by elucidating 'The Prince' with quotations from Machiavelli's other works. Thus we are able to see how much of Machiavelli's doctrine was common to his time, and how much was peculiar to himself, and to estimate his work as a whole, instead of in fragments. Hitherto, it has been too much the habit of critics to pick out a few obnoxious sentences and to direct their whole attention to them; Mr. Burd makes it possible for any one to know which opinions Machiavelli elsewhere qualified, which he abandoned, and which he held to the end of his life.

Instead of writing a formal biographical and critical introduction, Mr. Burd limits himself to a brief statement of the purpose of 'The Prince,' of the conditions under which it was produced, and of the attitude of early critics towards it; then, in a copious Historical Abstract, he sets down year by year the principal events in Italian politics and in Machiavelli's personal fortunes, between 1469 and 1527. By this last plan the reader can turn quickly from any passage in 'The Prince,' in which contemporary affairs are alluded to, and find a succinct narrative of them; this is all the more important because Machiavelli draws from the current affairs of his day most of the illustrations for his doctrines. Mr. Burd's knowledge of the history of Medicean Italy will best be appreciated by those who have themselves studied the Renaissance most thoroughly. It is rare indeed to come upon so comprehensive a summary of any epoch as that on pp. 23-26, in which the condition of decaying Italy is described with great force and compactness; and many of the notes, as, for instance, the short prefaces to chaps. 3 and 18, and the note on Cæsar Borgia (pp. 214-217), are models of what the best editorial work should be.

The key to Mr. Burd's own attitude towards 'The Prince,' and, as we firmly believe, the true one, is contained in the following passage (p. 16):

"In modern times hardly any science of which the subject-matter is man, viewed under one aspect singled out from many others, has been brave enough to neglect the other points of view from which man may be regarded. Political Economy is the classical exception; and it is characteristic of modern feeling that there should be so much opposition to those who choose to regard men solely as creatures under the laws of supply and demand; and the belief that to disregard moral causes which influence even commercial action vitiates the conclusions of political economists, is in a measure justified. The same holds good of political science: any attempt to reckon without the sentiments and permanent moral convictions of men is doomed beforehand to failure. But there may be a moral interest in eliminating one side of human nature, the most capricious and the least subject to law, in order to trace the operations of cause and effect, assuming that no disturbing agencies will be present.

"Machiavelli, in 'The Prince,' has eliminated sentiment and morality, though the interest to him was not merely scientific, but practical also; he did so partly deliberately and partly without any distinct consciousness that he was mutilating human nature. But whatever considerations determined the method he employed, he followed it without swerving, consistently and logically. . . . Whether by thus considering only one aspect of human nature at a time he has vitiated his own conclusions, or whether this is rather the condition upon which alone he could solve the problem which he set himself, may be doubted; but it would be unfair in any case to argue from his silence and his omissions that he had lost the consciousness that man might be regarded as a moral being; he merely declined to allow moral considerations to interfere, as he believed they did, with the logical discussion of the subject in hand."

Readers who are acquainted with Lord Acton's great erudition and ability, and who have cause to regret that he so seldom displays them in print, will turn at once to his Introduction, and will probably be disappointed by it, at least at first. For instead of its being a criticism by Lord Acton upon so remarkable a personage as Machiavelli, it is rather a collection, gathered from the most various and recondite sources, of the opinions which philosophers, politicians, and theologians have expressed on Machiavelli and Machiavellianism during the past three hundred years. Only the cement in which these mosaic-bits are embedded is Lord Acton's own, but from the design he has wrought, and from his brief comments, we can infer what his own views are. He would maintain that Machiavelli's account of the practice of rulers and states is in the main correct; that, whatever may be the talk about moral considerations, self-interest really determines international policy, and that the cases in which an unselfish motive has prevailed are few compared with the habitual employment of Machiavellian principles.

On the surface we are easy-going optimists, whatever may be our inmost genuine convictions, and either we strive not to see the evil forces by which we are hemmed in, or we call them by pleasant names. We assume that many of the enormities which shock us as we look back upon the past, perished with the past. But it is better to know the truth than to dream in a Fool's Paradise, for, until we have measured an abuse, we cannot successfully combat it. And Machiavelli's 'Prince' is one of the books which should be read and pondered by every man who would see some of the aims and methods that have characterized the dealings of states and rulers since the beginning of history. The form which Machiavellianism assumes may vary, but its essence remains fixed. Europe to-day is as much under the sway of selfish principles as Italy was at the beginning of the sixteenth century. The belief that might makes right, that there is no appeal from brute force, that the State can do no wrong, that success justifies all measures, and that weakness is the only failure, the only unpardonable sin—these are so easily deducible from the current practice of European nations that we need do no more than mention them; and these are true Machiavellian doctrines. We are shocked at the name, but not at the thing. Metternich, Louis Napoleon, Bismarck, Beaconsfield—be the result of their policy good or bad—were all practical disciples of the Florentine master of statecraft; and as evidence that under a republican form of government human nature does not change, we need only cite the success of such vulgar and clumsy Machiavellians as Butler, Blaine, and Quay. Their success is the best evidence that our public would be benefited by reading 'The Prince,' in which are set down, as in a scientific treatise, the signs by which the political charlatan can be detected and so guarded against. Of course, Machiavelli no more invented the traits which are called by his name than Goethe invented those traits in human nature which he personified in Mephistopheles; to have analyzed and described them as he has done assures for him and his book the permanent attention of students of politics and ethics. "Religion, progressive enlightenment, the perpetual vigilance of public opinion, have not," says Lord Acton, "reduced his empire, or disproved the justice of his conception of mankind. He obtains a new lease of authority from causes that are still prevailing, and from doctrines that are apparent in politics, philosophy, and science. Without sparing censure or employing for comparison the grosser symptoms of the age, we find him near our common level, and perceive that he is not a vanishing type, but a constant and contemporary influence."

ROBINSON'S CAST CATALOGUE.

Boston Museum of Fine Arts. Catalogue of Casts. Part III. Greek and Roman Sculpture. By Edward Robinson, Curator of Classical Antiquities. Boston: Houghton, Mifflin & Co. 1891.

Among the many advantages which large collections of casts afford to the study of ancient art, one of the most conspicuous is the opportunity they offer for the compilation of scientific catalogues, embodying in chronological sequence the principal monuments of Oriental, Greek, and Greco-Roman sculpture. Such books or manuals are superior to systematic histories of art in one particular, namely: they deal almost exclusively with facts and leave very little room for theories. When antiquated, they require supplements, but do not need to be completely rewritten, as should be, for instance, Overbeck's 'Geschichte der Plastik,' the third edition of which (1881) is now so strikingly out of date. Archæological literature already possesses several good catalogues of that kind by Friederichs, Hettner, Kekulé, Blümner, Michaelis, and others; the first and the last, describing the large collections at Berlin and at Strassburg, are certainly the most useful and most widely known. Friederichs's great work, first issued in 1868, was reedited in 1885 by Wolters; the main defect of this new edition is lack of condensation, due to a somewhat superstitious regard for the original. The catalogue we owe to Prof. Michaelis (1887) is much shorter, but superior to the Berlin one by reason of the judicious selection of monuments all of real importance to the antiquarian; while the Berlin collection, like that in the École des Beaux-Arts at Paris, contains many casts which chance alone has brought together.

It is, indeed, an advantage for such collections to have been formed at a recent date, under the direction of an experienced archæologist; so in this particular the Boston Museum of Arts, begun in 1876, is inferior to none excepting the museums of Berlin, Paris, Strassburg, and perhaps Dresden. It now, moreover, enjoys the benefit of having a catalogue perfectly adequate to the requirements of modern science, more detailed than Michaelis's 'Verzeichniss,' less encumbered than Friederichs's 'Gypsabgüsse,' and as readable as it is reliable. The first edition, published in 1887, contained 414 numbers, the present one describes no less than 800, against 2,270 in Berlin, and 1,470 in Strassburg. Mr. Robinson, the curator of classical antiquities, has done his work very thoroughly; his descriptions of the most important items, such as the Lycian marbles, the sculptures from Olympia and the Parthenon, the Niobides, the Laocoön, etc., are written in a quiet and sober tone, without the least touch of that unscientific *pathos* which Friederichs sometimes, and more recent archæologists too often, indulge in. The various information relating to each object is given in a most practical way—to begin with, the subject treated and the place where the original is preserved; then, in smaller type, the material (bronze, marble, etc.), the history of the work and mention of the collections it has belonged to, the restorations, and, finally, the publications, including only the more important references to archæological literature.

As the Boston collection is expected to increase very rapidly, the Catalogue will have to be reissued more than once. We hope that the following observations may prove of some use both to the Catalogue and to the Museum.

To begin with the Museum. The study of ancient Attic art is now based principally on the statues, in marble and in calcareous stone, which have lately come to light on the Acropolis. Casts of these statues do not exist, nor will the Greek Ephoria ever allow any to be taken, for fear of injuring the delicate coloring which adds so much to their value. But, on the other hand, a collection of casts cannot fairly represent the state of our knowledge without these most important relics of the old Attic and insular schools. The problem can be solved only by securing good copies of the statues which it is not possible to mould. Such copies, made under the superintendence of archæologists, would be quite the equivalents of casts, and far superior for study to any photographs, colored or not. It would be well worthy of the Boston Museum and of its generous supporters to take the initiative in having them made in Athens, while the members of the American School would certainly be glad to superintend and to control the work.

The second desideratum we should indicate refers to the sarcophagi. All collections of casts, not excepting that at Berlin, contain but very few samples of these sculptures, the high value of which is only just being recognized in the light of the admirable reliefs discovered at Sidon. These, of course, with their charming polychromy, cannot be cast, but must be copied—a task which a most distinguished sculptor would not find unworthy of his talent. But there are at least one hundred sarcophagi which can be cast without any inconvenience and at a comparatively small cost; a collection of them would be of the greatest interest and would form a prominent feature in a museum.

One more series would be, in our opinion, very profitable to students and to the art-loving public in general. It should comprise the minor bronze statues, which have not as yet received due attention in any museum. The identification and classification of such statuettes is now very difficult, owing to the small number of them which have been published and brought together. A set of two or three hundred casts, painted in dark green or blue, as they are in the Musée de Saint-Germain-en-Laye, could easily be collected in Paris, Berlin, and Naples; it would be the first step towards a much required *corpus*. Unfortunately, the British Museum allows no casts of its bronzes to be taken, but the day is certainly not far distant when that most absurd prohibition will be removed. A collection such as could be made within a few years would be quite unique, and, when published with the proper care, might illustrate many a dark corner in the history of ancient sculpture.

With regard to Mr. Robinson's Catalogue, our chief criticisms must bear on the references given at the beginning of every article. These references are introduced by the word *published*, which is used in a too broad sense. To have a monument engraved is one thing, and to describe or mention it is another, and these two kinds of "publications" should never be confused. Take, for instance, No. 540, the statuette of Aphrodite in the Museum at Argos. No engraving or photograph of it exists, so far as we know, but you nevertheless read in the Catalogue: "*Published*: Conze, in the *Arch. Anz.*; Milchhoefer, in the *Mitth. des Inst.*," etc., passages which, when examined, are found to contain only brief descriptions of the work. Thus a statue may very well be inedited and deserving publication (*stricto sensu*) without the reader of Mr. Robinson's Catalogue being able to ascertain that fact.

The reference should always be divided under two heads—(1) Engr (avings) and (2) Descr (iptions) or ment (ions). Again, we think that the corresponding numbers of the Friederichs-Wolters 'Gypsabgüsse' ought not to be indicated, as they are, at the end of the reference, but at the beginning, not *in extenso*, but in an abridged form, such as "F. W. No. 191" The 'Gypsabgüsse' giving the literature up to 1885 with sufficient completeness, the author of a more recent catalogue can, while referring to the German work, dispense with restating the greater number of old quotations, and lay more stress on recent publications which have appeared since 1885. Making a choice among many references is a difficult task, and requires much personal knowledge of antiquarian literature. Mr. Robinson has often done this very well, but in a few instances we cannot find that he has made the better choice. Whenever a photograph has been published in book form, it must be quoted preferably to all engravings. For instance, in the case of the Apollo of the Belvedere (No. 652), we should have referred to *Bollettino Commiss. Municipale di Roma*, 1889, plates xiii.-xiv., and not to Visconti, Müller-Wieseler, or Mitchell. Again, the only heliograph of the Melian Venus in conformity with its present appearance has been published in the *Gazette des Beaux-Arts*, May 1, 1890, and should have been quoted under No. 539. In the same paragraph, Mr. Robinson refers to Goeler's book on the Venus, wherein he does rightly, but he should not have mentioned Ravaisson's pamphlet (1871), which has no permanent value, and contains many errors now acknowledged by the author himself. Haeberlin's 'Studien zur Aphrodite von Melos' (Goettingen, 1889) might have been quoted instead as a résumé of recent work on the subject. The references given to the Hermes of Olympia (No. 516) are now antiquated, all previous publications having been superseded by the splendid folio dedicated to Mr. Gladstone by Rhomaïdes (Athens, 1890), and we should have expected to find the title of one at least of the recent papers relating to the replica of the Hermes.

As a rule, it should be borne in mind that the true object of a reference is to refer the reader to a book or periodical where the questions bearing on some work of art are discussed at full length; therefore we think it proper to avoid quoting second and third-hand manuals, which can give but a few lines to the study of a single statue, and to mention instead original papers in magazines or special monographs. *A fortiori*, it is worse than useless to quote bad or rare works such as the 'Galleria Giustiniana' (No. 173), Laborde's 'Athènes' (No. 24), Knight's 'Arch of Titus' (No. 727), when plenty of other and better references are at hand. An archæologist, before quoting a book or an engraving, ought always to reflect if he would himself think of taking them up in case he needed further information. It is from this point of view that Mr. Robinson's references seem sometimes open to criticism.

Minor shortcomings in the Catalogue are very scarce. On p. 48, the lion gate of Mycenæ is said to be derived from a Phrygian model; the reverse is infinitely more probable. On p. 118, we should have called in question the genuineness of the Talleyrand Jupiter, or at least indicated that it has been largely remodelled. On p. 303, we remark that Mr. Robinson repeats the statement according to which the Apollo of the Belvedere was discovered at Antium, which has lately been proved to be erroneous. Pp. 324–327, the terracottas "formerly in the Campana collection" are now in the Louvre. On p. 50 and elsewhere, the periodical issued by the French School at Athens is styled 'Bulletin de *la* Correspondance Hellénique.' All these defects are very slight and easy to correct; they by no means impair the merit and usefulness of a work which will be gratefully received by all archæologists, by whom trustworthy books of reference are greatly needed.

Charles Grandison Finney. By G. Frederick Wright, D.D., LL.D., Professor in Oberlin Theological Seminary, Ohio. [American Religious Leaders.] Boston and New York: Houghton, Mifflin & Co. 1891.

It means either a wide inclusion or a scarcity of good material, when a man of Finney's limited influence and imperfect character and training is one of those selected to figure in a series of American religious leaders. There could be no better evidence of his secular antecedents than his name, Charles Grandison. Pious Christian parents in Connecticut in 1792 would never have named a child after the hero of Richardson's novel. The story of his conversion is quite as remarkable as that of any of the more famous saints, and has much psychological interest, the visions that were palpable to him as things of touch being non-existent for others present. It is an interesting and instructive feature of Prof. Wright's treatment of Finney's conversion that he is disposed to minimize its supernatural character, of which Finney, in his autobiographical 'Memoirs,' made all he could. In several instances Prof. Wright finds himself obliged to check these 'Memoirs,' finding in them a good deal of reflection backward from the opinions of Finney's later life. He was already twenty-nine at the time of his conversion, and, though a leader of the choir, was thought to be past praying for by the minister. The morning after his conversion he turned away a client whose cause he had agreed to maintain in court, saying that "he had a retainer from the Lord Jesus to plead his cause" instead; but this bad beginning was not significant of any general lack of moral earnestness in his subsequent career.

His first successes as a revivalist were remarkable, and the account of them will have in it a surprise for many in the amount of opposition they aroused. Particulars of his method, which are now generally supposed to have descended from an immemorial antiquity, were regarded as startling innovations. Out of the criticism and opposition there came a convention at New Lebanon, N. Y., Prof. Wright's account of which is the most entertaining chapter in his book. There was sharp practice on both sides. Lyman Beecher, who came from Boston, breathing out threatenings and slaughter against Finney and his friends, allowed that they were full-grown men and not a company of boys. It being moved that females were not to pray in public meetings, Finney proposed the question whether a woman ought ever to pray in the presence of a man. A motion that the calling of persons by name in prayer should be avoided was successfully amended by making it read "public prayer," and the incorrigibles who had suffered under the former dispensation must have been relieved. "Audible groaning in prayer" was voted objectionable "on all ordinary occasions." The qualifying adjective was all

the party favorable to audible groaning could desire. The Convention was successful as a trial of wits, in which Finney's party came off more than conquerors in the main. At the next General Assembly the contestants signed a paper agreeing to speak and write no more about the matter.

The sphere of Finney's labors as a revivalist was much widened from this time (1828) until his removal to Oberlin in 1835. Prof. Wright gives a good account of Oberlin College, pathetic in its suggestions of the day of small things. The early direction of the movement depended more on Arthur Tappan than on any other person, and some pages are devoted to an account of his career and his relation to the anti-slavery cause. Although the beginnings of Oberlin were directly associated with the recreancy of Lyman Beecher and the anti-slavery revolt of his students from Lane Theological Seminary, it was apparently Finney's theological ability and not his anti-slavery sentiments that led to his Oberlin appointment. His anti-slavery sentiments were always subordinate to his theological spirit. He shared the fear of Tappan and the abolitionists of the new organization generally that abolitionism might work the disadvantage of their ecclesiastical system. It was, nevertheless, a brave thing, in 1834, to start a college giving men and women, white and black, an equal opportunity, though it is noticeable that the money for the start could not be got if negroes were excluded. This argument was very powerful with the Colonizationists, who were at first in the majority. It is difficult at this remove to see what should have suggested Finney as a fit person to fill the chair of theology. Of early education he had had but little; of special training in theology, next to none; and there is no evidence that his work at Oberlin had any scholarly quality. His early legal practice served him well, and he could argue effectively his theological tenets, and manipulate Bible texts to suit his purposes, much as he had his legal texts before. It was well for his peace of mind that he did not abandon his revivalist work. That was his joy and crown.

Prof. Wright gives a full account of his theological opinions, deriving them from the revised Calvinism of Dr. N. W. Taylor; but they had a good deal of personal accentuation. They were substantially the opinions of the New School Presbyterians, and Prof. Wright's volume derives not a little of its interest from the comparison which it continually suggests between the differences of Old School and New fifty years ago, and those which are now agitating the bosom of the Presbyterian Church. The reader finds himself wondering that the differences then could stir up so much feeling and produce a schism in the body.

It remains to hint the cardinal defect of Prof. Wright's book, viz., that it conveys to us no adequate sense of Finney's personality. There is much about the revivalist and theologian; little about the man. We are constrained to fear the man was buried out of sight under the revivalist and theologian; that he had little or no humanity to attract the pen of his biographer.

Across Russia from the Baltic to the Danube. By Charles Augustus Stoddard. Charles Scribner's Sons. 1891.

THE honor of contributing the latest volume to the library of what may be termed "Cook's tourist literature" belongs to Mr. Stoddard. Were it not for the infinite possibilities contained in this sort of composition, one might pronounce at once that this specimen will never be excelled. For the present, at least, it stands at the head of the mosaic department.

The author begins his Russian trip with descriptions of Sweden, but it is not necessary to note his utterances until he touches what is, nominally, Russian soil, in Finland. As the national name for that country is totally different, it is etymologically interesting to read that it is derived from "Fenland," the land of lakes and marshes, in English. Why not make a bold dash and say that it comes from *finik*, the Russian for a date tree, because dates may have thrived there when the mammoth roamed the Siberian wilds? However, we may accept the author's dictum on that subject as readily as on the next few points: that the Finnish language is different from all others in Europe, that *vodki* is a Finnish word, or that the legend which he quotes from a Russian book of the peewit, with its purely Russian cry of *peet*, is distinctively Finnish.

Mr. Stoddard's plan has the merit of simplicity. He has read Rambaud's 'History of Russia,' the ordinary guide-books, and whatever published works have come to hand, and has copied them verbatim, in fragments, often very roughly welded, and intermixed with superficial observations of his own. In many instances he acknowledges his authorities. In others he does not, and copies inaccurately. The trail of the guide-book is over it all, including the style. It is hardly necessary to state that the author could not make many original, accurate, or valuable personal surveys in the ten days or fortnight which he seems to have devoted to the vast empire, where he was dependent upon the information vouchsafed by foreign guides, who must have been nearly as ignorant of the language as himself, judging from the results.

It is impossible to enter into minute detail as to all the errors, but a few may be indicated, chiefly by negatives. A change of rooms in the hotel does *not* require a fresh visé on the passport. Servants do not have to pay six rubles for passports. Cronstadt houses are not all of one story. The apothecary never has a painting of pills on his sign. The droshky has a defence against the mud and dirt, and the driver's coat has not gathers at the neck. The Winter Palace does not curve around an immense open space. The imperial lackeys did not take the hats and coats of the travellers for the sake of increasing the fee—it was in compliance with the comfortable and healthy Russian custom of removing all outdoor garments in the house—and the guide probably pocketed what he pretended to give to the librarian at the Imperial Library. The gold and silver dishes in the Winter Palace ball-room were not presented by the towns and cities of Europe. Each step of the porticos at St. Isaac's Cathedral is not made of a single block of granite. The omophorion is not a robe. The paragraph on page 85, in regard to the dearth of books and periodicals, and the small stock of the book shops in St. Petersburg, betrays lack of the most ordinary observation. The remarks on beds might have been omitted, since the writer evidently never entered a Russian house, and was obliged to quote a person equally ignorant. Again, any one in the least acquainted with the baptismal service in the Russian Church would have perceived the absurdity of the statement that infants are baptised in the frozen Neva in the middle of January. But if people will persist in writing books about the manners and customs of the Russians in winter, and the habits of the upper classes, whom they see in summer trips no more than foreigners see wealthy Americans in New York in August, they must endure the consequences of their folly. The Nikolai bridge is not the only permanent bridge over the Neva. *Kvas* is not made of barley meal, salt, and honey, any more than cabbage soup (*shtshee*) is made according to the receipt furnished. *Botvinya*, also, is not a "fish salad." The upper story of the St. Petersburg Bazaar is not devoted to wholesale, and the merchants do not tend shop in winter clad in wolf-skin and bear-skin coats. The author assuredly never saw feather beds at any season or fur coats in summer on the platforms of the railway stations, and when he compares the brass basin and pitcher ablutions (to be found only on one route) with the "generous bath-tub of England or America," it is not out of place to inquire where bath-tubs are provided for the traveller in the countries named, except in private cars? The picture of the Archbishop walking round the church on his knees, on Easter night, is as curious as the title of "The Virgin's Rest" for the Assumption Cathedral in the Moscow Kremlin, the idea that Sophia Palæologus brought the ceremonials of the Greek Church to Moscow when she married Ivan III., and that the Tzesarevitch Dmitry (who was murdered in Uglitch, as the weakest historical student is aware) was thrown down the Red Staircase of the Kremlin Palace by his assassins. The assumption that Russian women of the present day are strictly secluded in Eastern fashion, simply because the traveller did not see many in the Moscow streets at the dead season of the year, is as gratuitous as that the nurses of the Foundling Asylum were ranged in order to receive the tourists.

There are plenty of other similar misstatements, which it is not worth while to chronicle here. One of the puzzles of the book is why the author has not described in his own words the things which struck him forcibly, instead of quoting Théophile Gautier and various travellers as hasty as himself. In fact, the book might have been much more cheaply pieced together in the author's study, so far as any value of personal experience or judgment is concerned, with one or two trivial exceptions. Yet personal observation and experience furnish the excuse for this wonderful piece of patchwork by a hand which is unskilled in literary work. The historical parts, again, which chance to be correct, are so ill-arranged that the uninitiated reader, for whom the book is prepared, must frequently feel himself at a loss to discover the connection and sequence of events. The same is true of the arrangement of the other statements, which traverse vast distances with seven-league boots, and flit about erratically without the slightest indication of locality, so that the result is not only confusing, but productive of false deductions.

The journey to Warsaw and as far as Buda-Pesth is narrated in the same objectionable form. People who desire knowledge on the subject of Russia will do well to abstain from this volume and betake themselves to Rambaud, and Haxthausen, and the guide-books (with all their imperfections) direct. The task will be longer, but there will be some solid outcome of the labor, which cannot be urged in favor of this superfluous production.

Fossil Botany: Being an Introduction to Palæophytology from the standpoint of the botanist. By H. Graf zu Solms-Laubach, Professor in the University of Göttingen. The authorized English Translation, by Henry E. F. Garnsley, M.A., Fellow of Magdalen College, Oxford. Revised by

Isaac Bayley Balfour, M.A., M.D., F.R.S., Queen's Botanist in Scotland, etc., etc. With forty-nine illustrations. Oxford: The Clarendon Press; New York: Macmillan & Co. 1891. 8vo, pp. xii, 401.

UNTIL within a few years, Palæophytology as a science has been in a far more unsatisfactory and rudimentary condition than its companion science of Palæontology. The most evident reasons for this comparative inferiority are, first, that vegetable tissues are far more perishable than the shells of molluscs and crustaceans and the bones of vertebrate animals, and consequently such remains of the vegetation of the Devonian and Carboniferous ages as have been found do not at first sight reveal the nature of the plant as clearly as shells and bones reveal the animal; and, in the next place, as we have but slowly learned, these ancient plants must have differed from recent vegetation far more, on the average, than palæozoic animals differed from animals now living. It is true that if angiosperms were lacking in the primeval ages, not less were mammalia not yet produced; but the coal-plants certainly were less like modern gymnosperms and acrogens than were the ancient radiates and molluscs like those of the present age. Consequently, as botanists had enough to do with present vegetation, they gave generally but little attention to the vegetation of the coal measures, and those who, like Brongniart, actually undertook their study, found that only their most general conclusions were acceptable to the students of living plants. In later years, thanks especially to the newer processes of microscopic lithoscopy, the real structure of ancient plants has become far better understood, and the true character of carboniferous Ferns, Lepidodendreæ, Sigillarieæ, etc., is now becoming daily better known.

While the distinguished author of the present work modestly calls it an Introduction to Palæophytology, it is really a well-digested and condensed summary of what is now known of this science. The work deals only with the Gymnosperms and plants below them in rank, the Angiosperms not being taken up, apparently for the very good reason that as they first appeared during the Cretaceous period, they do not come within the view of palæophytology as it is limited in the present work. Count Solms-Laubach has long been acknowledged as very high authority in this department of learning; and it is a fortunate thing for English readers that his investigations and conclusions are now put fairly within their reach.

BACK NUMBERS, VOLUMES, OR sets of leading and scarce magazines, etc., for sale by H. WILLIAMS, 196 West 10th St., N. Y.

Charles Scribner's Sons'

NEW BOOKS.

On the Border with Crook.

By Captain JOHN G. BOURKE, U. S. A. Illustrated. 8vo, $3.50.

A valuable and picturesque record of active army life on the frontier during the past twenty years. Captain Bourke was on Crook's staff, his warm personal friend, and familiar with his Indian policy, the remarkable success of which is here told. The work is a vivid picture not only of our wars with the Sioux and Apaches, but of the unique type, traditions, customs, and adventures of the "border" which is now a thing of the past.

The Divorce of Catharine of Aragon.

The story as told by the Imperial Ambassadors resident at the Court of Henry VIII. By JAMES ANTHONY FROUDE. 8vo, $2.50.

This work is the ripe fruit of Mr. Froude's later studies in a field which he has made particularly his own, and is the result of the great amount of new material now accessible, which the author claims only confirms his well-known views. While written to supplement his 'History,' the narrative is a most fascinating one, and will be widely read for its own interest.

Patrick Henry:

Life, Correspondence, and Speeches. By WILLIAM WIRT HENRY. With portrait. Eleven hundred sets printed from type. 3 vols., 8vo, *net* $12.00. Vol. I. *Now ready.*

These volumes form the authoritative and only complete biography of the great Revolutionary agitator and statesman. The work is the result of many years' labor on the part of the author, Patrick Henry's grandson, and is based largely on documents and data discovered and collected by him. The interest of the book is not merely biographical, however, but extends to the "times" of its subject, of which it gives a full and fresh history.

Stories for Boys.

By RICHARD HARDING DAVIS. Illustrated. 12mo, $1.00.

Every boy who is a lover of healthy, manly, out-of-door sports will be deeply interested in this collection of stories by the author of "Gallegher." Mr. Davis gives rattling and exciting stories of base-ball, football, tennis, yachting, and other contests, full of snap and dash.

The Tests of the Various Kinds of Truths.

Being a Treatise of Applied Logic. By JAMES MCCOSH, D.D., LL.D. 12mo, $1.00.

This volume expounds the elements of Philosophy, Metaphysics and Logic to those who may not have time or taste for all the technicalities.

Across Russia.

From the Baltic to the Danube. By Dr. CHARLES A. STODDARD, Editor of the New York *Observer*. Illustrated. 12mo, $1.50.

An experienced traveller and careful observer, the author has pictured most graphically the people, customs, art and institutions, and the many phases of life in Russia.

Elsket,

And Other Stories. By THOMAS NELSON PAGE. 12mo, $1.00.

Mr. Page's new volume contains the stories written since his popular "In Ole Virginia" appeared, and will add to his already high reputation as a delineator, not only of Southern life and character, but of transatlantic types.

THE CENTURY CO'S
MAGAZINE FOR YOUNG FOLKS.

THIS famous magazine has been at the head of all children's periodicals since it began issue in 1873, and consolidated with itself "Our Young Folks," "The Little Corporal," "The School Day Magazine," and other juvenile magazines of that day. From the first issue

Mary Mapes Dodge

Has been the editor, and the pens of the greatest writers of the English world, and the pencils of the most famous illustrators, have been at its service. Tennyson, Longfellow, Bryant, Thomas Hughes, Whittier, Bret Harte, Bayard Taylor, Mrs. Burnett, Miss Alcott, Donald G. Mitchell, George Macdonald, and Professor Proctor are a few of the many great names which have been upon its list of contributors. Everything in it is illustrated.

The November Number,

Ready everywhere Saturday, October 24th, begins the new volume and is just the number for new readers to buy. It contains first chapters of Brander Matthews's serial story, Lieut. Schwatka's article on "A Dash with Dogs for Life or Death," a charming story by Mary E. Wilkins, and a host of other good things. During the volume now beginning, besides a long list of serial stories, ST. NICHOLAS will have a great number of useful articles on such subjects as "How Columbus Reckoned," "William the Conqueror," "Volcanoes and Earthquakes," "Straight Lines and Circles," "Strange Corners of Our Country," "Honors to the Flag," "Boys and the National Guard," "The Making of a Great Newspaper," etc.

If there are boys and girls in your home you need ST. NICHOLAS. *It costs $3.00 a year, or 25 cents a copy. News-stands and bookstores have it, or you can subscribe with the publishers (send check, draft, money or express order).*

*RARE AND STANDARD SECOND-*hand books. Books purchased for cash. Catalogues issued. E. W. JOHNSON, 1336 B'way, N. Y. City.

Houghton, Mifflin & Co.'s New Books.

Christopher Columbus.

And how he received and imparted the Spirit of Discovery. By JUSTIN WINSOR, Editor of "The Narrative and Critical History of America." With portraits and maps. 8vo, $4.00.

A book of great value in biography, history and geography. Mr. Winsor's special qualifications to write such a work are known to all.

Betty Alden.

By JANE G. AUSTIN, author of "A Nameless Nobleman," "Standish of Standish," "Dr. Le Baron and his Daughters," etc. 16mo, $1.25.

"Betty" is the daughter of John Alden and Priscilla. This novel is full of the history and picturesque incidents of the Pilgrim story, and is likely to be one of the most popular of Mrs. Austin's very successful books about the Old Plymouth Colony.

Snow Bound.

By JOHN G. WHITTIER. *New Holiday Edition.* With a portrait of Mr. Whittier, and nine photogravure illustrations by EDMUND H. GARRETT. Daintily bound from designs by Mrs. WHITMAN. 16mo, white and blue, $1.50.

The beautiful typography and illustrations, rubricated text, and attractive binding, make "Snow-Bound" a good companion to "The Vision of Sir Launfal," published last year, and equally attractive.

Huckleberries

Gathered from New England Hills. By ROSE TERRY COOKE, author of "Stead fast," "Happy Dodd," etc. 12mo, $1.25.

A book of short stories, told with the skill and charm for which Mrs. Cooke is famous.

Bishop Wilberforce.

By G. W. DANIELL, M.A. With a portrait. Crown 8vo, $1.00.

A concise, excellent account of the life and achievements of one of the most eminent of modern English religious leaders.

Masks, Heads, and Faces.

With some Considerations respecting the Rise and Development of Art. By ELLEN RUSSELL EMERSON, author of "Indian Myths." With many illustrations. 8vo, $4.00.

Mrs. Emerson's book fills a somewhat unique place in literature, since it explains the earliest incentives to artistic expression.

*** *For sale by all Booksellers. Sent postpaid, on receipt of price by the Publishers.*

Houghton, Mifflin & Co., Boston.

11 East Seventeenth Street, New York.

PRINTS. ELIZABETHAN LITERATURE. BOOKS.

Brentano's will send to any address upon request a descriptive catalogue of rare and curious books, including a collection of prints, play-bills, and clippings relating to Vauxhall Gardens, works on Shakespeare and Elizabethan literature, etc., forming part of their recent purchases from some notable libraries.

BRENTANO'S, 5 Union Square, New York.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York,

PUBLISH THIS WEEK:

Names and their Meaning. A Book for the Curious, giving the derivation and etymology of the names of Countries, Creeds, Sects, Days and Months, Royal Surnames, London Districts, Streets and Taverns, Festivals, Sobriquets, etc., etc. Half leather, gilt top, $1.75.

Celtic Fairy Tales. Collected by JOSEPH JACOBS, President of the English Folk-Lore Society. (Uniform with English Fairy Tales.) 12mo, $1.75.

English Fairy Tales. Collected by JOSEPH JACOBS. Pictured by JOHN D. BATTEN. 12mo. (New Edition.) $1.75.

This volume is addressed as well to the lovers and students of folk-lore as to the little people who want "real stories" simply and graphically told.

The editor says that these stories, if not in all cases actually of English origin, all belong to the nursery literature or folk-tales of the English people, and that they "indicate unsuspected capacity for fun and humor among the unlettered classes." The story of Tom Tit Tot is, he believes, "unequalled among folk-tales for its sense of humor and dramatic power."

Some few of the tales have heretofore been known only in the form of ballads.

"Mr. Jacobs has shown scholarship and research in his work, and we can think of no new one that will afford so much delight to young people."—*Philadelphia Bulletin.*

The Living World: Whence it CAME AND WHITHER IT IS DRIFTING. By H. W. CONN, Professor of Biology in Wesleyan University, author of 'The Evolution of To-Day.' A review of the speculations concerning the origin and significance of life; of the facts known in regard to its development, and suggestions as to the direction in which the development is now tending. 12mo, illustrated, $1.25.

WILL ISSUE NEXT WEEK:

The Alhambra. By WASHINGTON IRVING. A Residence in the celebrated Moorish Palace, "The Alhambra," with the Historical and Romantic Legends connected with its History. Darro Edition. Two volumes, octavo, cloth extra, gilt top, and with slip covers, binding decorated with handsome Moorish designs (in box), $6.00.

Printed from entirely new electrotype plates; illustrated with 31 photogravures from photographs, many of which were taken specially for this edition by R. H. Lawrence, Esq.

Each page is surrounded by a MOORISH BORDER in RED AND GOLD, *the designs, sixteen in number, being carefully copied from the decorations of the Palace.*

Economic and Industrial Delusions. A DISCUSSION OF THE CASE FOR PROTECTION. By ARTHUR B. FARQUHAR, with the collaboration of HENRY FARQUHAR. 8vo, with Explanatory Charts. $1.50.

*** Notes on New Books No. 3 sent on application.

EUROPEAN SUMMER AND WINTER Resort, University town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year, Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

Literature of Northland

Vitus Bering,

THE DISCOVERER OF BERING STRAIT.

By PETER LAURIDSEN of the Royal Danish Geographical Society. Translated by Prof. J. E. Olson of the University of Wisconsin, with an introduction by Lieut. Frederick Schwatka. 12mo, 240 pages, with four maps. Price, $1.25.

"It is a moving story and a stirring one and the author has done well to rescue the reputation of the great explorer from the neglect and disesteem into which it had fallen, and to vindicate him against all the calumnies and misrepresentations which have gathered about his name."—*New York Tribune.*

America Not Discovered by Columbus.

An Historical Sketch of the Discovery of America by the Norsemen in the Tenth Century. By Hon. RASMUS B. ANDERSON, late United States Minister to Denmark. 4th edition. Price, $1.00.

"A valuable addition to American history. . . . The book is full of surprising statements, and will be read with something like wonderment."—*Notes and Queries (London).*

Norse Mythology;

OR, THE RELIGION OF OUR FOREFATHERS. Containing all the myths of the Eddas. By Prof. R. B. ANDERSON, ex.U. S. Minister to Denmark. 5th edition. Illuminated cover. Crown 8vo, cloth, $2.50.

"Prof. Anderson's work is, as it claims to be, the first complete and systematic presentation of Norse Mythology in the English language."—*Atlantic Monthly.*

The Younger Edda.

Sometimes called SNORRE'S EDDA, or the PROSE EDDA, with an Introduction, Notes, a full Glossary and complete Index. By Prof. RASMUS B. ANDERSON, author of 'Norse Mythology,' etc., etc. 1 volume. Price, $2.00.

"By far the most important English contribution to the elucidation of Northern Mythology which we possess."—*Boston Courier.*

Echoes from Mist-Land.

Or, the Nibelungen Lay Revealed to Lovers of Romance and Chivalry. By AUBER FORESTIER. 2d Edition. Price $1.50.

"This is the first American edition of the whole 'Nibelungen Lied,' and as such deserves to be warmly welcomed."—*The Nation.*

Scandinavian Literature.

From the most Ancient Times to the Present. By FREDERIK WINKEL HORN and Prof. R. B. ANDERSON, with a bibliography of the important books in the English language relating to the Scandinavian countries by Thorvald Solberg. 8vo, 520 pages. $3.50.

"Between its covers is comprehended the whole field of Scandinavian literature, including that of the nineteenth century."—*Publishers' Circular, London, England.*

Viking Tales of the North.

FROM THE ICELANDIC. By Prof. R. B. ANDERSON. 3d Edition. 12mo. Cloth. Price $2.00.

"This work will vie in interest to scholars with the Vedas of the East."—*Boston Commonwealth.*

HOLCOMB'S TRANSLATION OF

Tegner's Fridthjof's Saga.

2d Edition. 12mo. Cloth. Price $1.50.

"No one can peruse this noble poem without arising therefrom with a loftier idea of human bravery, and a better conception of human love."—*The Inter-Ocean.*

The Pilot and His Wife.

By JONAS LIE (translated by Mrs. Ole Bull). 3d Edition. 12mo. Cloth. Price $1.50.

"This author has conquered for himself a name in the very foremost rank of Scandinavian literature; he is a novelist of very marked genius."—*North American Review.*

The Spell-Bound Fiddler.

By the famous Norwegian writer, KRISTOFER JANSON. Translated by AUBER FORESTIER, with an introduction by Prof. R. B. ANDERSON. 1 vol., 12mo. Price $1.00.

"The story itself is full of attractive points. For all who would know more of the sympathetic and virtuous people at the North, we commend this fine story."—*Boston Commonwealth.*

Sold by all Booksellers, or will be sent, prepaid, on receipt of price by the Publishers,

S. C. GRIGGS & CO., Chicago

The Nation

VOL. LIII.—NO. 1374. THURSDAY, OCTOBER 29, 1891. PRICE 10 CENTS.

THE

Popular Science Monthly

FOR NOVEMBER.

University Extension. By Prof. C. HANFORD HENDERSON. Describes the beginning that has been made in the newest of important educational movements, and gives the plans of its organizers for the future.

The Manufacture of Steel. Concluded. (Illustrated.) By W. F. DURFEE. Pictures the vast and fiery operations of a modern steel works, and shows what part America has taken in the development of this immense industry.

Dress and Adornment. III. Ornament. (Illustrated.) By Professor FREDERICK STARR. A fruitful topic, and well brought out both in text and illustrations.

Some of the Possibilities of Economic Botany. I. By Professor GEORGE L. GOODALE. A very interesting and practical address by the President of the American Association for the Advancement of Science.

Lessons from the Census. II. By CARROLL D. WRIGHT. A criticism of our present mode of taking the census, with suggestions for improving it.

OTHER ARTICLES ON

DO WE TEACH GEOLOGY? REEF-KNOT NETS (illustrated); THE ETHICS OF CONFUCIUS; THE ORIGIN OF PAINTING; HIGH LIFE; SKETCH OF JAMES CURTIS BOOTH (with portrait).

EDITORIALS; MISCELLANY; NOTES.

50 cents a number. $5.00 a year.

D. APPLETON & CO., NEW YORK.

New and Recent Books.

AN UTTER FAILURE.

By MIRIAM COLES HARRIS, author of "Rutledge." 12mo. Cloth, $1.25.

"Rutledge" proved to be one of the most popular works of fiction ever published in this country. The author's host of friends will appreciate her skillful rendering of this new and deeply interesting story.

LITTLE SMOKE.

A story of the Sioux. By WILLIAM O. STODDARD. With 12 full-page illustrations by F. S. DELLENBAUGH, portraits of Sitting Bull, Red Cloud, and other chiefs, and 72 head and tail pieces representing the various implements and surroundings of Indian life. A new volume in the series of "Good Books for Young Readers." 12mo. Cloth, $1.50.

"There are few writers who know how to meet the tastes and needs of boys better than does William O. Stoddard."—*Detroit Free Press.*

THE JOHNSTOWN STAGE, AND OTHER STORIES.

By ROBERT H. FLETCHER, author of "A Blind Bargain," "Marjorie and her Papa," etc. No. 83, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

A series of graphic pictures of the far West, the life of the Sierras and the California slope, racy of the soil, and interesting from cover to cover. The author, a contributor to *The Century* and *St. Nicholas*, is one of the most promising of the company of talented writers on the Pacific coast.

THE COMPARATIVE ANATOMY OF THE DOMESTICATED ANIMALS.

By A. CHAUVEAU, M.D., LL.D., Inspector General of Veterinary Schools in France; Member of the French Academy of Sciences, etc. Second English edition, translated and edited by GEORGE FLEMING, C. B., F. R. C. V. S., etc., Examiner in Anatomy for the Royal College of Veterinary Surgeons, etc. With 585 Illustrations. 1084 pages, 8vo. Cloth, $7.00.

Since the translation of this standard work, seventeen years ago, it has been several times reprinted. There has been, however, an obvious need for a revision brought up to the requirements of the present day, especially to meet the necessities of advancing veterinary education, and the issue of a fourth French edition has been considered a favorable opportunity for undertaking the task. The anatomy of the ass, mule, rabbit, and camel has been added, and the number of illustrations largely increased.

SECOND EDITION.

THE FAITH DOCTOR.

By EDWARD EGGLESTON, author of "The Hoosier Schoolmaster," "The Circuit Rider," etc. 12mo, cloth, $1.50.

"Dr. Eggleston has made a distinct advance in his literary work in 'The Faith Doctor,' the latest novel from his pen. Dr. Eggleston's writing is really American in its character, without making much parade or profession on this point; but he has taken a new phase of American life in this book, and has treated it very ably, besides evincing an increase of literary skill."—*Boston Herald.*

"An excellent piece of work. . . . With each new novel the author of 'The Hoosier Schoolmaster' enlarges his audience and surprises old friends by reserve forces unsuspected. Sterling integrity of character and high moral motives illuminate Dr. Eggleston's fiction, and assure its place in the literature of America which is to stand as a worthy reflex of the best thought of this age."—*N. Y. World.*

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.

For references and circular address Mrs. E. L. HEAD, Germantown, Pa.

Teachers, etc.

A YOUNG LADY ACCUSTOMED TO teaching desires a position as governess or companion. Qualified to teach English branches, French, drawing, and painting. Address "B.," the *Nation.*

AN EDUCATED WOMAN OF 20 years' experience as manuscript and proof-reader, desires a position in a newspaper, magazine, or book-publishing house. Ample references. Address E. K., 94 Gold St., N. Y.

*CHARLES W. STONE, Tutor for Har*vard, 68 Chestnut Street, Boston.

Charles Scribner's Sons

Will Publish October 28th:

The Incarnation of the Son of God.

The Bampton Lectures far 1891. By Principal CHARLES GORE, Editor of 'Lux Mundi.' 8vo, $2.00.

A reverent and devout presentation for the general reader of the doctrines of the divine incarnation. The discussion is marked by keen intellectual penetration, and among its most striking features are its modernness and freedom from speculative and dogmatic methods.

Essays on English Literature.

By EDMOND SCHERER. 12mo, with portrait, $1.50.

This volume contains the essays on English subjects —Shakespeare, George Eliot, John Stuart Mill, Taine's 'History of English Literature,' Milton, Sterne, Wordsworth, Lord Beaconsfield's 'Endymion,' and Carlyle—comprised in the 'Etudes sur la littérature contemporaine' of the late Edmond Scherer, after the death of Sainte-Beuve for many years at the head of French criticism. The translation is by George Saintsbury, who supplies also a critical introduction.

Nature and Man in America.

By Professor N. S. SHALER. 12mo, $1.50.

The influence upon man of physiographic conditions, especially in North America, and a forecast of future social and economic development through the effects of environment, form the subject of Prof. Shaler's book, which is written in popular style and designed mainly for the general reader.

JUST PUBLISHED.

Lyra Heroica.

A Book of Verse for Boys. Selected and arranged by WILLIAM ERNEST HENLEY. 12mo, $1.25.

A collection of the stirring and thrilling lyrics and ballads of English and American Literature from Shakespeare down to Rudyard Kipling, which especially appeal to youthful ardor and inspire enthusiasm in young minds for what is noble, elevated, and heroic.

On the Border with Crook.

By Captain JOHN G. BOURKE, U. S. A. Illustrated. 8vo, $3 50.

A valuable and picturesque record of active army life on the frontier during the past twenty years. Captain Bourke was on Crook's staff, his warm personal friend, and familiar with his Indian policy, the remarkable success of which is here told. The work is a vivid picture not only of our wars with the Sioux and Apaches, but of the unique type, traditions, customs, and adventures of the "border" which is now a thing of the past.

The Divorce of Catherine of Aragon.

The story as told by the Imperial Ambassadors resident at the Court of Henry VIII. By JAMES ANTHONY FROUDE. 8vo, $2.50.

This work is the ripe fruit of Mr. Froude's later studies in a field which he has made particularly his own, and is the result of the great amount of new material now accessible, which the author claims only confirms his well-known views.

"His history remains a monument, and his fame as a writer of English overtops that of any other man of his time."—*G. W. Smalley in N. Y. Tribune.*

Patrick Henry:

Life, Correspondence, and Speeches. By WILLIAM WIRT HENRY. With portrait. Eleven hundred sets printed from type. 3 vols., 8vo, *net* $12.00. Vol. I. *Now ready.*

These volumes form the authoritative and only complete biography of the great Revolutionary agitator and statesman. The work is the result of many years' labor on the part of the author, Patrick Henry's grandson, and is based largely on documents and data discovered and collected by him. The interest of the book is not merely biographical, however, but extends to the "times" of its subject, of which it gives a full and fresh history.

Books for Library Reference

The Best Books. A Readers' Guide to the choice of the Best Available Books in every department of Science, Art, and Literature (about 50,000 titles) down to 1890, with the dates of the first and last editions and the price, size, and publisher's name of each book. Accompanied by numerous Characterizations, Biographical Notes, etc. A contribution towards systematic Bibliography. By WILLIAM SWAN SONNENSCHEIN. Second edition, thoroughly revised and much extended and improved. With very copious Author's and Subject Indexes. Quarto, 1,100 pages, cloth, $9.00 *net;* a few copies interleaved, cloth, $13.50, *net;* stoutly bound in half morocco, neat, *net*, $12.00.

The whole work is divided into classes, each of which is subdivided into sections, systematically arranged.

"Undoubtedly the most convenient, accurate, and comprehensive work of the kind in the English language. The special student in any department of the arts and sciences can have no better guide to point out authorities and sources of information in his direct line of search, and delvers in libraries who waste their time in hunting through incomplete and imperfect catalogues will be saved hours of weary and oftentimes fruitless investigation, by reference to this volume."—*Boston Transcript.*

"It would be difficult to exaggerate the usefulness of this work, or to praise too highly the industry of the compiler. Turn to what subject we may, we find the best current books which the reader may consult, and the prices at which they are published."—*London Spectator.*

". . . The work is a marvel of patient industry, and the only wonder is that one man should be able to accomplish so much."—*Philadelphia Times.*

Proverbs and Phrases of All Ages By ROBERT CHRISTY. Classified by subjects and arranged alphabetically. Believed to be the most comprehensive and most conveniently arranged compilation in its department. Two volumes, large 12mo. half leather, $5.00.

"A handsome book of reference with a good index. . . . The collection will be found useful."—*London Athenæum.*

"If Mr. Christy has not, in his two interesting volumes, exhausted the wisdom of every age and language he has at least come nearer doing so than any previous gleaner in his special field. The compiler is to be thanked for presenting his vast material classified and alphabetically arranged."—*Atlantic Monthly.*

"The book is a monument to the compiler's industry, and deserves a place in every library, public and private."—*Evangelist.*

A Literary Manual of Foreign QUOTATIONS. By JOHN DEVOE BELTON. 8vo, half leather, gilt top, $1.50.

The distinctive feature of this compilation is the presentation of the English equivalents of the originals, together with extracts from the writings of noted authors in which the quotations have been used.

"It is not alone a good book of reference, but is entertaining reading. An apt quotation often gives a sparkle to a sentence, and brings the long past in communication with the actual present."—*New York Times.*

"Especially valuable are those extracts from scholars, showing how the sentence has been used, and doubly valuable when the sentence itself is rich in meaning and elegant in its expression."—*Chicago Inter-Ocean.*

"The illustrative passages bear evidence of selection at first hand, for they cover a very wide range and include not only passages from the classics of England and America, but others equally apt and striking from the magazines and the daily newspapers."—*San Francisco Chronicle.*

Names and their Meaning. A Book for the Curious, giving the derivation and etymology of the names of Countries, Creeds, Sects, Days and Months, Royal Surnames, London Districts, Streets and Taverns, Festivals, Sobriquets, etc., etc. Half leather, gilt top, $1.75.

"A book full of curious and scholarly information."—*The Scotsman.*

These books (and any current publications) will be sent by mail or express, paid, on receipt of price.

NEW YORK, THURSDAY, OCTOBER 29, 1891.

The Week.

So many people are making figures over the coming election in this State that a recurrence to facts may be useful, and may save some over-confident persons their money. In 1883 all of the Democratic State ticket was elected by about 16,000 plurality, except the Secretary of State. For this office Carr (Rep.) was elected by 18,583 plurality. In 1884 Cleveland (Dem) received the electoral vote of the State by 1,047 plurality, and in 1888 Harrison (Rep) received it by 14,373 plurality. The elections other than Presidential since 1883 have all been carried by the Democrats, and by the following pluralities:

	Dem. Plurality.
1885—Governor	11,134
1886—Court of Appeals	7,797
1887—Secretary of State	17,077
1888—Governor	20,527
1889—Secretary of State	19,171
1890—Congress	75,646

The very large Democratic majority last year was due to the McKinley Bill. There is no evidence that that bill is a whit more acceptable to the people now than it was then. But, on the other hand, it is less conspicuous as an issue now. How much influence it will exercise on the present election it would be unsafe to predict, but it will be something, and it will be adverse to the Republicans. Probably the silver question will count for more than the tariff question in so far as national issues go; and here, too, Mr. Flower represents the better side, and will get most votes, his party having committed itself against all silver dollars that are not of the same intrinsic value as gold dollars. On the other side, Mr. Fassett has the advantage of the ballot-reform issue, and this might have given him enough votes to offset Mr. Flower's advantages on national issues if he had not presented himself in shirt-sleeves at the German meeting in the Bowery—not that this was anything bad in itself, but it was one of those small things that enable the public to "size up" a candidate.

It is difficult to see how Mr. Flower's carefully deliberated letter on the blanket-ballot issue has bettered his position. He was asked to say directly whether or not he was in favor of a blanket-ballot amendment. He declines to answer directly, taking refuge in the statement that "if the public sentiment of our State shall favor any proper extension or amendment of the Ballot Law, I shall, if elected Governor, feel bound to support it." This is the kind of answer known in political literature as a "dodge" or "straddle." It means nothing whatever as to Mr. Flower's course, were he to be elected Governor; and were a blanket-ballot amendment to be sent to him by the Legislature for approval, he could say that he did not consider that a "proper" amendment, and his pledge would not be broken. It was perfectly easy for him to answer the Municipal League question in unmistakable language. Mr. Fassett's response shows this plainly enough. He says: "I am not only now in favor of a genuine Australian blanket ballot, such as you describe, in its essential features, but I was so at the time 51,000 citizens petitioned our Legislature for such a reform; and I shall continue to favor the same whether elected or not." There is no doubt whatever about what that means.

We feel quite sure that Mr. Andrew D. White could show the Republicans that he is not disgruntled because he was not nominated for Governor of New York, with far less outlay than he is now making. In his speech on Saturday night, in the Cooper Institute, he might, without the slightest risk, have spared himself the following bit of dithyramb:

"As regards the foreign policy of this Administration there is no thinking man who will deny, no pessimist so cynical, no alarmist so severe, who has not in his heart to acknowledge that the foreign interests of the United States on every sea and on every shore are safe in the hands of our Republican Secretary of State, James G. Blaine."

As Mr. White is known to be an educated man and ex-diplomat and ex-College President, a large number of the "thinking men," as well as the cynics and pessimists and alarmists, will, we fear, think "in their hearts" that he either did not believe this or did not know exactly what he meant when he said it. The trouble with nearly all our "scholars and gentlemen" who have set out to be "good Republicans" is, that, to use a commercial simile, they never get in on the ground floor. They are always admitted in the fifth story, where they pay the top of the market for their stock, and it is generally common stock at that.

The campaign in Massachusetts is fought on national issues mainly, and of these the silver question appears to be the most prominent. It is argued by the supporters of Gov. Russell that if Massachusetts is lost to the Democrats this year, the result will give the free-coinage party in other sections of the country a great impetus, and probably enable them to pass a free-coinage bill this winter, whereas, if Gov. Russell is re-elected on the anti-silver platform, the result will be an equally decisive set-back to the silver-men, and will prevent any bad legislation by the new Congress. The platform on which Gov. Russell was nominated declares that all dollars coined by the United States should be of equal intrinsic value, and that the present law increasing the Government purchases of silver two and one-half times the former amount, and compelling the Government to buy seven tons of silver bullion every working day in the year, "is a menace to the maintenance of a sound and stable currency, and threatens, if not repealed, to derange values, impair the obligation of contracts, and to bring the currency of the country to a silver basis." This platform has put all the Republican politicians to their trumps to uphold the present law. Senator Hoar is, of course, strong for it, because it is a party measure. This is as it should be. The party passed the bill in order to hold the newly created States in the Republican column, and it must stick to the bill for the same reason.

The feature of the Iowa campaign is the announcement by many men of both the great national parties that they propose to vote against the candidates of their own party in the pending election, on the ground that this is a State contest, the chief issue in which—prohibition—has nothing to do with Federal politics. The Republican papers mention name after name of men who voted the Democratic ticket in the last Presidential election and expect to vote the same ticket in 1892, but who believe in the prohibitory law as the best method of dealing with the liquor problem, and will support the Republican candidates for Governor and members of the Legislature, because they are committed to the support of that law. On the other hand, many life-long Republicans will vote for the re-election of Gov. Boies and for Democratic candidates for the Legislature, because they are disgusted with the farce of prohibition and desire to see a local-option system substituted in its place. Among the latter class is James G. Day, who has been Chief Justice of the highest court and is one of the most influential men in the State.

Secretary Foster said in a very sober way in his speech at Findlay, Ohio, that he "had caused a search to be made of all manufactured articles upon which the duties had been increased by the McKinley Bill, and had found *only two articles* that have increased in price, and these were pearl buttons and corsets." One dry-goods store in Boston furnished Gov. Russell a list of 112 such articles on its own shelves and counters, showing that Secretary Foster's search was by no means exhaustive. On the subject of corsets, the Secretary waxed facetious, saying:

"I am grieved over the corset business because the increased price is objectionable to the ladies, causing them all to feel unkindly towards the gallant Maj. McKinley, but I can assure them that if they will possess their souls in patience, it will not be long till *Yankee ingenuity* will find a way to cheapen them, provided, always, that a substitute can be found for whalebone."

That "Yankee ingenuity" found a way to *increase* the price of corsets will be apparent to anybody who puts the old tariff and the McKinley tariff side by side. The old law ran in this way:

"324. Cotton cords, braids, gimps, galloons,

webbing, goring, suspenders, braces, and all manufactures of cotton not specially enumerated or provided for in this act, *and corsets of whatever material composed*, 35 per centum ad valorem."

In the McKinley tariff the words in italics were simply dropped out. The effect is to make corsets dutiable according to the material of which they are composed; that is, if they are of linen, they are taxed 55 per cent., of silk, 60 per cent., of cotton, 40 per cent. The Yankee who accomplished all this without debate, by simply crossing out a line, was certainly ingenious, but hardly more so than Mr. Foster himself, who could search the whole list of manufactures and find only two things that had advanced in price.

Secretary Foster's attempt in Ohio last week to show that the Treasury is perfectly overflowing with money was so surprisingly vague and evasive as really to confirm the suspicions on that subject, instead of allaying them. He again denied that he had issued orders to hold back payments on appropriations; yet he said nothing to explain the fact, as shown by the record of actual operations in the Treasury, that the payments for the first quarter of the current fiscal year were at least $40,000,000 less than the liability for that period on account of appropriations—the latter calling for $125,000,000 quarterly, while but $84,471,733 was actually paid out. Unless he is misreported in the *Tribune*, he made a bad blunder, or worse, in one statement. He said the Treasury paid $26,000,000 in pensions last June "without any inconvenience whatever." As a matter of fact, the Treasury paid out in June on account of pensions the sum of $18,721,585. We believe he told the truth in saying that about $26 000,000 were due on pensions; but the fact that about $7,250,000 had to go unpaid for lack of funds, would seem to prove that there was "inconvenience" somewhere.

The Georgia Legislature, which has just adjourned, was controlled absolutely by the Farmers' Alliance, and was elected upon the most profuse pledges of economy and retrenchment. Instead of carrying out these pledges, it has spent more money than any Legislature in the history of the State, with the result that the tax-rate is the highest ever known. This is of a piece with the performances of Alliance law-makers in Kansas and Nebraska. There has been much speculation as to the permanence of the Alliance movement. It is a waste of time to discuss the question. No party can long survive such a record as the Alliance has made wherever it has come into power.

Nobody will be surprised at the news that Quay's name has been connected by documentary evidence with that of Bardsley in the Keystone Bank rascalities. The evidence was produced in Harrisburg on Tuesday by the Attorney-General of Pennsylvania, who tried in vain to have it brought before the Senate. It consists of a Keystone National Bank certificate for $8,877, deposited by John Bardsley, November 29, 1889, payable to the order of himself, and signed by G. W. Marsh, cashier. It is endorsed: "Pay to order of M. S. Quay, John Bardsley," and under this endorsement appear Quay's signature and other endorsements, showing that Quay had the certificate cashed at his bank in Beaver, Penn., after which it travelled back through the Clearing-house to the Keystone Bank. Marsh, who signed the certificate as cashier, was afterwards the President of the Keystone Bank. As cashier and President he concealed the theft of Lucas, the former President, of $997,000 of the bank's funds. When the Keystone Bank investigation began, Marsh fled, forfeiting the $25,000 bail bond which John Wanamaker's brother had signed for him. The inference which is drawn from the certificate is, that the $8,877 which Bardsley thus handed to Quay was taken by the latter from the State money which he had on deposit in the Keystone Bank and given to Quay for use in politics. Over a million dollars of State money was at that time on deposit by Bardsley in the Keystone Bank, and no trace of what became of it has been found either in the bank's accounts or in Bardsley's. It has been generally suspected that a good deal of it went "into politics," and it is natural, therefore, that this suspicious certificate should be taken as strong evidence of such disposition. The explanation which Quay's friends now put forward strengthens this view. According to the Harrisburg correspondent of the Philadelphia *Public Ledger*, it is that Quay contributed $10,000 for campaign purposes in 1889, of which he paid $1,000 in cash; that he gave his note for $9,000 to David Martin, who had it discounted by Bardsley, receiving from the latter this certificate which was for $9,000 less the interest for three months; that when the note became due Quay took it up. If this be a truthful statement, and if satisfactory proof of its truthfulness shall be adduced, it will still stand confessed that Bardsley and Quay were using public money for campaign purposes, and that the money thus used was, apparently, a part of the million or more which the State lost in the Keystone Bank through Bardsley's rascalities. It is said that the books of the Keystone Bank contain no record of the deposit by Bardsley upon which the certificate was issued.

In addition to the weakness of the above explanation, the conduct of the Republican majority in the Senate this week furnishes strong corroborative evidence against the alleged innocent character of the transactions. They have resisted by all possible parliamentary expedients the efforts of the Attorney-General and the Democratic Senators to get this certificate in evidence before them. They take the position that it is not relevant to their inquiry; but if it were entirely innocent, and proof of its innocence were possible, is it reasonable to suppose that they would be so anxious to exclude it? In fact, its admission as evidence would make it necessary for them to summon Quay as a witness, to give, under oath, rather than through the newspapers, his explanation of the transaction, and that would certainly be the most satisfactory way for him to meet the charge. This is the crucial point in the matter. Quay will never allow himself, if he can help it, to be put under oath and subjected to examination on this or any other point connected with his dealings with State money. He had the Legislative inquiry, which came to so impotent a conclusion a few weeks ago, restricted to the present State Treasurer in order that he might escape the danger of being put on the witness stand—a danger which caused him to flee the State as soon as it was threatened. He has compelled the Senate to exclude this certificate for the same reason. We presume that there is not an intelligent person in Pennsylvania who has any reasonable doubt that the certificate is evidence of guilty partnership between Quay and Bardsley for the use of public money for campaign purposes. It is interesting to observe that the go-between in the Bardsley-Quay transaction, "Dave" Martin, is the man whom the State Auditor, McCamant, mentioned in his incriminating "burn this letter" to Bardsley as a useful man to have put on the watch against persons who were suspected of an intention to make unpleasant exposures. That makes the ring of Keystone Bank, Bardsley, McCamant, and Quay rounded and complete.

The oppressions visited upon the importers of worsted clothing by the Government during recent years have been peculiarly heavy, and they have been lately renewed with extreme violence. We are not now speaking of the increased duty imposed by the tariff, but of the practices under it. Two years ago the manufacturers of worsteds, by dint of begging and lying, prevailed upon the Secretary of the Treasury to rule that worsteds were woollens, in the teeth of history, of the law, and of judicial decisions then in force. The object of this was to increase the duty on worsteds without an act of Congress to that effect. As soon as the new ruling could be brought before the courts, it was overruled. In fact, the very men who procured it predicted that it would not stand in the judicial tribunals, and for this reason they asked Congress to pass a special law in their favor, without waiting for the regular Tariff Bill. This was virtually a request that Congress should give all hands a bill of indemnity for violating a pre-existing law. This request was actually complied with, or rather was sought to be complied with, but in such a headlong fashion that the special bill itself was wrongly worded, and turned out to be a nullity. In due time the regular McKinley Bill came along, which screwed up the duties on worsted cloths valued at sixty to eighty cents per pound from 24 cents per pound and 35 per cent. to 44 cents per pound and 50 per cent. But even this proceeding did not satisfy the manufacturers. So they took into their employ a special Treasury agent to instruct

Appraiser Cooper in his duties, and they so far succeeded as to induce Mr. Cooper to seize worsteds arriving at this port, on the ground of undervaluation. On Thursday the most respectable merchants in New York, some of them Republicans whose names are always on the campaign subscription lists, went before the Board of General Appraisers and testified that the special agent and Mr. Cooper were wrong. A letter from the United States Consul at Bradford, England, was also read to the same purport. All that the special agent could say was, that the manufacturers were convinced that the goods were undervalued, and that somebody in Philadelphia who had once made goods in Bradford had told him so. Of course, all people who have lived in Bradford and are now making worsteds here will tell the truth.

The contemptuous remark of ex-Speaker Reed about reciprocity as "commerce on paper" finds apt illustration in the statistics of our exports of manufactured cotton during the first eight months of this year. For five of those eight months we have been in the enjoyment of reciprocity with Brazil, under an arrangement which accorded particular favor to our cotton goods. It is therefore something of an eye-opener to find that our exports of cotton manufactures to Brazil for the period in question this year amounted to but $310,216, as compared with $522,420 in the corresponding part of 1890. If this is the effect of reciprocity, our exporters might say, give us no more of it, or we shall lose the rest of our trade. In fact, one might infer that it had been a very disastrous eight months all around for our foreign trade in cotton goods. But that would be a great mistake: our exports of cottons show a surprising gain. The total foots up $9,855,783 for the first eight months of 1891, as against but $6,631,428 for the same period last year. Where did the gain come in? Has there been some important treaty of reciprocity that Mr. Blaine has secretly negotiated and forgotten to mention? Alas, no! the gain all came in our exports to China. That country took of us $1,230,042 worth of cotton goods in the first eight months of 1890, and no less than $4,600,276 in the same part of the present year. Of course, this is somehow due to reciprocity and the Administration, though what the latter has done to China except to threaten her with Blair and gunboats, we do not know. But we have an unfaltering faith that Private-Secretary Halford, or some attaché of the State Department, or the Bureau of Statistics, or the *Tribune's* Washington correspondent, will, now that we call their attention to the matter, hasten to maintain that anyhow it proves we ought to vote the Republican ticket. The idea that our exporters had quietly gone ahead and developed a foreign trade without any whooping or electioneering or subsidy-seeking, must, of course, be dismissed as too unpatriotic and un-American a course to be thought of.

The recent Church Congress in England gave up a good part of one day's discussions (October 7) to the consideration of church work in the poorest quarters of the cities and in industrial and mining regions. The address of the Bishop of Bedford, who is Bishop-Suffragan for North and East London, set forth some of the mistakes which had been made in that work, mentioning among them the subdivision of parishes, with the establishment of great numbers of uninviting chapels to which the people would not go, the employment of too many intellectual or physical weaklings among the clergy, under the mistaken idea that work among the poor was easy, and the attempt "to reach the masses by mission-halls, services in lodging-house kitchens, and under railway arches." He declared that the church could not too soon eradicate the idea that she was an institution "with deferred annuities alone to bestow," and that her clergy were only a sort of special "relieving-officers." The church had a great work of charity to do, he admitted, but he said that "charity is a science," with "well-defined principles and rules which it is a sin to disregard." He would have thrift inculcated as "nothing short of a Christian virtue," while, at the same time, he would "help the people to secure time for recreation, and then teach and assist them to spend it profitably." "The art of rational recreation is . . . not foreign to the work of the church." It is gratifying to have the word of a man of such good sense that "there is no part of the East End that can truly be called 'outcast London,' and there is more of sensationalism than of truth in what is implied in the title, 'Darkest England.'"

Now that the English Liberals have committed themselves to the disestablishment of the Church in Wales, the Anglican ecclesiastics are renewing their efforts to show that the claims of the Dissenters are unfounded. The Bishop of St. Asaph has circulated a pamphlet, entitled "The Truth about the Church in Wales," in which he undertook to show that the reported numbers and importance of the Dissenting sects had been greatly exaggerated. This has brought out a reply from the Welsh Calvinistic Methodists, who show that the Bishop, at least in what he had to say about their denomination, had succumbed to the usual temptation of political stump-speakers in matters of statistics. He had asserted, for example, that "the number of communicants had steadily decreased." Pressed for figures, he had to admit that he had considered the case of but a single county, where a general depression in manufactures and trade had led to large migrations of the inhabitants, and where, very naturally, the adherents of the churches had diminished with the rest of the people. When the Bishop was taxed with this unfairness, he replied that he had not been able to find any full statistics since 1887. But the Methodists retort that he could not have searched very diligently, as such statistics had been regularly published, and showed a steady growth in the denomination, both in numbers and contributions, for the past twenty-three years. This is all the more remarkable in view of the fact that in the rural districts, where this branch of Methodism has its strongest hold, the population as a whole had actually decreased during the same period.

The plan of Uruguayan debt conversion, upon which we lately commented, has been accepted by the Congress of Uruguay in its main features. In one respect the project is better than we had supposed, since it makes a present of $2,866,953 in the new consolidated bonds to the holders of some $28,600,000 of the 6 per cent. bonds, as a partial acknowledgment of the injustice of cutting down their interest to 3½ per cent. But the Congress declined to accede to the proposal of the London bankers that 45 per cent. of the Custom-house receipts should be made the security for the interest on the consolidated debt. As this was regarded as a vital feature of the scheme, the result may be the upsetting of the whole of it, in its present shape at least. But the most remarkable thing in the entire affair is the revelation made by the President of Uruguay, in his message to Congress, of the monstrous commissions paid for the floating of former loans. The costs and commissions for negotiating the present consolidation are put in the bill at $2,519,646, and the total amount of bonds in the contemplated issue is $96,350,000. This seems high enough, but is really very cheap, as President Herrera says, in view of what Uruguay has paid on foregoing loans. The loan in 1872 of $16,450,000, emitted through Thomson, Bonar & Co., cost $1,170,425, or 10.70 per cent. of the total amount realized. The $20,000,000 conversion loan of 1888, negotiated through the Barings, cost 8 per cent. What the Barings got, or were to get, for their unmarketed $10,000,000 of last year does not appear; but the Antwerp Committee of Uruguayan bondholders allege that those bankers had themselves paid all the interest on the 1888 loan, so as to keep the nation's credit up, and that they were to have all they wanted of the 1890 issue.

However that may be, these transactions certainly cast a flood of light upon the whole wild-cat system of South American finance. No wonder that the frequent loans disappear like so much spilled water, when the borrowing countries get only nine-tenths of the face value of their bonds from the bankers, and then have to pay 6 per cent. interest on securities that sell from 20 to 30 below par. And how the bankers who were on the inside, and knew the rottenness of the whole system, could ask innocent investors to embark their savings as they did, is a question for the moralist rather than the financier.

A WORD FOR THE POOR STATE.

THERE is one serious omission, both in this State and in Pennsylvania, in all the Republican and Democratic addresses, speeches, and manifestoes which call for a State victory this year in order to help the party ticket at the Presidential election next year. It occurs in nearly all the Flower articles in the New York *Times*, and in the address of the Democrats and Independents urging Mr. Flower's election for the sake of national issues. We need hardly say, too, that it occurs in the comments on the coming election which appear in nearly all the Republican papers in Pennsylvania, and in such "talks" as the Republican managers in that State venture to indulge in. We mean the failure to indicate the time and manner in which State or municipal abuses can be, without danger to larger interests, attacked at the polls. The utterances of the signers of the address to the Democratic and Independent voters of the State of New York, printed on Monday, were on this point absolutely hopeless, and yet among these signers were such thoughtful politicians as Charles S. Fairchild, F. C. Barlow, Stephen A Walker, Simon Sterne, E. P. Wheeler, and William L. Trenholm. They said:

> "However much we may wish it were otherwise, nevertheless, in voting upon this State election in 1891, it is necessary to consider the effect upon the national election in 1892. So long as the United States Senators are elected and Congressional districts are gerrymandered by S ate Legislatures; so long as State campaigns are fought by national parties; so long as these campaigns turn, in the minds of the people, upon national issues; so long as their results are generally accepted as popular verdicts upon national questions—so long must we consider the effect which State elections may have, not only upon national elections, but also upon the policies which will be adopted by political parties in national controversies."

These conditions, on which our duty at the State elections depends, are, we need hardly say, for all practical purposes, perpetual. The writers might as well have said at once that "as long as human nature is what it is," or "as long as pain and sorrow are the lot of man," we must "consider the effect which State elections may have, not only on national elections, but also upon the policies which will be adopted by political parties in national controversies." Stripping the proposition of its rhetorical drapery, it means simply that as long as there are national elections State elections must be treated as a preliminary trial of party strength on Federal questions.

Gloomy and puzzling as this proposition is, we are not now going to dispute it. But we have a right to ask its authors this question: "Given the conditions you describe, what provision have you made or do you propose to make, under the American system of government, for the reform of local abuses, and for opposition to mischievous or corrupt local organizations? You will readily perceive that one indirect, and certainly unintended, result of your theory is, that it makes the great Federal parties sanctuaries or asylums for local offenders, and you offer no suggestion as to the mode in which they can be got at by the indignant or outraged local voter; for as soon as he attempts to arrest them and bring them to justice, you stay his hand, and ask him if he has duly considered the injurious effect which a scandal of this sort will have on the fortunes of his party in the larger and more important Federal arena."

We must not be told that this right of asylum for local malefactors is only meant to be valid this year, and that it is only for the Presidential election of 1892 that it is claimed either in New York or in Pennsylvania. As we have said already, the arrangement, as described in the New York address, is clearly meant to be permanent. As a matter of experience, it has been so treated for some time in both States, here by the Democrats and there by the Republicans. It was not possible under it, as everybody knows, to get a judgment against either Tammany or Quay in 1888, because of the possible effect on the Presidential election of that year. It has not been possible in any year since 1888 to get such a judgment because of the probable effect on the election of 1892. In 1890 it seemed as if it would surely be lawful to vote at the municipal election with a single eye to municipal interests, but even then we were forced to condone a whole string of local rascalities lest we should hurt the Presidential ticket in 1892. A swarm of orators from other States actually injected themselves into the municipal canvass, and assured us that we must put up with Grant for one more mayoral term, in order to be ready to punish the Republicans in the nation at large two years later. In Pennsylvania the same plea was, *mutatis mutandis*, put forward in behalf of Delamater, who was, as we now know, a cover for a herd of State criminals.

We are not now condemning or approving of this arrangement. It may be good, or it may be bad; but it is unprecedented. It is not provided for in the State or Federal constitutions, and was not foreseen by the founders of the Government. What we say is, that those who excuse it or defend it, and still more those who commend it to the voters, are bound to produce some way of avoiding the neglect of local interests which it plainly involves. In other words, they ought to say at what elections and in what years a New York voter may rightfully attack Tammany or a Pennsylvania voter attack Quay, without damage to the national parties to which Tammany and Quay respectively belong. What are the arrangements proposed by our various party publicists for conducting State and municipal administrations with purity and efficiency?

OUR TREATMENT OF CHILI.

THE despatch of the cruiser *Boston* to Chili with a flourish of trumpets, and the obscure hints about something very serious which are issuing from some of the departments, will, we fear, make a good many people look forward with dread to our having a really powerful navy. They will ask, if we are so ready to threaten and vapor with four or five unarmored cruisers, what should we be if we had a large armored fleet, capable of forming a line of battle against a first-class maritime Power? Should we, with such a force at our disposal, ever have a Presidential election without having threatened, on some pretext or other, to bombard a foreign port in the interest of the Administration candidate?

In the ordinary course of civilized diplomacy, the despatch of increased naval force to the capital or chief port of a weaker government, especially if it be in trouble of any kind, is the last thing a first-class Power does. The reason is that the forms of diplomatic intercourse are based on the forms of intercourse between gentlemen, and when gentlemen have a dispute, the offended party never begins with a threat. He reserves this to the end, as something to be used only in case peaceful satisfaction is clearly unattainable. Now, the despatch of a naval force to the scene of a controversy is a threat; so is the increase of such naval force as may be already there. The departure of the *Boston* is undoubtedly meant to produce the impression at home that something serious is impending in Chili, and that the mysterious Somebody who now manages the State Department does not mean to "stand any nonsense," and to produce in Chili the impression that we should, on the whole, rather like a fight with that republic just now, when it is contending with a host of difficulties. But if that Somebody were really a civilized man, to say nothing of an American deacon or pewholder, he would have studiously avoided the faintest appearance of a resort to force until the resources of negotiation in this matter of the attack on the American sailors in Valparaiso had been completely exhausted.

What aggravates the unseemliness of the performance is, that the Valparaiso outrage is the natural outcome of our whole treatment of Chili since the present Administration came into power. It was, in the first place, disrespectful to the verge of insult to a "sister republic" to send as our representative to her capital, not an American of high standing and character, but a foreign adventurer who had recently arrived in the United States as a fugitive from the justice of his own country. We cannot recall in diplomatic history any such slight offered by a great Power to a friendly nation.

The Chilians bore it with great patience and even courtesy. They would have been quite justified in refusing to receive Egan as a *persona non grata*. But they did receive him and treated him civilly. Far from being conciliated by this forbearance of theirs, when an attempt was made a little later by the President to overturn the Republic in Napoleonic fashion and set up a dictatorship in its stead, we at once, through every instrumentality within our reach, showed our sympathy with the traitor, and treated him—a rebel in arms—as the lawful Chilian Government. When the men who were trying, against heavy odds, to save their liberty and laws, and who represented all that was left of the Constitution, tried to buy a few cases of arms in the United States, we pounced

on them almost with fury as public enemies, and started one of the new cruisers, with great noise, to "blow them out of the water" for committing a misdemeanor. There is, too, evidence of the strongest kind that Egan was the open partisan and mouthpiece of Balmaceda, if not his partner in speculations, and that our squadron was by no means careful to maintain a neutral attitude towards the contending parties—our flagship actually conveying to the Dictator important information about movements of the Congressional army.

That the Chilian populace should, after this had gone on for many months, have become greatly excited against Americans, is not surprising. It would be wonderful if they had not, and they are still in about the same stage of civilization as the street mobs in some of our own large cities—New York and New Orleans for instance. If our Government had had to put up with a similar series of annoyances and slights from the British Minister and Navy during the rebellion, we venture to say British sailors in uniform would have run considerable risk in appearing on our streets in 1862 or 1863; and if they had suffered injury or insults, assuredly we should have felt that Mr. Seward was entitled to great consideration and forbearance while endeavoring to settle the matter.

The present Government of Chili have a most difficult task before them in restoring the normal working of the administrative and legislative machinery, in reëstablishing the national credit, reorganizing the army and navy, and effecting the constitutional reforms which Balmaceda's attempt has shown to be necessary. They are therefore entitled to great indulgence at our hands. We ought not to increase their difficulties by unnecessary threats or insults. We ought, as Republicans, to do to them as we would be done by. We ought not to use our new cruisers, in childish glee, to vindicate Quay and Dudley and save the tariff at their expense. This is our work, and if it has to be done, the cost should fall on Americans exclusively.

EUROPEAN PUBLICISTS ON EMIGRATION.

In accordance with a suggestion of the Emigration Congress at the last World's Fair, a "Commission Permanente Internationale pour la Protection des Émigrants" was formed at Paris in December last, M. Levasseur being chosen its President, and the Prince de Cassano, who had been the moving spirit in its organization, becoming its general secretary. A committee of seven was promptly appointed to determine the "minimum of desiderata." Five of the seven, including Gen. Meredith Read, the American member, were unable to serve. Consequently, Professors Renault and Lyon-Caen of the Paris School of Law had the matter all their own way, and have finally published their report in the first number of the Commission's *Bulletin*. In an address delivered before the Paris Society of Commercial Geography, and afterwards published under the title 'Les Conditions Actuelles de l'Émigration Européenne,' the Prince de Cassano had already emphasized the evil wrought by unscrupulous emigration agents—an evil quite as great as he estimated it—and now the Committee have proposed means of amelioration, which, however, go by no means to the root of the matter. In fact, neither he nor they seemed to recognize how necessary a part of the present system unscrupulous agents are. Enormous steamers, built and run at enormous expense and in ever-increasing numbers, must be filled with emigrants, or dividends will cease. Several countries, the Prince de Cassano's native Italy among them, refuse to the transatlantic lines the subsidies they pay to others, for the avowed reason that the transatlantic lines can count on large sums in steerage money. The companies, accordingly, instruct their agents to see to it that there be no miscount. The agents, who work very largely by means of lies, naturally have the greatest success with the most ignorant—a fact that goes far towards explaining the steady deterioration of the immigrants landing in this city.

To remedy this state of things, the Committee proposes that all countries which, either by propaganda or by special laws, attempt to attract foreign workmen, shall reject every immigrant whose "contract" (whatever that may be) has not been signed either by one of their own consuls or by their specially appointed immigration agent, and also by the authorities of the port of embarkation or by a consul of the immigrant's native country. The only reason suggested for an immigration agent's refusing to sign the contracts of would-be immigrants to his land is that the trades mentioned in the contracts are unknown there. The conditions under which the domestic official should withhold his signature are not specified. But even the fantastic proposition to make the right of emigration dependent upon the caprice of an official at the often foreign port of embarkation is outdone in absurdity by the provision (article 9 of the report) that "lands placed gratuitously at the disposition of immigrants by the country to which they emigrate, should be provided with a house of at least two rooms," at public cost! After this, the further proposition (art. 14) to pension the widows and orphans of emigrants who die within a year or even longer after their arrival, seems to follow as a matter of course, and would not have been mentioned here save that it contains a practical suggestion (the only practical thing in the whole report) for Republican members of Congress. The idea advanced in it is capable of great improvement, and could undoubtedly be so developed as to relieve any possible congestion of the Treasury. To make the suggestion still more practical, it might be turned about: when wife or child dies, pension the vote of the surviving immigrant.

While one international association is thus entertaining silly suggestions with regard to emigration, another and more important association has been practically refusing to entertain sensible ones. At Hamburg the other day, the "Institute of International Law" was on the point of rejecting without debate the report on the admission and exclusion of foreigners which had been laid before it by its newly-elected president, Prof. von Bar of Göttingen. As might have been expected from Von Bar's pronounced "freisinnige" tendencies, his report was very liberal, viewing the matter almost exclusively from the standpoint of the individual emigrant, not from that of the States concerned. Nevertheless it conformed to the only sound principle, viz., that emigration is a right, immigration a privilege—a privilege, however, whose free exercise is of such importance that it should be restricted as little as possible. Among his more characteristic propositions were these: "Any act which forbids the subjects of a State to enter it or to remain in it, is contrary to international law." "In case of great political necessity, a State may expel subjects, but only when it is certain that the territory of many other civilized States, which they can conveniently reach and where they can live in peace, remains open to the persons expelled." "Immigration should be hindered only in the public interest, and from motives of extraordinary gravity, *e. g.*, on account of fundamental difference of race or of customs, or where numerous foreigners, having entered the State, may, by organizing, endanger it." "A State can refuse admission to persons who, after the artificial rules of another State have made it possible for them to live there for a long time, are forced to emigrate and to spread themselves over other lands in search of work [Russian Jews ?]; but, on the other hand, protection of national labor is not alone a sufficient ground for exclusion." "It is desirable that admission and expulsion be regulated by law."

While such propositions as these are undoubtedly in advance of the present conditions of international law, perhaps in advance of any condition it will ever reach, still there can be no doubt that they form a suitable subject for discussion by the Institute. It was therefore surprising when several members, among them Prof. Renault, declared one after another that the matter must be settled by municipal law, and consequently that the report was out of place. Prof. von Bar reminded the Institute that he had prepared the report in response to a formal invitation which they tendered him in their last session at Lausanne and added that he was unable to see why the subject was less important or less appropriate now than three years ago. Rolin-Jacquemyns (Belgium) begged that the members would not, on account of recent political events, refuse consideration to a question of such importance. Lord Reay declared that there was no probability of England's enacting any law on the subject. Albérie Rolin, in response, emphasized the fact that the Institute did not desire to force laws on anybody, but simply to formulate the views of competent scholars; and finally, upon motion of

Asser (Holland), supported by Von Bar himself, the debate was postponed to the next session. This little comedy is only intelligible when regarded as an afterpiece to the great Franco-Russian drama at Cronstadt. Prof. Renault is quite willing to recommend all sorts of impossible humanities to the three Americas, but unwilling to see an important body like the "Institut de Droit International" adopt or even discuss a report which, at least by implication, condemns the expulsion of Jews from Russia.

ARGENTINE FARMING.

SINCE the disastrous close of the era of speculation in Argentina, a great amount of attention has been given to the legitimate development of the country. This has come about partly as a healthful reaction from the absurd overdoing of business on paper, and partly as a consequence of the general conviction that the only escape of the nation from disgraceful bankruptcy is by growing crops to pay the interest on the national debt. At any rate, there can be no question that the past year, so calamitous financially, has been, agriculturally, one of great activity. Yet the actual condition of the farming interest in the Argentine Republic is hard to get at, so conflicting is the evidence both as to the development and the profits of agriculture there.

On one side we have brightly colored and apparently authentic pictures of the outlook and opportunities of the Argentine farmer. Thus an Englishman, R. W. Traill, wrote to the London *Times* from his own farm, in the province of Santa Fé, August 1, 1891, declaring that in wheat-growing a profit of 23 shillings 11 pence per acre could be made on land costing only from 30 to 40 shillings the acre. He proceeded to prove this from his own experience by giving his budget for a year, which he vouched for as "absolutely correct." He added: "If Englishmen who have an interest in this country would invest their money in productive work instead of making loans to the natives, the Argentine Republic would soon improve its position, and they individually would secure a fortune and find that the country was healthy and fairly satisfactory to live in." In like manner a correspondent of an English paper published in Buenos Ayres gave what purported to be authentic statistics for the two great branches of farming in Argentina—cattle and wheat—showing a yearly return, in the former case, of $9,000 on an investment of $30,000, and in the latter, of $33,600 on an outlay of $60,000.

Unfortunately, both these letters are couched in somewhat vague terms, and it is to be feared that analysis of details, taking into account the matter of locality and transportation, would put a very different face on the affair. This fear is certainly given color by the fact that two great English land companies, owning vast tracts in the very provinces where these extraordinary profits are reported, have made nothing at all. The Santa Fé Land Company purchased 4,336,150 acres in 1883, at about 3 shillings the acre; but its stock is now quoted at a price which would make its holdings worth only a little over 2 shillings the acre, and it has never paid a dividend in all the seven years of its existence. The Cordova Company was brought out in 1888, and has paid one dividend of 5 per cent.; but its shares are now quoted at sixty cents on the dollar. How these things can be in the same provinces and in the same business where private farmers claim to be making 50 per cent. profit, is difficult to understand. Much more reasonable appear the estimates lately put forth in the report of the National Hypothecary Bank. These were intended for the guidance of immigrants, and particularly of foreign investors who might be asked to loan money on Argentine real estate. Taking up first the "open camp" system of cattle-raising, under the smallest possible outlay of capital, the report gives details showing an average profit of 2.65 per cent. With heavier investments and consequent improvement in methods and cultivation, a profit of 5.44 per cent. is shown. Still further improvements, purchase of better breeds of animals, etc., with the heavier outlay involved, push the profits up to 9.36 per cent. Higher returns are asserted in the case of wheat-growing. As this report was drawn up by a body of experienced Argentine gentlemen, some of whom are ready to invest in land on the basis of the values therein assigned, it probably comes pretty near the actual facts.

One branch of the agricultural export trade of Argentina has proved highly disappointing to those engaged in it—the shipment of cattle and sheep to Europe. This was taken up with great enthusiasm a few years ago, partly under the promise of a Government guarantee of interest on the capital invested, and partly on the basis of the great success of the business of shipping frozen mutton to England from Australia and New Zealand. But the report of the River Plate Fresh Meat Company for the year 1889-91 shows that the year's operations were conducted at a loss of over $75,000. This company began business in 1883, when it exported 17,165 carcasses; in 1890 the number was 1,196,531. The first shipment of Argentine horned cattle to France was made in September of this year, and resulted in a heavy loss. Some English companies are said to be doing better than the one just referred to, but, on the other hand, others are known to be in financial difficulties.

With Argentina so many thousands of miles nearer Europe than is Australia, and with a soil and climate at least as favorable as the latter's for sheep-raising, it seems strange that the frozen-meat trade with the South Sea colonies should be profitable while it is so distinctly unprofitable with the former country. The explanation is to be largely found in the inferior condition of the Argentine sheep. They are, as a rule, half-bred merinos, while the New Zealand and Australian mutton is the flesh of the best South Downs. Moreover, there is a great prejudice against the Argentine article in the English market, so that it brings only about half the price of the Australian mutton. Added to this is the undoubted fact that the Argentine sheep are often diseased. The Board of Trade inspectors reported, in 1890, that the "increase of cases of disease among animals landed from abroad was largely due to the prevalence of scab among sheep, principally from the Argentine Republic." All which goes to show that natural advantages for successful farming cannot take the place of improved methods and careful oversight.

WILLIAM FERREL.

ON September 18, died at Maywood, Kansas, Prof. William Ferrel, the most eminent meteorologist that America has produced. If we were to say the most eminent meteorologist of the world, most of our readers, not even knowing Ferrel's name and never having heard of his works, would regard so high an estimate as extravagant; and if eminence includes general reputation, it would perhaps be unjust to make such a claim for a man who always lived simply and quietly, known to few of his countrymen, and, for many years after his work began, hardly known even to scientific men in Europe. But if eminence in science is to be measured by the effect produced on methods of investigation and by importance of results, unrivalled eminence in meteorology may be fairly claimed for Ferrel. Dové, who held the highest place among the older European meteorologists, accumulated a great store of facts concerning climatology; but he was not particularly successful in interpreting the facts. In more modern times, there are many earnest students in this science in the several countries of Europe, all contributing their good share to its progress, but none so strongly changing its attitude as Ferrel did. In this country, we have had Redfield and Espy, both able, although so different in their methods; both adding much to our understanding of atmospheric processes, but neither having the genius or knowledge of Ferrel, and neither reaching results so well demonstrated or so far-reaching as his. Loomis, a most persevering and successful investigator, whose results are often quoted to our credit, followed so purely and patiently the inductive method that he can hardly be said to have originated any broad theoretical views.

With more boldness and originality than any of his predecessors, and with more success than was reached by any except his followers in later years, Ferrel applied a knowledge of physics and mechanics and a mathematical method of treatment to the solution of problems in meteorology. In these lines he was certainly a genius, his love for mathematics being shown even when as a boy he drew geometrical diagrams with a pitchfork on the door of his father's barn in Virginia, and later in his wonderful judgment regarding the theoretical explanation of facts; but, as always with genius of the highest order, it was supported by hard and persevering study. He was not an "observer" in the common sense; he employed the observations of many others and reasoned well upon them. His writings do not teem with bibliographic references, although he read carefully and continuously; but the student may be sure that the few references given will lead him to records of the highest value. Ferrel's selection and discrimination among facts was as acute as among theories—he was seldom misled by errors of record or interpretation; but his great success was in the dis-

covery and demonstration of theoretical explanations. The general circulation of the atmosphere around the earth never received anything like adequate treatment till he examined it; and, although his explanation was not complete, all subsequent work has followed essentially upon the lines that he first marked out. His theory of the mechanism of cyclonic storms was the first to give intelligent explanation of their whirling winds and central low pressure. His theory of the action of tornadoes has never been approached by any other; it is far superior to all that have been suggested. It is not, however, theoretical suggestions alone that we owe to him: he followed his suggestions with the most careful examination of their value, and thus not only established his views on firm foundations, but gave an example to others of the methods by which scientific meteorological investigations should be carried out. In this respect his work may be taken as a model, even though his mathematical form is criticised as inelegant by more expert mathematicians.

The most conspicuous novelty of principle that he introduced was the correct estimate of the deflective force by which bodies moving over the earth tend to depart from rectilinear paths, in consequence of the earth's rotation. This and its consequences, not properly introduced by his predecessors into meteorological theories, had left them all at fault; more than anything else, it was the solution that Ferrel found for many difficulties, but it is not a matter of which one can treat in a newspaper.

Ferrel's work, like his life, was aside from the paths of other men. His essays were inconspicuously published in scientific journals, some of which had a very narrow circulation. It was not till near the close of his life that he prepared a book for separate publication, his 'Popular Treatise on the Winds,' and that is too severely argumentative for general reading, although there is no work to which the student of meteorology may turn with greater confidence of good leadership. He never sought promotion. His advancement from school-teaching in Tennessee to a place in the Nautical Almanac in 1857, his removal to the office of the Coast Survey in Washington in 1867, his selection for the office of professor in the Signal Office in 1882, were all unsolicited. In each of these offices, he pushed beyond the previous limits of knowledge. When with Winlock in the Nautical Almanac, he, better than any one else, demonstrated that a slight unexplained excess of the moon's velocity in its orbit was due to the lagging of the clock (the rotation of the earth) by which the moon's velocity was measured. In the Coast Survey under Peirce, he investigated our tides and invented a tide-predicting machine now in daily use and doing the work of thirty or forty men, which the visitor to Washington would do well to see in operation in the basement of the office. In the Signal Office, under Hazen, he performed the highest scientific work of the service, and stood for what a meteorologist should be—not an officer temporarily assigned to a new duty, but a lifelong and well-trained student of the science. He was a member of our National Academy of Sciences and of our best scientific societies, and an honorary member of the Austrian, German, and English Meteorological Societies. He never sought to force his theories on the public or even on the scientific world; he had a simple and trustful confidence that time would make correct judgment and determine between fleeting error and enduring truth.

Although living apart from the ways of the world, he was not careless of worldly matters, as many students are; he saved from his moderate salary, invested his savings wisely, and at his death, at the age of seventy-four, he was the possessor of a considerable fortune to leave to his relatives. He then said, "I regret to leave my friends, but that is all I regret," and so closed a pure life of simple greatness.

LIBRARIANS AT SAN FRANCISCO.

San Francisco, October 19, 1891.

The late conference of the American Library Association in this city was much quieter than the Fabyan conference. The attendance was less than half as great, consequently there was less rush, less of the enthusiasm of a crowd; the meetings, though a little unpunctual, were very orderly. One reason for the quietness may have been that little novelty was presented. The work of libraries in connection with schools, though of the highest importance and interest, has been discussed so often that little new can be said upon it; nor does it in general lead to that difference of opinion which so enlivens a meeting. No heresy in cataloguing or classification was presented to bring a score of objectors at once upon their feet. There was not even the annual report upon those subjects. On the other hand, it was stated that Mr. Rudolph of the San Francisco Free Library will shortly publish a new system of cataloguing that is far to surpass all its predecessors in utility and economy; but no description could be given pending application for a patent. The claims made for it are indeed startling. It almost does away with the use of the pen; card catalogues become a thing of the past; it solves the long-standing problem of a universal catalogue; it is speedy—books received in the morning, no matter how numerous, can be presented to the readers in a printed catalogue before night; it is cheap—what now costs $2 can be done for 25 cents. These statements were received with a little scepticism. The visiting librarians can understand how great mechanical improvements can be made; but as the chief expense in cataloguing is not for mechanical, but for intellectual work, they do not see how such saving is possible.

In library architecture the old material was threshed out a little; but the main interest centred in an exhibition and description of the plans for the interior arrangement, particularly the shelving, of the Library of Congress by an enthusiastic admirer, Mr. Linderfelt of Milwaukee. Unluckily, the necessity of adjournment cut short his account. It is evident, however, that the nation is to have a library of which it may be proud; one that will supply a model for large libraries in cities where the dearness of land forbids spreading the books over much surface and compels the erection of a lofty pile—forces the library to be, as it were, set up on end. The shelves of the Library of Congress are to be absolutely interchangeable all over the building; the books are to be brought from the stacks to the delivery desk and carried back to the shelves by an endless band which can fetch one from the remotest corner in less than half a minute, to the great saving of the muscles and hearts of attendants and of the temper of readers. The means for the admission of light and air and the exclusion of undue heat, it is hoped, will be equally admirable.

The opening paper of this session, by Mr. C. C. Soule, was a brief, clear, and full statement of the points on which librarians are agreed in respect to library architecture. It will be found most useful to put into the hands of architects who are employed to design libraries, and will dispel the common ignorance of the qualities necessary in such buildings, and render the blunders we now see in most of our American libraries inexcusable. It should be separately printed. Another paper which deserves the same treatment was Mr. D. V. R. Johnstone's report on binding and binderies, which might be called a manual of binding for the use of librarians. Mr. Gardner M. Jones's report on the dissemination of contagious diseases through the use of library books was based on the replies to circulars sent to many librarians. Its conclusion was that the danger is very slight, but that precautions should be taken in order to satisfy the fears of the nervous. Mr. W. E. Foster's defence of the public support of libraries, in answer to the Spencerian doctrines of the 'Plea for Liberty,' was a satisfactory reply. Access to the shelves by the users of libraries, on which papers were written by Herbert Putnam and W. H. Brett, who have introduced the greatest freedom at their libraries of Minneapolis and Cleveland, is one of the burning questions of the present day, taking the place which the use of fiction held in the early meetings of the Association. It would certainly have provoked a lively discussion had any discussion been permitted, but the tardiness of attendance, which by that time had been allowed to become extreme, left so short a time for the session that discussion was cut off. This was the defect of the whole convention. And yet discussion is the main object of such a body. Papers can be read in print. This should be borne in mind at the next meeting, and prompt attendance insisted on. No doubt it is unpleasant to begin a session with an important paper when only a dozen auditors are in their seats, but if this course be followed from the start, people will come early; if it is not, unpunctuality is a vice that grows apace.

The fact is, that sight-seeing proved too strong for business. The Association was received with a prodigality of hospitality such as, well as they have been treated in other cities, they have never before experienced. A committee of reception came from Sacramento to the very borders of the State to meet them, with offerings of flowers and fruit and fish, and from that time till they left they were the objects of unremitting attention. As far as weather was concerned, Nature treated them equally well; but it was not the right season to see the beauty of California. After four months of drought everything was faded, brown, dusty; yet there was much that was interesting or wonderful, and it was easy to see how lovely the country must be in the green winter and spring.

One announcement of extreme importance was made at this Convention. Mr. R. R. Bowker, under whose supervision the supplements to Mr. Leypoldt's excellent 'American Catalogue' have appeared, will prepare an 'American Bibliography of the Nineteenth Century,' designed to give the title, with suitable details, of every book published in America from 1800 to 1890, with perhaps a preliminary conspectus of the previous centuries. The form will be octavo, in place of the cumbersome quarto of the 'American Catalogue.' Mr. Bowker stipulates for a subscription of only 500 copies, at $100 each, which would give a guarantee fund of $50,000, though his experience with the 'American Catalogue' and its supplements leads him to estimate the expense at

nearly $100,000 It is greatly to be hoped that as soon as the proposals are issued every library of size will hasten to give its subscription. Merely in the economy of service, such a bibliography will soon pay for itself; and as a matter of national pride, all must desire the publication of a work unequalled in any other nation. If the subscriptions come in quickly, the preliminary work will be begun at once, but with all possible haste the volumes could hardly be ready for issue till some years of the twentieth century have passed.

TREATY-MAKING POWER IN FRANCE.

PARIS, October 14, 1891.

THERE is no such thing as the French Constitution. The present republic was organized by several successive laws, which are constitutional laws. These constitutional and organic laws were voted by the National Assembly which sat at Versailles after the war of 1870–1871. The existing relations between France and Russia have drawn attention to the articles of these laws which relate to the right of making treaties. I will give the exact terms of these articles:

"The President of the Republic negotiates and ratifies treaties." (Constitutional Law of July 16, 1875, article 8.)

"During the session of the National Assembly, no treaty will be definitive if not approved by the Assembly." (This article, taken from the Constitution of the Republic of 1848, was in force during the sitting of the National Assembly.)

"After the adjournment of the National Assembly, the President of the Republic is bound to give cognizance of the treaties to the two chambers as soon as the interest and security of the State permit." (Constitutional Law of July 16, 1875, article 8.)

We have now clearly to deal only with the first and the third of these three articles. The President, in virtue of them, can make treaties and can make secret treaties, since he is bound to make them known to the Chambers only when the interest of the State requires it. The President of the French Republic has been thus invested with a really royal prerogative, and we must not wonder at it since the Constituant Chamber of Versailles was very monarchical in sentiment, and prepared a constitution which was intended to become the constitution of a monarchy, with as few changes as possible in its articles. Everybody knows how its intentions were defeated, how the revision clause was altered in Congress so as to set aside the question of the form of government—how, in fact, the republican form of government became definitive.

The Republic has now attained its majority—it has lasted twenty-one years; and we may calmly inquire if the Presidential prerogative was made too large in this matter of the right of making treaties. I, for one, do not think so; it is obvious that, placed as she is in Europe, France cannot dispense with the necessity of forming alliances and of entering into diplomatic arrangements which, at times, require secrecy. She has friends and she has enemies; her long history is a perpetual struggle for the conquest of a natural frontier—there is not a town, not a village, on her northern and on her eastern frontier which does not recall a battle, a siege. She is covered now on the north by the Belgian neutrality, but how long did she not have to struggle with the Spaniards in the Low Countries? In the part of the country which I inhabit in the summer, archery is still the amusement of the peasants, and this amusement dates from the time when the English and the French were disputing the valleys of the Somme and the Oise. Our eastern frontier has been constantly changing; Henri II. took the three bishoprics, Metz, Toul, and Verdun; the story of the annexation of Lorraine, of Alsace, of Franche-Comté is well known. The ecclesiastical estates which lay between our eastern frontier and the Rhine were attached to the Roman Empire by a very loose tie; the frontier of the Rhine has been the dream of every great French ruler. For the present, French ambition is reduced to the reconquest of the provinces lost in 1870–1871, and the whole policy of France will have this reconquest for its object.

The Triple Alliance was formed, under the influence of Prince Bismarck, in order to secure for Germany the conquests made in 1870. It is legitimate for France to try to confront this formidable constellation of Powers with another constellation, and she imagines that she has found in Russia the ally which is necessary to her. France and Russia, which are so distant in every respect, have one common fear and one common dislike; and nations are more united by their dislikes than by their affections. As the Triple Alliance was really formed chiefly in the interest of Germany, the Franco-Russian Alliance is chiefly directed against Germany. The French fleet would not have been sent to Cronstadt, and the demonstrations which followed this visit would never have been allowed by the Russian Government, if there had not been a desire to give a sort of visible form to an understanding which had been long and carefully prepared. It has been said that during the visit to Cronstadt some diplomatic document was prepared which gave to what may be called the moral alliance of France and Russia the character of a diplomatic alliance.

How far things are advanced, very few probably know. The Paris correspondents of the *Times* and the *Politische Correspondenz* have gone so far as to say that there is a formal treaty in a state of preparation. I have shown that President Carnot is perfectly free, under the terms of the Constitution, to make such a treaty on his own responsibility; but it is said that this responsibility is so great that there is a question of making a communication on the subject, not to the Chambers, but to the heads of the Parliamentary groups. The wisdom of such a policy is very doubtful, for if the information of the *Times* is correct, the Government would not communicate to these heads of the Parliamentary groups the tenor of the articles of the secret treaty, they would simply be informed of the existence of the treaty. But how could they form an opinion on the treaty if its articles remained unknown to them? How could they judge that the treaty is opportune or not, advantageous or not? Therefore, if a communication of this sort is made, it must be made in full, and in that case the articles of the treaty would probably not long remain a secret.

The Russian Government has not been slow to take advantage of the disposition of the French people by announcing a new Russian loan to be offered to the public, on the French market, at a comparatively very high price. Four hundred millions of francs will leave the country in the course of a few months and go to the banks of the Neva. *Punch* had a caricature showing a French peasant in the character of a bear-leader; in this case the peasant will not collect the money, he will give his own. France has systematically, for the last few years, sold Italian funds and replaced them with Russian funds. The operation, as it was undertaken merely for an idea, has so far proved successful. Russia's credit has gained all that Italian credit has lost. This half-reasoned and half-instinctive operation has been inspired in a great degree by the anger felt by the French people when they saw Italy bind herself hand and foot to the Triple Alliance. There is a notion in France that we had something to do with the liberation of Italy; we remember Magenta and Solferino; all the articles of M. Crispi cannot destroy the great facts of the past. There is, perhaps, more anger felt against Italy in a certain part of the nation than against Germany.

It is idle to deny it. France, who has been wounded in every way for twenty years, who felt in a sort of diplomatic isolation, and knew that a formidable combination of forces had been formed against her, feels now a sort of relief since Russia has shown interest in her position. There may be, there probably are, many illusions in this sentiment; all the hopes that are formed may never be realized; but the nation feels more at ease, it breathes more freely; the late manœuvres, which showed a real army of 120,000 men, well officered, well fed, well equipped, animated with the best spirit, have revived the confidence of the nation in itself. This sentiment is so strong that all the ministers in their speeches are obliged to express it in order to keep their popularity. The President himself, cautious as he is, has expressed it on various occasions. France is herself again; there is no serious opposition to the Government; the patriotic feeling has, for the present at least, become uppermost.

CHARLES STEWART PARNELL.

LONDON, October 13, 1891.

IN the career which has so suddenly closed with Mr. Parnell's death at the age of forty-five, there are elements of passion and vicissitude which might fit it to be the subject of a Greek tragedy. There were strange and sudden alternations of obscurity and fame, of unlooked-for success, and ruin in the hour of triumph. We shall doubtless within the next few months or years learn much that is new regarding his perplexing character and some unexplained passages in his life, and any view given of them now must be given with the knowledge that it is imperfect and subject to correction, as well as, when the facts shall have been more fully cleared up, to expansion. Still, it seems worth while, now that the impression he made upon English observers is still fresh and vivid, to try to convey that impression to those in America who have long felt curious about him, and desire to know how he struck persons with no special means of knowledge.

It has often been observed that he was not Irish, and that he led the Irish people with success just because he did not share their characteristic weaknesses. But it is equally true that he was not English. One always felt the difference between his temperament and that of the normal Englishman. The same remark applies to some other famous Irish leaders. Wolfe Tone, for instance, and Fitzgibbon were very unlike the usual type of Irishman—that is, the Irishman in whom the Celtic element predominates—but they were also unlike Englishmen. The Anglo-Irish Protestants, a strong race who have produced a number of remarkable men disproportionate to their ratio to the whole population of the United Kingdom, are a group by themselves, in whom some of the fire and impulsive-

ness of the Celt has been blended with some of the firmness and tenacity of the Englishman. Mr. Parnell, however, though he might be reckoned to the Anglo-Irish type, was not a normal specimen of it. He was a man whom you could not refer to any category, peculiar both in his intellect and in his character generally.

His intellect was an eminently practical one. He showed no interest in speculation or in the pursuit of abstract truth. He had no taste for literature, no love of knowledge for its own sake. He had read very little, and his speeches show no acquaintance either with history, beyond the commonest facts, or with any of the other subjects connected with politics. Very rarely did they contain a maxim or reflection of general applicability, apart from the particular topic he was discussing. Nor did he ever attempt to give to them the charm of literary ornament; all was dry, direct, and practical, without so much as a graceful phrase or a choice epithet. Sometimes, when addressing a great public meeting, he would seek to rouse them by vehement language, but though there might be a glow of suppressed passion, there were no flashes of imaginative light. Yet he never gave the impression of an uneducated man. His language was clear and grammatical; his taste was correct. It was merely that he did not care for any of those things which men of equal ability usually do care for. His only interests, outside politics, lay in mechanics and engineering and in the development of the material resources of his country. He took pains to manage his estate well, and was specially anxious to make something out of his quarries. Noticing that he was almost always occupied in examining and attacking the measures or the conduct of those who governed Ireland, many thought his intellect a purely critical one. This, however, was a mistake. Critical, indeed, it was, in a remarkable degree; keen, penetrating, stringently dissective of the arguments of an opponent, ingenious in taking advantage of any false step in administration or of admission imprudently made in debate. But it had also a positive and constructive quality. From time to time he would drop his negative attitude and sketch out plans of legislation which were always consistent and weighty, but notably deficient in imaginative warmth or color. They were the schemes rather of an able man of business, who saw the facts in a sharp, dry light, and never went beyond what the facts could be made to prove. And they were not only vigorous, but independent: he never seemed to be borrowing from others, although he freely used the help that others gave him in collecting facts or opinions. You felt that he had looked at things for himself, and had seen them as they actually were, in their true perspective, and not (like most Irishmen) through the mists of sentiment or party feeling. The impression which one of his more elaborate speeches made might be compared to that which one receives from a gray, sunless day with an east wind, a day in which everything shows clear, but also hard and cold. To call his mind a narrow one, as people sometimes did, was to wrong it. The range of his interests was doubtless limited; his intelligence was not. It never seemed unequal to any task it undertook, but, on the contrary, judged not only soundly, but also with an appreciation of the whole phenomena of the case, even those with which it had no personal sympathy. Still, his was a purely practical intellect. It was not original, not given to theorizing, not discursive; it did not rejoice in the exercise of thought for thought's sake, but felt itself to be merely a useful instrument for performing the work which the will required of it.

If, however, the intellect of the man could not be called interesting, his character was interesting in an eminent degree. It gave one many problems to solve, and could not easily be covered by any formulæ. An observer who followed the old method of ascribing to every one a single ruling passion, would have said that his ruling passion was pride. The pride was so strong that it almost extinguished vanity. He never seemed to seek occasions for display, frequently neglecting those which other men would have chosen, not seeming elated by the applause of crowds, and treating the House of Commons with equal coolness whether it cheered him or howled at him. He cared little for any social compliments or attentions, very seldom accepted an invitation to dinner, dressed with little care and often in clothes whose style and color seemed unworthy of his position. He was believed to be haughty and distant to his followers, and although some of them have denied this, the fact remains that scarcely any were admitted to intimacy, and that none of the ordinary signs of familiarity could be observed between him and them. Towards others he was sufficiently polite but warily reserved, showing no desire for the cultivation of friendship or, indeed, for any relations but those of business. Of some ordinary social duties, such as opening and answering letters, he was more neglectful than good breeding permits; and one did not know whether to ascribe this fault to indolence or to a superb disregard of everybody but himself. Such disregard he often showed in greater matters, taking no notice of attacks made upon him which he might have refuted, and sometimes declaring in the House of Commons that the opinions of Englishmen did not in the least affect him, since it was to his own country only that he recognized any responsibility. But he treated even his own countrymen in a somewhat disdainful and somewhat irresponsible way. He would sometimes remain away from Parliament for weeks together, even when important business was being considered, perhaps even vanishing altogether from public ken. Yet this lordly attitude and the air of mystery which surrounded him did not seem to be studied with a view to effect. They were due to his habit of thinking first and chiefly of himself. If he desired to indulge his inclinations, he indulged them. Some extremely strong motive of passion or interest might interpose to restrain this desire and stimulate him to an unwelcome exertion; but no respect for the opinion of others, nor fear of censure from his allies or friends, would be allowed to do so. This boundless self-confidence and independence contributed greatly to his success as a leader. They gave him faith in his own fortune, they inspired a conviction that obstacles whose reality his judgment recognized would ultimately yield to his will, an undismayed fortitude in crises which only once forsook him—in the moment of panic which followed the Phœnix Park murders of 1882. The confidence which he felt, or appeared to feel, reacted upon his party, and was perhaps the chief ground of their obedience to him and their belief in his superior wisdom. His calmness, his tenacity, his patience, his habit of listening quietly to every one, but deciding for himself, were all evidences of that resolute will which imposed itself upon the Irish masses no less than upon his Parliamentary following, and secured for him a loyalty in which there was little or nothing of personal affection.

In all these regards pride was a source of strength. In another direction, however, it proved a source of weakness. There are men in whom the want of moral principle, of noble emotions, or of a scrupulous conscience and nice sense of honor, is reinforced by respect for the opinion of their class or of the world. Such men may hold through life a tolerably upright course neither from the love of virtue nor because they are ambitious and anxious to stand well with those whom they aspire to influence or rule, but because, having a sense of personal dignity, combined with a quiet perception of the feelings of those around them, they are resolved to do nothing whereby their good name can be tarnished or an opening given to malicious tongues. But when pride towers to such a height as to become a law to itself, disregarding the judgment of others, it may not only lead its possessor into an attitude of defiance which the world resents, but may make him stoop to acts of turpitude which fatally discredit his character. Mr. Parnell was certainly an unscrupulous man. Without dwelling upon his relations to Mrs. O'Shea, his betrayal of Mr. Gladstone's confidences, and his reckless appeals during the last year of his life to the most inflammable elements in Ireland, there are facts enough in his earlier career to show that he had little regard for truth and little horror for crime. A revolution may extenuate some sins, but even in a revolution there are men (and sometimes the strongest men) whose moral excellence shines through the smoke of conflict and the mists of detraction. In Mr. Parnell's nature the moral element was imperfectly developed. He seemed cynical and callous; and it was probably his haughty self-reliance which prevented him from sufficiently deferring to the ordinary moralities of mankind. His pride, which ought to have kept him free from the suspicion of dishonor, made him feel dispensed from the usual restraints. Whatever he did was right in his own eyes, and no other eyes need be regarded. Phenomena somewhat similar were observable in Napoleon. But Napoleon was obviously not a gentleman in the common sense of the term. Mr. Parnell was a gentleman in that sense. He had the bearing, the manners, the natural easy dignity of a man of good birth who has always moved in good society. This made his departures from what may be called the inner and higher standard of gentlemanly conduct all the more remarkable.

He has been accused of a want of physical courage. It is certain that after the Phœnix Park murders he asked the authorities in England for police protection, being, not unnaturally, in fear for his life; and that he habitually carried fire-arms. But these facts are hardly sufficient to justify the charge. Moral courage he showed in a high degree during his whole public career, facing his antagonists with an unshaken front, even when they were most numerous and bitter. Though he intensely disliked imprisonment, the terms on which he came out of Kilmainham left no discredit upon him. He behaved with perfect dignity under the attacks of the *Times* in 1887, and in the face of what turned out to be the forgeries of Richard Pigott—forgeries which the bulk of the English upper classes greedily swallowed. With this courage and dignity, however, there was little to show magnanimity. He seldom said a generous word, or showed himself responsive to such a word spoken by another. Accustomed to conceal his feelings, except in his most excited moments, he rarely revealed, but he certainly cherished, vindictive sentiments. He never forgave either Mr. W. E. Forster or Mr. Gladstone for

having imprisoned him in 1881; and though he stood in some awe of the latter, whom he considered the only really formidable antagonist he had ever striven with, he bore him a grudge which smouldered under the reconciliation of 1886 and leapt into flame in the manifesto of November, 1890.

The union in Mr. Parnell of intense passion with strenuous self-control struck all who watched him closely, though it was seldom that passion so far escaped as to make the contrast visibly dramatic. Usually he was cold, grave, deliberate, repelling advances with a sort of icy courtesy. He hardly ever lost his temper in the House of Commons, even under the sarcasms of his former friends, though the low, almost hissing tones of his voice sometimes betrayed an internal struggle. But during the electoral campaign in Kilkenny, in December, 1890, when he was fighting for his life, he was more than once so swept away by anger that those beside him had to hold him back from jumping off the platform into the crowd to strike down some one who had interrupted. Suspended for a moment, his mastery of himself quickly returned. Men were astonished to observe how, after some of the stormy passages in the Committee Room No. 15 debates in December, 1890, he would address quietly, perhaps lay his hand upon the shoulder of, those who had just been denouncing him, and on whom he had poured all the vitriol of his fierce tongue. As this could not have been good-nature, it must have been either calculated policy or a sort of scorn for those whom he had been wont to deem his subjects. Kindliness was never ascribed to him; nor had he, so far as could be known, a single intimate friend.

Oratory is the usual avenue to leadership in a democratic movement, and Mr. Parnell is one of the very few who have arrived at power neither by that road nor by military success. So far from having by nature any of the gifts or graces of a popular speaker, he was at first conspicuously deficient in them, and became at last effective only by constant practice, and by an intellectual force which asserted itself through commonplaceness of language and an unimpassioned delivery. He had no fluency, and acquired even moderate ease only after four or five years. His voice was not powerful nor delicate in its modulations, but it was clear, and the enunciation was deliberate, distinct, quiet when the matter was ordinary, slow and emphatic when an important point arrived. With very little action of the body, there was often an interesting and obviously unstudied play of feature. So far from possessing any of that florid rhetoric or imaginative fertility which are supposed to characterize Irish eloquence, his speeches were singularly plain, bare and dry. Neither had they any humor. If they ever raised a smile, which seldom happened, it was by some touch of sarcasm or adroit thrust at a point left unguarded by an adversary. Their merit lay in their lucidity, in their aptness to the matter in hand, in the strong, practical sense which ran through them, coupled with the feeling that they came from one who led a nation, and whose forecasts had often fulfilled themselves. They gave the impression of having been carefully prepared, and were usually made from pretty full notes, but the preparation had been given rather to the matter and the arrangement than to the diction, which had rarely any ornament or literary finish. Of late years he spoke infrequently, whether from indolence, or weak health, or because he thought little was to be done in the face of a hostile majority, now that the tactics of obstruction had been abandoned. When he interposed without preparation in a debate which had arisen unexpectedly, he was short, pithy, and eminently practical; indeed, nothing more characterized him than his talent for hitting the nail on the head, a talent which always commands attention in deliberative assemblies. No one saw more clearly or conveyed in terser language the course which the circumstances of the moment required; and as his mastery of Parliamentary procedure and practice was second only to that of Mr. Gladstone, his advice carried great weight. It would, indeed, be no exaggeration to say that during the sessions of 1889 and 1890 he was distinctly the second man in the House of Commons, surpassed, of course, in debating power by four or five others, but inferior to Mr. Gladstone alone in the interest which his speeches excited and in the impression they produced. With this access of influence his attitude and the spirit of his policy seemed to rise and widen. There was less of that hard attorneyism which had marked his criticisms of the Tory Government and their measures up till March, 1880, and of the Liberal Government and their measures during the five following years. He seemed to grow more and more to the full stature of a statesman, with constructive views and a willingness to make the best of the facts as he found them. Yet even in this later and better time one note of greatness was absent from his speeches: there was nothing genial and generous and elevated about them. They never soared into an atmosphere of lofty feeling, worthy of the man who was by this time seen to be leading his nation to victory, and who had begun to be admired and honored by one of the two great historic English parties.

He was not only well versed in the rules of Parliamentary procedure, but also a consummate master of Parliamentary tactics. Very soon after he entered the House of Commons he detected its weak point, and perfected a system of obstruction which so destroyed the efficiency of its time-honored modes of doing business that new sets of rules, each more stringent than the preceding, had to be devised between 1878 and 1888. The skill with which he handled his small but well-disciplined battalion was admirable. He was strict with individuals, requiring absolute obedience to the party rules, but ready to gratify any prevailing current of feeling when he saw that this could be done without serious harm to the cause. More than once, when English members who happened to be acting with him on some particular question pressed him to keep his men quiet and let a division be taken at once, he answered that they were doubtless right in thinking that the moment for securing a good division had arrived, but that he must not muzzle his followers when they wanted to have their fling. The best proof of the tact with which he ruled a section comprising many men of brilliant talents lies in the fact that there was never any serious revolt, or movement towards revolt, against him until the breach of 1890 between himself and the Liberal party had made it clear that his continued leadership would mean defeat at the polls, and the postponement, perhaps for many years, of home rule.

His own political views and tendencies furnished matter for much discussion among those who studied him closely. Many, both among Englishmen and among Irishmen, held that he was at heart a Conservative, valuing strong government and attached to the rights of property. They predicted that if an Irish Parliament had been established, as proposed in 1886, and an Irish cabinet formed to administer the affairs of the island, Mr. Parnell would have been the inevitable and somewhat despotic leader of the reactionary party. His coöperation with the agrarian agitators from 1879 onwards was in this view merely a politic expedient to gain support for the home-rule campaign. For this theory there is much to be said. Though he came to lead a revolution, and was willing, as appeared in the last few months of his life, to appeal to the genuine revolutionary party, he was not by temper or conviction a revolutionist. The Fenians, and those remains of Fenianism out of whom the secret insurrectionary and dynamitard societies were formed, never liked or trusted him. The passion which originally carried him into public life was hatred of England, and a wish to restore to Ireland either her national independence or at least her own Parliament. But he was no democratic leveller, and still less inclined to those Socialistic doctrines which the section influenced by Mr. Davitt has espoused. He did not desire the "extinction of landlordism," and would probably have been a restraining and moderating force in an Irish legislature. That he was genuinely attached to his native country need not be doubted. But his patriotism had little of a sentimental quality, and seemed to spring as much from dislike of England as from love of Ireland.

It may excite surprise that a man such as has been sketched, with so cool a judgment and so complete a self-control, a man (as his previous career had shown) able to endure temporary reverses in the confidence of ultimate success, should have committed the fatal error, which blasted his fame and shortened his life, of clinging to the headship of his party when prudence counselled a retirement. A retirement need not have been of long duration. It can hardly be doubted that if he had, after the sentence of the Divorce Court in November, 1890, gone abroad for eight or ten months, allowing some one to be chosen in his place chairman of the Irish party for the session, he might thereafter have returned to the House of Commons, and might, after some little further loss of time, have naturally recovered the leadership. Unfortunately, the self-reliant pride which had stood him in good stead so often before, made him refuse to bow to the storm. Probably he could not understand the indignation which the proceedings in the divorce case had awakened in England—being morally somewhat callous, and knowing that his offences were no secret to the House of Commons. He had been accustomed to despise English opinion, and had on some former occasions suffered nothing for doing so. He bitterly resented both Mr. Gladstone's letter and the movement to depose him which it roused in his own party. He had so often before found defiant resolution lead to success that he determined again to rely on the maxim which has led so many to ruin, just because it had so much truth in it—"*l'audace, encore de l'audace, toujours de l'audace.*" The affront to his pride disturbed the balance of his mind, and made him feel as if the humiliation of a temporary retirement would destroy the prestige of his haughty self-confidence. It was soon evident that he had overestimated his power in Ireland, but when the schism began there were many besides Lord Salisbury—many in Ireland as well as in England—who predicted triumph for him. Nor must it be thought that it was pure selfishness which made him resolve rather to break with the English Liberals than allow the National cause to be guided by any hands but his own. He was a sort of fatalist, and had that confidence in his star and his mission which often belongs to minds in which superstition

and a morbid taint may be discerned. There were others who believed that no one but himself could hold the Irish party together and carry the Irish cause to triumph. No wonder that this belief should have filled and disordered his own brain.

The swiftness of his rise is a striking instance of the power which intellectual concentration and a strenuous will can exert, for he had no adventitious help from wealth or family connection or the reputation of having suffered for his country. *Ergo vivida vis animi pervicit.* He was only thirty, with no experience of affairs and no gift of speech; but the quality that was in him of leading and ruling men, of taking the initiative, of seeing and striking at the weak point of the enemy, and fearlessly facing the brunt of an enemy's attack, made itself at once felt, and he rose without effort to the first place. With some intellectual limitations and great moral faults, he will stand high in the long and melancholy series of Irish leaders, far less noble than Grattan, far less attractive than O'Connell, far less brilliant than either of them, yet entitled to be remembered as one of the most remarkable figures of our time. O. D.

Correspondence.

GETTING READY FOR THE STORM.

To the Editor of The Nation:

Sir: It is interesting to note, as an illustration of the general desire to escape as far as possible the losses which are likely to be incurred by every one, except the silver-mine-owners, in the too probable event of a depreciation of current money, that a leading law stationer here now prints and keeps in stock forms for ordinary bonds and real-estate mortgages, providing for payment in "lawful gold coin of the United States of America of the present standard of weight and fineness," as corporation loans have been made payable for some years past. When spoken to on the subject last winter, the stationer referred to thought the demand for such forms would be slight, but now it is large enough to induce him to provide the supply. The only pity is that the movement did not start earlier. Were all contracts made payable in gold, the silver-men would have no power to threaten the country with a sudden fall in the value of the circulating medium.

Charles C. Finney.

Philadelphia, October 19, 1891.

NOT A FOREGONE CONCLUSION.

To the Editor of The Nation:

Sir: In your editorial of the 8th of October, you assert that "the minister is not considered as a learner; his views are fixed." Is not this dictum utterly at variance with the theory and practice of an educated ministry? Does the English Church, for instance, bind the hands of her clergy at the outset, and forbid them to study the "great doctrines" and "great questions"? Are the scholarly men of that communion, whether conservative or liberal, breaking their ordination vows? On the contrary, every Episcopal clergyman has solemnly promised to be diligent in study.

But, it will be answered, his study is confined within a narrow range; he has lost his freedom. I fail to see it. Certainly he is not at liberty to teach anything contrary to the doctrine (not doctrines) of the Church. But the very vow that he has taken, "to banish and drive away from the Church all erroneous and strange doctrines," requires him to study the writings and understand the teaching of those who are outside the Church. The defender of the faith must meet the enemy, if he be an enemy, in the open field. Whatever "the theory of the world" may be, certainly it is not the theory of the Church that her clergy are not learners, nor does she require of the young man of twenty-five that he be master of all knowledge. F. L. P.

Cambridge, Mass., October 16, 1891.

[Our correspondent is mistaken. We did not "assert" what he says we did, but spoke only of "the actual conception of the ministerial character." Nor does what he says change our conviction that, both historically and literally, the vows of ordination leave no room for divergence from the creed of the Church. The promise to be "diligent in study," and to "banish and drive away all erroneous and strange doctrine," is subsidiary to the main vow to teach and defend the "doctrine and sacraments . . . as this Church hath received the same." Does our correspondent think it a sign of open-mindedness that "erroneous and strange doctrines" are to be studied only to be banished and driven away? Are they not, *ipso facto*, condemned in advance? Suppose a clergyman should find them, or any of them, not "erroneous," but true? If a candidate should tell his bishop that he left the question open whether they were "erroneous" or not, would that not be considered the equivalent of the "great Crime or Impediment" which ought to prevent such a man from becoming a priest?

We make no assertions about what is or ought to be the actual practice; but we do assert that the wide liberty which many men see provided for in the ordination vows of the different Protestant churches, is an afterthought. The framers of the creeds and the vows did not contemplate it or the need of it. It is not legitimately to be inferred from their exhortation to study. That exhortation may be considered the Nemesis of Protestantism, or its unconscious principle of salvation, as one chooses to look at it. At the Reformation, "study" meant separation from Rome; now it often appears to mean separation from organized Protestantism.—Ed. Nation.]

THE SCHOOL-BOOK COMBINATION.

To the Editor of The Nation:

Sir: To produce good books, it is necessary to secure good authors and editors, and they must be liberally paid. Many books have to be made before the good one is produced. It costs time and money to try these experiments. The business must yield a fair profit to attract men of the necessary ability to engage in it. Important as it is to produce good books, it is no less important that they should be used in the schools. To insure this we must elect to the school boards competent men and women, who know the value of books, and can be relied upon to secure them, no matter how active and unscrupulous may be the influences used against them.

If a great combination, controlling four-fifths of all the books in the country, publicly boasts that it will crush all publishers that do not join it, by giving their own new books without charge in exchange for those of other houses in the schools, and employing all the means that wealth can control for that purpose, is it not time that the people should begin to think what effect this will have upon the schools if accomplished?

We have given the best years of our life to trying to produce good books and place them on the market, by honorable methods, at a fair price. We must leave the result of our efforts to the judgment of others. The people have the whole question in their own hands. If they think it is safe and best for their schools to have the publishing and supplying of all their books absolutely in the control of a single house, all that is necessary will be to take new books for old ones, free of charge, for a few years. Such a course will drive all the educational publishers from the field, and the political wire-puller will have it wholly to himself.

Should the American Book Company, by even-exchanging the books of their competitors in the schools, narrow down the holdings of other houses so that it will be impossible for them to continue business at a profit, it is easy to see that the day when these houses will have to relinquish the field will not be far distant. When the American Book Company have the entire business in their own hands, it may be natural for them to sit down and calculate how much it has cost to get rid of their competitors, and to say to themselves, "Now it is only fair that the public, who have had the benefit of these free books so long, should pay for them." The pay may be exacted in several ways—by raising the price of their books gradually; by giving less discounts; by cheapening the cost of manufacture; by discouraging the sale of their best books, which pay large copyrights to the authors, etc., etc. When, however, they have assessed this amount on the public, is it in accord with human nature to expect that they will stop there? But it may be said that it will not be safe for them to make too much profit on the sale of their books; the public will rebel, and publish for themselves, by States or otherwise.

Now, it is well for us all to look this question fairly in the face in order to comprehend the difficulties to be overcome. In the first place, it requires not only special talent and a long term of service on the part of publisher and editor, but a large outlay of money and time, to produce a good book, under the most favorable conditions. After the American Book Company shall have driven from the field all the trained men in either department, it will not be easy to establish independent houses. There will not only be a lack of ability and experience, but it will require at least $2,000,000 of direct capital to establish houses as good as the present ones. After five years' control of the whole field, the American Book Company will be twice as powerful as at present. Now it is one of the strongest political organizations in the country. It has important interests in every town and city in the land. It has not only a large corps of able and trained agents travelling all the time, but sub-agents and local politicians in all important centres. It is looking after legislation in the various States, and lately we have seen many laws framed for binding them to adopt books for long periods.

Notwithstanding the great power of this remarkably developed political organization and the millions at its command from its vast monopoly, it will lose its terrors when the American people fully realize its evil influence on the educational institutions of the country.

Let the press, the teachers, and the committees jealously guard their rights, and punish by exposure and loss of patronage any infringements, and timid capital will keep to its own legitimate channels. It is not simply a question between rival publishing houses, but one of vital importance to the schools.

EDWIN GINN.

BOSTON, October 21, 1891.

A JAPANESE LIBRARIAN.

TO THE EDITOR OF THE NATION:

SIR: A young gentleman from Japan, who had had some training in the Imperial Library at Tokio, was sent to this country two or three years ago and placed under my charge by the Japanese Minister of Public Instruction, for the purpose of acquiring a knowledge of the methods of administering libraries in this country. He was for a large part of a year under my constant oversight in Cambridge, and then visited, with my introductions, some of the principal libraries of this country and of Europe, previous to his return to his own country. By virtue of the constant reports which he had monthly made when absent, and because of the excellent examination which he passed, he was, soon after his return, placed in charge of the Tokio Library in the Uyeno Park in Tokio, the chief public repository for books in Japan.

I have felt that a letter which I have recently received from him, involving some of his experiences in conducting his library on methods based on our own, might prove interesting to your readers. JUSTIN WINSOR.

HARVARD COLLEGE LIBRARY, Oct. 22.

"TOKIO, September 24, 1891.

"DEAR SIR: . . . I am very much ashamed to say that I have hardly done even one-hundredth of what I intended to do when I came back from Europe. But this is not a fault of myself alone. . . . Still, I have printed two publications, *i. e.*, 'Guide to the Tokio Library' and an 'Essay on the Improvement of the Tokio Library,' both in Japanese, besides doing the usual work of the Library; and I am, of course, trying to do more, and expect to make our Library one of the best in the world. I sent to you an extract of my report some time ago, which you will kindly glance over. I am now compiling an index of the author catalogue of the Imperial University Library, and nothing is more valuable and useful to me than the Index of the Catalogue of Harvard University Library, which you have kindly sent to us, sheet by sheet. I have prepared a paper introducing the Tokio Library to the notice of American libraries, incidentally touching all other libraries in Japan. I wish to give you an extract of it:

"The Tokio Library is national in its character, and is maintained by the State and by the Copyright Act, which gives it a copy of every book, pamphlet, etc., published in the empire. The Library was established in 1872 with about 70,000 volumes. In 1886 it was removed to the Uyeno Park. The place is away from the bustle of the city, with fresh air and evergreens around it. The reading-room accommodates about 200 readers, and is divided into three compartments, viz.: 'special,' 'ladies',' and 'ordinary.' We have two sets of catalogues, viz.: a card catalogue and printed catalogue, both classified. It is now proposed to improve them upon the principle of a dictionary catalogue. A system of lending out books was added three years ago, something like that of the Königliche Bibliothek of Berlin. The Library now contains 97 550 Japanese and Chinese books and 25,559 European books, besides about 100,000 of duplicates, popular books, etc., which are not used. The average number of books used is 337,262 a year. By applying 'the principle of multiplication of utility,' the average turn-over of each book used is about 2 5+, and, by dividing by the total issue of books, the average cost of each issue is 2 3 ten. By comparing the number of books used and the classes of books read during the last year, we see that 21.5 per cent. are in history, geography, etc., 21 per cent. in literature and language; 17.2 per cent. in science and medicine, and 13.4 per cent. in law and politics. This comparison gives some idea of the inclination of the reading public.

"The Library of the Imperial University comprises all the books belonging to the University. These books are solely for the use of the instructors, students, and pupils, no admittance being granted to the general public. The library contains 77,991 European books and 101,217 Japanese and Chinese books.

"As to other small libraries, there are only eight public and ten private libraries in different parts of the empire. The books contained in them are 66,912 Japanese and Chinese and 7,531 European books, with only 43,911 visitors!

"Besides these, in most towns of respectable size there are generally two or three small circulating libraries which contain books consisting chiefly of light literature and historical works popularly treated. The proprietors of these libraries or their assistants go about from patron to patron every day, leaving with him the books he requires. These books are loaned for a small sum, which varies according to the quality of books and also length of time during which the books are to be kept. There are about sixty libraries of this description in the city of Tokio alone.

"The past summer has been very warm in Japan, and the farmers are very glad, as it has given hope of good crops this autumn. . . .

"Yours sincerely,
"I. TANAKA."

THE LATE DR. ROBERT LOWELL AND NEWFOUNDLAND.

TO THE EDITOR OF THE NATION:

SIR: The reason for the Rev. Dr. Lowell's leaving Newfoundland was very creditable to him. In 1847 there was a severe famine in Bay Roberts (Conception Bay), where he was stationed as a clergyman of the Church of England. The people lived for some weeks on a scanty supply of potatoes alone, and, when these were exhausted, were obliged to eat damaged oatmeal. It took a long time in those days to communicate with St. Johns. Dr. Lowell labored among the people both as clergyman and physician (he being both), and shared their privations. His health gave way under the strain, and he was obliged to leave Newfoundland to regain it. If I am not mistaken, he did not return directly to the United States, but spent some time first at Bermuda. I give the foregoing from the remembrance of a conversation with Dr. Lowell and his wife about sixteen months ago.

I find no mention of the famine at Bay Roberts in 1847 in any of the histories of Newfoundland. Seasons of scarcity, when affecting only limited districts, were probably too common to attract special attention from outsiders. Dr. Lowell had nothing to do either with the politics or with the material development of the island, and it is these things which have chiefly concerned the historians. He led there the quiet life of a scholar and student of human nature, and was known to few besides "planters" and simple fishermen. There is little, however, in Newfoundland history that is better worth knowing than that a man so gifted in mind and beautiful in character once lived for four or five years in Conception Bay, and that all his life afterwards (I had his own word for it) he loved Newfoundland and Newfoundlanders.

JOHN C. COZENS.

AMSTERDAM, N. Y., October 20, 1891.

THE LATE GENERAL WILD.

TO THE EDITOR OF THE NATION:

SIR: Your recent remarks on the eulogy business find an echo in many a disgusted bosom. "De mortuis nil nisi bonum" is an excellent maxim, no doubt, but with regard to one at least of the biographees so profusely eulogized in some of the daily papers, one cannot but recall that other plain English saying, "Least said, soonest mended." On the other hand, in the same journals which report these "funeral orgies" is given, among "other deaths," a bare notice of the passing away of a man of another sort, whose memory calls up a thrill or a tear among older readers familiar with his record.

Brig.-Gen. Edmund A. Wild of Brookline, Mass., died at Medellin, Colombia, South America, September 4, at the age of sixty-five years. As a young man he was a graduate of one of the medical schools of his day, and followed the profession of physician in the Turkish service and elsewhere with honor. Profession and all else were thrown aside without doubt or hesitation when our civil war broke out, and he entered our volunteer army and took his place among the leaders of our war for freedom. In one of the early encounters he lost an arm, but continued to serve, and earned the respect and admiration of all who knew him as a soldier. He was one of those uncompromising men about whose character and onward course no one could ever doubt. Impaired health and a maimed body were probably the only impediments to his rising beyond the rank of Brigadier-General.

An instance showing his sense of commercial honor will give a touch of his quality in that particular. He returned from the war minus an arm and almost reduced to a living skeleton, and, seeking neither office nor pension, went West to earn his living in mining, a few friends making up a moderate sum of money which they invested in the mine of which he took charge, he having also a share in the adventure. Mining ventures sometimes give enormous returns, but often prove failures, as this one did. Gen. Wild almost disappeared from sight for some years, keeping in communication only with the nearest circle of his friends at the East; but at last a stroke of good fortune overtook him, and the first his partners in the old mine heard from him was an offer to buy back the shares which they had taken in it, at the original cost, to be paid for out of money he had made in a new and successful venture.

No doubt there are other such occurrences taking place from time to time, but they are so rare as to make it worth while to record this characteristic instance in a life of noble courage and self-devotion. Surely there should be something more than the inscription in some country churchyard, "Died, Edmund Wild, 1891." SENEX.

Notes.

HENRY HOLT & Co. will publish directly 'The Shield of Love,' a novel by B. L. Farjeon.

J. B. Lippincott Co. will have ready next month 'Countess Erika's Apprenticeship,' from the German of Ossip Schubin, by Mrs. A. L. Wister.

'The Anarchists: A Picture of Civilization at the Close of the Nineteenth Century,' from the German of John Henry Mackay; and 'Holiday Stories,' by Stephen Fiske, are about to be issued by Benj. R. Tucker, Boston.

'Elton Hazelwood: A Memoir,' by "Henry Vane" (Francis George Scott), is in the press of Thomas Whittaker.

A text-book of 'Rudimentary Ethics,' by George M. Steele, LL.D., will bear the imprint of Leach, Shewell & Sanborn.

Ginn & Co. have in press 'Short Courses of Reading in English Literature,' by Prof. C. T. Winchester of Wesleyan University.

A translation of Herbart's 'Allgemeine Pädagogik,' by Henry M. Felkin, has been edited and furnished with an introduction by Oscar Browning, and will be brought out next month by D. C. Heath & Co., Boston.

Macmillan & Co. are going to reprint the Lincoln's Inn sermons of the late F. D. Maurice in a new edition of six volumes. We have received the first volume, containing twenty sermons in 305 pages.

Dulness is the note of the selection entitled 'William Morris: Poet, Artist, Socialist,' made from his writings by Francis Watts Lee (New York: Humboldt Publishing Company). One feels that it is not alone the vagueness of the ideal, but the language, which produces such a soporific effect. Mr. Morris's archaistic style, applied to socialistic discussion, resembles a political economy in words of one syllable for infants. Infantile is the whole quarrel with machinery and invention, save (with a halting exception) the power loom; the horror of a surplus in production, like nature's abhorrence of a vacuum; the denunciation of trade; and all the suggestions of a way out of overpopulation, congested districts, too constant and inconstant employment, unequal distribution of wealth and leisure, and the other standing evils of the struggle for existence. Nor are Morris's socialistic hymns or "chants" at the end of the volume any more inspiring than his prose argumentation. The "Socialists," too, who will sing them are not Lancashire millhands or East End paupers.

Mr. Andrew Lang himself points out, in the preface to his 'Blue Poetry Book' (Longmans), the striking proportion of Scotch verse, as if to redress the balance of Palgrave's 'Golden Treasury,' where he thinks it odd that the ratio should be but one in ten. He overlooks here the editor's aim to make an *English* anthology; and in giving so much Scotch dialect to his "lads and lassies," Mr. Lang overlooks the influence of his own nationality in guiding him "by recollections of what particularly pleased himself in youth." He has another excuse, however, that he wanted poems of action and adventure; and on another side he sought poems "full of witchery and music," which alone explains his selections from Poe. Longfellow and Bryant are the only other American poets thus honored. We have no fault to find with Mr. Lang's defence of his inserting pieces to some extent above the child's comprehension —and there are plenty of them; but he seems to us to reach a climax when he ends his volume with Wordsworth's allusive sonnet on the departure of Sir Walter Scott from Abbotsford for Naples! The particular note of British patriotism, for which Campbell has been well drawn upon, will ring false on this side of the Atlantic. On the whole, we prefer Mr. Cabot Lodge's 'Ballads and Lyrics'—especially because it has no pictures, and such pictures!

Mr. Laurence Hutton, whose work on the 'Literary Landmarks of London' put all pilgrims to the shrines of literature in his debt, has performed the same pious service for the other most notable literary city of Britain, "the gray metropolis of the North," toward which perhaps as many American lovers of literature bend their steps. His 'Literary Landmarks of Edinburgh' (Harpers) is a thin little volume, but it contains much matter about the local habitations of the literary worthies of Scotland; it is amply illustrated with both portraits and views of streets and houses, and it is made entertaining with anecdote and kept so by the genuine interest of the guide in what he has to point out. He has made one identification that is of special significance, the house in which Scott saw Burns and heard him speak. It was at Adam Fergusson's that this famous meeting took place, but there has been doubt as to where Fergusson then lived. Mr. Hutton identifies the house as Sciennes House, on the north side of Braid's Place, two doors from the street called "The Sciennes," and he gives for the first time a photograph of it. In the rest of the volume there is nothing to be singled out, but there is much that is taking, and occasionally we are reminded of some curious fact, such as that Scott, who placed a commemoration stone over the grave of "Helen Walker, the humble individual who practised in real life the virtues with which fiction has invested the imaginary character of Jeanie Deans," neglected entirely the graves of his parents. His mother lies "in an unmarked and unknown grave" near St. John's Church, and his father's place of interment is to be identified only by the register, which describes it as "at the foot of the stone marking the foot of the grave of Alexander Grant." It is said that the Town Council contemplates putting a memorial there.

The pleasant meandering journey which has been a source of mild entertainment to readers of *Harper's* under the title of "The Warwickshire Avon," is now issued by the Harpers with the modest sub-title of 'Notes by A. T. Quiller-Couch.' The sub-title defines the character of the volume best, and not the least attraction of these "notes" consists of the illustrations by Alfred Parsons. Text and cuts run on together on fine paper and through good margins, making an inviting volume at the first glance; but on reading it one is disappointed because the author lacks the touch of beauty and charm of style which are so essential in sketches of river scenery. The chief quality of the volume, therefore, is of the guide-book variety, and lies in what is told us of localities merely, with the advantage of the pictorial collaboration of Mr. Parsons to eke out the unpictorial letter-press. It is agreeable enough; but one knows he is idling his time, and in books meant for idleness even that is a defect.

The issue of the third and fourth volumes of the invaluable Cambridge Shakspere (Macmillan) gives us opportunity to direct attention again to this singularly beautiful and cheap edition, desirable equally for students of Shakspere and for ordinary home use. One volume will be published quarterly until the entire set of nine volumes is completed, and the low price at this rate of issue enables any one who wishes a really good copy of Shakspere to obtain it. The notes, which are purely textual, furnish new illustration of the painstaking thoroughness and indefatigable scholarship of the editor, Mr. Aldis Wright.

The seventh volume of Prof. Henry Morley's 'English Writers' (Cassell) continues his encyclopædic history of our literature from Caxton to Coverdale, with the same breadth and detail already characterized by us in the notice of previous issues. A considerable space is occupied with an account of the Scotch poets, in which much information about them and their writings, not accessible in so convenient a shape elsewhere, may be found; and on the English side of the border the scholars who revived learning at the universities, the early historians, and the writers of the Reformation, are attended to. The scope of the work may be judged by the fact that in this comparatively obscure period Prof. Morley makes special mention of upwards of seventy authors, besides those who are classed as minor and anonymous. There are the usual valuable bibliographies at the end.

Among the series of University Extension Manuals, Prof. Knight's 'Philosophy of the Beautiful, being Outlines of the History of Æsthetics' (Charles Scribner's Sons), deserves special attention because of the novelty of its scheme. The author confines himself to an account of what thinkers on the nature of the beautiful have given as their conclusions, from the time of Plato and Aristotle, and has thus made what is really a history of opinion on the subject. Owing to the nature of the subject, much of this opinion is fragmentary, and at times is hardly more than suggestive, but these portions of the work are hardly less valuable than those which reproduce elaborate theories such as Schiller's and Hegel's. The predominant strain of thought is naturally Platonizing, but the materialists have justice done to them in stating their views. Any one who is interested in the fundamental truths that underlie art in all its forms, whether plastic or literary, will find here a mine of information and suggestion, and especially that consensus of thought which is most profitable for conviction or conversion, as the case may be. Prof. Knight surveys the whole literature of the subject, but, as he remarks, his familiarity with minor writers is naturally greatest in his own language, and consequently the view of British opinion occupies more than one-third of the volume. America, including Canada, is represented, we regret to say, by only fourteen pages, covering the period since 1815, and, except for Emerson, the section is quite barren of names of great distinction.

A useful little volume on 'Dante and his Ideal,' by Herbert Baynes (Macmillan), contains a sketch of the scheme and meaning of the 'Divine Comedy,' sufficiently illustrated from the other works and the Life of Dante, which will serve very well as an introduction for ordinary readers, and may profitably be consulted by them before undertaking the perusal of the work itself. It is very free from abstract statement and vague speculation, and does not undertake to deal with the dark portions of the text. It is, in fact, a sort of lecture, such as might be prepared for a popular audience, and is as little difficult as the nature of the subject permits; but it is to be regretted that the author does not translate all he quotes from the Italian and German. We take pleasure in recommending it to those who may wish to make acquaintance with the great poem of Italy and the Middle Age, which, unlike most great poems, does require an introduction of this sort to remove difficulties from the path. A frontispiece of Giotto's portrait of Dante ornaments the volume.

An edition of the tenth book of Quintilian, by Principal Peterson of University College, Dundee, has just been published by the Clarendon Press (Macmillan). It is a large volume, and the text is preceded by essays upon the author himself, the style, language, and nature of his book, with the place it holds in literary criticism, and upon the manuscripts. The explanatory notes, printed on the same page with the text, are extremely full and excellent in quality; the critical notes follow in an appendix. The editor ascribes considerable importance to two Harleian MSS. in the British Museum; of one of these (No. 2664) he gives a collation never before published, and a specimen page in collotype. Heretofore the only worthy edition of this book in English has been that of an American scholar, the late Prof. Frieze. The present editor has availed himself of the best works by Germans, and his

book may be highly commended to students and scholars.

Mrs. Dyson's 'Story of the Trees' (Thomas Nelson & Sons) is a pretty full description of English trees, with some account of a few exotic ones, intermingled with scraps of history, mythology, and moral reflections. It is evidently written with the hope of teaching a good deal of the knowledge of trees to children so young that they will not be contented with the oak unless King Charles is hidden in it, or the ash unless they can imagine the eagle and the squirrel of the ancient Scandinavians in its branches, and shudder at the serpent which gnaws its root. The book contains much that is interesting about trees, and has a good picture of an English oak and of a Himalayan deodar, and perhaps enough of William Tell, Wat Tyrrel, Diomedes, Odin, and other personages, historical and mythical, to make the botanical part of it digestible.

Another book of the same general kind is Miss Bergen's 'Glimpses at the Plant World' (Boston: Lee & Shepard). It is addressed to "Dear Children"; but the language is often rather involved and above their comprehension. It glances at the field of fungi, mosses, ferns, and flowers; has something about the transportation of pollen by bees and butterflies, and in the last chapters passes from "Jack" and his dandelion to plumed and winged seeds generally. It is, however, more likely to afford amusement to botanists than to attract children by the now fashionable mixture of sugar-plums and science.

Poor's 'Handbook of Investment Securities' (H. V. & H. W. Poor) contains a large amount of valuable information very badly arranged. Financial advertisements have been scattered broadcast through the volume, and are encountered in the most unexpected and inappropriate places. The table of contents is hidden in a cloud of advertisements, and the only index is one of advertisers. The collection of facts and figures is probably accurate, though a cursory examination shows that it is not invariably and absolutely so; but the judicious investor will do well to bear in mind the old adage that nothing is so misleading as facts except figures.

'The Swordsman,' by Captain Alfred Hutton (B. Westermann & Co.), is a neat and convenient manual of fencing. The only novelty in it is the suggestion of *blindfolded lessons* in defence, which, it is claimed, impart that delicate sense of touch which the French call *sentiment du fer*. Considerable space is rightly given to sabre-play, which, from the military point of view, is the most important development of fencing.

The paraphrase of Charron's 'Traité de la Sagesse,' by Myrtilla H. N. Daly, under the title of 'A Treatise on Wisdom' (Putnams), is a condensation of the lengthy and frequently tedious work of the French moralist. Charron will stand a very much better chance of being read and appreciated in this form, though it is an open question whether the enthusiastic judgment of Buckle and of the paraphraser will be endorsed by a reader acquainted with other moralists as well.

Gazier's 'Petite Histoire de la Littérature Française' (A. Colin & Cie.) is a catalogue of biographical notices of authors arranged in chronological order, rather than a history properly so called. Analyses of the principal works, exceedingly brief for the most part, and a very full, though in one respect defective, chronological table, are commendable features.

The *Revue Critique* is by long habit cool in tone and chary in bestowing its approval. This characteristic emphasizes greatly the unstinted praise which it lavishes in its issue of September 28 upon M. Max Bonnet's book, 'Le Latin de Grégoire de Tours' (Hachette, 1890). We will not attempt to make any summary of an article which is in its full shape severely compact, but merely note it, and the book to which it relates, for the benefit of lovers of the Latin tongue and of philologists generally. The book, the *Revue* says, is "une continuelle leçon de philologie."

No work of the late P. A. Alarcón was more famous than 'El Sombrero de tres Picos,' and none seemed more hopelessly untranslatable into English. An old folk-tale, saturated to the marrow with the Spanish flavor, it was an audacious thing in Mr. F. J. Amy to attempt its translation, as he has done under the title 'The Cocked Hat' (Minerva Publishing Co.). The work is certainly well done; barring a few minor slips, it is as well done as possible. Even so, the transfer from one language to another is attended by inevitable loss; and what is racy and redolent of the soil in the Spanish too often seems only odd or pointless in English.

The changes in Syria and Palestine within the past ten years are the subject of a striking communication in the London *Spectator* for October 10. Among these the large increase of foreign settlers, chiefly Germans and Jews, is perhaps the most important. The latter now number about 70,000, nearly half of whom are in Jerusalem, which has again become a Jewish city, three-fifths of its inhabitants being Jews. Their agricultural colonies have increased in number and "apparently in efficiency," but they are not yet a success, and their further progress is checked by the recent order from Constantinople "that no land be sold to Jews." The governing power of the Turk has greatly increased, even the turbulent Bedouin tribes beyond the Jordan having been brought under control, so that one may travel in that wild region with perfect safety. Some of these nomads have actually been prevailed upon to settle down to agriculture, and are becoming fellahin. The plain of Esdraelon, which formerly was cultivated only in small patches for fear of the desert marauders, is now "one almost unbroken sea of wheat." The same is true of the Hauran, a "wheat field which stretches south from Hermon some sixty miles, by some thirty broad." This region it is proposed to open to commerce by the railway from Haifa to Damascus, for which a concession has been granted. The educational institutions, Protestant, Roman Catholic, Greek, and Mohammedan, have so multiplied in efficiency and numbers that in Syria the opportunities for a thorough education are second only to those of the first-class European States. The crown of the whole, the "centre of light and leading for all the Levant," is the American College at Beirut. Among the minor changes are the increase of vine-growing and of drunkenness, the wearing Frankish boots and shoes, and the substitution of Russian oil from Batum for the once universally used American petroleum.

Mr. F. Gutekunst, Philadelphia, sends us a timely addition to his large and valuable series of imperial panel photographs, viz., a portrait of Bishop Phillips Brooks. It is an excellent likeness of the latest disturber of our theologic peace.

—The October number of *Mind* closes the first cycle of that excellent journal, and bears in bold letters on its front the announcement that Mr. G. F. Stout of Cambridge is henceforward to be its editor, in place of Prof. Croom Robertson, resigned. An index to the sixteen past volumes, and a word of valedictory from the past editor, also distinguish the present number. All students of philosophy will regret deeply that Prof. Robertson's bad health has forced him at last to relinquish duties which he always carried on as a labor of love, and for his successful performance of which so far he has earned their lasting thanks. *Mind*, in short, has been admirably edited. Impartiality, completeness, and especially promptitude of information about new philosophical books, and punctuality of appearance, have all characterized it. We Americans have particularly good grounds to feel cordially towards *Mind* for its steady hospitality to contributions from our side of the water, during years when no other vehicle of publication (save our own somewhat wayward *Journal of Speculative Philosophy*) was open to our lucubrations. Now that we have the *American Journal of Psychology*, and shall soon have the bi monthly *Journal of Philosophy* (about to be published at Cornell), we shall be less dependent. What the new *Mind* will do in its turn without American psychological contributions remains to be seen. The study of psychology seems in Great Britain—the native country of the science—to be sinking to the lowest ebb, while in France, Germany, and the United States it advances like a "tidal wave." It seems even likely now (with all our new university laboratories for psychology and young men in charge of them) that we may fill our own journals without diminishing our supplies of psychological material to the older review.

—*Mind* and the *Revue Philosophique* were launched almost simultaneously. *Mind* is a quarterly, the *Revue Philosophique* a monthly. The supply of articles for the French journal seems to have been the more profuse. Moreover, if we are rightly informed, it more than pays for itself, while its English rival has had to make up a large yearly deficit, and, as we are now informed by the editor, has been enabled to do so only through the public spirit of Prof. Bain. To be sure, it has been an advantage to the *Revue Philosophique* to be published in a country which has a "Minister of Public Instruction" who by a stroke of his pen could order every secondary school in the land to subscribe. Nevertheless, the fact distinctly appears, when one compares the two periodicals, that the "philosophical movement" during the last fifteen years has shown a good deal more vitality in France than in England. The English universities are partly to blame for this—Cambridge, in particular, does almost nothing for the encouragement of philosophic study; and now, as always, England neglects organization, and keeps up her old habit of trusting to Providence to raise up the needful number of private gentlemen and amateur geniuses to keep her reputation in the various branches of the ideal from going to decay. It is true that they have never failed her so far. But while waiting for their advent, is it not better to organize the secondary talents to be ready to coöperate with them when they come?

—Mr. Gustav Kruell's graver is never idle. To have produced in the course of six months two such masterpieces as his Lincoln and Webster was already a *tour de force;* but he has now added a portrait of the late James Russell Lowell which, as it satisfies his family and most intimate friends, so will be accepted by the public as the most authentic and artistic likeness extant. "All who knew him and loved him best who have seen this portrait," writes one of that favored circle, "agree with me in this estimate of it," namely, that

no better presentation of the poet in his latter years can be made. What is especially striking in it, from a technical point of view, is the appropriate difference in the treatment between it and the portraits of Webster and Lincoln—the absence of mannerism. The character of each person has been successfully revealed by the mere method of handling, while the connoisseur is at a loss to pronounce on the comparative merits of the respective engravings. Mr. Kruell has chosen to offer the Lowell at a lower price than any of his previous works, but the inference would be wholly false that he puts a less estimate on his latest performance. The contrary is more likely to be true, and a more popular sale has doubtless been anticipated. The original of this portrait is a photograph by Pach taken early in the present year. Mr. Kruell's address is East Orange, N. J.

—The English Dialect Society has put out three more of its annual publications through Kegan Paul, Trench, Trübner & Co. One of these, 'Ablaut in the Modern Dialects of the South of England,' is translated from Bülbring's 'Geschichte des Ablaute, etc.,' by W. A. Badham, with an introduction by Prof. Skeat. The other two are, respectively, 'A Supplement to the Sheffield Glossary,' by Sidney Oldall Addy, and 'Rutland Words,' by the Rev. Christopher Wordsworth. There is a great deal that is curious in the new Sheffield vocabulary, and Mr. Addy holds that it bears evidence, "both in living words and ancient field-names," of a strong Norse influence, owing to the Danish occupation of the southernmost part of the county of York. Thus, he refers "Old Harry" to "the O. Icel. *harri*, lord, so that the meaning is 'the old lord'"; and he connects Organ Stubbing, a field in Crookes, with a Celtic root *argun*, 'a forest,' which Förstemann guesses may be the Hercynia Silva of Cæsar and Tacitus. Another odd field-name is Two Days' Work, and there is mention also of One Day Work and Five Days' Work. *Abeless*, 'incompetent, careless, listless, awkward'; *bastard*, in the sense of 'female' as applied to a tree, or of 'puny' as applied to a child; and *forth put*, 'energy,' are other Sheffield peculiarities. In Rutland we come upon *acquainted*, 'in the first stage of courting,' *anew* (*enew*), 'enough,' upon which Mr. Wordsworth remarks that "Prof. Conington, who came from a neighboring district (South Lincolnshire), more than once, in his Translation of Horace, makes 'enow' rhyme with 'due'"; *backen*, 'to retard,' which we have heard in use in this country; *chump*, 'a thick log of wood,' used also of a sturdy child; *hewing cry*, for 'hue and cry'; *not well*, 'unwell,' the latter word "said to have been coined by Horace Walpole"; and *Viper's Dance*, for 'Saint Vitus's Dance.' "I have heard '*invitus*' hazarded as the etymology of the name of this malady," says Mr. Wordsworth humorously, and he proceeds to correct a vulgar belief that St. Vitus is a saint of the Protestant imagination. "He was a noble Sicilian saint, patron of dancers and of those who have a difficulty in early rising" (June 15, A. D. 303).

—The first issue of a new edition of Peacock's novels comes to us with an introduction from the pen of Dr. R. Garnett, whose name is a sufficient warrant for the excellence of the editorial work. He has chosen 'Headlong Hall' (London: J. M. Dent & Co.; New York: Macmillan & Co.) to begin the series, and the publishers have made a very pretty book of it, with clear type, an ornamented title-page, a charming little frontispiece, and an attractive cover. The Introduction is of the nature of a biographical essay, in which the editor has done the best for a man who desired that no life of him should be written. Some privately printed memorials of him exist, and out of what could properly be used of these and a few other sources of information in Dr. Garnett's own control, together with what has been necessarily recorded of him in Shelley's biography, the present sketch has been made. His life was uneventful, but his character was idiosyncratic and interesting; and, apart from his fortune in being Shelley's friend and the recipient of the Italian letters, he won a certain place for himself, both as a lover of literature and as a producer of a new kind of fiction. Dr. Garnett traces its origin to the author's failure in comedy, which he tried first; and the style of "that original creation, the Peacockian novel," as the editor calls it, is well described by him as "the spirit of comedy diffused in exemption from the restraints of the stage, like gas liberated by the disintegration of a solid." These novels, of which 'Headlong Hall' is the first, have not been popular, but they have enjoyed the success of being liked by a few; they are too much intellectualized and too abnormal in their characterization of what our ancestors called "humors" to appeal to any but somewhat cultivated and leisurely readers; but they do constitute a special kind, and have an historical interest as one type of satirical literature.

—Very little criticism either of the novels or of Peacock's other works is indulged in by the editor, but he makes out his author's individuality in his actual life very clearly and agreeably, and tells some anecdotes of his life which it is pleasant to know. He records, too, Tennyson's liking for a poem of Peacock's, called "Newark Abbey," which he quotes, as Peacock's poems are not to be included in the reprint. The verses have great simplicity, with grace of feeling, and are not of the sort which would naturally be expected from the author of "The Genius of the Thames." Dr. Garnett takes occasion also to make the *amende honorable* by retracting some criticism, which he now thinks unjust, though not inexcusable at the time, made on Peacock when he published in *Fraser's* the well-known papers on Shelley and his first wife. We observe no mention in the essay of the sketch of Peacock by Robert Buchanan in his 'Glance around Literature,' which affords a sympathetic view of him, nor of the fact there alleged of his learning Spanish when nearly eighty, a feat which certainly deserves to be recorded, if true. Altogether, it is pleasant to find that a man who was honored by Shelley's friendship was more attractive in his personality than those who know him only through Shelley's biography would suppose; and it is to be hoped that the republication of his singular works will be sufficiently successful to insure its completion. It would seem, too, that a minor poet who won the praise of Shelley and Poe and also of Tennyson should have enough of interest in his verse to justify its reissue by itself, for the edition of his works in three volumes is, we believe, hard to come by.

—The most notable letter of Jay, printed in the third volume of the 'Correspondence and Public Papers of John Jay,' edited by Prof. Johnston (G. P. Putnam's Sons), is that addressed to the President of Congress, May 19, 1785, recommending that England be approached with an offer to share her privileges of cutting logwood in Honduras and Campeachy—privileges which England herself only enjoyed under a treaty with Spain. The object of this proposal, which we do not remember to have seen in print before, was to slap at Spain through England, and is all the more notable as being made on the eve of the arrival of Gardoqui, charged with the important negotiations relating to boundaries, the navigation of the Mississippi, and other matters that had been pending so long. Why the editor should see fit to print this letter, and suppress everything of importance that pertained to the subsequent negotiations with Gardoqui, is a question difficult to answer. The Mississippi and Spanish negotiations were a most powerful factor from the Revolution to the purchase of Louisiana, and were the origin of that intense distrust of Jay by the Southern States which almost overthrew Washington's Administration. The positive additions to our knowledge which this volume brings consist entirely of letters to Jay. A note from Washington, enclosing some tickets for the theatre, begs that Mr. and Mrs. Jay "may not feel themselves embarrassed in the smallest degree, upon the occasion, if they have any reluctance to visiting the theater." A letter from Mrs. Jay on the New York election proves that she was as keen a politician as her husband, and a philosopher, too: "Much rather would I lose a crown as you have lost the office contended for, than gain an empire upon the terms Gov. Clinton steals into his." Some new letters are printed from E. Rutledge, Hopkinson, Troup, Richard Price, Jefferson, and Franklin, and one more glimpse is afforded of Kitty Livingston, of whom we would know more.

—The many errors of this volume would justify more than a passing notice. The manuscript is not followed, omissions are made without any marks to indicate them, and small attention is paid to a proper proof-reading. A little care would have prevented the occurrence of such misprints as *Olto* for Otto (173), *Munroe* for Monroe (90), *Humphrey* for Humphreys (226), *Varville* for Warville (345), or *Montiers* for Moustiers (162). Temple Franklin may have written "Hudon," but he might have known better; and we doubt if Mrs. Jay wrote *Canzwort* for Gansvoort. In the 'Life of Jay' Ceracchi is spelled correctly; but Mr. Johnston turns it into *Ciracchi*. The dates of letters are often misleading. The letter from Hamilton (page 404) is printed without date; yet the 'Life of Jay' prints the letter with the proper date, November 13, 1790. Washington wrote on the 1st, not the 15th of August (p. 207), and Jay's letter to Jefferson (p. 178) was dated the 19th and not the 9th. Why should two dashes and an ? be inserted on page 245, when a simple reference to the printed 'Diplomatic Correspondence' would have given the proper words—*festina lente*? It was John, not James Lowell who was interested in the affair of Soderstrom (not Saderstrom).

THE HISTORY OF MARRIAGE.

The History of Human Marriage. By Edward Westermarck. Macmillan & Co. 1891.

A NEW book on the history of marriage is sure of a welcome, and its interest is not lessened by the fact that, written in English by a foreigner, it is introduced to the public by an eminent English man of science. Mr. Alfred R. Wallace, in an introductory note, declares that he has "seldom read a more thorough or a more philosophic discussion of some of the most difficult and at the same time interesting problems of anthropology." He adds:

"The origin and development of human mar-

riage have been discussed by such eminent writers as Darwin, Spencer, Morgan, Tylor, Lubbock, and many others. On some of the more important questions involved in it all these writers are in general accord, and this agreement has led to their opinions being widely accepted as if they were well-established conclusions of science. But on several of these points Mr. Westermarck has arrived at different, and sometimes diametrically opposite, conclusions, and he has done so after a most complete and painstaking investigation of all the available facts. With such an array of authority on the one side, and a hitherto unknown student on the other, it will certainly be thought that all the probabilities are against the latter. Yet I venture to anticipate that the verdict of independent thinkers will, on most of these disputed points, be in favor of the new comer who has so boldly challenged the conclusions of some of our most esteemed writers. Even those whose views are here opposed will, I think, acknowledge that Mr. Westermarck is a careful investigator and an acute reasoner, and that his arguments as well as his conclusions are worthy of the most careful consideration."

Our space will forbid us to take any part in the tempting controversy of which Mr. Wallace here appears as the herald. We shall rather confine ourselves to the more modest task of attempting to explain how Mr. Westermarck's method of examining the subject differs from that of his predecessors. They have in the main studied marriage as a purely human institution. McLennan, if we remember right, does, indeed, suggest that, inasmuch as man is a descendant of a simian ancestor, the evolution of marriage should be traced further back than man; but he did not attempt anything of the sort himself. Like his fellow-students, he assumed that the problem before him was, taking what we know of primitive marriage from the evidence of the habits and customs of primitive tribes and peoples, to discover how primitive marriage and cognate customs were probably evolved by man, beginning with a condition of promiscuity. To take a very simple case: if we assume this condition as a starting point, it is easy to see how a system of kinship through the mother might spring up, the identity of the father being uncertain. Then we must by some other process explain how it is that the maternal is followed and superseded by the patriarchal system, kinship through the father being the only species recognized by civilized peoples. We have, in other words, a certain body of evidence which seems to show that mankind's marriage customs are evolved in a certain orderly sequence. How, knowing what we do know of man, his nature, appetites, desires, and habits, can we account for this evolution?

Now, Mr. Westermarck at the outset parts company with those who have pursued the subject in this way, and insists that to understand the origin of marriage, we must not stop within the limits of our own species; we must examine the habits of animals, and see whether the germs of marriage are not to be found among them. Without reviewing the evidence, we may say that Mr. Westermarck finds a pretty steady progression among the lowest orders of creation. Defining "marriage" to be "a more or less durable connection" between male and female, "lasting till after the birth of offspring," he finds the first traces of marriage among the Chelonia; with the birds he declares it to be an almost universal institution, while among mammals it is restricted to certain species only, above all, the monkeys, anthropomorphous apes, and man. The following is a specimen of the results of the evidence of family, or married, life among man's first cousins:

"When all these statements are compared, it is impossible to doubt that the gorilla lives in families, the male parent being in the habit of building the nest and protecting the family. And the same is the case with the chimpanzee. According to Dr. Savage, 'it is not unusual to see "the old folks" sitting under a tree regaling themselves with fruit and friendly chat, while "their children" are leaping around them and swinging from branch to branch in boisterous merriment.' And Herr von Koppenfells assures us that the chimpanzee, like the gorilla, builds a nest for the young and female on a forked branch, the male himself spending the night lower down in the tree" (p. 14).

The question now arises, assuming it proved that marriage is not of human invention, but exists in a qualified form among animals, to what does it owe its origin? Considering that the union lasts till after the birth of offspring, and considering also the care taken of the offspring by the father, we may assume that the institution is in some way or other connected with parental duties.

"I am, indeed, strongly of opinion that the tie which joins male and female is an instinct developed through the powerful influence of natural selection. It is evident that when the father helps to protect the offspring, the species is better able to subsist in the struggle for existence than it would be if this obligation entirely devolved on the mother. Paternal affection and the instinct which causes male and female to form somewhat durable alliances, are thus useful mental dispositions, which, in all probability, have been acquired through the survival of the fittest.'

To the question how it can be that among so many animals the father never concerns himself about his progeny, the answer is that marriage is only one of the means by which a species is sustained in the struggle for existence. When parental care is lacking, we find compensation for it in some other way. Among the fishes, for instance, the number of eggs laid is so enormous that the species is preserved without care. The young of reptiles are from the outset able to take care of themselves. Among the highest apes, and in man, the long period of infancy makes a great deal of care necessary, and the necessity for care produces a more or less durable union. Thus we reach the following conclusion: "Marriage and family are thus intimately connected with each other; it is for the benefit of the young that male and female continue to live together. *Marriage is therefore rooted in family, rather than family in marriage,*" and in this Mr. Westermarck states a proposition which appears to be diametrically opposed to a fundamental assumption of most previous investigators.

It will be seen at once that this theory is entirely at war with the commonly held belief in a primitive stage of promiscuity. Mr. Westermarck thinks it more scientific, and in accordance with all the evidence on the subject derived from natural history and the accounts we possess of the customs of savage races, to reject early promiscuity as an unverified and unverifiable hypothesis. He first examines in detail all the groups of social phenomena adduced as evidence in favor of the hypothesis, and shows that they do not prove the fact; and with regard to the supposed connection between promiscuity and kinship in the female line, he declares that there is no general coincidence of what we consider moral and immoral habits with the prevalence of the male and female lines among existing savages. Having thus shown that the hypothesis of promiscuity has no foundation in fact, he proceeds to demonstrate that it is opposed to "all the correct ideas we are able to form with regard to the early condition of man." There is, for example, the fact that promiscuity leads to a pathological condition very unfavorable to fecundity, while infecundity, among savages perpetually fighting with one another, implies failure in the struggle for existence. But the strongest argument against early promiscuity he finds in that disposition to jealousy which is the characteristic alike of the male quadruped and of savage as well as civilized man. Evidence of the indisposition of the very lowest races of men to permit the sharing of marital rights is discovered on all sides. Without going any further into the details of the argument, the conclusion reached is, not that promiscuity or something approaching it may not be found here and there, but that "there is not a shred of genuine evidence for the notion that promiscuity ever formed a general stage in the social history of mankind. The hypothesis of promiscuity, instead of belonging . . . to the class of hypotheses which are scientifically permissible, has no real foundation and is essentially unscientific."

The foregoing will give a good idea of Mr. Westermarck's method, and as to the importance of the result, it is easy to see why Mr. Wallace has so strong an opinion. Anthropology, as a science, is founded on the assumption that mankind tends to pass through certain stages of development. A secondary assumption, in that branch of it which is devoted to the study of marriage, is that the earliest form of the relations of the sexes is promiscuity. From this as a starting point we have been told we must derive polygamy, polyandry, monogamy, the various systems of relationship, etc., etc. Mr. Westermarck boldly declares the hypothesis to be untenable. If he is right, the foundations of the science of anthropology seem to require reëxamination. The subject is one of which the fascination is only equalled by the difficulty, and the difficulty is partly inherent in the nature of the facts which constitute its materials. The evidence consists not only of the recorded history of the customs and laws of civilized man, but of the reports made by travellers of the customs and habits of savages, representing various prehistoric stages of evolution. These reports are subject to more than the usual infirmity which attaches to any human evidence, because they consist of evidence on subjects concerning which the witnesses have generally little or no previous knowledge, and as to which they are constantly liable to be misled. Add to this that there is the widest difference between travellers, both in powers of observation and generalization, in carefulness, and in freedom from prejudice, and we see that the sifting of the evidence bearing upon the problems presented by anthropology is a task of no ordinary magnitude. We know from experience how difficult it is for any traveller to give an account of the habits, customs, and characteristics of any civilized country which its inhabitants or other observers will recognize as accurate, yet if we are told that the Fuegians are very jealous of their wives, or that the Andamanese are a very modest people, we are quite ready to accept it as demonstrated fact.

Another difficulty is that a custom, when ascertained to exist, may represent a normal stage in evolution, and may represent something very different. Suppose, for instance, all contemporaneous written records to be destroyed, what would the future anthropologist make of polygamy in Utah, established in a monogamous country? Would not a perfectly natural and plausible explanation be that the Mormons represented a primitive stage in American civilization, and would not America be cited as another proof that monogamy is everywhere preceded by polygamy? Mr. Westermarck's conclusions, so opposed to

those usually held, and yet based in the main on the same evidence, shows the necessity of sifting, as well as accumulating, the evidence of the facts which afford the material for the ingenious speculations of the anthropologist.

My Three-Score Years and Ten: An Autobiography. By Thomas Ball, A.M. Boston: Roberts Brothers. 1891.

AUTOBIOGRAPHIES are generally pleasant reading, and this one is no exception to the rule. Though one of the better of the elder generation of American sculptors, Mr. Ball is hardly an artist of such distinction that an account of his life is a desideratum in art history, nor has that life been so full of strange vicissitude and interesting circumstance as to make the mere recounting of it romantic. It has been a simple life enough, that of a shrewd and thrifty Yankee who, devoting himself to art, made his way in it, and rose from humble beginnings to an enviable position, as he would have done in any other walk of life, by the exercise of his Yankee thrift and shrewdness. But the gentle egotism of a veteran looking back upon the struggle of life pervades the book, and its somewhat loose and colloquial style and chatty, gossipy manner have a distinct charm and leave an agreeable impression.

Thomas Ball was born in Charlestown, Mass., on the 3d of June, 1819, but his family removed, in his early childhood, to Boston, where his youth was passed. His father was a "house, sign, and fancy painter," but, the son is inclined to think, possessed an artistic temperament and longed for a higher class of work than he was able to do. Thomas himself showed no particular love for or interest in art until his fourteenth or fifteenth year. He was gifted, however, with a notable mechanical aptitude, such as is not infrequent with sculptors, which showed itself in ship-building and in the making of musical instruments. He was exceedingly fond of music, and, in later years, supported himself by the use of his voice while he pursued the study of painting, the art to which he was at first devoted. His schooling was interrupted when he was twelve years old by the death of his father and the consequent necessity of earning something towards his own support and that of his family. He was engaged as shop and errand boy first by a retail grocer, then by a merchant tailor, and he has some rather amusing stories to tell of his experiences in these positions. His next step, and, as he thinks, a decisive one in his life, was to enter the employment of the "New England Museum," the nucleus of the "Boston Museum." His duties were to dust pictures, clean glass cases, and show strangers about the collections. He seems to have had an invincible repugnance to the second of these duties, but he soon made himself so useful in repairing and keeping in good order the various mechanical toys of the institution that he won the good graces of his employers and an increase of wages. At the same time, another future sculptor, who was destined to become one of Ball's most intimate friends, Hiram Powers, was making himself similarly useful in a similar position in the Cincinnati Museum.

Ball's first effort in art was made in the Museum, and was a pencil drawing in profile from one of the portraits he was engaged to dust. This suggested to a friend the possibility of his making a little money by cutting out silhouettes of visitors to the Museum. The profiles were traced by a machine, but he soon began to add the figures by eye, which brought in more money and was useful training. He was now determined to become a painter, and, after a compromise on wood-engraving which did not last long, had his way. He was, as were most artists of the day, almost entirely self-trained, but soon began to have some success, first with miniatures in oil, then with portraits, and last with "historical pictures" in the taste of the time—"Christ in the Temple," "Lear and Cordelia," etc.—which he sold at prices that now seem ludicrously small, but which, he says, were very good for those days. The only piece of his painting which is reproduced in the volume before us, the portrait of his mother, painted in 1841, would seem, from the photogravure, to be an excellent and dignified bit of work. At this time Ball and George Fuller were intimates and studio companions, and the account of their blind gropings after technical excellence, without guidance of any kind, throws much light on the subsequent work and career of the latter.

Mr. Ball does not give us the exact date of his first attempting sculpture, but it must have been some time after 1848—the date of his "Christ in the Temple"—and some time before 1854, the date of his marriage. The occasion of it was a disappointment in love which rendered his regular work—for which the lady had kindly served him as a model—odious to him, and made him take to modelling as a distraction. His first publicly shown bust was a small one of Jenny Lind, modelled from photographs, at the time of her appearance in Boston. It took, and he soon found himself with many orders for cabinet-sized busts. His first life sized bust was one of Daniel Webster, which was finished in the nick of time, a few days before the death of the statesman. The knack of timeliness Mr. Ball always retained. He seems to have found sculpture more remunerative than painting, and about this time definitively abandoned the latter for the former.

In 1854 Mr. Ball married and went to Italy, where he remained two years. He returned to Boston and made a small model of the equestrian Washington, now in the Public Garden, which was much admired by artists and the public, and a subscription was started in 1859 for its erection. It was not finally unveiled until 1869. Orders for work, public and private, flowed in upon him, and the rest of his long life has been that of a highly successful sculptor. The book becomes largely an account of commissions received and executed, culminating in the great Washington monument for the town of Methuen, on which he is now engaged. In 1865 he returned to Florence, where, with brief intervals, he has resided ever since.

His autobiography is the record of an honorable life, and shows many captivating traits of character. Honesty, thrift, intelligence, humor, strong religious feeling, and a firm belief in good angels and evil spirits, a good deal of modesty and not a little gay vanity, seem to be the strongest characteristics of a nature not marked by genius or especially artistic, but thoroughly wholesome and kindly. In taking leave of Mr. Ball, we heartily wish him many more years added to the three-score and ten he has spent so well.

A Translation of Dante's Eleven Letters, with Explanatory Notes and Historical Comments, by Charles Sterrett Latham. Edited by George Rice Carpenter, with a Preface by Charles Eliot Norton. Boston: Houghton, Mifflin & Co. 1891. Pp. xiii + 284.

THIS volume, as we learn from Prof. Norton's preface, is the memorial of a brave young scholar who, while still an undergraduate at Harvard, was stricken with paralysis, but who, in spite of this calamity, with nothing before him but the prospect "that his days were henceforth to be passed monotonously upon the bed, with the little variety of a change to the couch or the invalid's chair," determined to make the best of the strength that remained to him. He first devoted himself to getting his bachelor's degree—the examinations being held at his bedside—and then, having become interested in the study of Dante, he resolved to compete for the prize annually offered by the Dante Society at Harvard. Choosing for his subject the translation of Dante's Letters, with historical comments, he accomplished an amount of work that can best be understood by those who have themselves driven a furrow in the vast field of Dantesque literature, and then he died a day or two too soon to know that the prize had been awarded to him.

It is fitting that his work should be published, not only because it bears witness to a noble fortitude, but also because it is an excellent translation of Dante's Letters, hitherto neglected by English-speaking scholars. All of Dante's prose works are now accessible in good English versions. These letters contain so much that has a biographical interest, and throw so many side-lights on Dante's poetical methods and on his philosophy, that they cannot be overlooked by any one who wishes to understand the greatest man of the mediæval world, and, after Shakspere, the greatest of poets. So far as we have compared Mr. Latham's translation with the original, we have found it uniformly accurate, and, what is more, very readable—a difficult achievement in view of the stiff Latin of the original; it is far more concise and not less clear than Fraticelli's Italian version.

In the comments Mr. Latham shows not only the thoroughness with which he examined his materials, but also a fine historical sense in handling them. He gives a vivid picture of the Florentine factions at the time of Dante's banishment; he traces the history of the Counts Guidi and the Malaspina; he tells briefly the origin of the Babylonish Captivity, and discusses the Scaligeri and Dante's relations with them. If in all this there be nothing absolutely new, the service which Mr. Latham has rendered is not less valuable; for he has bound together facts from many distant sources, and he has sifted the wheat from a great heap of critical chaff. So much has been written about Dante that it is of prime importance that some clear and competent mind should sum up from time to time the results of voluminous criticism.

We point out a few errors and make a few suggestions in order that the next edition of this book may be better even than the first; that there will be another edition we have no doubt, because it is unlikely that any one will try to improve on Mr. Latham's translation. *Sesto* (p. 6) should be *ward*, because, although Florence was originally laid out in *sixths*, as English towns were laid out in *fourths* (wards), the word came to have a more general meaning. It would be well throughout to translate the party names, "Neri" and "Bianchi"; on p. 9, for "The Neri or Guelphs *was*" read *were*. "*Paladin* of the Roman Court" (p. 36) should be *Palatine*, as the former word has acquired a special significance. *Marchese*, which frequently occurs, should be *Marquis*, especially as Mr. Latham uniformly uses the English equivalent of other titles. "How he rules me *you may discover in the accompanying*

rhymes" (p. 66) is altogether too free a paraphrase of the Latin text, "Inferius extra sinum præsentium requiratis"; especially as this is a much disputed passage, and as it is by no means certain that the canzone which follows was sent by Dante with the letter. On p. 107, "*a* article" should be "*an* article," and on p. 130, note 2, *coincisely* should be *concisely*. *Actually* (p. 160) hardly gives the force of the Italian *corporalmente;* on the same page *togaed* would be preferable to *togated*. On p. 161, *straniero* should be rendered *foreign*, rather than *strange*. *Trastiverine* (p. 172) should be *Transteverine*. Instead of *Tullius* (p. 201) why not the good old English *Tully?* For "Scaramella *dei* Scaramelli," read *degli* (p. 227); for *Sassoulo* read *Sassuolo* (p. 229). *Monselici* and *Esti* (p. 242) should be *Monselice* and *Este*. *Puliciano* is printed right on p. 247 and wrong on p. 253. *Cangrande* is frequently printed for *Can Grande*.

These letters give sufficient evidence, if any were needed, of the chilling and desiccating quality of the scholastic philosophy. That a mind as intense and fiery as Dante's could not shake off the numbness which long exercise in the processes of the schoolmen brought upon him, is a final condemnation of those processes. The poet broke free; the prose-writer remained fettered and palsied by them. No one would suppose that the author of the eleventh letter could also be the author of the thirty-third canto of the Inferno. Occasionally, of course, even in the Letters, we come upon Dantesque expressions, but in general they are crabbed and, as Balbo said, almost barbarous in style; very different, for instance, from Milton's prose pamphlets, to which, so far as regards their intent, they may not improperly be compared. But their value, as we stated above, is independent of their form, since they furnish clues to portions of Dante's career that would otherwise be unknown. The third letter, in which Dante writes to Moroello Malaspina concerning a love affair in which he was entangled with a woman of the Apennines, we cannot think is genuine; not because we deem it impossible that Dante should fall violently in love when he had entered upon middle life, but because we deem it out of keeping with what we know of his character that he should have gushed in the fashion of a youth of eighteen about his amour. The critics have been so bothered by this letter that they have either rejected it altogether or have gone far afield after some recondite interpretation. Troya suggested that it is a cipher "treating of secret political negotiations"; Bartoli would have it that the woman who captivated the Poet was not of flesh and blood, but merely an allegory of Florence; Gaspary was willing to allow that the woman really existed, but he argued that the love she inspired was purely Platonic. The chief reason for retaining this letter is that it serves as a preface to the Canzone, *Amor, dacchè convien pur ch'io mi doglia*, which is allegorical after Dante's usual manner; but for our part we would dismiss it, together with all stories of "the woman with the goitre," until incontestable proofs of their genuineness shall be discovered. Of the other letters we cannot speak in detail. The eighth gives an amusing account of Dante's mission to Venice; the tenth, whether authentic or not, certainly expresses sentiments of noble self-respect and dignified scorn that we believe were characteristic of him; the eleventh, after its cumbrous exordium, is the most important, because in it Dante reveals the plan and significance of the 'Divine Comedy.'

In closing, we would again emphasize the fact that Mr. Latham's work will be of permanent value to English students of Dante, and we can but regret that so fine a scholar and so brave a man should have been cut off so early.

B. F. Stevens's Facsimiles of Manuscripts in European Archives Relating to America, 1773–1783. Vol. X. Nos. 920 to 1058. London: B. F. Stevens.

We have now before us the tenth volume of Mr. Stevens's great collection. The number of manuscripts of which copies in facsimile are furnished is one thousand and fifty-eight. It is time, therefore, to consider the general character and utility of the work, and its importance as a contribution to our knowledge of history.

As we predicted when the publication of these documents was first proposed, no important historical discovery has been made in consequence of them. The ground had been too often and too carefully worked over. The researches of a long line of investigators, from Sparks to Doniol, had been too thorough. Concerning few periods are documents more numerous than they are about this one; and while the historical scholars of other countries have had many national crises to study, those of America have been more restricted. Our colonial history is the tale of small beginnings, interesting and important chiefly in view of subsequent events. The affairs of colonial New Jersey and Carolina are seen principally in the reflected light of later days. Only with the Revolution do these regions become illuminated by the broad glare of general history, and after 1789 the United States sink again for a long time into comparative obscurity. While the most momentous and the most picturesque events of modern times were occurring beyond seas; while France was overturning her monarchy and setting up her empire; while her armies were overrunning Europe, and the civilized world was joining in the struggle, America played but a subordinate part.

Nor has that part itself proved particularly attractive to her historians or to their readers. How many of those who see this notice could relate the incidents of the war which their country once waged with France? How many have any minute knowledge of that much better-known struggle with England of which very old people sometimes speak as "the late war," and to the widows of whose veterans we still pay pensions? After 1815 the whole world appeared to sit still and rest for a generation. It was not until 1860 that anything happened in our country greatly to occupy the historian. The events of that year and of those which followed are passing but now from the region of personal controversy to that of impartial history. The historical material of that time is still making, in the shape of autobiographies, monographs, and reminiscences. The American lovers of documents (and the taste is as distinct a one as that for caviare) have therefore been fairly driven into the Revolutionary field, and few corners of it have been left unexplored. Mr. Stevens has had many predecessors. He has gleaned industriously after them, but his garners contain but gleanings after all.

It is to be wished that the methods of this collection could have been applied to some of the more important papers which were printed long ago, and perhaps have been repeatedly printed. A facsimile carries conviction with it as few copies can. It may be altered only by gross fraud; and such honest and well-meaning tampering as that of which even great editors have sometimes been guilty, is rendered quite impossible. Here is no chance for abridgment. The important sentence cannot be extracted, and perhaps changed in meaning for want of its context. The page must be given whole or omitted. A correspondence that was really important might be advantageously treated in this way. Until that of Washington, for instance, has been thus published, we shall not feel that the final edition of his writings has been reached. With them, it is true, one reason for facsimile is lacking which exists in regard to the letters of many famous men. No one can mistake Washington's meaning on account of his handwriting. The greatest of Americans has hardly been surpassed in the simple art of penmanship. His chirography was at once legible and full of character. But many important people have written execrably, and the most painstaking editor must sometimes be in doubt as to what they say. To go no further than this collection, the letters of Sir Henry Clinton are sometimes hardly decipherable. When this is the case, we are grateful to the editor who puzzles them out for us; but we may be glad of the means to assure ourselves that our own reading of the hieroglyphics coincides with his.

But with less important papers, like many of those before us, the value of the method is far more doubtful. In respect to not a few of them it may fairly be said that no one would, by any possibility, wish to do more than glance at them sufficiently to satisfy himself of their unimportance. They are reports of spies, full of inaccurate information; letters of advice that never was taken; petitions for aid that was refused. In the present volume are eight distinct warrants given at length, permitting various persons to visit Henry Laurens when a prisoner in the Tower. The method of facsimile makes it impossible for us to glance and skip. We can no more abridge documents in our reading than Mr. Stevens in his editing. We can leave out a page, and so could he, but we cannot persuade ourselves that we have taken in the gist of it at a general view.

And perhaps, after all, the chief value of this work is closely connected with its very tediousness. After the student has spent time and eyesight on the thousand papers, short and long, of this collection, he will understand better than ever before that great affairs are not often managed off-hand by the sudden flashes of genius of a few great men. An atmosphere will have been created in his historical picture. Beside Washington and Lafayette, and the Howes, and Clinton and Cornwallis, beside Franklin and Vergennes and the picturesque Beaumarchais, he will see a crowd of rather shabby figures struggling and striving to promote or hinder the action of the leaders. He will recognize that their lies and jealousies and vanities had an influence, were it only by disgusting and fatiguing their betters. Therefore it is worth while that such a collection as this should exist and that a few earnest scholars should read it. Therefore, every great library in America which collects books concerning our national history, should have Stevens's Facsimiles upon its shelves. Therefore, the young student who proposes to take up history seriously may well spend the many hours required for the perusal of these ponderous volumes.

Occasionally we find something interesting as to the state of civilization a hundred years ago; although, in this respect, these manu-

scripts are not very rich, far less so than any good memoir or book of travels of the period. Thus in the tenth volume we come on the following bit of news, in a letter written by William Eden, from Dublin Castle, on the 22d of January, 1782:

"I came to town yesterday for a five hours conversation as usual:—after which we held a Council in order to issue the Erutum Fulmen of a Proclamation against some justices of the peace and others on the banks of the Shannon for plundering a Portuguese ship under pretence that she was a wreck because she had fired a signal of distress the day before; at the time of plundering she was lying safe at anchor,—in the week before, at Galway, the troops were forced to fire on a large mob who persisted in the same laudable occupation upon the cargo of an unhappy vessel that had been driven ashore.—I believe that we shall try the effect of an act to charge all these depredations in future upon the barony where such outrages happen." (1049.)

One other purpose these papers may serve, especially when the promised indexes are published. The genealogists and biographers may find material in them. They may help to solve the interesting question what some insignificant person was doing on a day when he did nothing very particular. Somebody's almost forgotten great-grandfather may be relieved of an imputation, or subjected to one, and genealogical societies may be thrown into a ferment. Here and there, on the other hand, a true bit of character may be revealed or a truly interesting incident related.

The Principles of Strategy: Illustrated mainly from American Campaigns. By Lieut. John Bigelow, jr., U. S. A. With illustrations and maps. New York: G. P. Putnam's Sons. 4to, pp. 200.

MR. BIGELOW has made the praiseworthy attempt to supply American students with a restatement of some of the leading principles of military science as taught by the more recent European authorities. These he has copiously illustrated by examples drawn from all the wars in which the United States have had part, especially the late civil war. The maps are sketch-maps, in which minute topography has not been attempted, and by far the greater part of them refer to Grant's Vicksburg campaign, twenty out of thirty-two being devoted to the movements of the month preceding the siege of that city. The method pursued is to state a principle or rule of strategic movement in technical form, explain and illustrate it by geometric diagram when possible, and then briefly refer to some example of its application in the history of American wars. The execution of the task is creditable to the author, and cannot fail to be of great service to his brother officers, both in giving them the form in which current authorities cast the principles and maxims of strategy, and especially in stimulating them to read our own history with constant reference to these principles.

The numerous geometric diagrams give, at first glance, the air of a treatise upon an exact science to that which, after all, can never become such, and must always remain a field in which physical, moral, and mental forces are combined in complex ways that refuse to be reduced to mathematical statement. In his treatment of the subject of the strategic movements of armies respectively advancing against or covering a line or a position, the author faithfully follows the authorities who strive to refer all the conceivable cases to appropriate geometric formulæ, in which the area of command is shown to be limited by circular curves and hyperbolic curves determined by *distance* alone. In spite of warnings to the contrary, the reader is so apt to be misled by such an apparatus of diagrammatic mathematics that it may be fairly questioned whether it does not do more harm than good. Distance is only one of the numerous elements of the problem of moving armies. The smoothness or roughness of roads, hills and hollows, bridges and fords, defiles and plains, marshes and sands, tides and streams, rains and snows, darkness and light, heat and cold, all enter into the physical discussion, to say nothing of the intellectual and moral elements and the personal factors of different sorts.

If we were to seek one element to stand as index of the combined ones, that element would not be *distance*, but *time*. Whether the covering force can reach a threatened point before an attacking one, is, in terms, a problem of time. How many hours away is each? This includes marching ability, character of roads and of the country, obstacles of every natural and artificial kind, and the like. Distance is the simplest, and, in some respects, the least important of all the elements. It might be possible to include in a diagram the modifications of your regular curves caused by the topographical and other conditions, but when it was done, the curve would be so irregular and anomalous that the application of geometric rules to it would be palpably ridiculous. It would seem more wise, then, to omit the mere geometric statement and diagrams, and to begin at once with the natural conditions of the problem. Instead of a dozen figures illustrating the relation of points to lines, give us a dozen good sketches of different topographical situations with the varied classes of obstacles and difficulties likely to be found in practice; and if we must have a unit of common measure by which to compare them, let it be the *time* it will take a given body of troops to march to a critical point, in view of all known conditions. The Confederate cavalry general Forrest would have gone crazy if he had been required to follow the so-called demonstrations in the work before us, but he was nevertheless passed-master in the art of "getting there first with the most men."

It is not intended by this to intimate that the geometric illustrations referred to are not simple enough and clear enough in themselves. The objection is that they demonstrate nothing of practical value, and that the useful knowledge of handling an army has not been begun when the mathematical theorems have been mastered. In this, however, Mr. Bigelow has followed such high authority that the criticism does not apply to him so much as to the current tendency to give rigid form to subjects of investigation of which the elements will not admit it. Nothing but commendation can be given to the efforts of our younger officers in the army to apply the teaching of European writers to the actual conditions of warfare on this continent. Whether the conflict be with the aborigines or between civilized communities, the character of the country makes it necessary to modify all accepted rules when they are to be applied in circumstances every way different from those of old, compact, and densely populated States. To point out these differences, to show the inventions and new methods which they have occasioned, and thus to give American military art the flexibility and the progressive character which belong to it, are noteworthy and valuable features of Mr. Bigelow's book.

The analysis and criticisms of several campaigns of the civil war are clever and interesting. An occasional error is almost inevitable when the author has to gather his facts from the vast and, as yet, almost disorganized mass of material. In his outline of the Atlanta campaign he makes Schofield seize the crossing of the Chattahoochee at Roswell; it was at the mouth of Soap Creek, a number of miles nearer Sherman's centre. He describes the Army of the Potomac as "disorganized" after the second battle of Bull Run; whatever may have been its *morale*, not a brigade or regiment had lost its organization when it marched back to Washington. It could not have taken the field again, immediately, had it been otherwise. In the Shenandoah campaign of 1862, Banks's troops are said to have been, from the beginning, "nominally at least, under the command of Gen. Frémont." Banks and Frémont commanded separate departments, wholly independent of each other, and each responsible only to the War Department at Washington. This separation of responsibility was one of the causes of disaster.

There are rather more typographical and other minor errors than should be in such a book. Meade is sometimes spelled Mead. Edward Johnson (a subordinate of "Stonewall" Jackson) is called Johnston. It is important to keep the Johnsons and Johnstons separate in the Confederate Army. Rodes (a Confederate general) is called Rhode. Lannes (the French marshal) is called Lanne. Cols. Carroll and Tyler (under Shields in the Shenandoah) are spoken of as Generals. Their promotion came later. Most of these are trifles, but they mar the appearance of the fair quarto pages of a book rightly aspiring to some importance.

Justice: Being Part IV. of the Principles of Ethics. By Herbert Spencer. D. Appleton & Co. 1891.

THERE is something heroic in the determination with which Mr. Spencer undertakes, with declining strength, the increasing labor of lifting to their proper place the culminating parts of his philosophical edifice. As this structure rises, the storms of criticism beat upon it more fiercely, and whatever insufficiency may have existed in its foundation, becomes more dangerous with the increase of the superincumbent weight; but Mr. Spencer toils steadfastly and serenely on. His vigor may be lessened, but not his confidence. To change our metaphor, the throng of enthusiastic crusaders with which his early steps were attended has wofully diminished, thinned out by death, and desertion, and discouragement at the unforeseen arduousness of the pilgrimage and the unexpected remoteness of the goal; but they cannot accuse their leader of any variableness or shadow of turning. No doubts have ever arisen in his mind concerning the all-sufficiency of his philosophical principles, and, though he stand alone, like Athanasius, he knows that in the fulness of evolution the world will advance to his position.

The theory of ethics advanced by Mr. Spencer was laid before the public so long ago, in his 'Social Statics' and in the more recent 'Data of Ethics,' that it calls for no fresh criticism. No one can deny that, as a practical system, it is pure and elevating, and for most of the many people who are no longer affected by the sanctions of the Christian religion, the rules of such a system would furnish wholesome guidance. Whatever views may be entertained of the origin of our feelings of duty or obligation or rightness, no one insists more earnestly than Mr. Spencer upon the imperative character of the dictates of conscience, or shows more impressively the evil

results of disobeying these dictates. But his talent for invective is too freely employed in this latter direction. Society being at present in the midst of an evolutionary relapse or backsliding, Mr. Spencer waxes wroth at society; but he might wisely ask himself if he does well to be angry, for this relapse is only an illustration of his principle that all motion is rhythmical. It must come out right in the end, for evolution requires it, and why should we try to hurry the grinding of the mills of the Unknowable? Doubtless it is true, as Carlyle said, that the population of England is so many millions, mostly fools; but the majority cannot be expected to receive this unflattering doctrine gladly, and are not to be converted to it by harsh words. We heartily agree with Mr. Spencer in his condemnation of the mischievous action of government, but we would have him assail it with an orderly indictment and not a railing accusation.

Justice, according to Mr. Spencer, requires "that each individual carrying on the actions which subserve his life, and not prevented from receiving their normal results, good and bad, shall carry on these actions under such restraints as are imposed by the carrying on of kindred actions by other individuals, who have similarly to receive such normal results, good or bad." The qualification that the actions are to be such as subserve life is inserted because the principle that "every man is free to do that which he wills, provided he infringes not the equal freedom of any other man," would permit injury to another by one willing to submit to injury in return. But the limitation to actions which subserve life is, as Mr. Spencer declares, practically equivalent to saying that the greatest sum of happiness is the ultimate end. We have thus two principles of justice, and as there cannot be two ultimate principles, it is necessary to choose between them. Although Mr. Spencer uses language that would not be out of place in the mouth of an intuitional moralist, he is to be classed as a utilitarian, the principle of equal freedom being a condition of attaining the greatest amount of happiness.

It is interesting to see that Mr. Spencer has discovered the substantial identity of his principle of equal freedom with that of Kant. His attention was called to the likeness a number of years ago, but he states that, owing to his inability to read German, he was unable to satisfy himself that it existed until recently, when he succeeded in finding a translation that convinced him. He points out, however, that Kant derives his principle from a "search in the pure Reason," while the Spencerian principle is to be regarded "as expressing the primary condition which must be fulfilled before the greatest happiness can be achieved by similar beings living in proximity." Again, in Kant's formula the negative element, or obligation to respect limits, is the dominant idea, while in Mr. Spencer's case, the positive element, the right to freedom of action, is represented as primary. The latter aspect is perhaps better adapted to the requirements of evolution.

As to land tenure, Mr. Spencer admits that he took a position in his 'Social Statics' that he cannot now defend. His discussion of the rights of women and children, the right of suffrage, and the nature and constitution of the State, is marked by his usual vigor, but can scarcely be said to add very much to our knowledge of the problems. The chapters upon the duties of the State and the limits of State duties contain a great deal of Mr. Spencer's most emphatic denunciation, but, as we have said, it is doubtful if he makes so deep an impression as he desires, or as his argument, stated calmly, would effect.

Early Travellers in Scotland. Edited by P. Hume Brown. Edinburgh: David Douglas. 1891.

THE idea of bringing together in one volume the testimony of a number of travellers, visiting a country at intervals during several centuries, so as to enable the reader to weigh and compare the good and the evil reports, is certainly an excellent one. The present volume contains extracts, more or less judicious, from the descriptions of visitors to Scotland, beginning with Edward I. in 1295, and ending with Thomas Morer in 1689. The books from which these extracts have been made are for the most part difficult of access, and they are admirable illustrations of the truth of the proposition that a part is sometimes better than the whole. A sufficient instalment of each writer is given to show the general tone and tendency of his observations, and by the elimination of exaggerated praise or blame a residuum is obtained which is probably an accurate picture.

As late as the end of the seventeenth century, Scotland was regarded as a strange country where strange things might very well happen. Even its geography was a matter of conjecture, and until the publication of Mercator's Atlas in 1595 it was believed that it stretched far to the eastward in the direction of Norway. Many of the travellers whose accounts are here quoted had evidently read Hector Boece's History, published in 1527, and they reproduce with childlike faith his wonderful stories of floating islands, *barnicles* (or wooden geese that fell from fir trees and came to life in water), and many other supposititious freaks of nature. Froissart was in Scotland about the middle of the fourteenth century, and seems to have been particularly struck by the sustaining qualities of oatmeal as food and by the niggardly character of the inhabitants. He tells how the French nobles who made an expedition to Scotland in 1385 in order to drive out the English, were practically imprisoned by the Scotch until money had been deposited in Bruges to cover the expense of their board and lodging—a curious instance of what bankers call an arbitrage operation in exchange. Pope Pius II. describes how the beggars at the doors of Scotch churches in the middle of the fifteenth century "departed with joy on receiving stones as alms, which stones being of a sulphurous nature were used instead of wood for fuel." Coal mines had, in fact, been worked as early as 1300, although peat was the common fuel. Estienne Perlin found the country in 1551 "poor in gold and silver, but plentiful in provisions, which are as cheap as in any part of the world, and truly the milors of that country and the gentillemans who have any money may live very comfortably." The latter part of this description is still true in this present year of grace. Fynes Moryson, a student of Peterhouse College, Cambridge, says that in 1598 for the lending of £60 there were plenty of good citizens of Edinburgh who would give the lender board and lodging as long as the loan continued—showing either a very high rate of interest or a very low rate of living expenses.

Taylor, called the water-poet, considered Sterling Castle fully equal to Windsor, and declared that there was not such another hall either in Scotland or England except Westminster Hall, "which is now no dwelling hall for a prince, being long since metamorphosed into a house for the law and the profits." Fortunately for him, he did not take passage in the *Mayflower*, then about sailing, for even in Scotland he complains of being stung by the "*musketaes*, a creature that hath sixe legs and lives like a monster altogether upon man's flesh." Perhaps the most interesting traveller that ever visited Scotland—more interesting than Dr. Johnson himself—was "rare Ben Jonson," who walked to Edinburgh and back for a wager in 1618, and wrote an account of his adventures in verse, the manuscript of which was unfortunately burnt in 1620. In the year 1655, Thomas Tucker was sent to Scotland by Parliament to report on the trade of the country, and he made a remarkable prophecy in regard to the future growth of Glasgow, based on what he called the "mercantile genius" of her people, although at that time there were only a dozen small vessels belonging to the port, and the shallowness of the river caused the merchants much trouble. Then came Richard Franck, who had been a trooper of Cromwell's and went to Scotland in 1656, mainly, it would appear, because he was a lover of nature and an enthusiastic angler. So plentiful were salmon in those days that servants, in making engagements, stipulated that they should not be compelled to eat salmon more than three times a week. In contrast to this is the statement of the next traveller, Thomas Kirke, that in 1679 the Highlanders were in the habit of cutting steaks from the living cow, just as James Bruce afterwards charged the Abyssinians with doing; but there is no confirmatory evidence on this point. The last traveller on the list, Thomas Morer, found that the Scotch were "great criticks in pronunciation and often upbraid us for not giving every word its due sound, as when we call *enough* 'enow' or 'enuff' without making it a guttural, but neglecting the *gh* as if not written."

From these illustrations the reader will perceive that there is here a mine of curious sociological and general information about the country and its inhabitants, and the book is certainly one which no Scotchman's library should be without.

BOOKS OF THE WEEK.

Abbot, W. J. Battle-Fields and Victory. Dodd, Mead & Co.
Adams, W. D. With Poet and Player. A. C. Armstrong & Son. $1.25.
Alarcón, P. A. The Cocked Hat. New York: The Minerva Publishing Co. 25 cents.
Barr, Mrs. A. E. A Sister to Esau. Dodd, Mead & Co.
Bixby, J. T. The Crisis in Morals. Boston: Roberts Bros. $1.
Bourdillon, F. W. Alles d'Alouette. Boston: Roberts Bros. 75 cents.
Bourke, Capt. J. G. On the Border with Crook. Charles Scribner's Sons. $3.50.
Bröcking, Wilhelm. Die französische Politik Papst Leos IX. Stuttgart: G. J. Goschen.
Bruce, Henry. Life of General Houston. ["Makers of America."] Dodd, Mead & Co. 75 cents.
Castlemon, Harry. Marcy the Blockade-Runner. Philadelphia: Porter & Coates.
Chaffee, Frank. Idle Verses Idly Writ. New York Geo. M. Allen & Co.
Champney, Elizabeth W. Witch Winnie's Mystery. Dodd, Mead & Co. $1.50.
Cook, Prof. A. S. Shelley's Defence of Poetry. Boston: Ginn & Co.
Coolidge, Susan. In the High Valley. Boston: Roberts Bros. $1.25.
Curtis, R. H. Important Federal Statutes Annotated. Chicago: Callaghan & Co.
Dalin, Talmage. European Relations. [The "Unknown" Library.] Cassell Publishing Co. 50 cents.
D'Aurevilly, J. B. The Story without a Name. Belford & Co. 50 cents.
Davis, R. H. Stories for Boys. Charles Scribner's Sons. $1.
Deane, Mary. Mr. Zinzan of Bath. E. P. Dutton & Co. $1.50.
De la Saussaye, Prof. P. D. C. Manual of the Science of Religion. Longmans, Green & Co. $3.
Didon, Père. Jesus Christ. 2 vols. D. Appleton & Co. $7.50.
Dobson, Austin. Four French Women. Dodd, Mead & Co. $2.
Dowie, Miss M. M. A Girl in the Karpathians. Cassell Publishing Co. 50 cents.
Dunbar, Newell. Phillips Brooks. Boston: J. G. Cupples.
Durham, W. Food, Physiology, etc. Macmillan & Co. 50 cents.

A Fascinating Biography.

FROM THE N. Y. EXAMINER:

"No biography issued this season will be read with greater interest than that of Austin Phelps by Elizabeth Stuart Phelps. It is such a memoir as an affectionate daughter might be expected to write, but it is, in addition, such a book as only a woman of genius could produce. It differs much from the conventional biography, and differs greatly for the better. The book is fascinating, so skillfully is the story told, but more attractive still is the saintly character that shines forth from its pages. It is one of the few books that no Christian man or woman can afford not to read."

One volume, 8vo, Illustrated, $2.00.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

LINCOLN.

G. KRUELL'S portrait on wood from photograph and life mask. Size of block, 10.5x8.5 inches. Proof impressions on Japanese paper, signed by the artist.

"This extraordinary print of Lincoln is, we do not hesitate to say, destined to be the historic likeness of the first President of our free Republic."—*The Nation*, March 26, 1891.

WEBSTER.

G. KRUELL'S portrait on wood from daguerreotype Size of block, 12x10.5. Proof impressions on Japanese paper, signed by the artist.

"In point of technique . . . perhaps even more to be admired [than the Lincoln]. . . . Not less calculated to cast all previous prints in the shade."—*The Nation*, Sept. 24, 1891.

TWENTY DOLLARS each, carriage free. Address G. KRUELL, East Orange, New Jersey. (Mr. Kruell will also send *on approval* on receipt of price.)

Mr. Kruell also has for sale his DARWIN (two portraits), GARRISON, PHILLIPS, ASA GRAY, and E. L. GODKIN, in the same style of engraving and impression, at Fifteen Dollars each: edition limited.

Also, at Ten Dollars, his just finished portrait (on block 9x6.75) of the poet

LOWELL.

"It is as good a likeness of Lowell in his last years as can be. It gives me the greatest pleasure."—*Prof. Charles Eliot Norton.*

A SHORT HISTORY OF ANGLO-SAXON FREEDOM.

The Polity of the English-speaking Race outlined in its inception, Development, Diffusion, and Present Condition, from the Germans of Tacitus to the adoption by Australia of a Federal Constitution.

By JAMES K. HOSMER, Professor of English and German Literature in Washington University. 8vo, $2.00.

FROM SIR CHARLES DILKE.

"I have read it with the deepest interest, and with very general agreement."

FROM MR. JAMES BRYCE.

"The spirit and counsel which breathe through it seem to me quite admirable."

DR. M. W. CASE,

809 North Broad Street, Philadelphia, Pa.

A NEW BOOK BY MAX O'RELL.

A Frenchman in America.

BY MAX O'RELL,

Author of 'Jonathan and His Continent,' 'John Bull, Jr.,' etc.

With over 130 illustrations by E. W. Kemble.

1 vol., octavo, extra cloth, gilt top, $2.00.

Max O'Rell's marvellous versatility is the best guarantee that he does not repeat himself in these reminiscences. While every page glows with the humor of the same swift and graceful pen, the book is as fresh and brimming with interest as though its genial author had never before written a line about America.

Mr Kemble has caught the spirit of the text with rare fidelity, and gives us over 130 illustrations done in his inimitable style.

The Story of Francis Cludde.

By STANLEY J. WEYMAN, author of 'The House of the Wol',' etc. 1 vol., 8vo, extra cloth, ink and gold dies, inlaid, $1.50.

This is the initial volume of "CASSELL'S NEW SERIES OF INTERNATIONAL COPYRIGHT NOVELS," by leading English and Continental writers. Works by prominent American authors will occasionally be added, and the Series will present a wide range of literary attractions.

The Children of Wilton Chase.

By L. T. MEADE, author of 'A World of Girls,' 'The Palace Beautiful,' 'Polly, a New-Fashioned Girl,' etc. 1 vol., 12mo, with illustrations. Price, $1.50.

A delightful story of child life, told in Mrs. Meade's brightest manner.

A New Volume in the "Unknown Library."

European Relations.

A Tirolese Sketch. By TALMAGE DALIN. Flexible cloth covers. 1 vol., 12mo, 50 cents.

The Last Great Naval War.

An Historical Retrospect. By A. NELSON SEAFORTH. With maps and diagrams. 1 vol., small quarto, flexible boards, pp. 120, 75 cents.

This is an account of the *last great naval war* that will occur, not of one that has already transpired. The sketch is well conceived, and is worked out with rare skill and originality.

New Volumes in Cassell's Sunshine Series.

Father Stafford.

By ANTHONY HOPE, author of 'A Man of Mark,' 1 vol., 12mo, paper, 50 cents; cloth, 75 cents.

The Hidden City.

By WALTER H. MCDOUGALL. Illustrated by the author. 1 vol., 12mo, paper, 50 cents; cloth, 75 cents.

The New Job.

By LEOPOLD VON SACHER-MASOCH. Translated from the German by HARRIET LIEBER COHEN. 1 vol., 12mo, paper, 50 cents; cloth, 75 cents.

Sacher-Masoch is probably the most popular novelist in Germany to-day, and 'The New Job' is a splendid example of his work. It is a powerful story of persecution and disaster in Russia.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company

104 and 106 Fourth Avenue, New York.

Macmillan & Co.'s

NEW BOOKS.

With 138 Illustrations. 8vo, $5 00.

MACMILLAN & CO.,

112 Fourth Avenue, New York.

Ready Saturday, October 31st.

THE NOVEMBER CENTURY

Begins a new volume with a number of great interest and pictorial beauty. It contains illustrated articles on "A Rival of the Yosemite," "The Players" (the famous New York Club), "A Great German Artist," "The San Francisco Vigilance Committees," by the Chairman, William T. Coleman, the first of the "Autobiographies" of Edgar W. Nye ("Bill Nye"), three complete stories, "The Food-Supply of the Future," and first chapters of

"THE NAULAHKA,"

A Novel of America and India, by

Rudyard Kipling and Wolcott Balestier.

In the invention and composition of this story Rudyard Kipling is associated with a young American writer. The hero and heroine of the novel, residents of a "booming" Colorado town, are transplanted to India—he in search of a famous jeweled necklace said to be upon an Indian idol, and she as a physician to her own sex. THE CENTURY begins its new volume with

A GREAT AMERICAN PROGRAM.

It will print, during the year, **A New Life of Columbus,** by the distinguished Spaniard, Emilio Castelar (richly illustrated); important papers on **The World's Fair;** a serial novel of the Great West, by Mary Hallock Foote, one of New York life, by the author of "The Anglomaniacs," and a novel by Dr. Weir Mitchell; a series of short stories, by **Thomas Bailey Aldrich;** articles on **The Indian's Side,**—written from the Indian's standpoint; papers on **Art Subjects;** articles by **Gounod** and other famous **French Musicians** on their life and work: illustrated papers on **"The Jews in New York,"** with other articles on phases of New York life; papers by **Archibald Forbes,** the famous war-correspondent, etc., etc. December will be a richly illustrated

Christmas Number.

A year's subscription to THE CENTURY *costs $4.00; single numbers, 35 cents. Begin with November. Subscriptions are taken by newsdealers and booksellers generally, by postmasters, and by the publishers. Remittances should be made by post-office or express order, bank check, draft, or in registered letter.*

ROBERTS BROTHERS

HAVE JUST PUBLISHED:

The Story of the Glittering Plain.

Which has also been called the **Land of Living Men, or the Acre of the Undying.** Written by WILLIAM MORRIS. A limited edition from original type, with letters and borders, designed by Mr. Morris. Demy 8vo. Unique binding. Price, $2.50.

A Calendar of Sonnets.

By HELEN JACKSON (H. H.). A sonnet for each month in the year, with 12 full-page illustrations by Emile Bayard, 24 vignettes by E. H. Garrett, and a portrait of "H. H." Small quarto, uniquely bound. Price, $2.00.

Ailes D'Allouette.

A little volume of couplet verses. By F. W. BOURDILLON.

When like a lark the soul upsprings,
Of verse she makes her airy wings.
Oh, may these verses, pair and pair,
Some heart in heavenward flight upbear.

With 12 illustrations by E. H. Garrett. Small 4to. White and gold binding. Price, $1.00. Parchment paper, 75 cents.

The Crisis in Morals.

An Examination of Rational Ethics in the Light of Modern Science. By Rev. JAMES THOMPSON BIXBY. 16mo. Cloth. Price, $1.00.

A criticism on Ethics, mainly of Herbert Spencer's theory of morals as the product simply of evolution.

A Lost Hero.

By ELIZABETH STUART PHELPS WARD and HERBERT D. WARD. With 30 illustrations by Frank T. Merrill. Small Quarto. Cloth. Price, $1.50.

This little story, originally contributed to the *Youth's Companion,* has sought to teach the grandeur of a brave deed and the beauty of supreme self-sacrifice.

In the High Valley.

By SUSAN COOLIDGE, being the fifth and last of the "Katy Did" Series. Illustrated by Jessie McDermott. 16mo. Cloth. Price, $1.25.

At all the Bookstores. Mailed, postage paid, on receipt of price by the Publishers,

ROBERTS BROTHERS,

BOSTON.

THIRD EDITION.

The belief is rapidly spreading that to this strikingly-finished, sunny, humorous volume belongs the lonely distinction of being the one single, solitary work of genius produced during the literary season of 1890-91.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.

For references and circular address MRS. E. L. HEAD, Germantown, Pa.

Teachers, etc.

Important New Books

Christopher Columbus,

And how he received and imparted the Spirit of Discovery. By JUSTIN WINSOR, Editor of 'The Narrative and Critical History of America.' With portraits and maps. 8vo, $4.00.

A book of great value in biography, history, and geography.

Dante's Divine Comedy.

Translated by CHARLES ELIOT NORTON, Professor in Harvard University. With Notes. In three volumes. I. HELL. 12mo, gilt top, $1.25.

Professor Norton is recognized in America and in Europe as not only one of the best Dante scholars, but as one of the few masters of English prose. His translation of the Divine Comedy is as literal as is consistent with good English.

Dante's Eleven Letters.

Translated into English by CHARLES S. LATHAM, with Introduction and Notes. Edited by G. R. CARPENTER, Professor in the Massachusetts Institute of Technology and Secretary of the Dante Society. With an Introductory Chapter by Prof. Charles Eliot Norton. Crown 8vo, $1.50.

This translation of Dante's letters, which is the first ever made in English, won a prize from the Dante Society for its excellence.

What is Reality?

By FRANCIS H. JOHNSON. Crown 8vo, $2.00.

This is a book of remarkable grasp and power, and is a contribution of great value towards the solution of some of the deepest problems that can engage the mind of man.

Abraham Lincoln.

By CARL SCHURZ. With a fine new portrait of Lincoln. 16mo, $1.00.

Mr. Schurz portrays Lincoln's career and character with remarkable fairness and wisdom, and justifies the admiring love with which his memory is cherished.

Joseph Hardy Neesima

By ARTHUR SHERBURNE HARDY, author of 'But Yet a Woman,' 'Passee Rose,' etc. With portraits of Mr. Neesima and Hon. Alpheus Hardy. Crown 8vo, $2.00.

This account of one of the most famous Japanese of modern times is deeply interesting.

Masks, Heads, and Faces.

With some Considerations respecting the Rise and Development of Art. By ELLEN RUSSELL EMERSON, author of 'Indian Myths.' With many illustrations. 8vo, $4.00.

Mrs. Emerson's book fills a somewhat unique place in literature, since it explains the earliest incentives to artistic expression.

*** For sale by all Booksellers. Sent postpaid, on receipt of price by the Publishers.*

Houghton, Mifflin & Co., Boston.

11 East Seventeenth Street, New York.

Charles Scribner's Sons' New Books.

Across Russia.

From the Baltic to the Danube. By Dr. CHARLES A. STODDARD, Editor of the New York *Observer*. Illustrated. 12mo, $1.50.

"Mr. Stoddard is a good traveller; he sees well, and his descriptions of people and places are graphic and of large value. He makes his book as profitable as pleasing."—*Chicago Inter-Ocean.*

Patrick Henry:

Life, Correspondence, and Speeches. By WILLIAM WIRT HENRY. With portrait. Eleven hundred sets printed from type. 3 vols., 8vo, *net* $12.00. Vol. I. *Now ready.*

These volumes form the authoritative and only complete biography of the great Revolutionary agitator and statesman. The work is the result of many years' labor on the part of the author, Patrick Henry's grandson, and is based largely on documents and data discovered and collected by him.

ON THE BORDER WITH CROOK.

By Captain JOHN G. BOURKE, U. S. A. Illustrated. 8vo, $3.50.

A valuable and picturesque record of active army life on the frontier during the past twenty years. Captain Bourke was on Crook's staff, his warm personal friend, and familiar with his Indian policy, the remarkable success of which is here told. The work is a vivid picture not only of our wars with the Sioux and Apaches, but of the unique type, traditions, customs, and adventures of the "border" which is now a thing of the past.

The Sabbath in Puritan New England.

By Mrs. ALICE MORSE EARLE. 12m., $1.25.

"A perfect mine of curious and interesting information. It is one of the most entertaining books we have ever come upon, and of value to every student of history."—*Boston Courier.*

The Life of Austin Phelps.

By ELIZABETH STUART PHELPS (Mrs. Ward). Illustrated. 8vo, $2.00.

"No biography issued this season will be read with greater interest. The book is fascinating, so skilfully is the story told. It is one of the few books that no Christian can afford not to read."—*N. Y. Examiner.*

THE DIVORCE OF CATHERINE OF ARAGON.

The story as told by the Imperial Ambassadors resident at the Court of Henry VIII. By JAMES ANTHONY FROUDE. 8vo, $2.50.

"It is almost as remarkable for its introduction as for its fresh contributions to the history of Henry the Eighth. People have made up their minds that Mr. Froude's general conception of the age or the men he deals with is not only true, but admirably picturesque, vivid, and human. His history remains a monument, and his fame as a writer overtops that of any other man of his time."—G. W. SMALLEY in *N. Y. Tribune.*

Elsket,

And Other Stories. By THOMAS NELSON PAGE. 12mo, $1.00.

"It is sufficient to say that Mr. Page's admirers will not be disappointed in this volume. It is a dainty volume, and contains some of this popular author's best tales."—*Richmond Despatch.*

The Hightop Sweeting,

And Other Poems. By ELIZABETH AKERS. 12mo, $1.25.

A volume of fifty poems, principally lyrical, simple and musical in form, and tender in feeling.

"It will delight the lovers of good poetry. The entire collection of the handsome little volume is of marked excellence."—*Chicago Inter-Ocean.*

*** For sale by all booksellers, or sent, postpaid, on receipt of price, by*

ENTIRELY THE PRODUCTIONS OF SKILLED WORKMEN EMPLOYED BY THE DAY.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York,

HAVE NOW READY.

The Alhambra. By WASHINGTON IRVING. A Residence in the celebrated Moorish Palace, "The Alhambra," with the Historical and Romantic Legends connected with its History. Darro Edition. Two volumes, octavo, cloth extra, gilt top, and with slip covers, binding decorated with handsome Moorish designs (in box), $6.00.

Printed from entirely new electrotype plates; illustrated with 31 photogravures from photographs, many of which were taken specially for this edition by R. H. Lawrence.

Each page is surrounded by a MOORISH BORDER in RED AND GOLD, *the designs, sixteen in number, being carefully copied from the decorations of the Palace.*

A Year in Portugal. 1889-1890. By the late GEORGE B. LORING, M.D., late United States Minister to Portugal. With frontispiece, 8vo, $1.50.

Fra Lippo Lippi. A Romance of Florence in the Fifteenth Century. By MARGARET VERE FARRINGTON, author of 'Tales of King Arthur,' etc. With 14 full-page Illustrations in photagravure. (New edition.) 8vo, cloth extra, gilt top, $2.50.

"As a whole, the story is decidedly picturesque, and the romance thoroughly pleasing."—*Vassar Miscellany.*

"The story is prettily told, and in the relation occasion is taken, properly enough, to display a great deal of lore respecting the Italian Renaissance and the art of Florence in the middle of the fifteenth century. It makes one of the handsomest volumes of the season, and will be welcomed by lovers of beautiful publications."—*Philadelphia Telegraph.*

A Sketch of the German Constitution. By SAMUEL EPES TURNER. From the Early Times to the Dissolution of the Empire. $1.25.

"It is a history of intense interest, and needs to be carefully studied in connection with the English Constitution, and by those who are in search of the forms of our own Constitution and form of government. The United States and the old Germanic Empire seem widely removed from each other, but there is, after all, a bond connecting them which deserves careful study and attention."—*Boston Traveller.*

"It is well worth studying, as indicating the means by which a feudal system of primarily dependent and eventually independent units builds up an empire after the manner of a mosaic, and breaks it up with the ease of a child who destroys his carefully contrived map-puzzle."—*Spectator (London).*

*** Notes on New Books No. 3 sent on application.

The New England Sunday

FROM THE BOSTON COURIER

"There is a perfect mine of curious and interesting information in 'The Sabbath in Puritan New England,' by Alice Morse Earle. The author has ransacked old records and chronicles with the richest results, and the picture which she gives of the old-time observances of the first day of the week is the most complete that has ever been written. It is one of the most entertaining books that we have ever come upon, and it is of value to every student of New England history. It throws a flood of light upon the past."

One volume, 12mo, $1.25

HAVE JUST ISSUED

A SUPPLEMENT TO

Allibone's Critical Dictionary

OF ENGLISH LITERATURE AND BRITISH AND AMERICAN AUTHORS, by JOHN FOSTER KIRK. Two Volumes, Imperial 8vo, Nearly Sixteen Hundred Pages, Cloth, $15.00; Sheep $17.00; Half Russia, $20.00; Half calf, $22.00; Half Morocco, $22.00.

"From the first publication of Allibone's Dictionary its value has been recognized, and the use of it in public and private libraries has constantly extended and increased. Covering as it does the whole field of English literature, and combining biographical, bibliographical, and critical material; it is, in fact, a unique work—indispensable as a library companion, serviceable to all students of subjects comprehended in its range, and not without interest for readers of every class who may be led by some casual desire for information to consult its pages. Produced by a vast amount of careful and diligent labor, it supplies a general and permanent need, and it has, consequently, had no rival, and run no risk of being supplanted."—*Preface.*

Specimen pages and Prospectus mailed on application.

Life of Benjamin Harris BREWSTER. With Discourses and Addresses. By EUGENE COLEMAN SAVIDGE, M.D. 12mo, cloth, $1.50.

Atlantis Arisen; or, Talks OF A TOURIST ABOUT OREGON AND WASHINGTON. By Mrs. FRANCES FULLER VICTOR. Illustrated by numerous engravings. Crown, 8vo, cloth, $2.50.

Countess Erika's Apprenticeship. A new translation by Mrs. A. L. WISTER. From the German of Ossip Schubin, author of 'O Thou, My Austria!' 'Erlach Court,' etc. 12mo, cloth, $1.25.

"Lightness of touch and a bright, animated style are the leading characteristics of Ossip Schubin's works," says the London *Saturday Review.* . . . "There is nothing elaborate in the workmanship of the stories, no studied effort after effect, and no minute analyses of character, and yet we know these charming, well-bred, well-dressed men and women, and feel familiar with them."

Averil, Our Bessie.

Two new Stories by ROSA NOUCHETTE CARY, uniform with "Esther," "Aunt Diana," etc., by the same author. 12mo, cloth. Illustrated. $1.25 per volume. Sets of Miss Cary's books for Girls, "Esther," "Aunt Diana," "Merle's Crusade," "Our Bessie," "Averil," (5 vols.) in box, $6.25.

Drawn Blank. By Mrs. JOCELYN. The latest issue in Lippincott's series of "Select Novels." Paper, 50 cents; cloth, 75 cents.

For sale by all booksellers, or will be sent by the publishers, free of expense, on receipt of the price.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 5, 1891.

The Week.

THE interest in Tuesday's elections centred in the four States of New York, Massachusetts, Ohio, and Iowa, each of which elected a Governor. In every one of the four an exceedingly vigorous canvass was made, which, in the cases of Massachusetts and Iowa, brought out a vote nearly up to the high-water mark of a Presidential year. Extraordinary interest was lent to these contests by the fact that, for the first time since the Republican party was formed, each of these four States had a Democratic Governor in the year before a Presidential election, and that in every State but New York the question was whether the Democratic incumbent should be reëlected. Moreover, it has never happened since 1856 that the Democrats have elected the Governor in two successive elections in Massachusetts, Ohio, or Iowa; and the hopeful fight which they have been making to break this record in Massachusetts and Iowa engaged the attention and interest of the country to an extent seldom, if ever, equalled in an "off year."

State issues ought to control in State elections, and they indisputably did decide the contests in Iowa and Massachusetts. The burning question in the former commonwealth was whether the prohibitory law should be maintained. Gov. Boies made his canvass chiefly on this issue, declaring for the repeal of the law, while the Republican candidate stood for a further trial of prohibition. Each side gained supporters from the other party on this issue, but Gov. Boies got the larger share, his reëlection on a largely increased poll being due to the votes of men who have always been Republicans in national politics, and who still call themselves Republicans, but who hold that questions of Federal policy have no place in an election when no Federal official is to be chosen. In Massachusetts the main issue was whether a Governor who had shown himself one of the best executives the State has ever had, whose administration had been so nearly faultless that the Opposition could not find material enough for the usual "arraigning" plank in the platform, who had earned a reëlection if ever a Governor of Massachusetts earned such a reward of faithful service, should be denied that reëlection simply because he was a Democrat in national politics. The Legislature to be chosen was not to elect a United States Senator, and consequently no Federal issue was necessarily involved. The Legislature was sure to be Republican any way, and the one issue was whether all the men who have always voted the Republican ticket in national elections would support a weak and untried man for Governor, rather than an incumbent of proved ability and experience, simply because the former wore a Republican label while the latter was a Democrat. The result shows that there were enough Republicans who recognized the absurdity of such a course to reëlect Gov. Russell, although the Republicans who thus gave him another term at the same time reelected a worthy Lieutenant-Governor belonging to their own party.

There was no such single clear-cut State issue in New York as in Massachusetts and Iowa. Moreover, such questions of State policy as were involved became obscured rather than accentuated as the canvass proceeded. At the start, the Republicans had a decided advantage in the matter of election reform, as they were pledged to the much-needed blanket-ballot amendment of the existing law, while the Democratic platform constructed by Gov. Hill appeared to commit the party against the amendment. But so strong has public sentiment grown in favor of this reform during the past two months, largely in response to the admirable work of the Municipal Reform League, that Democratic opposition to the blanket ballot gradually died out, until at the end the amendment seemed almost as likely to be secured from Gov. Flower and a Democratic Legislature as from a Republican administration. The issue of Tammany and anti-Tammany, which was precipitated by the action of the Democratic State Convention in recognizing Tammany as the sole Democratic organization in New York city, could not be pushed successfully by candidates who had been engaged in as many "deals" with Tammany at Albany as Fassett and Vrooman. Then, too, the voter had to consider that Fassett was nothing but "Platt's man," and that the Platt machine is almost as offensive as Tammany Hall. Fassett himself was the strongest Democratic campaigner on the stump, having disgusted by his demagogical conduct thousands of men who were at first inclined to support him. His only hope from the first was in winning the Independent vote, but it is doubtful whether at the end he received more than a tenth of that vote. New York must be recognized as normally a Democratic State, and it will always elect a Democratic Governor unless the Republican candidate gets the non-partisan vote solidly. National issues also helped the Democrats. many Independent voters who saw little to choose between Flower and Fassett supported the Democratic candidate, because they thought his election on a platform which declared for sound money and tariff reform, would help the success of those causes in the Presidential election next year.

In Ohio, State questions cut but a small figure, and the election turned on national issues, as Ohio State elections so often do. The Democrats were handicapped here by their fatal blunder in putting a free-coinage plank in their platform; and ever since the canvass was forced to turn on that issue by Senator Sherman's shrewdness in making this plank the Republican point of attack, it has been obvious that Gov. Campbell would be defeated, as he ought to be. The "moral effect" of the elections is distinctly favorable to the triumph of the Democratic party in the Presidential contest, under the leadership of Cleveland and upon a sound-money and tariff-reform platform.

Mr. Blaine's refusal to come to New York to make a speech on the "last day of the canvass" calls to mind the opposite course followed by him a year ago, when Quay appealed to him for aid. On that occasion he went to Philadelphia and made his famous predictions. Giving his word for it that the attack on Delamater and Republican corruption was only the calumny which a free-trade press levelled against patriots, he went on to speak of Pennsylvania as the "keystone of the cause of protection," and said: "If she falls back now, when the tariff is on its severest trial, the free-traders see, or think they see, an easy road to the Presidency in 1892. . . . If they can to-day elect as Governor of Pennsylvania as ardent a free-trader as President Cleveland himself, there may be no balm in Gilead that can heal that wound." Obviously that prophecy is enough to disqualify the man who made it from speaking for the Republican ticket anywhere "on the last day of the canvass." If he is a true prophet, then he is on record as to the futility of his party's efforts, since he has predicted defeat in the great contest for the Presidency. And if his character as a prophet is open to suspicion, he is no man for a "last-day-of-the-canvass" speaker, because then is the time for prophecy and nothing else. There is then no longer room for argument, and any speaker is out of place or superfluous who cannot predict with absolute certainty what the sun will see when it sets on November 3.

There are, however, some questions suggested to the curious mind by Mr. Blaine's letter to Mr. Platt. He has nothing to say of the tariff, nor even of reciprocity, and not a word about the Administration or the impending Presidential election. Has he, then, recalled his view of a year ago that the tariff was to be the only issue in 1892? Or is it his idea that the tariff's "severest trial" then resulted in such an overwhelming verdict against it that the contest is settled in advance? He also hopes that the Republicans will all come out and vote. This seems to imply a fear that the bad habit they acquired in the Folger campaign, under the influence of another somewhat famous letter by Mr.

Blaine, may have become chronic. Then there is the question of ethics in dealing with bosses. When Quay piped last year, the Secretary of State danced, but Platt pipes in vain. Ought he to consider this preference shown to Quay a slight or a compliment?

A leading Congregational minister writes to the *Times* challenging Mr. Andrew D. White's fulsome eulogy of Mr. Blaine's foreign policy, and adducing the attitude of the Administration in the matter of the claims of the missionaries of the American Board in Ponape. He tells how delegation after delegation has visited Washington on the subject, without getting any satisfaction, and adds: "A great show of vigor in some directions, where it costs nothing except to the taxpayers, does not atone for the lack of all visible interest in another and equally important line, where a show of vigor might be detrimental to the political prospects of Mr. Blaine." It is by no means clear to us that Mr. Blaine is at fault in this particular case, except in having misled the representatives of the American Board. He did this in a general way by fostering the impression, all these years, that if anybody had any quarrel with a foreign nation, nothing would be necessary except to notify Mr. Blaine, when the foreign nation would be at once taken by the throat and compelled to give satisfaction. In particular, he misled the Board by what he told them when they first approached him with their complaint. At that time he was in the thick of his negotiation of the Cuban reciprocity agreement, and he asked the Board not to press their affair just then, for fear it might break off the important matter he had in hand, giving them to understand that when that was once settled, the threats and gunboats would be set going. So Secretary Smith intimated in an interview last spring. On the merits of the case, the Spanish Government appears to have a good defence. Its sovereign rights in Ponape are not disputed, and it maintains that the destruction of missionary property was simply incidental to the punishment of the rebellious natives, who used the mission-houses as forts. The question of religious prejudice and influence in the affair is as yet an open one. If the missionaries affirm that they were conspired against by Catholic priests, the Spanish Government asserts, on the other hand, that the natives were stirred up to revolt by the American missionaries, and furnished arms by them. Obviously this is a case not for bluster but investigation; and complaint of Mr. Blaine's dilatoriness has no foundation except in the reputation he has built up of being the champion blusterer of the world.

Attention has been drawn to points of resemblance between the reply made by the Chilian Minister of Foreign Affairs to our demand for reparation for the killing of our sailors by a Valparaiso mob, and the reply of Secretary Blaine to the similar demand of the Italian Government upon us. It would seem, indeed, that the Chilian Minister had a copy of Mr. Blaine's answer before him. We put the two in parallel columns:

[Chilian despatch.]	[Mr. Blaine's despatch.]
The Minister of Foreign Affairs replies that . . . he does not doubt the sincerity, rectitude, or expertness of the investigation on board the *Baltimore*, but will recognize only the jurisdiction and authority of his own country to judge and punish the guilty in Chilian territory. He says the administrative and judicial authorities have been investigating the affair, that judicial investigation under Chilian law is secret, and the time is not yet arrived to make known the result. When that time does arrive, he will communicate the result, although he does not recognize any other authority competent to judge criminal cases than that established by the Chilian people. Until the time arrives to disclose the result of the investigation, he cannot admit that the disorders in Valparaiso or the silence of his department should appear as an expression of unfriendliness towards the Government of the United States, which might put in peril the friendly relations between the two countries.	Even if the National Government had the entire jurisdiction over the alleged murderers, it could not give assurance to any foreign Power that they should be punished. The President is unable to see how any government could justly give an assurance of this character in advance of a trial and a verdict of "guilty." It needs no argument to prove that a jury could not be impartial if it were in any sense or to any degree bound before the trial of the accused by an assurance which the President of the United States had ventured to give to a foreign Power. I have repeatedly given to Baron Fava the assurance that, under the direction of the President, all the facts and incidents connected with the unhappy tragedy at New Orleans on the 14th of March last should be most thoroughly investigated. I have also informed him that in a matter of such gravity the Government of the United States would not permit itself to be unduly hurried; nor will it make answer to any demand until every fact essential to a correct judgment shall have been fully ascertained by legal authority. The impatience of the aggrieved may be natural, but its indulgence does not always secure the most substantial justice.

The essential point in each is, that jurisdiction of crimes committed in one's territory belongs to one's courts, and that one cannot be hurried in making an investigation. If that was good law for us in the New Orleans case, it is good law for Chili now. We cannot make fish of one and flesh of the other. Moreover, Chili will not allow us to do so. It is true that she is a small nation, having a population but little larger than that of Massachusetts and far less wealthy. But she knows perfectly well that we are not going to war with her on an issue where we shall have to fly in the face of our own precedent not yet a year old.

A telegram to the London *Times* from Valparaiso makes mention of a fact which has, of course, long been known in this city, that the South American cable, owned and worked by an American company, was cut off from Iquique, where the Congressionalists had their headquarters, on the demand of Balmaceda, backed by Egan. The company complied with the request and cut their cable, on a promise of compensation for damage from the Dictator, but also under a threat from the same source, communicated by Egan, that, if they refused to comply, worse things would happen to them, and doubtless in the belief, diffused by Egan, that Balmaceda would come out victorious. Now here was a chance for a display of real "patriotism" and legitimate bluster. It was a disgraceful and humiliating thing for our Government to communicate to an American corporation the threat of a foreign military usurper that he would destroy their property if they refused to help him in trying to overthrow constitutional government in his own country, and advise the company to succumb. The proper answer to such a threat was a note saying that any attempt to injure the cable or interfere with its proper working, outside the area of the Dictator's military rule, would be resisted and punished by force. The way it was actually met showed clearly enough, taken in connection with other things of the same sort, that the neutrality of the Administration was a sham, and that its hopes and fears were all with the man who was trying to destroy republican government in Chili. This is a nice way to establish a Pan-American Confederation with "hegemony" for the United States.

When the next House of Representatives shall have assembled at Washington, there will be required a patient and careful investigation of the doings of the Department of State since Mr. Blaine became its titular chief. We do not mean that the House should attempt to interfere with affairs which the Constitution has committed to the sole discretion of the President, such as the negotiation of a treaty, but there should be inquiry into matters concerning which the House has cognizance as a part of Congress. The House should inquire and ascertain, for example, what outside help has been called in to the State Department, either by the President or the Secretary, since Mr. Bayard's retirement. If those employed have not been regularly commissioned, as officers recognized by law, then what sums have been paid to them, and out of what fund? It is not known that Secretary Bayard employed, or paid, such an irregular staff of persons, and, if he did not, they were presumably unnecessary; but, if the Department is really undermanned, the House of Representatives should be straightway informed thereof.

One of the most amusing of the many ante-election antics which Quay performed because of the publication of that Keystone Bank certificate with his own and Bardsley's names upon its back, was his demand upon the Comptroller of the Currency for information as to how the certificate came to get out. To his mind its publication was a more serious offence than the transaction which it reveals. In fact, he is so angry with everybody who has had anything to do with the publication, and is so busy bringing suits for libel, that he has had no time whatever to "turn up" among his papers the cancelled check which was to prove that he paid the money back again into the Keystone Bank.

Senator Quay's sudden resort to libel suits to save his character from assault appears to excite general hilarity in Pennsylvania. His Philadelphia organ, the *Inquirer*, is very serious about it, however, and says: "Senator Quay has apparently borne abuse just as long as he intends to. No man in the whole range of public life has been subjected to such attacks." This is true. He has been called a public thief in many newspapers and on the floor of Congress for taking $660,000 of State money for his personal use in speculation, yet, in spite of repeated invitations to come into court with a libel suit on that accusation, he has never done so. He has been asked to call upon Senator Cameron and Mr. Wayne MacVeagh to tell all they know about $260 000 of that State money which Mr. Cameron paid back for him, but he has declined to do even this. After these failures to put an end to "abuse" of really portentous dimensions, it is not impressive to find him bringing suits for libel because the newspapers have published a facsimile of a Keystone Bank certificate of deposit for $8,877, with Quay's and Bardsley's names united on the back.

The story which comes from the capital of Wisconsin, of an attempt by a United States Senator to control the decision of a State judge by bribing the latter's brother-in-law to influence his action, is most extraordinary. For many years, under Republican rule, the State Treasurers of Wisconsin have pocketed thousands of dollars in addition to their salary every year, by depositing the State funds in banks and retaining for their personal use the 3 per cent. interest which was allowed—such deposits being in violation of law. When the Democrats secured control of the State Government last winter, they stopped this practice, and brought suit against the ex-treasurers for the recovery of the money thus illegitimately drawn. One of these suits was just coming to trial before Judge Siebecker. A few days ago, the Judge announced that he could not try the case by reason of propositions which had been made to affect his action. Later the character of these propositions came out. Ex-Congressman La Follette of Madison says that last September Senator Sawyer sought him because, as he said, he wanted to talk with him about Siebecker and Treasury matters. The Senator then said:

"I knew you would know all about Siebecker, and I wanted to see you about him. These cases are awful important to us in the State, and we cannot afford to lose them. It costs me lots of anxiety. I don't want to have to pay [naming a large sum of money, whether $100,000 or more I am not certain]. Now, I came down here to see you alone. No one knows I am to meet you here. I don't want to hire you as an attorney in the case, La Follette, and don't want you to go into court, but here is $50. I will give you $500 more, or $1,000 [I am uncertain which he said], when Siebecker decides the case right.' I said to him: 'Senator Sawyer, you can't know what you are saying to me. If you struck me in the face, you would not insult me as you insult me now.'"

The man who brings this charge is, like Senator Sawyer, a Republican, and Judge Siebecker was appointed to the bench by a Republican Administration. There is consequently no chance for any allegation of partisanship in the matter.

The decision of the Supreme Court of Massachusetts in the Andover case, denying the right of the Board of Visitors to remove Prof. Smyth, reads like a bit of ancient history, so completely has the whole question ceased to be a living one. Indeed, it is probable that if the decision had been the other way, the conservatives themselves who instituted the proceedings five years ago would have been filled with consternation. They would not have known what on earth to do with their victory, whereas now they can drop the whole matter with a sigh of relief. Nothing else is left for them to do, even if the fight had not been taken out of them long ago. With the trustees solidly behind the accused professors, it would be impossible to oust the latter in any legal way. And as far as the general sentiment of the denomination is concerned, it has undergone such a sweeping revolution since the trial was undertaken that the confirmation of the removal of Prof. Smyth would have been received with universal dismay. The whole case shows anew what wonders time can work.

With the meeting of the Assembly's committee and the trustees of Union Seminary, all hope of a compromise in the Briggs case has been abandoned, and the trial has begun as was appointed. One charge against the Professor is that of disrespect to the Bible; but nothing he is guilty of in that direction can equal the offence of his prosecutors themselves in the use of Scripture they made in the printed charges against Prof. Briggs which they have circulated. Without going into details, we may simply say that many of the "proof-texts" they adduce to show that the Professor's views are "contrary to Scripture," are mistranslated, while very many more are totally irrelevant, and that the mass of them proceed on perfectly uncritical and exploded principles of exegesis. The exegetical teaching of every theological seminary in the land, Princeton included, is dead against such abandoned methods. If these texts prove what they are asserted to prove, they would prove anything under heaven; and a Bible which proves everything, proves nothing. Hence we say that the use of the Bible made by the prosecutors in the case is far more disrespectful and hurtful to it than anything alleged of Prof. Briggs. He may doubtless be trusted to make a spectacle of them on this and other subjects as the trial proceeds; but there can be no harm in saying beforehand that they have exposed themselves to the contempt of all Biblical scholars.

We would advise those gentlemen whose names are given out as the probable incorporators of the proposed new steamship line to Brazil, to get something more than the word of the enthusiastic promoter of the enterprise before taking it for granted that Brazil will guarantee the interest on their capital and grant them a subsidy besides. The Government of Brazil is not just now looking around for places to throw away money. The most stringent economy is the order of the day in that country, and the Government's estimates are being cut on all hands by Congress. The Brazilian Consul at Havana lately wrote: "It can scarcely be said that the present condition of Brazil is highly flattering financially." We are aware that the promoter of the new line has boasted that he had a "pull" with President Fonseca, through some relative, and that the guarantee and subsidy would be forthcoming on personal grounds. He had in mind what the Brazilian Consul referred to when he further wrote: "The history of Brazil, I hope, will never register a time when so much money was spent for so many useless and criminal purposes as in the first days of the Republic." Those were the days of guarantees and subsidies by the wholesale, but those days are past. The President is himself sobered now, has dismissed the men who were looting the Treasury, and is cutting down expenses right and left—one effective way being the cancelling outright of millions of dollars' worth of contracts and concessions made a year ago. There is no likelihood whatever of a new era of that sort being entered upon for the present, and the utter absence of a business reason for the establishment of a new line is conclusively shown by the remarks of the President of the existing line, published on Thursday. He is correct in saying that the public service is so demoralized in Brazil that vessels sometimes have to wait three or four months before being able to unload, and that this state of affairs led to the discontinuance of the unsubsidized Baltimore line. His own company sees so little encouragement to hope for an enlarged business that it made no bid for a subsidy under the terms of the Postmaster-General's advertisement. We doubt if the new line ever gets off paper.

An interesting experiment with the eight-hour system is to be tried in London during 1892—hit upon as a way of staving off the threatened strike in the bookbinding trade. Through the mediation of the London Chamber of Commerce, the employers and their men have agreed to give the eight-hour day a trial for twelve months, at the end of which time it is to be continued or abandoned according to the results attained under it. There is also an arrangement in the matter of overtime, which is to be reckoned as all work over forty-eight hours a week. But the employers pledge themselves, in accordance with the desires of the men, to make every effort to abolish systematic overtime. They also grant an advance of 10 per cent. on prices for piecework. Under such voluntary and amicable conditions, the experiment promises to yield valuable conclusions as to the real effect of a working day of eight hours.

THE CHILIAN NEWS.

THE Administration gets its Chilian news from Mr. Patrick Egan, and no intelligent person will put much confidence in Mr. Egan's rendering of the Chilian despatch. When he says that it is "couched in strong language, and amounts to a refusal to accept responsibility for the affair" (the attack on American sailors in Valparaiso), it ought not to make any serious impression. We must see the despatch itself, which he would doubtless have given in full if it were as inflammable as he says it is. All news from him has to be read and construed in the light of his position at Santiago. He figures there not simply as a man disqualified for his post by training and antecedents, but as an accomplice in a conspiracy for the overthrow of the Government to which he was accredited, and the establishment of a dictatorship. Consequently, he ought to have been promptly withdrawn at the close of the war and on the restoration of the constituted authorities to power. As long as he is kept there, he is as dangerous as a lighted tobacco-pipe in a powder magazine. He has the strongest possible interest in producing an explosion of hostility of some kind between this country and Chili, in order to effect his retreat under cover of the patriotic excitement which an armed quarrel would produce.

How little his judgment in Chilian affairs is worth has been fully shown by the course of events. How little value it had during the dictatorship, when he was actually guiding the action of our State Department by his reports, was well illustrated by one little incident. Balmaceda found in the Government vaults, when he seized on the Treasury, $4,000,000 in silver. He was extremely anxious to get this out of the country, or, in other words, to steal it. He had no ships of his own in which he could send it away as his money. So he tried to sell it to foreigners on the spot by sending a private circular to every foreign house in Chili, offering to take their drafts on London at ninety days for any part of it at almost any price. Tempting as this was, *not one foreign house took any notice of his proposal*, so thoroughly satisfied were they, as intelligent observers, of the transitoriness and illegality of his rule; and yet at this time Egan was "stuffing" the State Department with news of its permanent establishment and the hopelessness of the Constitutional cause. Balmaceda afterwards got the silver conveyed to London by a British man-of-war, and it has there been impounded by an injunction. Our Congressional investigation will show, however, that stupidity as an observer of current events was by no means Egan's worst offence, for he was engaged also with Balmaceda in a financial speculation which that paltry Catiline had set on foot, and which needed the continuance of his power in order to succeed. The ship that is most needed to-day in Chilian waters is a ship to bring Egan home.

The only full text that has been made public of the correspondence relating to the Valparaiso riot, including the report made by Commander Schley, is that of the "instructions" sent by cable to "Egan, American Minister, Santiago." This contains a sort of highly colored summary of Commander Schley's report, with a good many adjectives thrown in, and then Egan is directed, not to deliver a despatch drawn at Washington in proper terms, but to communicate his instructions to the Chilian Government in his own way. Here is the exact and amazing text of the license given, in a most delicate matter, to the speech and behavior of an illiterate foreign adventurer, in his intercourse, on behalf of the United States, with the cultivated, proud, and sensitive men who represent the Chilian Republic:

> "You will at once bring to the attention of the Government of Chili the facts as reported to you by Capt. Schley, and will inquire whether there are any qualifying facts in the possession of that Government, or any explanation to be offered of an event that has very deeply pained the people of the United States, not only by reason of the resulting death of one of our sailors and the pitiless wounding of others, but even more as an apparent expression of an unfriendliness towards this Government which might put in peril the maintenance of amicable relations between the two countries. If the facts are as reported by Capt. Schley, this Government cannot doubt that the Government of Chili will offer prompt and full reparation. You will furnish the Foreign Office a full paraphrase of this despatch, and report promptly to this Government. WHARTON."

Now we ask any intelligent man, whether Democrat or Republican, to picture to himself the way in which Egan probably "brought" these matters "to the attention of the Chilian Government," and inquired whether they had any explanation to offer, and told about the "deep pain" of the people of the United States, and enlarged upon the fight as an "expression of unfriendliness" which might put the amicable relations of the two countries in peril. Egan has no diplomatic training whatever—not even a decent English education, nor any large business experience; and is utterly discredited in the eyes of the Chilians, both personally and officially, owing to his relations with Balmaceda. Common prudence, to say nothing of common decency, therefore, required that, under these circumstances, every word of the communication to the Chilian Government should be carefully weighed and written in Washington, and that Egan should be directed, as is usual among civilized nations in dealing with delicate international troubles, to "read this despatch to the Chilian Minister, and, if he desired it, to leave him a copy of it."

What happened at this interview of Egan with the Chilian Minister; what "demands" he made and what answers he got; what language he used, we know only from Egan himself. Indeed, all we know as yet of the written response of the Chilian Minister we get from a *précis* made and telegraphed by Egan. It says that the United States Government "formulates demands, and advances threats." But there were no "threats" in the instructions to Egan. Whence, then, did they come? Were they made by Egan? Where is Egan's own report of his conversation with the Minister? If Egan made threats and the Chilian Minister has resented them, are we going to back them up by war? In fact, we ought not to go a step farther in the matter without finding out what Egan said in carrying out his instructions. Any one who wishes to satisfy himself of the importance of this would do well to read the correspondence between Secretary Fish and Mr. Motley, then American Minister in London, in 1870. Mr. Motley was removed because, according to Mr. Fish, he had, on his own admission, in making representations to Lord Clarendon touching the *Alabama* claims, assumed a minatory tone, or, in other words, introduced a threat into his remonstrance, although the threat was nothing more serious than the assertion that "England had assumed a grave responsibility" in issuing the belligerent-rights proclamation. Mr. Fish, commenting on this, said:

> "The contingencies of war or peace! Neither the letter nor the spirit of his instructions authorized such expressions with which his remarks abounded; much less did his instructions, or the proprieties of the occasion, or the feelings of the President, justify his repeated allusions to the contingency or to the possibility of war. . . . It is a grave responsibility for a Minister to assume to intimate to the Government to which he is accredited the contingencies of war. Nations have been dragged into war by indiscretions less flagrant than those of Mr. Motley. He assumed a responsibility beyond the proprieties of his trust."

But in those days our diplomatic work was done decently and in order by well-equipped and sober-minded statesmen.

It must be remembered, too, that we have heard nothing whatever to warrant the conclusion that the Chilian Government is not applying to the outrage the usual process of law in a law-abiding country. There is a regular legal investigation going on according to the forms and usages of the Civil Law, which rules in all the Latin countries—Spain, France, and Italy—as well as in Germany. No one disputes this. The whole trouble can be cleared up in any sensible man's mind by his asking himself, How should we here behave if a similar disturbance with foreign sailors had occurred in our streets? Suppose Chilian sailors had been set upon by a New York mob, and the aggressors were arrested by our police, and a preliminary investigation was pending before Police Justice "Paddy" Divver or any other of the ornaments of our police-court bench? Would we allow the Chilians to come in and supervise the proceedings, with threats and doubts and suspicions, or to dictate the procedure and prescribe the punishment? Would we allow them to question "Paddy's" competency to conduct an important and delicate judicial investigation? If they instituted an odious comparison between their educated judicial officers and our barroom and gambling-house refuse, would we confess in shame, and hand the prisoners over to Chilian Navy captains to be tried by court-martial? Would we not, on the contrary, resent their interference bitterly, and, if necessary, resent it in arms?

That such an affair should be looked upon for one moment as likely to imperil seriously the good relations of the two countries, is a striking commentary on the way in which our diplomacy with Chili, as well as other South American States, has been conducted since the unfortunate day, in 1881, when Mr. James G. Blaine was converted into a Minister of Foreign Affairs. Al-

though the promotion of close alliance of every kind with the South American States has been for over fifty years a cardinal feature in American policy, we are to-day on much worse terms with them, and especially with Chili, than we were fifteen years ago. Chili has never got over Mr. Blaine's antics in the Peruvian Landreau affair, but she was in a fair way of doing so when he flung his "Blaine Irishman" at her head, for his own base and selfish purposes; and yet his organ has the boldness to prate of his "patriotism," and we find educated and intelligent men like Mr. Andrew D. White perorating on the party stump about the "safety" of our foreign relations in his hands!

COMMISSIONER RAUM'S REPORT.

COMMISSIONER RAUM'S report of the business of the Pension Bureau for the fiscal year ending June 30, 1891, taken in itself and apart from the scandals which have surrounded the Pension Office for some time past, discloses a condition of affairs which cannot but be disagreeable to the taxpayer. It appears from his showing that there were at the end of the year 676,160 pensioners borne upon the rolls. Of these, 633,479 are survivors of the army of the civil war, or the widows and dependent relatives of the soldiers of the civil war. The remaining pensioners are beneficiaries on account of the Revolution, of whom there are twenty-three widows and daughters, of the war of 1812, of the Mexican War, and of the naval service. It has been calculated that there were in all 2,780,176 men in the Union Army; that is to say, every fourth man is now represented on the pension rolls either by himself, or by a widow, or a parent, or child who was dependent upon him for support. There are 1,208,707 Union soldiers now living, and 520,158 of them draw pensions—about every other one.

Last year the Pension Office disbursed $118,548,959.71, and for the ensuing fiscal year will expend an appropriation of $133,473,085. A quarter of a century ago, when the war was just over, and when the proving of a pension claim was an easy matter — but when the detection of fraud was easy, too—65,256 claims were filed, 50,177 were allowed, and the whole cost was $13,459,996.43. Some advocates of our present pension system have explained the enormous increase in the business of the Pension Office by saying that in many instances the diseases or injuries arising from the service did not fully develop until some years after the war, and that claims have become more numerous in consequence as time has gone on. But those who use this argument forget how many men who were really in a disabled condition when the war closed, have since fully recovered their health. Last year 365,799 applications were filed, and the causes of this tremendous increase are simply the activity of the claim agents, the reckless legislation of Congress, and the extravagant administration of the Pension Office. These three forces play into one another's hands. The claim agents drum up the claimants, both bring effective pressure to bear on Congress, and all the parties in interest exert an influence upon the Pension Office.

During the past year 71,004 claims were allowed under the act of June 27, 1890. This is the Dependent Pension Law passed by the last Congress, and provides that "all persons who served ninety days or more in the military or naval service . . . who are now or who may hereafter be suffering from a mental or physical disability of a permanent character, not the result of their own vicious habits, which incapacitates them from the performance of manual labor in such a degree as to render them unable to earn a support, shall, upon making due proof of the fact according to such rules or regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensions." Mr. Raum gives a table showing the period of service by months rendered by each beneficiary under this act, and appears to derive much satisfaction from the statement that "the largest number of certificates issued to any class was 4,693 to men who had served thirty-six months." Fortunately for his theory, there is no publication of the War Department showing the length of service of the men who were discharged from the army; otherwise it might be shown that the percentage of claims filed by soldiers who had but a short service is higher than the percentage filed by those whose service was long. If enlistments are any guide, this is unquestionably true. Under the call for troops of May 3, 1861, for instance, 657,868 men were furnished for three years, 9,147 for one year, and 2,715 for six months, and under the call of the following year 421,465 were furnished for three years and only 15,007 for three months. Yet under the Dependent Pension Act, Mr. Raum allowed pensions to 1,638 men who had served three months, to 3,852 who had served four months, 2,778 who had served one year, 1,254 who had served thirteen months. The number rather diminishes after that until the three-years' men, who were so largely the preponderating element, are reached.

Mr. Raum's next table effectually disposes of any false sentiment for "the poor old veterans" who have been pensioned under this law, as it shows that 24,991 were men under fifty years of age; that 27,926 were between the ages of fifty and sixty years; and that but 15,039 were between the ages of sixty and seventy years. Pensioners above seventy are few.

A notable omission in this part of the report is a neglect to say anything of the evidence required by the Pension Office to establish these claims. Under the law the nature of the proof must be prescribed by the Secretary of the Interior, and it would be interesting to know what these rules are. If they are strict and carefully applied, they are some safeguard against fraud; but if they are loose and are loosely administered, the Government is at the mercy of the claimants.

One safeguard, although a very insufficient one, against the allowance of fraudulent claims has hitherto been the employment of special examiners to investigate personally upon the spot suspicious claims; but Commissioner Raum tells us with considerable pride that he has reduced the force of special examiners from 340 to 110. Indeed, one looks in vain in this report for any reference to illegal claims. Strange as it may seem, it is nevertheless true that not since the days when James A. Bentley was Commissioner of Pensions has there been any serious effort to protect the Government from the "organized raid" of the claim agents, the claimants, and the politicians.

How long is this colossal pension business to last? There is a table in Commissioner Raum's report which seems to show that it will never end, and that it will, on the contrary, keep on increasing for years to come. The army invalid claims filed under the general law—not the act of June 27, 1890 — in 1890 numbered 71,318. Of these, only 17.9 per cent. were allowed in that year. Very few were rejected, and in the end nearly all of them will be allowed; the point to which attention is directed is, that every year it becomes more difficult to prove these claims under the general law, and requires a longer time, and in consequence the labors of the Pension Bureau would appear to be interminable. In 1889 51,919 claims were filed, and 41 per cent. of them were admitted. In 1888 47,347 claims were filed, 53.7 per cent. of which were allowed, and so on. The number of claims filed under the general law has hitherto increased, and the length of time during which they are before the Pension Office before adjudication has become longer. The Dependent Pension Act has had the effect of reducing the number of invalid claims filed under the general law to 20,519, but a large proportion of these claims will remain upon the files of the Pension Office year after year, and will require attention until they are finally admitted or rejected.

Mr. Raum's report is a short one—the shortest, in fact, that has come from the Bureau in many years. It is particularly free from suggestions or recommendations of changes. Apparently he is satisfied with matters as they stand, but in this particular most good citizens do not agree with him.

THE RELIGIOUS TRADITION ABOUT THE PRESIDENCY.

SEVERAL of the Presidents have been church-members, and, with scarcely an exception, the chief magistrates of this country have shown great respect for religion, no matter what their private views might be; but none of them ever had such a claim as Mr. Harrison's to be considered a preeminently religious man. He was not only a church-member but a church-official—and that in a denomination noted for austerity of practice as much as for orthodoxy of profession. His departure from Indianapolis for Washington was made a religious ceremony. On the train he held morning prayers. He has been an exemplary churchgoer, and his carefulness about matters of religious observance, such as travelling on Sunday, has been notorious. In short, there can be no question that he is the most

religious man, in the common acceptation of the words, ever elected to the Presidency. Yet it has been reserved for him to deal a fatal blow to a long-standing religious tradition of this country relating to public office.

That tradition has been that the way to stay political corruption and take away the reproach of politics, the way to secure public men who will say what they mean and stand by what they say, who will rebuke and put down partisan schemes and scoundrels, and who will elevate political affairs to a higher and purer plane, was to elect to office, particularly to the highest office in the land, God fearing and pious men. This has been the burden of address after address in church congresses, of sermon after sermon on Fast days and Thanksgivings, and of editorial after editorial in the religious newspapers. And when Gen. Harrison was chosen President, we were assured by all the authorities on the subject that he was precisely the kind of man they had been hoping for. We have no doubt that he was. We do not question for a moment the sincerity of his religious professions. But we maintain that his conduct has been such as to make impossible in the future the kind of talk we have referred to, which was so common before his election to the Presidency, and which had such special currency during his Presidential campaign and at the time of his election and inauguration.

In the crucial matter of ante-election pledges compared with post-election performance, President Harrison has shown, so far as his example goes, that the word of a Presbyterian elder is no better than that of a Tammany politician. If this is thought by any of our readers to be an uncharitable judgment, let them test it by undisputed facts. In his letter of acceptance, Gen. Harrison pledged himself, if elected, to make "fidelity and efficiency the only sure tenure of office," and to order "removals from office" only in "the interest of the public service." This was a specific and solemn promise. It was the most important part of the whole letter. The candidate's attitude towards the great issue, protection, was never in doubt, and all that people wanted to know was his views on the civil service. On that subject he went beyond his party platform, and committed himself in the language we have quoted. He did this to get votes, and it undoubtedly won him votes. It was this that secured him the support of the Indianapolis civil-service reformers, of Mr. H. C. Lea of Philadelphia, and many others. Thus the pledge was most precise, and was understood by the public to be.

To show how lightly this God-fearing man held his plighted word, we will cite, as we said, undisputed facts. Only a little more than a month after his inauguration, on April 13, 1889, a chief of division under him wrote to a discharged public officer, saying that "the action was taken in consequence of no fault on your part. . . . The reasons for your retirement were of a political nature." The President must have sanctioned this letter openly or tacitly, for if he did not, he would never have allowed its unmistakable impeachment of his veracity to go uncontradicted. So much for removals. Now for a case of failure to continue in office a man of unquestioned "fidelity and efficiency." In so marked a degree had Postmaster Corse of Boston displayed these qualities that a popular movement for his reappointment gained such headway as to carry with it even the two Republican Senators from Massachusetts. But the reappointment was not made, and the President gave as the reason that "it was not wise to appoint to an important office a person who made no expression anywhere of disapprobation of these things"—*i.e.*, of alleged misdeeds of Democrats in other States. On his own showing, therefore, Mr. Harrison admitted that he had not meant what he said in his letter of acceptance.

We will not multiply cases of the same sort, easy as it would be, because, for our present purpose, these are enough. These clear cases of political untruthfulness have never been disputed. They have never been defended except on the ground that it was sometimes good politics to break one's word. But we are dealing not with the policy, but with the honesty, of a religious man in politics. It will not do to come to the rescue of such a man by saying that he is "no worse than Cleveland." Here was a church-member deliberately making a pledge and then deliberately breaking it. That puts an end to the tradition that the word of a pious man, as such, is better in political matters than the word of a Tammany politician. If President Harrison should be renominated and should make his pledge over again, it would as justly give politicians occasion to thrust their tongues in their cheeks and wink at each other as would the repetition of Mayor Grant's famous promise to make his appointments from "the highest order of citizenship." On the basis of performance, the political veracity of the two men stands on the same level.

In the choice of those whom he delights to honor, President Harrison has also proved religious tradition to have been greatly at fault in affirming that piety in the White House would mean purity in politics. If a hundred intelligent men were asked to name the three most offensive and dangerous leaders in the Republican party it is probable that ninety-nine would mention Mahone, Quay, and Platt. They are the ones whom the religious people have had in mind when speaking of the need of putting a good man into the Presidential chair in order to discourage unscrupulous corruptionists. Yet they never flourished in their lives as they have under the most conspicuously "good man" that ever filled the Presidency. Each of them has boasted of having the President's influence behind him, and has proved the boast to be true by the Presidential patronage placed at his disposal. Other Presidents have now and then given in to a party "boss" who was notorious for dishonest political methods; but we think that the spectacle of a President placing himself in the hands of three such men as Platt, Mahone, and Quay was never seen before Mr. Harrison displayed it. And it must be remembered that this is the critical test: these are the men who direct and give tone to the party. They overbalance great numbers of excellent appointments, which no one has more heartily praised than we have. What influence have good Judges on the management and reputation of the party, compared with the men who control the machine and dispense patronage and corrupt voters? These last are the men whom religious tradition has asserted a really pious President would leave without influence and put to shame, when the fact is, they have attained their very highest pitch of effrontery and power under precisely such a President.

It may be doubted if there was not always more or less illusion in the idea we refer to; but all we are at present concerned to note is, that it has been dissipated by the very man who was expected to confirm it. If it is a loss to religion in this country to have it demonstrated that a church-member in the White House will be no more careful of his word or of his political associates than any other man, then that loss has been inflicted by the most religious man ever chosen President. It is in one sense laughable, in another sense most tragic and melancholy, that such a man should have suffered the humiliation of receiving two of the most scathing denunciations ever addressed, in the name of religion, to the ruler of a civilized country. At the time of the Washington centennial celebration in this city, Bishop Potter, it is true, lashed the President only by praising certain civic virtues in Washington—whose religious professions, by the way, were certainly of the vaguest; but the open letter of Mr. H. C. Lea to Mr. Harrison went at the business with the directness of John Knox. Saying to the President that "your connection with him [Quay] has rendered the scandal national," and that by "accepting his man, Mr. Wanamaker," though "duly warned in advance from a friendly source of the dangers of such an alliance," "you assumed responsibility for both of them," he went on to accuse him of being false to "the pledges under which you were elected." Then, rising to true prophetic vein, he adopted and applied to Mr. Harrison the language of the Hebrew prophet: "The heads thereof judge for reward, and the priests thereof teach for hire, and the prophets divine for money; yet will they lean upon the Lord and say: 'Is not the Lord among us?'" Nothing could more conclusively signify the disappearance of the religious tradition about the Presidency.

A CATASTROPHE OF THE GLACIAL PERIOD.

OBERLIN, O., October 19, 1891.

GREAT SALT LAKE is now a shallow body of water, occupying an enclosed basin, and subject to whatever fluctuations are dependent upon changes in the rainfall or in the rapidity of evaporation. That it once stood at a much higher level than it does now, and extended over a vastly larger area, is evident even to an ordinary observer who visits Salt Lake City;

for, all along the western flanks of the Wahsatch Mountains, a conspicuous feature in the landscape is a level-topped terrace, several hundred feet above the city, which very clearly marks an old shore line of the lake. The recent monograph, prepared by Mr. G. K. Gilbert of the Geological Survey, upon Lake Bonneville (the name given to the old extension of water in the basin), brings to our knowledge one of the most interesting and remarkable catastrophes in geological history.

The area of the present lake is but 2,170 square miles, with an extreme depth of 49 feet, and a mean depth of 13 feet. Its area at the time of the enlargement, indicated by the upper terrace, was 19,750 square miles, and its extreme depth, 1,050 feet, making a body of water twice as large as Lake Erie, and five times as deep. For many years it has been a question of great interest whether or not the former enlargement of this lake was sufficient to make it pour over its rim at any point; and, if so, where and under what conditions. These questions are now definitely settled by Mr. Gilbert's survey. The lake did rise till it found an outlet, and the discharge was accompanied by dramatic features rarely, if ever, repeated elsewhere. The outlet finally obtained by the water was to the north, through the Port Neuf River into the Snake River Valley, to augment the floods of that important branch of the Columbia. It is to the peculiar circumstances of this discharge that attention will now be directed.

The pass through which the discharge finally took place is at Red Rock, on the Utah and Northern Railroad, at the head of Cache Valley on the south and the lower part of Marsh Creek Valley on the north. During the long period preceding and accompanying the gradual rise of water in the Utah Basin to the level of the highest terrace, Marsh Creek (the upper portion of which comes from the mountains on the east and turns at right angles) had been at work depositing a delta of loose material in the col which separates the two valleys. This deposit rested upon a stratum of limestone at the bottom of the pass, and covered it with sand, clay, and gravel to a depth of 375 feet. Thus, when the water was approaching its upper level, the only barrier to prevent its escape was this unstable accumulation of loose material upon top of the rock. It would have required, therefore, no prophet's eye to predict that the way was preparing for a tremendous *débâcle*.

The critical point at length was reached. After remaining nearly at the elevation of the pass for a considerable period, during which the 1,000-foot shore line was formed, the crisis came when the water began to flow northward towards Snake River. Once begun in such loose material, the channel rapidly enlarged until soon a stream equal to Niagara, and at times probably much larger than Niagara, was pouring northward through the valley heretofore occupied by the insignificant rivulets of Marsh Creek and the Port Neuf. It is impossible to tell how rapidly the loose barrier wore away, but there is abundant evidence in the valley below that not only the present channel of the lower part of Marsh Creek, but the whole bottom of the valley for a mile or more in width, was for a considerable time covered by a rapid stream from ten to twenty feet in depth, and descending at the rate of thirteen feet to the mile.

The continuance of this flood was dependent upon the amount of water to be discharged, which, as we have seen, was that contained in an area of 20,000 square miles, with a depth of 375 feet. A stream of the size of Niagara would occupy about twenty-five years in the discharge of such a mass, and this may fairly be taken as a measure of the time through which it lasted. When the loose material lying above the strata of limestone in Red Rock Pass had been washed away, the lake then continued at that level for an indefinite period, with an overflow regulated by the annual precipitation of the drainage basin. This stage of the lake, during which it occupied 13,000 square miles and was 625 feet above its present level, is also marked by an extensive and persistent shoreline all around the basin. But finally the balance was again turned when the evaporation exceeded the precipitation, and the vast body of water has since dwindled to its present insignificant dimensions.

We have spoken of this geological catastrophe as connected with the glacial period, but the connection is not at once evident, since the enlargement of the old lake was merely one of the indirect effects of the period. It is easy to see, however, that the refrigeration characterizing the epoch would both increase the precipitation and diminish the evaporation over considerable areas outside of the actual accumulation of ice; so that we readily find in the glacial period the causes needed to produce such a recent enlargement of the lakes in the arid basins of Utah and Nevada as is known to have taken place. More direct evidence exists also in the terminal moraines to which Sir Archibald Geikie called attention several years ago, and which were laid down upon the very margin of the old lake by local glaciers coming down from the Wahsatch Mountains.

My own interest in this discovery of Mr. Gilbert is enhanced by the explanation it gives to a phenomenon in the Snake River Valley which I was unable to solve when on the ground a year or more ago. The present railroad town of Pocatello is situated just where this flood emerged from the narrower valley of Marsh Creek and the Port Neuf, and spread itself out upon the broad plain of the Snake River basin. The southern edge of the plain upon which the city is built is a vast boulder bed covered with a thin stratum of sand and gravel. Everywhere, in sinking wells and digging ditches on the vacant lots and in the streets of the city, water-worn boulders of a great variety of material and sometimes three or four feet in diameter are encountered. I was debarred from regarding this as a terminal moraine, both by the water-worn character of the boulders and by the absence of any signs of ice action in the surrounding mountains, and I was equally debarred from attributing it to any ordinary stream of water, both by the size of the boulders and by the fact that for a mile or more up the Port Neuf valley there is an intervale, forty or fifty feet below the surface at Pocatello and occupying the whole width of the valley, in which there is only gravel and fine sand, through which the present Port Neuf pursues a meandering course. The upper end of this short intervale is bounded by the terminus of a basaltic stream which had flowed down the valley and filled it to a considerable depth, but had subsequently been much eroded by violent water action.

In the light of Mr. Gilbert's discoveries, however, everything is clear. The tremendous *débâcle* which he has brought within the range of scientific vision would naturally produce just the condition of things which is so puzzling at Pocatello. Coming down through the restricted channel with sufficient force to roll along boulders of great size and to clear them all out from the upper portion of the valley, the torrent would naturally deposit them where the current was first checked, a mile below the lava cliffs. The plunge of the water over these cliffs would keep a short space below clear from boulders, and the more moderate stream of subsequent times would fill in the cavity with the sand and gravel now occupying it.

What other effects of this remarkable outburst may be traced further down in the Snake River Valley I cannot say, but it will be surprising if they do not come to light and help to solve some of the many geological problems yet awaiting us in this interesting region. At any rate, the whole story of this geological catastrophe is instructive—on the one hand, as illustrating the insecurity of conclusions concerning the past drawn from the activity of agencies now in operation, and, on the other, as showing how geological catastrophes when they occur are but the culmination of slowly acting and calculable causes.

G. Frederick Wright.

Correspondence.

THE CHILIAN TROUBLE.

To the Editor of The Nation:

Sir: Perhaps the most striking fact in connection with this matter is, that if Mr. Bayard had remained in the State Department, we should almost certainly have avoided this fracas as well as the concentrated hatred and fury which the Chilians (not altogether unnaturally) exhibit towards us. It also affords an excellent illustration of the working of "practical politics." Mr. Harrison had an electioneering debt to pay to Mr. Blaine, and accordingly placed our skyrockety fellow-citizen in the Department of State. Likewise Mr. Blaine had a similar debt to pay to Egan and settled it by sending him to Chili. Both debts were paid—very cheaply to the debtors, but most expensively to the country.

The main fact in the whole matter is one relative to which the Administration gives us not an iota of information. The Chilians are enraged because, rightly or wrongly, they believe that Admiral Brown played the spy and gave important information as to the movements of the Congressional army at a most critical moment—information that undoubtedly diminished their chances of success, increased their losses, and might have turned the scale. The Administration cannot ignore or slur over this charge. The truth is needed and must come out. If it is false, let us have the satisfaction of knowing it to be so. If true, Admiral Brown should be court-martialled and cashiered.—Very truly, etc.,

M. C. L.

STATE POLITICS.

To the Editor of The Nation:

Sir: You have not undertaken any better or more important work than the defence of State politics (which of course includes municipal) against national. You ask those who insist upon using State and city elections for national party purposes, even when, as in off years, they are only indirectly available, what times or opportunities they would allow us for attending to our own local affairs. Of course they will not and cannot answer this question. The only resource is to beat them out of the field by making State questions more interesting than national—that is, in off

years, for, of course, in Presidential and Congressional years it is out of the question.

Now the question of the appointment and removal of his subordinates by the Governor; the abolition of executive commissions, and the performance of their duties by the responsible executive officials, just as under the Federal Government; and, further, the presence of these officials in the Legislature, are and can be made the most exciting of political questions, not only for students, but for the people. They involve a fight between Executive and Legislature, and a fight always draws a crowd.

We have been fortunate enough this year in Massachusetts to have a Democratic Governor with a Republican Council and a Republican Legislature, and the elements of these constitutional questions have crystallized into a very pretty quarrel. I have attended a number of meetings in this campaign in different parts of the State, and read the reports of a great many others, and it has seemed to me that the popular interest in the State questions was much greater than in national. After listening for an hour or more with a bored look to tariff discussions, enlivened only by the occasional mention of the name of Grover Cleveland, the audiences sensibly brightened up when any one began to tell them about Gov. Russell and what the row at the State House was about. To my regret and disappointment, Gov. Russell has allowed himself to be switched off from these main questions and on to the national track. During the last and important part of the campaign, he has given himself up almost wholly to the discussion of prices under the McKinley tariff. From the point of view of personal modesty it was perhaps praiseworthy, but from that of his own interest and that of the State, I regard it as a mistake.

I was travelling a day or two since with a gentleman of wide reputation in New York, whose name would be well known to you, but whom I had not previously met. He expressed a warm approbation of and agreement with my views as to personal responsibility in government, reproached me gently for confining it to speculation, pointed out how it could be reduced to practice, and said that if he were not interested in so many other movements, he would undertake it himself.

One of his suggestions seemed to me particularly valuable. The question was how should the measures I have above described be got before the people. Why, said he, a Governor who believed in them, would send a message to the Legislature describing them and inviting that body to name a day for meeting him in joint public session for the discussion of them. If the Legislature took no notice, he would follow it up with another and more urgent one, and if there was no reply, would then invite the members of his own party to meet him in the same way.

I am inclined to think that in a State election—in an off year—which followed such a process as that, there would be no lack of popular interest, and that national affairs would stand a very small chance indeed.

GAMALIEL BRADFORD.

BOSTON, October 31, 1891.

A MISLEADING CIRCULAR.

TO THE EDITOR OF THE NATION:

SIR: I have before me a circular asking for general subscriptions for the University Marine Biological Association. The document is so disingenuous that I ask the privilege of calling attention, through your columns, to the singularity of the appeal.

There has been established a Marine Biological Laboratory at Wood's Holl, Mass. This Laboratory has been in successful activity for several years, and has attracted a large number of the ablest biologists of the country, who have availed themselves of its excellent facilities, and it has given instruction to a yearly increasing class of students. It is under the direction of Prof. C. O. Whitman, who has to assist him a corps of men of established reputations in science. This institution has been founded and maintained by the earnest devotion of its officers, and offers free and equal advantages to every competent investigator. It has, therefore, earned its place and the hearty approval which has been bestowed upon it.

The circular of the University Marine Biological Association is so worded as to give the impression that its laboratory is the only one of the kind in the country, and that if it is not supported, America will be without a station for biological work at the seaside. The circular gives a list of the stations in foreign countries, "which" (I quote) "will make clear at the same time how much America is behind other nations in giving scientific oversight to one side of the question of cheap and plentiful food supply." The circular does not mention in this list either the laboratory at Wood's Holl, the United States Fish Commission, or any of the State Fish Commissions. It is well known that our country has been among the foremost, perhaps the foremost, in applying science to fishery problems. That the Marine Biological Laboratory was not unknown to those who issued the circular, I conclude not only from the fact that the laboratory is known to biologists the world over, not only from the fact that they have quoted on their first page from Dr. Whitman's address before the laboratory members, but also from the fact that I have myself described in detail the organization of Dr. Whitman's Laboratory to one officer of the University Association, and have personally escorted another over the laboratory buildings. It may be added that the new Association is undertaken by the University of Pennsylvania, and that the authorities of that institution have been officially informed of the existence and plans of the Marine Biological Laboratory.

Other parts of the circular are so worded that those who issue it might say that there was no absolute deception, and yet any one who read it without knowing of the earlier laboratory would certainly never suspect that the new one was not the first and only laboratory to supply an urgent need in this country.

I will add that I am personally interested in the Biological Laboratory at Wood's Holl, and that the University of Pennsylvania, together with other universities, was invited to co-operate. The Philadelphia University has decided to attempt its own laboratory, but I consider it unjust to ignore the earlier institution, and to appeal to the public so as to give the impression that it is a question of founding the first and only biological station in America.—Yours respectfully, CHARLES S. MINOT.

HARVARD MEDICAL SCHOOL, BOSTON, Oct. 25.

PRESIDENT FINNEY.

TO THE EDITOR OF THE NATION:

SIR: It may be to you a matter of interest that the favorite paper of C. G. Finney was the *Nation*. He took it from the first number, and just before his death he had renewed his annual subscription. He preserved all the numbers and gave them to the college library, where they now do good service. The editorials especially he used to read with much zest.

Permit me to add that I was sorry to see in your last number so depreciatory, and, as it seems to me, unjust, an estimate of Mr. Finney. The writer evidently never knew him, but has a misconception of him and of his work. Though not technically a scholar, he was more of a thinker than most scholars, and had a rare power of concentrating and wielding his thought. And he had a heart as large as his mind. His personality was most marked; he was eminently human, and in his day was a great power in the promotion of righteousness. —Respectfully, HENRY MATSON.

OBERLIN, O., October 26, 1891.

THE REV. LAWRENCE WASHINGTON OF PURLEIGH.

TO THE EDITOR OF THE NATION:

SIR: Since an English writer has seen fit to refer to the Rev. Lawrence Washington of Purleigh as "a drunken parson," I have found great consolation in looking over the 'Annals of Evangelical Nonconformity in Essex,' by the Rev. T. W. Davids (London, 1863). The author has considerable to say about the Episcopal ministers who were expelled from their livings in 1643, doubtless for their loyalty, but ostensibly for other causes. He quotes the evidence in many cases. He cites (p. 246) the charge against Washington as a tippler and often drunk, but he also quotes the same charge against many others. I notice these cases: T. Punter (p. 232), Thurman (p. 233), Fairfax (p. 233), Hurt (p. 238), Turner (p. 239), Southen (p. 239), Chamberlain (p. 242), Frost (p. 243), Staples (p. 245), Washington (p. 246), Lake (p. 247), Heard (p. 249), Laud (p. 249), N. Wright (p. 250), Darnell (p. 251), Hull (p. 253), Brinsley (p. 341), Bird (p. 349), Beard (p. 350), Man (p. 380), Benson (p. 417), Nicholson (p. 422), Billio (p. 512), Deersley (p. 515), F. Wright (p. 518).

Here there are twenty-five cases, where clergymen were deprived, in which this same charge of drunkenness is made. Considering the social habits of the time, and the fact that most of these, if not all, were also accused of excessive attachment to the cause of Episcopacy and monarchy, is it not evident that the charge is a mere pretext, and that Mr. Washington does not deserve to be singled out for opprobrium and judged according to recent standards of morals?

From Mr. Davids's book I glean one or two interesting points. Thus he states (p. 302) in regard to Braxted Parva, "The return in 1650 is 'Mr. White was presented, but he hath left it about three years, and Mr. Roberts provides for the supply of the cure.' Lands. MSS. 459." Again (p. 156) he says of the Rev. Nehemiah Rogers of Messing, that he was sequestered at Bishopsgate in 1643 and at Ely in 1645. "He continued to preach, however, for three years at Little Braxted, for upwards of six at St. Osyth, where he is found in 1650, and ultimately became rector of Doddinghurst, where he died."

It would seem, then, that Mr. Roberts had given this "poor living" first, about 1645, to Nehemiah Rogers; then, about 1647 or 8, Mr. White was presented, but in place of him Lawrence Washington took it. It is certainly very curious that it was John Rogers, son of Nehemiah, who expelled Washington from Purleigh (p. 272), and that the latter was thrown upon the same charity which had supported Rogers's father. As Nehemiah and his son seem to have been on opposite sides, I presume that there was no retaliation in this.

If, by any happy chance, the family papers of the Robertses of Little Braxted have been preserved, we may yet learn something of this patron of distressed clergymen. The first of the name at that place was Thomas, auditor to Henry VIII. His son was Clement, whose son Thomas married Alice Hobson and was alive in 1612. Then came Thomas, the owner in 1634, whose son Thomas was aged sixteen. As the father had then ten children, it seems probable that he deceased before the Civil War, and that it was the young man who was the friend of Nehemiah Rogers and Lawrence Washington.

In 1660, among the signers of a petition to Gen. Monk, calling for peace and amnesty (Davis, p. 323), are Sir Benjamin Ayloffe of Great Braxted and Thomas Roberts of Little Braxted.

Mr. Davids quotes as authorities Cole's MSS., Landsdowne MSS. 459, Add. MSS. 15660, 15669, and 15670, also Journals of the House of Lords, Journal of House of Commons, and State Paper Office files. He seems to say that many of the original papers in regard to these sequestrations are preserved. If so, we may yet find the petition of the wife of the rector of Purleigh, and learn her Christian name, or we may get a signature of the Rev. Lawrence Washington. Col. Chester's references, as quoted by Mr. Conway, are Harl. MS. 6244, in regard to the petition for tithes; and Pul. R. O. Charles I., W. 58, No. 29, as to the chancery suit. W. H. W.

P. S.—Davids (p. 220) mentions the Rev. Elizæus Burgess of Canewdon, Essex, also archdeacon of Rochester, as sequestered in 1643. From identity of name, I imagine him to have been an ancestor of the Col. Eliseus Burgess who was commissioned as Governor of Massachusetts in 1715, and who sold his commission to Gov. Shute. I do not remember to have seen any facts about this politician.

Notes.

Longmans, Green & Co. have nearly ready 'Preludes and Studies: Musical Themes of the Day,' by W. J. Henderson.

Henry Holt & Co., in response to a demand for a popular edition of President Walker's works on 'Money' and 'Wages,' will bring one out at a materially reduced price.

Macmillan & Co. are about to publish 'Natural Theology,' by Sir G. G. Stokes; 'The Burning of Rome,' an historical novel by the Rev. Alfred J. Church; and 'The History of David Grieve,' a new novel by Mrs. Humphry Ward.

'The Divine Enterprise of Missions,' lectures by the Rev. Arthur T. Pierson, is announced by the Baker & Taylor Co.

J. G. Cupples, Boston, will issue during the present season a 'History of Haverhill, Mass.,' by Col. Frankle, and 'Watchwords from John Boyle O'Reilly,' by Katherine E. Conway.

A beginner's book in Old English (Anglo-Saxon), by Prof. George Hempl of the University of Michigan, is promised by D. C. Heath & Co., Boston.

A 'Latin Prose' based on Livy, by Prof. A. Judson Eaton of McGill University, Montreal, should deserve a welcome on the part of teachers and students of Latin. Ginn & Co. will publish it.

J. B. Lippincott Co., Philadelphia, announce the completion of John Foster Kirk's Supplement to Allibone's 'Dictionary of English Literature and British and American Authors.'

A Danish-Greenland dictionary is at present being prepared under the direction of the Danish Government, to which a revised edition of the New Testament will be added.

With Part 24 the 'Century Dictionary' comes to an end, and, glad as we are to have it complete, we shall miss the pleasant recurrence of such admirable specimens of the printer's art. The final folio is 7,046, but pages are still added containing a supplementary note to the preface, a list of writers and authorities cited, and a list of "amended spellings" recommended by the Philological Society of London and the American Philological Association. Prof. Whitney urges the general adoption of these spellings with undeniable force, but we wish he could have pointed to the least advance towards the desired end since the "Twenty-four Rules" were adopted in 1883. Has one school board prescribed them? Has one school-book been printed in accordance with them? Has one publishing-house offered to print for any author who desires to observe them, or ventured to issue any classic in their guise? Has any author of high literary standing insisted on being printed in the new orthography? If not, what prospect is there of the reform being carried out? We ask these questions in no antipathetic spirit.

The season is already prolific in new editions of standard works, and we can hardly do more than mention the titles of them. The Brantwood Edition of Ruskin (Charles E. Merrill & Co.) has for its latest issue 'Val d'Arno,' lectures on Tuscan art in the first half of the thirteenth century, delivered in 1873, prettily illustrated. Four volumes swell the Riverside Edition of Dr. Holmes's writings (Houghton, Mifflin & Co.), viz, his three novels, 'Elsie Venner,' 'The Guardian Angel,' and 'A Mortal Antipathy,' and 'Pages from an Old Volume of Life'—twelve essays and addresses, among which the author specially designates his favorite, "The Seasons," and it is in truth characteristic in the best sense, and of permanent value in the natural history of New England. Dr. Holmes's publishers also send us their new-dressed 'Snow-Bound,' illustrated by E. H. Garrett, and adorned with a steel portrait of Whittier. Only one side of each leaf is printed, with beautiful typography, and thus some forty pages are eked out, while the vignettes are all separate from the text. There are nine of these, copied in photogravure, and on the whole they add much to the elegance of the get-up; one or two of the landscapes are little gems, but the figure pieces are less successful. The form of Long's translation of 'The Discourses of Epictetus,' as put forth by Macmillan (London: George Bell & Sons), is all that we need concern ourselves with. This well-known work has been tastefully made over in two handy volumes of clear print on laid paper, bound in a strong blue cloth. Besides the notes there is, as was inevitable, an index. D. Lothrop Co. have essayed a Library Edition of the 'Arabian Nights' in four volumes, adapted for family reading from the text of Jonathan Scott. There is a fair sprinkling of quite recent illustrations. Dr. Wm. Elliot Griffis furnishes a well-conceived introduction, describing the Oriental public story-teller, and discussing from the best sources the nature and derivation of the stories. It adds much to the value of this edition, which, for the rest, is attractively made, within and without. It is fitting to mention next Mr. S. G. W. Benjamin's 'Persia and the Persians,' which originally appeared in 1886 with the imprint of Ticknor & Co., and now bears that of Houghton, Mifflin & Co., with no ostensible change in the body of the work. The volume is planned on a large scale, and comes to us very well bound. We do not recall any illustrations in last year's first bringing out of Austin Dobson's 'Four Frenchwomen' (Dodd, Mead & Co.). Fourteen of them, mostly from contemporary prints, accompany this year's edition. They perhaps add a little to the worth of this youthful production.

The trustees of the Boston Public Library, having acquired at a great price at the Barlow sale a copy of the Latin version of the 'First Letter (to Raphael Sanchez) of Columbus announcing the Discovery of America,' have resolved to popularize it by publishing it in facsimile. This has been handsomely done in a thin small folio, and a new translation supplied by one of their members, Prof. Henry W. Haynes, in addition to a preface in which he gives the history of the letter in its Spanish and Latin forms. He points out several discrepancies between the text of this (Roman) edition and that of the Kennedy copy in the Lenox Library, which has also been published in facsimile. This volume and Mr. Winsor's 'Columbus' appear simultaneously, and worthily introduce the Columbiana to be evoked by the four-hundredth anniversary now close at hand.

The Rev. J. Evans Walcott, Public Librarian at Bridgetown, Barbados, has just issued a reprint of that very rare booklet, 'Memoirs of the First Settlement of the Island of Barbados and Other of the Carribee Islands.' Compiled by some colonist of Barbados, and first printed and published there in 1741, it was reprinted in London in 1743. A copy of either date seldom comes upon the market. The last offered for sale by a firm of Bristol (England) booksellers was priced at $12, and was bought at once. It is this book which contains a list of the owners of ten acres and upwards on the island in 1638. A copy of this list was published in the *New England Historical and Genealogical Register* for April, 1885, with notes by Mr. Samuel Briggs of Cleveland, O. Valuable as is the book, it is far from being free from errors. It is therefore to be regretted that Mr. Walcott should have reprinted it without attempting to edit it. There used to be two copies of the 'Memoirs' in the British Museum. One copy disappeared a few years ago. The other forms an item in the Grenville collection. To use it, students have to go into the special sanctum for rare works.

David Douglas, Edinburgh, adds to his well-known series of books on sport and natural history 'The Camp Fires of the Everglades, or Wild Sports in the South,' by Charles E. Whitehead. The volume contains a good deal of reprinted matter, much of which appeared under the title 'Wild Sports in the South' (New York, 1860). The whole relates to that far-away time when deer and bear and "Injins" were common in Florida, and is an agreeable mixture of narratives of actual hunting adventure with undisguised "yarns" and observations of nature. Paper and print are excellent, and of the many illustrations two or three are notably good.

There is not much new or valuable information in 'Two Years among the Savages of New Guinea' (London: Ward & Downey). The author, Mr. W. D. Pitcairn, was a trader, and his account of his various trips after bêche-de-mer, copra, cocoanuts, etc., is at times very entertaining. The most interesting of these was to the Bismarck Archipelago, where he visited a "splendid" plantation, owned and superintended by a half-caste Samoan woman. Her principal crops were coffee, cocoanuts, and cotton. For the pre-

paration of the latter she had six cotton-gins working every day. The cotton "appeared of very good quality, and the manager, Mr. P——, told me it realized from 1s. to 1s. 3d. per pound in Sydney." The book shows, in a very graphic manner, the constant peril in which a trader lives, especially those who are venturesome enough to go to the more distant islands. The fertility of some of these islands is extraordinary. On Kiwai, for instance, about thirty-six miles long and two-and-a half broad, the natives cultivate thirty-six different varieties of the banana, twenty-five kinds each of the sago-tree and the yam, as well as ten of sweet potatoes. Of the natives of the south coast of New Guinea, Mr. Pitcairn says: "They have no knowledge of any intoxicating drink, not even of kava," the palm-wine in almost universal use in those regions where the palm is to be found.

Those who are interested in our coast line in one way or another should know that an illustrated catalogue of the charts published by the United States Coast and Geodetic Survey has lately been prepared under the direction of Superintendent Mendenhall by Assistant Colonna. The left-hand pages contain outlines of successive portions of our coast from Maine to Alaska, with rectangular spaces marked off, by which the area and location of all published maps are indicated. The special description of these maps, giving their scale, dimensions, and cost, appears on the corresponding right-hand pages. The maps are sold at the cost of paper and printing, and, with the catalogue, can be obtained at the agencies in all our coast cities. There are seven such agencies in New York city.

A 'Popular Handbook and Atlas of Astronomy' has been prepared by William Peck, Astronomer to the City of Edinburgh (Putnams). It is in quarto form, allowing the introduction of numerous large-sized plates in their proper place with the text. Most of the illustrations are well prepared, and the star charts are presented in a convenient arrangement; but the plates of nebulæ and of comets are lacking in delicacy, and do not do justice to the beauty of these objects. The explanation of the origin of the constellations, to which the author calls attention for its novelty, has certainly that quality, but it cannot be regarded as demonstrative, being hardly more than ingenious and plausible. The needs of amateur astronomers who wish to gain a telescopic acquaintance with the heavens are duly considered, and to these perhaps more than to others the volume is addressed. The effort towards correct graphic illustration is seen in the diagram of the moon's path around the sun. Equal care in preparing the vignette of the earth at the close of the preface would have omitted the clouds that surround it at altitudes of about five thousand miles; but this was most likely added by the publishers.

'Nature Study for the Common Schools' (Henry Holt & Co.) is the title of a small volume by Wilbur S. Jackman, a Harvard graduate, now teacher of natural science in the Cook County Normal School at Chicago. It is intended to serve as a guide to teachers who wish to present the facts of nature to their classes, and as such it should have a wide use. It consists chiefly of a series of questions, which cover a wide range over the sciences, but are all of an elementary nature, requiring only ordinary observation or simple experiment for their answer. Many of the questions are highly suggestive, and, in the hands of an alert teacher, will serve well in bringing out many subjects for discussion with the scholars. The questions are arranged in chapters according to the months; those of the autumn at the beginning of the book being adapted to the opportunities of that season, and so on through the winter and spring. The questions imply a good knowledge of the various subjects treated on the part of the author, but the care generally observed in the matter of terminology seems to have lapsed for a moment in speaking of the refraction of *heat* (p. 157).

'A Brief Spanish Grammar,' by Prof. A. Hjalmar Edgren of the University of Nebraska (Boston: D. C. Heath & Co.), is a thoroughly good piece of work. Extremely compact (the whole, exercises, index, and all, falls within 125 pages) and well arranged, it is difficult to conceive of anything more satisfactory within the same dimensions. It is not quite abreast of the Spanish Academy in the matter of written accents, but is in all other respects, we believe, entirely accurate.

When Minister to Spain, Mr. Lowell was chosen an honorary professor of the Institución Libre de Ensefianza, and it is but fitting, therefore, that its *Boletín* should contain a suitable obituary notice of him. Such a notice we find in its issue of August 31, done by a competent hand. Of Lowell's relations to the literature and people of Spain the writer says: "He was familiar with our classics, not only in the inner structure of their thought and the movement of their style, but also in their connection with the medium which gave them birth and of which they are the transparent expression; and in all his relations with our people, our history, our government, and our existing society, all Spain, and not alone the Institute, owes a grateful tribute to the memory of one of the most faithful and affectionate friends that she has been fortunate enough to find among the great writers of our time."

The *Scottish Geographical Magazine* for October contains the conclusion of Dr. H. Schlichter's paper on Southwest Africa. In it he treats of the inhabitants, who are mainly Hottentots, Bushmen, and various Bantu tribes, altogether numbering about 300,000 people. Of these the best and most civilized are the Bastards, some 2,000 natives, immigrants from Cape Colony and descendants of Europeans and Hottentots. The question of the origin of these latter is still unsettled, and probably never will be solved conclusively. Dr. Schlichter is very sceptical as to the value to Germany of her possessions in this part of Africa. All industries, as copper-mining, agriculture, and cattle-rearing, are unprofitable, on account of the cost of transport to the coast, while there is little or no trade with the natives. The only occupation feasible seems to be wool-growing, for which all the conditions, save the frequent native wars, are apparently favorable. Appended is a bibliography containing over a hundred titles of books and papers in scientific journals on this region, mostly in German, which have been published from 1884 to 1891.

Wagner and Supan's monograph on the population of the globe, lately noticed by us, is soon to be followed by a similar publication giving the population and other statistics of the various cities and towns of the world.

The eighth annual meeting of the New England Meteorological Society, recently held in Boston, was chiefly devoted to memorials of Prof. William Ferrel, a sketch of whose life appeared in our columns last week. Contributions were received from Prof. Simon Newcomb, Superintendent of the Nautical Almanac, describing Ferrel's work in astronomy, particularly in connection with the tides; from Prof. T. C. Mendenhall, Superintendent of the Coast Survey, concerning Ferrel's work in that office, and from Prof. Cleveland Abbe of the Weather Bureau, recounting Ferrel's services in the Signal Office. The last was introduced by a letter from Prof. Harrington, Chief of the Weather Bureau, who was represented at the meeting by Mr. Alexander McAdie. Personal reminiscences by Mr. Frank Waldo, formerly of the Signal Office, and an account of Ferrel's contributions to meteorology by Prof. Davis of Harvard College, were also presented. The proceedings of the meeting will be published in a later number of the *American Meteorological Journal*.

Mrs. Hearst, widow of the late Senator George Hearst of California, has established five $300 scholarships "for worthy young women," at the University of California. The requisites for appointment to these collegiate privileges, as stated in the donor's letter to the Regents of the University, are somewhat unique, in that the element of competition in examinations is excluded from the problem. Mrs. Hearst desires that "the qualifications entitling students to the scholarships shall be noble character and high aims, it being understood that without the assistance here given a university course would in each case be impossible. I desire that a school officer, say any County Superintendent in this State, shall recommend to the Faculty of the University the applicants for scholarships, the award being made by a vote of the Faculty; but I do not wish any scholarship to be given as a prize for honors in entrance examinations."

By an error which we much regret, the late Gen. Edward A. Wild's Christian name was misspelled Edmund in our last issue; and the date of his death should have been given as August 28.

—The November *Atlantic* continues Prof. Thayer's important paper in the interest of the Indians, and states luminously and convincingly the primary reform of all, which goes deepest into the social problem of their status and furthest into the future of the race, namely, the giving to them of a system of law. The proposal is not new, as our readers know, and the present paper is mainly a call to united and aggressive action by the Indian societies for the purpose of supporting and urging the measure already before the Senate, or some form of that measure. The argument is so clear as to amount to little more than saying that the Indians cannot be civilized without introducing among them the main instrument of civilization for orderly social life; and that the law is that instrument is a self-evident truth to men of Anglo-Saxon traditions. Prof. Thayer had only to state the actual condition of the Indians, relative to law, and to suggest the attendant practical modifications of a plain principle necessary or useful for its successful application in the given case. He has done this with singular force, and it is to be hoped that his discussion of the whole matter will prove the opening gun of a vigorous winter campaign in Washington. No other topic in this number of the magazine is of leading interest, though we recommend to the disciples of Tolstoi the account of a visit with him, by Miss Hapgood, equally entertaining and discriminating, and especially happy in its description of the Countess's place in the family and of her attitude of mind. The paper seems to us far the most sensible of any we have seen upon a difficult subject, with just enough of appreciation of Tolstoi's methods and aims and of reservation of mind on the part of the friendly critic and observer. Miss Guiney contributes a paper on one of those marvels of unrecognized genius who are periodically brought up from the kindly waves of Lethe, and exhibited, all

dripping with oblivion, to a curious public. James Clarence Mangan is his name in this case. Miss Guiney indulges in the usual dithyramb, but she is unwary enough, or sincere enough if you please, to quote a good deal of his verse; and after its perusal we think he must plump down again into the ooze with a feeling of general satisfaction and relief to the readers. But really we cannot help asking if to be a nobody is such a novelty that our patience must be abused with a forgotten nobody? In the words of the rhyme which has so happily relieved our pent-up weariness, when a "Rudyard" does "cease from Kipling," shall we not leave the "eternal silences" that Carlyle so much desiderated, undisturbed? Or must the penny-whistle echo "down the corridors of time" for ever? Perhaps equally useless will be protest against Lafcadio Hearn's "mush" of landscape and sensation; it is a hard word, but nothing else so well describes the peculiar stickiness of the mixture, which, meaning to be a thing of art, resembles a paint-pot more than a picture.

—*Harper's* comes to us with that touch of dulness which will enhance the attraction of its holiday number; the latter will be full of plums; for the present we must content ourselves with simpler fare. Miss Woolson's Cairo sketches are admirable, but lack the *verve* that we look for in description of the land that so many writers have treated so picturesquely, and the instalment of Dickens's letters to Wilkie Collins is of very minor interest. The paper on Stonewall Jackson is best worth attention, because of the fascination of that type of character which belonged to the Cromwellian times; he was certainly a man born out of his age; and if more proof were needed, it is forthcoming here, where we learn, on unimpeachable authority, that he wished to raise "the black flag," which, as every one knows, means no quarter—the spirit of the murder of Agag in the bosom of a Sunday-school teacher. The article on cancers does not come within our literary survey; but Walter Besant's article on Elizabeth's London is the best of his series on that city and excellent on both the historical and Shaksperian side; and the paper on Africa is one of those solid blocks of information on a special topic of which *Harper's* seems best to know the secret.

—Two of Cole's unrivalled woodcuts, in this case after Michael Angelo, open the *Century* with a double frontispiece, and there is much other interesting illustration. In the text many subjects are treated briefly and well: the change in the habits and ideals of Southern women in consequence of the destruction of the social fabric which depended on slavery as the institution of labor, is described with much closeness of detail, and a great advance in the position of woman is disclosed by it; the future of American art is rapidly and hopefully forecast by Mr. Frank Millet, in a paper of practical value; the letters of Mazzini to his English friends are rich with new illustrations of one of the most heroic and spiritual lives of a century remarkable for noble characters; and there is much besides. The most striking paper, however, is that which turns Malthusian pessimism into a startling optimism, and with the lens of science descries a new law, namely, that the increase of population is the condition of cheap and abundant sustenance; when there are more mouths to feed than natural growth can supply—such is the theory—it will become profitable to use the resources of science for an artificial growth or manufacture which will be to the slow "process of the suns" what electrical motion is to walking. The theory, we must say, is plausibly argued, but depends, of course, on an assumed advance in man's control of the chemical elements and of that vast reservoir of energy in the sun's rays of which we have hardly profited by forethought. The doctrine that demand creates supply can then be applied to food and know no limit; at least, if we read rightly, this is the author's position. We must find space, too, to advise our readers to read the letter from Mr. Lowell, published in this number, which is worth more in itself, and shows the poet's character more luminously, than all the pages of eulogy occasioned by his death.

—The most important article in *Scribner's* is the account of the new Constitution for the Australian Commonwealth, of the history of its framing and the present state of opinion regarding it. The various elements derived from the other federal systems of the world, and all that has been retained from British methods, are carefully discriminated, and the reason of the choice made is stated; but the author is naturally most concerned to show in what points the system of the United States has been departed from. The responsible executive, retained from the habitual practice of the colonies, the restriction of the Senate in financial legislation, and the method of amendment by a final Referendum, are the main points. The question of the adoption of the instrument, now pending, is interesting to Americans because of the way in which our own experience is paralleled. The author is not given to prophecy, and he risks no opinion as to the issue except that the drafting of the instrument, by defining a hitherto vague tendency, has secured definite discussion and made the adoption of some similar instrument, if not this one, a foregone conclusion. Not the least instructive portion of his article is that which shows the national interests of Australia in the Pacific and in the common life of the colonies with one another; this proves that a nation—a unity pervading the separate States—exists whether it declares itself as such at once or is delayed in doing so. A second foreign paper is that on the Trans-Saharan Railway, which is written of with much detail. Northern Mexico and Holland also claim our attention, one for the sake of its primitive people and the other for its artistic opportunities. An unsigned article by one of Mr. Lowell's pupils gives an impression of Mr. Lowell's charm as a teacher and the memory that Harvard men have of him, which the public has not previously been acquainted with. It should be said, however, that he was different to different men, and this old student seems to have made more of the "quizzical" quality than was either necessary or just.

—In the October Proceedings of the Royal Geographical Society, Mr. A. Millson gives a surprising account of the Yoruba country. This is a tract of 600,000 square miles lying between the great bend of the Niger and the Guinea Coast. Its inhabitants, mainly agriculturists, are fully clothed in cotton of their own growth and manufacture, and live in a degree of comfort surpassing that of the Egyptian fellah or the Indian peasant. They dwell upon scattered farms and in farming villages, as well as in cities, the largest of which, Ibadan—the London of Negroland—covers an area of nearly sixteen square miles, and is surrounded by ditches and walls of hardened clay more than eighteen miles in circumference. Its population is at least 120,000, and Mr. Millson gives the names of eight other cities whose inhabitants number from 20,000 to 60,000. The cultivable soil, which is exceedingly rich, is fertilized wholly by earthworms. In the dry season the worm-casts, varying in height from a quarter of an inch to three inches, exist in astonishing numbers. "It is in many places impossible to press your finger upon the ground without touching one." The rains break them down into a fine powder, rich in plant food, and lending itself easily to the hoe of the farmer. From careful measurements, Mr. Millson computes that "62,233 tons of subsoil are brought to the surface on each square mile of cultivable land in the Yoruba country every year." Where the worm casts do not exist, the native never attempts to farm. The currency of the country which has very little trade outside of its own boundaries, consists of cowries for the small sales, and "slaves represent the larger currency, varying in value from £4 to £10." Food, which is surprisingly cheap, is often left for sale by the roadside, with no one to watch it, every passing traveller who takes any leaving its value in cowries. He also may stop at any "farm or field and cook sufficient food from the standing crops for one meal, but it is considered a very heinous offence for him to carry any away with him." Incidentally Mr. Millson referred to the work of the Botanical Garden at Kew in this and the coast region. Since 1888, "over 80,000 young plants of cocoa, coffee, kola, cocoanut, and other economic trees were distributed, over 60,000 of which were eagerly purchased by the natives." Vast quantities of cotton are grown, which commands a paying price in the Liverpool market, "equal to that of Louisiana and superior to that of India."

—The eleventh volume (1786-1790) of Mr. Worthington C. Ford's edition of the Writings of Washington (Putnams) is one of the most interesting of the series, and has had to be very copiously annotated. Taken altogether, it fully confirms Washington's own profession of being "a philanthropist by character" and "a citizen of the great republic of humanity at large." As he had previously to reconcile this rôle, however, with that of a warrior, so now he has to reconcile it with his being a slaveholder. On the one hand, he declares that he will always vote (as a Virginian) to abolish slavery gradually, and will never, unless forced, purchase another slave, or even accept one in payment of debt; praises Lafayette for buying an estate in Cayenne in order to free the slaves; and offers to retain one of his mother's slaves on her death at his disadvantage in the division of her estate—for the slave's sake. On the other hand, he helps a fellow-slaveholder to recover a slave in Philadelphia whose freedom had been attempted through the courts by Franklin's Quaker Pennsylvania Society for Promoting the Abolition of Slavery, and rebukes their alleged practice of tampering with and seducing "slaves who are happy and contented with their present masters"; as President, merely judges "very malapropos" a Quaker memorial of 1789 for the abolition of the slave trade; and in his diary of the Constitutional Convention and contemporary correspondence makes no allusion to the pro-slavery compromises. Only in 1790 do we come upon the irrepressible sectional conflict over slavery—the Eastern States arrayed against the Southern—and here Washington acutely remarks "that more points will be carried by the latter" than the former, and "for the reason . . . that, in all great national questions, they move in unison, whilst the others are divided." These letters clearly reveal the patriotism which induced Washing-

ton, who longed for the quiet of home and who felt the infirmities of his years, to accept the Presidency, foreseeing that the cares of initiating the ways of a new government and standing between hostile interests and factions would hasten his end. Admirable, too, was his caution in making appointments to office and his absolute integrity in so doing.

—On October 19, at a meeting of the Hellenic Society, Prof. Jebb in the chair, papers were read by Mr. F. C. Penrose and Mr. L. Dyer. Mr. Penrose gave the results of measurements recently taken on the Acropolis to determine what bestowal was to be made of a host of architectural fragments, visible, some of them, in the Acropolis wall, others obtained in the course of recent excavations. These last probably belonged to a very ancient structure of the Ionic order, and careful measurements have led Mr. Penrose to connect them with the archaic foundations discovered by Dr. Dörpfeld between the Parthenon and the Erechtheium. He was, however, less confident in affirming this connection than in denying the architectural possibility of fitting to these substructures that other group of fragments—Doric in style—which Dr. Dörpfeld has associated with them. It was, he contended, in the highest degree probable that these Doric fragments anciently stood upon the oldest foundations of the Parthenon. These last had been laid so completely bare by recent excavations that many valuable hints could now be derived from their minute study, and much information was now at hand concerning the first Parthenon. Mr. Dyer's paper on the Vitruvian account of the Greek stage was an appeal from the disagreement of scholars about this passage in the nineteenth century to the agreement about it in the sixteenth—from Rode (1796 and 1801), Stieglitz (1818), Geppert (1843), Strack (1843), Lenonius (1850), Schoenborn (1852 and 1858), Valentine Rose and Mueller-Struebing (1867), Albert Mueller (1866, 1872, and 1888), Kawerau (1888), and Oemichen (1890), to Bulengerus, Budæus, Julius Cæsar Scaliger, and above all to Friar Giocondo of Verona. The three manuals last published in Germany, Hermann's, Baumeister's, and Iwan Mueller's, contained, he said, three diagrams illustrative of this Vitruvian passage, and each was irreconcilable—so far as the stage was concerned—with both of the others. With the aid of Friar Giocondo's diagram and sketch-plan, the whole passage was then explained according to Friar Giocondo's text. All the world was agreed that a copyist's blunder had to be corrected by changing, in one of two consecutive lines, "dextram" to "sinistram." Rose, greatly to the relief of certain controversialists, changed the first; Friar Giocondo, blinded by the dust of no controversy, and endowed with the unerring insight of a truly great architect, changed the second. Friar Giocondo's proscenium, described by Scaliger, was a narrow, empty space in front of the scena, masked by a row of columns, interrupted only by the forward projection of the pulpitum, or raised stage, into the orchestra. The pulpitum, as Bulengerus is always insisting, was a part of the orchestra. The close agreement between Dr. Dörpfeld's definition and Friar Giocondo's is remarkable.

NORTON'S TRANSLATION OF DANTE.—I

The Divine Comedy of Dante Alighieri. I. Hell. Translated by Charles Eliot Norton. Boston: Houghton, Mifflin & Co. 1891.

THE appearance of a new translation of one of the world's poetic masterpieces revives the old question as to whether the translation should be in prose or in verse. Our bookshelves are crowded with metrical versions of Homer, Virgil, and Dante, yet we feel that not one satisfies us, although more than one was the work of a poet. The reason is not far to seek. A great poem is the marriage of two excellences—noble substance and beautiful form. Substance is the universal element, and though, like gold, it be coined in many mints, yet its value remains undiminished. But form is individual, peculiar to the race and to the given poet; you cannot change it and produce an equivalent effect; you cannot, for instance, rewrite "Hamlet" in Scott's favorite measure without losing all the subtle beauty, the variety and strength, inherent in Shakspere's blank verse: that would be asking a single instrument, a cornet or oboe, to do the work of a whole orchestra. Yet both blank verse and Scott's measure are proper to the genius of our language, and ought therefore to be more easily interchanged than could a metre peculiar to a foreign race be represented by either of them. The Homeric hexameter and Dante's *terza rima* have never been naturalized in English, and, judging by the talents of those who have attempted to naturalize them and failed, they never will be. If you insist, therefore, upon a poetic translation of them, you must choose some familiar English metre to represent them. Which shall it be? The heroic couplet? But Pope's 'Iliad' is to its original as a jingling spinet is to an organ. Shall it be blank verse? But Longfellow's 'Divine Comedy' is like a photograph of a great Venetian painting, all black and white, with no delicate reliefs, no modulations of tone, no gorgeous and varied color. We know, indeed, that Matthew Arnold held that Homer could be rendered in English hexameters, and he, if any man, was fitted to make the trial; but he did not make it, and till some other scholar equally endowed shall succeed, we must believe that the achievement is impossible. In the case of Dante there are other insuperable difficulties to be overcome. The Italian is rich in rhymes, the English is comparatively poor; the Italian permits many elisions and abbreviations for the sake of melody or metre, while the English is, in this respect, far more unyielding; above all, Dante is the most terse and direct of poets, and terseness and directness can never be reproduced by a translator who has to lengthen or curtail his phrases to suit the metre, and who is perpetually groping in a scantily stored vocabulary for rhymes.

The difficulties vary, of course, in kind and degree according as the poem to be translated is in a language more or less allied to the English. German prosody, for example, being much like ours, good metrical translations have been made of many German poems; but nobody with an ear for poetry will agree that the best versions of the lyrics of Goethe or Heine communicate the indescribable charm of their originals. Bayard Taylor's "Faust" is certainly an extraordinary and often a satisfactory work, and if it comes nearer than most translations to its original, it is, we believe, because the language and style of "Faust" by no means reach the level of the language and style of Dante or of Shakspere. We hear much praise of the German translation of Shakspere, and there are Germans who fondly imagine that on the whole they are about as well off with their Schlegel's copy as we are with Shakspere himself; but no English-speaking person would admit that the blank verse of "Othello" or "The Tempest" can ever be adequately represented by the German blank verse, with its tendency to sing-song and the redundant syllable at the end of most of its lines.

It is evident, then, that where the same metrical forms are not common and familiar to two languages, the translator must choose that form in his own language which he can best handle, and which his readers are accustomed to hear; but in so doing he immediately acknowledges that he is unable to reproduce the form of the original—and to reproduce that is the main excuse for a poetical version, since the substance can be given in prose. If he have sufficient talents, he may achieve a readable, or even a poetic work, but the impression it will make will inevitably be different from that made by his model; or he may cut loose from the fetters of literalness, and, like Fitzgerald in his paraphrases of Omar Khayyám and Calderon, create a work in which the translator pays back from his own wealth what he has borrowed from the author. But it may easily happen that, like Pope, he pitches upon a metre wholly unadapted to his subject, in which case the Homeric heroes speak epigrammatically in heroic couplets, after the fashion of Queen Anne's time; and it would scarcely be more ludicrous were some sculptor to model Hector or Achilles in full-bottomed wig, long-skirted coat, and knee-breeches. In short, the metrical instrument used in the translation of Homer or Dante cannot strike the same notes that are struck in the original.

Of late years we have had urged upon us a sort of compromise between verse and prose. "We admit the inadequacy of blank verse or any other English metre to reproduce the Homeric hexameter, for instance," say the advocates of this compromise. "We admit, too, that any metrical version, unless it be very free, and consequently unliteral, will be stiff in proportion as it is exact; but at the same time we feel that ordinary prose is too commonplace, that it takes away the glamour and charm and unusualness of the poetry of the original, and we therefore suggest for adoption a form which may be called rhythmic prose." This is, however, no new thing: from McPherson's 'Ossian,' through Blake and Whitman, to Blackmore's 'Lorna Doone,' authors of various ability have tried their hand at this style of composition, but they have in the long run satisfied only those readers whose ear for the cadences of poetry or prose is dull. There is an air of affectation, a suspicion of "fine writing," about most of these productions, and the "rhythm" is often a source of annoyance rather than of pleasure. Who has not been irritated in reading 'Lorna Doone' aloud, for example, by the constant recurrence of maimed hexameters? Who has not felt the striving after effect in much of 'Ossian'? The fact is, that great English prose possesses a rhythm as distinct and excellent as does our great poetry, and every master of prose, from Hooker and Browne to Carlyle and Ruskin, has carefully abstained from mixing them; for the products of such mixtures are mongrels, wanting the best qualities of either parent.

Prose, then, honest, flexible prose, with no poetical embellishments bound like the wings of Icarus upon it, we believe to be the vehicle by which Dante's epic can best be conveyed to the English reader. The translator's chief aim should be to give the substance unalloyed, and the reader at the outset should understand that the form is untranslatable. And after all it is the substance rather than the form of the world's masterpieces that is most precious; it is that which gives them a cosmopolitan audience and makes them always contemporary. We have but to turn to the Book of Job in

our English Bible in order to see how adequately the substance and spirit of one of the grandest of foreign poems can be rendered in English prose. All attempts to dress the Book of Job in metrical garb have failed: it is possible that similar attempts with the 'Divine Comedy' would not have been made had there been an equally nob'e prose translation of that.

Passing from these general remarks, in which we have tried to set down some of the rules which we believe should govern the translation of a great poem like the 'Divine Comedy,' let us take a concrete example by way of illustration. No passage in all of Dante's epic is better known than those twelve lines in which Francesca da Rimini tells her tragic story ('Inferno,' v, 127-138). How have translators rendered them? First, let us hear the best metrical versions, beginning with Cary's:

"One day
For our delight we read of Lancelot,
How him love thrall'd. Alone we were and no
Suspicion near us. Ofttimes by that reading
Our eyes were d awn together, and the hue
Fled from our alter'd cheek. But at one point
Alone we fell. When of that smile we read,
The wished-for smile, so rapturously kiss'd
By one so deep in love, then he, who ne'er
From me shall separate, at once my lips
All trembling kiss'd. The book and writer both
Were love's purveyors. In its leaves that day
We read no more."

Cary, it must in justice be said, frequently does better than this; his translation, as a whole, is fluent and readable, but it was made at a time when the eighteenth-century fondness for circumlocution and artificial pomp in English verse had not yet been driven out by the victory of the great poets who flourished during the second and third decades of this century. Now Dante, of all men, tolerates no circumlocution; he uses verbs, not adjectives; he expresses his meaning with the swiftness of lightning, but without the lightning's zigzags. How inadequately, therefore, in the passage we have quoted, does Cary's "and the hue Fled from our alter'd cheek" represent Dante's simple, direct phrase, "e scolorocci il viso." And were we to analyze further, we should find in these few lines many other evidences that Cary falls short, not only in words but in spirit; he is like a musical conductor who, after transposing a score to another key, plays it in a different time from that the composer intended.

But a much abler man than Cary has made a translation in blank verse of the 'Divine Comedy.' If the task were feasible, Longfellow, we feel sure, would have achieved it; for he was a poet, a metrist of very conspicuous talents, a scholar who knew Dante literature in its length and breadth, and who was sensitive to the difference of atmosphere between Dante's time and our own; moreover, he enjoyed the privilege of consulting with Mr. Lowell and Mr. Norton while he worked upon his translation. And this is his version of Francesca's story:

"One day we reading were for our delight
Of Launcelot, how Love did him enthral.
Alone we were and without any fear.
Full many a time our eyes together drew
That reading, and drove the color from our faces;
But one point only was it that o'ercame us.
When as we read of the much-longed-for smile
Being by such a nob'e lover kissed,
This one, who ne'er from me shall be divided,
Kissed me upon the mouth all palpitating.
Galeotto was the book and he who wrote it.
That day no farther did we read therein."

This is an improvement on Cary, but the inversions for the sake of the metre, and the use of "palpitating"—a word proper to the libretto of an Italian opera—for Dante's "tremante," destroys that simplicity and intensity which are, we cannot too often repeat, characteristics which it is the first business of any one who attempts to translate the 'Divine Comedy' to reproduce if he can. The throwing in of the word "noble" in the eighth line weakens the force of the original "cotanto"; Dante does not make Francesca say "such a noble," or "such a brave," or "such a passionate" lover, but simply "such a lover," and the reader feels that there is more significance in that indefinite *such* than in a dozen adjectives. The slight pleasure that comes from the metre of this passage does not compensate for the lack of Dantesque qualities; the blank verse, whether of Cary or of Longfellow, has but little suppleness, its rhythm is not spontaneous, and, however accurate it may often be, it rarely charms.

But it happens that Byron made a translation of the Francesca da Rimini episode, and made it in *terza rima*, like the original. Could not he, who had passion, and who sometimes struck off great phrases at white heat, and who, besides, succeeded in transplanting that other Italian metre, the *ottava rima*, to the field of English verse—could not he combine melody and force, and give us a more satisfactory metrical version? We think that he could not, as the following specimen shows:

"We read one day for pastime, seated nigh,
Of Lancliot, how love enchained him too.
We were alone, quite unsuspiciously.
But oft our eyes met, and our cheeks in hue
All o'er discolored by that reading were;
But one point only wholly us o'erthrew:
When we read the long-sighed-for smile of her,
To be thus kissed by such devoted lover,
He who from me can be divided ne'er
Kissed my mouth, trembling in the act all over.
Accursed was the book and he who wrote!
That day no further leaf did we uncover."

We hardly need to point out how inferior this is to Longfellow's and to Cary's version. Not to mention the unidiomatic and clumsy seventh and eighth lines, how many words are inserted in order to fill out the verses! And little satisfaction we get from the rhymes. We reach the conclusion, then, that a metrical version at the best fails to give us the substance of Dante's words, and that if any pleasurable effect is produced by the metrical form, it is by no means an effect similar to that produced by the form of the original. And these conclusions would be confirmed if we examined further the translations quoted above and others which we have not quoted. Let us now turn to Mr. Norton's translation, and see how he treats this passage in prose:

"We were reading one day, for delight, of Lancelot, how love constrained him. We were alone and without any suspicion. Many times that reading made us lift our eyes, and took the color from our faces, but only one point was that which overcame us. When we read of the longed-for smile being kissed by such a lover, this one, who never from me shall be divided, kissed my mouth all trembling. Galahaut was the book, and he who wrote it. That day we read in it no farther."

Here, at length, we have Dante's substance perfectly reproduced—not a word added nor left out, and not a word inappropriate to the time or the speaker. The simplicity and directness of the original are here, and though we necessarily miss the charm of Dante's verse, we have in its stead the charm which belongs to excellent prose—and this, to our thinking, can never be approached by a more or less artificial metrical translation.

Life of James Boswell (of Auchinleck); with an Account of his Sayings, Doings and Writings. By Percy Fitzgerald. With four portraits. 2 vols. D. Appleton & Co. 1891.

THAT Boswell's repute is still proof against the critical analysis to which he is from time to time subjected, is the strongest evidence we can have of its solid foundation. From the time of Croker to the time of Fitzgerald, the task of explaining the incongruities and eccentricities of the most transparent character of which literature gives us any record, has been from time to time eagerly assumed, with the result of leaving the matter very much where it was. Mr. Fitzgerald, whose keenness of vision enables him to discover a mare's nest as far away as any biographer of recent times, has delivered himself of a chapter entitled "Boswell Self-Revealed," in which he declares that he has "opened up a rather piquant subject of inquiry for Boswellians." We turned to the chapter with some curiosity, wondering what this could mean, and found that what Mr. Fitzgerald had in mind was simply that Boswell, in reporting Johnson's conversations, had constantly in mind *himself*, and, knowing his own faulty character, made his writings a sort of vindication of himself *to* himself. The fact is, that any one in writing such a book as the Life of Johnson would have been tempted to show himself in as creditable a light as possible. Boswell alone among biographers is remarkable for revealing himself in a way that no one else ever dreamed of doing. The psychological problem here, if there be one, is simply how a man, otherwise clever and shrewd, could have been so absolutely wanting in the pride either of reticence or reserve; and this is a problem which, it is safe to say, will never be solved in this stage of existence. That he should have been inclined to give anecdotes of others, showing them to be afflicted with his own failings, is neither a mysterious characteristic nor one involving any problem whatever.

Mr. Fitzgerald belongs to the school of biographers which imagines its first duty to be that of pronouncing judgment. Without very voluminous quotations, it would be impossible to give an idea of the extent to which his book exemplifies this theory. It is not merely that at every convenient opportunity he passes judgment on Boswell's moral character, and his unfortunate fondness for the bottle, or that he thinks it his duty to label every quality of his subject's mind and heart with an appropriate epithet; but, even in such matters as jests and repartees, he thinks it advisable to inform us whether, in his opinion, they are good or flat. The effect of this on the reader is not at all what Mr. Fitzgerald imagines it to be. It does not impress him with a conviction that the criticisms are just or appropriate; on the contrary, it fills him with resentment at the critic who is for ever intruding himself upon the view. Especially is this the case in a Life of Boswell, who, one would think, had disarmed such criticism by his own frankness.

What critical value the book has lies in a wholly different direction. Mr. Fitzgerald has devoted a good deal of research to matters of disputed fact, especially wherever he has an opportunity of picking a bone with Dr. Birkbeck Hill. It cannot be said that the result of this is to give a new view of Boswell, for when Mr. Fitzgerald labors hardest, it is almost always when he has least to tell us, and when he discusses most actively, it is when he has least to contribute to the discussion; but by his very failure he often contrives, as in his account of the death of Johnson, to show that the view already commonly held is quite correct, and to put it in a stronger light.

It would be wrong to give the idea that the book is uninteresting. Most of the material out of which it is made is as interesting as any in the world; even the author's flat comment cannot deprive it of its interest. There is no literary period or society so alive for us as that of which Johnson was the sage and Boswell the reporter. Garrick, Reynolds, Goldsmith, Johnson and Boswell themselves, and a host

besides, are not mere portraits for us, they are living human beings. We can almost hear the accents of their voices. That they still live is due chiefly to the wonderful skill and patience of the author of the Life of Johnson. No doubt his qualities lent themselves to caricature. He was laughed at, and by many avoided, throughout his life. Everything about him, moral and intellectual, was grotesque. Even his fidelity to Johnson (ending as it did in unconscious mimicry of Johnson's own eccentricities of manner) had its grotesque side. But the period itself was grotesque according to the smug and proper notions of the nineteenth century. Where we hide and dissemble and affect, they blurted out their feelings and revealed both their virtues and their vices in a way that is all the more entertaining and delightful because it has ceased to be possible. This is what makes us resent the method of biography adopted by Mr. Fitzgerald. If the important thing about Boswell was that he drank too much and too often, or that he was unfaithful to his wife, or that he frequently made himself ridiculous, why weary us with two volumes about him? All these things must be told, for they are part of the man, and since Boswell himself set the fashion, biography has required that we shall have exact, not idealized pictures. But not only has Boswell himself told everything that could be said against him, but the facts do not affect the question of his literary position at all; besides this, the person whom we want to know about is Boswell, not Mr. Fitzgerald. The latter's reflections on wine-bibbing, and women, and egotism, and tuft-hunting may cause us to throw up our hands and exclaim, What a good and wise biographer! But it is not to be impressed with the author's virtues that we take up the book.

There is a good deal that is new in these volumes, but we have space only for a single quotation, an account of the impression made by Boswell, at the time of his tour to Corsica, upon Gen. Paoli. The source from which this is taken is not mentioned, but, even if old, it will bear repetition. We have plenty of English impressions of Boswell. His Corsican host, it seems, took him at first for a mixture of impostor and spy, but speedily discovered his true character:

"He came to my country sudden, and he fetched me some letters of recommending him. But I was of the belief he might, in the verity, be no other person but one impostor. And I supposed, in my *mente*, he was in the privacy one *espy;* for I look away from him to my other companies, and in one moment, when I look back to him, I behold it in his hands his tablet, and one pencil! O, he was at the work, I give it you my honour, of writing down all what I say to some persons whatsoever in the room! Indeed I was angry enough. Pretty much so, I give it you my word. But soon after I discern he was no impostor, and besides, no espy; for soon I find it out I was myself only the monster he came to observe, and to describe with one pencil in his tablet. O, is a very good man, Mr. Boswell, in the bottom! So cheerful, so witty, so gentle, so talkable. But, at the first, O, I was indeed *faché* of the sufficient. I was in one passion, in my mente, very well."

The Complete Angler. By Izaak Walton and Charles Cotton. Boston: Little, Brown & Co.

Of the editions of Walton, now exceeding one hundred, which have followed the first modest volume of 1653, now one of the great prizes of collectors, some half-dozen have been published by Little, Brown & Co., who have given us the one under notice in two small 8vo volumes, with an appendix of notes and commendatory verses, and an introduction of fifty charming pages by James Russell Lowell.

Nothing new can be said in praise of Walton's pastoral. It has become one of the best known of the English classics and the admiration and delight of all lovers of nature and honest, straightforward writing. Through the long life of nearly a century of troublous, unsettled times that Walton lived, he seemed uninfluenced from the even tenor of his ways, and went on steadfastly in his life of simple virtue and ideal calmness and repose, not with an inactive mind, but one keenly observant of matters he was interested in, keeping himself aloof from things repugnant to him; for he says he "will be seen twice in no man's company he does not like, and likes none but such as he believes to be very honest men."

Thomas Westwood, in one of his sonnets, thus apostrophizes him:

"So Fine Ear, stooping with a steadfast will
Above thy mouldering tomb in summer-time,
Hears still what seems a ripple or a rhyme
Unsilenced by the centuries—hears still,
Through chinks and clefts, a little babbling rill,
Then quaint discourse: Piscator's homily,
The voice we honour—Anceps' grave reply,
Venator's jest: and presently a thrill
Of music joyous without fret or jar,
'Come live with me and be my love,' and near
The nightingale's sweet cadence, full and clear,
Or bay of otter hounds from fields afar—
Old life, old sport of Leaside or of Dove,
The life we cherish and the sport we love."

Of the many introductions to the many editions of Walton, that of Sir Harris Nicolas to the Pickering of 1836 is the best of the English ones, and the Rev. Dr. Bethune's notes and bibliographical preface to Wiley & Putnam's edition of 1847 place him in the foremost rank of those inspired by Walton to write of him. That this inspiration came to Mr. Lowell in his latter days all will be glad who read his graceful introduction. It is not merely biographical and critical—the greater part is taken up with his conception of the character of Walton, and it is most just and appreciative. He brings the old man (for somehow Walton never appears young), before us with all his quaint simplicity and innocent keenness, love for the streams, meadows, and groves, and for quiet, as none of his previous biographers have done. Westwood comes nearest, perhaps, but in a different way. How true is this, taken almost at random from Lowell's introduction:

"Walton's weaknesses, too, must be reckoned among his other attractions. He praises a meditative life, and with evident sincerity, but we feel that he liked nothing so well as a good talk. His credulity leaves front and back door invitingly open. For this I rather praise than blame him, since it brought him the chance of a miracle at any odd moment, and this complacency of belief was but a lower form of the same quality of mind that in more serious questions gave him his equanimity of faith."

We recommend this introduction and what it introduces especially to such, and there are some, who may still think that Walton's 'Angler' is merely a book about catching fish.

Adeline's Art Dictionary. Translated from the French and Enlarged. With nearly 2,000 illustrations. D. Appleton & Co. 1891.

Adeline's 'Lexique des Termes d'Art' is, in the original, an indifferent book, unworthy of a place in the famous series of handbooks in which it has been included. On every page it bears irritating evidence of the author's incapacity to give concise, exact, and instructive definitions, such as are demanded in a small and popular book of the kind. The English edition, though enlarged, is not improved; it is the shortcomings, rather than the merits, of the original which have been magnified, the translation being evidently done by a person not trained to dictionary work. The definitions generally are loose, and give but a partial description of the word defined, while they frequently include irrelevant, or, at least, unessential, matter, which might well have been spared. Of what value is it, for example, for the student who wishes to know the precise meaning of the word restoration to read that "the restoration of pictures is a task which necessitates the utmost prudence"? This is the beginning of the article on that word. Further on one reads that "it will never occur again to any sculptor to restore the arms of the Venus of Milo," and that "there can be no doubt that of late years the work of restoring churches has been carried a good deal further in England than it should be." These are interesting opinions—they might, perhaps, be more so if we knew whose opinions they were; but one hardly expects to find them in a small dictionary where one is promised that "he will find definitions concise but to the point." As a specimen of these, we find that "boldness"—under the definition of the word—"is at the opposite pole from tameness." Individuality is defined as "a term which denotes the originality of an artist and the personal character which he communicates to his works. Thus we speak of a strongly marked individuality, a scene the rendering of which lacks individuality, and so is commonplace." Of "private view," which also comes in for a definition, we learn that "of late years invitations have been sent out so indiscriminately that the day on which it is impossible to look at works of art is that on which the private view is held. Private views have, indeed, degenerated into crushes, in which women are stared at and costumes chatted about."

These are fair specimens of the manner in which the book has been compiled. They would not be worth noticing in detail were it not that there is great need of precisely the kind of book which this essays to be, now that the many technical terms of archæology and the various arts are used so freely, and so much knowledge is expected of the lay reader. It being impossible for the writer of popular handbooks to stop and define every term he uses, the 'Art Dictionary' has become a necessity to every beginner, and we confess to great disappointment that in translation Adeline's dictionary has not met this need. The illustrations often save one the trouble of reading the text, being much more to the point, but in some of them, especially those illustrative of Greek art, there is much room for improvement.

The Bible Abridged: being Selections From the Scriptures of the Old and New Testaments. For Families and Schools. Arranged by the Rev. David Greene Haskins, S.T.D. Boston: D. C. Heath & Co.

Stories from the Bible. By the Rev. Alfred J. Church. Macmillan & Co.

Lessons from the Old Testament. Junior course and Senior course. By the Rev. M. G. Glazebrook, M.A., Head Master of Clifton College. London: Percival & Co.

The almost simultaneous appearance of three series of selections from the Bible indicates, at least, the confidence of their compilers that the Bible has still an educational work to do in schools and the domestic circle, while at the same time it is evidence of a grave distrust, in the most orthodox, of the fitness of the Book, in

its entirety, for the work in hand. Dr. Haskins's 'Bible Abridged' contains selections from the Old Testament and New, about 400 closely printed pages. The selections are not made from the Revised Version, but from that of the American Bible Society. This is, however, less to be regretted than the lesson headings which reproduce the glosses of the Authorized Version; those giving a Messianic character to many passages in the Old Testament being made particularly prominent. The bias of the author's taste in his selection is noticeable in many places. From Solomon's Song, which is as finely ethical as any book of the Old Testament, there is not a word. The selections from Job are extremely meagre and not of the most impressive parts, except the prologue. The part of the Almighty in the great dialogue is not drawn upon, as if a hint had been taken from Dr. George P. Fisher, who finds the moral essence of the book in the interpolated speech of Elihu, and dismisses the Almighty as "another interlocutor," as if he had forgotten his name. Only about a dozen of the Psalms are taken, and the glorious 104th, which Humboldt loved, is not included, nor the 139th—omissions passing strange. As the glosses of the titles are a theological interpretation of the text, so is the arrangement of the selections from the gospels a critical interpretation, for it is based on Jarvis's 'New Harmony of the Gospels,' which violently subjects the chronology of the Synoptics to that of the Fourth Gospel.

The treatment is much freer in the Rev. Alfred J. Church's 'Stories from the Bible.' The author's 'Stories from Homer' and 'Stories from Virgil' were so admirable that we had great hopes of this volume, which are not disappointed by the event. There is no critical discrimination, and no attempt to soften any glare of the miraculous. The language of the Bible is generally used, and sometimes imitated with good success. The illustrations, which are after those of Julius Schnorr, are admirably conceived, with perhaps a too eager predilection for angelophanies and the violent posturings of nude figures, which have, however, always a classic refinement.

Mr. Glazebrook's 'Lessons from the Old Testament, a Junior series in one volume and a Senior course in two, have something more of a critical element in them than the other volumes on our list. The Revised Version being copyright, the text of the Authorized Version has been used, with corrections where the text was obscure or wholly wrong—generally following the 'Variorum Bible' of Canons Cheyne and Driver. The name "Jehovah" has been substituted for "the Lord," as advised by the American Revisers. The text has been judiciously Bowdlerized of words and phrases and incidents too bold or innocent for general use. But by far the most important feature of the compilation is its adoption of the Jehovistic or prophetic narrative of the Pentateuch and Joshua as the general thread, on which, however, some bright bead from the Elohistic, priestly portions of the Pentateuch is occasionally slipped; and, similarly, the prophetic narrative of Samuel and Kings is supplemented by extracts from the priestly narrative in Chronicles. Extracts from the priestly portions of the Pentateuch and Joshua and Chronicles also are given in an appendix. A succession of admirable foot-notes elucidates difficult passages and defines obsolete words. The Junior series is intended for boys and girls under thirteen, and the Senior series for those from thirteen to eighteen years old. Mr. Glazebrook quotes by permission the approval of the Head Masters of Rugby and Clifton.

Thirteen Essays on Education. By Members of the XIII. London: Percival & Co. 1891.

STUDENTS of education will find in this volume some interesting discussion of the problems that vex English public schools. It is made up of a collection of papers read at the meetings of a schoolmasters' club. They are all practical, and concern matters which often have but a slight relation to our school system, but they afford a very lively notion of the difficulties, and to a certain extent the confusion, felt in the educational reform which has already wrought so many changes in the old system. The essays on the religious education of boys, and the teaching of Holy Scripture, though admirable from the point of view of an English master, do not touch us with any nearness; those on the scholarship question, and the universities and specialization, which are related subjects, are even more strictly meant for home consumption; but other titles, such as "Commercial Education," "An Educational Museum," and "The Teaching of Music," are full of excellent material and suggestion for ourselves.

The special topic of English literature gives opportunity for a strong protest against the method, which has recently spread so much, of teaching English authors by texts, with philological and other comments, after the manner used ordinarily in classical instruction; and in the three essays upon the study of Greek, although there is much threshing of old straw, there is a useful contribution to our knowledge of facts. Indeed, the statistics scattered through the volume, which, though often imperfect, have been carefully gathered, are of uncommon interest. For example, in the essay on music, by the Assistant Master at Harrow, there is an account of just how music is taught in several great public schools, with tables and figures to illustrate its success; and the statistics as to the age at which English boys begin Greek are equally interesting, and seem to show that a later age of beginning does not practically lessen the amount actually acquired at the time of entering the universities. The ideas in the volume are not new, and they are treated in so practical a way, with a direct reference to the particular condition of English schools, as to render them of little value elsewhere; but, on the other hand, they illustrate all the better the state of the English schoolmaster's mind and the drift of opinion. It is noticeable that one point upon which all seem to agree is, that the teaching of natural science from which so much was expected, has proved disappointing; the study has shown the same tendency as the older literary studies, to become a routine of memory-cramming, and the results are not believed to have been so good as under the old system. This, as we already know, is also the experience of Germany.

Electricity and Magnetism. Translated from the French of Amédée Guillemin. Revised and edited by Silvanus P. Thompson. Macmillan & Co. 1891.

THE very handsome and portly volume which forms the subject of the present notice has been translated under the supervision of Prof. S. P. Thompson, who has enriched the work with many valuable notes, and almost rewritten the chapters on the telephone and dynamo-electric machine. It contains nearly six hundred woodcuts, which are for the most part well executed. Though not intended as a text-book, it may be very advantageously used in connection with the smaller strictly scientific treatises. In fact, such is the proper sphere of the work, though the editor states that it is intended for the drawing-room rather than for the desk of the student—a view of the work which gives one a higher idea of the intellectual character of drawing-rooms than is usually held by scientific men. The work covers, and covers at least fairly well, the sciences of magnetism and electricity, with a long list of their applications. Many chapters are very attractive. We do not remember to have seen the subject of the aurora so fully and so agreeably presented, the woodcuts being very well selected. Pure magnetism is always a dry subject, the meagre details of our knowledge being contrasted with the immense wealth and splendor of electrical science, yet our author manages to give it a certain interest. Book second is occupied with electricity, which is treated very much after the manner of text-books. Electro-magnetism comes next, followed by induction and inductive machines. Here we fail to find any allusion to the work of Joseph Henry—an omission which is the more noticeable because our author is unusually fair towards American investigators as well as inventors. The chapters on luminous electric discharges, electric meteorology, and atmospheric electricity are good examples of popular scientific writing.

The second part of the work is devoted to the practical applications of magnetism and electricity, and, without being in any sense exhaustive, is very rich in details. Thus we find a description of the photophone of Bell and Tainter which, so far as we know, is not to be found in text-books. Of subjects not usually treated in these we may mention a chapter on electric warfare, an account of electric sorters for separating magnetic from non-magnetic particles, an electric brake for railroads, Edison's electric pen, and the photo-electric miners' lamp of Dumas and Benoit. The work closes with a sufficient account of electric transformers, now beginning to play a very important part in electric lighting.

Some of the statistical data are rather antiquated, as, for example, the statement of the telegraphic mileage of the United States in 1881; but the account of telegraphic distribution on the earth's surface is illustrated by a good map which fairly represents the case. It is natural that in such a work there should be some omissions. Thus, House's printing-telegraph, used for some time in this country, deserves notice with that of Hughes, as does also the so-called chemical telegraph of Bain, which at one time threatened to drive Morse out of the field, and which we believe was finally got rid of by purchase. The electric motor of Bourbouze is only a modification of that of the late Charles G. Page, to whom the principle is due. Omissions are, however, unavoidable in such a work, and, being not numerous, detract but little from its practical value, especially as the spirit of the author is eminently fair and he never offensively brandishes his French nationality. Perhaps we may venture to indulge the hope that sooner or later we may see the subjects of Heat and Light treated in the same attractive manner.

The Woman's Manual of Parliamentary Law, with practical illustrations especially adapted to women's organizations. By Harriette R. Shattuck, President of the Boston Political Class. Boston: Lee & Shepard. 16mo, pp. 248.

SOME two years ago, we were impelled to say, apropos of Crocker's Manual, that many

writers seem to think that Cushing-and-water will be more wholesome or more palatable than the original. Mrs. Shattuck's book is an additional proof of our statement that the science of parliamentary law is a small subject, easily mastered by one with a natural taste for it, but of no value to most persons, and by them difficult of acquisition. This book merely leads us to emphasize the fact that by "most persons" we mean women as well as men.

It would be useless and invidious to try to ascertain which sex has the less natural capacity for this particular branch of learning; Mrs. Shattuck thinks that women have far fewer casual opportunities than men to witness and hence to acquire the art of presiding over a public meeting. The plain fact, however, remains, that any woman or any man possessed of the patience and desire which would lead her or him to read, understand, and commit to memory the contents of this book, would be equally competent to digest Cushing's Manual in far less time. Mrs. Shattuck would probably make a very good presiding officer, as she evidently knows and comprehends the principles of the art; but she cannot communicate that power to her reader. There are several manuals in print prepared on this plan, and the only possible excuse for her book is that its title may lead to its purchase by the sex which usually ignores such matters.

For any society or casual assemblage a few rules of order can be briefly formulated:

(1.) Get a competent person for chairman and obey his rulings.

(2.) Remember that the vote of the majority is final.

(3.) Speak in turn, and only after the chairman gives you the floor.

(4.) Keep your temper, and know when you are beaten.

With these four rules kept in mind, a large body will be orderly and can transact business; a neglect of them will turn a dozen ladies and gentlemen into a disorderly mob. All the refinements of parliamentary proceedings are meant to give effect to the transaction of business, when properly used; or else are used, as are the forms of law in courts, merely to thwart the wishes of the majority. But even as a jury is not expected to take upon itself the duties of the judge, so the assembly cannot do its part by debates and votes, and at the same time undertake to question or override the decisions of its chairman.

Biographical Sketches of the Delegates from Georgia to the Continental Congress. By Charles C. Jones, LL.D. Boston: Houghton, Mifflin & Co. 1891.

THE biographical sketches here gathered into a sheaf are of the nature of a light aftermath gleaned by Dr. Jones from the same fields which he had previously harvested in his copious 'History of Georgia.' Whether it be from a dearth of materials appropriate to the uses of biography, or from some new law of parsimony applied to the making of many books, it is certain that Dr. Jones has conceived that he could sometimes best accomplish his work as biographer by making free drafts on his work as historian—and this not only for matter of substance, but also for matter of form. Page after page and paragraph after paragraph are extracted from the 'History' to be reset in these 'Sketches,' sometimes with textual exactitude, and sometimes with slight modifications of phrase which hardly serve to hide the seams of the literary suture. Whatever gain of gross product may accrue from such labor-saving methods in the work of literary composition, it is likely to be attended with some loss of net result on the score of literary ensemble and of rhetorical freshness. Where pieces of whole cloth, originally belonging to another fabric, are selected for insertion into the warp and woof of a new tissue, it is not always easy to effect a perfect juncture between the two products; and this problem becomes specially difficult if, among the passages or paragraphs compelled to pay a double debt, there should chance to be now and then some *purpureus pannus*, better fitted for the singing robes of the poet than for the Quaker garb of pedestrian prose, like, for instance, the passage torn from page 271 in the second volume of the 'History,' to be embroidered in full color on page 67 of the 'Sketches' before us. To most persons it would seem enough to say only once of Button Gwinnett, that, "rising like a meteor, he shot athwart the zenith of the young commonwealth, concentrating the gaze of all, and in a short moment was seen no more." The same lump of Attic salt is liable to lose its savor if used to season too many broths. We notice with a mild surprise that Dr. Jones has not been willing to write even a preface to these 'Biographical Sketches' without laying the body of his 'History' under contribution for a small portion of his prefatory text.

The author makes it clear by the *copia verborum* of his 'History' that any economy on his part in point of literary method does not spring from penury of diction. His style is only too exuberant, and perhaps it is this very fact which explains the overflow from one volume to the other. And he is to be commended for his self-control in not allowing his biographical enthusiasm to get the better of his candor in pronouncing judgment on the men here passed in review. Frankly admitting that the record of the service rendered by the members from Georgia in the Continental Congress "may not be as brilliant or as valuable as that of some of the delegates from other colonies," Dr. Jones is able to show that, with the exception of Dr. Zubly, and perhaps of Gen. Gunn, they were "all good and true men." The biographies of twenty-five men are here given in outline, and we have been specially pleased with the sketches of Dr. Lyman Hall, of Gen. Lachlan McIntosh, and of Chief-Justice George Walton. We venture the opinion that a somewhat fuller sketch was due to the life and services of Abraham Baldwin, and the materials for such a sketch are not far to seek. We notice that in referring to the "Schovilite bandits" who once harried the Revolutionary patriots of Georgia, Dr. Jones gives to the readers of these sketches no sufficient explanation of the origin or significance of that designation. A clue to the predatory gang and to their alliance with the Tories of the Revolutionary period may be found on p. 169 and p. 287 of the second volume of the author's 'History of Georgia,' and on pp. 160, 166, of Stevens's 'History of Georgia,' where the name is spelt "Scophalites."

The Women of the French Salons. By Amelia Gere Mason. The Century Co.

THERE are so many entertaining pages in this book that one regrets the author should have felt compelled to speak, at more or less length, of all the important salons, and thus have treated of personages or epochs less interesting to her personally and consequently represented imperfectly, or at least with much diminished grace and brilliancy. The period which seems to appeal most directly to her is the eighteenth century, and the chapter devoted to it is, with those on Mme. de Lambert, Mme. Geoffrin, and Mme. du Deffand, the best part of the book for *verve* and brightness. The account of the seventeenth-century salons and of those of the Empire and the Restoration is by no means as vivid, and more than one page seems pale and dull. But it is no easy matter to paint a series of portraits of personages not only widely different in character, but of different degrees of attractiveness. This is the weakest part of the book; one feels a lack of appreciation of some of the women spoken of, a haunting sense that the account is "to order." Here and there, also, when the author ventures, which she seldom does, upon a literary judgment, some reservation must be made. But as far as giving English readers not already acquainted with French salons and their leaders a fair idea of the peculiar influence they exercised, and the character of the principal writers who frequented them, the book may be cordially commended. The *Century* articles were much read in magazine form; thus collected into a handsome, well-printed and illustrated volume, they will be reread with interest and consulted with profit, within the limits indicated above.

BOOKS OF THE WEEK.

Arnold, Sir Edwin. Seas and Lands. Longmans, Green & Co. $5.
Austin, Jane G. Betty Alden: The First-Born Daughter of the Pilgrims. Boston: Houghton, Mifflin & Co. $1.25.
Bacon, E. M. The Pocket Piece. New York: Walbridge & Co.
Baldwin, Prof. J. Mark. Handbook of Psychology: Feeling and Will. Henry Holt & Co.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

IMPORTANT ANNOUNCEMENT.

The Philosophical Review.

Edited by J. G. SCHURMAN.
Annual subscription price (six numbers), $3.00.
VOLUME I., NUMBER 1, JANUARY, 1892,
WILL CONTAIN:
I. Prefatory Note, by J. G. Schurman.
II. The Critical Philosophy and Idealism, by John Watson.
III. Psychology as so-called "Natural Science," by George T. Ladd.
IV. On Some Psychological Aspects of the Chinese Musical System, by Benj. Ives Gilman.
V. Reviews of Books by J. G. Schurman.
Other periodicals published by us:
JOURNAL OF MORPHOLOGY.
AMERICAN JOURNAL OF ARCHÆOLOGY AND HISTORY OF THE FINE ARTS.
POLITICAL SCIENCE QUARTERLY.
To appear January 1, 1892, SCHOOL AND COLLEGE, a Journal of Secondary Education.

GINN & COMPANY, Publishers,
BOSTON, NEW YORK, CHICAGO AND LONDON.

The Chautauqua Circle.

You have heard vaguely, perhaps, of the Chautauqua Reading Circle, but do you know what its plans are? Do you never feel the need of reading good books systematically? Should you not like to take up a definite course and pursue it regularly during the coming winter? A solitary reader writes: "The course lifts me out of my old life.' A little perseverance for an hour each day will accomplish much. American History, Government, and Literature, the chief subjects for 1891–92, certainly appeal to all patriotic men and women. At least, write for full details of the plan to the *Office of the C. L. S. C.*, Drawer 194, Buffalo, N. Y.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

LADY WANTED AS ASSISTANT IN editorial office Southern religious and literary weekly. Previous experience not necessary if applicant has proper qualifications. Address SOUTHERN EDITOR, care of the *Nation*.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

SILVER, BURDETT & CO.,

PUBLISHERS,

6 HANCOCK AVENUE, BOSTON,

TWILIGHT PARK IN OCTOBER.

"When the frost is on the punkin
And the fodder's in the shock"—

Mountain scenery has been described to death. We have been surfeited with "word painting." Who can surpass Ruskin, Hamerton, Black, Tyndall, and Daudet in that field? Therefore I shall not gush or poetize over October foliage and Indian summer, but will write bald prose in the catalogue style, to set forth the attractions of the Park, like Olivia's inventory of her personal charms in "Twelfth Night":

Item.—One moon (very full, but it did not get so in the Park).

Item.—One sentinel star (Jupiter) at its Evening Post. (!)

Item.—One large and elaborate waterfall, which is "turned on" with a lever, for 25 cents per head, and which tumbles in unruly fashion down a rocky cliff some 160 feet, as Bill Nye would say, with "a cold, sickening thud."

Item.—Five "bloomin'" cascades with considerable "crystal foam" and general tumultuousness, reached by 475 feet of rickety and very ancient stairs.

Item.—Several spacious and elaborate "views," adapted to all sizes of cameras and cut bias by the mountains.

Item.—A large collection of forest trees of different dimensions and of highly variegated hues; 17 brooks arranged to "murmur" at suitable times and in the right key to suit the most fastidious taste; 9 rippling streams; a baker's dozen of crystal springs, and about 13,692 square yards of velvet moss tastefully spread over rocks and ledges by an experienced decorator and "window dresser."

Item.—Several miles of roads made of dirt and gravel, averaging 16 feet in width and leading to other "views" and "scenery."

Item.—An extensive collection of clouds formed of aqueous vapor, self-acting, interchangeable, and easily replaceable, so that "they never will be mist."

Item.—A number of twinkling stars; one set of brand-new Northern lights; one sunset much worn by use, but still serviceable, and a patent, self-regulating "Twilight" with an "in the gloaming" attachment; rustic seats, lovers' walks, and other adjuncts for flirting.

Item.—One club-house parlor, with stone chimney and open fire-place; 13 assorted rockers; a piano; old-fashioned inlaid clock, pictures, lamp, and other conveniences for comfort; good beds and lots of blankets.

Item.—Beef, bread, 'taters, griddle-cakes, pie (nine kinds), hot biscuits, eggs, home-made preserves, real milk with yellow scum; maple syrup, country sausage, roasting chestnuts, pop corn, and sweet cider for any number of guests.

Item.—Numerous birds, squirrels, chipmunks, woodchucks, foxes, coons, porcupines, and an occasional bear; also two Irish setters, a Fox colley, one shepherd, and one mongrel—half shepherd and half plain purp.

Item—A number of mountain peaks about four thousand feet high, entirely free to climbers; an unlimited quantity of rocks of all shapes and sizes, and a superabundance of pure, bracing air—real native American air—neither English, Irish, French, Swiss, nor Teutonic. (!)

During the past fortnight we have had 28 visitors, and they have enjoyed the October foliage immensely. Eight lots were bought near "Squirrel Inn," and an option taken on a dozen others. These lots will double in value as soon as the new Inn is built. Why should people seek investments in the far West when they can safely make fifteen per cent. so near by?

Our visitors included a clergyman, three artists, a well-known author, and a physician. They were all particularly interested in the $1,000 log cabins, and in the new "Cliff Cottage" building for Jennie June. We could sell a bushel of such cozy houses if we had the money to put them up. That is why we are tempting buyers by low prices so as to build before spring. Five houses are under way and eight others ordered. We shall be noisy all winter with hammer and plane.

The Club-House is always open, and Indian Summer is here. Three hours by the West Shore only to Saugerties, and the drive up the Kaaterskill Clove is entrancing.

D. Appleton & Co.'s

NEW BOOKS.

POEMS.

By WILLIAM E. H. LECKY, author of "The History of England in the Eighteenth Century." 18mo. White vellum, stamped in gold, $1.00.

Only the personal friends of the eminent historian have known his verses, and this is his first public appearance as a poet.

A TEXT-BOOK IN PSYCHOLOGY.

An attempt to found the Science of Psychology on Experience, Metaphysics, and Mathematics. By JOHANN FRIEDRICH HERBART. Translated from the original German by MARGARET K. SMITH, Teacher in the State Normal School at Oswego, New York. International Education Series, Vol. XVIII. 12mo. Cloth, $1.00.

The central idea of the Herbartian philosophy is *apperception*, which is explained by the editor, Dr. Harris, in his preface, as follows: "In *perception* we have an object presented to our senses, but in *apperception* we identify the object or those features of it which were familiar to us before; we recognize it; we explain it; we interpret the new by our previous knowledge, and thus are enabled to proceed from the known to the unknown, and make new acquisitions; in recognizing the object we classify it under various general classes; in identifying it with what we have seen before we note also differences which characterize the new object and lead to the definition of new species or varieties. All this and much more belong to the process called *apperception*, and we see at once that the chief business of school instruction is to build up the process of apperception."

STRAIGHT ON.

A story of a boy's school-life in France. By the author of "The Story of Colette." With 86 Illustrations by Edouard Zier. 320 pages. 12mo. Cloth, $1.50.

An interesting story of the experiences of a French officer's son, who, being left an orphan at an early age, resides with relatives while attending a military school. It is an absorbing narrative, charmingly told and appropriately illustrated. The last words of the hero's father to his son—which the boy adopts as his motto—give the title to the book.

For sale by all booksellers; or will be sent by mail on receipt of price by the publishers.

DR. GUNSAULUS'S GREAT NOVEL.

Monk and Knight.

An Historical Study in Fiction. By FRANK W GUNSAULUS. 2 vols. Crown 8vo. $2.50.

"If it is not a romance of extraordinary value, we are at fault in our judgment. . . . It is not only readable, but deeply interesting from beginning to end. . . . It reads like a biography at times, and at other times like outright history; yet one never misses the story, a sort of prose epic, that glimpses here and comes out full and strong yonder all the way along."—*Independent, New York.*

"Read Chapter VI, Volume II, on Rome, and then say by how little the writer has missed, if, indeed, he has missed, the laurel wreath of genius."—*Boston Traveller.*

"Although a novel, this work may well have place among the books of spiritual suggestion for the student of mankind."—*Journal of Education.*

COLUMBUS'S FIRST VOYAGE

With the Admiral of the Ocean-Sea.

A Narrative of the First Voyage to the Western World. Drawn Mainly from the Diary of CHRISTOPHER COLUMBUS. By CHARLES P. MACKIE Crown, 8vo, gilt top, $1.75.

"It is safe to say that no reader who peruses the first dozen pages will lay it away without finishing it. It is a most entertaining and instructive volume from cover to cover. The author's style is concise and graceful, we might say charming; and the publishers have put the matter before us in as neat a book as we have seen for many a day."—*Rasmus B. Anderson, in The Dial.*

"It is peculiarly well adapted to popularize the knowledge it embodies, for the subject is not presented after the manner of the ordinary historical work, but in the form of a story told wherever possible in the exact language which Columbus and his companions used in their narrative and in their recorded conversations."—*Congregationalist.*

A STORY OF PITTSBURGH AND THE OHIO.

Down the O-hi-o.

By CHARLES H. ROBERTS. 12mo, $1.25.

"It is an extraordinarily graphic picture of life along the great river in the old slave times. It is filled with incident and adventure, quaint character sketches, and delightful humor. Moreover, the literary finish of the book is rare and grateful."—*Buffalo Courier.*

A STORY OF SOUTHERN ILLINOIS.

From Timber to Town Down in Egypt.

A Dialect Story by an Early Settler. 16mo, $1.00.

"From whatever point I view the work it seems faultless, perfect. Genius is disclosed at every turn and corner. The exquisitely chaste love story charms the soul."—*Hon. John R. Thomas, in letter to Chicago Tribune.*

For sale by all booksellers generally, or sent, postpaid, on receipt of price, by the Publishers.

JUST PUBLISHED.

THE

French in America

DURING THE

War of Independence of the United States, 1777-1783.

A Translation by THOMAS WILLING BALCH of

Les Francais en Amérique,

PENDANT LA

Guerre de L'Indépendance des États-Unis.

Par THOMAS BALCH.

1 vol., 8vo, cloth extra. With Maps. $2.50.

Mr. Balch's book gives a complete sketch of the origin and events of the Revolutionary War, and a detailed account of the French force under Rochambeau, which contributed so largely to the final result. He supplies a thorough statement of the French regiments, and of the officers and volunteers who led them with such distinguished gallantry. It is particularly valuable from the contemporaneous picture of American life as it was seen and described by these cultivated French officers in their letters home and in the journals left by them.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 28.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.

For references and circular address MRS. E. L. HEAD, Germantown, Pa.

Teachers, etc.

A YOUNG LADY ACCUSTOMED TO teaching desires a position as governess or companion. Qualified to teach English branches, French, drawing, and painting. Address "B.," the *Nation.*

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

School Agencies.

Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York; Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. LII. comprising the first half-year of 1891.]

GOLD MEDAL, PARIS, 1878.
W. BAKER & CO.'S
Breakfast Cocoa

from which the excess of oil has been removed,
Is absolutely pure and it is soluble.
No Chemicals
are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.
Sold by Grocers everywhere.

Is to-day, as it ever has been, the Leading Typewriter. Carefully tested improvements are constantly added to this famous machine.

SEND FOR AN ILLUSTRATED CATALOGUE AND PRICE LIST OF OUR "PARAGON" TYPEWRITER RIBBONS.

Charles Scribner's Sons'
NEW BOOKS.

Marie Antoinette and the Downfall of Royalty.

A new volume on the Famous Women of the French Court. Translated from the French of IMBERT DE SAINT-AMAND. Each with Portrait. 12mo, $1.25.

The terrible scenes of the Revolution down to the abolition of royalty and the declaration of the Republic are here narrated. This volume, with the nine already issued, complete the list of those dealing with the momentous times before, during, and after the Revolution.

3 vols. on Marie Antoinette, in a box, $3.75.
3 vols. on the Empress Josephine, in a box, $3.75.
4 vols. on the Empress Marie Louise, in a box, $5.00.

Ocean Steamships.

By various authors. Fully illustrated, 8vo, $3.00.

The plan of this handsome volume is the same as that of the famous "American Railways" and "Electricity in Daily Life." Every phase of the construction, development, management, and appliances of the great transatlantic liners is treated by an expert, special attention being paid to the daily life of passengers and crew.

Jesus, the Carpenter of Nazareth.

By a Layman. 12mo, $1.50.

This is a simple, realistic, yet an almost poetical life of Christ, in which the Gospel narrative is retold with many a vivid touch and graphic picture. Its perfect naturalness and ease of movement, its simple language and the freshness of its style and method will captivate not only the younger readers for whom it is designed, but every lover of the Gospel's story.

Among the Camps.

Or Young People's Stories of the War. By THOMAS NELSON PAGE. Illustrated. Square 8vo, $1.50.

In this volume Mr. Page has told some Virginia stories of the war, which will touch the heart of every reader, young or old, and which will rival the author's "Two Little Confederates" in popularity.

Children's Stories in English Literature.

From Shakespeare to Tennyson. By HENRIETTA CHRISTIAN WRIGHT. Uniform with From Taliesin to Shakespeare, already published. Each 12mo, $1.25.

"Miss Wright has endeared herself to a host of readers by her stories of history and science, but she has never produced a book so thoroughly fascinating as this."—*Boston Beacon.*

On the Border with Crook.

By Captain JOHN G. BOURKE, U.S.A. Illustrated. 8vo, $3.50.

"Familiarity with a particular branch of the service, combined with a topographical knowledge of the Indian country, renders Capt. Bourke especially fitted for the writing of this volume. It is something to carry a sabre and besides that to wield a clever pen."—*N. Y. Times.*

The Divorce of Catherine of Aragon.

The story as told by the Imperial Ambassadors resident at the Court of Henry VIII. By JAMES ANTHONY FROUDE. 8vo, $2.50.

"It is almost as remarkable for its introduction as for its fresh contributions to the history of Henry VIII. His history remains a monument, and his fame as a writer of English overtops that of any other man of his time."—G. W. SMALLEY, *in the N. Y. Tribune.*

The Nation.

NEW YORK, THURSDAY, NOVEMBER 12, 1891.

The Week.

Now that Secretary Foster has finished campaigning in Ohio, and has no longer any motive for concealing the facts about the condition of the Treasury, we think he ought to let the public know how serious that condition is. The record of Treasury receipts and expenditures for October completes four months of the current fiscal year, and shows the same alarming falling off in income that has been noticeable ever since the McKinley tariff took full effect. For the last four months the receipts from customs have been but $58,734,456, or $32,504,262 less than for the same period last year. This is at the rate of a reduction in revenue of $97,512,786 a year in customs alone. While the returns on the score of internal revenue show a slight increase for the first third of the year, there is a falling off in other items which brings the total receipts of the Treasury for the period down to $119,746 995, as compared with the corresponding $154,930,894 in 1890. Here, then, is a total diminution of revenue going on at the rate of $105,551,697 yearly. Now it is perfectly futile for Mr. Foster to keep saying, in the face of this showing, that the Treasury is in an "easy" condition. It is in the highly uneasy condition of a man with more debts than money. The appropriations call for an outlay of $166,000,000 during the time when the revenue has been but $119,000,000. That means an annual deficit of more than $140,000,000. Does the Secretary call that "easy"? It is certain he does not do so in his private talks with bankers, whatever he may feel compelled to say on the stump. It is well known that he has been advised by friendly bankers to "hold up" appropriations. That is just what he has been doing, as the figures show on their face. He has been putting off the evil day as long as possible; but he will have to tell the truth in his report to Congress next month, and then the hope of his party that the Democrats may blunder in financial matters will have at least this basis to go upon, that an unsurpassed model of blundering has been set them by the Republicans.

Senator Vest of Missouri, who has been one of the most urgent of the free-silver advocates, follows the lead of Mr. Mills, and puts the silver question in the background till after the next Presidential election. In an interview which was published on Monday, he says that the recent elections make it certain that the Democratic Presidential ticket next year will be "Cleveland and Boies, or Cleveland and Gray, but always Cleveland," and adds:

"You want to know how silver Democrats like myself will stand as to his candidacy? We will support him earnestly and loyally, for we believe him to be wrong, but honestly wrong, and he has as much right to his opinion as we have to ours. The views of any Democrat as to free coinage constitute no test of party fealty, for our party in national convention has never so declared. Above all, however, and this is with me conclusive, Mr. Cleveland can be elected on the issue of tariff reform, and I regard the defeat of the Republican party at the next election as the greatest possible good for the country. Every Democrat should be willing to postpone the silver question, if it be necessary, to prevent Republican success."

This means that there will be no free-coinage bill passed by the next Congress, as Senator Sherman, and every other Republican leader who is longing to get away from the McKinley tariff issue, has been hoping there would be.

The Iowa Republicans are still struggling with the problem of what to do about prohibition. Although the Democrats secured control of the State Senate, the Republicans have a small majority in the lower branch of the Legislature. Gov. Boies will, of course, renew his recommendations for the repeal of the prohibitory law, and the substitution of a high-license and local-option system, and the Democratic Senate will pass a bill embodying these ideas. The question will then be, Shall the Republican House allow this bill to pass that body? The votes of four or five Republicans will suffice to give it a majority and thus abolish prohibition. Gov. Boies expresses confidence that the needed votes will be secured, and there are undoubtedly a great many Republicans who would like to see this happen. The difficulty is, that the Republicans made their campaign on a distinct pledge to stand by the existing law. As their State platform put it: "We submit to the people of Iowa the determination of the issue, recognizing that the control of the next Legislature by the Democratic party means State-wide license, and that the control of the next Legislature by the Republicans means continued opposition to the behests of the saloon power through the maintenance and enforcement of the law."

The Republicans consequently find themselves in a terrible quandary. Three successive elections have shown that they cannot hope to carry the State so long as prohibition remains the chief issue and they stand by the law. It would, therefore, seem the part of wisdom for them to help the Democrats in the Legislature to repeal the law. But they can do this only by breaking the most binding pledges to maintain the law. Moreover, if they do break these pledges, there can be no doubt that many of those Republicans who believe in prohibition will be so much incensed against the party that they will refuse to support it after it thus yields to "the behests of the saloon power." If four or five Republicans had been nominated and elected to the Legislature upon a personal platform of independence in this matter, and with the understanding that they reserved the right to vote as they chose on the question, the case would not be so bad for the party, but there does not appear to be a single such representative. The choice must be made between keeping the party's pledge, and thereby offending again the anti-Prohibition Republicans, and breaking the pledge, and thereby disgusting the Prohibition Republicans, with the cheerful conviction that they "will be damned if they do and damned if they don't."

Mr. Lacey's singular conception of the duties of Comptroller of the Currency has received fresh illustration from the Maverick Bank affair. There is, indeed, a parallel both instructive and disheartening between the action of the Comptroller in this case and in the case of the Keystone Bank of Philadelphia. The Philadelphia Bank Examiner, Mr. Drew, reported to Mr. Lacey on the Keystone Bank's rotten condition fully a year before the collapse came. So far back as last January, Mr. Magruder, the competent Bank Examiner of Boston, notified the Comptroller that the Maverick Bank was virtually insolvent. In both instances the warning of the experts was utterly ignored at Washington. Mr. Magruder continued his warnings as time went on and the bank's condition grew worse. To offset these warnings, the President of the Maverick Bank, a reckless speculator, went personally to Washington. Apparently he, like the dishonest President of the Keystone, was able to apply the screws of political influence, and the Bank Examiner's appeals were calmly pigeon-holed. In the end, the anxiety so worked upon Mr. Magruder that he broke down in health and died, leaving behind him, more fortunate than Mr. Drew, letters and documents fully clearing his official character. While this serene indifference prevailed at Washington, the officers of the Maverick Bank were engaged in violating the fundamental provisions of the National Bank Act. Its President took out on his personal note or endorsement $1,200,000, or thirty times as much as he had a legal right to borrow, presumably to pull him through his own unlucky ventures. Two directors helped themselves to $900,000 more; and all this, be it remembered, months after the Bank Examiner had notified his superior officer that the institution was insolvent. For ten months depositors were left to put their money in the rotten bank, trusting, like all depositors in national banks, that silence by the national banking bureau was equivalent to a guarantee of solvency.

Judge Ross of the U. S. District Court in California has directed a verdict of acquittal in the prosecution of Trumbull, the Chilian agent, and Burt for fitting out the *Itata* in violation of the neutrality laws. The Judge

found that the arms were put on board the *Itata* simply for transmission to Chili, that this did not constitute a violation of the statute, and that the secrecy with which it was done was a wholly irrelevant fact. All this reminds us of the inestimable service which we rendered to the editor of the *Times* last May, when he sent his cruiser, the *Charleston*, after the *Itata*, and said that if she "was blown out of the water," the owners would have themselves to thank, for had they not "violated our laws"? We pointed out respectfully that it would be a terrible thing to blow a ship out of the water for an offence which was at most a misdemeanor, punishable with a short term of imprisonment, and that it would never do to blow her out of the water without trial, and allow the captain of the *Charleston* to be judge, jury, and executioner all in one. At first the editor would not hear of leniency, but we believe these representations of ours at last had their intended effect, and induced our truculent but estimable contemporary to desist from his fell purpose. The "chase" was continued, but, we surmise, with secret instructions not to catch the *Itata*, as she had not left behind any memorandum of the course she would take. Is it too much to suppose that we thus saved him from undying remorse? He cannot be too careful of the way he uses his navy in time of peace.

Judge Ross's decision in this case of the *Itata*, following on his decision in the case of the *Robert and Minnie*, and supported as it is by Judge Blatchford's decision in the *Florida* case in 1871, seems to establish the rule that it is no violation of neutrality to sell arms to a belligerent, or to ship them for transportation to a belligerent port, but simply an operation of lawful trade. We believe the Chilians had good legal opinion to this effect before they purchased the arms in New York. It is a rule, too, which our Government, as one likely to be neutral in nearly all possible wars, ought to have asserted and upheld in the interest of American commerce and manufactures, and would doubtless have upheld if the interest of the Administration in the Chilian conflict had been simply diplomatic. We observe that its organs claim great credit for Secretary Tracy because, on hearing from Balmaceda that he had "outlawed" the Chilian fleet, he did not allow our navy to treat the Chilian men-of-war as "pirates." But suppose President Harrison had dispersed Congress by force of arms, and closed the Supreme Court, and announced that he was going to govern the country dictatorially, and the American fleet had refused any longer to obey his orders, and had transferred its allegiance to Congress as the only surviving portion of the lawful government—should we have thanked Great Britain for not setting upon it and capturing it as piratical?

The creed-revision movement in the Presbyterian Church has brought out a great many surprising views, but we doubt if there have been any advanced anywhere so startling as those in the paper read in the New York Presbytery on Monday in support of the report on revision. Said the speaker: "Election unto eternal life is Scriptural. . . . But no foreordination unto death, passing-by, or non-election, *however logically they may seem to be inferable* from the former, etc." And he added: "Let our poor little *logic* go." After such a complete abandonment of the whole basis of theology considered as a science, the puzzling thing is to find the man who makes it going on to glorify the "system" of which he would not for one moment impair the "integrity." Now, the Calvinistic "system" is nothing if not logical. Whatever may be said about its premises, it has never been charged that their unfolding was not an exhibition of the most rigorous logic. To give up the "logic" while clinging to the "system," is like expecting the Temple of Dagon to stand after Samson has pulled out its pillars. If it were admitted that theology has been wrong all along in assuming airs of certainty and authority to which it had no valid claim, it would be a different matter; but an infallible science repudiating itself and its methods is in danger of losing all respect. A devout traveller in Rome was asked his opinion of certain "new saints" just then in great vogue. His reply was: "These new saints make me distrust the old ones."

An American in London writes to us:

"Do make some reference to Smalley's letter of October 11 in the *Tribune* in regard to Mr. Gladstone's Newcastle speech, and also to a bit in his Parnell letter of the same date, apropos of the alliance with the Gladstonians. It is a shame that he should make such statements to the American public; he would not dare to do it here and take the personal consequences. There is something very revolting in his acceptance of Gladstonian hospitality whenever it is offered to him, and this return behind their backs, as it were."

To which we answer that we do not think Mr. Smalley's views of English politics worth serious reference of any kind. They are, of course, absurd views for an American observer in England to take, but as they make no impression on his own paper, the *Tribune*, which steadily ignores them in its editorial articles, it seems hardly worth the while of any other paper to discuss them. Moreover, they are, in our opinion, mainly intended to draw English "hospitality." "Hospitality" is, in fact, the Squire's chief pursuit. Of course he ought not to accept hospitality from the Gladstonians when abusing and misrepresenting them, but our correspondent must remember that he must do this as a means of securing Tory hospitality, which is undoubtedly better hospitality than that of the Gladstonians. The Tories have more country houses, and give more and better dinners; and the Squire is not the man to despise good victuals and good wine. Of course a paper like the *Tribune* ought to keep an impartial and intelligent observer in London, but nothing we could say would bring this about.

There could hardly be a better illustration of the effect of much politics without any responsibility on an excitable people than is afforded by the "shindy" in Cork over the election of a successor to Parnell which took place on Friday. It has never, since the Union, made any difference to an Irish voter what kind of legislator a candidate was likely to be, what measures he was likely to favor and what to oppose, simply because he was sure to have no influence on legislation. Consequently, as a rule, the candidate's personality has stood in the voters' eyes far above his political capacity, and, as long as he was hostile to English government, he met every requirement of the situation. Nor has the Irish voter ever learned the lesson that violence of any kind would damage his party or his cause, and lead to the defeat of some scheme or policy which he had at heart. On the contrary, he has always seen and heard that violence has procured him from England all the remedial legislation he cared for. Murders and outrages have been his one mode of attracting the attention of the British Parliament to the Irish questions. This being the case, it is open to him, he thinks, to express his feelings during electoral canvasses in any manner he pleases, and out of which he gets most fun. Some may like attending meetings and listening to speeches, but others like to "lay out" their opponents with a blackthorn or shillelah. It has never made the slightest difference in the political arena which taste predominated. The obvious deduction from all this seems to be that the retention in Ireland of the forms of Parliamentary government, without any Parliamentary power or responsibility, has been an unmixed misfortune for the character of the people, and also for the two countries which have had most to do with them, England and America. We have no hesitation in saying that the Irish would be far better off in the matter of political judgment and self-control to-day if they had lived, like the Italians, under semi-military rule during the past century, than living as they have lived, under sham parliamentary institutions. They have acquired under these a taste for politics, and a conception of politics as something which has nothing to do with the public welfare, and out of which each man may lawfully get all he can either in sport or money. If there be anything reasonable in this view, the eulogies heaped on Mr. Balfour for prolonging the tutelary régime, and commending it once more to the English mind, are remarkable displays of fatuity.

Mr. Chamberlain and Mr. Morley have been having one of the fiercest encounters in recent English political history. Mr. Chamberlain has distinguished himself for a good while by his criticism of things done by his old associates while he was in the Liberal Cabinet; and his zeal as a convert, as is not uncommon, has been making him more and more reckless in his statements. So he made a speech the other day in which he expressed his belief that if Gladstone got into power again, he would "make an awful mess" of things, as he had done before, and ascribing to the Tory party almost all the social legislation of the last fifty years,

and accusing Mr. Gladstone of having caused the loss of his (Chamberlain's) Shipping Bill for the protection of sailors in 1883. This brought Mr. Morley down on him at Manchester in a savage speech bristling with quotations from Chamberlain's former sayings as a Liberal, reminding him, high Conservative as he now is, of his "ransom" doctrine of 1885, of Lord Salisbury's calling him a "Jack Cade," and of his having deliberately, at Hull in the same year, ascribed the failure of his Shipping Bill to "the Tory party" and Lord Salisbury, and of his extravagant eulogies on Mr. Gladstone so late as 1886, when he again took office under him. But the most serious and damaging part of the recrimination was the criticism of Chamberlain for talking, as if an innocent bystander, of the "awful mess" made of it by the Gladstonian Cabinet of 1880–1886, of which he was himself a prominent member. The combatants subsequently locked horns in the *Times*, Mr. Chamberlain trying to "explain" and Mr. Morley again rending him with bitterness. This last exploit seems to have filled the cup of Liberal hatred of the Birmingham statesman to overflowing, but he has evidently given up all hope or intention of ever returning to the Liberal ranks. One of the good features of English politics appears in the fact that no quarrel with his old party can exclude such a man as Chamberlain from public life. With his talents he is always sure of a seat somewhere. But his chances of office will be small as long as he refuses to call himself a Tory, for the Tories are poor now, and dislike extremely sharing salaried places with any but thoroughbreds of their own party.

To understand the nature of the situation in Berlin, which has developed already into something like a financial crisis, it should be remembered that in Germany, as in Great Britain, the United States, and other countries, the last two years or more have been marked by the efforts of great banking houses to "float" the paper of new industrial and commercial schemes. There, as here, the profits of private bankers had fallen off enormously through the bad times, the decrease in speculative business, and the withdrawal of outside investors from the markets. In Great Britain this same phenomenon was attended by the craze for industrial shares and South American bonds; in Berlin there followed a similarly reckless effort of bankers to grasp at any kind of business, however hazardous, which would bring heavy commissions in return for the risk. Necessarily, this kind of banking, breaking as it did with all conservative precedents, developed weak spots in numerous financial quarters. The collapse of November, 1890, brought down many of the rotten houses in Europe, and Russia's sudden recall of its deposits last spring forced many more to the brink of destruction. If a rich harvest and business revival had followed in Europe this season, most of these houses would probably have been able to save themselves. Instead, they have been confronted with the most disastrous harvest year of recent times. Liquidation has been persistent in nearly all financial quarters. Distrust grew in both Paris and Berlin, and, as if their existing burden was not heavy enough, the French bankers, driven into a corner by the failure of public subscriptions to the new Russian loan, actually assumed on their own account $60,000,000 of the bonds which even the Chauvinist investor would not buy. As a consequence, they have been forced, in order to raise the necessary funds, to throw on the market their holdings of all other securities dealt in upon the Continental bourses. The strain has been too heavy for the weakest Berlin houses, and two or three have gone down within a week. The end of all this is hard to foretell. Particularly interesting is its bearing upon our own finances. The situation, we believe, is wholly without precedent. Its elements favor the American markets so distinctly as to have led already, in many minds, to a belief in a "bull year." Yet it may well be asked if our country, under the present close association of the world's financial markets, can reap the normal benefits of our extraordinary harvest while Europe is sinking in the very slough of financial despondency. Even our heavy imports of gold, which excite daily jubilation here, are wrenched away from business centres which need them far more sorely than ourselves.

The Cardinals are, like ourselves, getting ready for what is their Presidential election. There is no concealing the fact that the Pope is in an almost moribund condition, and, considering the greatness of his office and its importance to so large a portion of the Christian world, it would be false delicacy not to take up the question of the successorship. The Cardinals, therefore, and the higher clergy are discussing it with freedom; but, unfortunately, the Pope himself expects to have a say in the matter, and does not relish any display of independence by those around him. The Cardinal Vicar, Monsignor Parocchi, who has vice-episcopal charge of the Diocese of Rome itself, has fallen under the suspicion of preparing "a boom" of his own, if we may use the expression—that is, of talking of himself and permitting others to talk of him as a candidate—and he therefore either has had to resign or is said to be going to resign his office and get out of sight, owing to the Pope's disapproval. The coming election is likely to be one of unusual interest for two reasons. One is the possibility of the election of a Pope who would come to terms with the Italian Government and finally abandon all claim to the temporal power. This a great many Catholics would consider an immense misfortune and scandal. Some provision, but probably not adequate provision, against this contingency has been made by an oath administered to the cardinals "to maintain the patrimony of St. Peter"; but then nearly every vanished claim and possession has been vainly defended by oaths. The second reason is the growing pressure from the foreign clergy on the Italians to be allowed a chance of accession to the Popedom. The Italians, who organized and indeed founded the Roman Catholic Church, have managed for ages to keep the tiara to themselves, but the foreigners, who are now brought by modern improvements in transportation into such close contact with Rome, are more and more eager for the throwing open of the competition to all nations. At the next election, according to all accounts, the Italians will have some difficulty in holding their own, but many of them would probably look on the success of a Frenchman, or German, or Irishman as St. Augustine looked on the irruption of Alaric through the Porta Salaria. The Barbarians, however, are nearly as irresistible now as they were then.

There is something admirable in the gravity with which Fonseca sets forth the iniquity of the Brazilian Congress, and declares his unalterable resolution to put down all enemies of the Republic. When he gets a truly good Congress, with some of the unfortunate features of the present Constitution knocked out of it, all is to go on as peacefully as before. Very likely, unless somebody should again run athwart the President, when he would undoubtedly rally the army and navy again and proceed afresh to the work of restoring "republican institutions" to their pristine purity. Some idea of his conception of the subservient functions of Congress may be gathered from the way the late crisis was brought on. He promptly vetoed a bill prohibiting the holding of national and State offices at the same time. This was certainly a needed measure, as the practice was most extraordinary and demoralizing. Thus, a member of the Cabinet was at the same time a Governor of a State, other Governors were members of Congress, one Governor held a seat in the Legislature of another State, and men even acted as judges at the same time that they filled executive and legislative offices. In one case a member of Congress was a minister to a foreign country. Fonseca declared the bill unconstitutional, refused to approve it, and berated the Congress for passing it. In his attitude towards the State governments he was equally arbitrary and overbearing, removing and recognizing Governors at his pleasure. So flagrant was his course towards São Paulo that one of its representatives in Congress threatened secession, saying: "If the Government will not yield to reason, it will be made to yield to force, for São Paulo, to resist the encroachments of the Government, can in five or six months put 50,000 men in the field." But it was especially in matters of financial administration that the greatest indignation at the President's usurpations was aroused among the nation's representatives. Fonseca ignored their protest until it began to take the form of a process of impeachment, and then he made his sudden discovery that they were all traitors and monarchists at heart.

THE BOSSES.

THE work of interpreting the elections goes on bravely, and is almost as varied in its entertainment as was the work of predicting the result. We find in the Republican explanation of the Democratic victory in New York a general disposition to ascribe it to "bossism." The Republican voters, says one country organ of the party,

> "feared Tammany, and they had a right to; but between it and Plattism they dreaded the tiger less. The day for Platts, Quays, Dudleys, and their kind is past. The Republican party should throw off its bosses everywhere, and, when it does, the independent voters will flock to its standard and it will again control the States and the nation."

One finds the same sort of moral in a great many other organs, including even the hidebound Philadelphia *Press*, which observes that

> "The Republican voters of New York have plainly taken this opportunity to express their opinion, not of the candidate of the party, but of its leadership. It is idle to forget the causes or overlook the motives which have led Republican voters to abandon a Republican candidate who deserved the support of every Republican. It has again proved easier in New York State to control the organization of the party than to command the hearty support of its voters."

These conclusions are even less valuable than the prophecies before election from the same quarters. In our humble opinion "the day for the Platts, Quays, Dudleys, and their kind" is by no means past. The general adoption of the Australian ballot may somewhat limit their field of party usefulness—that is, it may diminish their opportunities of buying votes and making "deals"; but it by no means destroys their *raison d'être*. The truth is, and each election makes it clearer and clearer, that wherever and whenever the public offices are used to reward party services, or to promote what is considered the party welfare, there will always be, and will always have to be, a "Boss" to superintend the work of distribution. This is true of city, State, and nation, without any exception whatever. We always have a municipal Boss in New York, and always shall have, as long as there are so many fat offices to be used as the spoils of victory after election, with the consent or acquiescence of the public. Bosses come and Bosses go, but the office remains. Kelly succeeds Tweed, and Croker succeeds Kelly, and somebody else of like kind is sure to succeed Croker; and the reason is that the work of selecting, once in two years, the persons who, in payment for their political services, are to get a chance to live on the municipal treasury, necessarily creates a sort of dictator. The system could not be maintained except through the one-man power. "Spoils" are always divided by a chief of some kind, whose will is law and before whom the boldest malcontent has to hold his peace. The municipal Boss, like Croker here and McLaughlin in Brooklyn, differs, however, from the State Boss, in that he is, so to speak, Boss in his own right. He owes his power to strength of will, powers of command, and intimate knowledge of the character of his followers.

The State Boss, on the other hand, has only a delegated authority. He is not self-made. He is a prætor governing a province with forces supplied him by the President at Washington. But he, too, is a necessity of the situation. As long as the President treats the vast patronage at his disposal chiefly as a means of rewarding the people who work for him and his party at elections, and only secondarily as a means of honestly and efficiently conducting the public business—as long, in short, as about 70,000 offices are made to change hands after every change in the party in power in Washington—there must be in each State a Boss to superintend the distribution of the prize money. The spoils system cannot get along without him. In the small States, in which Federal offices are few in number, he will be a small Boss, of little account. But in the large States like New York and Pennsylvania he will be a leviathan like Platt and Quay. There would be a similar leviathan also in Massachusetts, owing to the size of Boston, but for the singularly intelligent and thoroughly democratic character of the voters. The Massachusetts Boss is consequently a much smaller personage than his New York and Pennsylvania congener, and his tenure is more precarious, but he exists and grows stronger.

We ought not to indulge in any illusions in this matter. We might get rid of Platt to punish him for not having carried the election, but he would have to be replaced by somebody else to-morrow. Platt to-day is weak and despised, but why? Not because Bosses are considered bad things, but because he has not done successfully a Boss's work. When he is called to account by his superiors in Washington for his recent failure, what they will say to him is not, "Is it true that you have been debauching the voters of the State by money, and corrupting the Legislature through 'deals' and 'intrigues,' and discrediting the Administration through unworthy promises and base contracts?" but, "What in thunder did you do with the custom-houses and other public establishments which we placed at your disposal? What was the use of giving you the Custom-house and all the Post-offices, and the Sub-Treasuries and the Internal Revenue Collectorships, and every other Federal office in the State, if you can't carry an important State election?"

What is most curious in all this to intelligent lookers-on is, that the offices never do help the Boss to carry elections. In 1882, President Arthur, as a New Yorker, acted as his own Boss in this State, and used the offices remorselessly against the Half-Breeds and Democrats, but Cleveland was elected Governor by the greatest majority in the history of the State. In 1884 the same story was repeated. Blaine had the Bosses and the offices on his side, and was beaten. In 1888 Cleveland had the Bosses and offices on his side and was beaten. On Tuesday week all that one of the ablest, most indefatigable and unscrupulous of the Bosses, Lodge of Massachusetts, could do failed to prevent the reëlection of a Democratic Governor. This, too, occurred in a State in which a brave soldier, a thoroughly efficient city postmaster, had been dismissed from office in the openly avowed and cynical expectation that it would frighten Democrats and encourage Republicans in other States. So that we think we can confidently assure our Republican contemporaries that they cannot get rid of their Bosses without laying the axe to the root of that upas tree, the spoils system; and also, that "of all horned cattle," as Horace Greeley used to say, in politics, a Boss is the least useful, the most deluding.

THE "SCARE" ARGUMENT GONE.

PERHAPS the most striking moral of the late elections is the demonstration that what may be called the "scare" argument of the Republicans is finally gone. This fact is brought out most forcibly by the returns from Massachusetts and Iowa; and no other two States in the whole Union could illustrate the change so clearly.

Ever since the war, the chief reliance of the Republican managers, whenever their party was hard pressed by the Opposition, has been the ingrained fear of the South and of the Democratic party, which was, naturally enough, felt by those who remembered the slavery era and who had lived through the civil war. If corruption ran riot in the Republican party under Grant and a change of Administration was demanded, a scare was produced by loud assertions that the election of Tilden would mean the payment of thousands of millions of "rebel claims" and the pensioning of rebel soldiers; and Republicans who were inclined to vote the Democratic ticket were frightened back into support of their old party. If an unworthy man secured the Republican nomination for the Presidency, and the interests of morality demanded a rebuke of the party by a vote against him, the cry was raised that the "Solid South" stood behind Cleveland and would dictate the policy of his administration if he should be elected, and inflict all manner of harm upon the nation.

In those States which have a number of large cities, a class of Independent voters has long existed which could not be influenced by the "scare" argument, but it has hitherto retained its potency in the rural districts. The Republican farmers in the "back towns" might seem to grow lax in the faith once in a while, but it was only necessary, when an important election approached, to send among them a lot of stump speakers who should yell "Solid South," "rebel brigadiers," and "dangers of Democratic rule," and they could be brought once more to the polls ready to "save the country" by voting the Republican ticket again.

The old dodge was tried once more this year, but it failed to work. The Republican orators in Massachusetts with one accord declared that, however worthy of reelection Gov. Russell might be, he must be beaten because his success would encourage the Democratic party throughout the nation, and help to bring about a Democratic victory in the national contest next year. As

Henry Cabot Lodge said on the day before election:

"They are fighting for Massachusetts for 1892. They want to get the State as a great card in that great Presidential game. Every Republican who gives his vote to-morrow casts it in the Presidential election just as surely as he will cast it there next fall. It is useless to disguise it any longer. The battle has taken such a shape that it has all the importance of the national and Presidential year. I have been all over this State in this campaign—from Berkshire to the Cape—and they are aroused throughout the State. The Republican vote is coming out unless every sign is false and fails—they are coming out all over the State—they are coming here with a great majority for you [turning to Mr. Allen, the Republican candidate]."

The voters *did* come out in the small towns all over the State, but they did not bring the expected Allen majority with them. The farmers went to the polls very generally, but they did not wear the anxious expression of old lest the country should go to ruin if Russell should be reëlected. Not a few of them, life-long Republicans though they had been, helped to reëlect him, and boldly declared that they were not afraid of any harm coming from it.

Iowa is an agricultural State to a far greater extent than Massachusetts, and the overwhelming majority of its voters live in the farming towns. It has always been the secure fortress of the Republicans whenever the "scare" argument was brought out. It was really pitiful to watch the simple-minded farmers as the stump-speakers, winking slyly to each other the while, retailed time and time again the ancient "gags," and frightened them into rolling up majorities which sometimes ran as high as 75,000. They essayed to play the old game again this year, and warned all hesitating Republicans that the reëlection of Boies would make Iowa a doubtful State in 1892, and promote the election of a Democratic President. But to their surprise the voters were not scared this time. One of them, Mr. H. D. Cope, explained why, in a speech at Des Moines giving his reasons for supporting Boies: "He was formerly a Republican. He was a great admirer of Mr. Blaine, and worked hard in the political field during that gentleman's campaign. When Blaine was defeated, he was, as his wife expressed it, 'sick for a week.' What followed?" he proceeded. "I, who believed nothing good could come out of Democracy, saw a four-years' administration by an honest, able, conscientious American citizen, who surrounded himself by a Cabinet of able, representative men. I saw that President leave the chair respected alike by friend and enemy." There were so many Republicans who could not be frightened any more than Mr. Cope that Boies was reëlected by a handsome majority, although the total vote was much larger than that cast in the last Presidential election, showing that the "Republican reserves" did not stay at home.

The downfall of the "scare" argument is cause for general rejoicing. It was never anything but a humbug and fraud, yet for almost a quarter of a century it has been the salvation of demagogues and rascals. Now that it is finally gone, we can have campaigns in which clap-trap will be at a discount, and both parties will appeal to the intelligence of the voters. This is really the most encouraging result of last week's voting.

THE BRIGGS CASE.

THE clearly avowed motive of the New York Presbytery in dismissing the charges against Prof. Briggs on the very first day of the trial last week, was a pure longing for peace at any price. On the merits of the case no opinion was expressed, except in the vague statement, amended into the resolution in order to win the votes of conservatives, that the action was taken "without approving of the position taken in the Inaugural Address." Prof. Briggs himself did not argue the main question. His adroit and able answer was simply a demurrer to the indictment. It may very well have brought a certain amount of shame on the prosecuting committee, as they saw their loose and illogical charges so mercilessly dissected at the hands of the skilful ecclesiastical lawyer, and their childish and futile use of Scripture held up to contempt. But it did not, after all, touch the vitals of the case, and was not intended to. It was only preliminary, and suggestive of the artillery the learned Professor had in reserve for use in the main battle. The dismissal of the case was not determined by this introductory pleading, except in a very small degree.

We say this because it is evident from the proceedings that the advocates of peace had been counting noses, during the time since the charges were presented, and had found that they could reverse the narrow majority by which the prosecution had been originally ordered. And they were all ready with their motion as soon as Prof. Briggs's paper was read, and before the Presbytery was given any chance to act upon it. They could have passed it just as well at the start. The truth is, the New York Presbytery had to be harried into taking up the case at all. Prof. Briggs advanced no new views in his famous inaugural. He had uttered and published them in one form and another many times, and the Presbytery never moved against him, even in the face of his challenge to do so. But when his transfer to a new chair in Union Seminary gave the Presbyterians of the West a chance to strike at him through the relations of the Seminary to the General Assembly, the pressure grew so great that the Presbytery of this city were driven to take the matter up lest their own orthodoxy should be called in question. But they have never had any heart in it, and the decision to drop the whole thing without further discussion was sure to come in time, given the composition of the Presbytery.

It has been a standing and open complaint of Western Presbyterians that the Presbytery of New York was altogether too lax for the good of the denomination. This has been accounted for in many ways. One Western paper waxed eloquent at one time on the doctrinally corrupting effects of associating with the men of great wealth in New York city, and spoke darkly of several ministers it might name who had married rich wives, and were naturally, therefore, somewhat shaky on the tougher doctrines. The commoner explanation, however, has been the influence of New England, and especially of New England Congregationalism, upon the New York Presbyterian churches. There has been no little muttering over the tendency of those churches to draw upon the Congregational pulpit for their ministers. Thus Dr. William Adams, who was so long the pastor of the Madison Square Church, was of New England and Congregational origin. So was his successor, who had no sooner removed to Andover as a professor than he fell violently under suspicion of heresy, even according to the looser Congregational standards. His successor, the present pastor, was also a New England Congregationalist, and has given almost greater offence to Western sensibilities than Prof. Briggs himself, by his audacious repudiation of those parts of the Westminster Confession which he does not fancy. Many other cases of the kind could be cited, and are cited with a great deal of indignation by Presbyterians in the West and in Pennsylvania and New Jersey, as a sufficient reason for the toleration of so dangerous a man as Prof. Briggs all these years. Whatever may be said to this, no well-informed person will deny that if Prof. Briggs had been a member of the Presbytery of New Brunswick or Philadelphia or Pittsburgh, he would have been convicted of heresy long ago.

All these conditions must be taken into account in estimating the future of this famous case. In the present temper of the denomination at large it is perfectly idle to say, as some make haste to say, that this is the end of the whole affair. A great tactical advantage is undoubtedly left with Prof. Briggs, but it will not avail him finally unless the general sentiment of the Church shall undergo a great change before the reviewing ecclesiastical courts have a chance to pass upon the action of the New York Presbytery. We are much mistaken if the immediate effect of that action will not be a burst of anger in the denominational organs of the conservatives, over what they will call the cowardly attitude revealed by it. The peace of the church demands the cessation of the trial? What, then, they will say, becomes of the principle, First pure, then peaceable? The Presbytery has not put Prof. Briggs right, but itself wrong, they will be sure to say. And if they could get their hands on the matter at once, they would make short work of it. Still, the element of time is very strongly in favor of Prof. Briggs. Under the usual methods of procedure, his case could not come before the General Assembly sooner than a year from next May. In the interval many things may happen. Perhaps by that time scholarship and high personal character may win as great a victory in the church at large as they did last week in the Presbytery. Who knows that, in the course of eighteen months, many men may not be found to disclaim, as Dr. Van Dyke did, all knowledge of what takes place beyond the grave, as

long as they are this side the grave, and hence to refuse to prosecute a man for heresy because his guess differs from theirs?

THE NEW COPYRIGHT LAW.

THE so-called International Copyright Act took effect July 1, 1891, and it is a matter of interest to know just what are its practical results. It should be borne in mind that this is not original copyright legislation, but an alteration of our copyright law as codified in 1870 and embodied in the Revised Statutes as chapter sixty, and as amended by the acts passed in 1874 and 1882. It is well, therefore, first to determine what provisions of the old law remain unchanged by the new statute.

In the first place, there is no change as regards the things which can be copyrighted. They remain as before: books, maps, charts, dramatic or musical compositions, engravings, cuts, prints, photographs or negatives of photographs, paintings, drawings, chromos, statues, statuary, and models or designs intended to be perfected as works of the fine arts. The copyright upon any of the above articles is to be secured, also, by the same class of persons, namely, the authors, inventors, designers, or proprietors of any of them, and their executors, administrators, or assigns. The legal period of copyright protection remains unchanged, viz., two terms of twenty-eight and fourteen years respectively, and nothing in the language of the new act would seem to affect the construction heretofore given to the provisions of the law as to the duration of copyright, whereby the second term of fourteen years cannot be acquired by the copyright proprietor (that is to say, the assignee of the author), but accrues solely for the benefit of the author if living, or his widow or children, if he is dead. Coming, in natural sequence, to the formalities required by the statute in order to obtain a copyright, we find important changes resulting from the new legislation, but the following provisions remain unaltered: (1.) A printed title of any article copyrighted, which can be reproduced by mechanical means, and two copies of such article, must be deposited in the Copyright Bureau at Washington; while (2.), of artistic productions wholly or mainly the direct product of the author, a description of the article together with a photograph of it must be sent to the same depository. (3.) The fees for recording copyright entries, for giving a copy of such record (fifty cents in each case), and for recording an assignment of copyright, and for furnishing a copy of such assignment (one dollar in each case), remain unchanged; but by the new law a special fee of one dollar is charged to a foreign author for entering his claim of copyright.

The various provisions of the present law establishing the Copyright Bureau, and defining the duties of the Librarian of Congress in relation to the Copyright Office, remain unchanged, but that officer is given an additional duty to perform, to which reference will be made further on. The provisions concerning penalties for non-compliance with the law, or for making false claim of copyright, or for fraudulent representation of dramatic works, are also unchanged, while all the provisions relating to copyright suits are left in force, as are also the regulations regarding assignments of copyrights and the minor stipulation that postmasters shall, if requested, give receipts for copyright deposits. Section 4967 of the Revised Statutes, which gives protection to manuscripts, is changed only by striking out the words which have heretofore limited the protection to manuscripts which were the property of citizens of the United States or residents therein. This is also the case as regards the two sections of the Revised Statutes (4964 and 4965) designed to protect the proprietor of literary and artistic property against fraudulent reprinting and importation.

Turning to the changes effected by the new law, we have first to notice the difference in phraseology whereby all the words in the existing copyright statute which limited the granting of copyright solely to citizens or residents of the United States, have been struck out. This erasure would virtually extend the protection accorded by the statute to literary and artistic property to the productions of all authors and artists, no matter what might be their citizenship or place of residence; but a final clause was added to the new law by the House of Representatives' Committee, whereby the new act is limited to apply only to the citizens or subjects of such foreign nations as permit copyright to our citizens. The change which is next in importance is that relating to dramatization and translation, whereby authors are granted the exclusive right to dramatize and translate their works for the entire forty-two-years' term of copyright. This is a radical change from the old law, and is the one particular in which the copyright legislation of the United States is more favorable to the author than is that of other nations. The third noticeable change effected by the new law is that certain articles can no longer secure copyright within the United States at all unless they are manufactured in the United States. These articles are books—concerning which it is stipulated that the copies required to be deposited in the Library of Congress to perfect the claim of copyright must be "printed from type set within the limits of the United States, or from plates made therefrom"—and photographs, chromos, and lithographs, of which the copies deposited must be from "negatives or drawings on stone made within the limits of the United States, or from transfers made therefrom." This stipulation of home manufacture applies to the articles named whether they are the productions of foreigners or of citizens of the United States. A minor alteration is that which requires this deposit of copies to be made not later than the day of publication "in this or any foreign country," in lieu of within ten days, as was the case before.

The law as it stood secured the author only against the importation and sale of unlawful reprints, but in order to give full effect to the stipulation of American manufacture it was deemed desirable also to bar the importation of authorized editions made beyond the limits of the United States. To this end the importation of any book, chromo, lithograph, or photograph, or any plates of the same "not made from type set, negatives, or drawings on stone made within the limits of the United States" is prohibited. This inclusive prohibition, however, is subject to certain exceptions of decided importance to book-buyers. Thus the importation is allowed of (a) books, engravings, photographs, maps, and charts printed more than twenty years; (b) books and pamphlets printed exclusively in languages other than English; (c) books and music in raised print, used exclusively by the blind; (d) books, etc., imported for the use of the United States, or for the Library of Congress; (e) books, maps, lithographic prints, and charts for incorporated institutions of learning; (f) books belonging to persons from foreign countries, if actually used not less than one year; (g) books bought (not more than two copies at one time) by persons for their private use; and (h) newspapers and magazines which do not contain any copy right matter other than such as is printed with the author's sanction. To aid in enforcing this prohibition of importation, the Librarian of Congress is directed to prepare weekly lists of all articles entered for copyright, as to which the copyright has been completed by deposit of two copies made or produced in the United States; these being virtually lists of books and other articles whose importation is prohibited except as allowed under the exceptions enumerated above.

The Copyright Act was passed March 3, 1891, and on May 7 the Department of State forwarded two copies of it to each of our Ministers abroad, requesting the transmission of one copy to each foreign Government, with the statement that the benefits of the statute were to be extended to the citizens of foreign States only after a proclamation by the President, to be issued under conditions specified in section 13 of the Act, which reads as follows:

> "That this act shall only apply to a citizen or subject of a foreign State or nation when such foreign State or nation permits the citizens of the United States of America the benefit of copyright on substantially the same basis as its own citizens; or when such foreign State or nation is a party to an international agreement which provides for reciprocity in the granting of copyright, by the terms of which agreement the United States of America may, at its pleasure, become a party to such agreement. The existence of either of the conditions aforesaid shall be determined by the President of the United States by proclamation made from time to time as the purposes of this act may require."

This section was drafted under the impression that a proclamation might issue immediately upon the passage of the act making it effective for the benefit of the citizens of all countries parties to the International Copyright Union, and on May 29 the Swiss Minister made inquiry at the De-

partment of State to ascertain whether this would be done. The reply was that the Department had not been assured that the type-setting requirement in the new law would not be an obstacle to our Government becoming a party to the Berne treaty, whereupon the Swiss Minister telegraphed, on June 21, to the Swiss Federal Council to ask whether the United States could be admitted to the Convention without a modification of the recent Copyright Act. A telegraphic response, dated June 23, was to the effect that it would be difficult to admit the United States into the International Copyright Union with the American-manufacture stipulation in force, and proposed submitting the question to the independent countries of the Union. On June 27, Mr. J. B. Moore, then Third Assistant Secretary of State, submitted a report to the President on the construction of section 13, which, together with the text of the act, and the President's proclamation, has been printed. Mr. Moore discusses the two conditions contained in section 13 at some length. Disposing of the second condition first, he takes the ground that unless the United States can be admitted to the Berne Convention without further legislation, it cannot be maintained that it may become a party to that Convention "at its pleasure"; and as no assurance has been given to the United States that it can become a party to the Berne Convention so long as the type-setting clause is contained in its law, no extension of the Copyright Act to citizens or subjects of the signatories of that Convention can take place until the parties to the treaty shall decide that the legislation of the United States entitles our Government to the privilege of accession at its request.

Under the first (reciprocity) condition of section 13, four countries have applied for an extension of the benefits of the act to their citizens, viz., Belgium, France, Great Britain, and Switzerland, and in the case of each Mr. Moore decides that the act may be declared in force, on the ground that their laws grant to citizens of the United States copyrights identical with or substantially the same as those enjoyed by their own subjects. Accordingly the President's proclamation of July 1, 1891, extends the Copyright Act to the citizens or subjects of the four countries named.

GREENLAND IN SUMMER.

PHILADELPHIA, October 22, 1891.

To the vast majority of summer tourists a diversion in favor of Greenland would be considered as unreasonable as any plan for a summer campaign could well be made to appear. Not even by that class of *voyageurs* who annually trouble their brains in the attempt to discover a land where no travelling brother had previously set foot, has the thought of such a trip been seriously entertained. The name of Greenland, albeit it implies the existence of meadows and pastures green, is in itself repellent—not a name that charms, like Chamounix, the Matterhorn, or the Riviera. In the popular mind, Greenland is a synonym for ice and icebergs, and little else; a journey thither is a journey to a region which offers only hardships of travel and the prospect of a non-return. Doubtless this estimate of a little-known country is derived from the narratives of reliable travellers and the record of disaster which, perhaps more than anything else, has thus far distinguished arctic exploration; but, whether founded on description or merely upon the fanciful web of supposed knowledge, this conception of a country stretching over not less than 1,600 miles of latitude is singularly inaccurate. It is true that there is ice, and much of it, in this great northern land mass; and it is none the less true that in winter (and on the greater elevations also in summer) the temperature descends to the not very comfortable level of —50° or —60° F. But the picture is not complete in this one aspect alone. Contrast with the winter snows the charming meadows of summer, with their delight of mountain pink, buttercup and poppy, of heath and harebell—a vision of loveliness not surpassed even in the far-famed upper valleys of Switzerland. Occasional butterflies, gleaming with the lustre of the poppy and anemone, flit lazily across the mild sunshine, dropping their shadows over forests of diminutive birch and willow. To the ear comes the music of thousands of mosquitoes, mingling with, but not drowning, the sounds of babbling brooks and tumbling cascades, to which the melting snows have given birth. Far and near over the Greenland waters hundreds of icebergs, like huge masses of statuary, dot a surface only less blue than the Mediterranean at Villefranche, while the sky above has the tranquillity and intensity of Neapolitan better days. To all this add a temperature of some 40°–50° in the shade, or 65°–75° in the sun, and we round off the picture much as the writer recently experienced it on the island of Disko, on approximately the 69th parallel of latitude.

Disko is in many ways the garden-spot of Greenland, but there are numerous localities, both north and south, which are only less enjoyable. For hundreds of miles beyond, or nearer to the Pole, the landscape still presents much the same general features that we find in the more favored regions of the south. Bold mountain prominences, broken through at short intervals by the great tongues of ice which radiate off from the distant and hazy ice-fields of the interior, abruptly contour the country. Long slopes of ravine-snow here and there descend close to the water, but more commonly little or none of this "garb of winter" is met with below the 1,500–2,000-foot level. To this altitude, therefore, the Alpinist, or even the mountaineer of most limited resources, will find no impediment to his search after points of view; and even the botanist will not have passed beyond the bounds of his own particular realm. Many are the plants that bathe in the first waters of the melting snows, and not a few have stolen from the rainbow its brightest hues. To the very border of the ice these plants crawl up, contesting each foot in the short period of their struggle for existence.

Beyond all follows the great ice-cap, with its endless sweep of prairie-like rolls and undulations—a picture of lonely desolation probably not matched in any other part of the earth's surface. A series of gentle rises carries the eye far into the interior, until in the dim distance, possibly three-quarters of a mile or a full mile above sea-level, it no longer distinguishes between the chalky sky and the gray-white mantle which locks in with it. No lofty mountain peak rises out of the general surface, and but few deep valleys or gorges bight into it; but roll follows roll in gentle sequence and in such a way as to annihilate all conceptions of space and distance. This is the aspect of the great "ice-blink." It is not the picture of a wild and tempestuous nature, forbidding in all its details, but of a peaceful and long-continued slumber. We tread the snowy mantle much as we should in winter cross over one of our meadow-lots; the foot sinks mildly into the granular névé, but only to find a solid base at some four or five inches beneath the surface. No more delightful wandering can be had than that which is held out, in a clear summer day, by the low-level Greenland ice. To be able to roam about Nature's grandest solitude without either guide or path, in a temperature which is both mild and invigorating, and without a night to mark off periods of light and darkness, is a privilege which even the most travelled of travellers cannot fail to appreciate.

But if this is Greenland, whence originates the popular supposition that the region holds out only terrors to the wanderer to its shores? Is it that travellers exaggerate the dangers of arctic exploration, or merely that the mind has not well read between the lines of their narrations? Probably both conditions are in a measure true. It is but natural that a narrative should deal more emphatically with experiences that are both novel and striking than with things commonplace, and it is therefore not surprising that much of what is of equal importance among the latter is made to give way to the former. Yet the careful follower of Kane and Hayes will not fail to find that these explorers have done full justice to the peaceful aspects of their arctic wanderings, and others like them have but repeated their own experiences. The fact is, Greenland and the arctic north have two phases in their existence—the one of summer, when the cheerful side of Nature is turned uppermost, and the other of winter, when, as almost everywhere else, the cup of Nature yields but an empty draught. It is the winter garb of the icy north that is mainly impressed upon our minds.

A summer tour to Greenland, even to the far North—to the 75th parallel of latitude, or thereabouts—and embodying in its realization neither hardship nor danger, could be arranged annually with much of the certainty of a transatlantic trip. During the latter part of July and throughout the whole of August the coast is mainly free of ice, and even the passage of the much-dreaded Melville Bay can very generally be effected during this season of the year without danger from a "nip," and frequently with not so much as an acre of ice to interfere with the traveller's journey. Once beyond Cape York, the free North Water opens up a passage to the 79th or the 80th parallel of latitude, or to within some 700 miles of the Pole. In the course of such a trip the traveller would see much that is novel and interesting, much that is grandly picturesque, and still more that is striking in its deviation from the rest of the earth. A country inhabited by a race of people so remarkable as are the Eskimos is always worthy of a visit, especially at a time when a greatly increasing interest in the science is fostering the study of ethnology. But merely in the contemplation of the forms of the almost endless number of icebergs, the vacation tourist would probably consider himself amply repaid for a journey to this easily-reached land of the midnight sun, with its almost numberless glaciers, its sky-splitting mountains, and a boundless ice-cap. The artist, too, will find here abundant suggestion for his brush and palette.

The day is probably not far distant when

the tourist will regularly find his way to these supposed inhospitable shores, and if not to a point very far north, at least to some distance beyond the Arctic Circle, where all that Greenland presents can be enjoyed with advantage, from the midnight sun and aurora to the Eskimos, glaciers, fjords, and icebergs. The climate, too, of the lower tracts is somewhat pleasanter, for although even as far north as Melville Bay the temperature at night will, in the summer months, descend but little below the freezing point, around about Disko a delicious 40° or more renders the wearing of an overcoat both unnecessary and undesirable. Neither arctic furs nor sleeping-bags need thus enter into the calculation of such a journey, on which, under ordinarily favorable conditions, the traveller can enter with the freedom of a transatlantic tour to the North Cape or Stockholm. As yet there is scarcely a means of communication with Greenland except by whalers and the vessels of the Danish fleet plying between Copenhagen and Godhavn (or Christianshaab and Upernavik); but a summer demand would soon establish the supply, just as it did in the case of tourist communication with the Nile, Iceland, and the North Cape. Greenland, while perhaps not quite as hospitable as the north of Norway, presents much more of general interest and of that which may be considered absolutely unique than that now much-frequented region.

ANGELO HEILPRIN.

GERMAN SOCIALISTS IN COUNCIL.

DRESDEN, October 26, 1891.

THE German Socialists held their annual Congress at Erfurt, October 14–21, and a remarkable meeting it was for a stranger to see. We speak of "red revolutionists," and the revolutionists accept the color. The hall blazed with red. The presiding officer sat at a table covered with red. Huge red banners hung from the wall. On red shields against the galleries were inscribed the great names and dates of Socialism—the storming of the Bastille in 1789, the Paris Revolution of 1848, and the abrogation of the Socialist law in Germany in 1890. At one end of the hall were busts of Lassalle and Marx, crowned with laurel. Over the stage swung a long banner, on one end of which was the text from Marx: "Workmen of all lands, unite"; and, on the other, this extraordinary adaptation of Scripture proposed by Lassalle: "The working people are the rock on which the Church of the future must be built." Between these two, one read the brief but important commentary on both of them, "Knowledge is Power." At four long tables running down the hall sat some two hundred and fifty delegates from all parts of Germany, representing this year about one and a half million voters. They were for the most part neither long-haired nor wild-eyed persons, nor yet horny-handed sons of toil, but patient and respectable-appearing Germans, quite above the ranks of manual labor. Each, like a bona-fide legislator, had his documents and portfolio before him, and the whole scene was as business-like as a Town Council. Beer was to be had at the sides of the hall, but it was plainly not "good form" even for the most radical revolutionist to have anything before him more stimulating than water. In fact, I saw more water drunk in one session of the Socialists than I have seen in six months together elsewhere in Germany. In the throng might be discerned a half-dozen women delegates, and the well-appearing and well-dressed wives of Bebel and Von Vollmar had conspicuous seats.

At the high table sat the leaders, Bebel, Liebknecht, Singer, Von Vollmar, and a few others, who—as has just been proved—will need all their force and ability to keep the party united under them. Bebel is a fiery little man, of wit and keenness rather than eloquence, and not unreasonably attacked by the Opposition as the dictator of the party. Liebknecht, its most scholarly leader, made a journey through the United States in 1887, which he describes in a pleasant volume called 'A Look at the New World,' and in which—as he writes—his likeness to Mr. Blaine was often observed. He speaks with deliberation and thoughtfulness, and appeals rather to the intelligence of his party than, like Bebel, to its passions. Singer, the President of the meeting, is a strange figure in such company, being a prosperous manufacturer, with a large watch-chain and a waistcoat, where, as the Irishman said of the English Bishop, "every button was doing its duty." Still more striking is the presence of Von Vollmar, an aristocrat among the democracy, a soldierly and eloquent man, perhaps the most effective speaker of them all, and a dangerous person—as was seen in this meeting—to attempt to discipline or suppress. Strangest of all in this strange assembly was the reminder of other days, so lately passed away, when all such free discussion of radical change was a criminal act, and when these very leaders more than once suffered imprisonment and exile for their creed. Close by the side of the presiding officer still sat at every session a sergeant of police in full uniform, and two special reporters for the Government took full notes of the proceedings.

One feature of business method I had already noticed at a Congress of English co-operators, and in this meeting at Erfurt it again added greatly both to decorum and to the advance of business. The whole order of business, with the report of the Council, was put in print before the meeting and distributed to the members. Each man therefore followed the proceedings with prepared intelligence. Any person wishing to speak sends his name to the President, and is called in his turn when the subject of business is reached. No amendment is entertained except with notice given. The method tends strongly to suppress unpremeditated talk and to give plain minds a full understanding of each question. The report of the Council thus presented announced the receipt during the past year of about $54,000, a sum which, in the present poverty of the laboring classes in Germany, is a substantial pledge of their loyalty. Of this sum $8,000 had been spent for agitation, $2,500 for the relief of individuals, $2,000 for election contests, $1,500 for defending legal actions, $4,000 for administration, and $3,800 for the support of representatives in the Reichstag at an allowance per man of $1.50 a day. The report further states that there are now sixty-nine party newspapers in Germany, of which twenty-seven appear daily, twenty-six three times a week, six twice a week, and ten once a week. A new scientific review, *Die Neue Zeit*, is to be endowed, to appear at Stuttgart. There are, still further, a weekly educational journal and two comic papers.

The Erfurt meeting was anticipated with the greatest interest both by the friends and the opponents of German Socialism. Its friends welcomed the Congress as the first opportunity for full announcement of the complete revolutionary programme, and its enemies fervently hoped that this liberty of discussion would bring to light the inner schisms of the party. Both anticipations were justified. On the one hand, the programme was set forth in great detail and finally adopted without debate; but, on the other hand, the whole six days were devoted to hot debate between the wings of the party, ending—no doubt to the great satisfaction of the Imperial Government—in at least one important secession. In preparing the party programme, the Council made one new departure. They abandoned the plan of productive societies with State credit, on which Lassalle laid so much weight; and this enterprise, as Bebel announced, is now regarded as "outgrown." So far the party leaves Lassalle and goes over to Marx, who always opposed this scheme. For the rest, the programme contains, first, a statement of the final goal towards which the movement is directed; and, second, a series of immediate demands in the interest of the working class. The statement of principles, slightly abbreviated, is as follows: "Nothing but the transformation of private ownership of the means of production—lands, mines, tools, raw materials, machines, and food—into common ownership, and the corresponding transfer of production itself to the control and interest of all, can make of modern industry a source of blessing to the workmen instead of a source of misery and oppression." How this transformation is to be made, or how, when the change is made, the new commonwealth is to be governed, is not announced in this report. On these points, which are the subject of so many programmes and romances, the German Socialists are discreetly silent. They proceed at once to what they call "immediate" matters, or methods of temporary relief which they propose to gain through legislation.

In their statement of principles and purposes the two aspects of the movement are formally distinguished from each other, with no plainly indicated plan for uniting the two. On the one hand is the final end of effort, the revolution of the present social order, and on the other hand is the list of palliative measures; but it is a long way from one to the other. Almost all the immediate remedies proposed might be brought to success and yet leave the constitution of society practically unchanged. Most of these measures, indeed, such as woman's suffrage, proportional representation, free education, and elected judges, are already in force in one part or another of the United States, without stirring that country as a whole from its position as the least socialistic of modern States. Here, then, in this distinction between end and means, lay the obvious risk of division in the Socialist ranks. On the one hand, the Radicals might say: "Why temporize with these petty legislative remedies when we set before ourselves a complete social revolution? Why agitate for an eight-hour day, or for free apothecaries, when what we really stand for is universal liberty and communal ownership? The oppressed masses ask for the bread of a new social order, and we give them the stone of parliamentary reform." On the other hand, the Conservative might argue: "If you talk to the average workingman of an ideal Socialist State, it will seem to his ears as far away a blessing as what the preacher tells him of heaven. What he wants is an immediate remedy for his personal distress. In the foreground of the movement, therefore, must be set such things as the most ignorant laborer can see to be for his own good. Give him shorter hours, free education, and a free Sunday, attach him thus to the party by immediate self-interest, and then by degrees indoctrinate him with the large philo-

sophy of society which discloses to us our final goal."

Precisely here came the split at Erfurt. On the one hand was the small group who for four days were the subject of hot attack under the name of the "Berlin Opposition." They prefer, for their own part, to be known as the "Young Democracy," and they concentrate their abuse on the "Old Guard," who thus far hold the power. Bebel they taunted as a dictator. He was, they insisted, in the pay of the Government. The party was held back by him to mere political opportunism. It could no longer be called a Socialist party, it was nothing but a party of parliamentary reform. Each such alleviation of present conditions only strengthened the present social order. It was for true Socialists to have no part in any such political questions, but to agitate directly for the "End-Ziel" of revolution. Bebel, of course, retorted that these irreconcilables were simply conspiring to get power in the party, and wanted to sit on the platform in his place; and this jealousy is more than probable. But the Radicals certainly had the great advantage in debate of being logically right. Thus, for instance, they held the only logical doctrine in a vital question which kept pressing to the front—the question of a possible European war. The Young Democracy maintained that Socialists ought to welcome international war, and should, when it came, refuse to take part in it, but let the resulting wreck of the present order come, and then step in with the new programme. Bebel, on the other hand, defends national unity against international Socialism. If, as he said, the Socialists stand aloof in the next war, they may suddenly find themselves in the hands of Russia, and their hopes would then be further than ever from realization. "Yes!" retorted the extremists, "but if, on the other hand, the war happens to be with France, then among our enemies will be the very men with whom at Brussels, only a few months ago, we swore eternal friendship." It was a clear issue between the logic of the situation and practical politics, and the German Government must notice with much satisfaction the position of the Socialist leaders. Dreams of a new social order may be lightly regarded by Caprivi, but, in the present unstable equilibrium of Europe, the possible contingency of a "strike" of half-a-million of soldiers just when needed for active service is worth consideration. The little group of five who thus for eight sessions of the Congress refused to be diplomatic, and insisted on being logical, were finally disposed of by a vote that they should present their grievances to a select committee. This they refused to do, and with much dramatic effect closed their portfolios and left the hall and the party; and, on their return to Berlin, were received and endorsed by a meeting of several thousand persons, as the anti-Bebel, true-blue—or rather blood-red—representatives of the movement.

At the opposite end of the Socialist problem lay the issue which occupied what was left of the meeting. The eloquent Von Vollmar had lately, at Munich, set forth the opportunist doctrine as the best diplomacy. The party, he had said, must, first of all, increase its members. It must, therefore, capture the whole working-vote. To do this it must emphasize immediate reforms, and it must have little to say of radical remedies from which the uninitiated would shrink. Only when the party was thus vastly larger could it demand the great things which lay beyond. Against this view, as against its opposite, the present leaders held out as long as possible. They regarded it as a new programme, growing out of the repeal of the Socialist law; and they insisted that no such moderate policy should be encouraged. They suggested that the conservatism of Von Vollmar was simply due to his own easy circumstances of life, and that the permissive policy of the present Government was more dangerous to Socialism than the suppressive policy of Bismarck. Liebknecht distinctly said that if he had to choose between using steam or brakes on his train, he preferred steam, and that if he must stand either for the opportunism of Von Vollmar or for the abandoning of all politics, as proposed by the Radicals, he for his part must be counted with the Berlin Opposition. A vote of protest against the view of Von Vollmar was proposed and was defended by Bebel. But the party was not ready to deal with so important a person as summarily as it had with the hot youths from Berlin. In spite of Bebel's personal appeal, the motion against Von Vollmar was defeated, and a second secession from the party was prevented. The Conservatives were held in the ranks by the defeat of the Centre.

Such was the general issue of these prolonged discussions. The result of the meeting is variously estimated by the different political parties of Germany. The Conservative press points out with satisfaction that free speech led to a free fight, but it does not notice the equally important fact that free speech on the part of the Conservatives was not permitted to exclude them. The Socialist newspapers justly dwell on the size and power of the party, and on its capacity for intelligence and self-control, but they do not call attention to its discords. Spectators at the Congress might have been variously moved. Those who were inclined to scoff at such proceedings would have found much to stir their sense of humor. When Bebel, in answer to questions, calmly stated that though he could not tell when the revolution would come, he thought it might happen in three or five years, and that at any rate some of those present would live to see it, one could hardly help smiling at the accepting on such short notice of "so large a contract." When, again, the meeting broke up, there were some amusing scenes at the railway station, which a correspondent of the *National Zeitung* describes. Singer, the President, stood in the crowd, permitting the waiter to bring him a light—most undemocratic conduct, says the reporter—and then asks of his friends, "Are you going with me to Berlin?" The train arrives, and while the working-class delegates clamber into the third and fourth-class compartments, Singer, the leveller of social distinctions, throws himself down on the velvet cushions of a first-class coupé. "So the Socialists, too," says the *National Zeitung*, "are human!"

But, after all, the main impression made on at least one spectator—and, so far as I know, the only witness of the Congress not directly concerned with its affairs—was that of the pathetic isolation in which the working-class in Germany, as in most countries, is placed. Here were the representatives of the great majority of hand-laborers throughout Germany, seriously trying to devise plans for those better conditions of life which their brethren so sorely need. But to whom could they look for guidance? They were almost wholly in the hands of a few men, who may be honest, but who are certainly unfit for judicious leadership—men who are simply agitators and politicians, with no training in the complex questions with which they have to deal. Beyond these leaders the whole movement is either tabooed or unnoticed. Few newspapers had anything to say of the proceedings at Erfurt. Most good citizens spoke of the meeting with horror. No competent adviser has so much as tried to meet the workingmen on their own ground. When the German Socialists meet before elections, they publicly invite their opponents to debate the matter with them; but no one goes. Not a single statesman has the confidence of the workingmen, not a single economist has approached them with counsel. No Christian minister has been able to make his Gospel seem to them a better message than the "good news" they hear of a coming social chaos. It has become a part of the creed of the working-class that Government, religion, and political economy are all alike their enemies. Every man's hand seems against them, and they mass their forces against the whole body of respectable opinion. Such isolation is not only pathetic, it is a reproach to the scholars, statesmen, and clergy of any civilized land.

FRANCIS G. PEABODY.

Correspondence.

THE MASSACHUSETTS ELECTION.

TO THE EDITOR OF THE NATION:

SIR: While the election of Gov. Russell is an important event, it is at least equally important that its significance should be clearly brought out. The first thing to be noted is the power of personality as an agent in politics. In spite of the energy of the traditional protest, the people are always much more interested in men than in measures. Instead of railing at them, therefore, for this incurable weakness, the part of wisdom is to provide them with good men instead of bad men to run after—a rule which, simple as it seems, is almost always reversed in our so-called practical politics.

The next lesson is, that the way to carry reforms is to identify them with persons, so as to combine the enthusiasm for men with the enthusiasm for measures. Of course, it is Gov. Russell's popularity which has carried the election; but that he has insisted on the false position of the Governor, has resisted the arbitrary exercise of power by the Council in rejecting his appointments, and has protested against the government of the State by irresponsible commissions over which the Governor has no control—I do not think these things have hurt his popularity, and I am very sure that his popularity has helped the things. The reflex action is to come. Personal popularity is evanescent. The people, having endorsed him this time, will think they have done enough, and will become indifferent. One more term would be the utmost extent of their good will. An election to Congress would change the scene from the State to a district. If he wishes to establish his hold, he must prosecute the reforms in vigorous earnest, and so make them work for him.

It may be asked, Why these particular reforms and not more practical ones, such as civil service, temperance, education, prison or law reform? The answer to that question has suggested itself in reading an article in the *Forum* by Mr. Herbert Welsh on "The Degradation of Politics in Pennsylvania." He narrates with some pride how a vigorous movement of Independents succeeded in showing that the whole Government of the State and of the city of Philadelphia was in the hands of a gang of the most abandoned thieves,

After discussing some mild expedients of remedy, he adds that, after all, everything depends on the people, and that, if they will not come to the rescue, nothing can be done. I protest most earnestly against this implied accusation of the people. I say that the Government of Pennsylvania as well as of Massachusetts, of Philadelphia as well as of New York and Boston, is so organized that the mass of the people have very little voice in the matter, that they do not see what is going on or where the difficulty lies, and, if they did, are wholly unable to apply the remedy. If the ordinary business principles which are in force in every successful commercial house in the country were applied to public affairs, honest men would come into power and the knaves be ejected as a matter of course. Therefore it is that the alpha and the omega of our efforts should be organization; that the reforms which Gov. Russell has taken as his starting-point, and which, if but a first instalment, are the basis of all others, he should adhere to and prosecute for the sake of his own success as well as theirs.

May I point to the third lesson from the election? It is as to how State affairs can—in off years—be made more interesting than national. The burden of the Republican campaign was assumed by the Hon. Henry Cabot Lodge, stimulated, as is well known, by his ambition for a seat in the Senate of the United States. He has strained every nerve to push State affairs into the background, and to divide the voters on strict national party lines. As regards the Council and the Legislature, where there was no serious personal opposition, he carried his point; but, as to the Governorship, Mr. Russell, putting personality and cause together, has beaten him as fairly as ever a man was beaten. Shall we not lay the instruction to heart?

GAMALIEL BRADFORD.

BOSTON, November 7, 1891.

ABBOT AGAINST ROYCE.

TO THE EDITOR OF THE NATION:

SIR: Dr. Francis Ellingwood Abbot makes substantially the following charges against Prof. Josiah Royce:

(1.) That Prof. Royce libelled Dr. Abbot, and that maliciously.

(2.) That Prof. Royce used unfair means to stifle Dr. Abbot's reply.

I propose to consider impartially what the verdict of students of philosophy ought to be regarding these public accusations against one of the most eminent of their number.

The charge of libel has two specifications, viz.:

(1.) That Prof. Royce warned the general public against Dr. Abbot as a blatant and ignorant pretender in philosophy.

(2.) That Prof. Royce accused Dr. Abbot of plagiarizing Hegel at second hand.

From the point of view of propriety of conduct in a student of philosophy, the only adequate excuse for the first of these acts would be that the fact proclaimed was so unmistakable that there could be no two opinions about it on the part of men qualified by mature study to pass judgment on the merits of philosophical writers. In case the act were not so justified, the offence would be enormously aggravated if it were dictated by malice. The first question, then, is: Did Prof. Royce, as a matter of fact, so warn the public against Dr. Abbot? He certainly did, unequivocally and with full consciousness of what he was about; that is the unmistakable import of his whole article in the *International Journal of Ethics* for October, 1890. The next question is whether it is so plainly true that Dr. Abbot is a blatant and ignorant pretender in philosophy that it is impossible competent men should think otherwise? So far is that from being the case that philosophers of the highest standing, such men as Kirchheiss in Germany, Renouvier in France, and Seth in England, have drawn attention to the remarkable merit of his work. I am not personally intimate with Dr. Abbot, and am far from being a partisan of his doctrines, but as an humble student of philosophy, endeavoring to form my estimations with the eye of truth, I recognize in him a profound student and a highly original philosopher, some of whose results are substantive additions to the treasury of thought; and I believe that the prevalent opinion among competent men would be that Prof. Royce's warning is an unwarranted aspersion. Next, what excuse was there for such conduct, what motive prompted it? Prof. Royce and Dr. Abbot have their rival ways out of agnosticism. Both start from the same premises to come in the main (at least, so Royce says) to the same conclusion. Shall we say, then, that a passer-by cannot loiter near Dr. Abbot's shop, attracted by the placard, "THE WAY AND THE TRUTH," without Prof. Royce's rushing out and shouting from across the street that he can offer the same article at a lower figure? No; for how far a spirit of rivalry may have influenced him no man can know, Prof. Royce least of all.

Passing to the second specification, we ask: Did Prof. Royce accuse Dr. Abbot of plagiarizing Hegel? No; he only accused him of giving a maimed version of Hegel's theory of universals, naïvely supposing it to be a product of his own brain. That was no libel in the sense now considered. But, says Dr. Abbot, I have stated so clearly the antithesis between Hegel's view and mine that Prof. Royce cannot be sincere in saying they are identical. No matter; the more absurd the accusation, the less injurious; the less the truth, the less the libel. On this count Dr. Abbot is entirely in the wrong.

Passing to the second charge, we ask whether Prof. Royce used unfair means to stifle Dr. Abbot's reply? The ex-parte evidence indicates that he did contrive that Abbot's reply should be first postponed (as postponed it was over two numbers of the quarterly), and at last, as the third quarter was drawing to a close, should be excluded; in which performances Dr. Adler, the editor-in-chief, does not appear as very strong in the practical department of ethics. Afterwards Prof. Royce, through a lawyer, threatened Dr. Abbot with legal proceedings if he published his proposed reply at all.

All this would be abominable to the last degree in the case of a philosophical discussion. But then it must not be forgotten that the contention had never had that character. Prof. Royce's article was written with the avowed purpose, clearly and openly conveyed, though not by direct declaration, of ruining Dr. Abbot's reputation; and what little discussion there was was merely to subserve that purpose, not to ascertain or prove any truth of philosophy. Thus, it was a brutal, life-and-death fight from the first. Prof. Royce clearly perceived this, for he ends the article *by saying that he shows no mercy and asks none!* That's ethics. And his subsequent proceedings make it, in my judgment, as plain as such a thing can be, that his cruel purpose never left his heart. Dr. Abbot, on the other hand, stood like a baited bull, bewildered at such seemingly motiveless hostilities.

It is quite impossible not to suppose that Prof. Royce conceived it was his duty thus to destroy Dr. Abbot's reputation, and with that the happiness of his life. A critic's stern and sacred duty, and all that! Besides, it must be remembered that he is a student of ethics; and it is not to be imagined that a person can study ethics all his life long without acquiring conceptions of right and wrong that the rest of the world cannot understand.

C. S. PEIRCE.

SOME MORE "SOCIALS."

TO THE EDITOR OF THE NATION:

SIR: The East is not disposed to acknowledge the superior fertility of the inventive mind of the West in the direction of "socials." Your article of October 15 on this subject shows that you have formed your opinion too soon; not from Chicago but from New York are to go forth the plans that will make "stiffness" impossible. In the *Christian Union* for this week, a writer tells of the means of developing the "Social Element in Church Life." I make a few selections in support of my position.

Under "impersonations" we are told: "It is quite possible to select incidents and qualities not generally known. For instance, the child life of Mahomet, or his business career, may be dwelt on. After each impersonation there should be a short recess . . . for the guessing of the name of the unknown."

Magazines are to be turned to account: "And the advertisements at the end of the magazine make a bit of fun. Sozodont, cod-liver oil, shaving soap, and cocoa are suggestive subjects."

The Chicago authoress will blush to think that she never imagined "a smelling contest: A dozen or more quart black bottles are used. Turpentine, vinegar, Pond's Extract, wintergreen, peppermint, coffee, bay rum, rose water, clove, cinnamon, ammonia, tar, and camphor are suitable for use. Each member of the company 'sniffs' and makes a list from memory."

The climax is the "Wrong-side Sociable: All the people are dressed wrong side before, with the hair drawn over the face, and a mask, home-made or otherwise, placed on the back of the head."

And thus we develop the social element in church life.

C. E. W.

BUCKING.

TO THE EDITOR OF THE NATION:

SIR: I read once more in your No. 1372, p. 296, in a valuable account of Kluge's 'Etymological Dictionary,' Heine's etymology of *Bücking*. The fact is, that the inventor of herring pickling was Willem Beukelsz, *i. e.*, Beukel's son. Whether Beukel stands for *pekel* (Dutch for *brine*), and was a name afterwards given, or whether *Beukel*, *Bückling*, *bokking*, *bokkem*, etc., are next of kin, is rather difficult to ascertain. The fact is, that long before Willem Beukelsz was born, as early as the fourteenth century, there was a word *bucking*, meaning smoked herring, a fish quite different in kind from pickled herring.—Yours truly,

TACO H. DE BEER.

AMSTERDAM, October 26, 1891.

Notes.

PROFESSOR NORTON is preparing for the press a volume of essays by Mr. Lowell not included in the Riverside Edition of his works. It

was in Mr. Lowell's mind to do this before he died, but his strength failed him. Papers on Milton, Gray, and Landor, on Keats and Walton, and an address before the Modern Language Association, will make up the contents. Houghton, Mifflin & Co. will be the publishers. They also announce 'Odes, Lyrics, and Sonnets,' selections from Lowell, Whittier, Longfellow, Tennyson, the Brownings, and Wordsworth, in their "White and Gold" series; and 'The Spirit of Modern Philosophy,' Harvard lectures by Dr. Josiah Royce.

'The Hours of Raphael in Outline,' by Miss Mary E. Williams of Salem, Mass., is announced by Little, Brown & Co., Boston. During her many years of residence in Rome, Miss Williams kept up a search for material upon "The Hours," and, as a result of her quest, there is now presented to the public for the first time a reproduction in folio of "The Hours" taken from tracings from a book in the Romani-Sarti Library, lately bequeathed to the city of Rome. This book, or old folio pamphlet, consists solely of "The Hours" in outline, done by three old engravers who worked in concert, each producing four of the "Hours." Miss Williams discovered it simply sewed into blue paper covers, without title-page or date, with the inscription "Raf. d'Urb. inv." at the left-hand side, and the name of the engraver at the right-hand side, of each plate. Further, she found this book unknown to all the dealers in old engravings at Rome, to the curators of the Imperial Galleries at Vienna and Berlin, at the Louvre, and at the British Museum; and M. Kanka, director of calcography at the Louvre, is authority for the statement that Raphael's "Hours" in outline were absolutely unknown among the merchants of engravings in Paris. The import of this discovery is thus apparent. The new publication will also contain a reproduction from a unique old engraving, in the Royal Stamperia in Rome, of the hall in the Vatican in which the "Hours" are shown in their original position on the ceiling. This engraving was originally published by Montagnani about 1750, and its reproduction has been kindly allowed for the present work. In all there will be sixteen plates, and enough accompanying text to explain the history and detail of the new material here brought together.

A. C. Armstrong & Son, in conjunction with Elliot Stock, London, will publish "The Camden Library," a series of volumes "concerned with the antiquities of Britain," and edited by G. Laurence Gomme and T. Fairman Ordish. The first volume is already completed, and deals with the 'Antiquities and Curiosities of the Exchequer,' containing numerous illustrations from original MSS. and the various relics preserved in the Public Record Office. Antiquities of the stage will be looked after in 'Old London Theatres,' and yet other volumes will be entitled 'English Homes in the Past,' 'Monastic Arrangement,' 'English Armor,' 'Folk-Lore,' 'Church Plate,' 'The Streams of London,' 'Miniature Portrait Painting,' etc., etc. The issue will be quarterly in three styles.

Charles Scribner's Sons will bring out the second volume of H. Morse Stephens's 'History of the French Revolution,' and 'Jesus, the Carpenter of Nazareth,' by a layman.

Harper & Bros. have nearly ready 'The Modern Aladdin; or, the Wonderful Adventures of Oliver Munier,' written and illustrated by Howard Pyle.

The Cassells are to publish this month, simultaneously in America and England, 'Henriette Ronner: The Painter of Cat Life and Cat Characters,' by M. H. Spielmann. The volume will contain twelve full-page photogravures by Goupil; there also will be a small *édition de luxe*.

Anson D. F. Randolph & Co. will publish immediately a new edition, in two volumes, of 'Historical Memorials of Westminster Abbey,' by Dean Stanley, with thirteen full-page photogravure reproductions of Railton's etchings; 'The New York Obelisk, Cleopatra's Needle,' by C. E. Moldenke; 'Dr. John Brown and his Sister Isabella'; 'A Cyclopædia of Nature's Teachings,' with an introduction by Hugh Macmillan; 'Friendly Talks with Boys' and 'Friendly Letters to Girls,' by Miss Hawley; 'Women's Thoughts for Women,' compiled by Rose Porter; and 'Unknown Switzerland,' with nineteen photographic illustrations.

Lee & Shepard have nearly ready a volume on the battle of Gettysburg, by Samuel Adams Drake, and 'Wood Notes Wild,' by the late Simeon Pease Cheney, edited by his son, John Vance Cheney, librarian of the San Francisco Public Library.

In D. Lothrop Co.'s "Story of the States" series, the volume on Massachusetts, prepared by Edward Everett Hale, will speedily appear.

The Shelley centenary, which comes next year, is already beginning to be productive of books. One of the earliest to arrive is 'Pictures from Shelley' (Macmillan). The volume, which is of folio size, contains twenty-four wood-engravings after designs by E. E. Dell. Twelve of these are suggested by "The Cloud," and the others by landscape passages in "Queen Mab," "Alastor," etc. Something has been made of Shelley's broad horizons, vagueness, and etherialization of the elements, but the work is not very satisfactory, yielding only weak and watery Turneresque effects. A portrait of Shelley, which is the frontispiece, is the best thing in the volume.

Prof. Albert S. Cook edits, with introduction and notes, Shelley's 'Defense of Poetry' (Boston: Ginn & Co.), for use in schools and colleges. The plan is the same as that of the previously issued Sidney's 'Apologie,' but the more modern language of Shelley requires of course less annotation. The editor discusses in his introduction the character of melodic prose, the resemblance between Sidney and Shelley, and the question of labor versus inspiration as the method of genius. Peacock's 'Four Ages of Poetry,' which was the occasion of Shelley's work, is given in full; and there are the usual indexes and notes grammatical and literary.

William Davenport Adams adds another to the volumes of short, gossiping miscellanies which have been popular with desultory readers, under the title 'With Poet and Player' (Armstrong). The papers are divided between literature and the stage, and are readable, though not so distinguished by out-of-the-way anecdote and quotation as some of the earlier issues. "Defoe's 'Crusoe's Reflections,'" "Mrs. Shelley's 'Last Man,'" "The Stage Rustic," "Botany on the Boards," and "Horace in England" are characteristic titles. The book is issued in the style of the "Book Lover's Library," but does not bear the name on its title-page.

Richard Malcolm Johnston publishes nine miscellaneous articles, with no great pretension to either substance or style, in a small volume, 'Studies, Literary and Social' (Indianapolis: The Bowen-Merrill Co.). "Belisarius," "Madame de Staël," "Franklin," "Shakspere," and "The Schoolmaster" are titles that show the range of the book, which is, however, of a very flimsy kind, and quite out of touch with either modern scholarship or criticism.

'Elizabethan Songs in Honour of Love and Beautie' (Little, Brown & Co.) is an elegant holiday volume, perfect in paper and typography, and characteristically illustrated by E. H. Garrett, who also made the selections. Mr. Lang furnishes an introduction, in which we find nothing noticeable, but it serves its purpose well enough by indicating the relation between verse and song, and showing that they were more closely allied in the Elizabethan time than now. "Elizabethan," however, is used with a laxity of application for which there is no excuse: it is extended over the whole seventeenth century, and includes Cowley, Herrick, and Waller. The selection is very closely confined, except in Shakspere's case, to the poetry of gallantry. The illustration is meant to be decorative, and succeeds admirably in what was intended; six of the photogravures are printed in sepia, and the head and tail-pieces are often happily designed. The total effect, however, is to render the men and women theatrical, and to give to the world of the Elizabethan lover and his mistress an atmosphere of unreality—of opera, almost—that easily blends with the verse of artifice and conceit, of which the volume is mainly made.

We can now extend the list of new editions begun last week. Two works peculiarly susceptible of illustration have been elaborately treated in this manner, viz.: Howells's 'Venetian Life' (Houghton, Mifflin & Co.) and Wallace's 'Ben Hur' (Harpers)—each in two volumes. Mr. Howells has been assisted by several of our well-known artists, or perhaps has simply profited by their already extant drawings in water-color; and in each of his volumes we find nine aquatint copies of such originals. Their size precludes these dainty vignettes from being much more than mere ornament, and the general effect of them is undeniably pleasing. The red initial letters at the beginning of chapters are by contrast too pronounced in color, as the arabesque head-pieces suffer in comparison with the letter-press. The buff and gold binding, on the other hand, is in the best of taste, and one must be fastidious not to choose or to welcome these volumes as a gift.

It is a "Garfield Edition" of 'Ben Hur' which the Messrs. Harper have undertaken, and it is so denominated because of President Garfield's praise of the story, which is attested by a facsimile of the letter containing it. For every page Mr. William Martin Johnson has supplied appropriate marginal pen drawings of scenery and antiquities, which are sometimes truly decorative, but have on the whole a distracting effect. Much more valuable are the photogravures, twenty in all, mostly from nature, including a portrait of the author. These have been well selected and are not hackneyed. The binding is a satin-like cloth of a deep orange, not unbecoming an Oriental work, and a hinged box in leatherette has been provided as a case.

Anson D. F. Randolph & Co. send us an abridged edition of the 'Life and Times of Jesus the Messiah,' by the late Dr. Edersheim. The work of condensation has been done by Prof. Sanday, and the omissions seem to impair the value of the full form but slightly for the general reader. Moreover, this edition is illustrated.

'The Swan of Vilamorta' is the latest of Señora Bazán's novels to be translated by Mrs. Serrano (Cassell). Of the story itself it is to be said that it is not one of the author's happiest, she herself being witness, while the translation bears marks of haste. In a pretty care-

ful comparison of a single chapter, we have noted only one bad blunder, but a great many failures to give the true shadings and transitions of the original. There can be no question, of course, of Mrs. Serrano's knowledge of Spanish, but she seems to make the mistake of thinking that style in a translation will take care of itself.

Mrs. Ellen M. Mitchell's 'Manual of Greek Philosophy' (Chicago: S. C. Griggs & Co.), dedicated to the "Kant Club of Denver," shows careful study of German authorities, and is based chiefly on the works of Zeller and Hegel. The results are, of course, largely colored by Hegelian phraseology and nomenclature. "The quotations are from the original German," as the preface states; and it does not appear from the preface or the book that any study was made of the original Greek. In this respect the work suffers by comparison with Dr. Marshall's sketch recently noticed by us, which has about the same size and scope, but is much clearer and fresher, more readable and authentic. Such mistakes as νοὺς, δοχα (for νοῦς, δόξα), Miletus (for Meletus), "homoumeria," and "diarœtic," are symbols of occasional crudeness and inaccuracy which are almost inevitable under the circumstances. Mrs. Mitchell's is, for her opportunities, a praiseworthy study; but it is second-hand in its sources and its criticisms, and the exacting standards of education are no longer content with this kind of work, even in manuals for the beginner.

The complexion of 'Lyra Heroica: A Book of Verse for Boys,' compiled by William E. Henley (London: Methuen & Co.; New York: Scribners), may be inferred from the title. Fighting by land and sea is the theme of much more than half of the selections, which begin with Agincourt. The patriotism, militant or peaceful, is mainly British, but Longfellow's "Building of the Ship" is admitted, together with war lyrics by Whittier and Walt Whitman and Bret Harte, and Mrs. Hemans's "Landing of the Pilgrim Fathers." There are mixed with these, somewhat incongruously, more elevating pieces, like "Lycidas," Wordsworth's "Ode to Duty," Wotton's "How happy is he born or taught," Ben Jonson's "It is not growing like a tree," and Sir Alfred Lyall's "Theology in Extremis," besides Herrick's "A-maying," Keats's sonnet on reading Chapman's Homer, Coleridge's "Kubla Khan," etc. As a whole, the collection is fresh and evinces poetic discrimination. Among sources overlooked, Clough should have been drawn upon for pure love of country as well as for adventure by sea and battles on land. For his "Green fields of England!" his "Peschiera," his "How in Heaven's name did Columbus get over," we could well have spared the two selections from Kipling, especially the last, "The Flag of England," which is, as Mr. Henley lets out in his note upon it, an anti-Home-Rule tract, and is by all odds the most whimsical of his choices, especially "for boys." A truly noble ending could have been furnished him from this side of the Atlantic in Mr. Woodberry's Gibraltar sonnets.

'American Football,' by Walter Camp (Harpers), is easily the first treatise on that now popular game. It is not only eminently readable, even to the tyro, but it contains suggestions based on such profound experience in the science of football that no captain or coach of any first-rate team can afford to miss the consideration of them. No one can read Mr. Camp's chapters on the historical evolution of the present American game without in a certain measure appreciating its present semi-military character, that makes its matches at once so difficult to understand and so thrilling to witness. Mr. Camp has written not only wholly without bias, but without giving himself the least credit for the present perfection of the game, though this is almost entirely due to his theoretical grasp of the possibilities and limits of football and he has at the same time made the "Yale game" famous above all others for subtle and unlooked-for strategy. The book is fully illustrated with photogravures of the most famous players of Yale, Harvard, and Princeton, who are an exceptionally fine-looking group of young men.

'A Summer in Kieff' (London: Ward & Downey), by Isabel Morris, is a fresh and lively description of a visit to a city in southwestern Russia. An attractive picture is drawn of the new town, with its "magnificent buildings, churches with Moorish domes splendidly gilt, mansions tastefully designed, universities, clubs and hotels beautiful in architecture, but all profiting by their natural setting in every shade of green, and intersected by acre on acre of gardens." Especially interesting is the account of the famous Petcherek Monastery, the Mecca of the Russian Church, with its singular catacombs and its rarely shown treasury, wherein are cloths studded with most precious diamonds; crosses, golden cups, and crowns, one of which contains five and three-quarters pounds of the finest pearls. The household life of the people, their servants, markets, places of amusement, and country-houses are all treated in an entertaining way. The book would have had a greater value if the trivial chapters relating to the author's journey to and from Kieff had been omitted.

Le Français, founded and edited with exceptional taste and skill by the late M. Jules Lévy of Boston, was published for the five years 1880–'85. Mrs. Lévy, whose address is Lexington, Mass., has a few sets and odd volumes to dispose of, and they are still perfectly available for self-instruction or for use in schools or in study circles. We have never met with any periodical so good for this purpose.

The third Year Book of the Brooklyn Institute has lately been issued, giving, among other things, a brief history of the Institute and an account of the work for 1890–'91. The membership now reaches about 1,500; 310 lectures were given, with a total attendance of about 56,000 persons, and all departments exhibited a healthy growth. The Institute will hereafter be known as the Brooklyn Institute of Arts and Sciences. Although it is nowhere clearly stated, we understand that an account of the conditions of membership, and a list of the extended series of lectures on a large variety of subjects as arranged for the coming winter, may be obtained by addressing the Secretary.

The October Harvard University *Bulletin* contains Mr. Tillinghast's most recent "Harvard Necrology," which takes account not only of deaths of the current year, but of such as have not heretofore been recorded. In this instance it fixes for the first time the date of death of a member of the class of 1653! In the same number Dr. Charles Gross gives a classified list of books relating to British Municipal History—a selection from his bibliography, comprising nearly 4,000 titles, now almost ready for the press.

Prof. Skeat reports, in the *Athenæum* of October 24, his discovery of the source of Chaucer's translation of Boethius. The problem has been to trace the explanatory sentences and glosses with which the translation abounds; and, acting on a hint of Prof. Ten Brink's, and the English text of a MS. contained in the Cambridge University Library, already printed by Dr. Furnivall, Prof. Skeat ran down a Latin text which contains side-notes and interlinear glosses wherein is revealed "the whole of Chaucer's sources of information as to this treatise" ('De Consolatione Philosophiæ'). He gives two or three convincing specimens of the way Chaucer used both text and scholia, and concludes that, though the manuscript "cannot possibly be the very MS. which Chaucer used" (because his own translation is intercalated with the Latin text, chapter by chapter), "it is clearly a careful *copy* of it, containing all the same explanations. Only Chaucer himself, or some one keenly interested in his work, would have ordered this to be done. We here have, practically, the authentic copy, original and translation, notes and all."

Joseph Thomson, the well-known African traveller, has just returned to England, having been engaged during the last eighteen months in exploring the plateau between Lakes Nyassa and Bangweolo, in the interests of the British South African Company. He reports very favorably upon its great agricultural value and fitness for European colonization, though this he believes to be out of the question at present. By his observations he was able to correct some errors on recent maps in the situation of Lake Bangweolo, the scene of Dr. Livingstone's death. This he found to be simply a shallow backwater of the Chambesi, the source of the Congo, and to vary greatly in extent according to the season of the year. He gives an enthusiastic account of the condition of Blantyre in the Shiré Highlands, to the south of Lake Nyassa, the headquarters both of the Scotch missions and the trading company now merged in the South African Company. A large area is devoted to the cultivation of coffee, which commands the highest price in Mincing Lane, while successful experiments have been made in raising tea, sugar, tobacco, and other crops. Much attention is paid to the industrial education of the natives, who come from great distances to seek employment upon the plantations.

—A valuable contribution to political science is made by Prof. F. M. Taylor of Albion College in his Doctor's thesis entitled 'The Right of the State to be.' The problem considered by Prof. Taylor is the theoretical justification for the use of force by one or more human beings in controlling the acts of others. He plants himself firmly on the solid ground that the central conception in all ethical, political, and social philosophy is the concrete individual person. All good is measured ultimately by reference to this standard. The right of the individual to free self-determination being original, primordial, and essential, every act limiting this right demands special justification. The State is not a metaphysically necessary social entity, nor a natural organism, nor an independent person, but a group of human beings existing in certain relations to one another. There is no State-consciousness, no "group-psychology," but only the psychology of individuals as determined by their relations to the group. At the same time, there is a jural order which is absolute in the sense of not being relative to the opinion or will of any thinking subject. The solution reached by Prof. Taylor involves the principle that to every person belongs the prerogative of rule, and that among a number of persons the prerogative of final authority belongs to the fittest. As persons acting collectively are better fitted to exercise authority than isolated individuals, the right of the State is established. We cannot here undertake to criticise

this solution, but must content ourselves with saying that it is developed with great ability, and that it is preceded by an admirable examination of the other theories that have been propounded. We have no hesitation in advising all students of political science to possess themselves of this essay, which may be had for twenty-five cents at Schoenhof's in Boston, or of J. Sheehan, at Ann Arbor, or E. W. Griffin, at Albion, Mich.

—In this connection we may call attention to an essay on the Law of Nature by the same writer, which has been reprinted from the April number of the *Annals* of the American Academy of Political and Social Science, and may be had from the dealers named above. This essay is complementary to that just noticed, and is marked by equally careful scholarship as well as by more literary finish. Prof. Taylor comments upon the disrepute into which the *jus naturæ* has fallen in these latter days, remarking that "when one reminds himself that for nearly twenty-two centuries this doctrine had practically universal acceptance, that it was the creed of Plato, Aristotle, Cicero, Marcus Aurelius, Gaius, Augustine, Aquinas, Grotius, Hooker, Locke, and Kant, its present forlorn state is certainly somewhat noteworthy." Even reformers, who in every other epoch have appealed from the iniquitous law of man to the righteous law of nature, now insist that the State is the only source of right. "An unsympathetic observer might be tempted to remark that, so long as there remained anything of the old order to demolish, the reformer very piously appealed to eternal right against the artificial wrongs of that order; but when he has disposed of the last vestige, has perfectly cleared the ground for himself, then he promptly casts aside the conception of an order which claims ultimate supremacy, lest it should set some limit to the exercise of his own sweet will in the proposed reorganization of society." Against this prevalent tendency Prof. Taylor argues with great power that the concept of natural law is indispensable, that it is reconcilable with both intuitional and utilitarian ethics, and that the name itself is on the whole the best that can be employed. His exposure of the principal misconceptions and misrepresentations of the doctrine is clear and vigorous. Prof. Taylor would do well to work over the matter of these two essays into a volume. Such a work would constitute a most important contribution to political science, and for many reasons the views for which he contends ought to receive a formal statement in this country, such as we are convinced he is qualified to give them.

—In the report on the Canadian Archives for 1890, prepared by Douglas Brymner, is to be found much of interest to students of American history. The internal government of Canada from the peace of 1763 to the Revolution was of great importance to the colonies to the south of that province, and the Quebec Act of 1774 was one of the strongest factors in producing a revolt against the tyranny of the mother country. The formation of a constitution for the province after 1783 was of less moment to the United States at the time, but has had a far-reaching effect since. The efforts to develop the fur trade, the retention of the posts after 1783, and the preliminaries to the canal system of Canada, are among the other subjects treated. Mr. Brymner's strongest claim to our commendation is the publication of the despatches sent to Lord Dorchester by George Beckwith, the confidential agent of the British in the United States from 1787 to 1792. Beckwith had been in charge of the "secret intelligence" of the British Army during the Revolution, and was thus well fitted for the delicate mission now intrusted to him. The suspicion, on the part of the executive of the United States, of bad faith in the English made negotiation difficult. What Mr. Brymner prints, taken in connection with what is to be found in Hamilton's and Jefferson's writings, gives both sides of this informal mission, and shows the intimacies the agent formed with members of the Executive and of Congress. Beckwith's despatches are curious and interesting.

—The *Figaro* of October 24 has an article upon the emoluments of an Academician which may be read with amusement as well as with a certain interest. Each of the Forty Immortals, it appears, receives a salary of 1,200 francs a year. It makes no difference to how many of the Academies one belongs, he gets but one salary. M. Pasteur or M. Duruy receives the same *traitement* as M. Pierre Loti. The Perpetual Secretaries, however, have a slightly better chance to accumulate wealth. They have 6,000 francs a year, and some of them have lodgings also. Besides these running salaries there is a payment for attendance at each meeting, and this is arranged in a very curious fashion. *Jetons de présence* are given to each member who is in attendance and who signs the record of the day. These jetons have no fixed value, but represent that portion of 200 francs which would be expressed by a fraction having 200 for its denominator, and for its numerator the number of Academicians who were present at the séance. In other words, 200 francs is divided equally at each meeting among those who attend. If all are present, they have five francs each; if one only, he has 200. But it is not within the memory of man that only one member has appeared at a meeting. Once, however, during the war of 1870, only three were present. On an average, Academicians receive in these attendance fees not more than two or three hundred francs a year; and, in all, not more than fifteen hundred. The Academy makes no great figure in the budget.

—'Rapports inédits du Lieutenant-Général de Police René d'Argenson (1697-1715)' (Paris: Plon) is a valuable contribution to the social, political, and religious history of France during the last eighteen years of the reign of Louis XIV., and throws additional and by no means favorable light on the system of government pursued by the Grand Monarch. What we now regard as the chief functions of the police, namely, public security and the protection of life and property, was deemed by d'Argenson and his *mouchards* a matter of secondary importance. His official reports to the Minister, Count Pontchartrain, which Paul Cottin has published in full for the first time, with annotations and an admirable historical introduction, show that he was far less zealous in preventing and punishing crime than in persecuting heresy, and in promoting marriages by which the property of wealthy Protestants could be inherited by Catholics. In order to accomplish this purpose, the most arbitrary measures were adopted, innocent persons were arrested and incarcerated, their estates confiscated, and their children taken away to be educated in cloisters. If a Protestant offered his house for sale, he was immediately suspected of a desire to emigrate; a detective was commissioned to dog his steps and apprehend him in case he should attempt to leave the country. Another very important duty of the police was to watch over public morals, and especially to hush up scandals affecting the reputation of the clergy and the monastic orders. In this capacity D'Argenson was an ardent and energetic defender of the faith, but is forced to confess that many of the cloisters are "séminaires de débauche." Dissolute abbés and nuns of noble birth were the most difficult subjects he had to deal with. The first and most essential point to be considered in any case of crime was the rank of the criminal. Woe to an evil-doer of the bourgeoisie, especially if he added to his transgression the sin of heresy.

—Prof. Hoskins sends us a rejoinder on *vis viva* too long and irrelevant to print, nor is the discussion, by its nature, exactly suited to our columns. Instead of showing how he could maintain that growth is not an irreversible process in the sense in which the action of viscosity is irreversible, he holds that an irreversible process does not violate the law of *vis viva*. But an irreversible process is such that if the final velocities have their signs reversed, the equations of motion will not be satisfied by the movement of all the particles back over their previous paths with the same (reversed) velocities. Now the equations will be so satisfied unless the forces are changed by this reversal of the velocities—that is, unless they depend on the velocities. Further, if the accelerations depend on the velocities, it is easily shown that the *vis viva* cannot always be the same in the same configuration, and thus the equation of *vis viva* is violated. Therefore growth, so far as it is an irreversible process, violates this principle. It is true that the kinetical theory explains not only irreversible processes (for which it was needed), but also reversible ones (which is supererogatory). But our correspondent is surely mistaken in saying that a similar apparent violation of the law of *vis viva* admits of any acceptable explanation not based on probabilities. Friction, viscosity, diffusion, conduction, in all states of matter must be so explained.

HISTORY OF THE TITLE-PAGE.

Last Words on the History of the Title-Page; with Notes on some Colophons, and Twenty-seven Facsimiles of Title-Pages. By Andrew Pollard. London: John C. Nimmo. 1891. Royal 4to, pp. 39.

THIS entertaining book is the expansion, with new matter and illustrations, of papers previously published in the *Century-Guild Hobby-Horse* and the *Universal Review*. Its illustrations of the first substitutes for printed title-pages, as they appear in the colophons or certificates of the illuminators who completed the work of the printers, are enough to explain this feature of the usage of book-makers in the fourteenth century. The earliest colophons in printed books were made not by their printers, but by their illuminators. Our surest clues to the origin of the three early Bibles (the thirty-six-line, the forty-two-line, and Eggestein's) are furnished by the rubricators who certified in the last leaf of each book that they had completed their work on a certain date. The modesty of the printer in declining to put his name on his book may be explained by the hypothesis that the impersonality of the copyist or maker of the text was already an established usage. The copyist of the manuscript was a clerk or a

drudge; the illuminator was the artist who alone had a right to announce his name and magnify his office. Consequently, the printer meekly followed in the path laid down by the copyist, and began the work as he did, without title-page or preface. Nor does it appear that the reader or buyer of the book needed a title-page. He could identify at a glance the few books he owned or read. Why should he demand that they be named or labelled? A separate leaf of paper for a title-page would have been a waste of material; the advertisement or personal explanation of the printer an impertinence. He wanted the text, and that only.

The printer's period of self-effacement was brief. Even before 1470, printers began to abound in the larger cities; there were rival editions of the same book, and their printers were often at variance. To get and keep the credit that was his rightful due, each printer put his name and device on his books. To recoup what he had lost by previous modesty, he asserted himself with vehemence: in poetry, and often with puns, he praised the greater accuracy of his texts and the superior beauty of his types and paper; he sneered at the scandalous workmanship of his rivals. It was soon found that the compact and unobtrusive colophon at the end of the book did not arrest the attention of the careless observer. Some printers transferred it from the last to the first leaf of the book, where it would certainly be noted, but its form was not changed. It remained, as before, a solid paragraph in small types without display.

The first title-page proper, on a separate page, bears the imprint of Ratdolt, Venice, 1476, of which Mr. Pollard gives a good illustration. This title is enclosed in an outline border; it has a red initial and a red imprint, but not one line is in capital letters. Its simplicity and beauty should have commended it to his rivals, but they were slow to imitate this model. Title-pages on separate leaves were not common before 1520, but the decorative border, with its typical illustrations, was eagerly adopted, for this was a time-honored fashion of the early illuminators. Following the practice also of the block-book printers, the borders and initials were largely in outline, so that the buyer of the book could paint them in bright colors. These outline borders and white-centred initials mark the downfall of the professional illuminator. After 1500 he disappears, and the engraver on wood takes his place. In this field the Italian engravers were undisputed masters, and Mr. Pollard does no more than justice in giving them the greatest praise.

The simple Italian style was transplanted and successfully practised in Paris by Geoffrey Tory, but French engravers had already developed a style of their own, largely based on monastic patterns, as may be seen in the borders of their 'Books of Hours,' which did not need further development by color. The French style leaned to strong contrasts of black and white, or to closer engraving on cribbled backgrounds. The bold devices of Kerver, Eustace, Levet and Vostre must have severely taxed the weak hand-press of this period. Judged by modern standards, the first pages of the French printers were not title-pages, for at least one-half (and often three-fourths) of the page was given up to the device of the printer, who was more intent on showing his own name and advertising his office than he was in defining the book or the name of its author.

The simplicity, or, as some may call it, the boldness of the modern title began with Aldus Manutius of Venice. In his 'Statius' of 1501, we find the device of the dolphin and anchor alone on a separate leaf, the title-page in plain capitals on the following leaf. Then comes a preface on a separate page. The work ends with the list of signatures and the imprint on the last leaf. This separation of the different parts of the book seems to have been promptly imitated by many printers of classic texts in Lyons and Paris. The titles of Robert Stephens of Paris had a small device on the title page, but in their simplicity and freedom from bold display his titles are thoroughly Aldine as to style.

The French printers of romances never adopted this plain style. To catch the eye of a possible buyer, it was necessary to make use of a striking design on the first page. A huge sprawling initial, decorated with grotesque heads, was a favorite device. Bits of engraved border, often of the most incongruous description, were put about the trade-mark of the printer, and printed in flaring red ink. Printers who had no devices made their title-pages noticeable by arranging the types of their titles in a fantastic form, as of an inverted pyramid, of a cross, and sometimes of a coffin or a goblet. Before 1550 the lines that separated books of study from books of amusement or of devotion were fairly drawn. The practised buyer at a glance could discern the frivolous from the classic or the religious.

Early French and Italian titles have received adequate treatment from Mr. Pollard. Nor have the earlier English titles been neglected, although they have few noticeable features. Much more might have been written by him concerning the grandiose titles of the early Spanish printers, and the forbidding solemnity of the old German black-letter titles, almost unreadable through their gloominess and excess of flourish. It is a disappointment to note the neglect to mention titles in engraved architectural framework, which became so common in Flemish, Spanish, and English books of the sixteenth and seventeenth centuries. The noble pictorial titles of Christopher Plantin, many of which were designed and engraved on copper by artists of renown, deserved more than a passing notice. Nor was the English title of the sixteenth century altogether undeserving of illustration. Cranmer's 'Great Bible' of 1540 and the 'Arcadia' of 1598 show titles that distinctly mark a development of typography. Here it may be said that English engraving on wood during this and a later period has been unjustly depreciated. It was not of a high order, but it compares favorably with that then done on the Continent. It needed, what it did not get, more skill in presswork to show the merit of engraved titles that are now hopelessly muddled with excess of dirty ink.

For the typographic titles of the seventeenth and eighteenth centuries Mr. Pollard has a most justifiable dislike. The graceful borders, the bold initials, the elaborate devices were then out of fashion. Artists had properly refused to draw on wood designs that were sure to be butchered by incompetent engravers or pressmen. If the printer of that time wanted a good illustration for a title, he must have it done by the copper-plate process. If he attempted wood, he regretted the venture, as any one may readily see who examines any of the monotonous and spiritless woodcuts that were then used by French, German, and English printers. The hideous basket of flowers was a stock device among all. The title-page entirely in type, or with a very small device added, marks a new feature of development. It has been shown how the illuminator had suppressed the printer; the engraver on wood, the illuminator; the publisher, the engraver on wood. Now came the turn of the author, who claimed and got at least three-fourths of the title-page, and sent the publisher and his imprint down to the foot. The change so made was proper enough, but the manner in which the title-page was composed was often absurd. To make up for the blackness of the excluded woodcuts, the printer selected his biggest capital letters, or the boldest black-letter, for one or more of the lines of display. If the word or words so selected would not come in the line, he divided them without remorse. For this practice he had high authority. In many famous early books one may see words of display chopped, mangled, and dislocated, apparently with serenest composure. For example, the first half of the word Commentaries may appear in capitals one-half inch high, and the other half in minuscules not one-eighth inch high. As the titles of the seventeenth century were usually prolix, this treatment made them look like handbills or posters.

In claiming the title-page as his own, the author usually undertook to assign to each line its relative degree of prominence. Not clearly understanding the inflexibility of types, he assigned too many letters to one line and too few to another. These orders compelled the printer to use many sizes of types. Mr. Pollard is in error in thinking that the resulting confusion was the consequence of the printer's desire to show the variety of his stock. It really came from the poverty of his stock. He did not have, nor did the type-founder make, sizes enough to meet the author's notions of a nicely graduated display of words. The author pitched his tune too high. The printer did his best with insufficient supply, spacing out the short lines with wide blanks, huddling the words that were too long in types that were too small, and filling up unsightly gaps with ruled lines. The average title-page of the eighteenth century, whether made by Didot or Baskerville, or any printer of minor importance, is always artificially arranged without sense or reason, and is usually a monument of bad taste.

Nor was much improvement made in the titles of books printed during the first quarter of this century. To English printers must be given the credit of the earliest tasteful composition of titles in letters of small size. They were the first to lower the scale of poster-like display, and to arrange the distinct clauses of a title in separate lines. Yet this improved style was often pushed to its extreme. A full or complex title was divided and subdivided in so-called "display-lines" and "catch-lines." When the display-lines were weak, the catch-lines were so small as to be almost unreadable, and the general effect was that of feebleness. French printers have always clung to big types for title displays. They evaded the difficulties of inflexible type by their introduction of condensed capitals, which allowed the use of more letters in one line. The impropriety of using types that are pinched with those that are of regular proportion, does not seem to be perceived.

Pickering of London seems to have been the first to apply a little common sense to the selection of types for titles. In his later years he rejected all forms of condensed letter, and set his titles in plain types of established proportion. He discarded the arbitrary rules of the printers of his time, and the equally mischievous notions of authors as to the relative prominence of lines, and set his titles as he believed Aldus and Stephens would have set them

if they had had modern materials. Robert Clarke of Edinburgh and Houghton of Boston show, though not by the same methods, equally praiseworthy attempts at the simple and direct method of composing book-titles. They are exceptions. The book-title of the average printer of to-day, whether he is in England, France, or America, is usually the worst page in the book as to composition. Some of them are as disgraceful as those of the seventeenth century. Our modern printer works in self-imposed fetters in the difficult path laid out for him by the critical author or publisher. This line must be large, and that small; this long, that short. Here must be italic, there black-letter. The meaning of the author is subordinated to stiff typographical rules that serve no good purpose. It follows that the title of the modern book is, as a rule, unsatisfactory to all concerned. It seems to be made not to help the reader, but to show the craft of the compositor.

Titles would be simpler, more satisfactory to the reader, and a real grace to their texts, if there were a proper supply of suitable types. Although type-founders' specimen books are filled with a wonderful variety of ornamental letter, there is no type-founder, either here or abroad, who makes a carefully graded series of Roman capitals of harmonious face. There are only two or three faces that approach completeness; the best show serious gaps. It is largely for the want of these needed sizes that our book-titles are so imperfect. Something, too, needs to be said about the quality of these title types. Following the French fashion, all our founders make title types of thin face, sharp hair-line, and feeble effect. Even the reproduced old-style faces are emasculated with razor-edged lines. The strong, virile types of the old printers are to be found only in old books. Mr. William Morris of London had good reason for rejecting all the modern faces. For two of his books he had new types made, after the models of the early Italian printers, and these seem to be the only text types that have been made for the convenience of the reader, and not for the glorification of the type-founder.

NORTON'S TRANSLATION OF DANTE.—II.

The Divine Comedy of Dante Alighieri. I. Hell. Translated by Charles Eliot Norton. Boston: Houghton, Mifflin & Co. 1891.

THE characteristics apparent in the Francesca fragment pervade Mr. Norton's work from the first page to the last. We have applied to it two sorts of tests: we have read many of its cantos line by line with the Italian in order to judge its literalness, and we have read other cantos freely, as we should any new work, with our mind fixed on the story and the style, in order to get its literary quality. In both cases the result has been most satisfactory; the translation is not only exact, it is literature. We can recall no other work of similar importance in which the translator has been equally successful in excluding all paraphrases and all words which had no correspondence with the original. We used to think that Dr. John A. Carlyle's version of the 'Inferno' was a marvel of exactness and lucidity; but a comparison of this version with Mr. Norton's shows that the latter is invariably more concise and more exact, and not less lucid. Mr. Norton has, besides, what Dr. Carlyle had not—style, that quality which gives distinction to single sentences, cements one sentence to the next, rounds out the paragraph to its full proportion, and makes each canto harmonious and symmetrical. Dr. Carlyle often chooses words of singular strength and picturesqueness, and in those cases where he has not been able to improve upon them Mr. Norton has retained them, as, for instance, "clucking voice," for "voce chioccia" (vii, 2); but in the construction of his sentences Dr. Carlyle does not sustain the excellence of his choice of words. For an example, let us take the description of Geryon's descent, with Dante and Virgil on his back, to the Eighth Circle (xvii, 100–105):

"As the bark goes from its station backward, backward, so the monster took himself from thence; and when he felt himself quite loose, there where his breast had been he turned his tail, and stretching moved it, like an eel, and with his paws gathered the air to him."

This is Dr. Carlyle's rendering of one of Dante's most compressed yet very vivid descriptions. Mr. Norton's is as follows:

"As the little vessel goeth from its place, backward, backward, so he thence withdrew; and when he felt himself quite at play, he turned his tail to where his breast had been, and moved it, stretched out like an eel, and with his paws gathered the air to himself."

This excels the other not less in literalness than in style. It is, of course, impossible to point out within the space allotted to a review many of the felicities of expression; we therefore limit ourselves to mentioning a few, each of which, however, will be found to be typical of the way in which Mr. Norton has overcome difficulties of different kinds. What could be better than "Ivy was never so *bearded* to a tree," for "Ellera *abbarbicata* mai non fue Ad alber" (xxv, 58-59)? Longfellow has "Ivy was never fastened by its barbs," and Dr. Carlyle contents himself with the epithet "rooted," whereas "bearded" gives the definite picture of the original. Admirable is the phrase "the brief *jest* of the goods that are committed unto Fortune" (vii, 61); admirable, too, this other (xxx, 91-92), "the two poor wretches that are smoking like a wet hand in winter." In all the 'Inferno' there is perhaps no more complicated passage than that in which Dante describes how a serpent fixed itself on the body of Agnel Brunelleschi, how the man and the reptile were merged in one, and how finally they separated, each being metamorphosed into the other's form. The passage (xxv, 50-141) is much too long to quote, but those who would see how Mr. Norton surpasses previous translators would do well to read it carefully. In the following well-known simile he has triumphed over the difficulties of an unusually long sentence, and he has chosen words most fit:

"As in the Arsenal of the Venetians, in winter, the sticky pitch for smearing their unsound vessels is boiling, because they cannot go to sea, and, instead thereof, one builds him a new bark, and one caulks the sides of that which hath made many a voyage; one hammers at the prow, and one at the stern; another makes oars, and another twists the cordage; and one the foresail and the mainsail patches—so, not by fire, but by divine art, a thick pitch was boiling there below, which belimed the bank on every side." (xxi, 7-18.)

In the Italian, with its inflected endings, it is comparatively easy to follow the meaning of a long passage like this, but to render it clearly in English—where endings and genders are less clearly marked, and where pronouns have to follow their substantives more closely, if ambiguity is to be avoided—is a noteworthy feat. We cannot too highly commend the entire version of the twenty-second canto for its vividness, ease, and vigor; and Count Ugolino's story, in the thirty-third, is equally fine in a different way. Dante invariably chooses words appropriate to the theme; like the Greeks, he intends that each episode shall be so expressed as to produce one predominant effect on the reader—thus, Francesca speaks in another key from Ugolino's. In this respect, also, Mr. Norton has been more successful than his predecessors; the modulations in language of the original are reflected in his translation.

We have marked a few words which we think might be improved, although we are aware that where it is a question of taste rather than of exactness, opinions must necessarily differ. In prose, we prefer *between* to *'tween* (i, 105). *Silvestro* (ii, 142) doubtless means by implication *savage*, but would it not be better to translate literally, and allow the reader to infer what connotation he might choose? *Dire* for *duro* (iii, 12) is another case in which the generic word of the original has been limited to a specific, derived meaning; *hard* exactly represents *duro*, and is preferable to *dire*. *Everything is confessed* (v, 8) is a paraphrase of *tutta si confessa;* here *tutta*, of course, refers to the *anima* in the preceding line—the meaning being that "the *whole soul* confesses itself." *Perso* (v, 89) is translated *lurid*, but further on (vii, 103) we have *perse*, a legitimate old English form. *Pluto* is translated *Pluto* (vi, 115, vii, 2), instead of *Plutus*. We are aware that this word has caused much discussion, but since *Plutone* is the regular Italian form of *Pluto*, and *Pluto* of *Plutus*, it seems best to observe the distinction, and not to imply, as some critics have implied, that Dante confounded the two. *Sucide* (viii, 10) carries with it an idea of filthiness, and so is hardly represented by *turbid*. *Stipa* (xi, 3) means rather 'a multitude huddled together' than the *pen* in which they are. *Opizzo* (xii, 111) should be *Obizzo*, and *Bergomasques* (xx, 71) should be *Bergamasques*. On p. 65, note 2, occurs the form *Aretians*, instead of *Aretines*, used elsewhere. *Lembo* (xv, 24) is *hem*, and can figuratively only be rendered *skirt*. *Smorte* (xvii, 86) means the opposite of *livid;* it is correctly translated *pallid* in iv, 14, and xxx, 25. *Annegava* (xix, 20) should be not *stifling* but *drowning*. *Vêr* (xxxi, 70) should be *towards* instead of *to;* a slight difference, perhaps, yet one which Dante evidently intended. The Carisenda tower is the shorter, not the taller, of the two leaning towers at Bologna (p. 173, note 3). Would it not be well to translate *babbo* (xxxii, 9), and to omit *the* before *Caprara* (xxxiii, 82), the English form of which, by the way, is usually the same as the Italian, *Capraja?*

It will be observed that most of the changes suggested make for greater literalness. That Dante can almost always be best represented by a literal rather than by a free version, that his words should be taken in their primary and not in their figurative sense, we have sufficiently illustrated by the quotations above. Mr. Norton never falls into the easy vice of translators who get round a difficulty by manufacturing unidiomatic compound words. His notes are few and brief, but, on the whole, sufficient. Reticence among Dante annotators is so rare that it deserves to be specially commended. The reader of this version will look in vain for any discussion of the many doubtful passages; he will not be bothered with a summary of the views of those critics who insist that the line, "Poscia, più che'l dolor, potè il digiuno," implies that Count Ugolino ate his sons (xxxiii, 75), or with the wasted diligence of other grubbers who think that they have discovered in Arabic or in Syriac a meaning for Nimrod's gibberish (xxxi, 67), which Dante expressly states is unintelligible.

Mr. Norton wisely restricts his explanations to the needs of the average person who takes up the 'Divine Comedy' for the first time and wishes to know what Dante has to say, regardless of the philological and antiquarian puzzles which the text has furnished. The arrangement of paragraphs, not less than the punctuation in the translation, will be of further assistance, nor should we omit to call attention to the preface, in which Mr. Norton states concisely the general purpose of Dante's epic. To the list of works to be consulted we would add Carlyle's lecture on the "Hero as Poet."

In conclusion, we repeat that this is altogether the best English translation of the 'Inferno,' outranking Dr. Carlyle's version as easily as that outranks all the metrical versions. Other translators will doubtless strive to transmute the Italian *terza rima* into English verse—since to strive after the unattainable is a deep-rooted instinct in human nature—but we believe that this translation of Mr. Norton's will become the classic and favorite translation. How great a service he has rendered in thus placing the 'Divine Comedy' within reach of English readers, we may endeavor to point out when we speak of the other canticles.

Thomas Sopwith. By Benjamin Ward Richardson. Longmans, Green & Co. 1891. Pp. 400.

THE subject of this memoir was born in 1803 and died in 1879. From 1822 until the year of his death he kept an elaborate diary contained in one hundred and sixty-eight small and three large volumes, and, under the supervision of Dr. Richardson, this vast mass of material has been reduced to a moderate-sized volume. In these days of the making of many books and of consequent weariness of the flesh, we should have felt indebted to the Doctor if he had still further reduced the size of the book; if he had not always referred to Weber's opera as "Der Frieschütz"; if he had not misquoted Dryden's line as "Great genius is to madness close allied"; if he had omitted such an absurd heading as "The Ascent of Chamounix"; and if he had in many other respects used what lawyers call "due diligence."

Although not known to fame outside of a limited circle, Thomas Sopwith was, in some ways, a remarkable man. He was a musician, an architect, a distinguished engineer, connected with important mines and with some of the early railroads; and in the course of a long and active life he was brought in contact with the Stephensons, with Faraday, and with a great many other famous people. Every day for fifty-seven years he wrote down his impressions of people and places, together with reflections on a great variety of subjects. Judging from the specimens here given, his impressions are often interesting, but his reflections are of the trite and commonplace character peculiar to people who habitually overestimate the originality of their ideas.

In 1828, during a visit to Scotland, he called on "Christopher North," whom he describes as "carelessly dressed in a large and coarse great coat and waistcoat, no neckcloth to a shirt seemingly worn two or three days, and a beard neglected for the same period." Dress seems to have made considerable impression on Mr. Sopwith, for he describes William IV., whom he saw in the chapel at Windsor in 1833, as dressed in a very shabby coat, and Queen Adelaide sitting by him, "plainly dressed in a green hat and a white feather, blue sleeves and a white gown"—which cannot be considered an expert account of such important matters, but shows an intelligent interest. Owing to the nature of his business, he was a great traveller, and he gives a multitude of figures showing that the cost of travelling by coach was twelve cents a mile, and the average speed 8.15 miles per hour. In January, 1834, he spent sixty-four hours in travelling between Newcastle and the Forest of Dean mines, eighty-two hours in resting or detentions, and only five hours in the business of the mines which necessitated the journeys. In 1838 he visited Ireland, and came to the conclusion that the chief faults of the people were improvidence and love of gayety among the rich, and improvidence and love of whiskey among the poor. He found, as he had expected to find, much misery, and he says: "Imagination, however fertile, will never picture the sad and horrible and gloomy aspect of these dwellings of the Irish poor." He was a great admirer of Dr. Buckland, and tells a story of his riding towards London with a friend on a very dark night and losing his way. The Doctor dismounted, and, taking up a handful of earth, smelt it. "Uxbridge," he called to his friend, his geological nose having enabled him to hit the precise locality. A better-known story of the Doctor is his brief but comprehensive criticism of Mrs. Probyn's picture of the Queen, "Deplorably like." Mr. Sopwith corresponded with Mrs. Somerville, and tells of her introduction to Laplace, who greeted her as the *second* most learned lady in the world. "I give the first place," said he, "to Mrs. Grieg." It was under this name—that of her first husband—that she had published her translation of Laplace's 'Mechanism of the Heavens.' When this wonderful old lady was in her ninety-third year, she wrote as follows: "I am quite deaf but see well, and my memory is only good in mathematics, so I amuse myself solving problems by the method of quaternions in the morning, and Martha beats me unmercifully at bézique in the evening."

Much has been written about the mechanical inventions and improvements of the first half of the present century, but we seldom hear of the multitude of more or less ingenious schemes which came to nothing. Mr. Sopwith had a great reputation for caution as well as for engineering skill, but we find him in 1840 warmly approving a plan for an atmospheric railway, of which nothing more has been heard from that day to this. In this same year, 1840, there were in use on the Gloucester and Cheltenham Railway twice as many American as English engines, although the first cost of the former, including duty, was somewhat higher. It is to be presumed, therefore, that the American engine of those days was more efficient than the English, and this is all the more interesting because some recent experiments go to prove that the superiority is still maintained.

Mr. Sopwith was one of those fortunate individuals whose daily occupations are entirely congenial to their tastes. He was successful, in the ordinary acceptation of the term, his health was excellent, and he seems to have been equally happy with the three ladies who successively assumed his name and looked after his household. Perhaps if he had been less uniformly fortunate, the story of his life would have been more interesting. He was, no doubt, a most estimable and well-informed person, and it may be that his friends fancied that, by publishing this book, they would save him from the fate of Mr. John Gray, as described in that saddest of epitaphs:

> "Poor John Gray, here he lies,
> Nobody weeps, and nobody sighs.
> Where he's gone, and how he fares,
> Nobody knows and nobody cares!"

The writing of diaries for domestic consumption is a harmless, and possibly a useful, occupation, but their publication, even in condensed form, is a matter for serious consideration.

Conduct as a Fine Art: The Laws of Daily Conduct, by Nicholas Paine Gilman; Character Building, by Edward Payson Jackson. Boston: Houghton, Mifflin & Co. 1891.

IN the fall of 1889 the American Secular Union offered a prize of $1,000 for the manual best adapted to assist teachers to instruct boys and girls in the principles of morality without at the same time "inculcating religious doctrine." Although the two essays which are bound together under the title of 'Conduct as a Fine Art,' did not exactly meet all the requirements of the competition, the prize was divided between them. Mr. Jackson's essay is put in the form of a dialogue between a certain Dr. Dix of Freetown Academy and his pupils. Naturally, a discourse on morals appearing in this guise arouses a certain expectation of dulness to come; but one has to read only a few pages before discovering that Dr. Dix's ten-minute talks are the contrary of tedious. It is the author's enthusiasm and his bright, incisive way of writing that redeem them from the common fate of the didactic conversation. Occasionally, however, the conditions of the dialogue betray him into a little stageyness; as, for example, when a boy asks the Doctor one of the standing questions about justifiable lying, and the Doctor makes his reply "[*rising, and speaking with deliberate emphasis*]" It is hard to see what there is in the circumstances that calls for the exhibition of any such restrained excitement. Not infrequently also the Doctor answers "[*coldly*]." It would be better if his depression of spirits were inferred from what he says: the effect is certainly weakened by the insertion of the explanatory parenthesis. But this is after all a minor matter.

Mr. Gilman has endeavored to develop and discuss topics which belong to practical ethics in their logical order. He consequently begins with familiar illustrations of the fact that we live under civil and natural law, in order that he may show also how there is a moral or social law to which we are equally subject. He then talks about obedience and the self-control that makes obedience possible, after which follow in their natural order chapters on Truthfulness, Justice, Work, Personal Habits, and the like.

It is the purpose of both these essays to enable teachers—and especially the more inexperienced of them—intelligently to train their pupils in practical morality. Few persons are satisfied with what is being done now in the schools, or rather what is not being done. Although conduct is three-fourths of life, many schools teach it only as such teaching is implied in the daily maintenance of order. Indeed, Professor Bain goes so far as to say: "For boys and girls above twelve we may as a rule pronounce that moral lecturing, except in actual discipline, is misplaced." By "moral lecturing" he appears to mean any formal attempt to give instruction in morals. But thoughtful teachers feel, in theory at least, that their work with their pupils would be much more effective if they could succeed in raising or completing the moral standards of school-children. The child's imperfect and one-sided sense of honor is responsible for that barrier of actual, though often unconscious, antagonism which turns many a boy's

attentive guide and instructor into his severe and watchful master. Moreover, comparatively few boys and girls realize what a teacher is for; they seemingly look upon him as a daily examiner and meter-out of rewards and punishments, and consequently as the object against which small conspiracies may be plotted. Their imagination is too weak to grasp the large idea of the school's real interests, and the need that each of its members should shape his conduct accordingly. If it were common to find schools where such a broadly intelligent spirit prevailed, children would be receiving even now the best possible moral preparation for actual life.

How much the regular teaching of morals which Mr. Gilman and Mr. Jackson urge will aid in creating the true standard and spirit, it would be difficult to say beforehand. They are wise in leaving to the individual instructor the particular way their essays are to be used. In fact, Mr. Gilman modestly limits the aim of his book to the "much-needed service of clearing the mind of the common-school teacher as to the nature and limits of the moral training which may advisably be given in the schoolroom." Undoubtedly if he had enlarged the scope of his explanations a little, he would have made his chapters more interesting and enlightening. Morals have been talked and written about to such an extent that scarcely anything can be said which has not been said before, though perhaps in a slightly different way. But there is so much to be found in sociological studies which make clear, as well as give freshness and interest to, such subjects as truthfulness and justice and honor, that it is surprising to discover merely a few references to these facts in Mr. Gilman's pages, or even in his notes. When he comes to speak of moral progress, he draws upon this unfailing source, and consequently his pages then furnish a positive diversion after some that have gone before. It is unfortunate, also, that, in writing of self-control and of habit, he says nothing about their physical basis in the structure of the nerves, which Dr. Carpenter, and more recently Prof. James, have so well brought out. As Prof. James says: "Could the young but realize how soon they will become mere walking bundles of habits, they would give more heed to their conduct while in the plastic state."

There are several comparatively unimportant statements in both essays which might easily be questioned. For example, Mr. Gilman's assertion that "representative offices should not be sought by the private citizen" implies a modesty decidedly finical, unless it be intended to arouse a feeling of contrition in the breast of the average Tammany brave. Again, if it be true in these days, why is it necessary or wise to teach children that "the husband and father is the natural head of the family"? To turn briefly to Mr. Jackson, one detects here and there a tendency to over-emphasis and exaggeration, which worried teachers sometimes permit themselves when trying to impress the mind of a dull pupil. Furthermore, when Dr. Dix inculcates fidelity by indulging in an analogy beginning with, "No, things are never unfaithful," he simply bewilders the minds of his listeners by a vicious course of reasoning. Even his alleged facts are not facts, for the "lower animate creation" is not always faithful to its duty, as every one knows who owns a hunting-dog. But such slight blemishes do not seriously mar either essay, filled as each is with true and helpful thoughts forcibly expressed. The combined work will certainly call attention to the subject, and prompt educators to a more intelligent consideration of it than has been customary.

Feelings and Will. By Prof. J. M. Baldwin of Toronto University. 8vo, $2.50.

HENRY HOLT & CO., 29 West 23d St., N. Y.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

ALFRED BOWDITCH, HENRY PARKMAN, J. MURRAY HOWE, } Trustees,

Direct Fast Express Route

TO THE MEDITERRANEAN.

First-class Passenger Steamer Service between

NEW YORK and GENOA, ITALY,

BY THE

NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers in regular intervals of five weeks from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Nov. 28, Jan. 2, Feb. 6, March 12.
WERRA Dec. 10, Jan. 16, Feb. 20, March 26.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

NOW READY.

The Bachelor of Salamanca

By A. R. LE SAGE. Translated by JAMES TOWNSEND. With photogravure illustrations. 1 vol., 12mo, cloth, $1.00; paper, 50 cents.

One of Le Sage's best compositions. A volume of astonishing brilliancy and vivacity.

WORTHINGTON CO., 747 B'way, N. Y.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Frederick Warne & Co.'s List.

A Tale of Imagination by Robert Cromie.

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

Schools.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.

For references and circular address
MRS. E. L. HEAD, Germantown, Pa.

Teachers, etc.

A YOUNG LADY ACCUSTOMED TO teaching desires a position as governess or companion. Qualified to teach English branches, French, drawing, and painting. Address

THREE STERLING BOOKS
FOR ALL BEGINNERS IN LATIN.

THE BEGINNER'S LATIN BOOK. By Collar & Daniell. Designed to give a mastery of forms and of the outlines of syntax. The most successful first book in Latin ever issued. Used in the best schools in America, and largely used also in Canada and Great Britain.

Andrew F. West, *Prof. of Latin, Princeton College:* "It is decidedly the best beginner's book with which I am acquainted."

GRADATIM. Adapted for use of American schools by W. C. Collar, Head Master of Roxbury Latin School, Boston. An easy and interesting reading book. Very successful in England, not less so in the United States.

W. G. Lord, *Prin. of Rugby School, Covington, Ky.:* "It filled just the niche. My class is aroused to new life by it."

THE GATE TO CÆSAR. By W. C. Collar. Designed to lighten the difficulties of the first classic author. *Just Ready.*

Send for full descriptive circulars.
GINN & COMPANY, Publishers,
Boston, New York, and Chicago.

A. C. Armstrong & Son

HAVE NOW READY:

A New and Enlarged Edition (printed from new electrotype plates) of the

Girlhood of Shakespeare's Heroines.

With a New Preface. By Mrs. MARY COWDEN-CLARKE, 5 vols., cloth, gilt top, with photogravure illustrations, $5.00; in white vellum, gilt top, $7.50; half calf extra, $11.25. (Each binding in a neat box.)

The continued demand for this standard work has induced the publishers to have prepared, under the author's supervision, this new edition, with the addition of a THIRD SERIES, NOT BEFORE PUBLISHED IN THIS COUNTRY.

From the author's new Preface: "These Tales were written in all the glow of having finished the sixteen years' labor in completing the 'Concordance to Shakespeare,' of having seen it published and already accepted into public favor.

"With a heart full of gratitude for having been permitted to live to see the present renewed call for the book written when half through her now advanced age, its author gladly again signs herself her readers'

"Faithful and devoted Shakesperian servant,

"MARY COWDEN-CLARKE.

"*Villa Novello, Genoa, Italy*, 1891."

The Camden Library.

Edited by G. LAURENCE GOMME, F.S.A., and T. FAIRMAN ORDISH, F.S.A. In post 8vo vols., tastefully printed and bound.

FIRST VOLUME NOW READY.

THE ANTIQUITIES AND CURIOSITIES OF THE EXCHEQUER. By HUBERT HALL, F.S.A., of H. M. Public Record Office. With illustrations by Ralph Nevill, F.S.A., and an introduction by Sir John Lubbock, Bart. Post 8vo, cloth, $1.75. (*A Prospectus, giving full particulars of the Series, sent, postpaid, on application.*)

"In the various chapters Mr. Hall treats of the Ancient Treasury of the Kings of England, the Exchequer House, the Officers of the Exchequer, the Chess Game, Exchequer Problems, and the making of the Budget, and his material throughout is arranged in such form as not only to be interesting to the ordinary reader, but to have value for the professed antiquary as well. If the succeeding volumes of *THE CAMDEN LIBRARY* are anything like as attractive as the first, the Series should have a wide success."—*London Publishers' Circular.*

NEW VOLUME, BEING FOURTH SERIES OF

The Book-Worm.

An Illustrated Treasury of Old-Time Literature. Tastefully printed in old style on antique paper, with numerous illustrations and ornamental embellishments. 1 vol., octavo, $3.00.

It is a treasury of knowledge on old-time literature, and presents its readers with stores of wisdom on subjects which are attractive to the book-lover, giving him in a readable form much out-of-the-way and little known information on the literature of the past. THIS NEW VOLUME CONTAINS SEVERAL NEW FEATURES—the primary object being, as in the case of its predecessors, to be as miscellaneous and discursive as possible, without being trivial or commonplace.

With Poet and Player.

Essays on Literature and the Stage. By WILLIAM DAVENPORT ADAMS. Cloth, uncut edges, $1.25. Uniform with 'By Ways in Bookland.'

As the fruit of much study of the Theatre, Mr. Adams discourses pleasantly in one essay upon Stage Furniture; in another upon Stage Stumbles (slips of the tongue); in a third upon Stage Effects; in a fourth upon the Stage Rustics; in a fifth upon Operatic Heroes; in a sixth upon After-dinner Plays, and in yet another upon Modern Imitations of the Elizabethan Drama, etc.

NEW VOLUME, "BOOK LOVERS' LIBRARY."

The Story of the Imitatio Christi.

Its Sources, Birthplace, and author, with a notice of the MSS. edition and translations of the work by LEONARD A. WHEATLEY. Cloth, uncut edges, $1.25.

It is to give a history of the book and its writer that Mr. Wheatley's *story of* the Imitation is issued in the Book Lovers' Library, and it is believed the new volume will be welcomed as giving information about this book, the various editions of which collectors have sought for during so many years, and which has been read more perhaps than any other work except the Bible.

Copies sent, postpaid, on receipt of price by

Macmillan & Co.'s

NEW BOOKS.

ENGLAND AND THE ENGLISH

IN THE EIGHTEENTH CENTURY.

By W. C. SYDNEY. 2 vols. 12mo. Cloth, gilt top, $5.00.

"Highly interesting volumes, which ought to be widely read, not alone for the intrinsic value of their multifarious contents, but because this panoramic view of the eighteenth century is pre-eminently calculated to reconcile the most confirmed pessimist to the conditions of the nineteenth."—*N. Y. Tribune.*

T. Love Peacock's Novels.

Edited by RICHARD GARNETT, LL.D.

9 volumes published monthly.

MELINCOURT. 2 vols., 12mo. With Portrait. Bound in cloth, $2.00.

THE PRACTICAL TELEPHONE HANDBOOK,

AND GUIDE TO THE TELEPHONIC EXCHANGE.

By JOSEPH POOLE.

With 227 Illustrations. 12mo, cloth, $1.

Library of Popular Science.

THE PLANT WORLD.

ITS PAST, PRESENT, AND FUTURE.

An Introduction to the Study of Botany.

By GEORGE MASSEE.

With fifty-six Illustrations. 12mo, cloth, $1.

New Books for the Young.

The Story of the Iliad.

By the Rev. A. J. CHURCH. With colored illustrations after Flaxman. 12mo, $1.00.

The Story of the Odyssey.

By the Rev. A. J. CHURCH. With colored illustrations after Flaxman. 12mo, $1.00.

Nurse Heatherdale's Story.

By Mrs. MOLESWORTH, author of 'Carrots,' etc. With illustrations by L. LESLIE BROOKE. 16mo, $1.25.

A Pair of Originals.

By E. WARD, author of 'Fresh from the Fens.' With Illustrations. 12mo, $1.25.

Winifrede's Journal.

By Mrs. EMMA MARSHALL, author of 'Mrs. Mainwaring's Journal,' etc. With Illustrations. 12mo, $1.25.

Tim: A Story of School Life.

12mo, cloth, extra, $1.00.

"The book will undoubtedly touch many hearts."—*Boston Beacon.*

All purchasers of books are invited to send for our New Illustrated Catalogue of Christmas and Holiday Gift Books, which will be sent free by mail to any address.

MACMILLAN & CO.,

112 Fourth Avenue, New York.

Scribner's New Books

FOR THE YOUNG.

By the author of 'Gallegher.'

Stories for Boys.

By RICHARD HARDING DAVIS. Illustrated. 12mo. $1.00.

Mr. Davis's new book has obtained immediate favor, and a warmth of commendation that assures for it a foremost position among the leading books of the year. The following, selected from many favorable notices, will serve to represent the universal expression of approval which has greeted the volume.

"It will be astonishing, indeed, if youths of all ages are not fascinated with the stories. Mr. Davis knows infallibly what will interest his readers."—*Boston Beacon.*

"They are of manly sport and adventure, and, while of absorbing interest to any boy, will at the same time inspire him with manliness, high ideals, and courage."—*Boston Times.*

'Crisp in style and animated in incident. For a wholesome, hearty boy we can fancy no more entertaining volume."—*Newark Advertiser.*

"Of intense interest. It will be very popular with all boys."—*Detroit Tribune.*

Among the Camps.

Or Young People's Stories of the War. By THOMAS NELSON PAGE. Illustrated. Square 8vo, $1.50.

In this volume Mr. Page has told some Virginia stories of the war, which will touch the heart of every reader, young or old, and which will rival the author's "Two Little Confederates" in popularity.

Children's Stories in English Literature.

From Shakespeare to Tennyson. By HENRIETTA CHRISTIAN WRIGHT. Uniform with From Taliesin to Shakespeare, already published. Each 12mo, $1.25.

"Miss Wright has endeared herself to a host of readers by her stories of history and science, but she has never produced a book so thoroughly fascinating as this."—*Boston Beacon.*

The Boy Settlers.

A Story of Early Times in Kansas. By NOAH BROOKS. Illustrated by W. L. ROGERS. 12mo, $1.25.

"A volume that all spirited boys will admire. Its descriptions of frontier life are accurate and exciting. The illustrations add to the entertaining and instructive text."—*Boston Saturday Evening Gazette.*

A New Mexico David,

And Other Stories and Sketches of the Southwest. By CHARLES F. LUMMIS. Illustrated. 12mo, $1.25.

"A pleasant volume of short stories, full of stirring incidents, and powerfully written."—*Congregationalist.*

Lyra Heroica.

A Book of Verse for Boys. Selected and arranged by WILLIAM ERNEST HENLEY. 12mo, $1.25.

"Mr. Henley has rendered boys a service they must certainly appreciate. It is a noble, a choice selection."—*Boston Traveller.*

New Books by G. A. Henty.

THE DASH FOR KHARTOUM: a Tale of the Nile. —REDSKIN AND COWBOY: a Tale of the Western Plains.—HELD FAST FOR ENGLAND: a Tale of the Siege of Gibraltar. Each illustrated. 12mo, $1.50.

"Mr. Henty's books never fail to interest."—*London Academy.*

Pilots of Pomona.

A Story of the Orkney Islands. By ROBERT LEIGHTON. Illustrated. 12mo, $1.50.

"His plot is original and the whole story full of excitement and enthusiasm. The volume will be very popular."—*Boston Herald.*

The Nation.

NEW YORK, THURSDAY, NOVEMBER 19, 1891.

The Week.

THE action of the Republicans of the Pennsylvania Senate in dismissing on a technicality the charges of irregular conduct against the General Auditor and State Treasurer is in accordance with the fitness of things in Quay's State. The election is over, the Republican ticket has been elected by about 60,000 majority, Quay says the result at the polls was a personal "vindication" of himself, and his Republican Senators now follow his example and say it was a "vindication" of the entire party, including the State officials who allowed Bardsley to rob the State of several millions of dollars. It did not trouble these Senators at all to contradict themselves flatly in reaching their final decision. They based that decision on the ground that the Senate had no jurisdiction, yet they had already assumed jurisdiction by taking evidence in the case. Of course, they assumed it before election in order to present an appearance of sincerity in the matter. When the election had been held, and the people of the State had shown that they still "stood by" the Republican party, the Senators turned squarely about, and declared that though they had had sufficient jurisdiction in the case to permit them to take the evidence, they had no jurisdiction which would permit them to pronounce judgment upon it. They even thought at one time that they would adopt a resolution specifically vindicating one of the accused officials, but for some unaccountable reason they refrained.

The decision of the Supreme Court of the District of Columbia in the Newton case is the worst blow the spoilsmen have yet received. It makes unlawful and punishable not only the solicitation of money for political purposes by a Government official of other Government officials, as in the Curtis case in this city, but it makes unlawful and punishable the collection of money for political purposes, "in any manner whatsoever," by anybody from anybody, "in any room or building occupied in the discharge of official duties by any officer or employee of the United States, or in any navy-yard, fort, or arsenal." One Newton in 1888 wrote letters to Government clerks from Virginia, soliciting money to help elect Mahone. On these letters he has been indicted. To the indictment he demurred. His demurrer has been overruled and the case ordered for trial. As the facts are not disputed, he will probably be convicted, and even if he has not to go to jail, he will doubtless be fined and thoroughly warned. The decision goes so much further than that in Curtis's case that it will probably spread terror among all the "workers." They may under it, of course, attack the clerks in their boarding-houses, but this will be much more difficult and troublesome.

Senator Saxton is in the field already with proposals for amendments to the Ballot Law and Corrupt-Practices Act, and announces also that he will reintroduce his joint resolution for an amendment to the Constitution transferring disputed election cases from the Legislature to the courts for settlement. These are all most deserving reforms, and the Senator ought to receive the hearty co-operation of all friends of honest elections in his work. He says he shall favor a blanket-ballot amendment; and that while he thinks the alphabetical arrangement of candidates' names on such a ballot, as is provided in the Massachusetts law and in several others, is the best, he would be willing to accept the party-group plan of arrangement which is provided in the Indiana, Ohio, and many other laws. This is the proper spirit in which to go about the work. Opinions differ as to the relative merits of the alphabetical and party-group forms of the blanket ballot, but all authorities agree that both those forms are superior to our present system of separate party ballots and "paster" ballot. We trust that the Senator, profiting by his somewhat unfortunate experience of last year with amendments, will allow nothing to swerve him from his championship of the blanket ballot this year, and that he will accompany his amendment embodying that change with other amendments which will remove the unfair obstructions that his amendments of last year put in the way of independent nominations.

The two other proposals of Mr. Saxton are of no less importance than the Ballot Act amendments. The Corrupt-Practices Act must be amended so as to compel the committees and bosses to make itemized statements, and, in addition to this, not only should all assessments upon judiciary candidates be prohibited, but all payment of assessments by them also, under penalty of disqualification for office and some form of criminal punishment; and a maximum limit should be placed upon the expenditures which any other candidate, either by himself or his agent or any committee, can make. Two States, Colorado and Michigan, have made a corrupt-practices act, calling for sworn publication after election by candidates and committees of itemized accounts of all money received and expended, a part of their ballot-reform laws, thus recognizing the fact that the two reforms belong together in any general system of electoral reform. Other States are certain to recognize the same fact.

Massachusetts has just removed the last restriction of a money sort upon the exercise of the suffrage—at least in elections for State officers. The charter of 1691 allowed no one to vote who did not possess an estate of freehold in land to the value of 40 shillings per annum, or other estate to the value of £40. The constitution adopted during the Revolution allowed the suffrage to "every male inhabitant of twenty-one years of age and upward having a freehold estate within the commonwealth of the annual income of three pounds, or any estate of the value of sixty pounds." This restriction was abolished in 1821, but payment of a poll-tax was still required before a man could vote. Of late years, as the State has grown closer in politics, the politicians of both parties have paid poll-taxes by the thousands, until a large fund came to be requisite for this purpose in Boston. For a long time the question of abolishing this tax has been agitated, and an amendment to the Constitution for that purpose, having gone through the preliminary stages, was ratified by the voters on November 3. The Democrats have led in the movement, and expect to reap considerable advantage from the change—an expectation which seems to be justified by the bitter opposition to it which has been manifested all along by some of the shrewdest Republican managers.

Secretary Foster's letter to the American Bankers' Association last week was the most pernicious utterance on the silver question that he has yet made on that subject—which is saying a great deal. We are very sure that it did not meet the concurrence of the bankers to whom it was addressed, although most of them are members of the same political party as the Secretary. Mr. Foster took ground in favor of the present silver law, with its monthly purchase of 4,500,000 ounces of silver, as a good thing in itself—not as an alternative to free coinage, but as a desirable permanent national policy. At all events, he did not hint that a time would ever come when it should cease. He told the bankers present that this law had proved beneficial by furnishing a currency to take the place of the $72,000,000 of gold exported last summer. Mr. George S. Coe at the same sitting read a paper showing that the exportation of this gold was rendered necessary for the most part by the Government's purchases of silver—that is, the Government went into the market and bought nearly $70,000,000 worth of an exportable article (silver), which would otherwise have entered into our international trade balance. Consequently, we had to pay our debts to a corresponding amount with gold. In other words, Mr. Coe showed (unintentionally perhaps) that Secretary Foster had put the cart before the horse. In other particulars Mr. Coe demonstrated the extreme danger of continuing the purchase of silver on Government account.

Harper's Weekly for November 14 contains a statistical article by David A. Wells con-

cerning the amount of useless silver now held on storage by the Government, with pictorial illustrations. The amount is now $400,000,000, and it is increasing at the rate of *seven tons* per day. The amount now on hand would make a column one foot in diameter and six and one-half miles in height. The most adventurous balloonist the world has ever contained would not be able to reach the top of it. To haul this mass of silver would require 1,000 freight-cars, or 5,500 two-horse wagons, or an army of 220,000 men, each man carrying 100 pounds of it on his shoulder. The cars, the teams, and the army are all shown in the illustrations. To count all the silver dollars in the Government warehouses would take the time of one man working eight hours a day for eleven years. The patient toiler is shown in the cartoon, with visibly advancing age at the end of his labors. This is not the first time that Mr. Wells has sought to teach the principles of finance by pictorial illustrations, as in the case of 'Robinson Crusoe's Money,' where he had the coöperation of Thomas Nast. Of this book the Harpers have recently issued a new edition. It is to be hoped that it may have a new and wider circulation, since nothing better adapted to the explanation of money to the common people has ever been published in this country.

The "arithmetic men" are at work upon the Electoral College as it is likely to stand next year, in the light of the results of the recent elections. One calculation divides the electoral votes by States according as the States have been carried in the latest elections held in them. That is to say, the eleven States which held elections this year are classified according to the results of November 3. The other States are classified according to results of most recent elections. This gives the Democrats 242 electoral votes and the Republicans only 202. But this calculation does not take into account the fact that Michigan is to choose electors by Congressional districts, and that instead of the entire fourteen electoral votes of the State going to the Republicans, as the calculation contemplates, at least four of them would go to the Democratic candidate. This would make the division stand Democratic 246, Republican 198. In this estimate Indiana is classified with the Republican States and Massachusetts and Iowa with the Democratic States. If Indiana were to be changed to the Democratic column and Iowa and Massachusetts to the Republican column, the totals would be Democratic 233, Republican 211. If Massachusetts, Iowa, and Indiana are all placed in the Republican column, the totals are, Democratic 218, Republican 226. Any one who studies the various calculations judicially will be forced to the conclusion that while the odds are unmistakably in favor of the Democrats on the "face of the returns," there is nothing in the outlook which justifies the assertion that either party has a "sure thing of it."

We find in recent copies of the *Texas Farm and Ranch*, an agricultural journal published at Dallas, Texas, much amusing information concerning Gen. Dyrenforth's rain-making experiments in that State. The editor says that since these "so-called experiments were made under the supervision of the Government and paid for by the people, the people are entitled to reliable information regarding them," and this he has been endeavoring to obtain. As a result he has become convinced that all the reports of success are false, that the experiments were ridiculous failures, that clouds came up and threatened rain before any explosives were used, that some of the heavy rain claimed to have been caused by the explosions fell the day before the General had unpacked his materials, and that "it is probably true that more atmospheric concussion was made by the jack-rabbit hunters in the vicinity in one day than was caused by the combined efforts of the rain-makers." The editor offers $100 reward for proof that his reports of the experiments are not true in every essential statement, and we advise Uncle Jerry Rusk to see if he cannot win it. Of all men in the United States, he ought to be interested in demonstrating that the experiments have not been the entirely idiotic performances which all respectable authorities represent them to have been, for he is the officer of the United States Government in charge of them, and of the $12,000 spent in making them.

It is as yet too soon to obtain expressions on the Briggs case from the most significant religious quarters—the organs of Presbyterianism in the West. Meanwhile, there is food for thought in the attitude of the *Presbyterian* of Philadelphia, which says "unhesitatingly" that the action of the New York Presbytery does not "restore Prof. Briggs to the confidence of the Church," and asserts that the vote at Detroit in veto of his appointment still represents the prevailing sentiment of the denomination. A very important comment upon the case is to be found in the Cincinnati *Herald and Presbyter*, a denominational paper of great influence. It says:

> "The Church has never expected help from the Presbytery of New York in this case. . . . To the prosecution it is a Bull Run defeat, but there were battles after that, and complete victory to the nation in the end. So it will be in this case. The decision of the New York Presbytery only inspires the adherents of the action of the Detroit Assembly to greater zeal in protecting our theological seminaries from unsound instruction. . . . New York Presbytery may inscribe on its banner 'Let us have peace,' but the motto of nine-tenths of the Presbyteries will be, 'First pure, then peaceable.'"

Some allowance is no doubt to be made in such expressions for the first smart of disappointment; yet they unquestionably speak the feelings of a large section of the Presbyterian Church.

The action of the New York Presbytery on Monday appears strange enough alongside the fact that the vote of the General Assembly, approving of revision of the creed, expressly provided that no changes should be made impairing "the Reformed or Calvinistic system." With preterition out, and the salvation of all infants and moral heathen in, the original Calvinistic system is no longer recognizable. But there is no likelihood that the changes desired by the Presbytery, or any others, in fact, will be made in the Westminster Confession for a long time to come. In face of the conflicting recommendations made by the different presbyteries, the next Assembly will do nothing, it is almost certain, except to call for more light and remit the whole question to the churches again. It has been shrewdly suspected that this continuous game of battledore with revision was precisely what its opponents intended, who would be quite content to demonstrate the impossibility of agreement on a new symbol, and then use that fact as a convincing argument for retaining the old one. The entire affair, too, threatens to be complicated by the Briggs case, which may now come up next spring by direct appeal to the Assembly. Prof. Briggs could probably demand, if he chose to, the more orderly course of first appealing to the Synod, but as he has all along been eager to get a decision from the highest court, he will presumably interpose no objections.

The really serious points in the accusations made against Admiral Brown were not met by his published letter, and they are not met by his telegram from Acapulco in reply to Secretary Tracy's despatch. He has never given any reason for his steaming up to Quintero Bay in the *San Francisco* on the eve of battle. No call of duty took him there, and our naval commanders charged with the delicate mission of maintaining American neutrality and protecting American interests in a foreign country where civil war is raging, are not expected to put themselves in a most suspicious situation out of mere idle curiosity. He has never explained why he did not show the ordinary naval courtesy to the insurgent vessels in Quintero Bay, but gave them the impression that he was there as a hostile observer of their movements. Most important of all, he has never accounted for the fact that, immediately after his return to Valparaiso, a Balmaceda newspaper came out with big headlines telling of "the trustworthy news" about the insurgent forces "brought by the United States man-of-war *San Francisco*." Of what avail is it for the Admiral to say that he gave strict orders that no information should be carried ashore, in the face of this positive and as yet uncontradicted evidence that the news actually did leak from his ship somehow? Secretary Tracy's telegram of inquiry is a gratifying proof that the Administration is properly sensitive about the affair, and we hope that Admiral Brown will be subjected to a searching examination when he reaches this country. His explanations thus far do not explain.

The result of the polling in the South Moulton division of Devonshire is all the

more significant because in the southwestern shires the Liberal Unionists were in 1886 proportionately more numerous than in any other section of England, with the possible exception of Birmingham. In that year in some of the constituencies in these counties, such as the South Moulton and the Totnes divisions of Devonshire, and the Bodmin, St. Ives, and Truro divisions of Cornwall, very much more than half of the Liberal electors refused to vote for the Gladstonian candidates. In 1885, in a total vote of about 217,000, the then united Liberals had in Cornwall, Devon, Somerset, and Dorset a majority of nearly 16,000, and carried twenty-one out of the thirty-four seats. Of the twenty-one Liberals then elected, ten, or almost half, declined to support the second reading of the Home Rule Bill; and at the succeeding general election nine of these ten were again returned as Unionists, the other being defeated by a Conservative. Five of the eleven Gladstonian Liberals were beaten at the polls, the net result being that the counties which in 1885 had chosen 21 Liberals to 13 Conservatives, the next year elected 20 Conservatives, 8 Liberal Unionists, and only 6 Gladstonian Liberals. The Liberals in 1885 in the constituencies which were contested in 1885, had a majority of 13,000, and in the same constituencies in 1886 the Unionists, Conservative and Liberal, had a majority of 22,000, the total vote at the earlier election having been 162,000, and at the later about 145,000—a ratio of change equivalent to more than 250,000 votes in the State of New York. The result in the South Moulton division last Friday seems to indicate that the majority of those who were in 1886 dissentient Liberals in southwest England have become reconciled to the party programme and will support its candidates. If such shall prove to be the case, the gains the Gladstonians will make at the general election in these four counties alone will wipe out more than a third of the present Unionist majority.

The French do not feel as pleasantly towards England just now as Lord Salisbury intimated in his speech the other day at the Lord Mayor's dinner. M. Ribot, the French Minister of Foreign Affairs, had occasion, some weeks ago, to discuss the question of Egypt in the Chamber, apropos of an attempt by the Anglo-Egyptian Government to submit a French apothecary at Cairo to the local police regulations. The French chargé at Cairo set up the "capitulations" with the Porte as the Suzerain of Egypt, reserving jurisdiction over all French citizens and interests to the French consuls, and the Anglo-Egyptian authorities thereupon backed down. In explaining all this to the Chamber, M. Ribot distinctly declared that France still considered Egypt a vassal of the Porte, and considered all the treaties with the Porte touching the status of French residents as entirely unaffected by the English occupation. He then went on to say that this continuance of the occupation was still deemed a grievance by France; that she still looked for its termination at the earliest possible moment, and that it constituted a cloud in the relations between France and Great Britain, in spite of the eager desire of France to make them friendly as well as peaceful. All this Lord Salisbury appears to have ignored at the Lord Mayor's banquet, and hence a considerable amount of irritation in the French press. This irritation has been prepared and fomented by the way the Tories have received Mr. Gladstone's observations touching the Egyptian occupation in his late Newcastle speech. He said in substance that Salisbury ought to get out of Egypt as soon as possible, and that its occupation was a dangerous burden. This has brought down on him a storm of Jingo abuse both from the Tories proper and from the Liberal Unionists. But the truth is that this is the doctrine which both parties held when the occupation began, as has been shown by many quotations. Occupation was to cease as soon as order was restored and Egypt was able to maintain order and protect herself from invasion on the side of the desert. Order has been restored, and the reorganized Egyptian army has thrashed the Dervishes over and over again on the southern frontier, and the question whether it is worth while to stay there at the risk of offence to France becomes more and more pressing.

This question is forcing itself on British attention all the more urgently because there is a growing feeling in England that the Suez Canal is, as a line of military communication with India, more or less of a delusion and snare. The approach to the canal would in time of war have to be protected by a great fleet; not only this, but the canal itself would have to be protected night and day by a large force, for fifty men, by sinking something in it or throwing earth into it, could make it impassable in fifty minutes. These considerations are made the more important by the great improvement which has taken place in communication with India by the Cape of Good Hope. The gain of the canal route in time over the Cape route is so small since the late improvements in steam navigation that fewer and fewer military men are disposed to claim superiority for the canal, considering the serious cost of protecting it during a war with any European Power, and especially France. In fact, the military value of canals in foreign territory must always be trifling, because it is so easy to damage them. Any injury done to a railroad is a comparatively small matter. Rails are soon put down again, and even breaches in embankments restored; but a canal well cut, or filled up at a good place, is, for practical purposes of warfare, hardly repairable.

Sir Charles Dilke, who is probably the best civilian critic of military affairs in Europe, and was a close observer of the operations of the Franco-German war, has followed the late French autumn manœuvres as a privileged guest—the one person to whom no information was denied and no place forbidden. He has published the results of his observations in the last number of the *Fortnightly* in a long article, in which he boldly declares that the French army is now the first in Europe, and that the issue of another struggle with Germany would be extremely doubtful, with the odds against the Germans. This was the impression made on nearly all the foreign officers who witnessed the manœuvres, but Sir Charles Dilke has worked out the conclusion in detail, in an extremely interesting paper. He places the French generals now in command in the very front rank of strategists, and evidently rates their capacity for handling large masses of men above that of the Germans, now that Moltke and the other paladins of the war of 1870 are gone. He restores the French infantry of the new generation to its old place under the first Napoleon as the finest fighting material the world can show, ardent, eager, intelligent, and thoroughly disciplined, and first-rate marchers. Of the artillery he speaks in praise nearly as high; but, while praising the horses and men of the cavalry, thinks it the weak point of the whole force, for want of proper leadership. The men in high commands in it are too old, cavalry leadership needing above all things bodily vigor, quick decision, and courage tinged with rashness—qualities which begin to decline after forty.

This astonishing revelation of the vitality of the French people he does not think an immediate menace to peace, but he does think that the present condition of the French army will make accidental occurrences more dangerous—that is, such as slight offences or mistakes for which an apology will be expected and refused. He thinks it was the old Emperor's knowledge of the improvement in the French military organization which made him so ready to make excuses for the Schnaebelé incident, for instance, but doubts if the present Emperor would be equally ready, as the military men on both sides are growing touchier and touchier. This is made the more serious by the passion of the young gentleman who now fills the German throne for making speeches on all sorts of subjects, in which he shows a good deal more valor than discretion. His allusion to the first Napoleon the other day as "a Corsican parvenu," besides being in bad taste, was a kind of thing of which the French would not stand many repetitions. No rôle is so dangerous for a man in any high place, and especially a man in command of a great army, as a habit of indiscriminate speech. Moreover, the Emperor evidently thinks he is Frederick the Great, and can get back a century and a half by simple proclamation. On a recent visit to Bavaria he wrote in the "Golden Book" at Munich "Suprema lex regis voluntas"—the old maxim, more tersely expressed, of the Roman lawyers, which has been used so much in historical literature in illustrating the despotism of the later Emperors. The Bavarian press is naturally indignant, and says there is no law of that sort known in Bavaria, or, in fact, in any part of Germany.

THE TRUE INWARDNESS OF THE TREATY WITH BRAZIL.

Nearly two months ago we called attention to the charge, publicly made in Brazil, that the reciprocity agreement with that country had been obtained by Mr. Blaine through a deception. He was said to have promised the Brazilian negotiators that our Government would not enter into a treaty with Spain affecting Cuban sugar, and it was alleged that, but for that promise, since broken, Brazil would not have accepted the arrangement in anything like the form actually adopted; moreover, that the Brazilian Government was indignant at the fraud practised upon its good faith, and had sent for its Minister to this country to come home and explain how he had been imposed upon. We are now in possession of information which enables us to set the whole matter in its true light.

In the first place, there is no doubt whatever that the Brazilian Government went into the reciprocity agreement upon the distinct understanding that it would be given advantages in the matter of sugar which Cuba was not to obtain. It was so stated in the hearings before the committee of Congress inquiring about the matter. Thus the *Jornal do Commercio* of October 16 expressly states that the Government met the obvious objections to the treaty, namely, that Brazil would lose her only advantage under it through the concession of similar terms to Cuba, by saying that, "in fact, the Government of the United States promised our Minister, Salvador de Mendonça, that it would not make a similar treaty with Spain." This is in line with the same paper's former declarations on the same subject, and with its assertion that four ex-members of the Brazilian Cabinet stand ready to vouch for the fact of the promise made to Mr. Mendonça by Mr. Blaine. Here, too, comes in the significant statement of the Brazilian Consul at Havana, in his letter to the *Tribune* of October 24: "The treaty with Cuba . . . had a tendency to destroy the benefits *we expected* to reap from the negotiation."

We are enabled, moreover, through information coming to us from the most authentic sources, to affirm that Mr. Blaine did, in fact, give Mr. Mendonça his "word of honor" not to negotiate a treaty with Spain affecting Cuban sugar, and that he even told him that he thought the Cubans would, in consequence, rise and seek their independence! We also have positive information that when the Brazilian Minister appeared before the committees of the Brazilian Congress investigating the question of the treaty, he could defend his conduct only by saying that Mr. Blaine had deceived him. He also said that Mr. Blaine had saved the letter of his promise by being sick and away when the President and Mr. Foster actually closed the reciprocity negotiations with Spain. And he finally said that the President had agreed to make some modifications in the Brazilian treaty, in consequence of its having been obtained under false pretences. It was to secure those modifications that Mr. Mendonça returned to this country.

There is no lack of corroborative evidence to back up these assertions. Mr. Blaine's confidential organ in this city accurately reflects the course of the whole negotiation. His first official note to the Brazilian Minister was dated November 3, 1890, and a favorable reply was received on January 31, 1891. But in the meantime, on January 3, and while the Brazilian negotiators were relying upon his pledge not to treat with Spain, Mr. Blaine wrote to the Spanish Minister to broach the matter to the Spanish Government. On January 28 the *Tribune* referred to the pending negotiation and said: "There is nothing for Cuba to do, if she is robbed of our market, but to go into bankruptcy or to *raise the flag of revolution.*" And even after the Spanish arrangement was made, the same paper expressed regret that the Spanish West Indies had not been, "like *free and independent* Brazil, dealing directly with the United States," and added, "Without reciprocity, bankruptcy and ruin was before it [Cuba], and probably *revolution and civil war* in the end." This is pretty good confirmation of what Mr. Blaine told Mr. Mendonça about his proposing to force Cuba to break with Spain.

But as soon as he had got his agreement with Brazil, thus dishonorably obtained, he began to brandish that as his most effective club to compel other nations to make similar arrangements. So the faithful *Tribune* said as soon as the success of the Brazilian negotiations was announced: "The act of Brazil puts powerful pressure upon other nations. . . . It is not difficult to understand that Brazil might soon push Cuba from the foremost place," etc. And the Brazilian Consul, in the letter before referred to, suggestively said: "I hardly see what he [Mr. Blaine] is after, unless his object was to make that treaty with Brazil facilitate his long and cherished negotiations with Spain, alias Cuba." Still further confirmation of this view of the case is to be found in the undoubted fact that Brazil has already demanded a modification of the treaty. A Rio correspondent of the *Herald*, in a letter published last week, said such a demand was to be made, though he gave no reasons for it. Minister Mendonça himself, on his return to this country, cautiously said, in an interview, that he expected the treaty to be modified very soon. The Brazilian Consul at Havana said the same thing. Why should the treaty be modified? It has been in operation only seven months, and has been reported as highly beneficial to both countries. Why this haste to modify it?

Plainly, only because Brazil knows that she was duped, and proposes to have redress. As the *Jornal do Commercio* says: "The Brazilian agreement has been a golden key to the Americans." But it was a stolen key. The Brazilians want it back, or some equivalent. The paper just quoted—which is the London *Times* of Brazil—says further: "It is true that, so far, we are not losing much by it [the treaty]; but we have gained nothing except a reputation in diplomacy as the tool of Blaine, without the slightest equivalent—and that is not a very proud rôle, to tell the truth." Meanwhile, we in this country are left to reflect upon that great gain in dignity and decency which has, we have been told, marked Mr. Blaine's diplomacy during his second term as Secretary of State.

THE SALE OF THE JUDGESHIPS.

It is not often that a law falls so completely in attaining its object as our Corrupt Practices Act. The Democrats, it is but just to them to say, in their last State platform, demanded an extension of its provisions, and what has been already seen of its working in two elections shows that an extension is absolutely necessary. The section which is made 41d of the Penal Code obliges every candidate to file "an itemized statement" of his expenses, showing all the money expended by him directly or through other persons "in aid of his election," and giving "the names of the various persons who received such moneys." But as there is no limitation put on the sums so contributed, and no prohibition of any class of expenditure except direct bribery of voters, "the itemized statement" is, of course, valueless. What the candidates do, or may do, under the act, is to give, in a lump sum, the amount they have paid to the Campaign Committee; but the Campaign Committee is under no obligation to render any account whatever, so that the law is practically futile. It can contribute nothing to electoral purity until a limit has been put on the amount which a candidate may spend, and his committee or agents are compelled to specify what they did with the money which he put in their hands.

The statements filed by the candidates in the late election have in most cases a touch of burlesque about them. But there is nothing humorous or amusing in the returns made by the candidates for judicial offices. Nothing can better illustrate the deadened state of public opinion in New York than the calm with which these revelations of the open sale of the judicial offices of the city are received. Judge Ingraham has been long on the bench, and is well known as an able and upright judge. There was not the smallest doubt of his reëlection. The commendation bestowed on this and other judicial nominations of Tammany Hall was used during the canvass to show the groundlessness of fears about Tammany by Mr. Fairchild and others, who were working for the success of the Democratic State ticket. But it now appears that Judge Ingraham was actually made to pay $7,000, or nearly one-half of his salary, in order to obtain it. We do not like to characterize this transaction as a sale in which Judge Ingraham appeared as vendee; we think the correct description of it is, that it was ransom levied on a judge of the State of New York, on his way to the bench, by a gang of foot-pads. This enormous sum was actually, as appears by the returns, paid over to Croker, and by him pocketed and in no way accounted for. Mark well, that no orator stumped, or was needed to stump, for Judge Ingraham. He needed no man's praise and no man's defence against attacks of any description on

his personal or professional character. There were absolutely no expenses properly incurred on his behalf except the cost of printing and distributing the paster ballots. For this, one hundred dollars would probably have amply sufficed. Croker had no more claim on him by right, therefore, for anything beyond this than any blackmailer or confidence man who besets simple-minded travellers in the neighborhood of the railway stations. The seven thousand dollars was pure extortion practised on a judicial officer by an adventurer who holds no office of any description, and pursues no recognized calling or industry. But the misery and shame of it is that this practice has gone on openly for years, in the full light of day, has never been prohibited or punished, and is not now legally punishable.

There is much the same story to tell about Judge Pryor, who has been elected on a Tammany nomination to the Common Pleas. This nomination, euphemistically speaking, was sold to him for $10,000, probably because it was the first time he had been elected. This sum was pocketed by McQuade, the Tammany Treasurer, in the same way. The expenses of the canvass were no greater in Judge Pryor's case than in Judge Ingraham's, and yet he has had to surrender two-thirds of his first year's salary, and neither he nor any outsider knows what was done with it.

Some of the smaller judicial offices cost still more in proportion to the salary. Judge McCarthy, the Tammany nominee for the City Court, paid Croker $6,150 for a chance at a salary of $10,000, and paid to others $1,748 No one knows what became of the money, in what barrooms it was spent, and by what foul creatures it was guzzled or gambled away. Mr. McCrea, who got the Republican nomination for the Civil Justiceship in the Tenth District, actually paid to various organizations $6,500 for his nomination, though the salary of the office is only $6,000. Is it possible to conceive of a more diabolical preparation for the proper dispensation of justice among the poor than a load of debt incurred in purchasing the judicial office?

The cheap way in which the candidates for political offices, according to their own story, got their places, is curious and interesting, and will excite many a smile among the judicious. The noblest Roman of them all, Mr. Bourke Cockran, the Tammany "Custos Mores," got returned to Congress for the beggarly sum of twenty-five dollars —ten dollars less than his monthly receipts from each Deputy Sheriff when he was counsel for Sheriff Grant. Mr. Fassett got defeated for $8,450, but gives the items pretty minutely. Mr. Flower, on the other hand, paid, he says, only $5,000, although his nomination must have been worth to him, one would say, on the basis of the judicial scale, about $500,000—that is, it must have cost at least seventy times as much to elect him as it did to elect Judge Ingraham. The whole story is most instructive. We commend it to the serious attention of all patriotic men, and especially to those who are comforted by the reflection that if Croker's present kindly "mood" lasts, he will give us ballot reform in the State of New York. Hamilton and Washington, we see, did not drive Sir Guy Carleton out of the State for nothing.

TAMMANY APOLOGISTS.

THE very worst consequence of Tammany rule in this city is not the actual corruption and disorder it produces, but the connivance or condonation which it imposes on the press and the bar. As soon as a Tammany man gets possession of the leading city office, a sort of conspiracy of apology seems to be entered into by nearly all the agencies that do most to shape or control public opinion. The lawyers find that in the course of their practice they encounter Tammany influences, for weal or woe, at almost every step they take, and have, perforce, in the interest of their clients, as well as in their own, to keep on good terms with the mammon of unrighteousness. The newspapers, in like manner, either are direct recipients of what "Fatty" Walsh calls "favors," or else are under obligations to Tammany for support given to party candidates at the polls. From these conditions there almost invariably results, especially soon after an election in which Tammany has played a prominent part, either dead silence about the conduct of Tammany officials, or else bold and outspoken praise of its worst appointees. The general effect of these apologies and justifications on the moral and political standards of the city population is, of course, about as bad as bad can be. We do not believe that any Christian community has, in the whole history of free government, been exposed to influences so debauching and so well calculated to make corruption permanent and ineradicable. The process began about 1867, when Tweed was rising into power, and it nursed him finally into the excesses which came near making a revolution necessary to oust him. It is on this subserviency that Tammany has again risen into power and expects to keep in power.

There could not be a better illustration of what we mean than the treatment by the press of Mayor Grant's appointments. They are in the main the worst ever made in a modern civilized community. The mere spectacle of some of his men, and indeed of himself, in high office is a bit of education for the younger generation against which Church and school would have hard work to contend, even if there were nobody but the Tammany General Committee to approve of it. But what is the younger generation to say or think when it finds them defended or praised or kept silent about by what is now almost the only literature of the bulk of the population in this city—the newspapers; and not the lowest kind of newspapers either, but newspapers of the best class, possessing a certain amount of moral and intellectual influence? Take the case of Grant's police justices, of whom he has now appointed eight, the last two being "Paddy" Divver and the more notorious Grady. There are few, if any, Tammany politicians whose unfitness, not only for any judicial office, but for any place of trust or emolument, is better known than Grady's. The bestowal on him of a police magistracy was a shocking offence against public decency. Yet the New York *Times*, as the fatal consequence of its alliance with Tammany in the last canvass, was obliged to refrain from one word of comment on it, and, worse than this, was obliged to give a sketch of Grady's career which might have been written about any one of the most reputable members of the bar in this city.

But the Brooklyn *Eagle*, another Democratic paper of wide influence and circulation, and which every now and then has intervals of sobriety and political morality, does better for Tammany than shut its eyes and hold its nose. It boldly defends Grant's police justiceships, as appointments eminently fit to be made and justified by the results. It says:

> "There is no mystery about what constitutes efficiency in a police justice. He is the most effective justice who hears the largest number of cases in the shortest space of time and decides them in a way satisfactory to justice, conducive to the decrease of complaints in the region over which he presides, and helpful to the recognition of law and authority among those who are brought before him. By these standards, which are as exact and which are as capable of precise formulation in figures or other terms as a civil-service examination is, Patrick Divver is proving to be the most effective justice that New York city has had in a great many years. Clarence W. Meade and Edward Hogan nearly equal him in efficiency, and the other men named as ranking next are making an excellent record. Justice Taintor is doing as well as he knows how, just as Justice John B. Cochrane undoubtedly did, but he does not know how very well. In these instances newspaper comment and public expectations have not been met. The one has been reversed and the other refuted by events. The 'good' men have made poor justices. The 'bad' men, so called by the press, have made good ones."

The answer to all this is easy. The account given of the administration of criminal justice by Paddy Divver and others is pure romance. It is the concoction of the editorial imagination. Nobody knows how justice is administered in the New York police courts who does not watch the proceedings regularly from day to day, as some of the police do, and who does not know the relations of the magistrates to the persons brought before him, as the police generally do. The difficulty in officering police courts in large cities is very like the difficulty of getting fit men for Indian agencies. It consists in the absence of observation by an intelligent public. Nobody fit to form a good judgment on the administration of a police court frequents such places. There is seldom any audience but policemen, criminals, and semi-criminals. The justice is monarch of all he surveys, and protects his cronies, punishes his enemies, and baffles the law—as in dealing with liquor-dealers, gamblers, and throwers of rubbish into the streets—with perfect impunity.

All civilized communities that we know of, except our own, make some effort to compensate for this absence of public super-

vision by means of the guarantee afforded by the life and character of the men put on the bench. They apply to the administration of criminal justice the principle of selection which they apply to all other useful and responsible work. They refuse judgeships to the Divvers and the Gradys, for the reason which would make it impossible for Grady to get the conduct of an important suit, or Divver the cashiership of the *Eagle's* counting-room or the editorship-in-chief, even if he had the literary qualifications, his reputation in other respects being what it now is. The doctrine that character is of no importance for such places, and that the commonest street ruffian one can pick up is, on the whole, more likely to prove a good magistrate than a lawyer of good standing in the community, because he has lived in closer contact with the criminal classes or has been a criminal himself, is a novelty; but it is the natural product of Tammany politics. The rule of a great city by the remarkable band who have now got control of our city government is in itself an absurdity, and, if defended, has to be defended by absurdity. But it cannot be defended, even by absurdities, without inflicting serious injury on the moral sense of the community. We doubt much whether the mere sight of Tammany rule has not already inflicted on the city an injury from which it will take a long time to recover. But the injury becomes more serious, and more likely to be permanent, when the moulders of public morality begin to tell the voters that the spectacle is on the whole edifying and hopeful; that the belief that birth, rank, and wealth were necessary qualifications in legislators or administrators or judges, was not the only mistake of past ages (another and greater mistake being the belief that some little knowledge, and a clean, decent, and honest life, were necessary for the discharge of public trusts); that the greatest discovery of democracy was that bummers, rowdies, drunkards, gamblers, pugilists, bilks, shysters, and dead-beats were the coming men, and that the State was happiest which had the best supply of them for its vacant offices.

THE WRECK OF THE DESPATCH.

THE approval by Secretary Tracy of the report of the court of inquiry exonerating all the officers of the *Despatch* from blame for her loss must have been accorded in pursuance of the very natural and proper habit of leaving professional questions to be decided by professional men. But the circumstances are so extraordinary that the matter should not be allowed to rest where it is. Wrecks from collisions, from treacherous currents, gales, deviations of the compass, from losing the way in a fog, and from sudden accidents of all kinds, are common enough. But we should have to search long and widely to find another case of a ship in perfect command steaming ashore at full speed in fair, clear weather, on a familiar coast and in the full blaze of a first-order lighthouse only four or five miles away. The only excuse was, that the officer in charge of the watch thought that this brilliant white light was the red light of a lightship which he had actually passed without seeing it an hour and a half before. That such an excuse should be accepted by a court of inquiry seems most astonishing, even to a landsman, and becomes yet more so when we consider what must have been the circumstances as present to the mind of the officer directing the course of the ship. It is true that we cannot speak with confidence as to all details. On minor points the testimony, as reported in the newspapers, is confused and contradictory, and the cross-examination of the officers concerned seems to have been anything but critical and searching. But the known location of the lights and the course of the ship, as afterwards worked out, enable us to fill in all that is wanting to complete one of the most singular stories in the history of navigation. Let us place ourselves, in imagination, on the deck of the *Despatch* on the night of the wreck, and think out what we should have seen.

The hour is one o'clock A. M., the ship steaming nine or ten knots. Within an hour two lights are to be sighted, unless the weather is too thick to permit it. The first is at the masthead of the Winter Quarter Shoal Lightship, a small red light; the next, fourteen miles farther on, is Assateague Light, a white light of the first order, 153 feet above the sea level. Being so much higher and brighter than the other, it is visible seven miles farther. In the clearest weather the lantern of the lightship can be seen at a distance of twelve miles from the deck of an ordinary steamship, and at eleven miles from that of the *Despatch;* for the other light the distances are nineteen and eighteen miles. In spite of the two lights being fourteen miles apart, the second should be sighted about forty minutes after the first, not only because of its greater range, but because its direction is so oblique to the course that it is only about twelve miles farther away.

Just about the time the officer expects to see the red lantern, the lookout reports a light on the starboard bow. It is a common weakness of men that, in doubtful cases, one thinks he sees what he expects to see; and it is well known that a white light may have a lurid tint when first sighted on the sea horizon. We cannot, therefore, blame the officer that he thought the light was red, that being the expected color. But it is a little surprising that, in that suspicious frame of mind which is the only guarantee for safety at sea, the fact that the light was not ahead, which was the expected direction, but in the direction of Assateague, should have called up no question whatever of the identity of the light. The only explanation which suggested itself to his too confiding mind was, that the ship had drifted two or three miles out of her course, which was now altered accordingly, and directed nearly towards the light.

The strange part of the story begins one hour after the light was sighted. The officer knows well that he could not possibly see the red light at a greater distance than ten or eleven miles; to bring this knowledge to his mind a circle on his chart shows it to him. On his theory, he must, at the end of one hour, about 2:30 A. M., have been close upon the lightship, and in full sight of Assateague light. Still, no question presents itself to his mind. The minutes pass on; if he has the use of his faculties he knows that he must be miles beyond the lightship, yet he chases the *ignus fatuus*, and never once asks, Where is Assateague? Had he obeyed the Captain's orders to rouse him in case of anything unusual, he would have awakened the Captain with the announcement, "There is indeed something unusual and unheard of. We have been steaming toward the Winter Quarter lightship for nearly an hour and a half, and her light is still in the horizon, though it is invisible at distances of more than eleven miles. And nothing is to be seen of Assateague, though we have been within range of it for an hour!" The reader can imagine the emphasis with which the Captain would have exclaimed, "Oh, fool! if you have been chasing a light for an hour and a half without reaching it, that cannot be the lightship; it can be nothing but Assateague itself." But the officer saw nothing to disturb his serenity, although the fancied red light must long before have developed into the brilliant white of a first-order light, 150 feet above the sea and only a few miles away; nothing to impair his confidence that he was only approaching the red lantern of the lightship; never thought of Assateague—until a rude shock and the coarse grating of the ship on the bottom brought him to his senses! He had steamed twelve miles past the lightship and never suspected it.

The exoneration of the Captain, Lieut. Cowles, and his executive officer, Lieut. Noel, was quite justifiable. The latter had been relieved by Lieut. Mulligan at two o'clock. But the conclusion that no court-martial was necessary in the case of Mulligan looks quite too lenient unless the reported evidence of the actors is egregiously in error. For the credit of the service we hope the official report will show some extenuating circumstances to justify its conclusions; but the only excuse so far offered is not encouraging. It was weakly claimed that, through some peculiarity of the lenses, the Assateague light often looked red or pink. No one who knows how scrupulous is the care with which all lenses and lights are tested by the Lighthouse Board, will believe this to be possible.

Apart from all questions of the possible color of the light, the following three conclusions seem well established:

(1.) That the ship steamed fourteen miles towards a supposed light which could not be seen more than eleven miles, or twelve at the utmost, without the officer in charge thinking there must be something wrong.

(2.) That Assateague Light was well known to be in full sight for forty-five minutes before the ship struck, and yet the officer never looked for it.

(3.) That by the dead reckoning itself the

ship should have run ashore very shortly after the time she grounded, but a little farther north.

THOMAS PAINE'S MILITARY SERVICES IN THE REVOLUTION.

NEW YORK, Nov. 14, 1891.

THE influence of Paine's pen in "the times that tried men's souls" so eclipsed his other services that these appear to have been little known to the public in his time, though appreciated by officers cognizant of them. In August, 1807, Paine was driven to defend himself against an attack by James Cheetham, editor of the New York *American Citizen*, who spoke of him as having "stuck to his pen in a safe retreat, and never handled a musket offensively." Paine answered that soon after the Declaration of Independence he marched with a Pennsylvania division of the Flying Camp, under Gen. Roberdeau. "We were stationed at Perth Amboy, and afterwards at Bergen; and when the time of the Flying Camp expired, I went to Fort Lee, and served as aide-de-camp to Greene, who commanded at Fort Lee, and was with him during the whole of the black times of that trying campaign." This is but a very small part of what Paine might have stated, for he participated in the capture of the Hessians at Trenton and in the affair at Princeton. This may be gathered from a journal of these events published in the *Pennsylvania Journal*, republished in Almon's *Remembrancer*, 1777, p. 28, which his contemporary (hostile) biographer "Oldys" (George Chalmers) says "was plainly written by Paine." On January 21, 1777, Paine was appointed by the Council of Safety in Philadelphia to accompany a commission sent by Congress to treat with the Indian tribes. The treaty was negotiated in the German Reformed Church at Easton, Pa., and for this service Paine was paid £300. On April 17, 1777, Congress constituted the "Committee of Foreign Affairs," and Paine was chosen its secretary. Among the Franklin Papers in the Philosophical Society at Philadelphia, there is a long letter from Paine (dated May 16, 1878), which amounts to a journal of his movements from September 19, 1777, when Gen. Howe was approaching Philadelphia, which he occupied September 26. Paine had sent the chest of papers connected with the Foreign Affairs Committee to Trenton in a shallop and followed it on the 21st. On the 29th he set out for Gen. Greene's headquarters ("John Wince's"), reaching camp on the third day, and on October 4 he travelled on to Germantown, reaching Washington's headquarters after some rough experiences. Having remained in camp two days after the Germantown action, he crossed over to Trenton and went to the forts at Mud Island and Red Bank.

"I laid the first night on board the *Champion* Continental Galley, which was stationed off the mouth of the Schuylkill. The enemy threw up a two-gun Battery on the point of the river opposite the Pest House. The next morning was a thick fog, and as soon as it cleared away and we became visible to each other, they opened on the Galley, who returned fire. The Commodore made a signal to bring the Galley under the Jersey shore, as she was not a match for the Battery, nor the Battery a sufficient object for the Galley. One shot went thro' the fore sail, which was all. At noon I went with Col. [Christopher] Greene, who commanded at Red Bank, over to Fort Mifflin. The enemy opened that day 2 two-gun Batteries and a Mortar Battery on the fort. They threw about 30 shells into it that afternoon, without doing any damage; the ground being damp and spongy, not above five or six burst; not a man was killed or wounded. I came away in the evening, laid on board the Galley, and the next day came to Col. Kirkbride's [Bordentown]; staid a few days and came again to Camp. An Expedition was on foot the evening I got there in which I went as Aid de Camp to Gen. [Nathanael] Greene, having a Volunteer Commission for that purpose. The occasion was—a party of the enemy, about 1500, lay over the Schuylkill at Grey's Ferry. Gen. McDougall with his Division was sent to attack them. . . . As I knew the ground I went with two light horse to discover the enemy's Picket, but the dress of the light horse being white made them, I thought, too visible, as it was then twilight; on which I left them with my horse, and went on foot, till I distinctly saw the Picket. . . . But the enemy either on the approach of McDougall, or on information of it, called in their party, and the expedition was frustrated."

Col. Greene and Paine went to Fort Mifflin (November 9) in an open boat, under a severe cannonade, Paine having been sent by Gen. Greene, charged with defence of the Delaware, to discover whether the fort could hold out. This Paine does not mention in his letter to Franklin. It is evident that most of his movements were to obtain or carry information; and that he had impressed the leading men by his competency and courage appears by the following letter from Timothy Matlack, Secretary of the Pennsylvania Assembly:

"LANCASTER, Oct. 10, 1777. Sir,—The Hon'ble house of As'y have proposed and Council have adopted a plan of obtaining more regular and constant intelligence of the proceeding of General Washington's army than has hitherto been had. Everyone agrees that you are the proper person for this purpose, and I am directed by his Exc'y, the pr't [Thomas Wharton, jr.], to write to you hereon (the Pres't being engaged in writing to the Gen'l, and the Express in waiting).

"The Assembly have agreed to make you a reasonable compensation for your services in this business, if you think proper to engage in it, as I hope you will; as it is a duty of importance that there are few, however well disposed, who are capable of doing in a manner that will answer all the intentions of it—perhaps a correspondence of this kind may be the fairest opportunity of giving to Council some important hints that may occur to you on interesting subjects.

"Proper expresses will be engaged in this business. If the expresses which pass from headquarters to Congress [in session at York, Pa.] can be made use of so much the better;—of this you must be judge.

"I expect Mr. Rittenhouse will send you a copy of the testimony of the late Y. M. by this opp'y, if time will admit it to be copied—'tis a poor thing. Yours &c, T. M."

There are various entries in the Assembly's accounts of the time showing that Paine promptly engaged on the work thus confided to him. (Pa. Archives 1779. pp. 659, 693-94.) On the Pennsylvania Treasurer's books there is a note of £2,355 paid Paine "for his services." The date is March 27, 1780, but no doubt the payment was for the services requested by the Assembly through Matlack. It was paper money, and much less than it appears, yet too large to be paid for Paine's services as Clerk of the Assembly.

Dr. William H. Egle of the Pennsylvania State Library informs me that the plan was suggested by Congress, though the expresses were paid for by the State. There had been, he adds, frequent false alarms, the Associated Battalions being summoned only to disband again. So often did this occur, owing to the trepidation of the eastern counties, that at length hardly a corporal's guard of the "Associatoes" would assemble when summoned. Paine seems to have passed a good deal between Valley Forge and York and Lancaster, but his mission extended, apparently, to all the camps in Pennsylvania and New Jersey. His fifth "Crisis" is dated at Lancaster, March 21, 1778. But neither in this, nor in any of his writings, is there any allusion to this commission from the Pennsylvania Assembly or to his services under it.

Among Paine's military services should perhaps be included his journey to France with Col. John Laurens to obtain from France the millions which wrought such wonders in 1781. It was a perilous voyage for Paine, whom the English cruisers would have been glad to get hold of. They left Boston in February and returned with the money, clothing, and stores in August (25th). Washington learned on May 26 that the relief was coming, and it is hardly doubtful that his movements which culminated in the capture of Cornwallis, were largely determined by this timely subsidy. Col. Laurens highly valued Paine and his services; he wrote him a letter (April 18, 1782) presenting him with his war-horse:

"I entreat your acceptance of him, more especially if you will make use of him in bringing you to a country [South Carolina] where you will be received with open arms, and all that affection and respect which our citizens are anxious to testify to the author of, etc. . . . Adieu—I wish you to regard this part of America as your particular home, and everything that I can command in it, to be in common between us."

Gen. Nathanael Greene, also, on whose staff Paine had served, wrote to him from South Carolina (November 18, 1782):

"Many people wish to get you into this country. I see you are determined to follow your genius, and not your fortune. I have always been in hopes that Congress would have made some handsome acknowledgment to you for your past services. I must confess that I think you have been shamefully neglected, and that America is indebted to few characters more than to you. But as your passion leads to fame and not to wealth, your mortification will be the less. Your fame, from your writings, will be immortal. At present my expenses are great; nevertheless, if you are not conveniently situated, I shall take a pride and pleasure in contributing all in my power to render your situation happy."

Although both of these letters emphasize Paine's writings, there is a personal cordiality in both, an accent of *camaraderie*, suggestive of affection for the soldier as well as the man. Paine, it will be remembered, was trained a Quaker. He was probably a non-resistant, personally; at any rate, when grossly and gratuitously assaulted on one occasion, in Philadelphia, he did not resent it. No power could have induced him to enter into any war except for a cause he held sacred. He was careful to say that he would not have thrown himself even into a struggle for independence, had it not been associated with republican equality and the rights of all men.

MONCURE D. CONWAY.

MARBOT IN THE RUSSIAN CAMPAIGN.

PARIS, October 29, 1891.

UNEXPECTED pleasures are the greatest pleasures. Unexpected memoirs, like those of Gen. Marbot, give us a more intense satisfaction than the long-expected memoirs of Talleyrand. Very few people knew of these memoirs of Marbot; they had been read in the manuscript by only a few persons—by Marshal Canrobert, who is a relative of Marbot; by the Duc d'Aumale, who had as a young man known Marbot, who was an aide-de-camp of the eldest son of Louis Philippe; by M. Thiers, who used the memoirs largely, especially in the account of the campaign in Portugal. Since their publication the memoirs have positively been devoured; they are the great literary event of the moment. They are discussed and cited in every drawing-room. The name of Marbot, which was really obscure,

notwithstanding the great part he had taken in great events, is on everybody's lips.

The third volume, which, unfortunately, is the last, has just appeared; it equals in interest the first two. At the beginning of this volume Marbot marries and the Emperor signs his contract; he is almost immediately afterwards sent, not as colonel, as he had every right to hope, but merely as chef d'escadron to the first regiment of chasseurs à cheval, to a garrison in Germany. He bids adieu to Masséna, and, on this occasion, he gives us the biography of that famous Marshal, one of the *preux* of the new Charlemagne. Masséna was born on the 6th of May, 1758, at Turbia, a village in the small principality of Monaco. He was really an Italian, and afterwards he was very anxious that people should pronounce his name as Massène, not as Massèna. In 1814 the Duc d'Angoulême made him Commander of Saint-Louis, but did not put his name among those of the peers of France, under the pretext that, having been born in foreign parts, he was not legally naturalized; "as if," says Marbot indignantly, "the victories of Rivoli, of Zurich, the defence of Genoa, and a series of glorious actions for France, had not as much value as letters of naturalization often paid for by foreign intriguers." When the Revolution of 1789 began, Masséna was at Antibes, where he kept a small shop in which he sold olive oil and fruits of Provence. Revolutions give fair play to what a Darwinian might call the natural selection of men: Masséna entered as a private the first battalion of the volunteers of the Var; his advancement was rapid, he became a general. We find him at Lodi, at Milan, at Verona, at Arcole, at Rivoli, where Gen. Bonaparte baptized him as "the beloved son of victory." The campaign in Switzerland will ever be famous; Masséna inflicted a severe defeat on the Russians at Zurich and saved France from invasion.

We cannot follow Masséna to all the battle fields where he showed his valor. His glory was obscured by his inordinate love of money; during the Continental blockade, which Napoleon invented and organized so as to prevent England from selling her goods to Europe, Masséna sold licenses which allowed some people to import these goods. Bernadotte had set him the example at Hamburg and in Denmark.

"The Emperor, having been informed that Masséna had deposited a sum of three millions with a banker in Leghorn, who had received also a sum of 600,000 francs from Gen. Solignac (Masséna's chief of staff), had a letter sent to Masséna, in which he asked him to lend him a million, and asked 200,000 francs from the chief of staff. It was just the third of what they had made out of the licenses; so the Emperor did not bleed them too much. But on receiving this command of a new sort, Masséna, cursing as if his entrails had been torn from him, answered that, being the poorest of the marshals, having a numerous family, and being covered with debts, he regretted not to be able to send him anything."

Masséna and Solignac were congratulating themselves on having deceived the Emperor, when, during the siege of Gaeta, Masséna was advised that a French inspector of finance, with some gendarmes, had presented himself at the banker's in Leghorn, had seized the three million and six hundred francs and given his receipt. Masséna fell ill with rage, but did not dare to complain to the Emperor, who was at the time in Poland. Masséna afterwards became very rich. The Emperor gave him an allowance of 300,000 francs a year, as Duke of Rivoli; when he was made Prince of Essling, he received a fresh allowance of 500,000 francs a year; as marshal and commander of an army, he received 200,000 francs. He received, therefore, in all a million a year; nevertheless, he was never tired of saying of the Emperor: "Cruel man! while I was fighting for him, he had the audacity to despoil me of my little economies which I had placed at Leghorn!"

Under very rude forms, Masséna was a true courtier. His Italian nature served him with the Emperor. One day Napoleon, who thought himself bound to live the life of the old kings, was shooting pheasants in the forest of Fontainebleau. He was a very bad shot, and a grain of lead flew into Masséna's left eye. The Emperor was evidently the guilty party, but Masséna turned towards Berthier, and taxed him with carelessness, though Berthier had not fired. The Emperor understood perfectly his intention, and so did Berthier. Masséna spent the latter part of his life in solitude, at Rueil, and died on April 4, 1817, at the age of fifty-nine years. It is curious to see how young most of the companions of Napoleon were, and how comparatively young most of them were when they left the theatre of the world, which they had filled with amazement.

Let us return to Marbot. Joining his regiment at Stralsund, he found it in superb condition. He declares he never saw a finer body of cavalry than the Twenty-third Chasseurs. It soon became evident that Napoleon would shortly go to war with Russia; in the summer of 1811, Napoleon drew many old soldiers from the Peninsula and placed them in his Old Guard. Russia had engaged at Tilsit, in 1807, to shut all her ports to England, but practically she had evaded her promise. Alexander feared being assassinated like the Emperor Paul, his father; he did not dare to destroy the Russian trade completely. Napoleon threatened him; he could enroll all the German forces in his "grand army"; all the kings were at his feet. He thought so lightly of his adversary that he only asked Austria and Prussia to give him 30,000 men each, of which he made the wings of his army, and did not weaken these two Powers as much as prudence required. Austria still kept 170,000 men, all ready to turn against us if we were defeated; Prussia kept a reserve of 60,000 men. Marbot's criticism on the preparations for the Russian war is very just. He never hesitates to criticise even Napoleon, notwithstanding his unbounded admiration for the greatest soldier the world has ever seen. It was very unwise to mix, as Napoleon did, Germans, Spaniards, Italians, Portuguese, Swiss, Poles with the French troops. Marbot considers this confusion of nationalities, races, and languages as "one of the principal causes of our reverses."

Napoleon left Dresden on the 29th of July, and the great army marched towards the Niemen. The Emperor kept the centre with 220,000 men, commanded by Murat, Ney, Oudinot, Lefebvre, and Bessières. Marshal Macdonald with the Prussians was on the left wing, on the right were Prince Schwarzenberg, King Jerome, and Prince Eugène de Beauharnais. The army counted at the passage of the Niemen 325,000 men (155,400 Frenchmen and 170,000 allies). Marbot was in the second corps under Oudinot. The Russian army was divided, and King Jerome ought to have destroyed Bagration, but Bagration succeeded in escaping. Napoleon ordered Jerome to leave the army immediately and return to Westphalia. The Düna was reached on the 15th of July by the French columns. Dünaburg was attacked without success. Marbot succeeded in precipitating two Russian regiments into the Düna; his corps became separated from the Grand Army and joined it again only during the winter at the passage of the Beresina. Oudinot, on leaving Polotsk, marched against Prince Wittgenstein. In a charge Marbot was wounded, but he had his usual luck; his wound would have been mortal if his thick epaulet had not diminished the velocity of the ball which pierced him.

"I will confess," said he, "that if I had been colonel I would have followed the numerous wounded of the corps who were sent towards Polotsk, and, once across the Düna, I would have gone to some town in Lithuania so as to be better cared for. But I was merely a chef d'escadron; the Emperor might have come in a post-chaise to Vitebsk and passed the corps in review, and he never bestowed any favors except on the men *present* under arms. This usage, which at first seems cruel, was based on the interest of the service, for it stimulated the zeal of the wounded, who, instead of lingering in the hospitals, tried to join their corps as soon as their strength permitted."

Marbot remained with his regiment; he had, however, to be lifted on his horse, and suffered acute pain in one of his arms, which was kept in a sling. In this condition he had to command a charge a few days afterwards against the forces of Gen. Kulneff. "General Kulneff, who was drunk on his horse, attacked the maréchal des logis, Legendre, who thrust his sword through his neck and killed him at once. M. de Ségur, in his narrative of the campaign of 1812, makes the dying Gen. Kulneff pronounce a fine speech, like the heroes of Homer. I was a few steps from Legendre when he thrust his sword through Kulneff's throat, and I can certify that the Russian general did not utter a single word." And thus is history written!

After the battle, Marbot buried all his soldiers who had been killed.

"I saw under a tree a young chef de bataillon supported by two grenadiers, and making up with much difficulty a small package, the address of which was written in blood—it was his own blood. This officer had, in the attack on the Russian camp, received a horrible wound made by a bayonet in his intestines. The wound was mortal; he knew it. Before dying, he wished to make his adieus to a lady whom he loved; but, after having written, he was at a loss to whom to confide this precious deposit, when I arrived near him. We only knew each other by sight; nevertheless, feeling death approaching, he begged me with a broken voice to render him two services. Bidding the two grenadiers go off a few steps, he gave me the package with tears in his eyes. 'There is a portrait.' He made me promise to leave it secretly in proper hands if I was so fortunate as ever to return to Paris: 'There is no hurry; it is better she should receive this long after I am no more.' I promised to fulfil this painful mission, which I could only execute two years afterwards, in 1814."

As for the second prayer of the young officer, it was executed at once. He did not like the idea of being torn to pieces by wolves; Marbot saw him buried near the captain and another officer of the Twenty-third.

Correspondence.

ALARMING SYMPTOMS.

To the Editor of The Nation:

Sir: To-day's paper contains some facts that deserve attention.

(1.) A Judge of a Supreme Court (New York) announces that he expended $7,000 in order to be elected to that office. If the office were filled by appointment, to print this statement would be deemed a libel of the most atrocious character. It was customary in France before the Revolution to buy the judicial office, and the result was that a right in the pur-

chaser to compensate himself somehow was developed. Must this not ultimately become recognized with us when *a price* is recognized by law as properly payable, as it is in New York, and published with no sense of shame?

(2.) The second is, that there is no jurisdiction in a court to address the Governor of a State to remove a State Treasurer from office for connection with a connivance at, or concealment of, misappropriation of public money by a collector of the revenue; the jurisdiction being given the court in these words: "*for* [in case there is] *reasonable cause.*"

This judgment of a *judicial* tribunal was pronounced by twenty-eight persons belonging to the party accused, and denied by nineteen of the opposite party.

The only comment that can be of any value is, that party allegiance blinds, or misleads to the extent of perverting the intellect, even those administering justice according to law; for it is quite impossible that opinion should thus be divided on a subject which had never been mooted as a party question, unless the mind was influenced by considerations for party that had no relation to the subject.

It is to be observed that the tribunal did not decide that there was *not a reasonable* cause, or whether the accusation *set forth* a reasonable cause, but that they, the Court, had no jurisdiction *to inquire* whether the accusation *was material*, or, if material, sufficiently proved under the grant of the jurisdiction to inquire if there was reasonable cause. It may be added that the arguments for the majority prove either an incapacity to think or a biassed mind. Take, for instance, the claim to the right to a trial by jury as his reason by one judge, and the bad motive of the Governor in calling the Senate to consider the question as his reason by another. The other side was nearly as bad when they replied that the charge was no ground for impeachment or indictment, and therefore, etc.

These arguments prove only that the minds of the judges were so perverted by party considerations as to be unable to think at all. Do not such facts disprove the silly statement that we are not responsible for our belief because we cannot control the effect of evidence on our minds? Are they not a striking illustration of the eternal truth, set forth by St. Paul, that God will send upon men that have pleasure in unrighteousness a strong delusion —that they shall believe a lie even where the unrighteousness is merely party allegiance that compels voting as a party dictates?

R. C. M.

PHILADELPHIA, November 12, 1891.

JOHNSTON'S EDITION OF JAY'S CORRESPONDENCE.

TO THE EDITOR OF THE NATION:

SIR: The writer of the review of vol. iii. of the 'Papers and Correspondence of John Jay,' which recently appeared in your paper, found occasion to criticise rather sharply certain errors in the rendering of proper names, which he considered as evidence of "inexcusable carelessness." It seems to us to be in order to make clear to your reviewer and to the readers of your paper that the larger portion of these so-called "errors" were due, not to any carelessness on the part of the type-setters and proof-readers, or to any editorial oversight, but to the editorial decision that these manuscripts should be printed precisely as written. This has been the policy pursued in the companion sets of the writings of Hamilton, Franklin, and Washington, and while it has subjected the editors and publishers to a certain kind of criticism, it has, we think, met the approval of the larger portion of the readers and critics of the works in question. We add examples of some of the proper names referred to: "Ciracchi" is printed precisely as Jay wrote it; "Canzwort" is printed precisely as Mrs. Jay wrote it; "Hudon" is printed precisely as T. Franklin wrote it (twice); "Varville" is printed precisely as Jay wrote it; "Montiers" is printed precisely as Jay wrote it, unless the *n* should be read as *u*, which would have been correct. It is, however, *n* in the old edition.

In addition to the above-referred-to criticisms of the spelling of proper names, your reviewer charges our editor with having suppressed "everything of importance in regard to the Spanish negotiations in 1785-88." In reply to this criticism, Prof. Johnston reports to us as follows:

"The reviewer misreads the letter of May 19, 1785, mentioned, by regarding it as 'a slap at Spain,' when in reality Jay was only trying to better our infant trade in a new way. His original instructions (p. 250, vol. i.) urged him to obtain (from Spain direct) the Honduras trade. As Spain did not grant it, Jay pushes for its participation with England.

"In the second place, I have given the one or two important letters respecting the negotiations (p. 240 et seq.), and to have loaded the volume with more would have opened it to the criticism of dulness or overweight of the Spanish matter, when vol. ii. had had so much of it. I paid special attention to our national matters, as more important, and put in every reference to the adoption of the Constitution, New York elections, and the Supreme Court. These are points which I assumed a critic would at least casually notice."

Asking that you will kindly find space in your columns for the above statement, we are yours respectfully, G. P. PUTNAM'S SONS.

NEW YORK, November 12, 1891.

[We should be sorry to have even the appearance of being unjust to Prof. Johnston, or to his publishers, and had carefully considered our criticisms before making them. The fact that Mrs. Jay did write "Canzwort," and Temple Franklin did write "Hudon," disposes of the doubts we expressed, and we will accept the fact that Jay wrote the other names as printed. But it seems to us that the examples of errors in criticism thus selected were not selected happily, being in every case names infrequently met with; and that the editor's plea of following "copy" is inconclusive, as he has taken strange liberties with the text throughout, and nowhere states that he intends to print exactly as written. When in the first two volumes we came across omissions, transpositions, etc., we concluded that the editor was exercising a certain control over the manuscript record, and a large number of such changes only confirmed us in this opinion. Or how else could he have omitted, without any mark of omission, such a phrase as the italics in the following sentence: "I find that in France great men, like their predecessors of old, have their bards. *Yours seem to have mounted high mettled Pegasus, and to have been inspired (if Brydene's doctrine be right) by electrised muses.*" Written to Franklin, there was a fitness in the allusion.

As to the Spanish negotiations, we must maintain our opinion. Denied by Spain a participation in the trade of Honduras, Jay sought to obtain it indirectly of England, who herself enjoyed her privileges in that trade only under a treaty with Spain. If this was not a slap at Spain through England, the proposition must certainly be capable of an interpretation in "a new way." Prof. Johnston will hardly claim that Jay was intent upon doing a favor to Spain. Then, as regards the negotiations with Gardoqui after the Revolution, we do not hesitate to say that they were of far more importance historically than Jay's entire career in Spain. The single report of Jay proposing to waive the right to navigate the Mississippi, of which no mention is made in Prof. Johnston's volumes, produced results of general import, worthy to be called "national" had the nation then existed. It was a vital incident in Jay's career; it is essential to an understanding of the national history. Prof. Johnston gives one letter on the negotiations, and a very unimportant letter, too, for what was regarded at the time as Jay's surrender to Spain is not noticed. It is because we differ with the editor on what constitutes a "national" matter that we did not so much as casually notice the minor contributions the volume contains.—ED. NATION]

ABBOT AGAINST ROYCE.

TO THE EDITOR OF THE NATION:

SIR: Mr. Peirce's letter on this subject in your last week's issue unfortunately brings it before the larger public; and, since Mr. Peirce professes to be a neutral judge, it may leave on your readers an impression unfair to Prof. Royce if nothing more gets said. May I take a little of your space to record my opinion of the merits of the case?

First, the facts. Professor Royce, one of the editors of the *International Journal of Ethics*, wrote, in its first number, a review, seventeen pages long, of Dr. Abbot's 'Way Out of Agnosticism.' This review was altogether technical in character, but hostile in content, impugning both the value and the originality of Dr. Abbot's philosophy. Reviews of philosophical books in technical journals are apt to be destructive—that is what philosophers expect of each other; and in this review there was nothing unusually intolerable, as reviews go, till the page before the last, in which (set in some sentences of a rhetoric characteristic of Prof. Royce) the following passage occurred:

"But Dr. Abbot's way is not careful, is not novel, and, when thus set forth to the people as new and bold and American, it is likely to do precisely as much harm to careful inquiry as it gets influence over immature or imperfectly trained minds. I venture, therefore, to speak plainly, by way of a professional warning to the liberal-minded public concerning Dr. Abbot's philosophical pretensions. And my warning takes the form of saying that if people are to think in this confused way, unconsciously borrowing from a great speculator like Hegel, and then depriving the borrowed conception of the peculiar subtlety of statement that made it useful in its place—and if we readers are for our part to accept such scholasticism as is found in Dr. Abbot's concluding sections as at all resembling philosophy—then it were far better for the world that no reflective thinking whatever should be done. If we can't improve on what God has already put into the mouths of the babes and sucklings, let us at all events make some other use of our wisdom and prudence than in setting forth the 'American theory' of what has been in large part hidden from us."

This passage is Dr. Abbot's chief ground of complaint. It contains the expression "professional warning," which certainly has a conceited sound. Dr. Abbot assumes that by "professional" Prof. R. meant *professorial*, and that he claimed the authority of Harvard

University for the warning conveyed. This is the basis of his application to the President and Fellows of Harvard to punish in some way their employee.

That an author should feel sore at being so handled by a critic is inevitable. That he should wish to reply is natural. Dr. Abbot replied. Mr. Peirce says that the editors first postponed, then excluded this reply, and finally threatened legal proceedings if it were published apart. A falser impression of the facts cannot be imagined than this statement gives. The editors were liberal as few editors are. An editor's first duty, if controversy must be, is to restrict it to one number so that it may not disgust the readers by trailing its slow length along. Dr. Royce and his colleagues, accordingly, in accepting Dr. Abbot's reply (although it was some thirty pages long and bitterly personal), insisted that a rejoinder from Prof. R. should appear after it *in the same number*. Dr. Abbot agreed to the rejoinder, but stoutly protested that it should not appear *in that number*. On condition, however, that the rejoinder should have appended to it a retort from him which should close the controversy, Dr. Abbot agreed that one number might contain both his own and his reviewer's words. These negotiations and the documents they demanded could not be finished in time for the then pending number of the review, which consequently appeared without the controversy in it. Mr. Abbot charges the editors with wilful delay; one as familiar as Mr. Peirce with the conditions of getting a "number" out might easily imagine less far-fetched reasons.

The July number was then in order, and the editors, who had not yet got Abbot's retort, now claimed that it should "not exceed Royce's rejoinder in length," that it should "not raise new issues," and that, since the twenty-eight-page reply was full of personal aspersions, these last words from Abbot "should not assault Royce's personal character, and should be parliamentary in form, and free from personally abusive language." To this proposal Dr. Abbot's reply was, to quote the words of his memorial to the President and Fellows, "a short and dry rejection *in toto*."

Then came rumors of a lawsuit and a pamphlet on the part of Dr. Abbot. Is it wonderful that Dr. Royce should now consult a lawyer as to how the growing tide of unpleasantness might best be minimized? The lawyer warned Dr. Abbot that to publish a pamphlet might make him legally liable, this being of course an ordinary routine precaution against future legal trouble of any sort. Mr. Peirce, following Dr. Abbot's *ex-parte* statement, treats it as part of a plan to "stifle" the latter's reply. Now Dr. Abbot (though in general correct in his record of the facts) has omitted the important fact that in the very letter in which the lawyer conveyed the warning as to liability, he also made an offer to Dr. Abbot from Prof. Royce to print his long reply in the next *Journal*, with no editorial comment in that number, provided Dr. A. would prune it of degrading personalities, leaving the argument untouched. The *quid pro quo* seems fair enough; yet the sacrifice demanded was intolerable to Dr. Abbot, and he published his memorial to the Harvard Corporation instead.

A more grotesque accusation of unfair editorial treatment than that made by Dr. Abbot and echoed by Mr. Peirce was consequently never made.

Now as to Mr. Peirce's talk about Prof. Royce's "cruel purpose" of "ruining Dr. Abbot's reputation." When did a critic ever deny the value of a book *without* the purpose of ruining the author's reputation—his reputation, namely, for competency in that field? That Prof. Royce had any animosity to Dr. Abbot's reputation in *other* relations of life is too silly a charge even for denial. And what Mr. Peirce means by the affair being a "brutal life-and-death combat from the first," I confess is too dark a thing for me to understand. Had *I* written a book with such ambitious aims as Dr. Abbot's, I should expect my differently-thinking compeers to handle me without gloves, and should despise them if I suspected that the fear of wounding my feelings stayed their hand. Were Prof. Royce's review one of *my* book, I should probably be considerably stirred-up by his low opinion of me, and should feel the genial latitude of his style, when expressing the same, to be peculiarly exasperating. At the same time I should recognize the inevitableness of such differences of understanding, and should feel that I had no avowable *grievance*, since, unlike those critics who dismiss a volume of poems or a novel with a sneer for which no grounds are given, Prof. Royce had given his own reasons for all that he had said. My only remedy would lie in beating down my critic's philosophy and strengthening my own. Mr. Abbot's remedy of heaping personal outrages upon Prof. Royce and his motives, admits of no excuse but a pathological one. It is truly deplorable that the quarrel should spread beyond the academic world. But since Mr. Peirce has served it up for your readers in what they also may imagine to be an "impartial" statement, it seems but fair that one with a less *ex-parte* knowledge of the facts should also be heard.

WILLIAM JAMES.

HARVARD UNIVERSITY, November 15, 1891.

DISFIGUREMENT OF FRENCH CHURCHES.

TO THE EDITOR OF THE NATION:

SIR: A grave abuse has lately been working its way into French churches, without protest or notice so far as I have observed, which has already brought about serious disfigurement of some of the most interesting and beautiful structures in the world, and now threatens still further and rapid degradation.

No one at all susceptible to sentimental impressions can ever have seen the chapels of favorite saints decorated, as they are still in some Roman Catholic countries, and as they used to be in all, with the *ex voto* gifts of grateful worshippers, without romantic and even reverent emotion. There hang the crutches of restored cripples; waxen models of the leg or arm that has been healed dangle in groups *in rei memoriam;* pictures, of less than moderate artistic merit, remind at once the protecting saint and the casual visitor of the runaway or the shipwreck from which a sudden prayer and vow have rescued the imperilled believer. Elaborate models of the ships themselves, in seaport churches, are dimly descried swinging above in the dusk of the groined vault; and all concur in adding a quaint and touching picturesqueness to architectural beauty and historic interest.

From most French churches, whether through thoughtless iconoclasm or the necessities of restoration, long accumulations of such pious memorials have been completely swept away. With this I am not now finding fault—if for no other reason, because to find fault with their destruction would not bring them back. Nor have I one syllable to utter in support of the shrieks which continually arise, especially from English tourists and critics, in denunciation of the dealings of the French with their architectural monuments. I believe, Mr. Ruskin and his hysterical following to the contrary notwithstanding, not merely that if it had to be done, it has been done with absolute archæological fidelity, with exquisite artistic sense, and with the most reverent historical feeling—qualities in regard to no one of which do the French need education or stimulation from any English authority that ever existed—not merely this, but I am penetrated with a sense of the expediency and necessity of the restorative work which has been so extensively carried on throughout France, under the Commission which once had Prosper Mérimée for its inspector, and Viollet-le-Duc for director of its ecclesiastical work. "I wish," screams Mr. Ruskin, that combination of Jeremiah with Shimei, "that the French Government could leave these cathedrals alone for ten minutes!"—forgetting, or not caring, that the destroyer Time cannot be induced to stay his hand from them for five. I have nothing less than earnest gratitude, on the contrary, to the Commission of Historical Monuments which has protected and saved, for us and for the future, everything in France of the greatest historical value, from Celtic megalith and Roman arch down to the florid product of the Renaissance.

Not from a godless Government, nor from ignorant restorers, but from grateful piety, comes the injury of which I complain. Some time within thirty years, somewhere in France, some devotee who fancied his prayers to a favorite saint had been answered, conceived the new notion of inscribing upon a pretty little white marble slab a private memorandum of acknowledgment, and fixing it upon the church wall, in the chapel or near the altar of the saint. The device seems to have commended itself first as new and original, and to have grown from that into an established convention. Other devotees came on, each with his own little private acknowledgment for the public eye, and new little polished slabs began to glimmer in the dusk. Then sacerdotal supervision came in to regulate pious zeal and to organize revenue; the slabs were controlled to a uniform shape and size of about ten inches long by eight high; they were set in actual contact; wall spaces and piers began to be covered by them; and now one may see large areas of wall marked out in advance to receive future enamelling.

Nothing more atrocious, from an æsthetic point of view, can be imagined than these bits of glittering marble; nothing more *banal*, more offensive to the religious sense, could easily be contrived without set purpose. There is some little variation of verbal form, but not much. It is sometimes: "Reconnaissance à Marie! 16 Août, 1889. A. B.," or "Notre Dame de la Garde, vous avez exaucé mes prières! 1 Avril, 1890. C. D.," or even "Merci! E. F. 30 Mai, 1891," as a waiter might acknowledge a "tip." Sometimes there is a more exact announcement of the help received, as in the Church of Notre Dame at Boulogne: "Procès gagné. Merci à Notre Dame. 16 Mars, 1881. C. F."; nothing said, however, as to the manner in which the Virgin Mother intervened to decide the law suit. In Notre Dame at Châlons-sur-Marne, a town so religious that my hotel, a few weeks ago, bore the name "de la Haute Mère-Dieu," successful students acknowledge the aid that has pulled them through their troubles: "Reconnaissance à N. D. de Lourdes. Un Bachelier, G. L. 9bre., 1889." "Reconnaissance à Marie pour avoir réussi dans mes examens. M. D. Mars, 1883." And there is in this one a suggestion of good fortune such as is not commonly published to the

world in stone: "Reconnaissance: Souvenir de 5 Juillet, 1883. Louise F."

Now no one need care when, for example, the *baroque* Church of N. D. des Victoires in Paris has its walls covered from floor to vault, as it is coming to have, with acres of these hideous marble tablets; for it has nothing to lose, either in architectural beauty or in historic interest. But the restoration of Notre Dame at Châlons, for another example, is one of the most splendid works of Violiet-le-Duc, and it is now undergoing a new debasement. The French Government has rescued from the parochial abuse which is still rampant and uncontrolled in English churches, the "historical monuments" in which its land is so rich, while leaving still to religious use the structures which were so designed. Frenchmen, perhaps because they are on the ground, fail to notice the growth of an injury which strikes the foreigner. This is a new evil. When I first knew French churches, in 1859, I believe it was nowhere to be seen. Seldom, if ever, is a date now found upon these stones earlier than 1865. I hope the protest I have felt constrained to make may, through the publicity you may give it and the responses it may elicit, reach some quarter from which a remedy may proceed. T. B.

ROCHESTER, November 11, 1891.

WASHINGTON - BRODHURST GENEALOGY.

TO THE EDITOR OF THE NATION:

SIR: John Washington, the immigrant and ancestor of General Washington, married the widow of Walter Brodhurst, whose maiden name was Ann Pope. Walter Brodhurst was the eldest son of William of Lilleshall, Shropshire, England. He was among the first settlers of Maryland, and his name appears as early as 1639 in the public records. In September, 1642, he was a member of the Assembly. In 1647 he was complained of for acknowledging Capt. Edward Hill of Virginia as Governor of Maryland. After this he moved across the Potomac to Virginia, and in 1653 was a burgess from Northumberland County. It is not known when he married Ann Pope, but by her he had a son who was also named Walter.

William Brodhurst, the father-in-law of Anne Pope, in 1658 died at Lilleshall and left her a legacy. Her second husband was John Washington, and by him she had a son Lawrence, the grandfather of the first President of the Republic. The half-brother of Lawrence, Walter Brodhurst, removed to Lilleshall, England. In the parish register the baptism of children of "Mr. Walter Brodhurst and Jane his wife" is recorded: Jane, October 5, 1669; Mary, December 29, 1670; Anne, September 26, 1672; Jane, October 1, 1674; Elizabeth, November 16, 1676; Mary, November 21, 1678; Anne, January 17, 1680; William, October 2, 1684. In the registry of burials Mary, the second child, is mentioned as having been buried on May 3, 1672; and on the 26th of November of the same year, Jane, the first daughter.

On the south side of the church-yard, adjoining the church wall, are two flat tombstones covered with moss, in bad condition, the inscriptions being partly defaced:

HERE LYET . THE BODEY OF MA . . BROD HVRST DAVGH TER OF WAL TER B OD HVRST BVRI ED THE 3D . AY 1672	HERE LYE . . THE BODEY . . . IANE BRO . . . RST DAVGH . . . . WALT . . 26 OF NOVEM . . . 1672

Walter Brodhurst was a church-warden of the parish, and on the 4th of August, 1707, was buried. EDWARD D. NEILL.

MACALESTER COLLEGE, ST. PAUL, MINN.

Notes.

DAMRELL & UPHAM, Boston, will issue next month a new edition of Mr. W. H. Whitmore's reprint of and dissertation on 'Mother Goose's Melody,' which appeared a year ago, with some additional matter from his pen, and also the Fairy Tales of Mother Goose in the racy original translation of 1729. The volume will be nearly doubled in size and the price will be reduced. The same firm have almost ready a work by Prof. Horsford concluding his researches into the coming of the Northmen, 'The Landfall of Leif Erikson on Cape Cod in the Year 1000, and the Site of his Houses on the Bank of Charles River in Cambridge.' It will at least have the merit of giving heliotype facsimiles of every authoritative map bearing on the question, including some never before published. An appendix will contain the Saga of Erik the Red, and other documents pertaining to Vineland.

Little, Brown & Co. have begun publication of a library edition of the military novels of Charles Lever, with full-page etchings after the original designs by H. K. Browne and George Cruikshank, and illustrations in the text; the whole in five volumes of legible and handsome print, issued in two styles.

Lee & Shepard will publish 'White Slaves, or the Oppression of the Worthy Poor,' by the Rev. Louis Albert Banks; and 'The Monuments of Upper Egypt,' translated from Marietta Bey's 'Itinéraire.'

'Reading and Speaking,' being "familiar talks to young men who would speak well in public," by Prof. Brainard Gardner Smith of Cornell, is in the press of D. C. Heath & Co.

Silver, Burdett & Co. will shortly publish 'Songs for All Seasons,' by the Rev. S. Dryden Phelps, D.D. The book contains an original poem for every day in the year, with appropriate texts from Scripture.

The first edition of the new volume of Emily Dickinson's 'Poems,' edited by Mr. Higginson and Mrs. Todd, has been exhausted within four or five days of issue, although it was double the size of the first edition of volume i., published a year ago. This evidences a sudden popularity quite unprecedented, to which praise and censure alike have probably contributed. The publishers, Roberts Brothers, have the second edition of volume ii. ready to-day.

D. Appleton & Co. will bring out 'Lady Dufferin's Journal [in Canada],' and 'The Tragedy of Ida Noble,' by W. Clark Russell. Also, 'A Text-Book in Psychology,' translated from the German of Johann F. Herbart.

Hunt & Eaton publish immediately 'A Winter in India and Malaysia among the Methodist Missions,' by M. B. V. Knox, and the Book of Job arranged in dramatic form by the Rev. Alfred Walls.

An entirely new and revised edition of William Black's novels is to be published by Sampson Low, Marston & Co. The volumes are to be issued monthly, beginning with 'A Daughter of Heth' in January, and the publication of the series is expected to occupy two years.

Mr. John D. Ross of Brooklyn, as a devoted admirer of "The Master Bard," has projected a series of annual volumes of 'Burnsiana: A Collection of Literary Odds and Ends relating to Robert Burns.' The work will bear the Paisley and London imprint of Alexander Gardner. Mr. Ross rakes together "not only original articles, but addresses, orations, poems, criticisms, anecdotes, biographical items, reliques, etc."

The November list of Percival & Co., London, embraces 'The Dawn of Art in the Ancient World,' an archæological sketch by William Martin Conway, with illustrations; 'English Pen-Artists of To-Day,' with examples and criticisms, by Charles G. Harper; 'Summer Rambles round Rugby,' by Alfred Rimmer, illustrated by the author; 'Architecture, Mysticism and Myth,' by W. R. Lethaby; 'The Art Teaching of John Ruskin,' by W. G. Collingwood; 'A Survey of France 100 years after the Revolution,' by M. Betham Edwards, in two volumes; 'Old Touraine: the Life and History of the Famous Châteaux of France,' by Theodore Andrea Cook, illustrated by Jane E. Cook; 'Grisons Incidents in Olden Times,' by B. L. Tollemache; and "The Pocket Library of English Literature," edited by George Saintsbury in characteristic extracts, or in full in the case of political verse and tracts.

G. Civelli, Florence, has undertaken the publication in eight volumes of a prize 'Storia del Metodo Sperimentale in Italia,' with an author and subject index.

The second volume of Emilio Motta's "Collezione Storico-bibliografica," published by the author at Como, is 'Materiali per una bibliografia del Generale Garibaldi,' preceded by a chronology of the principal events in the life of the hero, and followed by an index arranged by periods.

The last volume in the "Great French Writers" Series is a translation of Albert Sorel's interesting book on Mme. de Staël (Chicago: A. C. McClurg & Co.). The work has been satisfactorily performed by Fanny Hale Gardiner, and those who cannot read the French original will lose less than usual of its spirit and style. But good translations are very difficult to make, and something is invariably lacking. This is clearly the case with 'The Countess Rudolstadt' translated by Mr. F. H. Potter (Dodd, Mead & Co.). George Sand's style is not the only thing which suffers: her language, too often rendered literally, sounds and is awkward in its English garb, and there is a stiffness about the version which one never associates with the author's manner. An English reader knowing nothing of French will wonder at many of the expressions used. "Will you be good enough to tell me by what chance you came to have yourself presented here so suddenly?' is awkward, to say the least of it, besides not rendering the original neatly. And there are many such instances.

Another translation of Alarcón's 'El Sombrero de Tres Picos' comes to us—this one by Miss Mary Springer (Cassell).

Trübner of Strassburg has just brought out the second part of the second volume of Dr. Bernhard Ten Brink's 'Geschichte der Englischen Literatur.' The whole work will consist of four volumes, of which the first ends with Wiclif, and the second with the accession of Elizabeth. The same house (and no longer Oppenheimer of Berlin) will henceforth supply the 'Lord Byron' of Karl Elze, which has reached its third edition, Schipper's 'William Dunbar,' Brandl's 'Coleridge,' Brandes's 'Holberg,' Karl Hillebrand's seven volumes, 'Zeiten, Völker, und Menschen,' etc. It also announces as soon to appear the fourth and fifth volumes of A. von Düring's German translation of the works of Chaucer.

The latest addition to Ginn & Co.'s series of astronomical text-books is 'Star-land,' by Sir R. S. Ball, Royal Astronomer of Ireland—a book which we have already favorably noticed.

A. C. McClurg & Co., Chicago, bring out 'Childe Harold' and 'The Lady of the Lake' in their neatly printed series of "Laurel Crowned Verse," and Carlyle's translation of 'Wilhelm Meister,' with an introduction by Prof. Dowden, as an addition to their "Masterpieces of Foreign Literature"—in which series they also include a translation of Ruffini's 'Doctor Antonio.' The same firm send us an edition of Carlyle's 'Heroes and Hero-Worship,' and a tasteful reprint of Elizabeth Sheppard's 'Charles Auchester."

The little volume entitled 'Doctor Liddon's Tour in Egypt and Palestine' (Longmans) is a pleasant memento of the great preacher of St. Paul's. It consists of letters written by his sister, Mrs. King, to her daughters, not intended to go beyond the family circle, and now printed at the request of his friends—an unpretending record of the daily events of travel, but agreeable from its simple directness and kindly spirit. The most striking of the letters are those which describe the services of Good Friday and Easter in the Church of the Holy Sepulchre. Dr. Liddon was thoroughly interested in all that he saw, and indefatigable in sight-seeing. As he talked a good deal with Coptic and Greek church-officials, it would be interesting to know his reflections on the Christianity of Egypt and Palestine. The trip, Canon Liddon's only long holiday, lasted from December, 1885, to June, 1886. On page 48 the name "Bourillant" should presumably be "Bouriant."

After ten years the second and final volume of Furneaux's edition of the 'Annals' of Tacitus has appeared (Oxford: Clarendon Press; New York: Macmillan), fully bearing out the promise of its predecessor. It is a large book—too large for ordinary college use, containing over six hundred pages; but one forgives the size for the sake of the valuable matter with which the introductory essays and the commentary are filled. Mommsen's 'Provinzen' and his 'Staatsrecht' have been published since Furneaux's first volume, and these, together with such more special works as Lehmann's 'Claudius' and Schiller's 'Nero,' have been most diligently used. English and American readers will find of particular interest the notes on the chapters relating to the conquest of Britain. The editor in this volume does not follow the text of Halm as closely as before, but, when he leaves it, he generally gives the reading of the Medicean MS. A new map of Armenia and two good indexes complete what will be for a long time the standard English edition of the 'Annals.'

According to a recent account from Iceland, the antiquarian Sigurd Vigfusson, while on a journey through the island, has discovered several important ancient manuscripts.

The first two parts of a work entitled 'Eskimoliv' (Esquimaux Life), by the famous Greenland explorer, Fridtjof Nansen, are announced by H. Aschehoug & Co. of Christiania. It is to be hoped that the book will soon appear in an English dress.

A bill has been introduced in the Danish Folkething to determine fully the question of copyright. This has been made necessary by a similar action on the part of the Norwegian Government. Steps will at the same time be taken to provide for some agreement with this country in accordance with the International Copyright Law. There is very little doubt that the measure will be passed without opposition.

The topographical survey of Rhode Island, carried on jointly by the State and the United States Geological Survey, has been completed at a cost of $5,000 to the State, and the map sheets are now published. The Commissioners for Rhode Island have wisely induced the State Legislature to make a special appropriation of $4,500, to meet the expenses of a special edition of the map, to be distributed to all the public schools and public libraries in the State; and this excellent distribution has now been made. The map appears in three forms—as a wall map on rollers, as a folded map, or in separate atlas sheets. All these forms will be on sale through a publisher, not yet announced, at a slight advance over cost of printing. The map is on a scale of a mile to an inch, with twenty-foot contour lines in brown, roads and towns in black, boundaries in red, and water in blue. It indicates the natural features of the State with much clearness, from the hilly plateau of the north to the irregular shore-line on the south. Other States whose area is too great to be included on a wall map of this large scale might nevertheless imitate the liberal example set by Rhode Island, and, as fast as they secure good topographic surveys, prepare maps of considerable sections of their territory for school use. The absence of such maps is certainly one of the great difficulties under which the teaching and understanding of geography now labors.

A report on cloud observations at sea, by Prof. Cleveland Abbe, printed in the *American Meteorological Journal* for October by consent of Prof. D. P. Todd, director of the United States expedition to West Africa, illustrates the large variety of novel results that may be obtained by a well-trained observer during a sea voyage. The cruise was made on the United States steamer *Pensacola* about two years ago to observe an eclipse, and Prof. Abbe was detailed to accompany the party as meteorologist. The account of the clouds seen over various islands is very suggestive, particularly those at Ascension and Barbados. The Harmattan wind was observed on the coast of Africa, and found to be analogous to the northwesters of this country—that is, a flow of cool, dry air into a warmer region.

Mr. W. M. Griswold's several 'Descriptive Lists of American, International, Romantic, and British Novels' have been bound together in one handsome volume and issued at Cambridge, Mass., by the author. No fewer than 1,941 works of fiction have thus been brought together between two covers, with the critical appreciations of reviewers, in the selection of which Mr. Griswold must have performed an extraordinary amount of drudgery. Each title is succeeded by the author's name (pseudonym or real or both), the name of the publisher, and the date of publication—a very useful feature. Readers have now, therefore, as good a guide in the choice of light reading as they could well hope to have; while writers can easily discover what fields have been well harvested already, and to some extent what plots are no longer available. Any public library which does not procure and keep this volume for constant reference will clearly be derelict. We will add that the index to authors fills nine pages and a half, in triple columns; anonymous works filling one and a half columns.

For its Bulletin No. 9, the Bureau of American Republics (Washington) takes Mexico as the subject of a compilation like the one previously issued about Brazil. It is a handy collection of useful information, trustworthy in the main, though tariff rates are cited in oversight of the new schedules just put in effect.

We have received the first number of the *Bulletin de Folklore*, "organe de la Société du Folklore Wallon," edited by E. Monsieur, professor at the University of Brussels, which promises to be a valuable addition to the constantly increasing literature of this subject. A critical article by M. Wilmotte on the mediæval ballad (in which the writer argues in favor of an earlier origin of the ballad than that admitted by Gaston Paris in his recent review of Nigra's 'Canti popolari del Piemonte'), nursery rhymes (finger-rhymes corresponding to our "This little pig went to market," etc.), seven versions of the popular tale known as "The Singing Bone" (Grimm, No. 28), a popular song, a formula of possession written in a book about the end of the sixteenth century, and reviews of recent works relating to folklore, make up a very creditable first number of a periodical which we commend to the kindly interest of students of that science in this country. The annual subscription is six francs, which may be sent to Lebègue & Co., 46 rue de la Madeleine, Brussels, or to E. Leroux, 28 rue Bonaparte, Paris.

When M. F. Schrader published last year his 'Atlas de Géographie Moderne' (Hachette), he promised to keep it up to the times by the issue of a yearly supplement. The first of these has just appeared, under the title of the 'Année Cartographique,' and contains three sheets, with text, showing, for Asia, the itineraries of Grombtchevsky, Bonvalot, and others; for Africa, the latest delimitations; and for America, indications of the new States of our Northwest, the new Brazilian-Bolivian frontier, and the routes of several recent explorations, such as Nansen's in Greenland. This plan of keeping an atlas up to date seems to us a specially happy inspiration of M. Schrader's, and one worthy of both praise and imitation.

M. Henri Roujon has been appointed Director of the Beaux-Arts in place of M. Gustave Larroumet, who has lately resigned the position, though he accepts an honorary title of director. M. Roujon is well qualified for the place, not only from his learning and judgment and good taste, but also from his fifteen years of experience in subordinate positions in the Bureau. He has passed through all its grades. He is known to the outside world as an exceptionally brilliant writer, especially in his work in the *Revue Bleue*, the more serious part of which has been signed "Henry Laujol," and the lighter "Ursus."

—In our number of October 29 we left the American Library Association at San Francisco. Starting from that city after adjournment, they made a tour among the libraries and watering-places of Southern California. They were much pleased with both, especially with the activity of the Los Angeles Library, which shows a most unusually quick turnover of its books—once a month. They were received with the same exuberant hospitality as in the north, which gave the President an opportunity to rival the President of the United States in the number and diversity of his replies to welcoming addresses. The discussion of library matters which was crowded out at San Francisco, took place on the train, where squads of three or four settled to their own satisfaction many debated points, particularly of library architecture. Moreover, the last two sessions of the Convention were held in the train on the way home, and were most entertaining. Mr. Green presided, with the same courteous firmness and push which alone had made it possible to get anything done at the too short sessions in San Francisco. The liveliness of the discussion showed the advantage of having a small place of meeting, no outside distraction, and a subject on which opinions differed decidedly. The exact result of such a conference as has just been held no one can determine. The effect upon the pub-

lic is illusive: it is not to be measured by attendance upon the meetings, or by anything said or done at them. The idea that there is plenty of work to be done in libraries, that some methods of library administration or building are better than others, that it is worth while to get a librarian who knows his business rather than a ward politician or an unsuccessful literary man, that libraries are a potent means of public education, and can be made even more efficient by devices which are beginning to be introduced in the best of them—these ideas seem to spread, no one can tell how, from the mere getting together of a body of librarians and the stir about them in the newspapers. In proof of this, one may point to the apparently unsuccessful meeting at St. Louis and the subsequent library history of that city.

—With its twenty-eighth volume the 'Dictionary of National Biography' (Macmillan) puts the letter H behind it, and advances well into I, and it seems a proper time for estimating the probable extent of this vast enterprise. The one-volume dictionary of persons deceased in the reign of Victoria, called 'Men of the Reign,' offers a sort of comparison, being confined to British subjects. The same point in the alphabet reached by both is, in the smaller work, a little less than the half-way point (45 per cent.). To be sure, the seventy-five pages occupied by the letter H should, in equal ratio to the five volumes occupied by the same letter in the 'Dictionary of National Biography,' be 182 pages: nevertheless, at each of the quarter posts (vols. vii, xiv, xxi) 'Men of the Reign' proportionately outstrips the other work, though by a steadily declining excess; and it is not unreasonable to infer that the latter will not surpass sixty volumes. In the 28th the great tribe of Howards consume one-fifth of the volume, and of the philanthropist John Howard the amusing trait is recalled, among so many that were admirable, that he agreed before marriage with his second wife that, "to prevent altercations about those little matters which he had observed to be the chief grounds of uneasiness in families, he should always decide." The leading literary notices are of Leigh Hunt and of David Hume; the latter, in eleven pages, in Leslie Stephen's best style. The quarrel with the author of 'Émile' is fairly treated. Hume would, says Mr. Stephen, "have provided for Rousseau had Rousseau been providable for." The story of the nurse who affirmed that the sceptic's death-bed was less than tranquil is dismissed pointedly: "It is not, indeed, impossible that a man dying of cancer may have been sometimes out of spirits; but perhaps it is more likely that the old lady lied." Hume "may be regarded as the acutest thinker in Great Britain of the eighteenth century, and the most qualified interpreter of its intellectual tendencies." In the sketch of John Hunter, the anatomist, it is related that his 'Observations and Reflections on Geology' were suppressed during his lifetime at the instance of a geological friend, who objected to his "use of language which implied that the earth was more than six thousand years old." Under Edmond Hoyle we are told that but one copy of his first treatise on whist has been preserved. The westward-looking portion of this volume of the 'Dictionary' is noticeably strong, embracing the names of Henry Hudson; William Hubbard, the early historian of New England; Anne Hutchinson and Gov. Thomas Hutchinson; Admiral and Gen. Howe; Joseph Howe of Halifax, whose loyalist derivation is overlooked, but who is remembered as having been the occasion of the Cunard Atlantic service; William Humphrys, an Irishman who learned his trade in the United States, and engraved impartially the heads of Washington and Queen Victoria for the postage-stamps of their respective countries; the sculptor Ball Hughes, etc.

—As was to be expected, the new Copyright Law has received much attention abroad, and some recent expressions of opinion are deserving of more than a passing notice. Sir Frederick Pollock's article on "Anglo-American Copyright," in the *Contemporary Review* for April, was valuable chiefly because of the opinion of so eminent a lawyer on the rights of American authors in Great Britain—rights in no way affected by the new law, it should be remembered. Mr. Pollock was severe upon the phraseology of the act, and said that he had sometimes had occasion to criticise the form of English statutes, but must admit that this time the Congress of the United States "has attained a pitch of bad English, awkward and obscure construction, and general clumsiness wholly beyond any recent performances of Parliament, and barely surpassed, if at all, by the Copyright Act of 1842 itself." Mr. C. J. Longman, in the second number of the *Economic Review*, is mainly concerned with the probable effect of the new law in inflicting a certain loss of business upon English printers and the subsidiary book-making trades, which he holds must necessarily follow upon the operation of the American-manufacture clause. He thinks, however, that it is doubtful whether more than five per cent. of the books published in the United Kingdom after July, 1891, will be copyrighted in America. Both Mr. Longman and Mr. Pollock touch upon the question of orthography which is involved in this possible transfer of English book-printing to the United States, and the former believes that the American printers are probably going to be clever enough to adapt their type and spelling to English needs, while the latter does not think that "British authors or publishers will be found ready to sacrifice any considerable part of their gains as confessors against the Websterian heresy, or that the public will largely rally to the cry that Britons never, never, will spell defence with an *s*."

—The entire issue of twelve quarto pages of *Le Droit d'Auteur* for August 15 is devoted to an analysis of our new Copyright Law, which the anonymous writer terms a legislative "novelty," difficult of interpretation. After summarizing the opinions of the press upon the law, he proceeds to analyze its special provisions, first pointing out those which are pronounced unfavorable to the foreign author, the chief of these being, of course, the American-manufacture clause, which he deems aggravated by the stipulation of simultaneous publication. On the whole, this is a very intelligent exposition of our new law. Appended to it are translations of Mr. Moore's report to the President, and Mr. Harrison's proclamation extending the benefits of the act to the citizens of Great Britain, France, Belgium, and Switzerland. A German version of the article by Mr. Otto Mühlbrecht of Berlin is appearing in the *Börsenblatt* of the German book trade, beginning with the issue for September 20. As far back as in 1850, in his 'Social Statics,' Mr. Herbert Spencer forcibly advocated the right of property in ideas, and in his new book, 'Justice,' he repeats his argument under the heading, "The Right of Incorporeal Property," concluding the paragraph in these words: "Considered, then, as a deduction from the fundamental principle of justice, copyright cannot, I think, be questioned with any show of reason." Mr. Spencer, however, has not chosen to avail himself of American copyright for his last book, and, in explaining his reasons for this, he so clearly points out the false economy of the Copyright Act that we are glad to reproduce his words here:

"The fatal defect in the law is, that it puts the author or publisher to the expense of a double manufacture in supplying two communities. In these two communities there are eighty millions of people. In America about ten thousand of these (to make a liberal estimate) are engaged in setting type for reproduction of English publications; and for the sake of benefiting these ten thousand the law compels the eighty millions to pay a higher price for their books. In so far as the new law recognizes the proprietary rights of an author, it may be accepted as a good step in the right direction; but there will have to be a change before the literature which deserves protection can gain any benefit from it. Instead of encouraging the unknown author and the author of serious books, this law makes it harder for him to gain due recognition than it was before. Under this American law the publisher will seek out the man who has made his name; he will buy the popular author's works and distribute them very widely, and meantime the rising man will be left to his own devices. The general effect will be to multiply the reproduction of books which have no serious influence upon the world, and to discourage those who write books of instruction."

—M. Aurélien Scholl, in his *chronique* in the *Matin* of October 24, illustrates in an amusing way the different methods which Dumas the elder and Victor Hugo employed when they had a new play to offer to the theatre. Dumas would write to the director of the Porte-Saint-Martin: "My dear friend: I shall bring you on Monday a play in five acts. I shall need Mlle. Georges, Mme. Dorval, Bocage, Lockroy, Provost, and five new scenes." This extravagance would alarm the director, who would put off the production of the play till better days. Then Victor Hugo would appear and shyly draw a manuscript out of his pocket. He would agree to everything. The stock company would play his piece admirably, since all he wanted was a good *ensemble;* no new decorations would be needed, nor any change at all. So the piece would be read, and as the rôles were distributed, Hugo would say, musingly: "*Dieu*, how fine Frédérick would be in that part!" "That is true," Horel would murmur, and a few days after he would announce that Frédérick was engaged. Hugo would then remonstrate that this destroyed the equipoise of the cast, and Raucourt, Laferrière, and Mlle. Georges would be engaged. Then Hugo would attack the stage setting. Old scenes, that the public had tired of, were almost an insult to these great artists. If Horel showed reluctance at this, Hugo would threaten to withdraw his piece. And so the game would go on, till little by little Hugo had obtained everything he wanted, even to changing the paper-hangings in the stage boxes.

—About twenty years ago was founded in Germany the "Astronomische Gesellschaft," an international association whose office it is to foster astronomical research throughout the world. Bearing the same relation to the Gesellschaft as do those astronomical societies already established in England, France, Russia, and the United States, there has been formed in Berlin a "Society of Friends of Astronomy and Cosmic Physics," with a view to the organization of systematic activity and coöperation in research on the surfaces of the sun, moon, and planets; on the intensity and

color of the light of the stars and of the Milky Way; observations of the zodiacal light and meteors, of the aurora, terrestrial magnetism, earth currents, and atmospheric electricity; also of a restricted class of meteorological phenomena. While the new organization is intended mainly for the scientists of Germany, Austria-Hungary, Switzerland, and other neighboring countries, and natives of these countries in the colonies and elsewhere, other nationalities are also welcome. At present the only publication of the Society will be the 'Mittheilungen der Vereinigung von Freunden der Astronomie und kosmischen Physik,' issued at irregular intervals, and containing communications from individual members of the Verein. In addition to the publication of these papers, and to correspondence, the Society will endeavor to promote research by advice, and aid in providing apparatus of the optic, electric, and magnetic sort. Dr. R. Lehmann-Filhés of Berlin is President of the Society.

MOLTKE'S WAR MEMOIRS.

The Franco-German War of 1870-'71. By Field-Marshal Count Helmuth von Moltke. Translated by Clara Bell and Henry W. Fischer. With a map. Harper & Brothers, 8vo, pp. ix, 432.

If ever a book was strikingly characteristic of the author, this is. Moltke was the incarnation of professional and official system—system so ruled by a high and exact intelligence as to become scientific. The only history of the Franco-German war worth writing or reading, the only true, the only adequate account of it, was, in his judgment, the official staff report as contained in the archives of the General Staff, and published by authority. What was not there, if false, was proved so by its omission, or, if true, must be of the supplementary and personal kind which is trivial and ought to be forgotten. That record, to him, bore to the library of works on that war something like the relation of Omar's Koran to the Alexandria library. If the other books are contrary to it, they should be destroyed; if consistent with it, they are useless—so burn them all.

The only reason which induced him to write this book was, we are told, that the official history is too voluminous and too technical for popular reading. He consented, therefore, to prepare an abridgment of it. As an abridgment, it is perfect. No one else was so competent to make it. His will and his spirit had ruled in the preparation of the large work; the same spirit and the same will give life to the smaller. No concession is made to the popular desire for personal details of motive and of feeling, or for the picturesque elements of battle strife or battle wreck. It would be impossible to find, within its compass, a safer guide in the rushing stream of events, or a stronger grouping of outlines of the several subordinate campaigns. Things are in their proper places, their relations to the principal object of the war are accurately stated, they move on with the steady march of a battalion; but you look in vain for any trace of human emotion, whether pathetic or heroic, as you would look in vain into the faces of the men in battalion line for the heroic purposes, the tragic anticipations, the longing regrets for home, which lie deeper in the soldier's history.

Probably Moltke could not have written otherwise if he would; but he leaves us in no doubt that he would not write otherwise if he could. His nephew tells us in the preface that "he had a dislike to memoirs in general, which he was at no pains to conceal," and so he thought that his personal experiences had better be buried with him. It was in his nature that he should prefer to be known only by the cold lines of official sculpture as cut in the archives—a statue of Nemesis leading the army to dethrone a French emperor and to create a German one. But the world will not be content with even the classic lines of Cæsar's commentaries. It demands histories of the people as well as military reports of field-marshals, and will prize such a chapter as that of Hamerton's in 'Around My House,' where he tells of Garibaldi and his garrison in Autun, and the moods and conduct of the French residents of the vicinity when Keller's brigade attacked the town, more highly than any single chapter of even Moltke's book. The student of history, of course, wants both, and is happy in having them.

Moltke's theory of ignoring all but the official history of the war included the necessity of upholding the loyal fiction that King William was in a real sense the commander of the German army in the field. His loyalty would not have permitted him to put in print, had he lived to publish his own book, what his nephew quotes him as saying, that "it is a pious and patriotic duty never to disturb the prestige which connects the glory of our army with certain high personages." Such a statement implies so clearly that what piety and patriotism forbid one to disturb, is a fiction, that it does more than a long argument could do to show the futility of the perfunctory assumption that kings and princes were the generals who directed the movements of armies. It even destroys their military prestige more than the exactest explanation of the fact might do; for it practically puts them all in the category of mere figure-heads, when the whole truth might show that there were varying degrees of military capacity among them, and that the chief of staff of either grand army or subordinate armies was not quite completely the directing brain. Yet, in obedience to his theory, the staff corps is "piously" ignored, and we do not remember that the chief of staff of any one of the armies is named in connection with its movement. In the body of the book, Moltke tries to act upon the same rule with respect to himself, and though there is little difficulty in reading between the lines, there is no question of the Spartan courage with which he seems to sever his own vital connection with events.

Here, again, the symmetry which he had maintained in his book is broken by his editor in an "appendix," which gives a most interesting view of the man behind the official plate-armor in which he is encased. Publications in Germany had given currency to the belief that both at Königgrätz in 1866, and at Versailles in 1870, councils of war had been called at King William's headquarters to determine what action should be taken in critical junctures of both campaigns. These had been described so circumstantially that Moltke was led to throw aside his usual reticence, and wrote a memorandum for the use of the historian Treitschke, which, in an abridged form, was allowed to appear in a Munich journal shortly after the General's death. The full text of this is given in the appendix, and is one of the best proofs in the world of the convincing force added to the narrative of the most trustworthy and best-informed writer by fulness in that very personal and circumstantial detail which Moltke treats so slightingly. His picture of the doubt they were in, on the 2d of July, 1866, at the King's headquarters at Gitschin in Bohemia; of the dramatic way in which it was solved, after they had gone to bed, by news of the Austrian movements; of the issuing of orders in consequence; of the advance of the army in the early morning; of his own ride to the front, fasting, in the dull showery morning; of the scattering of the royal staff and escort by the shells of the hostile battery; even the incident of a huge ox entangled in the battle and charging forward against the Austrian lines—is a telling sketch of the very highest interest and value, and in itself a complete refutation of his theory that such details are trivial and detract from the proper effect of history.

In both cases Moltke denies absolutely that there was any council of war, and asserts that the formal orders were determined and issued by the King upon his advice alone. The memorandum concludes with a paragraph which, more than anything else that he has written, withdraws the "pious and patriotic" veil from his relations with the King. The suggestions intended for King William, he says, "which I had always discussed beforehand with my staff officers, were generally maturely weighed by his Majesty. He always pointed out, with a military eye and an invariably correct estimate of the position, all the objections which might be raised to their execution; but, as in war every step is beset with danger, the plans laid before him were invariably adopted." This tells pretty nearly the whole story: an intelligent appreciation, on the King's part, of the military situation and the dangers involved, but an "invariable" adoption of the course suggested by the chief of staff.

The form in which the book is presented to American readers is an attractive one. The paper and type are good and the page is a clear one, easily read. The portrait of Moltke in the frontispiece, with the spiked helmet on, is that of the ideal soldier, with strong, resolute mouth and jaw, keen eye, and broad, intelligent forehead. The map in the cover-pocket of the book is a fairly good outline map of the theatre of war, but it is wholly without topographical indications—not even the most prominent mountain ranges are marked. In the vicinity of the greater fields of battle, the names of some of the smaller villages have been crowded in, but by no means all that have been named in the text, and the names of the smaller streams are also wanting. The map gives only the French name of Thionville to the important frontier town and fortress which is uniformly spoken of in the text by the German name of Diedenhofen. This is seriously misleading to any one not familiar with both names. It is quite impossible to read the book intelligently by the aid of this map alone; and if the reader has nothing better at his command, the details of tactical movements might as well have been omitted. Well-executed military maps are costly things, but some simple kind of sketch ought to be possible which should show with approximate accuracy the relative position of all the villages, hamlets, and farmhouses which are named in the text, with the true courses and names of all streams of water. Hills and woods may be described in words when the general sketch is accurate to the extent indicated. The modern cheap methods of zinc etching would seem to bring this degree of assistance within reach without greatly increasing the cost of a book. If the large map which is furnished were supplemented by such sketches of the vicinity of Metz, Sedan, Paris, Orléans, Le Mans, Dijon, and Belfort, the usefulness of the book would be doubled. There is, in the corner of the

large map, one on a larger scale of the environs of Paris, but it is quite inadequate. We are astonished, too, to find that the volume has no index whatever.

The translation is, on the whole, a good one, but the translators have fallen into some errors from lack of technical knowledge of military organization. Thus (p. 9) they say "the railway transport of the troops of the second and third corps was to end at the Rhine," when the second and third "armies" are meant; the grand army of the Germans being divided into three subordinate armies, each composed of two or more "corps." The second "corps" was not included in the first movement to the Rhine at all. Again (p. 10), we are told that on receiving orders to move, "the colonel in command of the third army corps desired to wait for the fourth and its baggage train." It need hardly be said that no colonel was in command of a corps in the German army. The triple error is explained when we read later (p. 11) that the third "army" was ordered to cross the frontier on "August fourth," without waiting any longer for the "batteries" to come up. Still again (p. 317), when Gen. von Manteuffel was sent to command the army in the southeast, we are told that the "supreme command" (command-in-chief) of the "first army corps" was given to Gen. von Goeben. Manteuffel had commanded the first "army" and Goeben succeeded him in that command. On p. 337 there is an omission where it is stated that the "second corps" was in the new command of Manteuffel, and immediately after, no other being named, we are told that "these two corps" were to be increased by another. The army consisted at first of the second and seventh corps, and the fourteenth was added later. On p. 344, the fifteenth army corps is mentioned where fourteenth is meant.

Errors not so serious are the following: At the beginning of the war we are told (p. 7) the mobilized forces were divided into three independent armies on a basis worked out by "the General of the Prussian staff." What Moltke said was, of course, "the Prussian general staff." In the account of the battle of Mars-la-tour we read (p. 46) "an order from the Commander-in-chief was issued at seven o'clock." The order was from Prince Frederick Charles, commanding the second army, and as the grand army under the King was concentrating, the term commander-in-chief is liable to mislead unless qualified. In more than one place the "losses" of an army are spoken of as all "killed." At Weissenburg, the first combat of the Crown Prince, it is said (p. 13) that he had 91 officers and 1,460 men "killed." At Sedan, we read (p. 101) that the French had 17,000 "killed"! On page 159 it is said that "by the exchange of German prisoners for those French who had fought at Sedan, the news of the surrender of Metz, which had immediately followed, was generally known." This is nonsense. The translation should read, "the news of the surrender (of Sedan) which had immediately followed, was generally known in Metz." Sedan surrendered on the 2d of September, Metz not till the 27th of October.

Other minor errors in translation and in typography might be pointed out, but those we have noted are important as affecting the sense and not the mere form of the narrative. It is not strange that they should occur, for it would be stranger if any other than a competent military man could escape some misapprehensions in translating a work which necessarily has much that is technical in it.

RECENT NOVELS.

The Witch of Prague. By F. Marion Crawford. Illustrated by W. J. Hennessy. Macmillan & Co. 1891.

The Faith Doctor: A Story of New York. By Edward Eggleston. D. Appleton & Co. 1891.

One Reason Why.—On the Lake of Lucerne, and Other Stories. By Beatrice Whitby. D. Appleton & Co. 1891.

Betty Alden: The First-born Daughter of the Pilgrims. By Jane G. Austin. Boston: Houghton, Mifflin & Co. 1891.

MR. CRAWFORD has forestalled criticism by calling his 'Witch of Prague' "a fantastic tale." An enemy might call it grotesque. It deals with hypnotism and true love, and tells the story of a Wanderer. If, as Mr. Crawford seems to think, hypnotism of the sort dealt with in this story is an established art, the tale is important, for it is well to be on our guard against such diabolic personages as a witch who, in the "so-called nineteenth century," has power to produce at will a total change of mind and character in her victim. Magic is a dangerous field for the novelist, and to the best of our knowledge and belief the secret of creating an atmosphere of mystery by hinting a non-natural explanation of a questionable fact died with Hawthorne. Mr. Crawford's mistake is that he will *insist* when we can endure nothing stronger than suggestion. The best thing in the story is the aged man whose life is artificially prolonged in sleep.

The motive of 'The Faith Doctor' is easily conveyed by the title, indicating a modern phase of that instinct in ailing humanity which seeks relief from pain by supernatural agencies. Dr. Eggleston's psychologic lancet probes in various directions, penetrating the social and religious shams and foibles of fashionable New York, as well as the mushroom sciences which have sprung up in the favoring soil of times which he calls still the middle ages. If he had touched the vulnerable points in the region of legitimate medicine by instancing the elixirs that have been proclaimed by some of the very elect, his criticism of modern credulity would have been still more accentuated. Polemics is dear to Dr. Eggleston's heart, and his subject offers many temptations, but he contents himself with clever, satiric touches which heighten the effect of his story. Indeed, were it not for these touches, the story would be rather tame, for the fortunes of the young faith-doctor, Phillida, and her fastidious lover do not inspire keen interest. Phillida is neither a strong nor a pathetic figure, although her sincerity commands respect and her innocent mistakes awaken sympathy. Even with the softening of her mental angularities by painful experiences, she does not gain in attractiveness. Mrs. Frankland, the Bible reader, is an admirable study. With a genius for religious expression, inherited from Quaker ancestry, she finds her vocation in expounding the Bible to fashionable audiences, producing the comfortable effect of making her hearers "more religious without being less worldly." As compared with Dr. Eggleston's previous novels, 'The Faith Doctor' shows a decided gain in literary finish, in spite of persistence in a tiresome reiteration of the mannerisms of some of his characters. But the atmosphere of New York does not seem to be altogether friendly to his peculiar genius, for with the refining process there is a loss of the flesh-and-blood qualities which have made his former characters friends and companions.

A successful first novel is by no means an unmixed blessing either to the author or the reading public. Miss Whitby's first venture, 'The Awakening of Mary Fenwick,' deservedly won high praise. There was a naturalness in the management of the details of a highly dramatic situation which showed great power. But in her latest novel, 'One Reason Why,' naturalness has degenerated into childishness, and freshness of style into exaggerated vivacity. These faults intrude even into pathetic situations, and the frequent use of inappropriate quotations gives to the author's moral reflections a farcical turn which is fatal to their dignity. These traces of hasty writing make one regret that Miss Whitby's early success has made future study and hard work seem less imperative. Two of the tales in the collection entitled, 'On the Lake of Lucerne, and Other Stories,' reflect the qualities that brought their author into flattering notice; the others point the inevitable result of what Hosea Biglow calls a "milkin' o' the wits."

Mrs. Austin's enthusiasm for delving in Colonial records seems unabated, for 'Betty Alden' follows close upon her Puritan sisters, the daughters of LeBaron, although chronologically she should take precedence. She is a fair and modest maiden, with a dash of Priscilla Alden's piquancy, and we regret that we catch only tantalizing glimpses of this first-born daughter of the Pilgrims as she moves among the historical figures who crowd our author's pages. The story of the hardships and high courage of the Plymouth colonists will always be interesting, and Mrs. Austin has recalled to us the high-born women and brave men who lent grace and dignity to the lowliest toil, and has given pleasant, homely pictures of the sedate merry-makings which relieved somewhat the strenuousness of the daily life of our forefathers; but, after reading two or three of her historical novels, we are forced to ascribe pretty distinct limitations to her powers. A lack of self-restraint in keeping minor characters in abeyance, and a poverty in the creative material which is always needed to fill up the gaps left open by history, are noticeable. Aside from these limitations, too, there is room for improvement in literary form. Mrs. Austin's sentences sometimes contain such a superfluity of words that they trip over one another in confusion. A longer period between these stories, giving time for more careful writing, would add greatly to their value.

Business Openings for Girls. By Sallie Joy White. Boston: D. Lothrop Company.

Thrown upon Her Own Resources: or, What Girls Can Do. By Mrs. J. C. Croly (Jenny June). Thomas Y. Crowell & Co.

The New Womanhood. By James C. Fernald. With introduction by Marion Harland. Boston: D. Lothrop Company.

WE should like to see the modest little volume of a hundred and fifty pages called 'Business Openings for Girls' in the hands of every girl and woman who, in the words of the author, "either needs to earn money because she must be a breadwinner, or who wants to earn it in order to be independent." It is not addressed to those who wish to "study medicine, or law, or theology," but to "every-day, wide-awake, alert girls who have business capacity and prefer an active life to the sedentary one of the student." The reasons given why a larger proportion of such girls do not succeed in rising from the ranks are twofold. They are

not put to learn a business from the beginning upward, as boys are, without regard to salary at first, and they too often look upon their work as a temporary makeshift until marriage. The remedy in the first case is that the training process shall be tried (as has actually been done with eminent success by a Boston firm instanced), and in the second case that "as much heart and brain" shall be put into work "as if one expected to do it for ever." The range of work treated of in the different chapters is wide, extending from stenography and typewriting to pickling and preserve-making at home, and mending at home or from house to house. The comparatively new field for guides and shoppers is not overlooked, and several successful ventures of women in real-estate brokerage and "insurance and advertising" are concisely noted.

To "newspaper-workers" Mrs. White speaks out of the fulness of twenty years' experience on the staff of the Boston *Herald*. She is averse to the more sounding title of journalist, and what she has to say on the subject of a misnomer in vogue among the over-considerate or falsely sensitive is so sensible that it deserves to be quoted in full: they (girls) "must not turn the sympathy of the public whom they serve to ridicule and contempt, by speaking of themselves as 'saleslades,' but honestly, simply, and correctly, as 'saleswomen,' until such time as they shall become the proprietors, wholly or in part, of an establishment, when they will be 'merchants.'" If there be a hollow spot in the book, we think it is to be found in the chapter on "artistic and hygienic dressmaking." But, on the whole, it would be difficult to find anywhere else encouragement at once so sound and so genial to girls and women to seek happiness and dignity in honest work.

The tone and intention of the second of the three volumes named above is another proof, if more are needed, of the revolution that has taken place in all active minds concerning the right and safe way for girls to regard life. The conscientious father or mother of the present generation feels that voluntary idleness on the part of their daughters would be as dangerous as the desire to learn a profession or a trade was formerly felt to be. The writer of 'Thrown upon Her Own Resources' goes so far as to say that "work, and work for pay, is the motto of to-day for girls who wish to prove themselves true daughters of the nineteenth century." As is apt to be the case with aphorisms, this one leaves out of account the large amount of valuable unpaid work, public and other, that has been begun and must be carried on by women, wholly or in part. Still there is much common sense in a point of view which is represented by the further generalization that "the equal performance of contract between men and women, as between man and man, is the greatest step that has been taken [by] or conceded to women in this age of advancement." As a whole, this book suffers from lack of arrangement and too much discursiveness. The advice to working-girls—by no means new, but doubtless as much needed as if it were—loses much of its force through irrelevant allusions. Read as a series of familiar talks, the volume will be interesting to many; to give it serious usefulness, decidedly more matter and more art would be needed.

The profuse use of capital letters is not an infallible sign of originality. 'The New Womanhood' does, however, disclose some points of view that are peculiar to the author. Thus, the future college for women is to have a "Professorship of Applied Science," with cookery (including object-lessons in marketing) and what might in a hospital be called a diet kitchen for subject-matter; if time is needed for all this, it is to be "taken from the study of the Merovingian Dynasty, or from drawing upon the blackboard the frightful proportions of the ichthyosaurus or pterodactyl." In the chapter headed "Sex of Soul" we learn that man delights in "Abstraction"; he can "range the fields where the intangible shades of the mighty speak in deep whispers and play at mimic games; and he can disembody his own spirit, enter the ideal contest, and bring back its skill into common life." In these refreshing exercises the "Coming Woman" must not hope to share. But there will apparently be no limit to the altruism she will indulge in—though this would hardly seem fair to the coming man, if altruistic pleasures are to become so intensified that each person will, according to Mr. Herbert Spencer, be debarred from their undue pursuit in order to leave scope for the enjoyment of others. It would, however, be a thankless task to attempt to pull to pieces the flowers of fancy that grow so thickly in this ample volume. Most of them are of a species of perennial growth with which every one is familiar.

The Abbess of Port Royal, and Other French Studies. By Maria Ellery MacKaye. With an Introduction by Thomas Wentworth Higginson. Boston: Lee & Shepard.

"We sometimes see the remark made, that while American women are making large contributions to poetry and fiction, they are not yet doing their full share of thoughtful and studious literary work. Such a volume as the present helps to refute that criticism. Many years of enlightened study, both in this country and Paris, have helped to mature the execution and broaden the background of these French stories."

Thus begins Mr. Higginson's introduction to this little collection of articles reprinted from magazines. We regret that we do not share his opinion that the book is likely to enhance the reputation of one half of the human race on this continent. These essays do not seem to us to give any great evidence of "thoughtful and studious literary work," still less of "many years of enlightened study." They are such papers as a well-educated woman, familiar with the French language and not very strong in handling her own, could easily prepare in a very few weeks. As articles in the *Atlantic Monthly* and the *Galaxy*, they might well pass muster, and since there has been a demand for them, there was no harm in their republication; but why should they be heralded with such a trumpet blast?

Miss (or Mrs.) MacKaye has chosen very good if not very new subjects, and is evidently interested in them. The longest and most ambitious of her papers is that on Port Royal, from which the volume takes its name. To give a clear and minute account of that famous monastery, of the very interesting woman who was its abbess, and of the earlier part of the Jansenist movement, in forty three pages, would require great literary talent. Our author has made a mistake not uncommon with beginners: she tells us too many things and introduces too many people for the space she has allowed herself, so that the impression left on the reader's mind is indistinct. Moreover, her style is sometimes ambiguous, and her composition may be described as scrappy. The same criticism may be made on the essay on "French Women before the Revolution." It is a readable paper, not very well planned nor very carefully thought out.

The article on Beaumarchais is better than either of these. The Life of the author of "Figaro" by Loménie is followed, and that is a very good book. Miss MacKaye has apparently not heard of the later work of Bettelheim, who, by means of the archives at Vienna, laid bare the trick which Beaumarchais tried in vain to play on the Empress Maria Theresa. There are few more grotesque stories in literary history than that of Figaro, in the guise of a secret agent of the French Government, pretending to chase an imaginary writer of libels on Marie Antoinette across Europe, and wounding himself in a fictitious deadly combat with impossible brigands near Nuremberg. In this episode we have Beaumarchais at his worst. He appears at his best as a contractor assisting the American "insurgents" against Great Britain in the Revolutionary War. But here again Miss MacKaye follows Loménie too closely. While it would be difficult to be too severe on the conduct of the United States towards their great contractor in the later years of their dealing with him, there is much excuse for their failing to understand his position in 1777 and 1778.

The purely literary essays, again, are better than the historical. The 'Song of Roland' is an inspiring subject, and the translations of passages from the great epic here given are tolerably smooth. But any one who would become acquainted with this noble poem in English should turn to the admirable version of O'Hagan, which is a masterpiece of poetical translation. In the paper on Provençal Song we have another good article, and the author's rhymed translations are readable. "The Marvels of Mont Saint Michel" is a pleasant sketch. In conclusion, we may say that if the reader will, in spite of the introduction, expect no more from this little book than the author offers, he may find both profit and pleasure in it.

Life and Letters of Joseph Hardy Neesima. By Arthur Sherburne Hardy. Houghton, Mifflin & Co.

Prof. Hardy had the best of materials for the biography he has written, and has used them in the best way. Content to serve as editor of Neesima's letters, journals, and other writings, he has allowed them to give their own clear impression of the life which their publishing was meant to commemorate, and has added little more than the necessary dovetailing and explanations.

The dominant note in the simple and attractive character here revealed was the craving for intellectual expansion, first for himself and then for his people. Those of our readers who have heard of Neesima at all have doubtless heard of him only as the Christian minister and missionary, who fled from his native Japan at the age of twenty-one in order to satisfy his hunger for the Gospel, and to prepare himself to carry it back to his countrymen. But this is a narrower account of his "great aim" than he himself gave. What he thirsted for was access to the store of knowledge in the keeping of Western nations, and what he labored most earnestly to establish in Japan was a system of education after the American and European model. He accepted Christianity most heartily, even passionately, but as a part only of that great product and accompaniment of civilization which he wished to appropriate. This is clear from the first letter of his given in the volume—a most pathetic account of his struggles to reach America and the motives that led him hither, written out in broken English for his benefactor, the late Mr. Alpheus Hardy; and it is also clear from some of his last utterances, after

his return to Japan. For example: "If we simply teach theology and the Bible, I fear the best Japanese youth will not stay with us. They want modern science also" (p. 195). "Our good missionary friends have thus far tried to teach the Bible too much and neglected scientific teaching" (p. 228). "Some of our dear brethren have got very strange notions, and think altogether too little of education" (p. 235). In the course of an appeal to Japanese, published in twenty different newspapers of the empire, he said of the University he was striving to found: "If any one says that our purpose is the propagation of religion and the culture of Christian ministers, we must tell him that he knows us not at all, for we went to work with a broader purpose. . . . By the side of the theological course already established, we wish to establish courses in politics, economics, philosophy, literature, law, etc., thus making a true university" (p. 316); and on the day before his death, in a sort of last will and testament, he wrote: "The object of the Doshisha [the name of his school] is the advancement of Christianity, literature, and science, and the furtherance of all education. These are to be pursued together as mutually helpful" (p. 326).

With the correction of the popular idea of the man in this particular, the book also yields a very engaging impression of his personality. Warm-hearted yet courageous, of slight physique and fragile health, but with an iron grip of will, he left at Andover and Amherst the record of a stainless life of the highest aims. One of the greatest opportunities of his life was that of travelling with the Japanese embassy of 1872, in this country and in Europe, and Prof. Hardy says that "it was on the basis of his reports that Mr. Tanaka . . . laid the foundation of the present educational system of Japan." Dying at forty-six, with the last regret, "I have been able to do so little, owing to my feeble health," he yet can be truthfully said to have left his country much in his debt, and particularly to have made unequalled contributions to the missionary problem in Japan.

The History of Commerce in Europe. By H. De B. Gibbins. Macmillan & Co.

THIS is the first of a new series of commercial class-books to be edited by James Gow. They are designed primarily for young students preparing for commercial examinations, but are adapted for use in any schools where it is thought desirable to study the ordinary branches in the light of their application to business life. Mr. Gibbins has produced a clearly written and well-arranged text-book. Perhaps the plan of the series did not allow it, but a more detailed sketch than it was possible to give in 210 pages would have been of greater service. A serious deficiency, which can easily be supplied, is the absence of a brief bibliography. If the author had given a little more attention to this matter, he might have saved himself the unhappy opening statement of his preface, that his own is the first connected history of commerce in Europe in the English language. Yeats's 'Growth and Vicissitudes of Commerce in All Ages' is a work of considerable merit, and deserves Mr. Gibbins's attention, even if it result in his ceasing to regard himself as a pioneer in this field.

A few points may be mentioned in which the present manual may receive revision. It is too strong to say (p. 35) that "the law of nearly all Europe except England is to this day derived directly from the Theodosian Code." If Mr. Gibbins had carefully examined the question in Heyd's 'Geschichte des Levantehandels,' he would never have devoted half a page to the Danube route from Constantinople to Germany in the time of Charlemagne. Heyd considers it very doubtful whether it was used to any extent at that time. On p. 166, Charles V. is said to have become King of Italy after the campaign of 1527, "and when he abdicated, his power passed to his son Philip II." Mr. Gibbins here sadly confuses the Kingdom of the Two Sicilies with the Empire. We trust it is not pedantic to object to Wenceslaus being styled "nominal Emperor of Germany and Rome." To say nothing of the fact that this was not the style of any mediæval monarchs, Wenceslaus was only *Rex Romanorum*, never technically Emperor. So loose a geographical phrase as "Dalmatian coast of Greece" (p. 49) has no excuse. The narrative grows more interesting as the author emerges from mediæval times; and he is evidently more at home in his material. In tracing the transition to the modern period, however, the influence of the crusades is not sufficiently emphasized, nor is the direct stimulus which the interruption of Eastern commerce by the Turks in the fifteenth century gave to the voyages of discovery, clearly enough brought out.

Drei Monate Fabrikarbeiter und Handwerksbursche: eine praktische Studie von Paul Göhre, Kandidaten der Theologie. Leipzig: F. W. Grunow. 1891. 8vo, pp. 222.

WITH the beginning of June, 1890, Herr Göhre hung his candidate's coat on its peg and became a factory hand. At Chemnitz, a stronghold of socialism, he worked for three months as roustabout in a large machine-building establishment, spending his evenings and his Sundays undetected in the company of his fellow-workmen. His report of what he saw and heard, although written in a style which, when it is not turgid with adjectives, borders closely upon student slang, nevertheless bears many marks of careful observation and honest record. The book is divided into eight chapters. The first tells how, after many difficulties, he found work; the last is a summary. The other six describe the material situation of the workmen, their labor in the factory, the agitation of the social democracy, the social and political sentiments of the workmen, their education and Christianity, and their moral condition.

The factory in which Herr Göhre worked busied about five hundred men, with some one hundred and fifty of whom in the construction shops he came into more or less intimate contact. It is impossible to reproduce in a few words the multitude of interesting observations which he made concerning the material situation of his fellow-workmen. Their education in the elementary branches he found, on the whole, quite respectable, and their thirst for knowledge exceedingly great. On this point he says, with what truth we cannot of course determine: "The desire for education finds its most direct and most stupendous expression in the international agitation for the eight-hour day. That movement is not simply a manifestation of pure laziness and frivolity, of arrogance and contrariness, nor merely an expression of the notions and economic demands of the social democracy, but at the same time, also, an evidence, according to my observation and conviction, of the eagerness of the factory hands for more light, truth, and knowledge."

The discussion of the attitude of the laborers towards Christianity is largely given up to conversations in which the author argued with his fellow-workmen for the existence of God and for the immortality of the soul. It is noteworthy how completely the argument from design, with its easy refutation, has become, outside the pulpit, a thing of the past. Scarcely one of the scoffers stooped to suggest that a good God could not have planned a world so ill. On the other hand, they advanced frequently and skilfully the group of arguments which, in the minds of many people, connects itself, more or less justly, with the name of Darwin. Herr Göhre, who apparently has reached, by some one of the methods just at present in vogue, an entirely satisfactory "reconciliation of science and religion," sees in this tendency of the workingmen the result of miseducation through popular literature distributed by the Socialists. "They have misused the confidence which the people granted them, and given not modern science, but an extract therefrom fitted for the purposes of their agitation." But it is not alone in education that the Socialistic party, by taking advantage of the omissions of others, has grown powerful. In politics, also, it makes itself felt. "The whole working class of Chemnitz and its environs, so far as I became acquainted with them," writes Herr Göhre, "are to-day, with but trifling exceptions, to some extent connected with the Social Democratic party; they live more or less in its ideas, and see in it, this workingman's party *par excellence*, their only strong and professed representative." He soon found, however, that only a small proportion, "not more than three or four per cent. of the whole number," were thorough-going Socialists, clearly understanding the principles and programme of the party. Such he calls, with a certain dry humor not wholly absent from other parts of the book, "the élite" of Socialism. Among the rest there was no uniformity of political or social sentiment, but, on the contrary, the utmost diversity of opinion. In fact, with the majority of these average Social Democrats, "and especially with the shrewder, more thoughtful, practical, experienced and ripened men among them [we try to translate all the author's adjectives], neither the official democratic republicanism of the party, nor its economic communism, was generally popular." And each man not only retained his opinion, but did not hesitate to utter it among his party fellows, and was, as a rule, much more exercised about the practical questions of the business he understood than about a democratic or communistic social order.

This view of the case, illustrated and confirmed by many conversations with his fellows, has earned for Herr Göhre on one hand the cordial detestation of the Socialistic press, which denounces him as a masquerading fraud, by his own confession a frequent liar, and hence unworthy of belief at any time, and, on the other hand, the complacent approval of the bourgeois reviewer, who folds his hands and thanks heaven for sending Herr Göhre to show him that the Social Democracy is not a bomb but a bubble. In fact, the German Social Democracy is no bubble, nor is it in immediate danger of bursting like one. Numbers, and especially solidarity, are what the party just now needs, and it does not lack leaders capable of a shrewd effort to give it both. But to suppose that these "élite Socialists," whatever change of platform they may consider politic for the moment, have yielded jot or tittle of their fundamental conviction, betrays a thoroughly bourgeois inability to compre-

hend either that conviction or the zeal with which they hold it. Karl Marx, and after him every "scientific" Socialist, regard the Socialistic State as inevitable. Throughout history he traces the operation of laws which must bring it about as surely as the sun holds the planets in their orbits. His "materialistic philosophy of history"—so misnamed—is bred in the bone of Socialism, is in reality the very backbone of the Socialistic body politic.

Coast of Maine.
CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Direct Fast Express Route
TO THE MEDITERRANEAN.

First-class Passenger Steamer Service between

NEW YORK and GENOA, ITALY,

BY THE

NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Nov. 28, Jan. 2, Feb. 6, March 12.
WERRA Dec. 10, Jan. 23, Feb. 27, April 2.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

CHARLES SCRIBNER'S SONS

HAVE JUST PUBLISHED:

Japonica.

By Sir EDWIN ARNOLD. Fully illustrated by ROBERT BLUM. Large 8vo, $5.00.

Sir Edwin Arnold's poetic and sympathetic study of the Japanese in one of the most artistic and handsome of the holiday books. In theme, style, illustrations, and manufacture, it will appeal to every refined taste, presenting a most thoughtful and graceful study of the fascinating people among whom the author spent a year. Robert Blum's illustrations are drawn with fine feeling for the picturesque and romantic aspect of Japanese life.

A History of the French Revolution.

By H. MORSE STEPHENS. In 3 vols. Vol. I., with maps, 8vo, $2.50. Vol. II. now ready, 8vo, $2.50.

"We are glad to express our high appreciation of a work which will, when completed, form such a manual of the history of the Revolution as does not at present exist in the English language."—*The Nation.*

English Social Movements.

By ROBERT A. WOODS. 12mo, $1.50.

This book is the result of the author's observations in East London and in the North of England. Its object is to sketch all the more important phases of the different social movements, which are arousing such wide interest in England, exhibiting them in their relation to each other and in their united influence upon the present and future life of the English people.

REPRESENTATIVE BOOKS OF D. LOTHROP COMPANY'S NEW LIST.

ARABIAN NIGHTS' ENTERTAINMENTS. Edited, with Introduction, by W. L. GRIFFIS, D.D. Library edition. 4 vols., 40 full-page illustrations, $6.00.

"To be ignorant of the 'Arabian Nights' is to have lost some of the most delightful entertainment which literature affords."

A new edition of these ever-popular "Stories of Romance," containing at least four times the reading found in the ordinary one-volume edition.

"It was a happy thought to bring out a new edition in a popular form and free from the objections which belong to a literal translation."—*Boston Herald.*

"Thoroughly edited, charmingly illustrated, and carefully printed and bound."—*Boston Transcript.*

LEAVES FROM AN ARTIST'S FIELD-BOOK. By WEDWORTH WADSWORTH. Beautifully engraved by ANDREW. Oblong quarto, cloth, gilt, $4.00; full morocco, $8.00.

"Nothing could be more beautiful or appropriate for a gift book than this truly exquisite volume, which contains some of the most charming poetry of nature ever written, illustrated by pictures each one of which is a gem in design and execution."—*Geyer's Stationer.*

WITH THE BIRDS. Selected poems from the best English and American authors, with fifty full-page illustrations by GIACOMELLI, etc. 8vo, cloth, $1.50.

"Giacomelli's charming representations of 'great nature's happy commoners' are of especial grace and beauty. The book is so unique as to occupy a place by itself without competitor or rival."—*Christian Advocate.*

THE STORY OF MASSACHUSETTS. By EDWARD EVERETT HALE. 8vo. Fully illustrated. (*A Subscription Book.*) $1.50.
Seventh Vol. in the notable "Story of the States" Series.

A gracious contribution to American history which every lover of the Old Bay State may read with pride as the most concise, most practical, yet most picturesque presentation of the records of the Commonwealth.

THE STORY OF NEW MEXICO. Eighth Vol. in "Story of the States" Series. By HORATIO O. LADD, A.M. 8vo, fully illustrated, $1.50.
New Mexico has a romantic fascination quite unlike the older and soberer States, and its history, as told by Dr. Ladd, is full of novelty and brightness.

New York, Ohio, Louisiana, Wisconsin, Vermont, and Kentucky, issued previously.

SHORT CUTS AND BY-PATHS. By HORACE LUNT, author of "Across Lots." 12mo, $1.25.
A delightful out-door book, full of quaint curious facts concerning the myriad wonders of animal and vegetable life, as seen in rural highways and by-ways.

BIRD-DOM. By LEANDER S. KEYSER 12mo, $1.00.

Such chapter-headings as "Tangles of Bird-Song," "A Tiny Titter," "Brilliants in Plumes," "A Jolly Red-Head," "The Woods in Ermine," "Good-bye to the Birds," will give some idea of the character of these fascinating studies of bird-life.

THE NEW WOMANHOOD. By Rev. J. C. FERNALD. Introduction by MARION HARLAND. 12mo, $1.25.

The author treats in vigorous fashion such problems of the hour as domestic duty, home development, work and wages, cooking, coöperation and education, marriage and divorce, study, hygiene, false and true ideals of life, self-support, property, culture, and other matters equally important. It is a thoughtful and incisive book.

GAIN BY LOSS. Cheer for Invalids. By ROSE PORTER. 16mo, white and gold, 75 cents.

Tender, comforting, helpful words for the "shut-ins," that will bring solace and strength and hope in dark hours. A precious gift-book for an invalid.

WIDE AWAKE.

More Wide Awake than ever. 1892 *will prove it.*

The next number (Dec.) will contain a fascinating story by JOHN MEAD HOWELLS, son of Wm. D. Howells. 100 beautifully illustrated pages each month. Only $2.40 a year. NOW is the time to subscribe. Mention this paper and November and December numbers will be sent free to all who subscribe before Dec. 1. Send for free prospectus. Back sample copy, 5 cents.

27 and 29 West 23d St., New York,

WILL PUBLISH NEXT WEEK:

The Memoirs of Talleyrand. Volume IV. Edited by LE DUC DE BROGLIE, with Introduction by Hon. Whitelaw Reid, U. S. Minister to France. To be complete in five octavo volumes. With portraits and facsimiles. Each $2.50.

"It is enough to say that the volumes will be sought and read extensively, and that it casts a side light on the history of Europe which is of infinite value."—*Detroit Free Press.*

"The Memoirs are forcible and clear; the elegance lies in the ideas more than in the words. There is not a single break in the intellectual power of the work."—*The Chicago Dial.*

Writers and Readers. By GEORGE BIRKBECK HILL, D.C.L., editor of Boswell's 'Life of Johnson.' The volume comprises a series of lectures given in Oxford in 1891. 12mo, $1.50.

The Old Stone House and other STORIES. By ANNA KATHARINE GREEN, author of 'Behind Closed Doors,' 'The Mill Mystery,' etc. 16mo, cloth, 75 cents; paper, 40 cents.

RECENTLY ISSUED:

Principles of Social Economics. By GEORGE GUNTON. Inductively considered and practically applied, with criticisms on current theories, etc. 8vo, $1.75.

"The volume at hand has a wide scope, including a detailed discussion of the principles of social progress, of economic production, of economic distribution, and of practical statesmanship. If we have read the author right, the central position that he assumes is that 'the prosperity of the community in general, and capitalists in particular, depends upon increasing the wants and elevating the social life and character of the laboring classes.'"—*Nashville Christian Advocate.*

Politics and Property, or Phronocracy. By SLACK WORTHINGTON. A compromise between Democracy and Plutocracy. 12mo, $1.50.

"Unlike many works of this character, the interest increases as you read, and the most sceptical will finish at least half converted."—*New Orleans New Delta.*

"Mr. Worthington writes in excellent temper, moderately and logically, and certainly in an interesting way."—*Providence Journal.*

Days and Dreams. Poems. By MADISON CAWEIN, author of 'Lyrics and Idyls,' 'The Triumph of Music,' etc. 16mo, $1.25.

A Treatise on Wisdom. By PIERRE CHARRON. Paraphrased by Myrtilla H. N. Daly. With an Introduction by Marcus Benjamin. 16mo, gilt top. With frontispiece, $1.25.

Parties and Patronage. An Essay. By LYON G. TYLER, President of William and Mary College. (No. 68 in the Questions of the Day Series.) $1.00.

**** Notes on New Books No. 3 and illustrated Holiday catalogue sent on application.

JUST PUBLISHED.

LIGHT O' LOVE.

By CLARA DARGAN MACLEAN. Illustrated with Photogravures. 1 vol., 12mo, half Rox., $1.25; paper, 75 cents.

An American novel of striking and unusual interest, the scenes laid in Charleston in *antebellum* days, full of brilliant local color and abounding in dramatic situations.

WORTHINGTON CO., 747 B'way, N. Y.

D. Appleton & Co.'s New Books.

EDITION DE LUXE OF

The Life of an Artist. An Autobigraphy, by JULES BRETON. Translated by Mary J. Serrano. *Édition de Luxe*, with Portrait, twenty Plates, and facsimile of Autograph Poem. Gilt top, uncut edges, vellum cover, stamped in gold with specially prepared design. Edition limited to 500 copies, numbered. Royal 8vo. $10.00.

Among the paintings which have been reproduced in this volume are "The First Communion," "Evening at Finistère," "A Pardon, Brittany," "Calling the Gleaners," "The Colza-Gatherers," "The Last Ray," "Going to the Fields," and "St. John's Eve." In addition to the pictures which are in the galleries of American amateurs, the publishers have reproduced examples of the artist's work which are in France and England. The reproductions are by the gelatin process, printed upon India paper, and mounted by hand. Inasmuch as the edition is strictly limited, it is essential that intending subscribers should send in their orders as soon as possible.

LARGE-PAPER EDITION OF

The Story of My House. By GEORGE H. ELLWANGER, author of "The Garden's Story." With an etched frontispiece and numerous head and tail-pieces. *Édition de Luxe*, limited to one hundred copies, numbered. On hand-made Holland paper, with uncut edges, gilt top. Crown 8vo. Half cloth, $6.00.

ILLUSTRATED EDITION OF

The Story of Colette. From the French of "La Neuvaine de Colette." A new, large-paper edition. With 36 Illustrations. 8vo. Cloth, $1.50.

The great popularity which this book has attained in its smaller form has led the publishers to issue an illustrated edition, with original drawings by Jean Claude, both vignette and full-page.

"Colette is French and the story is French, and both are exceedingly pretty. The story is as pure and refreshing as the innocent yet sighing gayety of Colette's life."—*Providence Journal.*

The Cause of an Ice Age. By Sir ROBERT BALL, LL.D., F.R.S., Royal Astronomer of Ireland, author of "Starland." The first volume in the MODERN SCIENCE SERIES, edited by Sir JOHN LUBBOCK. 12mo. Cloth, $1.00.

The works to be comprised in this series are primarily not for the student, nor for the young, but for the educated layman who needs to know the present state and result of scientific investigation, and who has neither time nor inclination to become a specialist on the subject which arouses his interest. Other volumes in preparation are:

THE HORSE: A STUDY IN NATURAL HISTORY. By WILLIAM H. FLOWER, C.B., Director of the British Natural History Museum.

THE OAK: A STUDY IN BOTANY. By H. MARSHALL WARD, F.R.S.

My Canadian Journal, 1872-'78. By LADY DUFFERIN, author of "Our Vice-Regal Life in India." Extracts from letters home written while Lord Dufferin was Governor-General of Canada. With Portrait, Map, and Illustrations from sketches by Lord Dufferin. 12mo. Cloth, $2.00.

NEW EDITION OF

The Ice Age in North America, AND ITS BEARINGS UPON THE ANTIQUITY OF MAN. By G. FREDERICK WRIGHT, D.D., LL.D. With 148 Maps and Illustrations. Third Edition, containing Appendix on "The Probable Cause of Glaciation," by WARREN UPHAM, F.G.S.A., and Supplementary Notes. 8vo, 625 pages, and complete Index. Cloth, $5.00.

"Not a novel in all the list of this year's publications has in it any pages of more thrilling interest than can be found in this book by Prof. Wright. There is nothing pedantic in the narrative, and the most serious themes and startling discoveries are treated with such charming naturalness and simplicity that boys and girls, as well as their seniors, will be attracted to the story, and find it difficult to lay it aside."—*Journal of Commerce.*

The Tragedy of Ida Noble. By W. CLARK RUSSELL, author of "The Wreck of the Grosvenor," "The Mystery of the Ocean Star," etc. No. 82, Town and Country Library. 12mo. Paper, 50 cts.; cloth, $1.00.

A Widower Indeed. By RHODA BROUGHTON and ELIZABETH BISLAND. No. 84, Town and Country Library. 12mo. Paper, 50c.; cloth, $1.00.

☞ *Send for the holiday edition of Appletons' Monthly Bulletin, containing lists of a large number of new and recent books suitable for holiday gifts, with descriptions, specimen illustrations, etc. Mailed free on request.*

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 28.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.

For references and circular address MRS. E. L. HEAD, Germantown, Pa.

COLLEGE FOR WOMEN.—THE FIN- est winter resort in the South; the most beautiful grounds of any boarding school in the Union. Appointments of Boarding Department first-class in every respect. Advantages in Music, Art, and Literary Departments unsurpassed. For catalogue, apply to the President.

ROBERTS BROTHERS, BOSTON.

CHARLES SCRIBNER'S SONS
NEW BOOKS

Japonica.

By Sir EDWIN ARNOLD. Illustrated by Robert Blum. Large 8vo, $3.00.

Sir Edwin Arnold's picture of Japan and its people is as delicate in texture as it is poetic in color and sympathetic in tone. The gracious and gentle people, among whom he spent a year, are portrayed with graceful appreciation of their many charming traits, and with an insight into their thoughts that come only from close and long intimacy. Mr. Blum's drawings reproduce with delightful effect this unique land and the characteristic types to be found among its people.

Ocean Steamships.

By various authors. Fully illustrated, 8vo, $3.00.

Every phase of the construction, development, management and appliances of the great transatlantic liners is treated by an expert, special attention being paid to the daily life of passengers and crew.

On the Border with Crook.

By Captain JOHN G. BOURKE, U.S.A. Illustrated, 8vo, $3.50.

"Prepared from Capt. Bourke's own diaries kept during twenty years of western campaigning. It is a work both of solid and popular merit, valuable as a record, and attractive for general perusal."—*Chicago Interior.*

The Incarnation of the Son of God.

The Bampton Lectures for 1891. By Principal CHARLES GORE, Editor of "Lux Mundi." 8vo, $2.00.

A reverent and devout presentation for the general reader of the doctrines of the divine incarnation. The discussion is marked by keen intellectual penetration, and among its most striking features are its modernness and freedom from speculative and dogmatic methods.

The Life of Austin Phelps.

By ELIZABETH STUART PHELPS (Mrs. Ward). Illustrated, 8vo, $2.00.

"No biography issued this season will be read with greater interest. The book is fascinating."—*N. Y. Examiner.*

The Sabbath in Puritan New England.

By Mrs. ALICE MORSE EARLE. 12mo, $1.25.

"One of the most entertaining books we have ever come upon, and of value to every student of history."—*Boston Courier.*

Across Russia.

From the Baltic to the Danube. By Dr. CHARLES A. STODDARD, Editor of the New York *Observer*. Illustrated. 12mo, $1.50.

"Mr. Stoddard is a good traveler; he sees well, and his descriptions of people and places are graphic and of large value. He makes his book as profitable as pleasing.
—*Chicago Inter-Ocean.*

CHARLES SCRIBNER'S SONS, 743-745 Broadway, N. Y.

THE SERIES OF WORKS UPON
CORRESPONDENCES.

By the Rev. JOHN WORCESTER.

Correspondences of the Bible.

Part I. THE ANIMALS, $1.00.
Part II. THE PLANTS, the Minerals, and the Atmospheres, $1.00.

Physiological Correspondences.

Treating of the Correspondence of all parts of the Human Body, $1.25.

"The doctrine of correspondences is such an important feature of the Swedenborgian system as to give an entirely legitimate and most serious character to the endeavor to discover and follow them out, both in Scripture and in life. The present attempt by Mr. Worcester to do this enters further into details and sytematic plan than any which has been previously made."—*The Independent, N.Y.*

*** The above will be sent, postpaid, upon receipt of price, by the publishers.

All the works of Emanuel Swedenborg and of New-Church authors can be obtained of us.

Houghton, Mifflin & Co.'s New Books.

Latest Literary Essays and Addresses of James Russell Lowell

Crown 8vo, Uniform with the *Riverside Edition* of Lowell's Works, $1 25
Also in Persian silk, $1 25.

Large Paper Edition, uniform with the Large-Paper Edition of Lowell's Works. 8vo, boards, with paper label, $3.50.

This new volume cannot fail to be exceedingly welcome to a wide circle of readers. It contains papers on Gray, Walter Savage Landor, Izaak Walton, Milton's Areopagitica, Shakespeare's Richard Third, and The Study of Modern Languages.

Dante's Divine Comedy.

Translated by CHARLES ELIOT NORTON, Professor in Harvard University. With notes. In three volumes. II. Purgatory. 12mo, gilt top, $1 25.

In its review of the first volume, the *Nation* said: "This is altogether the best English translation of the 'Inferno,' outranking Dr. Carlyle's version as easily as that outranks all the metrical versions. . . . We believe that this translation of Mr. Norton's will become the classic and favorite translation."

Odes, Lyrics, and Sonnets.

From the Poetical Works of JAMES RUSSELL LOWELL. Bound in a new and specially attractive style, in white, green and gold, gilt top. 16mo, $1.00.

This is a new volume and an exceedingly rich one, containing the best short poems Mr. Lowell wrote, and it would be difficult to surpass them in English literature.

The Baker & Taylor Co., 740 B'way, N. Y.

WANTED—BY A PUBLISHING House—An active man with college education, experience in the manufacture of books, and some knowledge of the details of publishing. Must be good correspondent and of pleasant address. State age, experience, references, and salary expected.
P. O. Box 1005, Philadelphia.

A. C. McClurg & Co.'s New Books.

Charles Auchester.

By ELIZABETH SHEPHARD. With an Introduction and Notes by GEORGE P. UPTON. With two portraits of Mendelssohn. 2 vols, 12mo, $2.50.

"No greater book," wrote Benjamin Disraeli of this remarkable musical romance, "will ever be written upon music, and it will one day be recognized as the imaginative classic of that divine art." The enthusiasm with which it was received thirty years ago will no doubt be revived on its reappearance in the beautiful form here given it.

Madame de Stael.

In the "Great French Writers" Series. By ALBERT SOREL of the Institute. Translated by FANNY H. GARDINER. 12mo. $1.00.

No volume of this series will have a more general interest than this judicial yet kindly and sympathetic sketch of a woman who was distinguished as an author, politician, moralist, and critic.

A Song of Life.

By MARGARET W. MORLEY. Profusely and beautifully illustrated. Small 4to. $1.25.

This little work unfolds the mysteries of plant and animal existence, and of the transmission of life, with a charm of manner and delicacy of treatment that delight while they instruct. Almost every page presents some illustrative drawing of flowers, or fishes, or birds, or beasts.

Life of Jane Austen.

By OSCAR FAY ADAMS. With portrait of Miss Austen. 12mo. $1.25.

This work is a simply told story of Jane Austen's life, dealing especially with its domestic phases which are full of interest. The author visited the scenes among which she lived, and his deep interest in Miss Austen led her surviving relatives to furnish him with much new and valuable material.

The Grandmother.

From the Bohemian of BOZENA NEMEC, with a Biographical Sketch of the Author. $1.25.

This work, long a classic in its own country, will appeal most strongly to all who love sincerity and simplicity in literature and in life. The grandmother, with her simple piety and her homely virtues, is a character as lovely as it is new in fiction.

Duplicate Whist.

Its Rules and Methods of Play; by which the strength of opposing hands are equalized, and the element of luck reduced to the minimum. By JOHN T. MITCHELL. 16mo, 75 cents.

This pioneer treatise presents a history of this new and most scientific of card games, and a full description of the various modes now in vogue.

The Scottish Chiefs.

By JANE PORTER. Finely printed and bound. 2 vols., 16mo, gilt tops, $2.50.

The Children of the Abbey.

By REGINA MARIA ROCHE. Finely printed and bound. 2 vols., 16mo, gilt tops, $2.50.

It has for years been difficult, if not impossible, to obtain either of these fine old-fashioned romances in a style fit either for reading or for the library. It is hoped these editions will supply the want.

Little Marjorie's Love Story.

By MARGUERITE BOUVET, author of "Sweet William." With 16 Illustrations by HELEN M. ARMSTRONG. Small 4to. $1.25.

This new book by Miss Bouvet is likely to be as popular as the first and very successful story, "Sweet William." It is marked by the same refined sentiment, purity and indefinable sweetness which characterized "Sweet William." It is very beautifully illustrated.

The Spanish Galleon.

An Account of a Daring Effort to Recover the Golden Treasures from a Spanish Galleon Wrecked in the Caribbean Sea 200 Years Ago. By CHARLES S. SEELEY. 12mo, $1.25.

A singularly attractive record of adventure, reminding the reader by its simplicity and directness of style of De Foe's "Robinson Crusoe." It is a book interesting alike to young and old. The difficulties that the hero overcomes by sheer perseverance and courage gives to the volume a most wholesome and stimulating quality.

A Short History of England.

For Young People. By ELIZABETH S. KIRKLAND, author of "A Short History of France," etc. 12mo. $1.25.

Many admirers of Miss Kirkland's "Short History of France," and especially those who believe that no short history of England, properly adapted to the needs of young Americans, now exists, have urged her to write a history of England upon the same plan. This admirable book is the result, and will be found to be even an improvement upon her popular history of France.

The Study Class.

A Guide for the Student of English Literature. By ANNA B. MCMAHAN. 16mo, $1.00.

This little book aims to make the student familiar with English literature by means of the direct study of its masterpieces, and to develop the critical faculty by personal examination of an author's text rather than to rest content with judgments at second hand, however able the critic.

Lyrics of the Living Church.

Original Poems Compiled from "The Living Church." Edited by C. W. LEFFINGWELL. Illustrated. 12mo. $1.50.

The poems are all of a deep religious nature and contain inspiration and comfort for all who are seeking the Higher Life. As a whole, it is a volume of religious verse of very unusual merit.

The Pentateuch of Printing.

WITH A CHAPTER ON JUDGES. By WILLIAM BLADES, author of "The Life and Typography of William Caxton" and "The Enemies of Books," etc. With a Memoir of the Author and List of His Works by TALBOT B. REED. With 59 fac-similes and engravings. Crown 4to, cloth, gilt top, $4.50, *net*; half roxburgh, gilt top, $5.50 *net*.

William Blades, the great authority on all matters pertaining to early printing, has given in this admirable work, which was left at his death ready for the press, a popular account of the history of the rise and development of printing, tracing it from its origin to its present state after the manner in which the origin and wanderings of the people of Israel are traced in the Pentateuch.

For sale by booksellers generally, or sent, postpaid, on receipt of price, by the publishers,

Address:
THE EVENING POST JOB-PRINTING OFFICE,
208 BROADWAY, NEW YORK.

Foreign Books, Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

What is the Bankside Shakespeare?

IT IS NOT an edition for Schools or Elementary Classes, nor for very young readers.

IT IS an exact typographical reproduction of the two earliest printed forms, Quarto and Folio, as presented in and about the years 1591 to 1623, unexpurgated and unedited. The introductions are purely historical, and deal only with questions touching the materials, genesis and record of each play; intruding no criticism, whatever, either literary, "sign-post," esthetic or by way of commentary. No other edition answers or in any degree meets these requirements.

TWENTY VOLUMES, de luxe, 500 copies only, registered and hand numbered.

Price, $50.00; after April 1st, 1892, advanced to $75.00.

Worthington Co.'s New Publications.

STANDARD BOOKS.

History of English Literature. By H. A. TAINE. Translated by Van Laun, and introduction by R. A. Stoddard. With portraits. 4 vols., 8vo, $7.50.
The most intellectual and altogether charming history of English literature ever written. An epoch-making work compelling admiration.

Wits and Beaux and Queens of SOCIETY. By GRACE and PHILIP WHARTON. Edited by Justin H. McCarthy. Illustrated by H. K. Browne and J. Godwin. 4 vols., 8vo, $6.00.
An inexhaustible mine of very entertaining anecdotes and gossip on French and English society.

Noctes Ambrosianæ. By Profs. WILSON, LOCKHART, HOGG, and MAGINN. Edited by R. S. Mackenzie. 6 vols., 12mo. With steel portraits, $9.00.
A singular and delightful outpouring of criticism, of politics, descriptions of feeling, character, and scenery, and of wild fun. Wilson's eloquence is as the rush of mighty waters.

Napoleon's Memoirs. By COUNT DE LAS CASES. With portrait and maps. 4 vols., 12mo, $6.00.
A scholarly and highly interesting memoir of the great Emperor, particularly valuable for its conversations.

Napoleon in Exile; or, A Voice FROM ST. HELENA. By B. E. O'MEARA, Napoleon's physician. 2 vols., 12mo, $3.00.
Describes Napoleon's last years at St. Helena, and reflects his opinions on the most important events in his life, government, and men he met.

New Edition.

Wharton's The Queens of Society. With Preface by JUSTIN H. MCCARTHY, M. P., and the original illustrations by C. A. DOYLE. In 2 vols., demy 8vo, English edition, 1890. $3.00.

Wharton's Wits and Beaux of SOCIETY. With preface by JUSTIN H. MCCARTHY, M.P., and the original illustrations by H. K. BROWNE and JAMES GODWIN. $3.00.

New Edition Just Out.

History of the United States, or THE COLONIZATION OF THE UNITED STATES. Abridged from the larger work by the author, GEORGE BANCROFT. With numerous quaint and curious illustrations. 2 vols., bound in one. 12mo, cloth extra, $1.00.

Napier's Peninsular War. With 55 maps and plans of battles and portraits. 5 vols., 8vo, $7.50.
Acknowledged to be the most valuable record of the war which England waged in the Peninsula against the power of Napoleon. A work which for vivid beauty of narrative may vie with Cæsar or Tacitus.

Thomas Gray's Works in Prose AND VERSE. Edited by EDM. GOSSE, with portraits. 4 vols., crown 8vo, $6.00.
A carefully edited complete edition of the works of the renowned author of "Elegy Written in a Country Church-yard."

Elizabeth Barrett Browning's POEMS. With introduction by H. T. Tuckerman. 3 vols., 8vo, $5.25.
All her writings show loftiness of sentiment, intellectual power, purity and fervid imagination.

Rotteck's History of the World from the Earliest Times to Napoleon III. 31st edition. With illustrations. 4 vols, 8vo, $7.50.
Enjoys the distinction of being a popular universal history written in an attractive style. Its statements are based upon careful researches and reliable; the illustrations are of exceptional excellence.

Famous Spanish Romances. Each volume illustrated with etchings by R. de LOS RIOS. $1.50 per vol.

1. CERVANTES' HISTORY OF DON QUIXOTE DE LA MANCHA. Translated by Motteaux.
2. LAZARILLO DE TORMES. By MENDOZA. Translated by ROSCOE, and GUZMAN D'ALFARACHE, 12mo. $3.00.
3. LE SAGE'S ADVENTURES OF GIL BLAS OF SANTILLANE. 12 etchings. 3 vols., 12mo, $4.50.
4. ASMODEUS, or, The Devil upon Two Sticks. By LE SAGE. With 4 etchings. 1 vol., 12mo, $1.50
5. THE BACHELOR OF SALAMANCA. By LE SAGE. With 4 etchings. 1 vol., 12mo, $1.50.
6. VANILLO GONZALEZ; or, The Merry Bachelor. By LE SAGE. With 4 etchings. 1 vol., 12mo, $1.50.

A Cyclopedia of the Arts and SCIENCES. Botany, Zoölogy, Mineralogy, Geology, Astronomy, Geometry, Mathematics, Mechanics, Electricity, Chemistry, etc. With over 3,000 engravings. 1 vol., 4to, cloth, $6.00; sheep, $7.50; half morocco extra $10.00.

PRESENTATION BOOKS.

Our Boys in Ireland. By HARVEY W. FRENCH. Profusely illustrated with steel and wood engravings. 1 vol., 8vo, illuminated cloth extra, $2.50.
An exceedingly entertaining account of travels in Ireland made by a party of bright American boys whose sole object was to get acquainted with the people, and view and enjoy the natural beauties of the country. The greater part of their journey was done in jaunting-cars, and there they met all sorts and conditions of men and experienced many adventures, some of them of a very amusing nature. It is a book that reminds one very much of Mark Twain's "Innocents Abroad."

With Stanley in Africa. A vivid account of the travels and adventures of the famous African Explorer in the Dark Continent, from the expedition in search of Livingstone to the rescue of Emin Pasha. Profusely illustrated. 8vo. cloth, $2.50.

Memory's Sketch Book. With designs by Helen P. Strong. 1 vol., oblong 4to, cloth, $3.50; boards, $2.50.
The most attractive gift-book of the year, showing exquisite designs printed in purple tints. The illustrations interpret successfully poems of great authors.

Manners and Customs of Spain. By JAMES MEW. With 36 etchings by R. de Los Rios, illustrating the works of Cervantes, Le Sage, Mendoza, and Aleman. 1 vol., royal 8vo, $5.00.

Flirt. By PAUL HERVIEU. Translated by Hugh Craig. With 37 photogravure plates after the original water colors of Madeleine Lamoire. 1 vol., 4to, $5.00; or cloth, extra gilt edges, $6.00.

Macaulay's Lays of Ancient Rome. With numerous illustrations and steel portrait. 4to, cloth, $3.00; full gilt, $3.75.
A poem that breathes the very spirit of antiquity, unsurpassed in vividness of outline, full of heroic action and energy.

Picturesque Ireland. Descriptive and Historical. With 50 full-page steel engravings from original drawings by W. H. Bartlett. Edited by Markinfield Addey. 2 vols., 4to, cloth, $10.00.

Nell Gwynn, The Story of, and the Sayings of Charles II. By PETER CUNNINGHAM. With 11 engravings and portrait. 8vo, $3.50.
An exceedingly vivacious memoir of "Pretty, witty Nell, the friend of Charles II."

Memoirs of Count Grammont. By ANTHONY HAMILTON. Edited by Sir Walter Scott. With 16 superb photogravures (the beauties of the Court of Charles II.). Imperial 8vo, $5.00.

A Treasury of English Sonnets. Edited from original sources, with notes by David N. Main. With steel portraits. 1 vol., royal 8vo, $7.50. *Edition de luxe.*

Festus. A poem by PHILIP J. BAILEY. With exquisite steel engraving by Hammatt Billings. 4to, cloth, $3.00; full gilt, $5.00.

Our Presidents; or, The Lives of the Twenty-three Presidents of the United States. By VIRGINIA F. TOWNSEND. With twenty-three steel portraits on India paper. *Edition de luxe.* 8vo, cloth, $5.00.

Scotia's Bards. Illustrated and beautifully printed on excellent paper. 1 vol., 8vo, $2.50.
A tasteful selection of the finest poems by Scottish poets.

NEW NOVELS.

No. 22, Worthington's International Library.

Light o' Love. By CLARA DARGAN MACLEAN. Illustrated with photogravures. 1 vol., 12mo, half rox., $1.25; paper, 75 cents.
A novel of thrilling and unusual interest. The scenes are laid in Charleston, S. C., in ante bellum days, when society was *sui generis* refined, cultured, hospitable, and under a slight disguise the wits and belles of a now almost forgotten period move before us in a glamour of grace and beauty and chivalric splendor. It is a story full of brilliant local color and abounds in dramatic situations.

No. 10, The Rose Library.

The Bachelor of Salamanca. By A. R. LE SAGE. Translated by JAMES TOWNSEND, with photogravure illustrations. 1 vol., 12mo, cloth, $1.00; paper, 50 cents.
One of the renowned series of Le Sage's adventure romances. Related in a masterful and most entertaining manner, the writer exhibits remarkable boldness, force, and originality, while at the same time he charms by his surprising flights of imagination and his profound knowledge of Spanish character and customs.

With Lee in Virginia. A Story of the American Civil War. By G. A. HENTY. With 10 full-page illustrations by GORDON BROWNE, and 6 maps. Crown 8vo, beautifully bound, olivine edges, $1.25.

New Colored Fine Art Juvenile Books.

Sundials; or, How Mammas Tell TIME, AND OTHER POEMS AND STORIES. By C. F. DALEY. 24 plates in full colors and sepia tints, by ANNIE B. SHEPLEY. 4to, $1.75.

Buds and Blossoms. By LUCIE E. VILLEPLAIT. 24 plates in full colors and sepia tints fac-similes of the original water-colors and drawings, with descriptive reading in prose and verse. 4to, $1.75.

Peep o' the Morn. By Miss M. A. LATHBURY. Consisting of fac-simile water-color drawings, in 12 colors. With verses to each illustration. Printed in colors and gold. 4to, boards, $1.75.

When Three are Company. By C. F. DALEY. And other Poems and Stories. Illustrations by ANNIE B. SHEPLEY. 4to, $1.00.

Songs of the Months. By LUCIE E. VILLEPLAIT. Illustrated by fac-simile water color drawings on every page. Gilt edges, tied with silk, in box, $1.00.
"The booklet has well-nigh superseded the Christmas and New Year's card, and properly so, as there is more to look at, a continuity of subject, combined with the same attractiveness, and the reading is an additional source of delight. It is selected from the best works of the best authors. The plates (14 in number) are in full colors."

Pond Lilies, and other Pictures AND STORIES. By LUCIE E. VILLEPLAIT. 12 plates in full colors and sepia tints with descriptive reading, fac-similes of original water-colors, and drawings. "Exquisitely charming. The Pussy-willows surround a group of happy children digging in the sand." $1.00.

Morning Glories, and other Stories AND PICTURES. By LUCIE E. VILLEPLAIT. 12 plates in full colors and sepia tints, with descriptive reading, fac-similes of original water-colors and drawings. $1.00.
The title is suggested by a 'cute water-color drawing of a child sending a message by telephone to papa.

The Skating Party. By C. F. DALEY. And other Poems and Stories. Illustrations by ANNIE B. SHEPLEY. 4to, $1.00.

Worthington's Annual for 1892. An entirely new volume, consisting of interesting and original stories, poems, biographies, natural history, and over 350 illustrations, printed by our patent process printing in colors, enclosed in a rich lithographed cover of beautiful design. 4to, $1.00.

Worthington's Natural History. Stories and history of animals of all kinds at home and abroad. Illustrating beast, bird, and other animal life in prose and poetry, with an alphabet of natural history. Choicely illustrated with numerous engravings and colored illustrations. 4to $1.00.

The Land We Live In; or, America Illustrated. Edited by the Rev. EDWARD T. BROMFIELD, D.D. An entirely new edition, with many additions, including a new chapter on New York City and vicinity. Profusely illustrated with fine wood engravings, and beautifully printed on fine calendared paper. Enclosed in an elegant cover; printed in rich colors, of original design. $1.50.

Boys' Own Book. A selection of the choicest reading, bright poems, pictures, games, etc. Printed by our patent process printing in colors. $1.25.

The Girl's Own Book. A collection of pretty pictures, printed in colors, with original stories and sketches by some of the best writers. Enclosed in a double cover. $1.25.

The Little Savoyard and other STORIES. By T. S. ARTHUR. A collection of instructive and entertaining sketches for young readers by this favorite and well-known author. $1.00.

Perils by Land and Sea. Shipwrecks, travels, and adventures in foreign lands. $1.00.

Adventures by Sea and Land. Thrilling adventures told in an interesting and instructive manner. $1.00.

Stepping-Stones for Our Little ONES. A collection of pretty pictures and short stories for little folks. $1.00.

Youth's Own Book. Short Stories and pretty pictures for the little folks. Profusely illustrated with engravings by the best artists. 4to, boards, in rich covers, printed in colors. 75 cents.

FOR SALE BY ALL BOOKSELLERS, OR BY THE PUBLISHERS,

WORTHINGTON CO., 747 B'WAY, N. Y.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 26, 1891.

The Week.

THE date fixed for the National Republican Convention, June 7, is spoken of in some quarters as unusually early, but this is not the case. In 1880 the Republicans called their Convention to meet on June 2, and the Democrats called theirs for June 22. In 1884 the dates were, Republican June 3, and Democratic July 8. In 1888, the Democrats took the lead, fixing their date at June 5, and the Republicans following with June 19. What the Democrats will do this year remains to be seen, but it seems improbable that they will fix upon a date earlier than that chosen by the Republicans, for the only reason apparent, namely, the "moral effect" of being first in the field. The campaign is long enough to satisfy both parties when the nominations are made fully four months before election. In fact, there is always a lull of a month or two after the conventions meet, neither party beginning the campaign in earnest much before the first of September. As regards the city chosen for the Republican Convention next year, Minneapolis, we are unable to detect any poignant regret in this part of the country over the fact that New York has lost it. We presume the fact of the Republicans going West to make their nominations will send the Democrats there too, and the latter will therefore be spared the peril of having their Convention assemble under the auspices of Tammany Hall.

Hill is employing his last days at Albany in a determined attempt to steal the control of the Legislature from the Republicans. Despite Flower's large majority for Governor, the Democrats did not secure the Legislature. The responsibility for this failure really rests upon the Governor. A reapportionment based upon a State census in 1885 would undoubtedly have given the Democrats a majority in each branch this year. Such a census was ordered by the Constitution, and would have been made had not Hill vetoed a bill providing for it passed by the Republicans, which was of precisely the same character as the one signed by Tilden ten years before. Having, by his folly years ago, lost his party the Legislature in the election this fall, Hill set out after election to recover control of the body by fraud. He has had his "heelers" at work to this end all over the State, Deputy Attorney-General Maynard taking the lead in the disreputable business. It culminated on Monday in the proceedings of the Dutchess County Supervisors at Poughkeepsie. The returns from the Senatorial district of which Dutchess constitutes a part showed a plurality for Deane, the Republican candidate. The Board of Supervisors is controlled by the Democrats, and on Monday they pushed through, without explanation or opportunity for discussion, a resolution giving Osborne, the Democratic candidate, enough additional votes in Dutchess County to overcome the Republican plurality in the rest of the district and give him a plurality of 14. As the County Clerk refused to sign these returns, the Democratic majority of the Board appointed a substitute and hurried him off to file the papers at Albany. All this action was in plain violation of explicit provisions of the statute, which denies the Board of County Canvassers any authority to throw out votes, as was done in this case by the score. The Republicans will, of course, appeal to the courts, and there should be no doubt that justice will be done in the matter.

This latest performance of Hill's, like so many previous ones, will hurt the prospects of the Democratic party, not merely in New York, but throughout the country. There is nothing which is more offensive to independent men than such attempts to alter the results of an election. The Republicans have always suffered from the performances of the Louisiana and Florida Returning Boards in 1876, by which, as candid members of the party now universally admit, the man who was entitled to the Presidency was defrauded out of it. People are in no mood nowadays to condone a repetition of the Returning-Board business in New York. Nor will all voters discriminate as to the responsibility for such actions. It is not simply "Dave" Hill who commits them; it is the Democratic Governor of the chief State in the Union.

That is a bright idea which is agitating the politicians of Kansas—the idea of electing a proxy Senator to represent the State in the departments at Washington. The movement was conceived as a means of mortifying the new Senator, Peffer, and perhaps forcing him to resign. The presumption is, that if Peffer is denied the privilege of scouring the departments to get places for Kansas office-seekers and to obtain garden seeds and copies of the Patent Office Report for his constituents, he will be lonesome, and will become gradually weary of life, so that after a year or two he will resign or commit suicide. This conception of the Senatorial career prevails extensively among the spoils politicians. There are few Mugwumps in Kansas to present the opposing view of a Senator giving his time and strength to the study of the Constitution and laws, with now and then a dip into political economy, and really enjoying that kind of life. What a Kansas Senator ought to be doing, and to enjoy doing, is the getting of "something equally as good" for every able-bodied man in his State of his own political party. Peffer, of course, cannot fill this rôle, because his party is not in power at Washington. Hence all the greater need of a proxy Senator to be elected by the Legislature and paid by the State. We hope that the novelty of this experiment will not deter the Kansas politicians from carrying their idea into practice. It would be a much greater reform than they imagine, and would probably extend to all the States in time. New York, just at this time, is in great need of a proxy Senator, having lost one Republican from the upper house. Mr. Thomas C. Platt is exercising the functions of such a proxy by turning people out of the Custom-house and other people into it, etc., etc. He ought to be recognized by a formal election. He ought to have a commission which he could show, and which other persons, like ex-Collector Erhardt, could compel him to show. There is really more in this project for proxy Senators than appears on the surface; but we think that the idea of causing Peffer to resign from mortification will hardly be realized.

The woman suffragists in Kansas held a convention last week, and resolved to seek the passage by the next Legislature of an act giving their sex the right to vote in all other elections, as they now enjoy it in municipal elections. In most States the chief support of woman suffrage has come from the Republican party, and it was a Republican Legislature in Kansas which enacted the municipal-suffrage law. But the politicians have been sadly disappointed in the result. At the last elections the women in several of the chief cities voted largely with the Democrats, and thereby gave that party control of the government of Topeka and other places. Some of the managers became so indignant that they declare not only that they will not extend woman suffrage, but that they will take away the right to vote so far as the sex now enjoys it. Very likely this feeling will prove strong enough to prevent further legislation for some time to come, but there is little probability that any step backward will be taken.

Admiral Brown said on Thursday at San Francisco:

> "The statement that the papers got out extras stating that, by the kindness of the *San Francisco's* officers, they gave particulars of the landing at Quintero, is altogether false. The papers did not publish anything of the kind."

The Admiral must, then, have been extraordinarily ignorant of what was going on under his nose. A copy of the Valparaiso *Gaceta Comercial* of August 21 was sent to this office by an American residing in Chili. Under the headline, "A Battle at Hand!" it gave an account of the military situation, beginning: "From trustworthy news brought by the United States war-ship *San Francisco* yesterday, we know for a certainty that the revolutionists have disembarked, from their twelve transports and six war-vessels, about 8,000 men in the vicinity of Concon and Quintero." We give Admiral Brown

the credit of supposing that his denial was not based on a mere quibble over the word "extras." The issue of the paper was not an extra edition, so far as we know. Nor has anybody asserted that the information was given by the "*San Francisco's* officers." But the Admiral could not have been relying upon any such verbal quibble, for he added sweepingly, "The papers did not publish anything of the kind." But we have shown that one paper most decidedly did.

Judge Ross, of the United States District Court in California, has sentenced three young Yuma Indians to death for killing an old medicine man who had undertaken to make rain and had failed to do so, such failure being, under the tribal laws, punishable with death. We sincerely trust the sentence will not be carried out. The execution of these men would be justifiable only on the assumption that the production of rain at will would be a miracle, or, in other words, a departure from the ordinary course of nature, and that the Indians had, therefore, no right to expect it from any man. This, it is true, has been the accepted view of rain-making in the United States from the foundation of the Government. The Indian rain-maker has always been regarded as an impostor and a subject of ridicule. But this view has been formally and officially abandoned. Congress has accepted the Indian theory that rain can be produced by the use of certain arts or incantations, in defiance of or in disregard of the explanation of Nature's mode of producing rain given by the modern physicists. It has voted money for the expenses of white rain-makers possessing no more scientific equipment than the savage medicine men, and one of our executive departments has actually appointed medicine men for the express purpose of producing departures from the previously recognized order of nature. This return to the practices of a very early culture—for the Yuma culture is undoubtedly very primitive—imposes on our courts, as it seems to us, the obligation to treat the Yuma mode of keeping the rain-makers in order with a certain respect, and would even justify the judges in borrowing and in recognizing in their decisions some of the Yuma sanctions. How do we know, for instance, with our limited experience of rain-making, that rain-makers can be kept up to their work except by the remorseless application of the death penalty? Is not the tribal law, in all probability, an induction from a large body of facts collected during many ages? If these young men should now be hanged, and we should discover, a year or two hence, during a great drought, that the execution of Dyrenforth was a terrible necessity, should we not all suffer the keenest remorse? Let us ask, too, whether, in the present state of our knowledge, any rain-maker should be left at large? The Indian rain-makers are virtually kept in custody because there is for a savage no escape from his tribe; but Dyrenforth may fly to Canada or Europe any day.

The kind of moral influence which a Tammany Board of Excise disseminates in a Christian community is forcibly illustrated by the latest evidence regarding the proximity of liquor-saloons and other dens of iniquity and vice to public-school buildings. Mr. W. N. Wilmer, a former school inspector, a member of the bar, and a man of the highest character, displayed much activity in seeking to have the Board of Excise enforce the law prohibiting the granting of a license to any place in the "immediate vicinity" of a schoolhouse. He tried in vain to get the Board to specify the distance implied in "immediate vicinity," and then he went to work to obtain evidence from police captains concerning the exact condition of affairs about several schoolhouses. He found within 200 yards of one of them 23 barrooms; within the same distance of another 15 barrooms and 5 houses of ill-fame; within the same distance of another 10 barrooms, of another 18 barrooms, of another 11 barrooms, and of another 13 barrooms. He endeavored to get the Board of Education to help him in the correction of this frightful state of things, but his reports were pigeonholed. When the Mayor's new appointments for School Commissioners and Inspectors came out a few days ago, Mr. Wilmer's name was not among them. Tammany has no use for officials of his kind.

The *Tri-Weekly Gleaner*, a Kingston (Jamaica) newspaper, in its issue of November 10, has a long article on the reciprocity clause of the McKinley Bill as bearing upon Jamaican trade. In substance it maintains that the rates of duty in the Jamaican tariff cannot be considered "unequal and unreasonable" by the United States, since they are levied on all goods alike, even upon those coming from England, and are, moreover, in both design and effect, purely revenue duties. In a subordinate paragraph the *Gleaner* makes an important contribution to the understanding of the statistics of trade between the island of Jamaica and the United States. It says:

> "Frequent comparisons have been made of the difference between the importations to the United States, great stress being laid upon the preponderance in value of our exports as compared with our imports. But it must not be forgotten that a good deal of coffee, sugar, and other products of the Island are shipped hence to the United States on through bills of lading; the merchants seeking to obtain the advantage of both markets. If, on arrival in the United States, the merchant finds the English market more advantageous for his goods, they are sent on to that market to be disposed of. At the same time, to all intents and purposes, here, in Jamaica, these goods are entered as being shipped to the United States. Some allowance, therefore, should be made for this fact, in comparing the difference between our interchange of supplies with the United States."

This illustrates the need of "going behind the face of the returns" in the case of commercial statistics, especially when they relate to international trade. People have been wondering why gold does not flow in upon us from Europe to pay for our enormous exports of breadstuffs. But an examination of the figures of foreign commerce for the nine months ending September 30 will show that we were already paid up at that date. In fact, the imports and exports came very near balancing, the figures being, respectively, $627,145,819 and $627,670,414. Somehow, international exchanges will look like mere barter, in spite of our latter-day theorists.

Whatever new shifting of the scene may be in store for Brazil, it is pretty clear that the events of Monday mean the complete disappearance of Fonseca. He seems to have had all the elements that go to make up a successful Dictator except the resolution to push his plans through to the bitter end. Soldier though he was, he seems to have had a genuine horror of bloodshed. Indeed, it was openly charged against him in the Senate by Admiral Mello that he had been on the point of drawing back at the time of the revolution in 1889, presumably out of this same shrinking from actual civil conflict. A striking confirmation of this view of his nature is given in an article published in a Brazilian paper a little before the dissolution of Congress. Rumors of an impending Dictatorship were rife at the time, and a member of Congress wrote to the newspaper in question in reference to them, under the suggestive heading, "Deodoro and Balmaceda." His argument was that there was nothing in common between the unflinching cruelty of the Chilian and the milder character of Fonseca, and he reported the following saying of the latter's, which he asserted that he himself had heard from the President's lips: "They may say of me what they will in Congress or out of it, but I declare that for no consideration whatever would I cause a drop of Brazilian blood to flow; I would give both arms, or life itself, to avert bloodshed." No doubt his final yielding was mainly due to his perception of the great strength of the combination against him. The navy appears to have played the same patriotic part adopted by the Chilian naval commanders, and with equal success. Still, Balmaceda cannot be conceived of as giving up without a desperate fight, and the peaceful withdrawal of Fonseca witnesses to a milder nature, both in him and the other Brazilians.

The past week brought to an apparent close an episode remarkable in both European finance and European diplomacy. Nearly two months ago the offer of the new $100,000,000 Russian loan in Paris for public subscription met with overwhelming failure. Less than three-fifths of the bonds were taken by the public, and the Paris bankers who had been reckless enough to guarantee the loan's success, were forced to assume on their own account the unsubscribed balance. It will be remembered that the news despatches of that date teemed with stout denials of the fact; going so far, indeed, as to protest that the loan had been seven times oversubscribed. But the fiction was too transpa-

rent to deceive any intelligent person. It presently appeared that the Parisian "underwriters" of the loan had got themselves into a very serious scrape. Sixty million dollars was the sum the bankers were pledged to raise in exchange for these unsalable securities, and they began at once to throw on the market all their other available holdings. This was a tempting opportunity for the "bear" operator. It is largely from America that the European operators have learned the art of breaking down prices as a means of forcing sales of real stock from frightened or discredited holders, and thus enabling themselves, on the consequently demoralized market, to "cover" their own sales at a profit. They applied it now with vindictive energy. Their movement went on simultaneously in every European stock exchange, and the circumstances were apparently all in their favor. They nearly forced a panic upon the financially unsound community of Berlin, but their central purpose, from the start, was obviously the destruction of the Parisian guarantors of the Russian loan. Common report attributed to this fierce attack upon values a singular and dramatic origin. The fact that not one of the great Hebrew bankers raised his hand to stop the break led, not unnaturally, to the assumption that it was actually a campaign of revenge, planned by the allied financiers of that faith to break down Russia's credit.

Among the diplomatists this movement seems to have been looked upon with great uneasiness. On Monday of last week, when the outlook of the markets was gloomiest and predictions of European war were disseminated by the alarmists, Salisbury in London and Rudini in Rome interposed with public assurances that the rumors were unfounded. For a day this disconcerted the "bears," but they returned to the task and once more demoralized the markets. The conviction grew that a serious crisis was imminent, and the belief was so general in Europe that Russia would resort to war if its financial negotiations failed, that a prediction to this effect, published in a Vienna newspaper a fortnight ago and falsely attributed to the Emperor of Austria, threw the Continental markets on to the verge of panic. A similar imposition was practised on the New York *Times*, which on November 12 announced that "a letter had been received in this country from an officer on the General Staff of the German Emperor, which" declared in effect that the war in Europe could not be postponed beyond next spring. "The communication," the impostor added, "is understood to have been dictated by the Emperor himself." This was undoubtedly concocted in aid of the European enterprise. Then the Cabinet ministers interfered personally. In Berlin and in London, ministerial pressure was evidently applied to the anti-Russian operators to force an abandonment of the bear campaign. This intervention was successful. Baron Rothschild in London was the first to give way. The German bankers were silenced next, and a sudden advance in prices on all the great stock markets of the world announced that the fight was over. What the Paris bankers will do with their $60,000,000 Russian bonds is not yet clear.

One of the agencies which probably contributed to the sweeping victory of the Gladstonians in Devonshire the other day was the unflinching, and, indeed, for so old a man, enthusiastic support which the Liberal candidate, who is both a tenant farmer and a landlord, received from Sir Thomas Acland. The Aclands are the oldest family in Devonshire. No memory or record goes back to a time when the Aclands were not great people in that county. The present baronet is the twenty-third in lineal descent from an Acland of the twelfth century, and nothing of importance has taken place in Devonshire in six hundred years in which an Acland has not figured prominently. The garrison of their manor house was, during the civil war in 1640, at one time the only force which held out for King Charles in the county. The present Sir Thomas began public life as a Tory with Mr. Gladstone, but, as he said in a recent letter to the Liberal candidate:

> "I can look back, like our great leader, over fifty years of public life to the days before the first Reform Bill, when I did not belong to the Liberal party. Parliament has more and more found its strength to depend on trust in the people. We may now trace with satisfaction the advance in the welfare and comforts of the mass of the people which has attended the progressive policy of the Liberal party passed in the face of constant opposition from the Conservatives. . . . I refuse to believe that the electors will be misled by the attempts made on the Tory side to claim credit for the present Government because they had found it politic to pass, with the help of the Liberals, a few of the measures against which the Tory party had long protested."

The need of going behind social statistics to the operative causes of social phenomena is illustrated afresh by a recent decision of the Supreme Court of Bavaria. This decision annulled a marriage contracted in a Prussian city by two Bavarians who had not previously obtained the authorization of their own commune. In other words, legitimate marriages in Bavaria are impossible without the consent of the local authorities. The judgment of the Munich court gave much scandal to the Prussian newspapers, which thought it monstrous that imperial legislation should thus be overturned by that of a single State. Nevertheless, the Bavarian position seems to be impregnable, since, at the time of the unification of 1871, Bavaria made it a condition that her individual legislation should be recognized by the empire. But the awkwardness of the situation has led the Bavarian Government to announce that it will propose a thorough modification of the marriage laws, so as to make them square with those of the rest of the empire. The significance of the Bavarian marriage laws, for students of sociology, lies in the fact that they help to explain the extraordinary number of illegitimate births in Bavaria. In that respect, in fact, Bavaria has the unenviable distinction of leading the world. But this does not imply such prëominent immorality as it might seem to do. The communal magistrates often refuse their consent to the marriage of poor people for fear that an increasing burden may be laid upon the taxpayers. Irregular unions are the natural and frequent result, and the statistics of illegitimacy rise accordingly.

The partial reconstruction of the Spanish Cabinet announced on Sunday does not indicate any serious division in the Conservative party. The changes were made chiefly for the purpose, it would appear, of giving a place to Romero y Robledo, who has been made Minister for the Colonies. He has long been the leader of an unattached following in the Cortes, now acting with the Liberals and now with the Conservatives, though generally managing to get into favor with the party at the time dominant. Since the last general election he has been standing aloof, but it was rumored some months ago that he had made terms with Cánovas and would soon have a portfolio. His entrance into the Cabinet must thus be regarded as a strengthening of the Premier's hands, politically. For the rest, there appears to be no tightening of party lines, nor retreat from the comprehensive policy which marked Cánovas's first choice of a Ministry. The Duke of Tetuan, an old Liberal, retains the Ministry of Foreign Affairs. The retirement of Silvela from the Interior Department would seem to indicate that no appeal to the people is deemed imminent; he is one of the most adroit of Spanish politicians, and it was in good part to his able management, and working of his department "for all it was worth," that the last great victory of the Conservatives was due.

A committee of the Norwegian Storthing, appointed to consider the subject of a change in the consular service, has recently made a report declaring unanimously in favor of a separate representation. At present the foreign affairs of Norway, both consular and diplomatic, are wholly under the control of the Swedish Government; and as the commerce of the dependent country far exceeds that of Sweden, the injustice of the arrangement, as regards the consular service at least, has long been felt by patriotic Norwegians, irrespective of party. The report recommends, in connection with the proposed change, a reduction of the number of consuls in Europe, and the formation of new consulates in the other parts of the world, by which is undoubtedly understood the United States in particular. It is asserted that this change will not only better serve the interests of the home country, but will do so at a cost not exceeding the present expenditure. There is no doubt that the Storthing will act favorably on the bill of the committee, for the elections just held show marked gains for the party which advocates separate foreign ministries for Sweden and Norway.

THE PROPER USE OF A COUNTRY.

THERE is nothing on which professors of journalism should dwell so strenuously in their lectures to the tyros as the mischief of irrelevancy—that is, the practice, when discussing public questions, of answering assertions or arguments about one thing by assertions and arguments about another and totally different thing. This is the besetting sin of "hardworking journalists." They will not stick to the question, even in an ineffective and absurd way. There is a scene in one of Howells's novels, in which some women on the piazza of a summer boarding-house are discussing the True and the Good, when one of them breaks in with, "Talking of true reminds me of blue, which they say is going to be all the rage next winter." (We are quoting from memory.) So also many of our contemporaries, if you address some remarks to them about the *Itata* case, will answer about dyspepsia or sick headache; if you make a proposition about the Bering Sea case, will respond with propositions about malignity, or chastity, or free trade. The term "a dies non" reminded one the other day, like Howells's character, of "a dies iræ." If you say that the foreign affairs of the nation are being badly managed, they will show that you are "a man without a country," as the *Tribune* did last week in answer to those who find fault with Secretary Blaine's conduct in the negotiations with Brazil. This habit of irrelevancy, or failure to join issue on the matter in hand, not only protracts discussion indefinitely, but keeps the public in perpetual darkness regarding its most serious interests. The most diligent newspaper reader may peruse everything that appears in his favorite organ on a controversial matter for a whole month, without knowing at the end of that time "what it is all about."

The favorite refuge of the Irrelevants in all discussions of diplomatic questions is the charge that their opponents are either "bad Americans" or men with no country at all; a charge which the *Tribune* actually brought against James Russell Lowell, above whom, as a true American, it placed—"Pat" Ford and "Pat" Egan. This, of course, shows that the charge is hardly ever seriously made. It is simply a rhetorical mode of escaping from an antagonist who is pressing you too hard. It is, however, a device which comes readily to hand, because it is almost always resorted to by persons whose only idea of "a country" is something to make money out of. Of their country as a place to make glorious through great victories in the world of morals and of thought, through the truth and justice of its policy, the honesty of its traders, the wisdom and knowledge of its statesmen, the integrity of its judges, the efficiency of its administrators, and the greatness of its contributions to civilization in the highest sense of that term, they have not the smallest conception. To them the chief work of a man proud of his country is to show that it can "lick" somebody if he does not "shut up" or "get off that mule." Their whole attitude as patriots was well described by that member of the old Irish Parliament who, being taunted with having sold his country in voting for the Union, "thanked God he had a country to sell." Our "patriots," in like manner, would have little affection for a country that had "no money in it" for them. "What is there in this for me?" is the first question they ask about every question of home or foreign politics.

But it is very obvious that most of them would be far better off without a country than with the kind of country they have. For their country, to most of them, is what his cave is to a robber—that is, a place to store his booty in, and get rest and refreshment after a foray. But when a robber is driven out of his cave, we do not say, "Poor robber! he has lost his cave." We say, "That fellow has lost his cave, and we are glad of it, for he may now take to some honest industry." We might say much the same thing of several of the patriots who are just now defending the honor and interests of the United States against foreigners—that they seem to thank God that they have a country to disgrace by lying, cheating, double-dealing, sophistry, and humbug, and proposing to thrash any one who complains.

The audacity of this class has been steadily increasing ever since the war, and the most important work of every American who really loves his country and is jealous of its fair fame, is to put them back in their proper place. They surround nearly every question of foreign policy with an atmosphere of falsehood. To take reciprocity as an example: when Mr. Cleveland advocated it in 1888, Mr. Blaine, who is the best exponent of their peculiar ideas and methods, wrote a long letter from Paris fiercely denouncing it, and stigmatizing anybody who sought foreign trade as un-American. Within two years (in 1890) this same publicist was furiously advocating reciprocity and claiming the authorship of the idea, but, characteristically, helping to embody it in legislation by a whole string of misrepresentations. His deliberate account of the huge annual losses in gold which we sustained in our trade with Cuba and Brazil, would have disgraced a boy of ten in a public school. But the body of "true Americans" who follow his lead and like his ways, instead of saving their country from the discredit which such talk from a man who had filled high office was sure to bring upon it, by repudiating his nonsense, actually fell in with it, and swore on the holy tariff that "that was so." Every step since taken to bring about increased intercourse with foreign nations has been marked by the same mixture of ignorance and cunning. The people who are guilty of it cannot be reformed, but their "country" can be taken away from them; and this, we trust, will have been done in a thorough way in one year from this date.

THE LEGALITY OF BOUNTIES.

THE brief filed by Solicitor-General Taft in the tariff-act cases now pending in the Supreme Court is a very audacious as well as able argument. The cases are three in number, viz.: Boyd, Sutton & Co., Herrman, Sternbach & Co., and Marshall, Field & Co. *vs.* the United States. These plaintiffs seek to overthrow the McKinley Tariff Act, and to revive the Act of 1883, on three distinct grounds. These are, first, that section 30 of the McKinley Bill (relating to tobacco and snuff), as the said bill passed the House and Senate, was wholly omitted from the enrolled bill which was signed by the President and filed in the Department of State; 2d, that the provisions of the bill giving bounties from the Treasury to the producers of American sugar are unconstitutional and void, no power to enact legislation of this character having been vested in Congress by the Constitution; 3d, that section 3 of the act (the reciprocity clause) is unconstitutional and void, in that it delegates to the President the power of laying taxes and duties, which power, by sections 1 and 8 of article 1 of the Constitution, is vested in Congress.

The Solicitor-General's argument upon the second point—the constitutionality of the sugar bounty—is very bold. He contends that the bounty is only the protective tariff in another form, and that it cannot be overthrown on constitutional grounds without overthrowing the whole doctrine of protection. All protective tariffs, he says, rest upon the "general-welfare" clause of the Constitution. This clause must be depended upon also to sanction the bounty on sugar. He examines at length the contention of the plaintiffs that the bounty is condemned in principle by the decision of the Supreme Court in the Topeka case, where it was held that bonds issued by a city to pay a bonus to a manufacturing corporation to build its plant within the city, were invalid and beyond the power of the city, even though expressly authorized by the Legislature. The distinction between this case and the one before the court is found in the grade of the government that levies the tax. "There may be," says Cooley, "a public purpose as regards the Federal Union which would not be such as a basis for State taxation, and there may be a public purpose which would uphold State taxation, but not the taxation which its municipality would be at liberty to vote and collect." The contention of the Solicitor-General is, that a bounty on sugar is simply a change in the method of putting money into the pockets of the sugar-producers without any change of substance—a change from tariff to bounty.

> "The principle [of a protective tariff]," he says, "thus established, necessarily justifies bounties, for in the beginning of the operation of a protective tariff *the amount of duty levied is a bounty to the domestic manufacturer*, and it is with a view to such a benefit for him that it is levied. The sugar duties have always had the effect of a bounty to domestic sugar-producers."

This is very plain, and as we have said, very bold, considering the source from which it comes, *i. e.*, the law department of the Republican Administration. It has been a task of no small difficulty to convince Republicans that a protective tariff is really a bounty taken from the pockets of the community for the benefit of the domestic manufacturer or producer. We have now the solemn assurance of the Attorney-General's office that such is the fact; and it comes to us

in such a way that the validity of the bounty clause seems to rest upon its analogy to protection in the tariff.

But this is not the only surprising thing that we find in the Solicitor-General's argument. On page 84 he contends that the sugar-producers have a vested right in the tariff, so that whenever Congress finds it expedient to repeal a protecting duty, it is morally bound to give the producers of the article "something equally as good." We quote this paragraph in full, viz.:

"Here was a case where citizens, by reason of heavy sugar duties which had existed for many years, had been induced to make large investments in the plant required for the production of sugars; and now it was proposed by Congress to remove the duties because the revenue which they produced was more than sufficient for the uses of the Government. The removal of duties would absolutely destroy fifty or sixty million dollars' worth of property invested in this industry and protected by the duties. To enable persons whose property would be thus injuriously affected to prepare for the change, the Government was under a moral obligation to reimburse them for their loss, or to permit them by a bounty to continue the business until such time as the business might be self-sustaining."

The argument for the removal of the sugar duties was largely based upon the idea that the industry never would be self-sustaining. Republicans told us, and told us truly, that the industry had been protected sixty years without making any gains in the quantity produced, and that it was simply a waste of the nation's resources to tax the consumers $50,000,000 per annum in order that the domestic producers might get nine or ten millions. And now the Solicitor-General tells us that the Government is under a moral obligation to pay this bounty till such time as the industry is self-sustaining. As this time may never come, it follows that the bounty may be a perpetual obligation, something like an interminable annuity or a permanent national debt. Of course, what is true of the protected sugar-growers is true of all the protected classes. By this rule, whenever Congress repeals a duty, it must grant an equivalent bounty to the home producers of the corresponding article, and continue the bounty till the beneficiaries say that they no longer need it.

"CRAZES."

THE complete collapse of the Farmers' Alliance movement, after flourishing and spreading alarm among politicians for less than two years, contains a lesson of some value for the many public men who lose their heads in the presence of the political epidemics known as "crazes." A very brief examination of the appearance and progress of these Crazes during the past twenty years shows very clearly that an attempt in the United States at a sudden and violent departure from the established political and economical traditions of the country is pretty sure to end disastrously for all concerned in it within a very brief period. There is probably no society in the world on which it is harder to make a quick impression of any sort in favor of a very radical change in the mental outlook of the people. As a rule, it takes twenty years to build up a party, and it takes just about the same length of time to drive a party definitively out of power. All originators and promoters of Crazes underrate greatly the weight and bulk of the mass to be acted on and moved before a new theory can get a firm foothold in politics. They underrate, too, the force of habit and the want of mental agility among the rural population, which really governs the United States. Syllogisms make but little impression on the farmer. He absorbs ideas after long contact with them, but they can hardly ever be injected into his head out of a reform syringe.

If it be asked how it is, if all this be true, that the promoters of Crazes are able to make such an appearance of progress as to produce so much confusion of mind among the political augurs, the answer is that they are usually fearfully in earnest and give themselves up wholly for a brief period to the propagation of their new idea. They have all the passion and enthusiasm which one finds so often among inventors. And then they are powerfully aided by the large class of politicians who have failed in the regular parties and are on the lookout for a job, and by the still larger class who live in expectation of some sort of cataclysm or social revolution which will make a better distribution of justice. This latter class, which includes a great many clergymen, cherish the belief that there exists somewhere a stock of pent up indignation over what they consider the defects in the social organization, which may any day burst forth and clear the ground for something far better. Any sudden proclamation of very radical opinions or demands seems to them, therefore, a sign that the day of righteous wrath has dawned; the old dams are at last giving way. All these classes are assisted, of course, greatly in making an uproar by that portion of the press which cultivates sensations and lives on them.

Let us take as illustrations of the evanescence of Crazes the political history of the Greenback, Labor, Granger, and Farmer Craze. The Granger, or "anti-monopoly," movement appeared in the West in 1873, and for two years threatened to carry everything before it. It elected its candidate for Governor of Wisconsin in 1873 by 15,000 majority, came within 5,000 of electing an "anti-monopoly" man Governor of Minnesota the same year, and secured Legislatures which passed what became known as "Granger statutes." It was very strong at the same time in Iowa and other States. But by 1876 it had entirely disappeared.

During the first half of the Hayes Administration the Greenback movement became very strong. In 1878 it swept over Maine. Eugene Hale, who had been elected to Congress from a "sure Republican district" in 1876 by almost 3,000 majority, was beaten by nearly 1,500 by an unknown stone-cutter. In a second district the Greenbackers and Democrats combined and elected their candidate by about 3,000 majority, against a large Republican majority in 1876. In each of the other three districts the Greenbackers polled so many votes that, if they had been united with the Democrats, the Republicans would have been beaten. By combination with the Democrats the Greenbackers came within 9,500 votes of carrying Iowa. In Ohio they polled over 38,000, and left the Republicans with a plurality of only 3,154. In Michigan they cast 73,000 votes, which were almost as many as the Democrats; in New York over 75,000, in Indiana almost 40,000, and so on. But by 1879 their strength had fallen off 75 per cent., and they cut no figure in the election of 1880.

The "Labor Movement" in politics followed the great strikes in the spring of 1886 The politicians of both parties were tremendously impressed with its importance. A Congressional Committee asked Powderly to submit amendments to the Constitution of the United States which he thought ought to be adopted in the interests of "Labor." In the autumn of 1886 Henry George ran for Mayor of New York, and polled 68,000 votes, or nearly one-third of the whole number cast. It was immediately assumed that the Labor party would be a controlling factor in the Presidential election of 1888. But by 1887 George polled only about as many votes for Secretary of State in the whole State of New York as in 1886 in the city alone, and by 1888 the party had disappeared.

The Farmers' Alliance movement, of which we are now witnessing the close, was most powerful and threatening in Mississippi, Kansas, and Nebraska. In no State was its chief absurdity, the sub-treasury scheme, so strong as in Mississippi. There it was boldly faced on the stump by Senator George and others, and in the election of the Legislature overwhelmingly defeated. In Kansas and Nebraska its fate at the last election has hardly been any happier. In fact, the Alliance may be said to have disappeared from American politics, leaving hardly a rack behind. Its one Senator, Mr. Peffer, who lent it powerful aid by the exceeding simplicity of his habits, has by current report gone over to the enemy, drinks champagne, and wears black broadcloth. We do not suppose that any number of these experiences will convince people of certain temperaments of the slowness with which the world moves. The "Nationalist party" in Boston, for instance, which aims at the establishment of the Bellamy millennium, polled only a beggarly vote of 1,300 at the late Gubernatorial election in Massachusetts, but this doubtless will not discourage the members in the least. There will always be a body of enthusiasts laboring to make progress independent of individual culture, and they render the community some service in keeping in order the ideals before which we all make the sign of the cross, as the Russians before the "sacred images."

THE REAL NEED OF REVISION.

NOTHING is more striking, in the current discussions in connection with creed-revision, than the apparent unconsciousness of the revisers that they are at all endangering the authority and absoluteness of their revised creed, when they get it. Indeed, there has not been even a suggestion, so far as we

have observed, that the new creed should be any less positive than the old in asserting its authority and necessity. Yet here is, after all, the most characteristic thing about creeds—the declaration, that is, that beliefs are necessary to salvation; the specification of the particular beliefs is of small moment beside the affirmation of the general principle. But there is no indication whatever of an intention to relax the latter, and its indispensableness in any creed seems to be so taken for granted that it is proposed to transfer it intact from one set of beliefs to another. Thus, the Westminster Confession, in its present form, speaks of "those things which are necessary to be known, believed, and observed, for salvation"; yet the men who mean to change that form for something which they like better, give no hint of abating the imperative claims of the new symbol.

This is not a thing peculiar to the Presbyterian situation. Any creed, when considered as an epitome of Christian doctrine and not as a devotional aid, seems to require the assertion of its own paramount importance. This is conspicuously seen in the so-called Athanasian creed, beginning with its *Quicunque vult salvus esse*, and ending with its *Hæc est fides catholica*, and alluding both at the beginning and ending to the unpleasant fate awaiting any dissenter from it. But it is the same in principle, if not in such set terms, with all creeds. The Articles of Religion of the Episcopal Church, for example, refer to beliefs which are "requisite or necessary to salvation."

If one were required to give the most essential distinction between the spirit of modern science, using the term broadly, and the spirit of a doctrinal creed, he could find it in this very point. Where a creed asserts its own finality and necessity, science admits the provisional and approximate nature of its conclusions. We have not met a more excellent illustration of this cautious and modest temper of science than the declaration of Weismann, preliminary to the unfolding of his remarkable theory of heredity.

"It is nevertheless possible," he says, "that continuity of the germ-plasm does not exist in the manner in which I imagine it takes place, for no one can at present decide whether all the ascertained facts agree with and can be explained by it. Moreover, the ceaseless activity of research brings to light new facts every day, and I am far from maintaining that my theory may not be disproved by some of these. But even if it should have to be abandoned at a later period, it seems to me that, at the present time, it is a necessary stage in the advancement of our knowledge, and one which must be brought forward and passed through, whether it prove right or wrong in the future."

This and the *Quicunque vult* belong to two different worlds, and few of our readers, we suppose, will question the great intellectual advance which has been required to pass from one to the other. In fact, the persistence of the dogmatizing spirit is one of the greatest dangers to which science itself is exposed, and one against which scientists have continually to be warned. A dogmatic scientist is as pestilent and offensive as his theological brother, and ought ever to bear in mind Huxley's forcible saying: "Science commits suicide when it adopts a creed." In the same philosopher's address on the occasion of the "Coming of Age" of Darwin's 'Origin of Species,' he did not fail to point out the perils attending the very triumph of the great theory. If it were to be taken as the final and absolute truth, it would be a weight upon research and a fetter upon the intellect, instead of being, as it should be, the stimulus to profounder inquiry and broader generalization. Whatever may be said as to that, it cannot be doubted that one of the truest marks of the scientific spirit is the refusal to admit that infallible and final results can be reached by methods which must be both fallible and tentative.

Now, it would be idle to affirm that a body of educated men like the ministry of the several churches can have failed to be affected in a considerable degree by this prevailing sentiment and spirit of the age in which they live. As a matter of fact, they have been affected by it powerfully. Scientific methods have been applied to a whole range of studies ancillary to theology. Macaulay's saying that a sensible man with the Bible in his hand was in possession of the whole material of theological study, was as mischievous an oracle as even he ever uttered. The antecedents and attendants of the literature of the Bible, the history of its formation, the right principles of its interpretation—these and other subjects have come to be regarded as absolutely essential matters to consider before you know what it is you have in your hand when you say you have the Bible there. And each of these subjects has now a scientific treatment—which means, of course, that scholars admit the results they reach to be approximate and subject to revision. Take such sentences as these from Canon Cheyne's introduction to his last volume of exegesis: "In 1880, seeing too much with the eyes of my expected readers, I adopted a possible but not sufficiently probable view of certain psalms. . . . In 1890, seeing entirely with my own eyes, . . . I offer my readers the truest solution I can find." That is not far from the spirit of Weismann's remark quoted above.

The wonder is, that when the scientific spirit has made as much impress upon the ministry as it has, when scientific method has gained such headway in subordinate theological studies, there should have come no perception of the incongruousness of retaining the old assumptions of certainty and finality. Here, one would say, is the part of creeds most in need of revision. The revision ought to be very easy to secure, moreover, since in actual practice so many clergymen drop out of use and out of sight the claim of theology to greater certitude than other sciences. It is extremely common nowadays to hear the Christian creed defended in the pulpit and out of it as a "working hypothesis," a "theory of life," and the like. It would be a great gain, it seems to us, if the creeds themselves could adopt that humble tone. Nor is the question merely speculative. Many men, we know, are actually repelled from the churches by the undue assertions of the latter in respect of the authority and certainty of Christian dogma. They cannot understand how it is that ministers who, in private intercourse, show themselves fallible mortals like the rest of us, and who, even when talking of religion, admit the great change of view and of attitude made necessary by modern research, should assume in the pulpit and ecclesiastical assemblies an air of absoluteness and certainty. It is like the experience of Emerson in English society, where, he reported, an almost audible click, as of a valve closing, could be detected in the organism of the man who passed from a general to a religious topic of conversation. It was he, also, who told of the effective method of controversy adopted by a bishop, which consisted in looking the heretic squarely in the eye and asking him to take a glass of wine.

SOME RUINS BEYOND THE JORDAN.

NEW YORK, November 9, 1891.

LEAVING Jericho on the 26th of August, we crossed the Jordan by a wooden bridge, kept locked to prevent the Arabs from using it without payment of toll. Our camp that night was by the side of a brook at Tel Kefren. Under a fine tree by our camp dwelt, or rather sat, a Moslem holy man, filthy, stupid, and lazy. Two or three women seemed to be connected with him, and they and the contributions of the faithful kept him in existence. Near by, in the jungle farther up the stream, dwelt or were encamped some Arabs of the valley, an indolent, degraded, immoral set of good-natured savages. The name Tel Kefren suggests a ruin mound; but on examination I found the *tel* to be an isolated hill of natural rock, on the sides of which were a few small caves, chiefly natural, and now used by the Arabs as granaries and sheepfolds. On top of the hill was a modern Arabic graveyard. Examining more closely, I found signs of ancient terracing on the hill, while quantities of fragments of common pottery were scattered over its sides and on the plain around for a considerable distance. This seems to justify the name *tel*, for, while not an artificial ruin mound, like the *tels* on the other side of Jordan, near Jericho, Kefren was yet the site of an ancient town, of which the hill constituted the acropolis. A short distance to the south of Kefren lies Tel Rame, a hill of similar formation. These are at the mouth of a bay in the hills, one to the north, one to the south, like forts guarding the entrance. They are both evidently sites of ancient cities of the plain of Shittim, one of the richest parts of the Jordan valley. Water is abundant, the herbage luxuriant, and the soil superabundantly fertile.

Referring to my note book, I find that at Kefren the thermometer registered 100° Fahrenheit at about sunset, and I have the same record for Jericho on the preceding day. I had expected to find a much higher temperature than this in the Jordan valley in August, and in fact the natives assured me that both days were abnormally cool, the coolest days of the whole summer. However, while the heat was not excessive, I found the atmosphere the most trying I had ever experienced excepting on the Sea of Galilee. It was as though an invisible blanket, soft but very heavy, had fallen upon me. I felt a sense of suffocation and of unrest. I was very tired, but could not sleep. Almost every traveller has pointed out the degrading moral effects of this climate of the lower Jordan and the Dead Sea country, and history and tradition bear

most eloquent testimony to the disastrous consequences to character of residence in those regions. Indolence and gross immorality characterize the inhabitants. The climate seems to produce abnormal sexual excitement. So tribes, like the 'Adwan, who spend their winters in whole or part in the plain, are notorious for their immorality, while the Bene Sakhr, their neighbors, who roam the uplands, only rarely descending to the plain, enjoy a high reputation for purity. The few Arabs who reside permanently in the valley, as at Jericho, appear to have reached the lowest depths of degradation.

It was a relief to leave the valley and climb up the mountains of Gilead in the early morning air. At every step the atmospheric load grew lighter and the sense of suffocation diminished. The view was not as fine as I had expected. Indeed, during the whole period of my trans-Jordanic trip, I never obtained a really good view. The Judæan, Samarian, and Galilean hills were always dim with haze, and distant points were indistinct or obscure. This was due to a strong west wind which blew all the time, cooling the atmosphere most gratefully, and bringing the precious mist of the Mediterranean to moisten the rainless earth.

Sending our tents and baggage to 'Ain Hesban, we directed our course towards the interesting ruins of Arak el-Emir, on Wadi Sir, identified with the fortress of Tyrus described by Josephus as erected by John Hyrcanus in this region. The place has been well described by De Saulcy, and the main features of his description are quoted in Baedeker's familiar guide-book. There has been little or no change since. The ruin which first catches the eye is the Kasr-el-'Abd, or Slave's Castle, whose huge blocks are carved with rude "Hittite"-like lions in bas-relief. At first sight, certainly, this seems to be a ruin of an earlier period, and it has accordingly been suggested that it was an Ammonite temple or fortress utilized by Hyrcanus. Unfortunately, we have not a sufficient basis of comparison for the determination of Ammonite and Maccabæan methods of construction. The remains of other public buildings and houses are on a plateau two or three hundred yards to the northeast of the "castle." They differ decidedly in appearance from that building, but, as far as I could determine, are of a period later than the Maccabæan. A few squalid Arabs have made themselves huts among these ruins. They offered us coins for sale, but none, if I remember aright, were older than the Roman Empire.

There are remains of a fine causeway, a reservoir, and some other solid pieces of masonry, but more interesting and curious are the two tiers of rock-cut chambers to the north of the town. The cliffs rise to the height of a hundred and fifty feet or more, and bend around in the form of a rude amphitheatre. Here were hollowed out the chambers referred to, in two tiers, with a gallery before the upper tier. These chambers are now used as granaries by the 'Adwan. Mangers and places for fastening animals show that at an earlier period they served as stables; but their original use was probably as tombs. Some of those of the lower tier show best the original form, vaulted within, the entrance by an arched door of a height and breadth much less than those of the chamber itself, giving the effect of a curtain wall in front. Over one of these doors is an inscription of five letters in the ancient Hebrew script. Besides these chambers one finds another piece of rock-cutting in the steep steps which descend from the plateau of the town towards the bed of the Wadi Sir. The Wadi itself, by the way, was a magnificent jungle of blooming oleanders, twenty to thirty feet in height, constituting one gorgeous bouquet. The castle of Hyrcanus was very picturesquely located, high up in a valley of the mountains, closed in to the north by an amphitheatre of chambered cliffs, gazing down the deep ravine of the little brook of Sir as it cuts its way through the mountains southward, and then, joined by another ravine, bends westward to force its way out to the Jordan Valley.

The next day we rode over the upland plains of Moab from 'Ain Hesban to Ma'deba, visiting on the way the ruins of El'al, the ancient Eleale of Moab; Hesban, ancient Heshbon, and Tel Kefr. At the last-named site, on a fallen door lintel, I observed a Greek cross. The visible remains at all of these places belong to the Byzantine era, with the exception, perhaps, of a building at Hesban which has been attributed to the Roman period, and some of the cisterns and caves, which have probably been used over and over again by successive masters of the land. Hesban is a large and important ruin. So far as the surface remains are concerned, it has been pretty thoroughly explored and mapped by various travellers, including Conder in the Survey of Eastern Palestine. Since then no changes have taken place.

At Ma'deba the conditions are different. This is the ancient Medeba of Moab, an important town in Bible times. Tristram, in his 'Land of Moab,' called attention to it as a site which was peculiarly likely to repay excavation. He found standing, among other ruins, what he supposed to be the remains of an old Roman temple. Later Ma'deba was chosen as the site of the Moabite forgeries. The inscribed pottery, manufactured at Jerusalem, so much of which Shapira contrived to sell to the Berlin Museum, was reported to have been found here. It will be remembered that an expedition was despatched to make investigations on the spot, and that Shapira and his confederates salted the ruins with forged pottery and potsherds, which were then triumphantly discovered. Since that time some excavations of an eminently practical nature, but yielding quite different results, have been conducted at this point. These have not been hitherto described by any traveller, so far as I am aware. The history of these excavations is as follows:

Some years since a Moslem of the notorious robber fastness of Kerak (Kir Hareseth of Moab) seduced a Christian woman of the same place. The Christians claimed, and claim to this day, that it was a case of witchcraft. A blood feud of unusual violence resulted, and the Christians, being in a minority of one to three or four, were in some danger of ultimate extermination. It was, I think, the Roman Catholics who obtained from the Porte a grant to the Christians of Kerak of the ruins of Ma'deba, with a view to removing the whole Christian population of Kerak as the only means of checking bloodshed. The bulk of the Christians refused to leave their old home, and remained at Kerak, but two or three hundred of the most zealous of them, and those most involved in the feud, comprising both Greeks and Latins, took advantage of the opportunity. These were also joined by a few of the Christian Bedouin of the region. Of course, Ma'deba was the traditional property of the Arabs of the region, and its occupation by the Christians was not without opposition. However, partly by backsheesh, partly by force, partly by diplomacy, the little colony managed to hold its own, until now the Christians are the undisputed possessors of Ma'deba. At first they occupied some caves in a low hill near the town, the traditional site of St. Paul's residence in the wilderness. Little by little they excavated among the ruins, where, as at El'al, Hesban, Tel Kefr, Ma'in, and all the sites of this Moabite region, the vaulted foundations were in a fair state of preservation. These with very little labor were converted into fairly comfortable huts, according to the ideas of the country.

As a result of these eminently practical excavations, which, as will be seen, affect the surface stratum only, the last town has been shown to have been Byzantine. A Greek inscription which has been uncovered belongs to the early part of the sixth century after Christ. The sixth century seems, indeed, to have been a period of great prosperity throughout this whole region, and to it must probably be assigned the bulk of all the surface ruins. This period of prosperity was followed by the invasion of Chosroes, after which came the Moslem conquest. From this time the country decayed and became depopulated, until it finally lapsed into primeval desert.

Ma'deba itself was evidently a city of importance. Five churches have been uncovered, and I am inclined to suspect that the remains which Tristram called a Roman temple were rather a Christian church. In the northeastern part of the town, near the modern Greek church, a well-preserved mosaic was found, but, its value not being appreciated, it was broken up and destroyed. Another mosaic in the upper part of the town, near the Latin compound, fared better. One of the Greek Christians, in excavating for building material to construct a hut, found the plastered walls of a room in a perfect state of preservation. Excavating the rubbish, he found the floor to consist of an elaborate mosaic, also in a perfect state of preservation. Apparently this had been the bath of some private house. The centre-piece was a large-sized head, done in very small stones, and really a fine piece of work. This was surrounded by animals and trees done in larger stones. The floor of this room was one step below the surface of a larger outer room or court, I could not tell which. This also contained a mosaic, for the most part destroyed, but two tigers before the door of the bath were in a fair state of preservation. The mosaic within the bath was, so far as I could see, absolutely whole. It was a good piece of work of a late and too florid period. The owner had roofed this room over and exercised at the time of my visit an intelligent guardianship upon his treasure. Lately I have heard a rumor, which I hope may prove false, that this mosaic has been broken up.

Ma'deba is situated on a low hill. On two two sides of it run valleys of no great depth, which unite to the southwest, and, running on as one, ultimately descend to the Dead Sea in the form of a deep ravine. The treeless uplands of Moab are rainless for the greater part of the year, and, when the rain falls, it runs off with great rapidity, through the wadis which it has cut, into the Dead Sea. To hold a supply of water, the ancient inhabitants used to dam the wadis, thus constructing reservoirs. Two reservoirs still exist at Ma'deba, and that to the west of the town is the finest and largest construction of the kind which I observed in the whole region. It is not a mere dam across the valley, but a carefully constructed reservoir in the valley bed, and is still in such a state of preservation that by a little excavation of débris and the erection of a small dam to turn the water in, it could again be made serviceable. I proposed this to the Ma'debites,

but they said that under present conditions the restoration of the reservoir would be one of the greatest calamities which could befall them, since if there were water in the pool, the Bedouin would come in great numbers to encamp beside it and fairly overwhelm them. My own experience with Bedouin and water convinced me that they were right.

Besides the pools and reservoirs, the old ruins are full of wells and cisterns, often in a perfect state of preservation. These the Ma'debites use as storehouses of the precious water, keeping them under lock and key. They charged me such enormous prices for the water from these wells that I should have been obliged to leave at once if it had not been for the friendly interposition and hospitality of the Roman Catholic Vicar Apostolic at this point. This man enjoyed a remarkable ascendancy, not only among the Ma'debites of his own communion, but also among the Greek Christians and the surrounding Arabs. He is endeavoring to teach them civilization, for which purpose he has imported a cart and a few civilized farm implements. He also has a European pig, which constitutes the museum of the country, the Arabs coming to look at it as we go to visit a menagerie.

But although my good friend's devoted work has not failed of valuable results, I still found the Ma'debites an unruly and turbulent population. I had hoped to penetrate farther southward, and for this purpose several of the Bene Hamaidieh chiefs, dwelling to the south of the ancient Arnon, were brought to Ma'deba to confer with me. It turned out that there was a feud between them and the Ma'debites, and some of the latter were with difficulty prevented from attacking the visitors. The latter were on the whole the most villanous looking set of Arabs with whom I ever came in contact. The negotiations ultimately fell through because it became apparent that they were merely trying to entice me over their border with a view to seizing me and holding me for ransom.

JOHN P. PETERS.

MARBOT IN THE RUSSIAN CAMPAIGN. —II.

PARIS, November 7, 1891.

WE left Marbot, under Oudinot, fighting against Wittgenstein. We cannot enter into the details of all the movements and engagements of the two generals. On the 15th of August, the Emperor's fête-day, the second corps was still at Polotsk, where it was joined by two fine Bavarian divisions under Gouvion Saint-Cyr. The French Army till 1870 preserved nearly the organization which was given to it afterwards by Gouvion Saint-Cyr. He was the son of a small proprietor of Toul, and became an actor in Paris. In 1789 he entered a battalion of volunteers; the process of natural selection speedily made him a general of division. He looked more like a professor, as he retained the dress of the generals of the Army of the Rhine, who wore no epaulettes and no uniform—merely a blue redingote. "It was impossible to find a man more calm. The greatest prosperity, annoyances, successes, defeat—nothing could move him: he was like ice before all possible events." With these great qualities, he had great defects: he was jealous, indifferent to the sufferings of his soldiers. Napoleon disliked him and did not make him a marshal (though he well deserved it) when he created the marshals. During the bloody battles which took place round Polotsk between the Russian army, numbering 60,000 men, and Oudinot, who had 52,000 men under him, Frenchmen and Bavarians, Oudinot committed many blunders. Saint-Cyr followed him in silence, and when Oudinot asked for his advice, he merely said: "Monseigneur le Maréchal!" which seemed to say: "Since you have been made a marshal, you ought to know more than myself, a simple general; get out of your difficulties as well as you can."

Fortunately, it may almost be said, for him, Oudinot was wounded. He immediately gave the command to Saint-Cyr and retired to Lithuania, where he remained two months. Saint-Cyr now took the reins of command, and everything changed as if by miracle; such is the influence of a strong and capable man. He made the best dispositions, inflicted a severe defeat on the Russians, and established himself firmly in Polotsk. Marbot took an important part in a great cavalry combat; his wound hindered him from holding both his sword and his reins, but he would charge with his regiment. His soldiers were extremely devoted to him, and half-a-dozen of the bravest surrounded him so as to protect him during the charge. After the battle of Polotsk, Saint-Cyr did not for an instant inquire into the needs of his troops. He immediately shut himself up in a Jesuit convent, where he spent all his days and a part of his nights in doing, what do you think? in playing the violin. Did not the great Frederick play the flute after battling, and make petty French verses? Saint-Cyr was nicknamed "the owl" by his soldiers, as nobody could approach him. The cellars and granaries of the Jesuit convent were full of wine, beer, oil, etc., but nothing was allowed to be taken away. The Marshal (for he had been made a Marshal by Napoleon after his victory) was all alone in the immense convent; he merely allowed the presence in it of a few wounded officers. Two months afterwards, when the French were obliged to evacuate the town, the convent, with all it contained, was burnt up.

While Marbot was in Polotsk, the Grand Army took Smolensk by storm and fought the battle of the Moskva. This terrific struggle took place on the 7th of September. The French lost forty-nine generals and 26,000 men killed and wounded. Marbot was not a witness of this memorable action, the bloodiest that has taken place since the beginning of the century, as there were in all 50,000 killed or wounded; but he heard the details of it from the generals who were on the spot. He tells us that the Emperor suffered the whole day from a terrible headache, that the cold prevented him from remaining on horseback, and that he spent the time walking in a small ravine and receiving frequent reports. At a certain moment, Murat was begging the Emperor to use his Guard against the Russians, who were returning for the third time against the left wing of the French army, when Bessières, who commanded the Guard, said: "I will permit myself to observe to your Majesty that your Majesty is now seven hundred leagues from France." The Emperor refused to engage the Guard. One of the curious episodes of the battle of Borodino was the storming of a Russian fort, opened at the gorge, by the French cavalry. Marbot, a cavalry officer, takes great delight in this curious feat, which cost Montbrun and Caulaincourt their lives.

After the struggle of the Moskva, which forced Kutusoff to retreat, bad news came from Spain: Marmont had been beaten by Wellington. Napoleon saw his danger, but the die was cast: he entered Moscow on the 15th of September. We will not go into the well-known details of the burning of Moscow. The position of Napoleon had become critical, and retreat was decided on when all hope of negotiating with the Russian Emperor had to be abandoned. Let us follow Marbot only, in this famous retreat. He was appointed Colonel on the 15th of November; when Napoleon signed his commission, he said: "It is an old debt which I repay." Marbot took admirable care of his soldiers in his camp near Polotsk; he fed them well, erected barracks, gave them fresh meat every day. The poor Bavarians were not so well off; they did nothing to better their position. In vain did Gen. Wrede show them what the French soldiers did; they were home-sick, and in the hospitals of Polotsk asked for "the room where one dies." Many of them perished. Marbot found even brandy for his men, as he made a sort of treaty with the Jesuits, he furnishing them with corn and they manufacturing the brandy.

Napoleon, though he did not wish to proclaim the reëstablishment of ancient Poland, wished to organize the parts which he had conquered as departments. He appointed a certain Count Lubenski prefect, and Marbot, with three hundred horsemen, received the order to convey him his appointment. The mission was not an easy one. Marbot arrived in the night before the old castle of Lubenski; his men surrounded it; when the Count heard that they spoke French, he came with his family and servants, and, "advancing towards me, with open arms, he said with a tragical air, 'Welcome to you, generous Gaulois, who bring liberty to my oppressed country; let me press you to my heart, soldier of the great Napoleon, liberator of Poland.'" All the Poles, men and women, kissed Marbot, the servants kissed his knee. This demonstrative Pole was not long a prefect; a month later he was obliged to fly before the Russians, and he took refuge in Galicia, where he lived till 1830.

The Austrians not only did not help the French army, they left the passage open for the Russians. The second corps of Saint-Cyr found itself in great danger in Polotsk, as the Prussians, who were near Riga, could at any moment fall upon it with the Russian troops of Wittgenstein. Saint-Cyr maintained his usual calm, and gave excellent orders for the defence of Polotsk and its entrenched camp; with 15,000 men he succeeded in keeping at bay 50,000 Russians, but Steinheil arrived with 14,000 more men, and Saint-Cyr evacuated Polotsk during the night. Oudinot returned some time afterwards and took command again of the Second Corps. The situation of the French army was becoming daily more critical; the Emperor had decided to cross the Beresina at Borisoff, as its bridge was covered by a fortress guarded by a Polish regiment. He felt so confident that, in order to diminish the train of the army, he had ordered all his pontoons to be burned. The fort which defended the Beresina bridge was unfortunately abandoned by the Polish general before Oudinot could arrive; the Russians were now masters of Borisoff, of the bridge and of the fortress. Oudinot and Tchitchagoff soon confronted each other. Oudinot's cavalry was still in a magnificent state; his cuirassiers and chasseurs forced the Russians to retreat on Borisoff and to cross the river. Oudinot hoped for a moment to secure the bridge, but the guns of the fortress played on the French who attempted to take possession of it; it soon became evident that the Beresina could not be crossed by the French at Borisoff, and that their line of retreat was cut. "This immense calamity became fatal to us, and contributed

infinitely to change the face of Europe and to upset the throne of Napoleon."

On the 25th of November Napoleon arrived at Boriscff, and made dispositions for throwing a bridge across the river at some distance from the town. To cross a river in front of an enemy is never an easy task.

"There has been," says Marbot, "much talk about the disasters of the Beresina. What nobody has yet said is, that the greater part of them might have been avoided if the staff, understanding its duties better, had taken advantage of the night of the 27th and 28th, and had sent, over the bridges which had been thrown across, the baggage and the thousands of *traînards* who the day afterwards encumbered the passage."

Marbot thought, that evening, that the bridges were being used; he galloped to the river, and "what was my astonishment to find them completely deserted. Nobody was crossing at the time, and at a little distance, in the fine moonlight, I saw more than 50,000 soldiers separated from their regiments—men who were called *rôtisseurs*. These men, quietly sitting before immense fires, were roasting horse-meat, without thinking a moment that they were before a river the passage of which would the next day cost the lives of a number of them, while in a few minutes they could now cross it without any obstacle, and finish their supper on the other side. Not an officer of the imperial household, not an aide-de-camp of the general staff of the army or of a marshal, was there to warn these unfortunate soldiers and to force them, if necessary, to cross the bridges." Marbot saw in this crowd, for the first time, soldiers coming from Moscow, and was horrified at the sight. Everything was confusion. "No arms, no more uniforms; soldiers, officers, even generals, covered with rags and having no other shoes than pieces of leather or of cloth kept together with strings; an immense multitude in which there were thousands of men of various countries, speaking all the idioms of the European continent and not capable of understanding each other." When Marbot rejoined Oudinot that evening, in vain did he point out the ease with which the men could cross the empty bridge. "I was answered only with evasive words, each one leaving to his colleague the care of such an operation."

The passage of the Beresina took place on the 28th of November, one of the most dismal dates in the history of the French Army. Great masses of unarmed soldiers had to cross under the guns of Wittgenstein. One of the bridges broke under the heavy weight of the guns; all rushed to the second bridge, and the confusion became terrible. Thousands of men were drowned in the river. Marbot estimates the loss at 20,000 or 25,000 men. Marbot's corps covered the retreat, and in an engagement with the Cossacks he had a hand-to-hand fight, in which he was struck on the knee by a lance. He remained on horseback, but was obliged to ride woman-fashion. "The road was covered with dead and wounded; we went on slowly and in silence. What remained of the infantry formed a square round the carriage of the Emperor. Napoleon had King Murat at his side." Napoleon left the army on the 5th of December at Smorgony to go rapidly to Paris, where he had been preceded by the famous 29th Bulletin.

"The Emperor's departure produced an immense effect on the spirit of the troops. Some blamed it and called it an abandonment; others approved of it as the only way to preserve France from civil war and the invasion of our so-called allies, who only awaited an occasion to declare themselves against us, but who would not dare to stir when they learned that Napoleon, in his own States, was organizing new regiments. I shared this second opinion, which was justified by the facts."

Correspondence.

OUR PRECIOUS TREASURY DEPARTMENT.

To the Editor of The Nation:

Sir: A few weeks ago I ordered from a leading bookseller in the Strand, London, a copy of 'Cupid and Psyche,' published in the "Bibliothèque de Carabas." I did not receive the book, but the following: "We still have Lang's 'Cupid and Psyche,' but a new rule of the United States postal authorities directs that all books forwarded by book-post are to be confiscated. This to us appears iniquitous. The only way of forwarding dutiable books is by express."

In what way are the Lobonais and Morgans and Teaches of the American book-trade protected by this new obstacle thrown in the way of purchasing books abroad? The duty of 25 per cent. on the means of acquiring knowledge and intellectual pleasure is an outrage worthy only of barbarians; but this new rule is piling Pelion on Ossa. A. Y.

[The ruling complained of is based upon a new interpretation of article 11 of the Universal Postal Union (concluded at Paris, June 1, 1878), which forbids the public sending by mail "any packets whatever containing articles liable to customs duty." A proper understanding of the above article, after a lapse of more than thirteen years, seems to be due to the same bright particular intellect of the Treasury Department who, twelve months ago, made the important discovery that for years the country had been imposed upon by the importation from Canada of dead frogs free of duty under the guise of "fresh fish for immediate consumption," and who promptly put a stop to this slight upon the Tariff Law by determining (after reluctantly deciding that they could not be assessed at 35 per cent. as "prepared meats," because the poor frogs were not prepared in any way whatsoever, but were merely dead frogs), that they should hereafter be classified as "raw, unmanufactured articles," dutiable at 10 per cent. ad valorem! Seriously, to the ordinary intellect, the purpose of article 11 of the Postal Union would seem to be simply an endeavor to prevent the secret importation of dutiable articles of value, hidden away in letters or other parcels—in other words, to check smuggling. But people who, for the last thirteen years, have imported books by post, have done so openly and without any attempt at disguise, and most certainly without any suspicion that this use of the most highly developed and convenient system of international transportation of our times should be branded as a criminal act by any civilized government. Color is lent to this rational interpretation of article 11 by the fact that Congress, in the appropriation act which provided, among other things, for the carrying out of the stipulations of the Postal Convention, so far from prohibiting the importation of books through the foreign mails, expressly provided that books admitted to the international mails exchanged under the provisions of the Universal Postal Union Convention, when subject to customs duty, should "be delivered to the addressed in the United States under such regulations for the collection of duties as may be agreed upon by the Secretary of the Treasury and the Postmaster-General." This section of the Appropriation Act of March 3, 1879, does not seem to have been repealed, and can hardly be deemed to have become inoperative so long as the Postal Union Convention remains in force.

Our correspondent will, however, be glad to know that the Custom-house bark is worse than its bite, and that, in accordance with more recent rulings of the Treasury Department, if he will but submit to the petty indignity of being branded as a smuggler of knowledge, and will approach the Collector or other chief customs officer with becoming meekness, the latter official may "at his discretion" release his book. And not only that, but if it costs less than two dollars he will not be assessed any duty! But if he has had the temerity to send for a book of higher value than $2, he must not only pay 25 per cent. of its cost but a sum equal to the duty as a fine! (Treasury Department Circular of November 5). Moreover, he is freely allowed to import books by parcel post from Barbados, Mexico, Hawaii, the Leeward Islands, Salvador, and a few other far-away regions (circular of July 28), it being the printed productions of the great centres of civilization that are obnoxious to these martinets of the Treasury, and his imported knowledge is treated as contraband only when it comes to him in his own language, for when printed in a foreign tongue, it is, apparently, considered innocuous, and can not only be imported without let or hindrance, but also entirely free from customs duties; which is also the case if it has been in print more than twenty years, provided it is not contained between the covers of a book newly bound. —Ed. Nation.]

REAL RECIPROCITY.

To the Editor of The Nation:

Sir: The enclosed list of tariff duties imposed by various countries in Europe on the exports of agricultural products from the United States and other countries is given by the *American Economist* to show the value of the home market to the farmers of the United States. The duties average nearly ½ cent per pound on wheat, and over 1 cent per pound on butter.

To the *American Economist* everything seems adapted to show the value of a protective or prohibitory tariff. If the prices advance, it is delightful to the manufacturers, and if they fall, it is equally to the credit of the McKinley Bill. The arguments used are often so far-fetched and seem so sophistical that they must make a manufacturer smile or wince. Each number is prefaced by a quotation from some public or distinguished man saying why he is a protectionist—varying from a cry of alarm at socialism and anarchy if any approach is made to free trade, or argument (generally partial and ill-founded), to the semi-religious form of statement of pious be-

lief as an American. But the figures given as to the tariff duties in Europe really point to a suggestion very different from that drawn from them by the *American Economist*. They suggest a valuable form of real reciprocity.

It has been stated that when the American Minister to France, Mr. Reid, was trying to persuade the French Minister that American pork was free from trichinæ and good to eat, and that it would be a great boon to the consumers in France to have it admitted freely, the Frenchman replied that he knew all that, but that there were farmers in France who wanted protection; still, that if the United States would admit French silks free, they might admit our pork free. The American had to reply that it was impossible, as America was a great country for weaving silk. "Well," said the Frenchman, "we might admit pork free if you would admit French wines or worsteds." "Alas," said the American, "impossible again; America is a great wine-producing country. Still, perhaps we might take the duty off of French pictures." "Oh," said the Frenchman, "that is too small a matter." And so the American Minister felt completely blocked.

Two things are suggested by this: (1.) That if this country is a great producer of silk goods or wines, why can it not compete with the foreigner, with all its advantages of distances by sea and land and its rich free soil; and if it cannot, is it not clear that American consumers are being deprived, to their cost, of articles which other countries produce cheaper or better than we can? (2.) And as specially suggested by the figures of tariff duties quoted, here is a great opportunity for the Western farmer to relieve himself from these oppressive duties on his products abroad, and at the same time to enable him to receive in exchange the products of France at much less cost.

Evidently the American would gain two advantages—a better market and a better price for his own products, and cheaper goods in exchange. Similar advantages are possible by similar reciprocity with Germany and other countries. ARTHUR T. LYMAN.

BOSTON, November 17, 1891.

THE SUPPRESSION OF DR. ABBOT'S REPLY.

TO THE EDITOR OF THE NATION:

SIR: Since Mr. Peirce has thought fit to bring this subject before your readers, and to comment on Prof. Royce's conduct, as charged by Dr. Abbot, in stifling Dr. Abbot's reply by a threat of legal proceedings, I feel compelled to ask you to publish the evidence on that point in full.

Dr. Abbot bases his charge upon a letter written by me, as Prof. Royce's counsel. In a pamphlet addressed to the governing boards of Harvard College (but widely circulated and put on public sale), Dr. Abbot characterizes that letter as an attempt, on Prof. Royce's part, "to gag the man he had injured," and formally sums up his accusation by asserting that Prof. Royce "has sought, with incredible cowardice and meanness, to deprive me of all opportunity of being heard in self-defence."

I now give the letter (of which Dr. Abbot publishes only the few lines of formal protest), and also Dr. Abbot's reply. I should premise that I knew nothing of the controversy until Prof. Royce sought my advice in consequence of threats of a law-suit from Dr. Abbot. At that time Dr. Abbot's reply had been set up in type by the *Journal of International Ethics* with the expectation of publishing that as it stood, together with a rejoinder by Prof. Royce, and a final retort which Dr. Abbot was to write, all in the July number. This plan had broken off, as stated by Dr. Abbot in his pamphlet, because Dr. Abbot could not agree with Dr. Adler as to the tone in which he should write his final reply; Dr. Adler requiring a parliamentary tone, while Dr. Abbot demanded a freedom which he called "the freedom of the courts." It is Dr. Abbot's main reply, already in type, which is referred to in my letter. Dr. Adler and Prof. Royce are both editors of the *Journal*.

BOSTON, June 9, 1891.

Dr. Francis E. Abbot, Cambridge, Mass.:

MY DEAR DR. ABBOT: Your article entitled "Dr. Royce's Professional Warning" has been submitted to me as a part of the case upon which my professional advice is sought, and I must call your attention to some passages in it which I trust you will think it well, upon deliberation, to revise.

I will say at the outset that, considering the severity of Dr. Royce's article, I think, for my own part, that you are justified in replying with spirit, and that you should perhaps be allowed more warmth than the ordinary discussion of such subjects calls for. Of that Dr. Royce, I know, would not complain, but in the heat of your reply you have in some places used language which I think you will hardly wish, upon cooler judgment, to allow to remain to lower the tone of your argument.

Conceding, for the moment, that you are right in thinking that Dr. Royce has transgressed the limits of courteous controversy, I must say that your article, in some places, goes far beyond anything that he has said.

On Dr. Royce's behalf, I must warn you that he protests against the publication, or any circulation of it, in its present shape, and must point out to you that it may, if circulated, entail a serious legal responsibility.

In it you charge Dr. Royce with being guilty of "a slanderous attack" and of "libel," and with having called you an "impostor"; you seek to belittle and injure him in his profession and business as a teacher in Harvard College; you imply that he is guilty of wilful misrepresentation; you seek to bring him to contempt by a degrading comparison; you charge him with untruth, with having made a wanton and injurious attack upon your personal reputation, having abused his academical position, compromised the dignity of Harvard College, degraded the office of professor, publicly traduced and libelled a fellow-citizen; and finally you pronounce him professionally incompetent.

Such language, even though used in controverting an irritating review of your book, so far exceeds the proper limits that in my judgment you cannot indulge in it without danger of legal liability.

Permit me, too, as a cool spectator of the controversy, to say that this language greatly weakens and lowers a very forcible argument, and must have the effect of distracting attention from the points you wish to make, and stamping the whole discussion as a strangely undignified attack for such a combatant. And aside from the effect of such an article upon yourself, let me call to your attention the scandal which is brought upon Harvard College by such a public wrangle between two of her instructors.

I have not read carefully the whole of Dr. Royce's article, but I have read the parts which must be most offensive to you; and while I do not defend, in all respects, the tone of the review, I think that you have greatly exaggerated and misinterpreted it. As I said to you on Sunday evening, Dr. Royce has disclaimed, in the strongest way, any intention to wound you, or to reflect in any way upon your personal character; and after this, is it not a perversion to insist upon putting the worst and most personal construction on all that he says, omitting the qualifications which go far to soften his hostile expressions?

As I remember his article, he nowhere calls you an impostor, as you repeatedly charge; and in speaking of you as "sinning against the demands of literary property rights," you omit the word "unaware," which wholly changes the sense.

That the *Journal of Ethics* should publish the article as it now stands is not to be thought of. It could not do so with self-respect. The editors are, however, very willing to publish the body of your reply as you have written it, if you will leave out those passages which are merely personal.

I send with this a copy of your article, with the objectionable passages marked. You will, I think, admit that your argument is untouched, and that enough of anger and indignation are left to save the paper from any appearance of tameness. If these passages are omitted, or so changed as to be free from objection, the *Journal* will publish it in the July number, and without any other comment than a statement that a reply is reserved for the October issue.

I trust that you will adopt my suggestions and make the changes, which I believe will strengthen the article in the minds of those whom you most wish to persuade. You will not overlook the great advantage it will be to you to have your reply appear in the same journal which originally published the review, and I trust that you will be willing, for that reason if no other, to conform to the very obvious requirements which the *Journal* must impose.

I hope you believe me when I say that I should not advise the *Journal* to refuse the article in its present shape, as I do, unless I were fully persuaded that you are offered the fullest opportunity of reply which fair play can demand. Very sincerely yours,

J. B. WARNER.

P. S.—Please let me know your decision as soon as possible, as the *Journal* must be made up. Will you kindly return my copy of your article? J. B. W.

LARCH STREET, CAMBRIDGE, Mass., June 9, 1891.

J. B. Warner, Esq., Exchange Building, Boston:

MY DEAR MR. WARNER: I beg leave to acknowledge receipt of your obliging letter of this date, with thanks, and to return at once the enclosed printed paper, as you request.

With great personal regard I remain

Very sincerely yours,

FRANCIS E. ABBOT.

Dr. Abbot declined to make any change in his reply and it has never been published.

JOSEPH B. WARNER.

BOSTON, November 20, 1891.

EXISTING CAVE-DWELLERS.

TO THE EDITOR OF THE NATION:

SIR: In the November number of *Scribner's Magazine*, Mr. Carl Lumholtz, in writing of his explorations in the Sierra Madre, remarks (p. 534): "The old church-books of Bacadéhuachi tell us, says Mr. A. F. Bandelier, of the Jesuits going out in the mountains, administering the sacrament to the Tarahumare Indians, who were living in caves and cliffs. *But* I am satisfied that many of the same tribe are still living in that way, and why not others?"

I italicize the "but." It conveys the impression that I had only mentioned the *former* existence of cave dwelling Indians about Nacori and beyond, ignoring the fact that the Tarahumares still partly live in caves at this day, and that they were cave-dwellers in part when first visited in the sixteenth century. Mr. Lumholtz knows better, and should have stated it. The reference is to Part I., page 92, note 1, of my "Final Report to the Archæological Institute of America," written before Lieut. Schwatka visited the Tarahumares, and published early in 1890. On page 98 I state: "If the verbal information imparted to me lately is correct, the Tarahumares are, at the present time, and in a few secluded localities, still the cave-dwellers of the American continent." In note 2, same page, I give the full text of the description of the cave-dwellings of the Tarahumares, as given by Father Juan Fonte, S. J., in 1608, and published by F. Ribas, S.J., in 1645. Lastly, on p. 245, I give the text of a letter written to me by a friend from Chihuahua, on the subject of the Tarahumares, in which he says: "But the Gentiles are a different people, live in caves,

. . ." The existence of at least one tribe of cave-dwellers had then been officially communicated by me to the Archæological Institute of America, for publication, before Lieut. Schwatka's promulgation of the fact, and the Institute published the information which I furnished before Mr. Lumholtz ever visited the Southwest.—Respectfully,

AD. F. BANDELIER.

ISLETA, N. M., November 10, 1891.

A GENEALOGIST'S GRIEVANCE.

TO THE EDITOR OF THE NATION:

SIR: I yesterday received from New York a copy of your paper, of October 8, in which I am referred to. Will you allow me to say a few words, not about the "coarse and venomous" part of the letter, for I do not think it worth a reply, but about the hope the writer expresses that some one will write to me, to see "if" I have "any information worth notice." I think I have proved my possession of such by the correction I have been able to make of Col. Chester's mistake about the eldest son of Laurence Washington, and it is amusing to think how differently that correction would have been received, and what a flourish of trumpets there would have been, had it been made by Mr. Waters. It is the unfairness of the New England Historic-Genealogical Society that has produced my "pronounced dislike." I am always ready to give —"too ready," Miss Walford once told me; but even when I give away my "finds," I like to have the *credit* of them in some cases, and in no case do I like to see them coolly "annexed." I gave Mr. Waters the reference to the will of John Custis, which he thought "important," and I called Mr. Waters's attention to the fact that Dame Dorothy Washington was "undoubtedly" a Pargiter. I refused, it is true, to be *named* in Mr. Waters's little book, in connection with the matter, because I am not a "professional worker"; but Mr. Waters has recognized indebtedness to others without naming them, and I expected just that amount of recognition. Not having had it accorded me, I did not feel inclined to have anything more to do with his Society.

What I wish to say about my information is, that it is disposed of, both in the present and in the future, and that it is, therefore, useless to write to me. The first instalment, which is little more than an amplification of Sir Henry Dryden's interesting notes, left for America last week; I have sent it to a gentleman who is a corresponding member of the Society in question, and I leave its fate, and the fate of all else I have, entirely in his hands, save that *yesterday* I wrote to him, "short of NOW giving it to the New England Historic-Genealogical Society." It will interest you, perhaps, to know that during the last few weeks, when not even thinking of Washington, I have found some wills of the time of Henry VII. and Henry VIII. in which the name occurs, and in connection with Northamptonshire and Yorkshire.

Miss Walford's "find" in Essex is very interesting to me, though, oddly enough, not in actual connection with Washington; but it surely must be very disappointing and disheartening to Mr. Waters, after the infinite pains he took and the great ingenuity he brought to bear on the point, to show *why* the Rector of Purleigh *lived at Tring*, to find that a single entry in the registers of Malden brings the "irresistible inference" that it is the burial entry of the Rector of Purleigh, and that Malden was his "natural abiding place"—and that, too, in 1652, his ejection having occurred in 1643! As I have accepted my reputation as "coarse and venomous," I will deserve it a little more—"on revient toujours à ses premiers amours"! Did the Rector of Purleigh go back to Malden from Tring on account of old associations with the "alehouses" of the neighborhood?—Yours faithfully,

VERNONA I. C. SMITH ("Vernon").

BARNES, SURREY, November 6, 1891.

THE LIBERAL PARTY IN JAPAN.

TO THE EDITOR OF THE NATION:

SIR: In view of the fact that the Emperor of Japan, by an Imperial Rescript, in accordance with the Constitution, has summoned the Imperial Diet to meet in the second annual session beginning November 21, it may be of interest to know the programme of the Liberal party, the principal factor in opposition to the Government. At a general meeting of the "Jiyu-to," the policy of the party was stated to be, in general, opposition to the wasteful expenditure of the State. "We desire to see no more extravagant waste of the country's resources. If any department adopts our suggestions, and introduces reforms in accordance with them, we are ready to vote for the expenditure of that department." "The policy of the present Government is often uncertain."

The following list of prospective "bills" is given in the *Japan Mail:*

(1.)—Amendment of the Press Regulations:
- (1.) To abolish the power of suspending publication.
- (2.) To abolish security money.
- (3.) To modify the punishments.

(2.)—Amendment of the Public Meetings Regulations:
- (1.) The law must not extend beyond political meetings.
- (2.) The control of political parties and meetings must be less strict.
- (3.) Punishments must be modified.

(3.)—Amendment of the Publication Regulations: Their provisions must be changed in accordance with the principles applied in the case of the above two Regulations.

(4.)—Amendment of the Law of Election:
- (1.) Enlarge the electoral districts.
- (2.) Extend the franchise.

(5.)—Amendment of the Organization of *Fu* and *Ken* [province]:
- (1.) Regard *Fu* and *Ken* as "persons" in law.
- (2.) Reform the law of reëlection of *Fu* and *Ken* representatives.
- (4.) Augment the rights of representatives and councillors in municipal meetings.

(6.)—Amendment of the Organization of *Gun* [county]:
- (1.) Regard *Gun* as a "person" in law.
- (2.) Make the election of Magistrates public.
- (3.) Reform the law of reëlection of representatives.
- (4.) Augment the rights of representatives and councillors in local meetings.

(7.)—Amendment of the Organization of *Shi, Cho,* and *Son* [city, town, and village]:
- (1.) Reform the system of election.

(8.)—Amendment of the Law of the Imperial Diet:
- (1.) Strengthen the independence of the Diet.

(9.)—Establishment by special provision of a Local Assembly in Hokkaido.

(10.)—Reduction of the assessed value of land for purposes of taxation.

(11.)—Abolition of the Peace Preservation Regulations.

The programme is certainly interesting, but perhaps too comprehensive to be carried out in full. The next session will be exciting.

E. W. CLEMENT.

CHICAGO, November 18, 1891.

Notes.

HARPER & BROS. have nearly ready 'Studies in Chaucer,' by Prof. T. R. Lounsbury, in three volumes, with a very full index; 'English Words,' by Prof. Charles F. Johnson; 'Glimpses of Nature,' by Dr. Andrew Wilson of Edinburgh; and 'Ruth the Gleaner and Esther the Queen,' by Dr. Wm. M. Taylor.

The first volume of four comprehending the 'Memorial History of the City of New York,' edited by Gen. James Grant Wilson and published by the New York History Company, will appear early next month. The work will be profusely illustrated.

Mr. W. L. Keese's annotated edition of W. E. Burton's 'Life of James W. Wallack' having been delayed, the Dunlap Society has in press for immediate issue a reprint of one of the oldest and most curious of American plays, Burk's 'Battle of Bunker Hill,' for which Mr. Brander Matthews has written an introduction.

Mr. W. Salt Brassington is preparing to issue, to subscribers only, a quarto containing twenty-four photogravure plates, representing two dozen of the finest book-bindings in the Bodleian Library at Oxford. In the introduction special attention will be paid to the history of the art of book-binding in England; and every illustration will be accompanied by a description by Mr. Brassington. Three of the bindings to be reproduced are in carved ivory; one is in transparent enamel on silver, four are in embroidery of various periods, and the rest are in leather, one of these being from the famous collection of Diane de Poitiers, and another from the library of De Thou. Only 150 copies will be printed. Subscribers' names will be received by Sampson Low & Co.

This firm will issue in connection with Houghton, Mifflin & Co. a new holiday edition in two volumes of Mrs. Stowe's 'Uncle Tom's Cabin,' with upwards of a hundred illustrations in the text by E. W. Kemble.

From the Dryden Press, Long Acre, London, will issue before the end of the year an anonymous bibliography of the works of Matthew Arnold in prose and in verse.

Cassell & Co. will immediately bring out a new and revised edition of 'The Law of Musical and Dramatic Copyright,' by Messrs. E. Cutler, T. E. Smith, and F. E. Weatherley. It will contain the text of our Copyright Act of 1891 and a comment on it.

Leach, Shewell & Sanborn have in press 'Outlines of Rhetoric,' by Prof. J. H. Gilmore of the University of Rochester.

The third part (Bridge Design) of 'Roofs and Bridges,' by Prof. Mansfield Merriman, is announced as in preparation by John Wiley & Sons.

Little, Brown & Co.'s promised new edition of Charles Lever's military novels makes a beginning with 'Charles O'Malley' in two volumes. The work has been set and printed at the press of John Wilson & Son, Cambridge, with unimpeachable accuracy, therefore, and in good fair type. The binding is in a dark green, richly stamped. The illustrations are after the original by "Phiz," and are partly full-page etchings and partly cuts in the text, the latter much the more meritorious. "Phiz's" graphic antics with horseflesh would furnish material for an evening's corrections by Mr. Muybridge. Lever's rollicking text is far less antiquated than these designs, and we do not know why it should not be read in this country with as much avidity now as fifty years ago.

The same firm continue their reprint of the

works of Alexandre Dumas, senior, with 'The Regent's Daughter' and 'Le Chevalier d'Harmenthal.' These are likewise products of the University Press, but are more elegantly printed and bound. The illustrations are confined to two portrait frontispieces.

The third volume of the beautiful six-volume edition of Landor's 'Imaginary Conversations' (London: J. M. Dent & Co.; New York: Macmillan), is provided with a portrait of the author. The Dialogues of Sovereigns and Statesmen are concluded, and the better half of the volume is occupied with the Dialogues of Literary Men, which possess a livelier and more enduring interest.

The well-preserved plates of the 1887 edition, in three volumes, of Dean Stanley's 'Historical Memorials of Westminster Abbey,' published by A. D. F. Randolph & Co., have been used in the less expensive edition just brought out by the same firm in two volumes. The full-page etchings are wholly changed in favor (mainly) of Herbert Railton's pen-drawings, and the exchange is no robbery. The binding shows a back of white and gold, and half-lavender cloth sides. The painstaking and the taste of the Messrs. Randolph are visible throughout, and are sure of recognition by book-buyers.

'The British Seas' (Macmillan & Co.) is a set of "Picturesque Notes," by W. Clark Russell and others, reprinted from the *Portfolio*, and serving as a vehicle for a dozen large plates and some forty cuts in the text of marine subjects. The title-page, which announces "Etchings and Engravings after J. C. Hook, R. A., Colin Hunter, A.R.A., Henry Moore, A.R.A., Hamilton Macallum, and other artists," has a rather modern sound, but in fact the book has a very old-fashioned air, the "other artists" including Turner (who has two of the twelve plates and a vignette), David Cox, De Wint, and Girtin, while the bulk of the illustrations are by unknown or little known men. The text is, as might be expected, somewhat scrappy. The chapter on St. George's Channel is by Mr. Hamerton, who shows considerable skill in making "copy" on a subject of which, confessedly, he knows nothing.

The holiday season brings at least one exquisite gift-book in Walter Crane's 'Queen Summer, or the Tourney of the Lily and the Rose' (Cassell). It is a thin quarto of forty pages, each bearing a portion of text in decorative black-letter and an illustration printed in colors. The paper is folded after the Japanese fashion and printed on one side only, and the book is bound in boards with a decorative design by the author. Mr. Crane's verse is fanciful and pretty, but it is only an excuse for the forty drawings, which show endless invention, exuberance of fancy, grace of line and richness of composition, with rare delicacy and charm of color. It is as much better than any former work of Mr. Crane's that we have seen as his former work is better than that of any of his emulators in the same field, and hardly any praise can be too high for it.

The latest volume in the "*Gentleman's Magazine* Library," edited by G. L. Gomme and published by Houghton, Mifflin & Co., is devoted to 'English Topography.' It consists of the articles which were written for that magazine by local antiquarians, the excerpts being now brought together under the head of each county. This volume covers Bedfordshire, Berkshire, and Buckinghamshire. Of course, the proportion of the notices is not preserved; many noted places are omitted, and some small places are fully described. But, on the other hand, being informal and without restraint, they preserve many facts which the larger county histories ignore. When the series is completed, it will be very serviceable in many libraries here which cannot afford the more costly local histories.

The fourth volume of the *Bookworm* (A. C. Armstrong & Son) presents the usual medley which the name betokens. Current publications and literary events, however, are more looked after than might be expected. The great defect, apart from occasional neglect to give the sources of curious information, is the absence of a table of contents. There is an index, not very full or very good, but it does not show at a glance the physiognomy of the volume.

A book to be recommended to all readers of French literature whose purses and libraries are limited, is a cheap volume recently published by Garnier (New York: F. W. Christern). It is a series of 'Extraits des Causeries du Lundi' of Sainte-Beuve, chosen (and arranged in chronological order so as to follow the development of French literature) by M. Pichon, Professor of Rhetoric at the Lycée Saint-Louis. There is an introduction by M. Léon Robert, Inspector-General of Public Instruction. The volume is neatly printed, and its contents have been most skilfully selected. There is no better book of its size and cost.

M. Conquet recently sent forth a most sumptuous edition of the Memoirs of Madame de Staal-Delaunay—not to be confounded with the author of "Corinne"; and of this admirably illustrated work we understand that an English translation by Mrs. E. Hamilton Bell is soon to appear. A cheap French edition of the Memoirs, edited by Mme. Carette, *née* Bovet, is now published in the "Collection pour les Jeunes Filles" (Paris: Paul Ollendorff; New York: F. W. Christern).

Dr. H. O. Lehmann's 'Quellen zur deutschen Reichs- und Rechtsgeschichte (Berlin: Otto Liebmann) was compiled for the use of students of German legal and constitutional history. Its scope for Germany resembles that of Stubbs's 'Select Charters' for England, but Lehmann's work embraces modern times as well as the middle ages. The book contains extracts from Cæsar and Tacitus (pp. 1–4), the *Leges Barbarorum* (pp. 6–18), Merovingian and Carolingian capitularies (pp. 49–79), laws and constitutional documents from 922 to about 1250 (pp. 80–108), the 'Sachsenspiegel' and the 'Schwabenspiegel' (pp. 109–176), laws, treaties of peace, constitutions, etc., from 1273 to 1866 (pp. 179–309). Difficult words are explained in the footnotes, but no attempt is made to furnish a detailed commentary. Prof. Lehmann is well fitted to compile a work of this sort, and his book may be recommended to instructors and students of German constitutional history.

The proclamation of the Emperor of Japan summoning the Imperial Diet to meet in Tokio for its second session on the 21st of November, 1891, called attention anew to "the constitutional development of Japan." The words we have put in quotation marks form the title of a pamphlet of fifty-six pages, by Dr. Toyokichi Iye'naga, Professor of Political Science in the Tokio School of Special Studies, which is published as Number ix. in the ninth series of Johns Hopkins University Studies in Historical and Political Science. The author does not penetrate very far beneath the surface of events, and contents himself with briefly outlining the story of occurrences very much as they have been repeatedly told in foreign publications. The value of the monograph lies rather in its being a good specimen of English composition by a Japanese than in its philosophical grasp of the subject. The best part of the essay is its two or three pages devoted to the crude attempts at national parliamentary action in the great councils of kugés and daimios, or of courtly and territorial nobles, in the days following the advent of Perry. Nevertheless, for those not familiar with the growing literature in which the rise of constitutional Japan is traced, the pamphlet is valuable as giving a bird's-eye view of the movement in clear and simple language. There still remains to the investigator who has patience, ability, time, enthusiasm, money, and the spirit of sacrifice, an inviting opportunity to tell fully the story of Japan's awakening to modern life.

Mr. E. P. Oberholtzer of Philadelphia contributes to the American Academy of Political Science an essay entitled "Law-making by Popular Vote, or the American Referendum." After glancing at the history of the referendum in Switzerland, he reviews the part taken by the people of our States in adopting and amending their constitutions, as well as in enacting statutes; discovering an increasing popular feeling in favor of withdrawing certain subjects from the control of the legislatures. Into the causes of this feeling Mr. Oberholtzer does not inquire. The most important recent developments of this tendency towards direct legislation by the people have taken place in reference to municipal government. In the Western States there are county referendums, city referendums, township referendums, and even school-district referendums; and both at the East and at the West city charters are submitted for approval or disapproval to the members of the communities affected by them.

In the address of its President, Mr. Edward C. Burks, to the Virginia State Bar Association, published by Everett Waddey Co. of Richmond, lawyers will find a valuable summary of the changes effected in the Virginia law by the recent revision. This account by Mr. Burks, who was one of the revisers, is in the line of the useful work of Mr. Dembitz on 'Kentucky Jurisprudence,' recently reviewed in these columns, but is of course much more restricted in its aim. It may be noted that *Magna Carta* was a statute of Virginia from 1785 until 1849, when it was omitted in the revision then made.

The Smithsonian Report for 1889 contains, under number 784, a brief treatise on Latitude by Walter B. Scaife, which students of geography and geodesy will find instructive. It traces the development of the idea of latitude from the earliest times, and gives especial attention to the controversy between the Newtonians and Cassinians two hundred years ago, this marking one of the most important epochs in the advance of our knowledge of the earth's form. By an unfortunate oversight, a footnote on the first page is in error, and contradicts the definition of latitude in the text.

The close of Gen. Greely's charge of the Weather Bureau is marked by the preparation under his direction of several series of charts of climatic data, lately published, adapted particularly to the needs of observers on stations, who are frequently questioned concerning the mean values of wind and weather. One series of charts gives the average monthly cloudiness for the United States; showing in January less than fifty per cent. for Florida, less than forty for parts of Colorado and Southern California, about seventy for the northern Pacific Coast, and more than eighty in small areas east of some of the great lakes. July has a lower percentage—below fifty about the lakes, and under ten in the valley of California. The probability of rainy days is given in another series of charts, the variation of values being

similar to that of cloudiness. A third series presents the temperature means for periods of ten days through the year, of much interest in measuring the relative advance of the season. Charts of isobars, isotherms, and winds for the several months from January, 1871, to December, 1873, heretofore unpublished, correspond to similar charts for later years contained in the Monthly Weather Review.

Westermann & Co. send us the first instalment of a new map of the German Empire just begun to be issued by Perthes of Gotha, on a scale of 1:500,000. It will comprise twenty-seven sheets and a title-page, and be issued in fourteen parts. It represents the patriotic labor of ten years directed by Dr. C. Vogel, and its execution is characterized by great elegance and delicate coloring. Königsberg and Mülhausen give names to the two plates before us; the latter contains no small part of German Switzerland as well as of the French frontier. The publishers print a letter of Moltke's in which he warmly praises the proofs, and declares the enterprise valuable from a military as well as a civilian point of view.

In the fifth paper of the series on British Confederation, published in the November *Scottish Geographical Magazine*, the subject is treated mainly from the colonial point of view. The author, Mr. M. H. Hervey, the principal of a college in New South Wales, does not propose a plan of federation, but simply shows its prospective advantages, as well as the disadvantages of disintegration, both to the mother country and the colonies. These latter are described as loss of empire to Great Britain, and the commercial ruin of the colonies. The advantages of federation are the impregnability of the empire and an immense increase of commerce. The existing high tariffs of the colonies he attributes to the fact that, regarding independence as inevitable, "they *must* and will strive, by a protective policy, to make themselves productively independent of the rest of the world, Great Britain included." The same number contains some interesting notes by Col. Tanner on the inhabitants of the Himalayas, whom he distinguishes by their religions into Mohammedan, Hindu, Buddhist, and idolaters. This is followed by another of Mr. Bartholomew's interesting papers on the "Mapping of the World," in which he treats of North America, and gives a list, filling more than twenty-three closely printed pages, of "only the best and most recent Government and private" maps. It is accompanied by a sketch map showing the extent and value of the geographical surveys. From this we learn that "only about 15 per cent. of the land-surface can be said to be even fairly well surveyed," while about a fourteenth part is to be regarded as "unexplored territory."

Mrs. Harriet Prescott Spofford, a neighbor and intimate acquaintance of the late James Parton, pays in the current *Writer* an intimate and affectionate tribute to this versatile writer, from the domestic and social point of view. A pleasing portrait of Mr. Parton accompanies the article. We may also signalize Mr. F. B. Sanborn's paper on James Russell Lowell in the November number of the *New England Magazine*. It is freely illustrated with views of the poet's "home and haunts," first wife, kindred, and near friends.

The cover of the *Revue Illustrée* of November 1 contains a portrait of M. Ernest Lavisse, and the writer of the accompanying essay declares that M. Lavisse is the leader of young France much as M. Taine was thirty years ago. M. Lavisse is the director of the Parisian School of Political Science. A translation of his 'General View of the Political History of Europe,' by Dr. Charles Gross of Harvard, is about to be published here and in England by Longmans, Green & Co.

The twelfth annual report of the Society for the Collegiate Instruction of Women (the Harvard "Annex") contains an announcement which possibly foreshadows a change of heart among benefactors of our great conservative universities. Mr. Waldo Higginson of the Harvard Class of 1833 has founded the George B. Sohier Prize, in memory of his brother-in-law, a member of the class of 1852. The endowment provides an annual prize of $250 for the best thesis by a successful candidate for honors in English or modern literature, and by its terms admits to competition, in addition to collegiate and post-graduate students of Harvard, "students pursuing courses of instruction in Cambridge under direction of the Society for the Collegiate Instruction of Women." This is the second prize in the gift of Harvard University for which "Annex" students may compete.

—Volumes iii. and iv. complete the 'Essays, Reviews, and Addresses' of Dr. James Martineau (Longmans, Green & Co.), which he has selected and revised. The first of these two volumes is theological and philosophical. The successive articles afford ample illustration of a statement in the preface: "The whole interest of literary intercourse, like that of all quickening friendship, is conditional on crossing lines of likeness and unlikeness, deepening the zest of sympathy by the need and possibility of more." Several of the reviews are of little systems of morality or metaphysics that have had their day and ceased to be, but Martineau's criticism always has a value independent of the particular book under discussion; and sometimes when the particular book has had its day, as in the case of Mansell's 'Limits of Religious Thought,' the problems it discussed are still alive and pressing. 'Essays and Reviews,' which are characterized by nothing else so strongly as by their opposition to agnosticism, and which make not only Mansell, and Hamilton, and Mill, but also Spencer, the object of their critical investigation and attack, are quite as timely now as when they first appeared. For every one the matter interested then, it interests a hundred now. Vol. iv. is made up of "College Addresses' and "Occasional Sermons" in about equal parts. Some of the sermons are nearly or quite fifty years old, but they justify their author's hardihood in printing them. One of them, and one of the college addresses, and a brace of the longer articles, in volume iii., "Early History of Messianic Ideas," make a group by themselves, and are very interesting, as showing that the part of Dr. Martineau's latest work, 'The Seat of Authority in Religion,' which has given most offence, and has been treated as a daring novelty—the denial to Jesus of any Messianic character or Messianic claim—represents one of the most stable and persistent elements of his thought. The sermon preached in 1851 expresses it as clearly as the volume of last year. In some of the American collections of Dr. Martineau's essays there are admirable things which he has seen fit to omit from this series.

—The moral obligation of faithfulness in the translation of foreign works needs no proof. Mistranslation is an injustice to the author and to the reader, especially when, as in America, the majority of readers are wholly dependent on the translation for a knowledge of the contents of the book. The duty of fidelity is equally binding on translator and publisher, but the public must hold the publisher responsible in an especial manner. This feeling was notably recognized some years ago when English editions of a large German commentary on the Bible were begun at the same time by firms in Edinburgh and New York; the Scotch version was found to be very bad, and the Edinburgh house suppressed it and (by arrangement with the New York publishers) adopted the American work. It would be a gain for us if this strict sense of responsibility were universal among publishers, for bad translations, it is well known, are not uncommon. An illustration in point is found in the third volume of the American translation of Renan's 'History of the People of Israel' (Boston: Roberts Brothers). Whatever may be thought of the merits of M. Renan as critic and philosopher, he is important enough to deserve an accurate rendering of his great historical work, and this he does not get in the American translation. The first and second volumes were bad, and the third is no better. To pass over the too numerous misprints (the Hebrew, especially, is very nearly a complete failure), this volume bristles with mistranslations. Some of these are infelicities, missing the precise shade of the author's expression; some are omissions or misconceptions of necessary connecting and modifying words; some are misrenderings pure and simple. It is unfortunate that the translator always adopts the King James version of Bible quotations instead of taking the author's translation; a curious specimen of the results he thus reaches is found on pages 149, 150. Many of the errors come from lack of acquaintance with the critical and literary material—another illustration of the fact that the translation of such books ought to be assigned to persons who have some critical training. No doubt the author's general ideas can be got even from a version so inaccurate as this; but there are a hundred places in which the reader will receive a wrong impression of particulars. It is to be hoped that the publishers will bring out the next volume in a form worthy of their excellent reputation, and that the translator (if the same translator be retained) will show himself capable of thorough accuracy and fidelity.

—Macmillan & Co. have brought out a reprint of the 'History of the Buccaneers of America,' which was published in 1816 by Captain, afterwards Rear-Admiral, James Burney of the British Navy. This work must in no wise be confounded with Mr. Howard Pyle's 'Buccaneers and Marooners of America,' which, in fact, merely reproduced portions of the narratives of Exquemelin, Ringrose, and Capt. Johnson. Admiral Burney's book is more in the nature of a digest of the two first of those authors, with additions from other sources, printed and manuscript. The heroes of Mr. Howard Pyle's volume are Sir Henry Morgan and Capt. Bartholomew Roberts, whereas Capt. Edward Davis, one of the most respectable of Buccaneers, plays the principal part in Burney's 'History.' In Mr. Pyle's volume, the Spanish Main and the West Coast of Africa are, for the most part, the scenes of action, while the South Seas were the place where the Admiral's merry men chiefly played their part. The get-up of the volume is admirable, but the publication is a mere reprint, with all the errors of the original, notwithstanding that the facilities afforded by the Public Record Office, London, are within the reach of everybody. When shall we find the statement at page 44, that the French and English made their settlements at St. Christopher on the same day, set right? The fact is that Sir

Thomas Warner had planted a colony at St. Kitts about two years before the Sieur d'Esnambuc, in his damaged frigate, arrived at the island and was made welcome by the English, who were at the time awaiting an attack from the avenging Caribs of the neighboring islands. The Caribs came, and were defeated by French and English. The island thereupon was divided between the two European nations.

—In connection with the various publications relating to the buccaneers, it ought to be noted that modern publishers may thank their stars that they did not live contemporaneously with Sir Henry Morgan. The first English translation of Exquemelin was made at the instance of Crooke, a bookseller. Sir Henry Morgan brought an action against Crooke, "proved all he did was by virtue of a commission of ye Governor of Jamaica and ye King's authority, and recovered £300 or £400 damage from Crooke, about that some I am sure Crooke himself told me. After which his History of ye Buccaneers was looked upon as fabulous, and sold for noe more than wast paper." This much can be learned from the Camden Society's second volume of 'Correspondence of the Hatton Family' (p. 225). Any author in search of a subject for a good biography would find such in the life of Sir Henry Morgan. Ample materials, full of fresh facts, are to be found in the Public Record Office, London. A glance at the index to the last Calendar (Colonial series) that has been published under the editorship of Mr. Noel Saintsbury, will satisfy any one that such is the case.

—Ever since the year 1853, that English official annual entitled 'The Nautical Almanac and Astronomical Ephemeris for the Meridian of the Royal Observatory at Greenwich' has been prepared and published under the superintendence of Mr. J. R. Hind, F.R.S., who attained early prominence among astronomers by his discoveries of a half score of minor planets, and his authorship of treatises on 'Comets' and 'The Solar System.' His administration of the office has been marked by an ultra conservatism which cannot be said to have won applause in all English scientific circles. Year by year the opening paragraph of the preface to the 'Almanac' has read, "The contents and arrangement are the same generally as those of the preceding year." In spite of the conservative policy in its management, the British Nautical Almanac has had a vast growth, chiefly in connection with the development of British marine interests, and its sales of 30,000 or 40,000 copies annually are probably far in excess of the combined sales of the similar publications of all the other nations of the world. At the end of the present year Mr. Hind will relinquish the office of superintendent, and seek that retirement to which his long service and his distinguished career entitle him. The Lords Commissioners of the Admiralty have made a happy selection of his successor in Mr. Arthur M. W. Downing, F.R.A.S., now and for many years of the Royal Observatory at Greenwich, where he has had the best of training and abundant experience in computational astronomy. The Nautical Almanac Office is in Verulam Building, Gray's Inn, and the sum of $17,000 is annually appropriated from her Majesty's Treasury for its maintenance. The salary of the Superintendent is $3,000, and this billet has always been filled by an astronomer of eminence. About sixty years ago, a committee of the Royal Astronomical Society drafted the 'Ephemeris and Almanac' in an improved and greatly enlarged form. The recommendations of this Committee set the style and form for the 'Almanac' which has been substantially adhered to ever since, notwithstanding the growth of the sciences of astronomy and navigation. Now, however, an entire and thorough revision is urgently demanded, and Mr. Downing will devote himself at an early day to this remodelling, though it seems unlikely that he will introduce any sweeping changes at once, perhaps not before the issue for the year 1900, which will be published four or five years hence.

DYER'S GODS IN GREECE.

Studies of the Gods in Greece at Certain Sanctuaries Recently Excavated. By Louis Dyer, B.A. Oxon., late Assistant Professor in Harvard University. Macmillan & Co. 1891.

It is pleasant to welcome back in this work certain discourses which are not strangers on American soil. The substance of the book was delivered in a series of lectures before the Lowell Institute. They comprise studies of the greater gods of Greece, of the growth and purification of their worship, of the spirit and form which it assumed in connection with certain shrines and sanctuaries, "where," as Mr. Dyer says, "that old-time worship of ideals, by some miscalled idolatry, grew pure and yet more pure, broad and broader still, until its inner significance and truth were no longer to be confined within old forms, could be fettered no longer by old bands; and lo! Christianity was there to gather in a heritage of high-born thoughts from Greece."

Some years ago Mr. Andrew Lang, in his 'Myth, Ritual and Religion,' traced the primitive foundation on which rest many rites and superstitions—crude notions and barbarous observances which he showed that the Greeks, notwithstanding the beauty of their culture, shared with Hottentots and Mexicans and the tribes of the Pacific islands. Mr. Dyer prefers to dwell upon the reverse of the medal—on the side that is turned towards us by Mr. Pater in his 'Marius the Epicurean'—upon that upward spiritual progress in which "the ape and tiger die." "Christianity as we know it," he observes, "Christianity as we prize it, is not solely and exclusively a gift from Israel. It is time to open our eyes and see the facts new and old that stare us in the face, growing more clear the more investigations and excavations on Greek soil proceed. To the religion of Greece and Rome, to the Eleusinian mysteries, to the worship of Æsculapius and Apollo, to the adoration of Aphrodite, is due more of the fulness and comforting power of the Church to-day than many of her leaders have as yet been willing to allow." As a help in tracing the sources of such influence, in diffusing a "genial catholicity of appreciation," he associates a study of the sanctuaries of the greater deities still haunted by the spell of "that beautiful religion whose fifth essence and nobler form has passed into our own"; and hence his design embraces a description of recent discoveries in connection with the sites of the temple of Demeter at Eleusis, the Æsculapius of Athens and Epidaurus, and the temple of the Paphian Aphrodite.

These studies traverse a wide field of archæology and of general scholarship; they include a chaos of opinions and material on which the author has very skilfully impressed the mould of artistic harmony. The chapters on Dionysus are really a triumph of orderly and lucid exposition, enabling one to grasp and follow the most complicated, elusive, and contradictory attributes of this strange and potent deity. The original conditions under which the lectures were written imposed a popular style upon the author; but, indeed, no reader who has the slightest interest in ancient ideas and art need feel any dread of the erudition which is here worn with so much lightness and grace of manner, and is brightened by the gleanings of personal observation on the sites which are described. All is fish that comes to Mr. Dyer's net; and in treating a subject which has so many aspects, he displays an equipment unusually complete and many-sided.

But beyond and beside what learning and research can accomplish, Mr. Dyer aims at something more. He has tried to seize and reproduce the vanished spirit of ancient worship, to evoke the presence that once dwelt in ruined shrines and vivified observances which we now with difficulty comprehend, or regard coldly as dead and preposterous superstitions. For such a task imagination is needed as well as science, and unquestionably Mr. Dyer is furnished with both sympathy and imagination. He brings to bear in a useful measure some of the gifts of the poet. The total effect is a synthesis very charming to the popular mind, as well as helpful to the student. All that our author says, in Mr. Pater's words, of the authority of the poets, of the necessity of applying the poetic imagination in reconstructing the religious attitude of the past, is true; true also is the caution he adds against "a certain cynicism in that over-positive temper which is so jealous of our catching any resemblance in the earlier world to the thoughts that really occupy our minds." Mr. Dyer is troubled with no such cynicism, as appears in his use of language in the article on Æsculapius, where he speaks of the "vicar of Apollo," "the mediator," "means of grace," "the collect of Aristides," and of a statue of the deity which "gazes—as if kindly to entreat with welcome all those who suffer and are heavy laden." These phrases have certain associations; they are fine strokes which, taken together, produce an effect that may be entirely accurate; if accurate, the tone of the picture may well furnish occasion for deep reflection. It is not always possible to give chapter and verse for things so evanescent and subtle as religious emotion and the varieties of its manifestations—to give a qualitative and quantitative analysis of that which cannot be seen or touched or handled. It is not fair, indeed, when Mr. Dyer's object is to present a living whole, to ask that he shall analyze and anatomize at the same time, and tell us where he got this or that detail or impression, what is his voucher for it. All we can fairly ask is that the imagination, like Socrates's cockchafer, shall be allowed to soar, but, at the same time, be tethered fast to the facts. One may feel that the net impression of certain chapters is perhaps too favorable, too roseate; that the influence of Aphrodite, of Apollo, or Æsculapius was never quite so gracious and benign as Mr. Dyer's fancy pictures it. He has a lover's eye for the life and ceremonial and religion that he describes; and who shall say whether the color and atmosphere and beautiful haze with which he adorns his picture truly belonged to the scene, or really never were, on land or sea, and are only a part of the poet's and the lover's dream? This, we admit, is a vague criticism, but the question itself is subtle and illusory. At any rate, if a corrective is needed for Mr. Dyer's glasses, the reader will find it in Plutarch's treatise on superstition, with its vivid detail of the features of that grim spectre which

"frowned from the heavens upon mankind" in the days of Lucretius as well as of Epicurus.

It is very neat and striking to say of Apollo that he, rather than Zeus, was governor of Olympus: "Zeus was a king among the gods who reigned but governed not. His Premier was the Delphian god." It is an aphorism which might have shocked the piety of Æschylus and Sophocles, yet its truth is reflected throughout the action of such plays as the "Eumenides," the "Œdipus Rex," and the "Iphigeneia in Tauris." These all show, what history declares, that the Delphic shrine was the most important religious power and influence in Greece. From a subtler point of view, Apollo was the source and ordainer of Greek theology. He is the inspirer of the poets who are the makers of its theology. He is, moreover, the highest ideal of character in the Greek pantheon. Mr. Dyer dwells on this fact with his usual enthusiasm. We confess that we do not always find his enthusiasm substantiated by the particular instances he quotes. The sudden passion of Apollo for Cyrene which Mr. Dyer finds so "noble and chivalrous," has been interpreted quite otherwise; the moral of his conduct in that case, it is to be hoped, was clearer for the youths of Greece than it is at present for the commentators of Pindar, in a scene where apparently Apollo is headstrong and it is the centaur Cheiron who preaches reserve and decorum. If we are to press at all the naïveté of such narrative, we should be puzzled by Apollo's manners in the very next ode.

Is it not, again, a false note to say of the same deity, "He deals no death to womankind; here is one test of his chivalry"? Is there any evidence that the early partition of functions between Apollo and Artemis, by which the masculine deity inflicts sudden death on men, and his sister on women, rested on any conception of a chivalrous scruple which stayed the hand of the sun-god from the gentler sex? Nor is it very safe to quote the "Ion" as a voucher for Apollo's character. Even if we do not go the length of accepting the hyper-ingenuity of Dr. Verrall's arraignment, it must be acknowledged that the general impression the play produces is unfavorable to the god, and is not dispelled by the apology of Athene at the close. That worldly personage who provides for the political future of his illegitimate son, who shrinks from the awkwardness of a domestic scene with Creusa, and who expressly recommends deceit through the mouthpiece of Athene, is really a typical Greek, possessed of the average virtues and failings of the period, and only wearing Apollo's name. He cannot be quoted as an example, or as the ideal of a cult. The pure and high-minded zealot Ion is indeed a startling contrast to his divine father. He is the real Sir Galahad, the sole character in the play who can be used to point a moral and adorn a tale. All that we are criticising here is the appositeness of certain illustrations to prove that Apollo embodied and anticipated the virtues of the Round Table. For such a claim the poets are rather slippery and discordant witnesses.

An excursus on the deification of the Roman emperors explains the situation and the causes which could originate a practice so alien to our modern conceptions. We are apt to think of it as an act of grossest flattery and hypocrisy. As a matter of fact, it was the result of the enlargement of the empire, of the annexing of Oriental peoples and the importation of Oriental modes of thought. To this class of minds the deification of powerful men, living or dead, was a natural impulse—an impulse which survives in full force in Hindustan at the present day. As Sir Alfred C. Lyall says: "The Indians worship all things created, but above all things men and women." A large part of the Roman world, therefore, in deifying the Emperor, was simply following an irresistible bent, and was acting in the spirit of the Sepoy who adored his British officer in spite of protestations, and was disciplined accordingly. The emperors were not so puritanical. They submitted graciously to a homage which was as spontaneous as it was convenient for purposes of statecraft. Hence arose, as Mr. Dyer puts it, "a seemingly incongruous compound of Asiatic piety and European bureaucracy"—a compound which, in some particulars, the Vatican may help us to understand. In the provinces, as well as in Italy, guilds of freedmen and tradesmen sprang into existence, calling themselves Augustales, and these centres of worship became also centres of political influence. The Greeks took kindly enough to the new cult, for it was native to their ways of thinking, and they had worshipped heroes from Achilles and Protesilaus down to Brasidas and Lysander. The poets, too—Virgil and Homer—became high-priests of the latest avatar, and wrote hymns in its honor with a certain amount of fervency and conviction. Strangest of all was the manner in which the unheard-of and universal sway of the Emperor impressed the imagination of sober and sceptical Romans of the highest culture—men like Tacitus and Quintilian and Pliny. The empire furnished Quintilian with his metaphor of the god "who administers the universe." Pliny himself is willing to accord to Vespasian, whom he calls "maximus ævi rector," a sort of Comtist apotheosis. And yet this was the age of which Juvenal could say that the very babes no longer believe in the lower world and its hobgoblins; and Pliny's hero, Vespasian, died with the jest upon his lips, "Ut puto, deus fio!"

We must pass over with regret a swarm of curious and interesting details which tempt one's notice—the sketch of the history of Greek medicine, in the chapter on Æsculapius; the illustration afforded by Apollo's plea in the "Eumenides" of the custom of the *couvade* (his reasoning, by the way, is precisely paralleled in the 'Mahabharata'); the lucid discussion of Aphrodite's origin and affinities; and, finally, the description and plan of the temple at Old Paphos, which was anticipated to a certain extent in the *Nation* (September 6 and 13, 1888). We can only allude to the dissertation which, setting right a common mistake about Mount Olympus in Cyprus, identifies it with Mount Troodos instead of Santa Croce; which restores, also, Bocarus, "the river of a hundred mouths," to its rightful place in Salamis, whence it was deported by a sleepy blunder of the geographer John Meursius. These points are traced out at great length, with a scholar's keen scent, and are set forth with a delightful humor which makes one forget the flight of time. It is not easy to find fault with a style whose *lactea ubertas* only an enemy would call at times diffuse. When we light upon this rendering of two famous lines of Archilochus—

> "Wood makes the trough to knead my bread withal,
> Wood makes the cask to keep Ismarian wine,
> Wood makes the deck where drinking I recline"—

we rub our eyes, and wonder whether we have been always wrong in supposing that this "wood" meant *spear*, and that the sentiment is the same as that of the song of Hybrias, *i. e.*, "My sword is my fortune."

An eminent advocate of scientific training has lately been expressing a despondent view of classical studies. He thinks that they tend to sophistical discussion and a disregard for the truth. It is to be hoped that works like Mr. Dyer's will dispel some of these alarms, and will show that we are all in our various lines pursuing the truth. When you have found the truth, there is no harm in telling it in an agreeable and attractive manner, and this Mr. Dyer certainly does. His work shows that combination of learning with literary taste and skill which may fairly be said to characterize the best type of English scholarship—the type which is represented by the names of Jowett and Jebb and Nettleship and Conington.

BOOKS FOR CHILDREN.

'Among the Camps' (Scribners) is a collection of stories which Mr. Thomas Nelson Page has contributed to *Harper's Young People*. They are five in number, each having reference to some incident of the Civil War. A vein of mingled pathos and humor runs through them all, and greatly heightens the charm of them. It is the early experience of the author himself, doubtless, which makes his pictures of life in a Southern home during the great struggle so vivid and truthful. There is none of the bitterness of the contest, however, to be perceived in the book, as the author has wisely chosen incidents in which Confederate and Union soldiers meet only to do some kindness to a child.

'Men of Iron,' by Howard Pyle (Harpers), is an unusually entertaining and stirring story, the scene of which is laid in England during the reign of Henry IV. The fortunes of the hero, Myles Falworth, from the time that he comes, a raw country lad, to enter the service of a great noble as squire, until he wins a bride and his father's pardon by a successful tourney (very spiritedly described) before the king, will be followed, by every boy reader especially, with the deepest interest. There are numerous striking scenes which admirably show the manner of life among the retainers of a great household, and the sports and exercises which formed the chief part of the education of a knight. The not too archaic style of the narrative lends reality to it, and the illustrations, drawn by the author, add much to the attractive appearance of the book.

'A New Mexico David,' by Charles F. Lummis (Scribners), gives, in a number of short stories and sketches not remarkable for literary quality, a clear impression of some aspects of life in Arizona and western New Mexico. The Pueblo Indians and the Mexicans of mixed Spanish and Indian blood are the principal figures, and unconsciously we absorb a good deal of information about them and about their savage neighbors, the Navajos, Apaches, and Comanches. The descriptions of New Mexican games, and the instruction "How to Throw the Lasso," will be hailed by boys in want of a new "fad."

The scene of William Stoddard's 'Little Smoke' (Appletons) is laid in the Black Hills. The real hero, however, is not the Sioux boy whose name the book bears, but Bert Raynor, a plucky Ohio boy, who, having ventured into this region in company with two prospecting miners, is captured by the Indians. They spare him solely because of his courage and endurance. Life in a lodge is well described, as are also some of the sports of the Ogalallah youth. Interwoven with Bert's story are the adventures of his two white companions, which are amusingly told. Gen. Custer's defeat and death and Bert's escape are the closing incidents. The book has a number of excellent illustrations by Fred S. Dellenbaugh.

We are somewhat doubtful whether the first and most ambitious of Mr. Richard Harding Davis's 'Stories for Boys' (Scribners) can be properly so considered. It is a very clever piece of extravagant humor, which men rather than boys will understand and appreciate. This is not the case with those which succeed, and of which boat-racing, football, and tennis are the themes. These are related with much vigor and dash, while the heroes in each are fine, manly fellows who will prove good companions to the boy reader. The main incident of the closing story of the collection—an unsuccessful attempt to induce a young jockey to cheat in a horse-race—will, we are glad to think, be unintelligible to many lads.

'The Boy Travellers in Northern Europe,' by Thomas W. Knox (Harpers), is the best of the series which we have read. The countries visited, Holland, Prussia, Denmark, and Norway, are described in a clear, if not always lively, way, the accounts of scenes and places being illustrated by unusually well-chosen pictures. The author errs, perhaps, in putting a little too much condensed history into the conversation and diaries of his youthful travellers. The make-up of the volume is marked by the same excellences as that of its predecessors, including the device of route-maps on the inside of the covers.

'The Pilots of Pomona,' by Robert Leighton (Scribners), has for its scene of action the Orkney Islands. Adventure abounds, and is in general probable enough. One incident, however, certainly puts too great a strain upon credulity. For a boy adrift upon the Arctic Sea to discover and board a vessel apparently deserted, and to find the dead bodies of the crew in a state of almost perfect preservation, scattered through the ship in life-like postures, thirteen years after they had perished, is a palpable invention, and one not called for by the plot. Mr. Leighton's style is thoroughly good, with a judicious admixture of dialect. The careful descriptions of scenery, animals, and plants (or, rather, lack of plants), together with manners and ways of life in the Orkneys, have every appearance of accuracy, and may well interest not only the boys, but their fathers and mothers, too.

'We All,' by Octave Thanet (Appletons), a pleasant little story of a fortnight's happenings on an Arkansas plantation, is made to read us the lesson of human brotherhood. A Chicago boy, the spoiled child of a millionaire, is brought to visit his poor Southern cousins, and learns, while sharing their busy, unconventional life, that luxury is not the only good thing in the world. Rheumatic old Aunt Valley, playing Kuklux with the help of little Larry and the docile mules mounted with pillows, cuts a figure not soon to be forgotten. Altogether, the book is brightly written and gives a vivid picture of lonesome plantation life.

The 'Jo-Boat Boys,' by the Rev. J. F. Cowan (T. Y. Crowell & Co.), is one of those children's books which are said to be "just the thing for Sunday-school libraries." It is a dull story, and its only excuse for existing lies in the fact that it tries to picture the life of a neglected and little known group of people, the river boat-dwellers at Pittsburgh. But this is done with so little sympathy, the diction is so stilted and unnatural in spite of a large amount of slang, that the result is anything but convincing. As for the plot, it can be considered possible only on the ground that truth is stranger than fiction, while its intricacies confuse no one but the author.

'Half a Dozen Girls,' by Anna Chapin Ray (T. Y. Crowell & Co.), is full of observation, and makes a laudable attempt to find material for a story in every-day life. But while most of the characters are fairly natural, some are quite overdone. Particularly is this true of the severe Aunt Jane, a progressive and conscientious woman, but, paradoxically, "so busy doing good that she has no time to be good." The talks of two mothers with their children furnish the didactic note, which seems to us a little out of date. Their main idea is one which we have somewhere met with before, namely, that "home is woman's sphere." Hence much fun is made of the woman with a career, although in the last chapter it is intimated that one girl goes to college and another studies medicine.

A posthumous work, 'Last Words,' by the lamented Juliana Horatia Ewing (Roberts Bros.), turns out to be simply a collection of the author's last-published writings, and to contain only one or two sketches which have not seen the light before. "Mary's Meadow," the principal story in the book, is a charming description of the doings of some delightful children, well-bred, as Mrs. Ewing's children always are, and as far from priggishness as from anything coarse or vulgar. A considerable part of the volume is taken up with matter more or less horticultural, and the "Letters from a Little Garden," as well as some of the stories, give many useful bits of information and general principles for inexperienced gardeners. From Mr. C. D. Warner's dedication of 'My Summer in a Garden,' in which he plainly implies that his wife's pretended help in his gardening was really no help at all, Mrs. Ewing infers that American women perhaps do not "*grub* so energetically" as their English cousins. Very likely this is true; our wilting summer heats might dampen the ardor, as they certainly would the clothing, of even an English grubber. But if Mrs. Ewing had ever seen the flowers which a New England woman, overburdened with house and farm cares, sometimes manages to coax from the arid soil of a Northern hillside, she would have been convinced that love of flowers, even to the point of grubbing, is not unknown on this side the Atlantic. Her many lovers will welcome the picture of Mrs. Ewing given as a frontispiece, which, although its reproduction is far from satisfying the artistic sense, conveys a pleasant impression of a very admirable personality.

We are afraid that 'Jolly Good Times at Hackmatack' (Roberts Bros) will seem to young readers a misnomer for Mrs. M. P. W. Smith's reminiscences of an earlier time in New England. The terribly wearisome Sundays she describes, the rigid home-discipline, and the lack of sympathy, or at least absence of its expression, between parents and children, cannot be overlooked for the sake of the many out-door delights, nor for popcorn, apples, and cider in the evenings at home, nor even for that priceless treasure, cross but capable Liddy Ann, who cou'd and did make endless mince-pies and doughnuts.

'Betty: a Butterfly,' by A. G. Plympton (Roberts Bros.), tells the old story, *amor omnia vincit*, in a rather novel way. Flighty little Betty, who was always troublesome and often naughty while in the care of stiff Quaker "Aunt Nancy," learns to be a thoughtful and unselfish child when taken to live with her more demonstrative Uncle Richard, to whom she gives her heart at once in the most unreserved fashion. Her goodness, indeed, fairly rises into heroism when she risks her life in the attempt to save from his burning studio the precious picture which is to make her uncle famous.

Prof. John Trowbridge, in 'The Electrical Boy' (Roberts Bros.), has happily combined with an interesting story of a New York waif's adventures enough information about electricity to make a wide-awake boy want to know more. The many friends whom little Richard makes on his way through life, and his few enemies, furnish the book with a variety of characters, and, as the scene shifts from New York tenements, dime museums, and electrical workshops to an Arizona mining camp, there is no tiresome sameness in the surroundings. The vagaries of Swamm, who plays the part of villain through all his protean changes of disguise, are sufficiently amusing. The great Montana giant, with his huge frame and timid character, overmastered by the one passion, ruling even in death, not to be exhibited, is another original figure. The book is altogether readable and full of life.

The Century Co. add to the holiday list three pretty books reprinted from *St. Nicholas:* a new and enlarged edition of 'Baby World,' already a nursery favorite; 'Marjorie and her Papa,' by Robert Howe Fletcher; and 'Lady Jane,' by Mrs. C. V. Jamison. The first two are for the "wee, wee" children; the last, for the "middle-sized" ones.

A Score of Famous Composers. By N. H. Dole. T. Y. Crowell & Co. Pp. 540.

Mr. Dole has chosen for his book a half-punning title, which has only this disadvantage, that it may have prevented him from adding a few more names to his list that are quite as deserving of notice as Purcell or Glinka. The list includes, besides these two, Palestrina, Bach, Handel, Gluck, Haydn, Mozart, Beethoven, Rossini, Weber, Schubert, Spohr, Meyerbeer, Mendelssohn, Schumann, Chopin, Berlioz, Liszt, Wagner—that is, thirteen Germans, two Italians, one Frenchman, one Pole, one Hungarian, one Englishman, one Russian. The name of Glinka seems oddly chosen, in view of the fact that both his two countrymen, Rubinstein and Tchaikovsky, are greater composers and much better known in our concert halls. But the facts about him will be new to most readers, and Mr. Dole has been able to make use of Glinka's memoirs at first hand. Mr. Dole was a musical critic for some years, and knows what he is writing about; the information he gives is remarkably accurate, and based on the most recent sources; indeed, he has collected his facts from so many sources that even a special student of musical literature occasionally comes across an anecdote or bit of information new to him. Principally, however, this collection of brief biographies is intended for the general reader and young student of music, who will have to go far to find another book of its kind so full of interest, combined with accuracy and freedom from petty partisan spirit. It is the composers themselves, rather than their works, that are here considered; so the book may be used as a sort of piquant sauce in connection with a brief history of music, such as Henderson's, Fillmore's, or Langhans's.

A few of Mr. Dole's statements may be questioned. We were not aware that Wagner declared of his youthful symphony that it "had many singular errors." It is technically a correct composition, but Wagner poked fun at it (a few months before his death) because it had themes "which it is easy to write counterpoint on, but difficult to express anything with"—a delightful aphorism for the advocates of "absolute" music to ponder over. Nibelungen is repeatedly spelled "Niebelungen"; and why say "Meistersingers," which

is neither German nor English? The startling assertion is made that "the published list of Liszt's pupils gives the names of 227 men and 183 women." The list printed as an appendix to Pohl's Life of Liszt (Reclam) is very much smaller, but perhaps the authority quoted by Mr. Dole enumerated all those who call themselves pupils of Liszt, in which case, indeed, as he says, "the list is not complete." In view of recent events in France, it is amusing to read, in the Meyerbeer biography:

"For the first time in its history the Opéra Comique opened its doors to a foreigner. Meyerbeer was allowed to write for that world-famous stage, and his first work was 'L'Etoile du Nord.' Owing to the outbreak of war with Russia, the censorship nearly forbade its presentation; but owing to the personal influence of Napoleon III. it was permitted after a few textual changes were made, such as eliminating the expression '*Vive la Russie*,' and changing the word *tsar* to *ciel*."

Life of General Houston: 1793–1863. By Henry Bruce. Dodd, Mead & Co. 1891.

It cannot be said that this Life of Gen. Houston, in the series of "Makers of America," is anything but a very careless and unsatisfactory performance. It is written in a peculiarly irritating and wearisome style of self-sufficiency and newspaper omniscience, which it is hard enough to endure in journalism and still more in what professes to be permanent literature, and with a snip-snap epigrammatism which cannot do better than to characterize Andrew Jackson as a "scoundrel" and to describe the career of Aaron Burr as the "most fascinating in American history." As a specimen of its style and accuracy may be quoted: "There is a monument somewhere in Texas with this inscription, 'Thermopylæ had its survivors, the Alamo had none.' I have forgotten the circumstances. The words can hardly be forgotten." It would hardly be supposed that any American schoolboy would be ignorant that the inscription on the monument to the defenders of the Alamo in San Antonio reads: "Thermopylæ had her messenger of defeat; the Alamo had none," or that any one writing about the history of Texas would dismiss it in such a flippant paragraph.

The principal material for the book is obtained, by the aid of the scissors chiefly, from the pamphlet by C. Edwards Lester, entitled 'Sam Houston and his Republic,' written a good deal at the dictation of Houston himself when he was considered as a possible "hurrah" candidate for the Presidency of the United States, and in the very "high-falutin" style of the campaign biography; and a few personal anecdotes and reminiscences culled here and there from books give it its only value. There is no appreciation whatever of Houston's peculiar character, or his place as a remarkably interesting specimen of that type of the adventurous, practical-minded, reckless, and shrewd frontiersman, as developed by the conditions of American life in civilizing the wilderness—at once knight-errant and colonizer, adventurer and business man. The eccentricities and weaknesses of Houston's character, his childlike vanity, theatrical posing, impulsive recklessness, and self-indulgence were only upon the surface. At bottom there was the fund of saving common sense, the shrewd and prudent persistence and capacity, the sincere and far-sighted patriotism, which were no less remarkable in his administration of the civil affairs of the young republic of Texas and in his resistance to the secession madness, than in the Fabian policy of drawing Santa Anna into the interior and inducing him to divide his forces before he pounced upon him and swept his army and his prestige out of existence at San Jacinto. Houston can hardly be called a great man in the sense that Washington, Franklin, and Lincoln, or even Jefferson and Jackson, are, but he was a remarkable one, with strong and original characteristics. He performed great and valuable services to the nation, and it is a pity that there is not some adequate account of his character and career that shall not be a mere eulogy of the half-mythical founder of a State, or a mere record of personal eccentricity and adventurism.

Pictorial Astronomy for General Readers. By George F. Chambers, F.R.A.S. Macmillan & Co. 1891. 16mo, pp. 267.

There is no lack of popular books about astronomy by those who look upon the subject from the inside, as, Herschel, Secchi, Newcomb, Langley, Young, Lockyer, Ball. Mr. Chambers is none of these. He is not a scientific observer of the stars, nor has he an ordinary astronomer's acquaintance with celestial mechanics. He is a well-known compiler of astronomical books, useful in their way, but marked by incompleteness and a want of discrimination. The present little treatise will serve the purpose of a person who wants some light reading with pictures touching most of those important topics of astronomy that call for no mental exertion, about right in most of its statements, and not seriously unjust in many of its appreciations. To show how simple everything is here made, we annotate a short passage taken almost at random. The numerals in parentheses refer to our remarks below:

"In calculating the different positions of Mars (1), and comparing his own observations (2) with those of Tycho Brahe, Kepler was astonished at finding numerous apparent irregularities (3) in Mars's orbit, and still more in its distance from the earth (4). He soon saw (5) that the orbit could not be circular, and eventually recognized that it must be (6) an ellipse, with the sun occupying one of the two foci. . . . The path of a planet once traced, the next thing (7) to determine was what regulated the irregularities observed in its course. Kepler, having remarked (8) that the velocity of a planet (9) seemed to be greatest when it was nearest to the sun, and least when it was most remote from the sun, proceeded to suggest that an imaginary line joining the centre of a planet and the centre of the sun would pass over equal areas in equal times. . . . He sought to discover if any relation subsisted between the diameters of the orbits and the times occupied by the planets in traversing them. After twenty-seven years (10) of laborious research (11), he found out that a relationship did subsist, and thus was able to assert his third law."

(1.) Kepler did not set out by calculating places of Mars from its elements, but on the contrary by endeavoring to deduce from the observations the eccentricity of the orbit.

(2.) At the time referred to, Kepler is not known to have observed Mars, and only a very few of his observations were used by him in the investigation of the motions of that planet.

(3.) What incited Kepler to his great work was not finding irregularities, but a belief that by a method of calculation different from that in use (based on apparent instead of mean oppositions) known seeming irregularities could be made to disappear.

(4.) The distance from the earth could not be a subject of observation, and consequently irregularities in this distance could not be detected. The only thing in the work with which we can connect this belongs to a later time, after a great part of the work had been done and a corrected theory of the earth's motion had been made.

(5.) For "soon" read: after five years of diligent research.

(6.) This "must be" conveys no hint of the mode in which the opposite errors of two hypotheses directed Kepler's suspicions to the ellipse as the form of the orbit.

(7.) Mr. Chambers writes as if Kepler first ascertained the form of the orbit and then introduced the principle of areas. But it was the other way. He had assumed this principle long before he dreamed of the orbit not being circular. Indeed, without some such assumption he would not have had sufficient data to determine the shape of the path, since the distance of Mars could not be determined except by an intricate procedure seldom applicable. Indeed, except for movements in latitude too slight to prove much, all that is observed is variable movements in longitude.

(8.) This remark was of course one of the earliest generalizations concerning planetary motion.

(9.) A *superior* planet is meant.

(10.) The discovery was made 1618, May 8. Twenty-seven years before, Kepler had not taken up the pursuit of astronomy.

(11.) Although he puzzled long over the figures before he happened to light on the true relation, there was nothing to be called systematic research, nothing comparable for an instant with the work upon Mars.

In short, the author correctly states Kepler's laws; but as to how he came by them (further than that two were from studies of the motions of Mars) he seems to have not the slightest idea. To show that the passage is not exceptional, as this comes from p. 10, we will see what we can find on the tenth page from the end. We find this:

"His [Ptolemy's] great work was the celebrated Μεγάλη σύνταξις, better known by its Arabian designation of The Almagest. This work contains, amongst other things, a review of the labors of Hipparchus; a description of the heavens, including the Milky Way; a catalogue of stars; sundry arguments against the motion of the earth, and notes on the length of the year."

Even the title is wrongly given, and the description of the contents is as if one should explain that the Bible is a work containing among other things a discussion of the age of Moses, a description of Solomon's temple, a list of commandments, sundry exhortations against sloth, and the memoirs of Paul of Tarsus.

Das Papstthum. Von I. von Döllinger. Neubearbeitung von Janus 'Der Papst und das Concil,' im Auftrag des inzwischen heimgegangenen Verfassers, von J. Friedrich. Munich. 1891.

What little doubt may have remained as to the authorship of 'Janus'—a work which stirred so profoundly the Catholic world during the Vatican Council—has been removed by the publication of a new edition under the editorship of Prof. J. Friedrich, a disciple of Dr. Döllinger and the well-known historian of the Council. The intimation of a dual authorship in the Preface to the first edition was justified by a little collaboration on the part of Prof. J. Huber, but virtually the entire work was Döllinger's. He always regretted that, with a view to popularizing the volume, he had omitted all reference to the sources on which it was based—an omission of which Cardinal Hergenrother and his other opponents took full advantage. He never replied to their attacks, but in his later years he grew solicitous to see the work issued

in a more perfect shape, with a refutation of the arguments alleged against it. This labor he confided to Prof. Friedrich, who, until the death of his revered master, worked upon it under his eye. It is at last completed and forms a portly octavo of nearly six hundred pages. The thoroughness with which the editor has performed his task is evidenced in the extent of the notes, which, allowing for their smaller type, must contain nearly as much matter as the original text. These consist partly of citations of authorities, partly of rejoinders to Hergenrother and others, and partly of new material, completing and perfecting the necessarily rapid sketch which Döllinger had so hastily traced. A fairly full index adds much to the value of the volume as a work of reference.

Though written as a *pièce d'occasion*, for a special time and purpose, 'The Pope and the Council' contains the quintessence of such varied and profound stores of learning, so clearly and incisively set forth, that its value is not ephemeral. It is well worth study by all who are interested in the questions constantly arising from the tireless political activity of the Holy See—questions which are not confined to Europe, but, like the Catholic Church itself, are coterminous with the globe. In its present shape, with its ample apparatus, this volume worthily preserves in a permanent form a pitiless exposition of the methods by which the papacy has, step by step, advanced to the domination of the Church and to the establishment of the most extraordinary spiritual despotism that the world has seen.

BOOKS OF THE WEEK.

Arnold, Sir Edwin. Japonica. Charles Scribner's Sons. $3.
Austin, J. O. The Ancestral Dictionary. Providence, R. I.: The Author.
Balg, G. H. The First Germanic Bible. B. Westermann & Co.
Ball, Sir R. S. Star-Land. Boston: Ginn & Co.
Bien, H. M. Ben-Beor: A Story of the Anti-Messiah. Baltimore: Isaac Friedenwald & Co.
Bissell, Dr. Mary T. Physical Development and Exercise for Women. Dodd, Mead & Co. $1.25.
Bostwick, Lucy W. Margery Daw's Home Confectionery. Brentano. 50 cents.
Butterworth, H. Zigzag Journeys in Australia. Boston: Estes & Lauriat. $1.75.
Cameron, E. L. A Hard Lesson. John A. Taylor & Co. 50 cents.
Campbell, Sir G. A Ruby beyond Price. New York: Minerva Publishing Co. 25 cents.
Carmen: The Toreador Song. Brentano. $1.50.
Chester, Eliza. Chats with Girls on Self-Culture. Dodd, Mead & Co. $1.25.
Church, Rev. A. J. The Story of the Odyssey. Macmillan & Co. $1.
Church, Rev. A. J. The Story of the Iliad. Macmillan & Co. $1.
Cronise, Florence M. Princess Ilse. Chicago: Albert, Scott & Co.
Crosby, Rev. Howard. Sermons. A. D. F. Randolph & Co. $1.25.

141 FRANKLIN ST., BOSTON.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

A Tonic

HORSFORD'S
ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

SCRIBNER'S MAGAZINE FOR 1892

NOW READY.

CHRISTMAS NUMBER.

CONTENTS:

AFLOAT ON THE NILE. Life on a dahabeeyeh by Mr. and Mrs. E. H. Blashfield, with many illustrations.

THOMAS BAILEY ALDRICH contributes an important poem, ELMWOOD, in Memory of James Russell Lowell.

A PAINTER OF DREAMS—by Harold Frederic, with reproductions of paintings by Mr. Albert Moore.

ROBERT LOUIS STEVENSON'S successful serial, THE WRECKER, is of renowned interest.

THE LAND OF POCO TIEMPO, the first of a group of articles on New Mexico and Arizona, by Charles F. Lummis. Fully illustrated.

PETER RUGG, THE BOSTONIAN, "the Missing Man" of the early legend. A ballad by Miss Louise Imogen Guiney. With drawings by Howard Pyle.

SHORT STORIES. The Oak of Geismar, a story of the first Christmas-Tree, by HENRY VAN DYKE. Illustrated by Howard Pyle. Espero Gorgoni, Gondolier, a story of a Venetian gondolier, by F. HOPKINSON SMITH. Illustrated by the author. A Little Captive Maid, by MISS SARAH ORNE JEWETT, with illustrations by Herbert Denman. A Charge for France, by JOHN HEARD, JR. Illustrated by L. Marchetti. A Fresh Water Romance, by GEORGE A. HIBBARD. Peleus to Thetis, a poem by BESSIE CHANDLER. Illustrated with a decorative border by Herbert Denman. THE POINT OF VIEW, short poems, etc.

AN EXCEPTIONAL YEAR.

THE Year 1891 has been marked by a greater advance than any similar period since the Magazine was established. Not only has the literary and artistic excellence been maintained and increased, but a corresponding gain has been made in the sale and influence of the Magazine. At the end of 1891 the circulation has risen to more than 140,000 a month, and it may justly be promised that the further improvements for the coming year will be proportionate to these largely increased opportunities.

FOR NEXT YEAR.

It is not possible to give, in a brief space, an account of all the features in preparation, but the following announcements will indicate that the material is deficient neither in importance nor range of subject:

THE POOR IN THE WORLD'S GREAT CITIES.

It is proposed to publish a series of articles, upon a scale not before attempted, giving the results of special study and work among the poor of the great cities. They will be written by authorities so experienced in their respective fields that the series will appeal to civilized people the world over. The plan will include an account of the conditions of life in those cities (in many lands) where the results of research will be helpful for purposes of comparison, as well as for their own intrinsic interest. The treatment will be thoroughly popular and the elaborate illustrations will make the subject vivid. Additional particulars may be found in the prospectus appearing in the Christmas number.

IMPORTANT MOMENTS. The aim of this series of very short articles is to describe the signal occasions when some decisive event took place, or when some great experiment was first shown to be successful:—such moments as that of the first use of the Atlantic cable, the first use of the telegraph and telephone, the first successful experiment with ether, the night of the Chicago fire, the scene at the moment of the vote on the impeachment of Andrew Johnson, etc., etc. Each of the topics, it is expected, will be described by an eye-witness.

WASHINGTON ALLSTON. UNPUBLISHED REMINISCENCES AND LETTERS of this foremost among early American painters. Two articles, which will appear early in the year, give most entertaining glimpses of the original personality of this famous artist. A number of illustrations will lend additional interest to the articles.

OUT OF DOOR PAPERS. In the early spring will be begun a number of seasonable articles, among them being: SMALL COUNTRY PLACES, how to lay out and beautify them, by Samuel Parsons, Jr. FISHING LORE FROM AN ANGLER'S NOTE BOOK, by Dr. Leroy M. Yale. MOUNTAIN STATION LIFE IN NEW ZEALAND, and RACING IN AUSTRALIA, by Sidney Dickinson, with illustrations by Birge Harrison. The illustrations which will accompany this series are made from original material, either photographs or sketches, secured for this purpose.

PARIS THEATRES AND CONCERTS will be the subject of four articles by W. F. APTHORP. The author has had the advantage, of unusual privileges, and the cordial co-operation of some of the first actors, managers, and critics. Among the illustrations are some by M. Morand, the artist of the Théâtre Français and himself a playwright.

RAPID TRANSIT IN CITIES. Two articles of great importance by MR. THOMAS CURTIS CLARKE, the well-known engineer, on this subject, will be, in all respects, among the most notable papers of the year, taking up their subject in its widest range, and showing its increasing need of consideration with the enormous growth of our great towns.

THE NICARAGUA CANAL, SPEED ON RAILWAYS, ETC. Two articles on the NICARAGUA CANAL, the result of a special investigation of the present state of the undertaking, elaborately illustrated. There will be articles on the AUSTRALIAN RAILWAYS (as the only profitably operated government system existing), by D. H. NEALE; on THE SPEED OF LOCOMOTIVES (which is just now attracting special attention), by H. WALTER WEBB; and on the GREAT WATER-WAY FROM CHICAGO TO THE OCEAN, by LIEUT. CHARLES C. ROGERS, U. S. N. Illustrated.

AMERICAN ILLUSTRATORS. A series of articles on modern illustrators, with examples of their work, will be begun early in the year. This will be of the greatest interest to all readers who watch in the Magazine from month to month the drawings which, in these days, are so accurately reproduced as to represent the artist at his best. The group of illustrators, whose work will appear in this series, comprises VEDDER, COX, LOW, FROST, PYLE, BLUM, and others.

THE ILLUSTRATIONS of the Magazine, during the coming year, will be of increased interest and beauty. Not only have the services of the best American artists been enlisted, but also several French painters and illustrators, whose work represents the very highest standard, have been engaged. Among others, CHARLES DELORT, L. MARCHETTI, ALBERT LYNCH, EUGENE MORAND, and many others whose works and names are equally well-known.

MR. ROBERT LOUIS STEVENSON will continue to contribute to the Magazine during 1892. In addition to the serial "THE WRECKER," which is now appearing, there will appear, in an early number, an account of a journey which Mr. Stevenson, the grandfather of the novelist, made with Sir Walter Scott. Mr. Stevenson discovered this manuscript while looking over some old papers at his home in Samoa and has written an introduction to the narrative.

CHARLES SCRIBNER'S SONS, 743 Broadway, New York.

A NEW BOOK BY MAX O'RELL.

A Frenchman in America.

BY MAX O'RELL,

Author of 'Jonathan and His Continent,' 'John Bull, Jr.,' etc.

With over 130 illustrations by E. W. Kemble. 1 vol., octavo, extra cloth, gilt top, $2.00.

Max O'Rell's marvellous versatility is the best guarantee that he does not repeat himself in these reminiscences. While every page glows with the humor of the same swift and graceful pen, the book is as fresh and brimming with interest as though its genial author had never before written a line about America.

Mr. Kemble has caught the spirit of the text with rare fidelity, and gives us over 130 illustrations done in his inimitable style.

The Blue Pavilions.

By "Q," author of 'Dead Man's Rock,' 'The Splendid Spur,' 'Noughts and Crosses,' 'The Astonishing History of Troy Town,' etc., etc. 8vo, cloth, $1.25.

The popularity of Q— who has now confessed to being Mr. Quiller-Couch, and a man not out of his twenties—increases with every story that he publishes, and he now has a larger following than many writers who have been twice as long before the public, and who are ranked among the most popular. It is enough, then, to say that "The Blue Pavilions" is eminently worthy of its famous author, and affords fresh evidence how well deserved his reputation really is.

The Story of Francis Cludde.

By STANLEY J. WEYMAN, author of 'The House of the Wolf,' etc. 1 vol., 8vo, extra cloth, ink and gold dies, inlaid, $1.50.

One Summer in Hawaii.

By HELEN MATHER. Profusely illustrated with full-page pictures and illustrations running through the text. 1 vol., 12mo, cloth, $2.00.

There has been no book written on Hawaii, or the Sandwich Islands, as many still call them, within the last twenty years. Mrs. Mather's work will, therefore, prove especially welcome at the present time, when more than usual attention is being attracted to that interesting country and its people.

A New Volume in the "Unknown Library"

John Sherman and Dhoya.

By GANCONAGH. 1 vol., 12mo, cloth, unique binding, 50 cents.

One of the best stories in this popular library.

The Three-Cornered Hat.

By PEDRO ANTONIO DE ALARCON. Translated from the Spanish by MARY SPRINGER. 1 vol., 12mo, cloth, 75 cents; paper (Cassell's Sunshine Series) 50 cents.

The most famous Spanish novel of modern times.

The Biography of a Locomotive Engine.

By HENRY FRITH, author of 'Under Bayard's Banner,' etc., etc. With eight full-page illustrations by Paul Hardy. 1 vol., 12mo, $1.50.

The Children of Wilton Chase.

By L. T. MEADE, author of 'A World of Girls,' 'The Palace Beautiful,' 'Polly, a New-Fashioned Girl,' etc. 1 vol., 12mo, with illustrations. Price, $1.50.

A delightful story of child life, told in Mrs. Meade's brightest manner.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company

104 and 106 Fourth Avenue, New York.

T. Y. CROWELL & CO.'S

New Publications

HALF A DOZEN GIRLS. By ANNA CHAPIN RAY, author of "Half a Dozen Boys." Illustrated. 12mo, $1.25.

THE JO-BOAT BOYS. By the Rev. J. F. COWAN, D.D., editor of "Our Young People," etc. Illustrated by E. W. PEIRCE. 12mo, $1.50.

LED IN UNKNOWN PATHS. By ANNA F. RAFFENSPERGER. Illustrated. 12mo, $1.25.

THROWN UPON HER OWN RESOURCES, or, What Girls Can Do. By "JENNY JUNE" (Mrs. Croly). A book for girls. 12mo, $1.00.

JULIUS WOLFF'S NOVELS. Delightful stories of old time life in Germany.

THE SALTMASTER OF LUNEBURG. From the 21st German edition. 12mo, $1.50.

THE ROBBER COUNT. From the 23d German edition. 12mo, $1.25.

FIFTY YEARS, THREE MONTHS, TWO DAYS. From the 15th German edition. 12mo, $1.25.

TENNYSON'S GREATER POEMS. 3 vols., 18mo. Neatly boxed. Each volume illustrated with a photogravure frontispiece and title-page from designs by the best artists. Bound in dainty styles. Price per vol., parti-colored cloth, $1.00; changeable colored silk, $1.50. Volumes are sold separately or in sets, and comprise the following: IDYLLS OF THE KING, IN MEMORIAM, THE PRINCESS.

THE ALHAMBRA SERIES OF NOTABLE BOOKS. 6 vols., 12mo. Each volume illustrated with a photogravure title-page and frontispiece from new designs by the best artists. Carefully printed on good paper and bound in original and taking styles. Price per volume, boxed, parti-colored cloth, $1.50; changeable colored silk, $2.00; China silk, $2.00. The list of volumes is as follows: THE ALHAMBRA, by Irving; ROMOLA, by Eliot; LORNA DOONE, by Blackmore; SCOTTISH CHIEFS, by Porter; NOTRE-DAME, by Hugo; SKETCH BOOK, by Irving.

THE LOTUS SERIES OF POETS. 6 vols., 12mo. Each volume illustrated with a photogravure title-page and frontispiece from new designs by the best artists. Carefully printed on good paper and bound in original and taking styles. Price per volume, boxed, parti-colored cloth, $1.50; changeable colored silk, $2.00; China silk, $2.00. The list of volumes in this series is as follows: ROBERT BROWNING'S POEMS; LALLA ROOKH, by Moore; MRS. BROWNING'S POEMS; LUCILE, by Meredith; LADY OF THE LAKE, by Scott; TENNYSON'S POEMS.

BACK NUMBERS, VOLUMES, OR sets of leading and scarce magazines, etc., for sale by H. WILLIAMS, 195 West 10th St., N. Y.

SOME RECENT BOOKS

The Alhambra. One of the most charming gift-books of the year is Irving's Alhambra, just issued in an entirely unique form; printed from new electrotype plates, and with the pages beautifully decorated with Moorish borders in red and gold. The work comprises two handsome volumes with thirty-one photogravures from photographs made specially for this edition. Octavo, 2 vols. $6.00

Knickerbocker Nuggets. To the delightful series have been added:

XXXII.—French Ballads, printed in the original text. Illustrated. $1 50

XXXIII.—Eothen, Pictures of Eastern Travel. By W. A. Kinglake. $1.00

XXXIV.—Stories from the Arabian Nights. Edited by Stanley Lane-Pool. Illustrated, 3 vols. $3 00

"There is nothing to add to our previous praise of the beauty of this unique and serviceable series. It is peerless in appearance, and the volumes that are illustrated are gems. May its list be endless."—*Philadelphia Press.*

Literary Gems. The third series of these dainty little volumes comprises: 1. Lyrics, by Robert Browning; 2. The Legend of Sleepy Hollow, by Irving; 3. Pre-Raphaelitism, by Ruskin; 4. The Rime of the Ancient Mariner, and Christabel, by Coleridge; 5. Speeches on America, by John Bright; 6. Education of Children, by Montaigne. Each volume contains a frontispiece in photogravure, and is bound in full morocco, with gilt top. Price per volume, in box, 75 cents.

Each of the three series of six volumes, in attractive box . $4.50.

"The New York publishing house of G. P. Putnam's Sons has a most firm reputation among book-lovers for artistic and dainty editions of the best in literature. This high reputation will be increased—if it be possible—by the series of 'Literary Gems' just issued."—*Boston Times.*

Heroes of the Nations. Six volumes of this handsome series are now ready, embracing picturesque and trustworthy biographies of Nelson, Gustavus Adolphus, Pericles, Theodoric, Sidney, and Julius Cæsar. The illustrations and maps have been selected with great care. Cloth, $1.50; half morocco, gilt top, $1.75.

"The handsomest book that we have seen for many a day, from the celebrated Knickerbocker Press, is this volume of Mr. Russell's on Lord Nelson. In paper, binding, cover, illustrations, appendix, index, it is everything that it ought to be. It is delightful to look at, and a pleasure to feel in the hand."—*N. Y. Epoch.*

Story of the Nations. In this series, of which it has been said that it "presents history on the very plan followed by Herodotus and Livy, historians who were superb story-tellers," thirty-three volumes have been issued, the later works being Mackintosh's "Scotland"; Hug and Stead's "Switzerland"; and Morse-Stephen's "Portugal." Each work complete in itself is adequately illustrated. Price, per volume, cloth for $1.50; half morocco, gilt top, $1.75.

G. P. PUTNAM'S SONS,

27 and 29 West 23d St., New York.

NOTE.—The above new books may be seen at and procured from the principal booksellers in the States.

Published by JOHN C. NIMMO,

LONDON.

RECENTLY PUBLISHED BY

Ward, Lock, Bowden & Co.

Important notice.—Just ready.

The Life of Charles Stewart Parnell. By T. P. O'CONNOR, M.P., with personal reminiscences. 12mo, paper, 50 cents; cloth, $1.00.

The "Practical Mechanic" Series of Industrial Handbooks. Illustrated guides to the various branches of industrial and technical work, adapted for home study and self culture and discipline. Profusely illustrated, with folding plates and engravings in the text.

The publishers desire to call special attention to this handsome new series of industrial handbooks, each of which contains more information upon the subject with which it deals than could be acquired by years of mere mechanical labor. All the information to be found in these works has been contributed by competent experts, and is the result of years of practical experience. It is given in the simplest possible language, and each manual contains many large plates and small engravings illustrating the various departments of the industrial art to which it is devoted. The volumes now ready will be followed by others.

1. **The Building and Machine** DRAUGHTSMAN: A practical guide to the projection and delineation of subjects met with in the practice of the engineer, machinist and the building constructor. With instructions as to the setting out of machine gearing, projection of shadows and the shading and coloring of drawings. With 18 folding plates and 155 illustrations in the text.

2. **The General Machinist.** A practical introduction to the leading departments of mechanism and machinery; the communication of motion or transmission of force by gearing, together with details of the component parts of mechanism, and the methods of fitting up machines, etc. With 4 folding plates and 75 illustrations in the text.

3. **The Domestic House-Planner and the** SANITARY ARCHITECT. An introduction to the leading principles of house-planning and arrangement and of sanitary construction. With 16 folding plates and 60 illustrations in the text.

4. **The Stonemason and the Bricklayer.** Being practical details and drawings illustrating the various departments of the industrial arts of masonry and bricklaying. With notes on the materials used. With 11 folding plates and 224 illustrations in the text, Demy, 8vo, cloth, each $2.00.

New Light on Dark Africa. Being the narrative of the German Emin Pasha Expedition. By Dr. CARL PETERS, the commander of the expedition; translated by H. W. Dulcken, Ph.D. Profusely and beautifully illustrated with 32 original full-page plates and 65 other engravings by Rudolph Hellgrewe (from sketches and photographs taken on the spot), together with a large explanatory colored map, representing the progress of the expedition day by day. Handsomely bound, cloth, 8vo, $6.00.

The Macaulay Library of Great Writers. 8vo, cloth, $1.50 each.

New volume.

Sheridan's Dramatic Works. Large type edition, with memoir by J. P. BROWNE, M. D., and a portrait of Sheridan on Steel. 672 pages.

New copyright novel by Mr. Henry Herman.

His Angel. A Romance of the Far West. By HENRY HERMAN, author of "Eagle Joe," "Scarlet Fortune," "A Leading Lady," etc., and part author of "One Traveller Returns," "The Bishops' Bible," the plays of "The Silver King," "Chatterton," etc. With four full-page illustrations by George Hutchinson. 12mo, paper, 50 cents; cloth, $1.00.

"His Angel" is an exceptionally striking and exciting story of wild life and adventure. The characters are drawn with the vividness and fidelity of Mr. Bret Harte, and the interest of the tale never flags from start to finish. The success of Mr. Herman's two recent stories, "Eagle Joe" and "A Leading Lady," sufficiently proves the author's popularity as a novelist, and in "His Angel" he has written a tale of remarkable power and breathless interest.

New popular work on South Africa.

The Great Gold Lands of South Africa. Cape Colony, Natal, the Orange Free State, and the Transvaal. Edited, from notes, by RONALD SMITH. With colored map of South Africa, full-page illustrations and many engravings in the text. 12mo, cloth, $1.00.

Primitive Religions. Being an introduction to the study of religions, with an account of the religious beliefs of uncivilized peoples—Confucianism, Taoism (China), and Shintoism (Japan). By G. T. BETTANY, M.A., author of 'The World's Inhabitants,' etc. With fifty-six illustrations. 12mo, cloth, $1.00.

A new work on physiognomy.

How to Read Character in Faces, Features, and Forms; or, THE OUTLINES OF PHYSIOGNOMY. By HENRY FRITH, author of 'How to Read Character in Handwriting.' 12mo, cloth, 50 cents.

New illustrated

Guide to the Riviera. Nice, Cannes, Mentone, Monte Carlo, Monaco, Hyères, Genoa, etc. With routes and fares; lists of hotels and conveyances; walks, drives, and excursions; historical, botanical, and geological notes. By R. BRUCE DOUGLAS. Illustrated with eight new maps and many engravings. 12mo, cloth, $1.00.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-five years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. ts Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION will be sent to new readers for examination, two months for 25 cents.

GOVERNOR WM. E. RUSSELL.

THE

FORUM.

DEGRADATION BY PENSIONS —The beginning of a noteworthy discussion.

CONTENTS FOR DECEMBER:

DEGRADATION BY PENSIONS—THE PROTEST OF LOYAL VOLUNTEERS, by Lieut. ALLEN R. FOOTE, founder of the Society of Loyal Volunteers.—The appeal of a veteran to his comrades, and an explanation of the Society of Loyal Volunteers.

SIGNIFICANCE OF THE MASSACHUSETTS ELECTION, by Gov. W. E. RUSSELL.—A lesson for the National Democratic Party.

THE JEWISH PERSECUTION—ITS FINANCIAL AND INTERNATIONAL ASPECTS, by A. LEROY-BEAULIEU, the great French economist.

FRENCH FEELING TOWARDS GERMANY, by CAMILLE PELLETAN, member of the French Chamber of Deputies. War about Alsace-Lorraine inevitable.

SHOULD THE SILVER LAW OF 1890 BE REPEALED? by JACOB H. SCHIFF.

A PLAN FOR A PERMANENT BANK SYSTEM, by HORACE WHITE.

BANK-NOTE CIRCULATION—MR. HARTER'S PLAN, by H. W. CANNON, formerly Comptroller of the Currency: President of the Chase National Bank.

IS MODERN EDUCATION A FAILURE? by FREDERIC HARRISON. A radical change from the present mechanical methods necessary for the best training.

REFORMATORY OR PUNITIVE PRISON MANAGEMENT? by ELIJAH C. FOSTER, Special Agent of the Department of Justice at Washington.

UNREGULATED COMPETITION SELF-DESTRUCTIVE, by ALDACE F. WALKER, Chairman of the Commissioners of the Western Traffic Association.

THE WORK OF WOMEN'S CLUBS, by ALICE H. RHINE.

NEED THE SCHOOL BE A BLIGHT TO CHILD-LIFE? by Dr. J. M. RICE. A school where learning is a pleasure and a school where it is a positive injury: the New York public schools.

A DAY WITH LORD TENNYSON, by SIR EDWIN ARNOLD.

THE FORUM, New York.

50 cents a copy. $5 a year.

Catalogues issued bi-monthly, and sent gratis to any address, on application.

A NEW EDITION DE LUXE.

Bulwer-Lytton's Novels.

LIMITED TO 1,000 COPIES.

The first and only fine illustrated edition of Lord Bulwer-Lytton's Novels ever made in Europe or America.

Bulwer stands foremost among novelists as a student and delineator of human nature, instincts, and passions, and he is also acknowledged to be the most versatile writer of his day and generation.

His popularity is increasing every year, and the publishers recognize the great demand for a good edition of his writings. This edition is embellished with over 200 photogravures on Japanese government paper from original drawings and paintings by the best illustrators in America, and photographs of the actual scenes and places referred to, gathered on the spot especially for this edition.

THE MANUFACTURE OF THE BOOK IS PERFECT.

The type is large and new, and set in a fine open page. The margins are ample, and the paper a beautiful natural-tint laid paper. The volume is a small 8vo, easy to hand'e, and the binding is vellum cloth, gilt tops, slightly trimmed. Complete in 32 VOLS., issued at the rate of about 2 vols. per month, at $2.50 PER VOLUME. Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

BRYAN, TAYLOR & CO.,

757 Broadway, New York.

CONTEMPORARY REVIEW.—ORIGINAL Edition. $4.50 per year. LEONARD SCOTT PUB. CO., 231 Broadway, New York.

Direct Fast Express Route
TO THE MEDITERRANEAN.

First-class Passenger Steamer Service between

NEW YORK and GENOA, ITALY,

BY THE

NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Nov. 28, Jan. 2, Feb. 6, March 12.
WERRA Dec. 10, Jan. 23, Feb. 27, April 2.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

EUROPEAN SUMMER AND WINTER Resort, University town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year, Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

FOR THE HOLIDAYS.

Following is a list of entirely new books and new editions which have been issued by us especially for the holiday season of 1891-2. All of the leading booksellers carry them in stock; you cannot obtain them from your bookseller, send direct to us, and they will be carefully wrapped with metal protecting corners, and forwarded to any address by express or mail at our expense.

NEW CHEAP EDITION OF

The Adventures of Huckleberry Finn.

By MARK TWAIN. Cloth, $1.00.

In putting the price of the new edition of 'Huckleberry Finn' at $1.00, we believe we have reached a figure at which all can enjoy it: The book is the complete unabridged work of 318 pages, brightened with 44 illustrations by E. W. Kemble, bound in light cloth, with black, brown, and gold stampings.

Adventures of a Fair Rebel.

By MATT CRIM, author of ''Zeki'l,' 'An Onfortunit Creetur,' 'Sphiry Ann,' etc. In cloth (blue and gray), $1.00; in paper covers, 50 cents. This story will be eagerly read by Miss Crim's many admirers.

This book constitutes the second number of "The Webster Library," a new series of cheap books by American authors.

The Old Devil and the Three Little Devils;

Or, Ivan the Fool. By Count LEO TOLSTOI. Translated direct from the Russian by Count Narraikow. With illustrations by the celebrated Russian artist, Gribayedoff. 12mo, cloth, $1.00.

Life of Jane Welsh Carlyle.

By Mrs. ALEXANDER IRELAND. 8vo, 330 pages, portrait, vellum cloth, (half bound), gilt top, $1.75.

The publication of the book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled by one in thorough sympathy with her subject, from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make this volume indispensable to all who venerate the genius or are interested in the personality of the Sage of Chelsea.

Inside the White House in War Times.

By W. O. STODDARD, one of Lincoln's Private Secretaries. 12mo, 250 pages, illustrated, fine stamped cloth, $1.00.

Humorous, pathetic, and exciting incidents follow one another through the pages of this book, making it intensely interesting from cover to cover to both young and old. In its pictures of men, women, and events, it justifies its title.

New Holiday Set of Mark Twain's Books.

'The Prince and the Pauper,' 'Adventures of Huckleberry Finn,' 'A Connecticut Yankee in King Arthur's Court.'

These three volumes contain a total of 1,352 pages, with 585 illustrations. Bound uniformly in a handsome shade of light brown cloth. Sold only in sets. Set complete in a box, $6.00.

Mark Twain's "Library of Humor."

A volume of 145 Characteristic Selections from the Best Writers, together with a Short Biographical Sketch of Each Author quoted. Compiled by MARK TWAIN. Nearly 200 illustrations by E. W. Kemble, 8vo, 707 pages. Full Turkey morocco, $7.00; half morocco, $5.00; cloth, $3.50.

The Happy Isles, Sherman's March to the Sea, The Marriage of the Flowers,

And Other Poems. By S. H. M. BYERS. Small 12mo, cloth binding, $1.00.

The Peril of Oliver Sargent.

By EDGAR JANES BLISS. 12mo, 217 pages, frontispiece, stamped cloth, $1.00; paper cover, 50 cents.

The most remarkable and thrilling story since 'Dr. Jekyll and Mr. Hyde,' which it resembles in that it treats of the dual character of man, and the separation and development of these characters until one of them gains control and leads the victim through awful experiences until he is finally rescued by accepting the teachings of Christ.

BOSTON PUBLIC LIBRARY

The Nation

Public Library

VOL. LIII.—NO. 1379. THURSDAY, DECEMBER 3, 1891. PRICE 10 CENTS.

No other Magazine in the World

so fully and fairly presents the opinions of the leading writers and thinkers on all questions of public interest as THE NORTH AMERICAN REVIEW. — *Boston Journal.*

THE

North American Review

is essential to every American reader who wishes to keep up with the times. The New York *Sun* says of it: "The NORTH AMERICAN REVIEW constantly offers to the public a programme of writers and topics that excites the reader and gratifies the intellectual appetite. In this respect there is no other magazine that approaches the NORTH AMERICAN REVIEW."

It is neither a partisan nor a sectarian publication, but

All Sides of All Questions

in which intelligent readers are interested are promptly discussed in its pages.

Among contributors to early numbers will be

The Rt. Hon. W. E. Gladstone,

who, in a series of articles on "The Olympian Religion," will give a conspectus of the great work which has occupied his leisure for several years; His Eminence, CARDINAL GIBBONS; Hon. DAVID B. HILL; Hon. THOS. B. REED; Hon. R. Q. MILLS; Col. R. G. INGERSOLL; Archdeacon FARRAR; Professor RODOLFO LANCIANI; ANDREW LANG; HENRY LABOUCHERE; JUSTIN MCCARTHY; ARMINIUS VAMBERY; and other distinguished writers.

The Presidential Campaign.

During the coming year, the REVIEW will be of special interest and value to every American voter, as it will lay before its readers discussions of the important issues of the Presidential campaign by the recognized leaders in the several political parties.

Schools.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.
For references and circular address
MRS. E. L. HEAD, Germantown, Pa.

*COLLEGE FOR WOMEN.—THE FIN-*est winter resort in the South; the most beautiful grounds of any boarding-school in the Union. Appointments of Boarding Department first-class in every respect. Advantages in Music, Art, and Literary Departments unsurpassed. For catalogue, apply to the President.

Two scholarships of $300 and $200 each are offered in connection with these examinations. For information apply to the SECRETARY, 32 East 33d St., New York City.

HARPER & BROTHERS' LATEST PUBLICATIONS.

Studies in Chaucer.
His Life and Writings. By THOMAS R. LOUNSBURY, Professor of English in the Sheffield Scientific School of Yale University. With a Portrait of Chaucer. 3 volumes. 8vo, Cloth, Uncut Edges and Gilt Tops, $9.00. (*In a box.*)

Professor Lounsbury's 'Studies' cover almost every problem which has been connected with the name of Chaucer, while giving their fullest attention to the questions which lie in the way of true intellectual communion with the poet. We have, first, a critical reconstruction of the narrative of Chaucer's life, with an account of the evidence for every fact in it which can be positively affirmed; then an amusing and effective dissection of the legendary stories which have grown up around this life and have deceived many careless or unscrupulous biographers. Another chapter describes the text, its sources, and history, and points out the methods by which great progress has already been made in its restoration, affording the hope that we may yet see it in a form which its author "might recognize, even in minute particulars, as essentially his own." In the chapter on "The Writings of Chaucer," an elaborate attempt is made to draw the line between his genuine writings and the mass of spurious productions which have been ascribed to him. "The Learning of Chaucer" is then considered—the languages he knew, the books he had read, his acquaintance with the literature and the science of his age. His "relations to the English language and to the religion of his time" are the themes of an essay that is full of interest and abounds in corrections of prevalent errors. The third volume is wholly devoted to "Chaucer in Literary History" and "Chaucer as a Literary Artist," and, if not the last word to be said on either subject, is at least the most complete and intelligent survey of each of them yet made.

Extract from Preface.

During the last quarter of a century many investigations have been carried on which have had the effect of modifying materially views previously held in regard to Chaucer's life and writings. Much has been added to our real knowledge, much more has been taken from our supposed knowledge. . . . It was with the intention of putting together in a compendious and easily accessible form the results of the latest investigations that this work was undertaken. . . . The three volumes contain eight chapters bearing upon the life and writings of Chaucer. These chapters constitute eight distinct essays, or rather monographs. It might, perhaps, be better to say seven, on account of the close relationship existing between the first two. Bound together as they all are by the unity of a common interest, there is a certain natural sequence in the order in which the subjects are taken up. Still, with the possible exception just referred to, the chapters are essentially independent of each other. Each monograph is complete in itself.

Ben-Hur:
A Tale of the Christ. By LEW WALLACE. Garfield Edition. Two volumes. Illustrated with twenty full-page photogravures. Over 1,000 illustrations as marginal drawings by WILLIAM MARTIN JOHNSON. Crown 8vo, Bound in Silk and Gold, Uncut Edges and Gilt Tops, $7.00. (*In a Gladstone Box.*)

LONGMANS, GREEN & CO.'S LIST.

ARCHDEACON FARRAR'S NEW BOOK.

DARKNESS AND DAWN;

OR, SCENES IN THE DAYS OF NERO.

An Historic Tale. By the Venerable ARCHDEACON FARRAR, D.D., F.R.S., author of "The Life of Christ," etc. One volume, large crown 8vo, gilt top, $2.00.

*** This novel of Imperial Rome is the most notable, and will also prove, we expect, the most popular piece of fiction we owe to the author's pen. . . . It is impossible not to admire the vigorous portraiture of historical personages and the brilliancy and extraordinary vivacity of the descriptions. . . . It is just the kind of book to become widely popular."—*The Spectator.*

NEW BOOK BY SIR EDWIN ARNOLD.

SEAS AND LANDS.

By Sir EDWIN ARNOLD, M.A., K.C.I.E., C.S.I., etc., author of "The Light of Asia," etc. With 40 full-page illustrations from photographs, and 30 illustrations in the text. 8vo, 540 pages, gilt top, $5.00.

*** This is the account of the journey of the author of "The Light of Asia," through Canada and the United States, and of his prolonged residence in Japan, in the course of which he made a careful study of Japanese manners and customs. In these letters he describes a Japanese dinner, militant Japan, a Japanese health resort, the Ascent of Fuji-San, etc.

"An entertaining book, for Sir Edwin Arnold is a writer of vigorous prose as well as of mystical poetry. A handsome book filled with pictures illustrating his travels, and illustrating them well."—*Chicago Tribune.*

JAPANESE LETTERS:

Eastern Impressions of Western Men and Manners, as contained in the correspondence of *Tokiwara* and *Yashiri.* Edited by Commander HASTINGS BERKELEY, R.N. Crown 8vo, cloth, $1.50.

*** Here we have a piquant account of the impression made by European life and thought on an intelligent and educated Japanese, who expresses frankly and kindly his opinion as to the morality, the theology, the politics, and the arts of the English and the French.

WITH AXE AND ROPE IN THE NEW ZEALAND ALPS.

By GEORGE EDWARD MANNERING, Member of the Alpine Club, Member of the New Zealand Alpine Club, Member of the Royal Geographical Society of Australasia, and Member of the Philosophical Institute of Canterbury, N. Z. With Map and 18 Full-page Illustrations from Photographs. 8vo, $3.50.

A NEW BOOK BY MR. LANG.

ANGLING SKETCHES.

By ANDREW LANG. With etchings and illustrations reproduced from drawings by W. S. Burn-Murdoch. Square 8vo, cloth extra, gilt top. $2.25.

*** This is a volume to delight the Angler, the Scotsman, and the lover of the supernatural, for Mr. Lang skilfully mingles eerie legends with the story of his fishing adventures. The illustrations are varied and abundant.

PRELUDES AND STUDIES.

MUSICAL THEMES OF THE DAY. By W. J. HENDERSON. Crown 8vo, cloth extra, gilt top, $1.25.

*** This volume contains a new discussion of Wagner's "Ring des Nibelungen," together with some other interesting Wagnerian essays. That portion of the book dealing with "The Evolution of Piano Music" covers many facts not before accessible in collected form, and most of which are not to be found in any other work in English.

BY THE SAME AUTHOR.

THE STORY OF MUSIC.

Cloth, gilt top, $1.25.

HAPPINESS IN THE SPIRITUAL LIFE;

Or, The Secret of the Lord. A Series of Practical Considerations. By the Rev. WILLIAM CLAVELL INGRAM, M.A., Honorary Canon of Peterborough Cathedral and Vicar of St. Matthew's, Leicester. Crown 8vo, $2.25.

THE SPIRIT OF MAN:

An Essay on Christian Philosophy. By the Rev. A. CHANDLER, M.A., Vice-Principal of Brasenose College, Oxford. Crown 8vo, $1.75.

"Mr. Chandler combines acute speculation with much practical edification."—*The Times.*

PROBLEMS OF CHRISTIANITY AND SCEPTICISM.

By the Rev. ALEXANDER J. HARRISON, B.D., Vicar of Lighteliffe, Evidential Missioner of the Church Parochial Mission Society and Lecturer of the Christian Evidence Society. Crown 8vo, $2.25.

NEW BOOK BY BISHOP OXENDEN.

THE HISTORY OF MY LIFE;

An Autobiography. By the Rt. Rev. BISHOP OXENDEN, formerly Bishop of Montreal. Crown 8vo, $1.75.

DR. LIDDON'S TOUR IN EGYPT AND PALESTINE.

During Dr. Liddon's visit to Egypt and Palestine in 1886 he was accompanied by his sister, Mrs. King, who wrote a series of letters descriptive of the tour. These letters are now published in book form. Crown 8vo, $1.75.

ANNALS OF MY EARLY LIFE.

1806–1846, with Occasional Compositions in Latin and English Verse. By CHARLES WORDSWORTH, D.C.L., Bishop of St. Andrew's and Fellow of Winchester College. 8vo, $5.00.

A MANUAL OF THE SCIENCE OF RELIGION.

By P. D. CHANTEPIE DE LA SAUSSAYE, Professor of Theology at Amsterdam. Translated by Mrs. COLYER-FERGUSON (*née* Max Muller). Revised by the author. Crown 8vo, $3.50.

CHRISTIANITY AND INFALLIBILITY.

BOTH OR NEITHER. By the Rev. DANIEL LYONS. 12mo, cloth, $1.50.

THE ECLOGUES AND GEORGICS OF VIRGIL.

Translated from the Latin by J. W. MACKAIL, M.A., Fellow of Balliol College, Oxford. Printed on Dutch hand-made paper. Royal 16mo, $1.75.

MR. D. G. THOMPSON'S NEW BOOK.

THE PHILOSOPHY OF FICTION IN LITERATURE.

An Essay. By DANIEL GREENLEAF THOMPSON, author of "A System of Psychology," "The Problem of Evil," "The Religious Sentiments of the Human Mind," etc. 12mo, $1.50.

*** Most of the recent abundant discussion of the art of fiction has been about details. Mr. Thompson treats the subject with philosophic thoroughness, inquiring into the principles of the art and into its scientific, moral, and æsthetic value.

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the Publishers.*

LONGMANS, GREEN & CO., 15 East 16th St., New York.

With Notes and Portraits. Literary Essays (in 4 vols.). Political Essays (in 1 vol.). Literary and Political Addresses (in 1 vol.). Poems (in 4 vols.). In 10 vols., crown 8vo, gilt top, each, $1.50; the set, 10 vols., $15.00; half calf, $27.50; half calf, gilt top, $30.00; half levant, $40.00

LATEST LITERARY ESSAYS AND ADDRESSES.

By JAMES RUSSELL LOWELL. Containing papers on Milton, Gray, Lander, Keats, Walton, Shakespeare, Richard III., etc. Crown 8vo, uniform with the *Riverside Edition* of Lowell's Works, $1.25. Also in Persian silk, a very attractive binding, $1.25.

CHRISTOPHER COLUMBUS,

And How he Received and Imparted the Spirit of Discovery. By JUSTIN WINSOR, editor of "The Narrative and Critical History of America," "Reader's Handbook of the Revolution," etc. With portraits and maps. 8vo, $4.00.

BETTY ALDEN.

By JANE G. AUSTIN, author of "A Nameless Nobleman," "Standish of Standish," "Doctor Le Baron and His Daughters," etc. 16mo, $1.25.

Betty Alden, the daughter of John Alden and Priscilla, is the heroine of a novel rich in descriptions of the early life of New England. It is full of the history and picturesque incidents of the Pilgrim story, and is one of the most popular of Mrs. Austin's very successful books about the old Plymouth Colony.

THE LADY OF FORT ST. JOHN.

By MARY HARTWELL CATHERWOOD, author of 'The Romance of Dollard,' etc. $1.25.

Fort St. John stood at the mouth of the St. John River in New Brunswick in the seventeenth century. The "Lady" of the fort is a charming character, of heroic fidelity and queenly grace. The story is powerfully written, and accurately portrays the epoch to which it relates. It is one of the strongest and most deeply interesting of recent novels.

JOSEPH HARDY NEESIMA.

By ARTHUR SHERBURNE HARDY, author of 'But Yet a Woman,' 'The Wind of Destiny,' 'Passe Rose,' etc. With portraits of Mr. Neesima and Hon. Alpheus Hardy. Crown, 8vo, $2.

ODES, LYRICS, AND SONNETS.

From the Poetical Works of JAMES RUSSELL LOWELL. Bound in a new and specially attractive style, in white, green, and gold, gilt top. 16mo, $1.00.

This is a new volume and an exceedingly rich one, containing the best short poems Mr. Lowell wrote, and it would be difficult to surpass them in English literature.

The Marble Faun.

Holiday Edition of HAWTHORNE'S famous work, with a Portrait and 50 Photogravures. 2 vols., 8vo, cloth, $6.00; full vellum, or full polished calf, $12.00.

The Song of Hiawatha.

With 22 full-page Photogravures and about 400 text illustrations and a Portrait of Longfellow. Buckskin, 8vo, $6.00.

Our Old Home.

With 31 Photogravures and a Portrait of HAWTHORNE. 2 vols., 16mo, gilt top, $4.00; half calf, $7.00; polished calf, $9.00.

The Vision of Sir Launfal.

With Photogravure Illustrations and a Portrait of Mr. LOWELL. $1.50.

On the Threshold.

An entirely new edition of DR. MUNGER'S remarkably good and popular book, with a new chapter on "Purity." $1.00.

A New England Girlhood.

A very interesting story of her girlhood by LUCY LARCOM. *Holiday Edition.* $1.00.

Points of View (*A New Book.*) *Books and Men.*

Two tasteful volumes of remarkably bright and readable essays. By AGNES REPPLIER. $1.25 each.

Atlantic Monthly

For 1892 will contain:

Leipzig: 10 Hospital St.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York; Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. LII. comprising the first half-year of 1891.]

A MAGNIFICENT HOLIDAY GIFT.

THE BEAUTIFUL COLORED PLATES FROM "GEMS AND PRECIOUS STONES."

WILLIAM R. JENKINS.

Direct Fast Express Route TO THE MEDITERRANEAN.

First-class Passenger Steamer Service between

NEW YORK and GENOA, ITALY,

BY THE

NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Jan. 2, Feb. 6, March 12
WERRA, Dec. 10, Jan. 23, Feb. 27, April 2.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

Reading Case for the Nation,

To receive the current numbers in a convenient temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of 75 cents.

Chatterbox FOR 1891.

This name a household word in every home in the land, has become endeared in the hearts of two generations, and the readers of the early volumes are now men and women, who know that no books will delight their children more, or instruct them to a greater extent, than these dear old annual volumes, whose sales have long since mounted above the million mark. *The* King of Jurenules. 1 vol., quarto, illuminated board covers, $1.25.

THE FAMOUS "ZIGZAGS."

The best and most successful series of books for young people ever made. Over 300,000 volumes already sold. Narratives of travel, history, and adventure, with anecdote stories associated with the countries visited. By H. Butterworth, editor of the *Youth's Companion*. Full of illustrations. The new volume for this year is

Zigzag Journeys in Australia;

Or, A Visit to the Ocean World. Describing the wonderful fifth continent, containing stories of gold discoveries, and of the animals peculiar to this fascinating country.

The other volumes of the series are Northwest, British Isles Antipodes India, Sunny South, Levant, Acadia, Occident, Orient, Classic Land, Northern Lands, Europe.

Each, 1 volume, small quarto, illuminated board covers, $1.75. Cloth, gilt, $2.25.

Beautiful Books

EXQUISITE BINDINGS.

The Last Days of Pompeii.

Pompeiian Edition. By Bulwer (Lord Lytton). This thrilling historical novel is produced in a superb manner, with fifty photogravure illustrations from photographs of Pompeii as it now is, and from celebrated restorations and frescoes, with a magnificent and distinctly Pompeiian binding.

2 vols., crown 8vo, embossed in full gold, $6.

The Lily of the Arno;

Or, Florence, Past and Present. By Virginia W. Johnson. In the beautiful Flower City of Italy there is an endless amount of historic folk-lore, an abundance of which the author has delicately interwoven with descriptions of the cathedrals, the campaniles, and the Florentine people. Illustrated with twenty-five photogravures of points of interest in Florence. Crown 8vo, vellum cloth, illuminated in gold and colors, $3.

Rienzi. Romanesque Edition.

The Last of the Roman Tribunes. By Bulwer (Lord Lytton). A superb edition of this splendid historical romance, which stands without an equal, full of photogravure illustrations from Roman photographs. 2 volumes, crown 8vo, embossed in gold, gilt tops, $6.00.

Romola. By George Eliot.

Uniform with 'Rienzi' and 'The Last Days of Pompeii,' with 60 photogravures. 2 volumes, $6.00.

For sale by all booksellers, or sent, postpaid, on receipt of price, by the publishers.

ESTES & LAURIAT, Boston.

THREE NOTABLE BOOKS.

"A most satisfactory collection."

FIFTY YEARS OF ENGLISH SONG;

or, Selections from the Poets of the Reign of Victoria. Edited and arranged by Henry F. Randolph. In 4 vols. 8vo. Limited edition of 250 copies. $7.50. Also 4 vols. 12mo, cloth, $5.00.

I. The Earlier Poets. The Blackwood Coterie and Early Scottish Poets. The Poets of Young Ireland. pp. xxxii. 290. II. The Poets of the First Half of the Reign. The Novelist Poets. pp. xxii. 298. III. The Poets of the Latter Half of the Reign. The writers of Vers de Société. pp. xxvi. 352. IV. The Pre-Raphaelite Brotherhood. The Ballad and Song-Writers. The Religious Poets. pp. xxix. 288.

Each volume is prefixed with complete biographical and bibliographical notes, and contains full indexes, including a index of pseudonyms and literary sobriquets.

"The editor has covered a great field of poetic activity and creation, and has covered it very comprehensively and in a thoroughly catholic spirit. His work seems to us to embody the broad sympathy and the thorough intelligence which are necessary in such an undertaking, and the result of his labor is a collection which will be of very great service to readers at large and especially to students of English poetry."

Of 50 sets of the limited edition with 26 inserted photo-portraits only 12 sets remain unsold. 4 vols., half Roxburgh, $15.00.

"One of the Historical Classics."

HISTORICAL MEMORIALS OF

WESTMINSTER ABBEY. By Arthur Penrhyn Stanley. New Edition. *With 13 full-page reproductions of etchings, mainly by* Railton, and numerous wood-cuts. 2 vols. 8vo, in white and violet cloth, with jacket, $7.50.

One of the Historical Classics of the English Language is Dean Stanley's Memorials of Westminster Abbey. No one was better fitted to write a history of Westminster Abbey than the man who for so long added one more to its many glories by being its Dean. None knew it more thoroughly or loved it more truly, and no one could more readily command access to its archives and secure the hearty cooperation of writers and archæologists who had made the Abbey their special study. In this new edition the full-page illustrations will convey to the reader a vivid idea of the wonderful architecture of the Abbey.

"The painstaking and the taste of the Messrs. Randolph [in the make-up of the volumes] are visible throughout, and are sure of recognition by book-buyers."—Evening Post.

"Unique in plan and wonderful in execution."

THE GREAT DISCOURSE: SPIRIT

AND LIFE. A Topical Arrangement and Analysis of all the Words of Jesus the Christ the Son of God recorded in the New Testament, separated from the Context. 16mo, cloth, $1.50. Also on thin paper. Cloth, gilt edge, $1.50.

This presentation is given under six grand divisions, eight heads, and one hundred and nine topics and subtopics, arranged in order, beginning with the Godhead, and treating, in due course, of the Life of the Savior, comprising his Ministry and Passion and the Prophecies, and finally of the Messianic Doctrine, comprising Righteousness under thirty-two, Sin under twenty, and general Exegetical discourses under thirteen topics.

The object of this work is to bring the teaching of the Messiah into closer contact with the heart and understanding by gathering His words into a coherent and ordered discourse upon all the subjects—Spiritual and Physical—treated of in His teachings during His ministry on earth. It aims to present the claims, the faith, the religion, the ethics, and the philosophy of Christianity as expounded by its divine Head and in His own words alone.

Of the limited edition of 125 copies, 8vo, printed on hand-made paper, only 15 copies remain unsold. 8vo, half Roxburgh, $5.00.

*** Any of the above will be sent by mail or express prepaid.

GINN & COMPANY, Publishers,

BOSTON, NEW YORK, AND CHICAGO.

A NEW EDITION DE LUXE.

Bulwer-Lytton's Novels.

Limited to 1,000 Copies.

The first and only fine illustrated edition of Lord Bulwer-Lytton's Novels ever made in Europe or America.

Bulwer stands foremost among novelists as a student and delineator of human nature, instincts, and passions, and he is also acknowledged to be the most versatile writer of his day and generation.

His popularity is increasing every year, and the publishers recognize the great demand for a good edition of his writings. This edition is embellished with over 200 photogravures on Japanese government paper from original drawings and paintings by the best illustrators in America, and photographs of the actual scenes and places referred to, gathered on the spot especially for this edition.

THE MANUFACTURE OF THE BOOK IS PERFECT.

The type is large and new, and set in a fine open page. The margins are ample, and the paper a beautiful natural-tint laid paper. The volume is a small 8vo, easy to handle, and the binding is vellum cloth, gilt tops, slightly trimmed. Complete in 32 VOLS., issued at the rate of about 2 vols. per month, at $2.50 PER VOLUME. Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

It comprises book reviews, literary news, selected readings, and illustrations from the latest books, special articles, and numerous other interesting features.*

CHARLES SCRIBNER'S SONS, 743-745 Broadway, N. Y.

J. B. Lippincott Company's BOOKS

FOR THE

HOLIDAYS.

In the Yule-Log Glow. Containing a charming collection of Christmas stories and poems. Edited by HARRISON S. MORRIS. The first and second volumes are devoted to stories which are taken from the French, German, Russian, Italian and Norwegian, and which offer a vivid picture of how the Christmas holidays are celebrated in these far-off countries, as do several American and English stories illustrate the day in this and the mother-country. The third and fourth volumes are exclusively poetry an almost complete collection of the best poems on Christmas in the language.

Four volumes. 16mo. Half cloth, gilt top, $3.00 per set; half polished calf, $7.50; half morocco, $7.50.—*Special edition*, with sixteen French photogravures in various tints. Cloth, gilt, $6.00; three-quarters English calf, gilt top, $10.00; silk and vellum, gilt top, $10.00.

King Arthur and the Knights of the Round Table A modernized version of the Morte Da thur. By CHARLES MORRIS, author of "Half Hours with the Best American Authors," etc.

The Morte Darthur is a collection of some of the earliest legends of Celtic Britain the romantic and chivalric deeds of King Arthur and his knights have been the inspiration of many masterpieces of literature, which in the form Mr. Morris has supplied make a most charming collection of romantic stories that old or young may enjoy.

Three volumes. 16mo. Half cloth, gilt top, $2.25; half calf or half morocco, $6.00.

Where Meadows Meet the Sea A collection of Sea Songs and pastorals. With illustrations by F. F. ENGLISH. Edited by HARRISON S. MORRIS.

Not only have the works of the older school of poets—the Brownings, Longfellow, Swinburne, Tennyson, Shelley, Keats, and Walt Whitman—been laid under contribution, but specimen poems have been taken from the poets of the younger circle, embracing Rudyard Kipling, Charles Henry Luders, John Arthur Henry, Richard Watson Gilder, and others. The selection is fresh and altogether new.

One volume. Crown 8vo. Cloth extra, gilt edges, $2.50; half morocco, gilt top, rough edges, $4.00; three-quarters calf, gilt top, $5.00.

Yvernelle: A LEGEND OF FEUDAL FRANCE. By FRANK NORRIS. Illustrated by Eleven Full-page Photogravures, three of which are in colors, from drawings by CHURCH, DEWEY, DIELMAN, GARRETT, HINTON, LOW, and SHERLAW; also, numerous Engravings after modellings by BOYLE and MAENE, and designs by BISSEGGER.

Square 8vo. Handsomely bound in cloth, gilt top, $3.50; full morocco, $5.00.

The Little Ladies. By HELEN MILMAN. A delightful book for children, with attractive illustrations. Small 4to. Cloth, $1.50.

Our Bessie. *Averil.* Two delightful stories for girls from the pen of ROSA NOUCHETTE CAREY, published uniform with "Esther," "Aunt Diana," and "Merle's Crusade," by the same author.

Illustrated. 2 vols. 12mo. Cloth, $1.25 per volume. Sets of Miss Carey's books for girls. "Esther," "Aunt Diana," "Merle's Crusade," "Our Bessie," "Averil" (five volumes), in box, $6.25.

PRESCOTT'S WORKS.

Complete and authorized editions, with notes by JOHN FOSTER KIRK.

Special Illustrated Editions.

HISTORY OF THE REIGN OF FERDINAND AND ISABELLA THE CATHOLIC.

Containing all the Steel Plates on India paper and Maps that have appeared in former editions. With Thirty Phototype Illustrations. Large type, printed on fine paper, and neatly bound. Two volumes. 8vo. Half morocco, gilt top, $10.00 net.

HISTORY OF THE CONQUEST OF MEXICO.

With a life of the conqueror, Fernando Cortez, and a view of the Ancient Mexican civilization. By W. H. PRESCOTT. Containing all the Steel Plates on India paper and Maps that have appeared in former editions. With Thirty Phototype Illustrations. Large type, on fine paper, neatly bound. Two volumes. 8vo. Half morocco, gilt top, $10.00.

The Nation.

NEW YORK, THURSDAY, DECEMBER 3, 1891.

The Week.

THE latest "health bulletin" upon Mr. Blaine's condition is sufficiently explicit, both in its contents and in the circumstances of its publication, to command the thoughtful attention of President Harrison. According to the Philadelphia *Press*, which publishes the bulletin, Mr. Blaine visited Philadelphia on Friday last for the express purpose of having himself examined with a view to ascertaining his ability to withstand the strain of another Presidential campaign. "A close friend of the Secretary," says the *Press* of Monday, "said yesterday that Mr. Blaine hesitated in his candidacy, and was seriously counting the cost to his health, knowing the arduous character of such a contest, and doubting whether he was physically able to stand the strain. These doubts, it is said, were removed by what his physician told him." The bulletin, which has been published all over the United States, gives us what his physician told him. In brief it was that Mr. Blaine is a "well man; for his years he is sturdy," and "he will be even better in six months from now." The Republican National Convention will meet just six months and four days from this time, so he will be in his best condition at the very moment when the delegates are assembling. The physician goes on to say that there is no doubt in his mind that "Mr. Blaine's health is excellent," that he has made it so by the "exercise of common sense, not medicines"; that at Bar Harbor "he went out riding so far per day, walked a certain distance, and played hand-ball a fixed length of time"; and that a couple of weeks ago Mr. Blaine wrote to him saying that he "walked two miles every day," and "very often a mile at a stretch." Finally, when the physician examined him, Mr. Blaine pulled up his right arm and the physician "felt his muscles." "They were good and large."

Simultaneously with the publication of this bulletin, there appears another publication, distributed likewise throughout the country, saying that Mr. Blaine wrote both the New Orleans and the Bering Sea correspondence with his own hand. This will be interesting news to the President's son, who has informed the country on several occasions that his father is entitled to the credit of both these diplomatic achievements. Simultaneously, also, with the bulletin appears a statement from Syracuse that James J. Belden, who "doesn't stir round for nothing," has started a Blaine club in that city, and has been attacked by the editor of the Syracuse *Journal*, whom President Harrison made Postmaster, for dragging thereby the "great name of James G. Blaine, the peerless statesman and foremost American of his age, in the mire of dirty politics." The editor-postmaster makes the following among other assertions: "James G. Blaine is always a Republican. He has no sympathy for treachery in the party which he honors and which has honored him. He never took office from it to turn upon its candidates and attempt to defeat them in an election. He is a leader of Republicans — never sulking, never taking mean revenges. It is scarcely less than profanation to take his name for use by political thugs and sluggers in a campaign of personal revenges and partisan reprisals." Has the editor-postmaster forgotten the letter which Mr. Blaine wrote to Mr. Richard Harrington in the Folger campaign? That letter was dated October 20, 1882, and in it Mr. Blaine said: "For the remainder of this campaign, Republicans everywhere should bend their energies to securing a majority in the next House of Representatives. *Whatever causes of just discontent may exist with State nominations, unfairly and injuriously thrust upon the party, and whatever means may be taken to resent such wrongs and repel such indignities*, it is evidently the duty of all true Republicans to use every honorable effort to hold control of the popular branch of Congress." Does not the editor-postmaster remember that that letter was the Blaine signal to "put a knife" into Folger, and that it was obeyed so well that Mr. Cleveland had a majority of 192,000?

Gov. Hill's fight for the control of the Legislature grows in intensity every day, and is leading him into performances which are remarkable even for him. When the Supreme Court in Onondaga County began on Monday to consider the responses of the election inspectors who had been ordered to recanvass the returns of the Second Assembly District, and correct the errors they had made in spelling the name of the Republican candidate, it was discovered that the inspectors had taken no action, for various reasons. One reason was, that a Democratic Supervisor, or member of the County Canvassing Board, had departed for parts unknown with some of the incorrect returns in his pocket. Another reason was, that other of the incorrect returns were in Albany, having been taken there on the order of the Governor, to be used in a hearing which he was conducting in regard to the conduct of the Republican Clerk of the Canvassing Board who had refused to sign the certificate which the Democratic majority had ordered to be issued to the Democratic candidate. Justice Kennedy, who might be a good deal more temperate in his observations than he is, denounced the runaway Supervisor and the Governor in equally vigorous terms, and it cannot be denied that the two are placed before the public in about the same degree of unfavorable light, since neither of them has any business to be meddling with the returns while they are still under consideration by the Canvassing Board. The Governor's conduct at the hearing of the clerk was about as partisan as it could be, he so far forgetting himself at one point as to tell the clerk, who sought to say a word in his own defence: "You shut up! You have nothing to say here."

The most surprising act of the Governor, however, has been the convening of an extraordinary special term of the Supreme Court at Syracuse, and the designation of Morgan J. O'Brien of this city to preside over it. It is generally believed that he has taken this step in order, as his organs in the press put it, "to checkmate" Justice Kennedy. We shall be greatly surprised if Justice O'Brien allows himself to be used for any such purpose as this implies. The spectacle of the Governor of the State setting up a branch of the Supreme Court to checkmate the decisions of the regular branch, because they interfere with his plans for capturing the Legislature, is a public scandal of the first magnitude. It may be that there is other court business which impels to the step, but the Governor's friends do not make that excuse for it. The worst feature of the Governor's side of the Onondaga contest is that all his efforts, in and out of the courts, are bent on preventing a revision of the returns by the inspectors for the correction of their own blunders. He thus admits that a fair count would show that the Republican candidate was fairly elected. He is in a similar position in the other contested cases.

Senator Carlisle has written a letter to Mr. John DeWitt Warner on the subject of the Speakership, disabusing the minds of such as may read it of the conception that Mr. Mills is a man of infirmities of temper which would unfit him for the Speakership. Having disposed of this matter, Mr. Carlisle adverts to another of even greater interest, *i. e.*, the policy of the Democrats in Congress on the silver question. Upon this point the Senator from Kentucky holds very sound views. He says that the Democratic party is united on the tariff question, but divided on the silver question. "Why shall we," he asks, "on the eve of a great national contest, when victory is almost within our grasp, abandon or ignore a vital issue, upon which we are united, and waste our strength in a fruitless controversy among ourselves over questions which can be better adjusted after it has been determined what part of their earnings the people shall be permitted to keep?" The importance of this deliverance by Mr. Carlisle can hardly be overestimated when we consider the commanding position he holds in the party, having been thrice Speaker of the House,

and representing a free-coinage State in the national Senate. It is not to be supposed that Mr. Carlisle wrote these words without due consultation and due understanding. We look upon his letter as very nearly equivalent to a guarantee that no free-coinage bill will pass Congress during the coming session.

Senator Pugh of Alabama has written a very unwise and schismatic letter on the silver question in reply to Senator Carlisle. We call this letter schismatic for two reasons: first, because it tends to divide the Democratic party into two factions to be beaten in detail by their common enemy, the Republican party; (2) because it proposes to introduce a new plank in the platform of the Democratic party in advance of the meeting of the National Convention. The last convention, the one which met at St. Louis on the 7th of June, 1888, did not pass any resolution on the silver question, but it did endorse the financial policy of the Cleveland Administration as "wise and conservative." It declared that that policy had "not only averted disaster, but greatly promoted the prosperity of the people." We all know what that policy was touching the silver question. It was diametrically opposed to the policy which Senator Pugh advocates, and which he now wants to thrust into the platform in advance of the meeting of the Convention. We have little fear that the party in Congress will go ahead of the Convention and run down a steep place into the sea, but if it does so, its fate will be sealed as surely as was that of the Ohio Democrats when they put free coinage into their platform. If free coinage would not win in Ohio this year, what is the chance of its winning in any Northern State next year?

Senator Pugh cannot take leave of the subject in hand without a fling at "Wall Street." This is the usual mark of the demagogue in financial matters. Wall Street happens to be the most convenient place for settling the balance of trade of the country—that of Alabama as well as that of California and of Maine. It may not always be so, but it is so now, and thus it comes about that money accumulates there in the shape of bankers' balances. Now the accumulation of money anywhere is a good target for demagogues. It is of no consequence who owns it. It is of no consequence if all the people of the United States who own anything beyond the clothes on their backs have some share of this money or some interest in it. It is "Wall Street" just the same—a terrible monster and an object of loathing and horror to Congressmen of a certain type. What Mr. Pugh's type is we can judge from a sample of his legislation on the statute-book. Some years ago there was a bill pending in the Senate to extend the National Bank Act—the original act being about to expire by limitation. This was a fine chance for somebody to do some harm to the system, and Mr. Pugh embraced it. He offered an amendment providing that no bank should be a member of a clearing-house where silver certificates were not received in settlement of balances. Silver certificates are not legal tender. The Government has nothing to do with clearing-houses any more than it has with any kind of labor-saving machine. A clearing-house is a contrivance for swapping checks. The banks meet in a common place for this purpose, instead of each one sending a messenger to all the others to collect what is due to it, at the risk of being robbed on the street. Mr. Pugh's amendment, therefore, provided in effect that unless national banks would accept something which was not legal tender in the payment of balances among themselves, they should be required to send messengers daily through the streets with piles of money at the risk of being robbed. Strange to say, this amendment was actually adopted by a wise Senate, and is now on the statute-book. It is worthless and nugatory, however, for all purposes, because it did not provide that the banks should *pay* silver certificates to each other as well as receive them.

There are not many "morals" to be drawn from the full official figures of the recent election in this State. Mr. Sheehan, the Democratic candidate for Lieutenant Governor, ran 6,882 votes behind Mr. Flower; and Mr. Vrooman, the Republican candidate for the same office, ran 6,621 votes ahead of Mr. Fassett. The total vote of all parties for Governor was 1,161,853, against 1,317,263 for Governor in 1888, and 1,026,239 for Governor in 1885. Mr. Flower's total vote is over 81,000 greater than that cast for Hill in 1885, and Mr. Fassett's is over 43,000 greater than that cast for Davenport in the same year. In comparison with the vote for Governor in the Presidential year of 1888, Mr. Flower has over 67,000 less votes than Hill received, and Mr. Fassett has over 97,000 less than Warner Miller received, though Miller received in that election over 19,000 less votes than Harrison. A curious revelation of this year's returns is the total for the Prohibition candidate for Governor, namely, 30,353, against 30,231 in 1888, and 30,867 in 1885.

The official canvass of the Massachusetts election shows a total vote for Governor this month of 321,673. This is a poll without precedent in the record of State elections, the only approach to it being the 312,357 votes in the year when Butler was beaten for reëlection. In 1889 the total was but 263,047, and in 1890, when Congressmen also were elected, it rose no higher than 285 526. Last month's contest brought out within 23,000 of the Presidential vote of 344,448 in 1888, and the result thus in every aspect records the most impressive verdict ever rendered by the voters of the State in such an election. The Republican State ticket below its head received votes rising from 150,697 on the Auditorship to 157,216 for the very popular candidate for Lieutenant Governor. The Democratic nominee for the latter office had 145,865, which appears to represent the normal strength of his party, so that on the purely partisan issue the Republicans ought to have elected the Governor by over 11,000 plurality. Gov. Russell received 157,982, which was 12,000 more than the regular Democratic vote, and 6,467 more than his Republican opponent. Apparently about two thousand of the extra 12,000 came from the People's party, which polled only 1,772 for its candidate for Governor, but ran up its vote for Secretary of State to 3,729. Another thousand came from the Socialist Labor party, which cast 2,525 for Auditor, but only 1,429 for Governor. About fifteen hundred more seem to have voted for some of the minor candidates on the Prohibition ticket, but to have supported Russell for Governor. The remainder of his lead, somewhere between 8,000 and 9,000, represents Republicans who stood by their party on the rest of the ticket, but proved their independence by voting for the other party's man for Governor, on the simple ground that he was better qualified to fill the office.

When the Postmaster-General advertised for bids under the Mail-Subsidy Law, he laid out a roseate programme with his sixty-two routes, several of them transatlantic and others calling for the establishment of new lines to South America and different parts of the known and unknown world. At the time the bids were opened, on October 26, it was found that but eleven routes were bid upon. Of these, four called for the opening of new lines. It now appears, however, that two of the four showed some "irregularities" in the bids, and had to be rejected, namely: the Boston-Liverpool route, upon which the "Columbia Safety Steamship Company" was to put a fleet of first-class vessels earning $4 a mile from the Government, and the New Orleans-Colon route, for which the Pacific Mail Company put in a bid. That modest organization seems to have withdrawn this bid, apparently for fear that the new law might be brought into discredit if a clear majority of all the contracts should turn up in its hands. As it is, it has four routes out of the nine upon which bids were accepted. Three of the others go to companies having established lines, upon which they will not need to put a single new ship or other improvement, and for operating which precisely as they do now they are to get a bounty from the Government with no service rendered therefor. Some second-class ships are to begin running between New York and Buenos Ayres on December 1, 1894, provided nothing happens in the meantime to discourage the contractor. He has a route upon which an experienced steamship president has said that the *Augusta Victoria* could not comply with the conditions of speed, yet he proposes to undertake the job with second-class steamers. The other new vessels to be built under the law are all fourth-class. We do not wonder that the great subsidy advocate, the *Tribune*, took two days to comment upon

this result of its famous policy—nine routes, of which the Pacific Mail Steamship Company, of odorous memory, gets four!

A year or two ago, when McKinleyism was rather more aggressive than it is now, we were told that the increased tax on this or that article would amount to only three cents per head of the people of the United States. The people, however, decided, so far as they have been able yet to decide, that they would rather keep the three cents themselves. And now the organ of the Manufacturers' Club in Philadelphia, playing a variation on the tune, tells us that the sugar bounty will be only $9,000,000 this year, whereas the receipts from the tax on beer will be $28,000,000. In other words, the beer tax will pay the sugar bounty and leave $19,000,000 to the good. Again it says that the tobacco tax will yield $33,000,000, or enough to pay the sugar bounty three and a-half times. Contemplating the internal revenue as a gift enterprise, it says that the sum so collected will pay all the pensions and the sugar bounty, and leave a remainder of $15,000,000. This is a most dangerous suggestion, since it notifies all the people of the United States who are willing to take a bounty, where it may be obtained. Think of fifteen millions of unclaimed money! It is like the estates in the Bank of England that are awaiting heirs from the Smiths, Halls, and Joneses whose progenitors emigrated to America in the time of Charles I.

The Boston *Journal of Commerce* has taken pains to get at the bottom facts regarding the recent reduction of wages in the iron works of Jones & Laughlin of Pittsburgh. Several contradictory stories have been in circulation regarding this matter. Mr. Jones is the ex-Chairman of the Republican National Committee, having been the immediate predecessor of Quay in that position. Consequently, many Republican papers have been unwilling to believe that wages had been reduced by his firm. It was almost as bad as the bankruptcy of the Chairman of the American Protective Tariff League soon after the passage of the McKinley Bill. The Boston newspaper says that, in consequence of the conflicting stories, it "took occasion to ascertain the facts from an entirely reliable source, and outside of the firm." The finding is as follows:

"On Thursday, November 5, an order went into effect which affected the wages of several hundred men employed as laborers, but the change was not absolute as regards a reduction in pay. In all, about 1,200 men were included; all are now required to work ten hours per day, instead of nine as formerly. Some had their wages reduced from $1.50 to $1.35 per day, but not the entire 1,200 laborers. The virtual decrease made by the added working time affects, perhaps, 400 more. In those cases where no extra working time was added the pay was cut, and in several departments both changes were made."

We advise that this paragraph be clipped out and collated with some dozens, or scores, or hundreds of other like testimonials to the advantages reaped by labor from the McKinley Bill.

"G. W. S." writes to the *Tribune* that somebody of the name of Curtice Bond has been casting aspersions on the fair fame of Mr. Blaine by a Dalziel telegram to the London press. "G. W. S." has had a conversation on this subject with "a person in authority" named X—he seldom has intercourse with persons of lower grade. The narrative, as he gives it, proceeds in this way:

"You will not have forgotten one shameless attack on Mr. Blaine which was sent over here by Dalziel's New York agency; one for which Mr. Curtice Bond assumed the responsibility in his character of Mr. Blaine's friend. On the morning when it was published in the *Times* I said to a person in authority, who must have read the despatch:

"'Look here, X. Suppose I should cable to New York that Lord Salisbury had a partner in the sealing business in Bering Sea, and that he was preventing a settlement and sacrificing his country to his partner, and for the sake of his own share in the plunder, what would you say?'

"'What on earth do you mean?'

"'I mean that that is exactly what Mr. Blaine is accused of in the Dalziel despatch from New York in this morning's *Times*.'

"He reflected a moment, and answered:

"'Well, it is a shame. I never looked at it in that light before.'

"By which I understood him to mean that so long as the calumny affected Mr. Blaine only, it never struck him as a calumny; apply it to Lord Salisbury, and the infamy of the charge, and of him who made it, became apparent at once."

Yes, but suppose he had cabled to New York that Lord Salisbury had written a letter to a person applying for a Government charter, or land grant, or favor of some sort, saying: "I will not be a deadhead in this enterprise. Kind regards to Mrs. Fisher." The effect of this kind of a cablegram would have been serious, because Lord Salisbury is not suspected of writing that kind of letters. With Mr. Blaine the case is different, and therefore cablegrams of this kind occasion no surprise, and few people take pains to ask whether they are true or not.

Some doubt appears to exist as to the provisions of the Brazilian Constitution in regard to filling the Presidency in case of a vacancy such as has just occurred, even the Brazilian Minister in Washington not being able last week to enlighten a newspaper correspondent on the subject. Article 41, section 1, of the Constitution of Brazil declares that the Vice-President, "elected simultaneously with the President, shall serve in place of the latter in case of impediment, and succeed him in case of vacancy in the Presidency." But article 42 adds: "In case of vacancy from any cause in the Presidency or Vice-Presidency before the expiration of the first two years of the Presidential term, a new election shall be held." As Fonseca's term had not yet covered a single year, it is clear that Vice-President Peixoto can succeed him only temporarily. The regular date for Presidential elections is March 1, and it may be that a new choice will be made then. The Congress, at the time of its dissolution, was engaged upon legislation carrying out the provisions of the Constitution relating to the Presidency, but had enacted no measure which would direct in the present emergency. Much depends, therefore, upon the kind of man Peixoto turns out to be. Congress has been reconvened by him, and the whole question of the succession may be settled this month in an orderly and lawful manner. Everything now promises a continuance of the republican form of government, though, for Brazil, it must be a *form* in a double sense for a long time to come.

Our esteemed contemporary, the *Brazilian Republic*, favored us with thirty-five copies of its issue of September 19, and a like number of its issue of September 26. We were somewhat at a loss to account for such a generous remembrance until we came upon the following editorial admission:

"We have a contract with the Brazilian Government, in virtue of which we send to Europe 1,000 copies, 1,000 to the United States and Canada, and 1,000 more we are distributing in Brazil. The amounts paid? That is our business. The objects sought? To spread the clear light of truth, etc."

After that there can be no question of the editor's entire sincerity and disinterestedness when he proceeds to sing the praises of "the best of Brazilian statesmen." He refers to the man who had given him his contract, Baron Lucena, who has since accompanied Fonseca to retirement. We fear that the contract is now in danger of cancellation, and that we shall have to get along, in the future, with a single copy of our unpurchasable contemporary.

The acute financial embarrassment of the Spanish Government is somewhat difficult to account for in view of the prosperous condition of Spain's foreign trade as revealed in the returns for 1890, just published. The exports reached a value of $187,551,976, a gain of $10,180,000 over those of 1889, and the imports amounted to $189,427,585, an increase of $14,965,260. The preceding year, moreover, showed a considerable advance over the results attained in recent years, so that the last year ought to represent a high degree of prosperity; and, as the national revenues are largely derived from customs duties, the embarrassment of the Treasury seems singular. If the public declarations of an ex-Minister are to be believed, the explanation is to be found in the extraordinary incompetence and dishonesty of the civil service. The Government ought to have a sufficient revenue from the existing laws of taxation, he asserts, but too much of the money collected from the taxpayers never enters the Treasury. We cannot enter into the arguments which the ex-Minister advances, except to say that the charge of incompetence is universally admitted, and to such a degree that it comes to about the same thing as dishonesty. That is to say, the spoils system, which has full swing in Spain, loads so many men upon the civil service whose only claim is partisan activity, that the whole service is thoroughly demoralized.

HOW RECIPROCITY WAS SET GOING.

THE evidence which we presented a fortnight ago to show that the reciprocity agreement with Brazil was dishonorably obtained by Mr. Blaine, has gone uncontradicted. That neither he nor Mr. Mendonça has denied the fact, although the latter at least, as we know, has been asked to deny it, is an added and strong proof that the charges recite the truth. But it has been said that there is an antecedent absurdity in supposing that Mr. Blaine could have promised to shut out Cuban sugar from the free market accorded the Brazilian product, in view of the fact that the Aldrich amendment to the McKinley Bill made the offer of reciprocity to all countries. Thus Gen. J. W. Foster was reported as saying: "No person or government having a knowledge of the law of Congress under which the negotiations were carried on, could have been misled by any such alleged promise. The third section of the Tariff Act is an offer to all countries," etc. The Boston *Journal* has said that this statement of the case makes the charge against Mr. Blaine "ridiculous." It may be well, therefore, to review the history of the reciprocity clause and its working, in order to show that Mr. Blaine was in desperate need of getting some country to appear to accept that legislation seriously, and so to have an example to hold up before the others.

Going back to the fall of 1889, we find Mr. Blaine negotiating a genuine reciprocity treaty with Brazil. Commissioners from that country were in Washington, on the invitation of our Government, empowered to offer certain concessions, and were ready to accept Mr. Blaine's offer of free sugar as a sufficient equivalent. No secrecy was affected about this, and, indeed, during the Senate debates on the reciprocity clause it was distinctly stated as an objection to making sugar free that it would upset the treaty which Mr. Blaine and the Brazilians were on the point of signing. Before that, as is well known, Mr. Blaine had cast all his influence against free sugar in the House; and his fierce denunciation of the McKinley Bill, with the famous hat-smashing episode in the presence of the Senate Committee on Finance, were the direct result of his disappointment at the loss of his sole available material for a treaty.

Then came the reciprocity manœuvres in the Senate. McKinley in the House had argued for free sugar solely on the ground of revenue reduction; the Aldrich amendment coolly asserted that sugar was made free "with a view to secure reciprocal trade." This did not suit Mr. Blaine any better. His ideas were brought out unmistakably in his letter to Senator Frye, and more especially in the amendment and remarks of Senator Hale, offered as they were, without any concealment, in the name of the Secretary. What the latter wanted was the restoration of sugar to the dutiable list, with the proviso that the President should be authorized, "without any further legislation, to declare the ports of the United States free and open to all products of any nation of the American hemisphere, whenever and so long as such nation" should give free entry to certain exports of the United States.

This was a fair and reasonable basis of reciprocity. We would call attention, however, to the fact that Mr. Blaine intended to exclude Cuba as well as Canada from its operation. In his letter to the President, transmitted by the latter to the Senate, he took pains to speak of the countries represented in the Pan-American Congress, and the *nations* of the American hemisphere, as the sole ones with which he wished to secure reciprocity. The peculiar phraseology he employed, as also that of the Hale amendment, was commented upon in the Senate, and it was admitted that it was intended to shut out Cuba and Canada. Neither of those countries sent delegates to the Pan-American Congress, and neither of them is an independent nation. This is a point which those would do well to remember who now assert that it would have been preposterous for Mr. Blaine to hold out the idea to the Brazilians that he would favor their sugar and shut out the Cuban product. He certainly intended to do that in the beginning, however his conduct may have been shaped by circumstances subsequently.

But the Senate rejected Mr. Blaine's plan and accepted the Aldrich amendment. It did this in the face of Senator Evarts's unanswerable argument against its constitutionality, and with the unconcealed idea that it would be taken as so much buncombe, and would never have any practical effect. Thus, Senator Hoar expressed the general sentiment on the Republican side when he said, after tacitly admitting that the Aldrich amendment was unconstitutional: "I regard the amendment . . . rather as a declaration of purpose than as a definition of legislative policies and enactments." The House finally accepted the amendment, with Speaker Reed's cynical remarks about it as the best indication of the spirit in which the action was taken. It was regarded as a harmless bit of sentiment, which might serve its purpose in the canvass, and then would never be heard of any more. The Brazilian negotiators themselves had declared that if Congress made sugar free, they should have nothing more to ask of this country, and so there would be no basis for a treaty. That the President would ever exercise the unconstitutional power voted him in the Aldrich amendment was universally regarded as out of the question, especially after the overwhelming Republican defeat in November, 1890.

These, then, were the circumstances under which Mr. Blaine set about securing a reciprocity agreement with Brazil. The representatives of that country had said there was no longer room for a treaty; they had already received from this country the last favor they could ask. Yet it was not long before they were recommending a treaty to their home Government, and doing it, so four ex-members of that Government assert, because Mr. Blaine had assured them that he would secure free sugar for them and refuse it to Cuba. Without some such promise, their action is wholly unintelligible. On Mr. Blaine's part there was need of some such way of getting reciprocity started, if the whole thing was not to flash in the pan. With one country accepting it, he could persuade or bully others into doing so, and, in fact, as soon as the Brazilian agreement was made public, the joyful *Tribune* hailed it as the means of exerting "powerful pressure" upon other countries. Thus, far from there being an antecedent absurdity in the Secretary's promise to Brazil, we have shown that no other hypothesis so well explains the facts—this, be it remembered, apart from the positive evidence which we have advanced to show that there was such a promise, and which, as we said above, has gone uncontradicted.

GOV. RUSSELL ON THE MASSACHUSETTS ELECTION.

THERE is no political leader who is surer of a hearing than the young man who was re-elected Governor of Massachusetts three weeks ago, after a most exciting canvass and on the largest vote ever cast there in a State election. There is no subject, too, about which the public would rather have his views than the significance of this very election, upon which Gov. Russell contributes an article to the December number of the *Forum*.

The Governor begins with a reference to the contest of 1890, when, for the first time since the war, the Democrats elected a majority of the Congressmen and a Democratic Governor, after a campaign which was "chiefly directed against the McKinley Bill." He recounts the desperate efforts made by the Republicans ever since his inauguration last January "to redeem Massachusetts," telling how they made their organization more thorough and efficient than ever before, formed a State club and local clubs, opened their campaign a fortnight before the Democrats, covertly appealed to race and religious prejudice, put the Collector of Boston and other Federal officials upon the stump, held more campaign meetings than had ever been known even in a Presidential year, and, in short, made a "supreme effort" to win. They had always claimed that the result in 1890 was a snap judgment upon a small vote, and that a full poll would restore the old Republican majority; but, although the total proved to be 36,000 larger than in 1890, the Democratic Governor was reëlected by a plurality but little diminished.

The importance of this result, in Gov. Russell's opinion, arises from the fact that the Republican leaders made their campaign chiefly upon national issues. "They declared from every stump that the electoral vote of Massachusetts would be in danger in 1892 if a Democratic Governor were re-elected in 1891." The Democrats were glad to meet them on this line. National issues were aggressively raised in their platform; such Congressional leaders as Mills, McMillin, and Springer took the stump; the tariff issue was kept at the front, and the McKinley

Bill was made the subject of constant attack. "Democratic success was won in Massachusetts last year upon this issue, and victory was again achieved this year largely upon the same ground."

Gov. Russell shows how the Democrats put the Republicans upon the defensive on the silver question, by adopting a platform which placed the party definitely and aggressively in favor of a sound currency and in opposition to the dangerous law passed by the last Republican Congress. While not claiming that the silver question was important enough to affect the result materially, Gov. Russell thinks that the attitude of the Democrats towards it helped the party to achieve its victory. But the main element was the growth of tariff-reform sentiment. The Democrats declared for the repeal of all provisions in the McKinley Bill which raise duties, and also for the repeal of all taxes upon food, fuel, fibres, ores, and crude or partly manufactured materials necessary in the processes of the State's domestic industries. Nearly the whole iron industry of Massachusetts, and a large section of the wool manufacturing industry, have been brought by the pressure of business interests to adopt this position in favor of free raw materials, and the Democrats thus appealed to a community which was in a mood to hear their arguments with candor. Upon the significance of the election as affecting this issue, Gov. Russell quotes in his article from his speech delivered in Faneuil Hall on the day before the election, in confident anticipation of the result actually reached: "It means, first, that Massachusetts adheres to her demand of last year for free raw materials, for the benefit of her industries and her people. It means that she demands that her sons—first, last, and always—shall stand for her rather than for Ohio or Pennsylvania, and that she stands behind those sons who have stood true to her. It means that she is willing to take her chance in any fair competition, but she demands that in that competition her hands shall not be tied. She objects to a policy that would destroy her natural advantages; she protests against law holding the knife that would cut the throat of any of her industries. True to her history and her traditions, true to the great agitations that she has led for human rights, for freedom and equality, she protests against unequal and unjust taxation."

Gov. Russell's remarks as to the prospects of the Massachusetts Democracy in the future will be read with lively interest. He points out that the recent growth of the party dates from the Presidential election of 1884, when "a large body of independent voters, including many of the most distinguished and influential men in the State, left the Republican party." Since then these voters have been gradually becoming more closely attached to the Democratic party, until he thinks that to-day nearly all of them are in its ranks. Cleveland's Administration did much to strengthen his party in the State and to give it the support of the business community. The Governor concludes:

"It cannot be claimed that Massachusetts can yet be counted as a Democratic State, whatever she may become in the immediate future; but the two last elections have shown that she is a State where the balance of power is held by a body of independent voters whose political action is guided by principle, and who are firm supporters of tariff reform. The Democratic party of Massachusetts cannot hold out to the national Democracy any strong prospect of securing the electoral vote of Massachusetts next year for any candidates, or for any policies, which cannot command this support; but these voters have now every inclination to continue to give their support to the Democratic cause, and a reasonable course on the part of the national Democracy will probably make Massachusetts a Democratic State in 1892. In order to attain this end, it is of paramount importance that the tariff question should be kept at the front in the next Congress, and that it should be made the one great issue of the Presidential campaign. If the Democratic party should commit itself—as fortunately there is now very little chance that it will—to the free coinage of silver, it must be frankly acknowledged that the Democratic ticket would have little chance of success in New England in 1892, whatever might be its prospects elsewhere. We have shown in Massachusetts that we can hold what we have won upon a vote 32,000 larger than that of last year [the official count makes it 36,000 larger]. The Democracy of this State is united and aggressive, and under favorable conditions it believes that it can again hold its own upon the yet larger vote which will be cast in the Presidential year. It only asks of the national Democracy a fair opportunity to make this contest."

This is the sort of talk which must have effect, for it comes, not from a "doctrinaire" or "theorist," but from a politician who has just won one of the greatest victories in recent political history. There is no more "practical man" extant than one who can not only carry a State long controlled by the opposite party, when the "tidal wave" runs his way, but can do it over again a year later, in face of unexampled opposition. What politicians always want to find out is how to carry elections. Gov. Russell has shown that he knows the way.

THE SILVER SITUATION.

Some little interest has been infused into the silver discussion by Mr. J. Edward Simmons's suggestion in the columns of the *Evening Post* that the Secretary of the Treasury be invested with power to sell silver bullion as well as to buy it, in order to replenish his gold resources. Secretary Foster, in his speech at the Chamber of Commerce dinner, had declared that he had the right, under existing law, to sell bonds bearing interest as high as 5 per cent., in order to replenish his stock of gold, if necessary. He had also affirmed that it was his duty to do so whenever that contingency should arrive. "Why not sell some of the silver?" asks Mr. Simmons.

The same question came into the mind of the late Secretary Windom, when he was wrestling with the silver problem soon after the Harrison Administration came into power. Mr. Windom saw that something evil would grow out of that clause in the Republican platform which condemned the Cleveland Administration for its unfriendliness to silver. So he began very early to "start a back fire." One of his plans was that the Government should buy silver and issue notes on it, and then sell the silver to redeem the notes on presentation, or at least to retain the option to sell it. But this did not please the silver-men. The silver-miners saw that if this plan were carried into effect, the Government would cease to be a buyer of any *net* amount of their product. The Treasury would be like a warehouse which buys wheat at some times and sells it at other times, really exercising no influence on the market. The silver-producers would lose their special favors, and be relegated to the condition of the producers of other things. The silver-men who are not miners, but who call themselves "the debtor class," or claim to represent that class, opposed the selling of any silver because that would tend to prevent depreciation of the standard of value. What they wanted was a cheaper dollar—a seventy-cent dollar or something lower—and they knew it would be impossible to get this if the Secretary had the power to sell silver for gold in order to redeem his Treasury notes. So Mr. Windom's plan fell through. Nevertheless, there is a good deal of virtue in it, and we shall hope to hear more about it by and by.

The silver situation is one which can not last. The purchase of seven tons of bullion per day to be stored in dark places is too great a strain upon the Treasury, and is becoming too grotesque for the public sense of humor. Secretary Foster has his eye fixed on Europe, and is looking anxiously for signs of relief from that quarter, in the shape of a new bimetallic conference. Mr. Jesse Seligman has been cruising around with a quasi-diplomatic mission to bring the Continental Powers into the movement. Somewhat earlier another gentleman visited England for the same purpose. A cable telegram the other day said that Mr. Seligman had had an interview with M. Ribot, the French Minister of Foreign Affairs, and that the latter had said that, while he sympathized with Mr. Seligman's views, France could not take the initiative in calling a new conference, and that Mr. Seligman had thereupon gone to Egypt to spend the winter. In the convenient company of the Sphinx that amiable gentleman may learn quite as much about the future of bimetallism as from all the cabinets of Europe.

It is the common opinion now that Congress will do nothing with silver this winter. This opinion is grounded upon the triumphant success of the Democrats in New York and Massachusetts on anti-silver platforms, and their humiliating defeat in Ohio on a free-coinage platform. If Congress does nothing, the purchase of seven tons of bullion per day will go on until the Treasury breaks down under the strain and the Secretary begins to sell bonds to replenish his gold balance. It would be a mistake to suppose, however, that the silver extremists will remain quiet. They see the danger that awaits them when bond-selling becomes necessary. That would mean that the people of the United States were borrowing money in order to pay silver-miners a higher price for their work than the market affords. There are few persons so squint-eyed that they cannot see this when the bond-selling begins. Naturally, in such a case many would join Mr. Simmons in asking, "Why not sell the silver instead of selling bonds"?

This danger, this rock ahead, is clearly perceived by the silverites, and they will try to avoid it by a change in the present law, if they cannot do more. The first change they will ask will be an amendment to compel the coining of all the bullion bought by the Government, because bullion can be more easily sold than coin. The public would see good reasons for selling bullion when they would not see reasons for selling coin. To get the daily quota of seven tons of bullion into the form of standard dollars will be the first push of the silver crowd if they are not strong enough to pass a free-coinage bill. Very likely they will try also to repeal the clause which declares it to be the purpose of the Government to keep the different kinds of money at par with each other. If they do this, they will proclaim their own intention to depreciate the standard of value and to demonetize gold. It will be worth something to have this purpose set forth in black and white.

THE PROSPECT IN ENGLAND.

THE English Conservatives have followed the example of the Liberals in getting up a "convention," not for the purpose of nominating candidates, as in this country, but simply to enable the chief men of the party to make speeches and compare views on the party prospects. In other words, the Conservative Convention at Birmingham is an answer to the Liberal Convention at Newcastle. The Conservatives formally join issue with the Liberals, not only on Home Rule, but on the disestablishment of the Anglican Church both in Wales and in England, and, in spite of the past promises of the Ministry, the Convention voted against the bestowal of local government on Ireland. In the opinion of good observers, however, the Irish Local Government Bill foreshadowed by Mr. Balfour will be introduced just the same in the next session, with the hope or expectation that some excuse for dropping it before the dissolution of Parliament will be furnished by Liberal obstruction. If this should come about, the Ministry would be able to go to the country at the general election with the cry that they had tried to give the Irish all the management of their own affairs that was good for them, but were prevented by the Liberal-Irish coalition. If on this the Conservatives came back to the House with a good majority, probably nothing more would be heard of the scheme. A great many good old-fashioned Tories dislike it, and if it were proved that the Ministry could win without it, it would be definitively laid aside. The Liberals are, however, fully prepared for this programme, and have determined, if Mr. Balfour introduces the bill, not to furnish any excuse for failure to pass it. The secret belief of the leading Tories, from Lord Salisbury down, is that arbitrary rule, to the extent provided by the Coercion Act, is good enough for the Irish, but they are afraid to avow this doctrine to the new democratic constituencies in England.

What is most interesting in the rival platforms of the two parties is the way in which they are trying to outbid each other for the votes of the laborers, especially the agricultural laborers. These until now have been an unknown quantity in electoral calculations. The belief of the Tories when they extended the franchise— one of the pleasing humbugs invented by Beaconsfield—was that the Squire and the Parson, who are natural Conservatives, would be able to control the labor vote in the country districts, so that the new democracy would be "a Tory Democracy," and would stand for Church and King against the wicked Radicals and levellers of the towns. But this is now turning out to be a complete delusion. It is admitted on all hands that the agricultural laborer is, as a voter, in full revolt against his old patrons and guides. It has taken him until now, for he is not quick-witted, to find out that he can vote as he pleases, and there is much reason to believe that the party of his choice, for the present at least, will be the party to which the Squire, the Parson, and the Farmer do *not* belong. Like the negroes of the South after their enfranchisement, he feels that his employers are not to be trusted politically, however kindly his relations with them personally may be. A correspondent of the London *Times* travelling through the country looking up election signs and "straws" had been foreshadowing this for some weeks before the South Moulton election, at which the Conservatives had such a rude awakening, due mainly to the desertion *en masse* of the agricultural laborers.

Accordingly, the great Conservative cry now is that something must be done for "Labor." One proposal is to apply the chief provisions of the latest Irish Land Act to England so as to enable laborers to purchase small holdings with Government aid. Another is to encourage the election of Labor candidates to the House of Commons, provided they are Unionists. Mr. Chamberlain has a scheme of compulsory insurance for sickness and old age, like Bismarck's, and he is trying to persuade the public, amid more or less laughter, that this is what he had in mind when he talked of the "ransom" which property-holders owed to the poor for having kept them out of their own so long. Of course, also, the Birmingham Convention resolved in favor of the establishment of "a labor department," to be presided over by a Minister of the Crown to be termed a "Labor Minister." No political sop for Labor is now complete without some provision for this functionary. What he is to do, or can do, for Labor, nobody ever explains, or indeed knows, but his existence gratifies the workingmen and seems to dignify manual toil in the eyes of the community; besides which, the place is pretty sure to be filled by a laborer. The only service a Labor Department can render or has rendered the laborer anywhere is the collection of information about wages and strikes, as in the instance of our State Commission. More than this the Government cannot do for the laborer without either depriving him of a portion of his individual freedom by enacting such measures as a compulsory eight-hour law, or giving him, or compelling some one else to give him, money which he has not earned. The mischief which all such schemes do, lies in the support they give to that unfortunate superstition of the modern laborer, that the "State" has somewhere a reservoir of wisdom and of cash which it can, if the rich and well-to-do will let it, draw on at any time for a sudden and immense alleviation of the lot of the sons and daughters of toil. That this superstition will not disappear from the modern world without the trial of some very disastrous experiments, is greatly to be feared.

Both of the English parties may now be said to have made their final appeal to the constituencies. Their programmes differ only with regard to the Welsh Church and Home Rule With regard to all other topics they go to the country on their respective reputations for sincerity and real trust in popular capacity and good sense. What the Liberals anticipate from the general election, which will probably take place next spring, is a majority of about ninety, including the Irish. They do not believe they can with this carry a Home Rule Bill without having another dissolution forced on them by the House of Lords, but it will hardly do to dissolve again immediately. They will probably stay in office after a check on this question by the Lords, as they have often done before on other questions, but the delay will tell heavily on their leader. That is to say, the chances increase every day that Home Rule will be achieved, if ever, by other hands than Mr. Gladstone's.

THE CITY OF INITIATIVES.

PALERMO, November 13, 1891.

THIRTY-ONE years ago we left Palermo, literally a heap of ruins, with Garibaldi, for Milazzo. The indomitable islanders who first, in the year of revolutions, 1848, had thrown down the challenge to the Bourbons, "Reform or Revolution," had been crushed, not conquered. For the next ten years they gave their oppressors no peace. No reforms or constitutions would content them now, for they had realized the truth of Mazzini's teaching, that no part of Italy could be free or independent until the whole should be united. When Lombardy was freed by the French and Sardinian armies, and the rulers of Italy bethought themselves only of northern Italy, Sicily determined to "strike the blow" on her own account. Crispi, with a halter round his neck, twice traversed the entire island, promising that if the people took the initiative, their Italian brothers would come to the rescue. They rose in arms and were partly subdued. The conspiracy of the Gancia was discovered, the conspirators executed. Then the bands took to the mountains, and Rosalino Pilo landed in a little fishing-boat, and sent the fiery cross throughout the country with the tidings, "Garibaldi is on the way to rescue." Then Garibaldi landed at Marsala, fought his way up by Calatafimi, dashing in with his red shirts, and Picciotti, crossing the Admiral's Bridge to beard the lion in his den; and all the people rose to welcome him, improvising barricades, defying the troops in the fortresses and in all their positions. Then followed the cruel, useless bombardment, then the surrender, and Palermo in ruins acclaimed the dictator, and at his bid-

ding proclaimed Victor Emanuel King of United Italy, with Rome for capital.

But Garibaldi had the Neapolitan continent yet to free, so that Sicily was left to herself for a time; the flower of her youth of all classes joining him on the continent to free their Neapolitan brothers, from whom they had received little kindness nor, it must be confessed, much gratitude for their services. The Plébiscite confirmed the will of the islanders to form part of united Italy, but for many a long year the moral unification was a desideratum. The Moderate party, who held the reins of government for sixteen years, understood nothing of the nature of the peo le. The Garibaldian leaders were all ex elled; the Sicilians who had taken part in the revolution were looked on as revolutionists pure and simple. The island was filled with soldiery, and the law of conscription, which the Bourbons had never dared to apply, was most harshly enforced. The Bourbon rulers had treated Sicily as a conquered people: no roads, no railroads, no schools; the misery was frightful. The new rulers did nothing for the alleviation of misery or for the amelioration of the economical and social condition of the priest-ridden populations. In 1862, when Garibaldi again landed in Sicily, and made Palermo his headquarters for the campaign to oust the French from Rome, the islanders answered to his call, and for this crime they were made to pay heavily in the following years. Martial law was proclaimed, citizens were shot without trial, the prisons were crowded, the law of suspects was applied without investigation, hundreds were deported to certain places, and in the chief towns civil and military authority was invested in the same person. In 1866, when the law for the sequestration of ecclesiastical property was passed, the religious orders and numbers of their adherents formed a conspiracy which very nearly succeeded; but the dread of destroying unity brought out the best qualities of the people, who rallied round the authorities and saved the city from bloodshed.

The Marquis di Rudini, now Prime Minister, was then syndic of the city of Palermo, and then, a young man of thirty, he made his mark. That was the time for the governors of Italy to have studied the nature of the people and to have held out the olive branch. But it was an *à priori* conviction with them that Sicily could be governed only with "blood and iron." So things went from bad to worse until, in 1875, the last Moderate Ministry brought in a bill for the grant by Parliament of fresh exceptional laws; Cantelli, the Home Minister, affirming that Sicily was ungovernable by any ordinary law. He informed the House that at that moment there were 152,000 persons subject to special surveillance by the police, besides the numbers in prison condemned or awaiting their trial. The fourteen articles of the law proposed were modelled on the English coercion laws for Ireland, four of which were quoted as models. But the committee chosen to examine the law rejected it in toto. "What Sicily wants," was the conclusion, "is a rigid application of the common law. The island has ever been treated as a conquered State. Of all the grants made for roads, railroads, schools, Sicily has not had even a partial share. The agents of police are the scum of the old police force of the dethroned princes. The well-disposed inhabitants have no security that if they help the authorities to discover real malefactors, they will not become victims and be left to fight their own battles."

The law was rejected, and in the following year the Ministry fell. Nicotera, the survivor of Pisacane's expedition, "the wounded of Sapri, the galley-slave of Favignana," was the first Home Minister of the Liberal party, Depretis being Premier. Whatever other defects he may have had, as a firm administrator of law and justice he has never had a rival. While he set himself to extirpate the Camorra in Naples and the Mafia in Sicily, he infused such confidence in the law-abiding and order-loving citizens that they rallied at once to his side. He chose an energetic prefect, Malusardi, who broke entirely with the system of ignoring lawlessness in high places and punishing it only when discovered in the lower ranks of society. When he entered on his functions, the proprietors of villas and estates in the country round Palermo dared not visit them for fear of blackmail being levied, with the alternative of being seized and kept in caves or grottoes until the sum demanded was paid down. He succeeded in arresting the chiefs of most of the bands, discovered who were the *manutengoli* (the go-betweens), and whether they were such from willing consent or through fear. The former were first admonished, then, if they continued in their evil practices, were arrested; the latter were protected and encouraged. In a couple of years the city and the neighborhood were restored to a normal state. The city revived from that hour. Political parties and administrative factions still rage in Palermo, as unfortunately elsewhere in Italy, but, be it said to the honor of the people, all the administrators of the city's finances and affairs have had the welfare of the citizens at heart, and have not wasted the substance of the commonwealth in corrupt speculations or in works of useless decoration. The result is that Palermo is transformed—cleansed, sanified, and at the same time beautified.

I arrived here some days since after a brief sojourn at Naples, about which city I prefer to write on my return, as at present it is "under the ban"—that is, the municipal council was dissolved some time since, and a royal commissary appointed. Most of the public institutions are undergoing "inspection and inquiry," so that in this abnormal condition of affairs it is hardly fair to speak in the terms of blame and deprecation which alone could be used. I will only say that all that Pasquale Villari wrote about the so-called works of sanitation is inadequate to express the horror with which the state of the wretched inhabitants inspired us. The money voted by the country for the poor of Naples has been applied entirely to the construction of fresh streets and palatial residences for the well-to-do classes. The Porto Pendino and other quarters have been partly destroyed to make room for the new streets and buildings, but not a single house that the poor people expelled can pay for has been built in the quarters where they have their occupations; hence all the *fondaci* and the *bassi*—cellars, dens, and dog-kennels—of which so much was written at the time of the cholera, are now doubly crowded by the poor wretches expelled elsewhere. The filth, the stench, the misery, therefore, is doubled. All this happens from the insane system adopted by the municipality of contracting with a society of mere speculators, who, of course, have looked after their own interests and cannot be blamed for so doing. However, the term of the royal commissary's authority does not expire till next month. The Government has still some power over the Society, and even when the next municipality is elected, "something may yet be done." So we will wait and hope, and report progress or regress after our Sicilian tour.

Here in Palermo a quite other system is adopted. Here, as in Naples, the cholera made sad ravages, especially in the poorer quarters of the city, and here it was decided that disembowelling (*sventrimento*) and a thorough reform of sanitary arrangements was necessary. But Palermo is so little visited and so little known to the rest of Italy that no national gift was proposed for her benefit. Simply the commune was authorized to contract a loan for thirty millions at 3 per cent. to be repaid in thirty years. Of this not six millions have yet been expended, and yet the whole city strikes you as having been rebuilt. So entirely is this the case that, after traversing it from the sea to the innermost recess of the golden shell, then, taking it by quarters, little can be recognized save the old Porta Felice, the *quattro cantoni*, the old Cassaro—now, of course, Victor Emanuel and Via Macqueda. All the old labyrinths of alleys and by-ways have disappeared, broad streets traverse the entire city from north to south, from east to west; and on either side palaces, houses of one, two, three (never more than four) stories are built or in process of building, or wide spaces are left for those who may choose to build in the future. Matters here are managed in this wise: The vast plan for sanification was laid out in 1886, and approved after many changes by the municipal council and modifications by the Government had been introduced. Then very gradually the municipality expropriated certain of the worst quarters, but only when sure that all the inhabitants could find house-room at the same prices, without being deported from the theatre of their daily work. This was not difficult to insure, as the municipality, availing itself of the law of 1885, which permits any unsanitary property to be taken and paid for at a certain price, gave orders for the demolition of the houses within a given period, then made no attempt to find "societies"—simply let on unlimited lease the ground-soil to private individuals, or (as in most cases) sold it. Here there have been no huge *società edilizie* running up jerry-built houses on borrowed capital, and, failing, leaving them unfinished. Simply private individuals have built for themselves, or for letting, such houses as they have thought fit; the municipality merely compelling them to keep in line and to build with decency. So sure do the purchasers feel of letting that they have often built splendid houses and rows of houses touching the back walls of the houses that are yet to be demolished, so that they shall be dry and habitable by the time the expropriation shall be carried into effect. At the present moment house-rents have fallen in Palermo, as there is more than abundant house-room for all. This is good for the public if bad for the builders.

Whenever the municipality has desired to attract the poor to a certain spot, they have built and opened an elementary school, and this more even than a church attracts the very poorest classes. This is one of the most hopeful signs in Palermo. I have not yet visited any of the town schools, but have spent long afternoons at the different *asili rurali* (infant schools) in the outskirts of Palermo. This is quite a new feature for the country. In the "good old times" the street Arabs even of the city were left to run wild, half-naked, and uncared for; as for the children of the outskirts, I never saw such specimens of 'cute, quick, starved childhood as were gathered into the Garibaldi Institute by Al-

berto Mario and made soldiers of in a trice. This Institution was destroyed by some Piedmontese hater of the "Nice cabin boy." Now into these *asili* they come in crowds at eight o'clock in the morning, and are kept there till four or five in the afternoon. The only obligation is that they shall have white pinafores, no matter how much mended if clean and not in holes. The nine *asili* are maintained by private charity, so that there are no fixed funds, and the "soup" which forms the essential feature of the Neapolitan infant-schools cannot be provided. Surprising to relate, all the children are provided by their parents with sufficient bread and some sort of *companatico*, a tomato, an apple, a bit of cheese; and, now the oranges are ripening, the much-cherished fruit is eagerly devoured. At worst, they have the *fichi d'India* (prickly pears) in abundance, and as all the children are of parents who belong to the fisherman or peasant or common working class, they get a hot meal at home when the day's work is done, of maccaroni and beans or some other vegetable; on Sundays, maccaroni and *sugo*, sauce made of tomatoes and onions. They look healthy and are of normal size for their respective ages; there is none of the servility, "the kiss-your-hand fashion," of Naples. Some of these schools have three or four or even five elementary classes, into which the children pass from the *asili*; and in the Educatorio Whitaker there are five hundred children and a normal school for the education of schoolmistresses, all Sicilian, with an addition of a class for Froebel's system. This was founded by the nephews of the famous Ingham of Marsala renown, and is now in a flourishing condition, only more funds are necessary.

It is wonderful, here as in Naples, what private charity does and can effect. There the industrial schools founded by Casanova are growing more perfect every year. There the hospital for poor children condemned to undergo surgical operations is a model unsurpassed in London, and the Ecce Homo, once a disorderly brothel for oblates, now transformed into a home and industrial school for orphaned girls left homeless by the cholera, is already a thriving institution. But in Naples the public charities are in a deplorable state. Here we have yet to visit them. Meanwhile one is cheered and hopeful to see that in this most important part of the social programme the well-to-do portion of the citizens are doing their part right well and earnestly. They are only awaiting the coming of Queen Margaret to inaugurate a magnificent hospital for poor children and an institute for the education of the blind. On the whole, Palermo is, by far, the cleanest, brightest, most thriving city that I have visited for a long time. The taxes are high, but the municipal budget balances itself, work is abundant and well-paid, and Palermo has effected all these reforms by her own unaided perseverance. Garibaldi rightly named the city of his love "the City of Initiatives."

November 14.—I thought I would not close this letter till I had seen the arrival of their Majesties, whose visits to the island are so few and far between (the last was in 1881). Never, to say the truth, have I seen such a welcome accorded to royalty in Italy or elsewhere. That the Sicilians, or at any rate the Palermitans, are all for a constitutional monarch I was aware—no republican propaganda has ever taken root here; but the rapture of the greeting given passes expression. For the last month nothing else has been talked of save the coming of the sovereigns for the opening of the Exposition. Fabulous sums have been spent by the ladies in toilettes for the reception of her Majesty; the dressmakers and the modistes have been working night and day. But what is more touching by far is that the poorest woman "made Saturday" on Friday in her honor. I had no idea how clean the poorest people are until my late "slumming" here. On Saturdays they clean everything and scrub their one-roomed tiled or brick floor like an Anglo-Saxon housewife. "*Fare il sabbato*" (to make Saturday) is a Sicilian proverb for doing a thing thoroughly. So yesterday, to be free for the sight of the royal heads, all cleaned their houses a day earlier.

At first a very official reception was arranged, with all the troops turned out on the sea-wall. One of the daintiest ladies of an old aristocratic house said to me, "What a pity! If Palermo is left in the hands of the people, there will be the most perfect order and a most hearty welcome, but the people turn restive at the sight of troops and police." I happened to be at the Prefect's when the Commander General of the troops stationed in Palermo came in and read a telegram from the King expressly ordaining that there should be no troops whatsoever. The General looked at the Prefect and the Prefect looked at the General, but a member of the aristocracy and a municipal assessor who were present said, "Wise King Humbert! He seems to know our people!" I must confess that I thought of the attempt made on Humbert by Passamante, and the torrents of blame that were poured on Cairoli's head in 1878, but I wronged Palermo in the thought.

Before dawn all the citizens were on foot, the landing place was bowered with greenery, all ugly corners hidden in flowers and leaves. The old Garibaldians claimed the first place, and, dressed in their red shirts and caps, all with medals, they took their posts at seven A. M. I wandered in and out all down the Corso Vittorio Emanuele. Not a window but had its flag (all bear the white cross now), its magnificent old tapestry or modest drapery—here the names of the King, Queen, and Prince worked in flowers; there some emblem of welcome. And every window and balcony was occupied. The people had taken possession of every lamp, cornice, grating, and of the sea-wall. Eight, nine, ten struck, and every now and then the salutes fired filled the spectators with hope that the longed-for were coming; but not a sign of impatience or weariness, not a shout nor a cry. One used to the noise and restlessness of Naples can hardly understand this grave, serious, yet intensely enthusiastic people.

In order to see properly, we footed it, with a carriage in reserve. Though the *America* was sighted at half-past nine off Monte Pellegrino, two hours passed before the landing was really made. The sea and land blended in a crowd of heads. The municipal bark, with the meritorious syndic, Senator Emanuele Paternò, and the Prince of Camporeale, the President of the Exposition Committee, went off, and as the *America* cast anchor a salvo of welcome poured out from the fort of Castellamare and the ships of all nations anchored in the bay; then one deep, prolonged *evviva*, and the sovereigns stepped on shore. Here the ladies of Palermo in fresh, rich morning toilets, with Signora Paternò Vassallo, wife of the syndic, presented the Queen with a splendid bouquet of flowers such as Palermo only can produce. The Prince of Naples offered his arm to the mayoress, and Humbert, bowing right and left, looking well and pleased, took the bouquet from the Queen and handed her into the carriage. The Garibaldians, in their red shirts and medals, followed immediately as guard of honor—a fitting escort for the son of the King who from their *Duce* received two kingdoms as a gift. Then the workingmen's societies, with their respective flags and mottoes; then, pell-mell, "all the world"—all Palermo certainly, and hundreds of visitors from every part of Italy: Senators, Deputies, all the provincial authorities, etc. The order was simply perfect, and the *evvivas*, continued as they were, did not stun one as often elsewhere. The crowd separated either side the royal carriage so that the procession through the streets went at an ordinary pace. Taking a carriage, we reached the royal palace on whose balcony we last stood with Garibaldi, and there the crowd seemed to exceed that on the quay and in the streets. Here there was slight confusion, and four of the Garibaldians, in keeping the ranks, were thrown down and, I fear, hurt. At the foot of the staircase stood the clergy of the Palatine Chapel and Monsignore Di Marzo (I noted that the Cathedral is decked for the morrow's service). As their Majesties appeared on the balcony, one shout reëchoed from the enormous piazza, "Viva il Re! Viva la Regina! Viva il Principe di Napoli!" The King has been moving about Palermo all day long, has visited the Exposition and expressed himself delighted with his reception, as well he may be! I attach little importance to royal visits in general, but this one is significant. All the other cities of Italy are the resorts of the King and the Queen—Naples most of all; but Palermo, not to speak of the rest of the island, has been forgotten, ignored, neglected. Now continental Italy will see that Palermo is one of the first, best, most orderly and progressive cities of the new kingdom, and it may be that the island will have justice done at last.

I close before the inauguration of the exhibition takes place, as those ceremonies are all alike. Their Majesties will not be able to see much, as most of the galleries are in confusion, but this was unavoidable, since, if the opening had been delayed, the opening of Parliament would have taken place first, and the Ministers could not have accompanied the King. Crispi is still the idol of the Palermitans, but they are prepared to give a hearty welcome to Di Rudini, their own citizen and Deputy, and to Nicotera, who spent three years in the dungeons of Favignana on their coasts, and who, again Minister of the Interior, must be well satisfied with the aspect of the city which he delivered from the horrors of coercion. J. W. M.

MARBOT IN THE SAXON CAMPAIGN.

PARIS, November 13, 1891.

NAPOLEON, when he left the army during the retreat from Russia, gave the command of it to Murat, "who, in these circumstances, showed himself inferior to his task." It must be confessed that the cold paralyzed almost every will; there was no discipline left; every morning thousands of dying soldiers were abandoned in the camps chosen for the night. Some colonels, Marbot among them, organized a sort of brigandage: they sent expeditions into the villages, which brought back cattle, salt meat, flour. Marbot gives curious examples of the effect of the intense cold which began in December. A division, composed of 12,000 conscripts, had left Wilna and joined the army. The transition from the well-warmed barracks to the field was fatal to it; the division was almost completely destroyed. "The cold produced even more terrible effects on 200 Neapolitan cavaliers of King Murat's Guard. They came to meet us after having long sojourned in Wilna: they *all* died the first night they slept

on the snow." The Germans, Italians, Spaniards, Czechs deserted and took refuge in the villages. The retreat was, in one sense, easier than could have been expected, as the Russians, accustomed to their warm *izbas*, suffered quite as much as, if not more than, the invaders; Kutuzoff contented himself with following the French army at some distance with a feeble vanguard. The Cossacks alone rode round the army, but they were easily repulsed. On the 13th of December, Marbot saw again the Niemen at Kovno, the last Russian city. How different did the French look from what they were five months before! They were now in Prussia, and Prussia was still an ally; the inhabitants treated the French soldiers kindly. Marbot slept in a bed, and the transition made him ill. Almost all the officers became ill in the same way from the same cause.

Marbot has a chapter on the causes of the disasters of the Russian campaign. He attributes them chiefly to our want of interpreters and complete ignorance of the Russian language; to the blind confidence of the Emperor in the fidelity of his allies; to the belief, which Napoleon entertained too long, that he should bring Alexander to terms, and dictate articles of peace in Moscow. He attaches little, if any, influence to the burning of Moscow; the destruction of that city was not so complete that there did not remain churches, barracks, palaces, and houses enough for a whole army; there was also an immense amount of provisions. The losses of the grand army in the Russian campaign were enormous but have sometimes been exaggerated. Three hundred and twenty-five thousand nine hundred men had crossed the Niemen (155,400 Frenchmen and 170,500 allies). In February, 1813, 60,000 Frenchmen recrossed the Niemen; 30,000 prisoners had remained in Russia, who only returned to France after the peace of 1814. The total loss of the Frenchmen was therefore 65,000 dead. Marbot preserved his regiment with so much care that out of 1,048 men who had entered Russia he lost only 355, and he could, in February, 1813, show at Dresden 693 men who had all made the Russian campaign. This exceptional number was noticed by Napoleon, who paid great compliments to the Colonel of the Twenty-third Chasseurs.

Napoleon had to make exceptional and even illegal levies to place his army again on a war footing; he made a great mistake in leaving about 70,000 men in the garrisons of the German cities, which he was unwilling to abandon, but which he could not hope to keep if he was not victorious in the open field. Marbot joined his dépôt at Mons, in Belgium, and reconstituted rapidly several squadrons. He joined his regiment again only after the battles of Lützen and of Bautzen. The French army had never been finer. The navy had given splendid men to Napoleon, and he had besides taken men from the gendarmerie, but, on the other hand, all the allied troops were on the point of abandoning the cause of France.

"Napoleon," says Marbot, "ought to have treated with his adversaries, and, before all, ought to have conciliated his father-in-law, the Emperor of Austria, by giving back to him Dalmatia, Istria, Tyrol, and a part of the other provinces which had been conquered in 1805 and 1809. Some concessions made to Prussia would have calmed the allies, who, it seems, offered to give back the French colonies and to guarantee him all the provinces as far as the Rhine and the Alps, as well as upper Italy; but they expected him to relinquish Spain, Poland, Naples, and Westphalia."

The Allies had an army three times as numerous as the army of Napoleon: he had 320,000 men in Germany; they had as many as 800,000. He would not treat on these terms; he dismissed Metternich, who had come to negotiate with him, with much arrogance. An immense circle was forming, however, round the French army; the armistice was broken as soon as the circle was complete, two days before the date fixed by the Convention. The Allies had cognizance of all the dispositions of Napoleon's army, through the treason of Jomini. Marbot is severe on Jomini, who was a Swiss, but whom Marshal Ney had protected, had made a French officer, and taken as an aide-de-camp, and who, through Ney's influence, as well as by his own talent, had rapidly become a general. Jomini went over to the Russians, taking with him all the notes relative to the opening campaign and the disposition of the French army. It was by his advice that Alexander, who took him as an aide-de-camp, opened hostilities two days before the day fixed for the rupture of the armistice. The Emperor inflicted a defeat on Blucher on three successive days, and forced him to retire behind the Katzbach, when, learning that the army of Schwartzenberg, 200,000 strong, was entering Saxony, he marched rapidly on Dresden, which was occupied by Saint-Cyr.

Marbot gives an account of the battles of the 26th and 27th of August, before Dresden. The Allies were obliged to retreat; on the second day they had lost as many as 20,000 men, killed or wounded, and 20,000 prisoners. Schwartzenberg was retreating towards Teplitz in Bohemia. Unfortunately, Vandamme, who pursued the retreating enemy, found himself confronted at Kulm by overwhelming forces; he refused to surrender, and was himself made prisoner. The battle of Kulm cost the French 2,000 men, killed or wounded, and 8,000 prisoners; 10,000 men succeeded in escaping from Kulm. Saint-Cyr and Mortier, who were at Dresden, ought to have helped Vandamme; their inaction was the cause of his defeat. At the same moment, Oudinot suffered a defeat at Gross-Beeren, and Macdonald on the Katzbach. Napoleon's victory at Dresden thus became useless. Marbot played his part, with his usual bravery, on the Katzbach; he gives a very detailed and graphic account of this bloody encounter. The army of Napoleon lost at the battle of the Katzbach 13,000 men killed or drowned, 20,000 prisoners, and 50 guns. It was a great disaster. Macdonald, who was the cause of it, assumed the whole responsibility for it before his assembled generals and colonels. The army retreated on the Elbe. Marshal Ney was beaten at Jüterbogk by Bernadotte. For a fortnight the French army remained round Dresden; Marbot camped at Pilnitz, and while he was there, he saw the first Tartars and Bashkirs, armed only with bows and arrows, who had come to join the Russian army. Napoleon one day visited Marbot's regiment. "I was getting ready to shave in the open air, before a small glass nailed on a tree, when I felt somebody touch my shoulder. . . . As I was in the midst of my regiment, I turned rapidly, wondering who could presume on such familiarity with the Colonel. I saw the Emperor, who had come in a postchaise with a single aide-de-camp." Napoleon wanted to examine the position; he wished also to examine some Bashkir prisoners.

On the 28th of September Napoleon passed in review Marbot's corps, and on this occasion he made him an officer of the Legion of Honor, a baron, and gave him a *dotation*. He praised Marbot's regiment, and said it was the only one which kept in good order at the Katzbach, which took guns from the enemy, and repulsed the Prussians wherever it found them. The army slowly concentrated round Leipzig, and the Allies took the same direction. The Emperor arrived in that city on the 15th of October. Deaf to the advice of the King of Würtemberg, who was the most faithful of his allies, Napoleon resolved to give battle, and not to effect his retreat towards the Thüringer-Wald and Hesse, a mountainous country where defence was easy. The King of Würtemberg did not conceal from the Emperor the fact that the movement of the German people had become irresistible, and that he would soon be obliged himself to fall in with it. The King of Bavaria sided with the Allies, and his army had marched already on the Rhine. When Napoleon heard of it, it was too late; he had with him 157,000 men, and he had to fight Schwartzenberg who had 350,000 men.

The battles round Leipzig were terrible struggles. Marbot, before they took place, was camped near an ancient Swedish earthen redoubt, on the Kelmberg. One night, he saw three men on horseback on the Kelmberg, and was near enough to hear their conversation: one of them told the others that there were no Frenchmen in sight, and that "their Majesties" might approach. Marbot, and those who were on the watch with him, soon saw about twenty people on the Kelmberg. Marbot was already hoping to make the Emperor of Russia and the King of Prussia prisoners, when one of his soldiers imprudently fired a shot and killed a Prussian major in the midst of the group on the Kelmberg. Immediately their Majesties and their suite disappeared at full gallop. The battle began the next morning; it lasted three days. On the 18th, the Saxons turned against the French, in the midst of the battle. Bernadotte opened his ranks to them and immediately turned their artillery against us. During those fatal days, Marbot received in the thigh an arrow which was four feet long; he had it extracted immediately and did not leave his regiment, even for a moment.

Napoleon was forced to retreat after the battles of Leipzig. He had very little ammunition left; he had lost 40,000 men, killed or wounded; the enemy had lost 60,000. The bridge over the Ulster was blown up too soon, and the French army was cut in two. This was a terrible disaster—worse than the three days' battle. I cannot follow Marbot in all the details of the retreat of his regiment; he was never more brave and active. I must refer the reader to Marbot's own book. The end of this third volume of his Memoirs, which, alas, is the last, is sad. Napoleon, when the campaign of 1813 was over, had lost all Germany, all Spain, the greater part of Italy; and the army of Wellington, which had crossed the Pyrenees, was camping on French territory. Marbot speaks rapidly of the invasion of France by the Allies; the subject was too painful for him, for he was really attached to the Emperor. His book ends thus: "The cause of Napoleon was now lost [alluding to the proclamation of the Bourbons by the Senate], though his adherents were infinitely more numerous than those of Louis XVIII., as the event proved in the following year."

Correspondence.

THE EARTHQUAKE IN JAPAN.

To the Editor of The Nation:

Sir: Your readers have by this time received full telegraphic news o the destruction and

ruin caused by the recent terrible earthquake in central Japan. At the present writing it seems that some 80,000 houses are destroyed and about 8,000 people killed. The number of people left homeless reaches far above 300,000. Doubtless there have been funds started in the United States for the relief of the sufferers. My object in writing this brief note is to urge upon those disposed to give, the great need of sending as much relief as may be. The particular feature of the calamity is not merely the loss of homes, but the destruction of means of livelihood. The most prosperous potteries in Japan have been laid in ruins. Dikes and irrigation works must be rebuilt before agriculture can be resumed with safety.

The result is, that for months to come a large portion of the people will be without any income from their occupations, even supposing they are able to borrow funds for rebuilding. Besides this, it must be understood that Japan is a poor country as compared with America. There is not enough to spare, however charitably disposed her people may be, to give adequate relief to their fellow-countrymen. It is to be hoped that the people of the United States will come to the aid of Japan. A dollar will go a long way here; it will keep twenty-five people alive for one day; and every dollar sent here will tell. I dare say that the Mission Boards will all forward contributions of clothes (winter) and money. If one desires to send direct, the best address would be "O. Keil, Secretary Yokohama Chamber of Commerce Yokohama, Japan."

Sincerely yours, J. H. W.

Tokio, November 9, 1891.

PATRICK EGAN.

To the Editor of The Nation:

Sir: I do not doubt that Patrick Egan has adopted a mistaken policy, and that his having been accredited to Chili has been a misfortune for that country, the United States, and his own reputation as a public man. But I must ask to be permitted to protest against your using such expressions regarding him as "illiterate foreign adventurer," his "not even [having] a decent English education, nor any large business experience," etc. I knew Mr. Egan for the twelve years previous to his leaving Ireland, and had a high opinion of him. He conducted an extensive business in Dublin, and was esteemed even by political opponents as an upright, straightforward man. There was nothing about him to lead me to suppose he was less literate than the majority of us who have not received a university education. I have always maintained that he was right and justified in leaving Ireland. He had had, as Treasurer of the Land League, the handling of large sums of money under circumstances which rendered it impossible for him to guard the directions in which some of it may have drifted. Considering the then temper of the Government, and the state of public feeling in England after the murder of the Secretaries, and the ease with which juries of men prepared to believe anything could be packed, his liberty was not worth a day's purchase. The *Times* Commission afterwards proved that nothing really could have been urged against him. The vast majority of Irishmen feel that they owe him an eternal debt of gratitude for the probity and self-abnegation displayed in his management of the money affairs of the League. Nor can they forget that the unmasking of the Pigott forgeries was due almost entirely to his business regularity and foresight in preserving sundry of Pigott's letters to him.

Our trained diplomatic service may have its advantages; nevertheless, in foreign relations you appear to come off as smoothly upon the whole as we do. The spoils system on either side of the Atlantic is, of course, to be condemned. Nor does it appear to me becoming that a great country like the United States should be represented by one who has but lately become a citizen. From what I have read from time to time in your columns, I should, however, suppose that you have often been represented abroad by men far less qualified as diplomatists than Mr. Egan.

Very sincerely yours, Alfred Webb.

Dublin, November 19, 1891.

MR. WARNER'S "EVIDENCE IN FULL" COMPLETED.

To the Editor of The Nation:

Sir: In your last week's issue, Mr. J. B. Warner professes to give the "evidence in full" respecting Prof. Royce's suppression of my reply to his (the latter's) avowed "attack." The long letter he publishes as "evidence" on this point is evidence of nothing but the lawyer's attempt to put forward his own baseless assumptions in his client's behalf as if they were assured facts. The adroit assumption in this case is, that the "language" of my suppressed reply was improper, and justified exclusion of the reply from the *Journal of Ethics*. This assumption I deny with vigor; and, what is more telling than any denial of mine, Dr. Adler and Dr. Royce, as editors of the *Journal*, denied it themselves, when at first they both accepted the reply for publication, had it put in type, and sent me proofs both of the reply and of Dr. Royce's rejoinder to it. The subsequent rejection of my reply, under Mr. Warner's advice, cannot undo the effect of their previous sanction of it as *perfectly fit for publication*.

But the "evidence in full" on this point cannot be given without showing, by actual quotation, what really was the "language" to which Mr. Warner so unreasonably objected. I have no right to ask you to devote much space to such quotation; but, relying on your well-known fairness, I must ask leave to cite, as a fair specimen of the "language" objected to, the opening of the suppressed reply. The passages here italicised were marked by Dr. Royce himself as the grounds upon which he and his lawyer based their threat of prosecution and their suppression of the reply itself. It will be perfectly clear to any fair-minded man that they were aiming to force me either to concede that Dr. Royce's original article was a legitimate criticism, or else to lose all opportunity of being heard in self-defence.

That his article was a libel, and not a fair criticism at all, has been proved in my pamphlet beyond all possibility of a successful reply; and the reader, bearing this in mind, will judge for himself whether the "language" as such, or whether the effort to defend myself against the libel, was the real ground of Mr. Warner's threatening letter. The following passage from the suppressed reply is a fair sample of its "language" throughout:

"The mere fact that, in the *International Journal of Ethics* for last October, there appeared a hostile review of my book entitled 'The Way Out of Agnosticism,' by Dr. Josiah Royce, assistant professor of philosophy in Harvard College, would not induce me to break my uniform custom of silence in such cases, were it not that Dr. Royce *oversteps the limits of legitimate literary criticism, throws out personal accusations of a slanderous nature, and resorts to empty and undignified official denunciation* in order to flank indirectly a philosophical position which he has not ventured openly to assail. *His mode of attack is a marked case of 'reversion' to controversial methods which, common enough some centuries ago, are happily going out of use to-day. Dr. Royce presumes to accuse me, falsely and injuriously*, of 'frequently making, of late, extravagant pretensions as to the originality and profundity of [my] still unpublished system of philosophy,' *and of 'sinning* against the most obvious demands of literary property rights'; and he even goes so far as to issue a solemn 'professional warning,' formally addressed to 'the liberal-minded public,' against myself as a philosophical thinker and author. Such tactics as these *are unknown among reputable literary men. They are justified by no higher ethical principle than that which dictated the old pettifogger's advice to the young one: 'If you have no case, abuse the counsel on the other side.'*

"This paper, therefore, is written *as a reply, not to a critique, but to a libel.* If I notice below what Dr. Royce puts forward as 'criticisms,' it is not because they deserve to be noticed as such, but solely because they are made to serve as the ostensible warrant and support of *his libellous 'professional warning.' And the only reason why I make my defence in these columns is that, believing the 'liberal minded public' to be a just judge, I have greater confidence in the court of reason than I have in the courts of law.*

"When civil-service reformers plead the urgent necessity of political reform, they are irrelevantly charged by the adherents of the spoils system with being 'hypocrites and pharisees.' Precisely so, when I plead the urgent necessity of philosophical reform, *I am irrelevantly charged by Dr. Royce, in effect, with being a false pretender, a plagiarist, and an impostor.* The charge is just as true in one case as in the other. But, be the charge true or untrue, the attention of keen and candid minds is not to be diverted by this perfectly transparent device from the main point of reform. In both cases, interests more important than any personal reputation are at stake; and loyalty to interests more important than my own reputation requires me *now to expose Dr. Royce's endeavor to divert attention by irrelevant, useless, and utterly unprovoked vituperation from the main point of philosophical reform.*"

Will any fair man say that the "language" here used is other than temperate, dignified, and parliamentary? I protest against Mr. Warner's attempt to misrepresent the character of my "language," as improper in any degree. A libelled citizen has a right to defend himself against the libel; and, when Dr. Royce blew his bugle-blast of defiance, "We must show no mercy, as we ask none," he deprived himself of all excuse, in the eyes of men who prize the good old English principle of fair play, for seeking refuge behind a menace of prosecution. And here I must express my surprise at Mr. Warner's statement that "Prof. Royce sought my advice in consequence of threats of a law-suit from Dr. Abbot." I never threatened Dr. Royce with a law-suit at all.

Francis E. Abbot.

Cambridge, November 28, 1891.

[We cannot print any more letters respecting this controversy.—Ed. Nation.]

ROSSETTI'S FRANCESCA.

To the Editor of The Nation:

Sir: In an interesting review of Mr. Norton's translation of the "Inferno" which appeared in the *Nation* for November 5, I find no mention of Dante Gabriel Rossetti's version of the celebrated Francesca di Rimini passage, though other and (as I think) inferior metrical versions are quoted in comparison with the prose. Nor, indeed, am I sure that Rossetti's has ever had adequate publication; I myself only know it from its being quoted in a lecture on Dante by Mr. William Davies of Rome, a friend of Rossetti's. It is not to be found, I am

told, in Rossetti's complete works. The passage begins:

Quando risposi, cominciai: o lasso . . .
(When I made answer, I began: alas . . .)

But, not to trespass upon your space, I will give only the lines quoted by your reviewer:

"One day we read for pastime and sweet cheer
Of Lancelot, how he found Love tyrannous:
We were alone and without any fear.
Our eyes were drawn together, reading thus,
Full oft, and still our cheeks would pale and glow;
But one sole point it was that conquered us.
For when we read of that great lover, how
He kissed the smile which he had longed to win—
Then he whom nought can sever from me now
For ever, kissed my mouth, all quivering.
A Galahalt was the book, and he that writ:
Upon that day we read no more therein."

Retaining the original form both in metre and rhyme, it is at the same time, I think, far more poetical and far more literal than the versions of Cary and Byron. Only a great poet, equally at home in the two languages, with an almost magical gift of giving an Italian grace and flavor to unexceptionable English, could accomplish such a *tour de force*. Even he, I suspect, could not have kept it up through the whole of the 'Commedia.' Still, one wishes he had tried.—Yours respectfully,

M. D.

"UNWELL."

To the Editor of The Nation:

Sir: In p. 337 you quote the Rev. Christopher Wordsworth as commenting that *unwell* is "said to have been coined by Horace Walpole." But my *Modern English* shows that, at least in its Scotch form, it was in existence long before Horace Walpole's time. Sir Thomas Urquhart wrote, in 1653:

"Whilst they were on this Discourse, and pleasant Tattle of drinking, Gargamelle began to be a little *unweil* in her lower Parts."—*Rabelais*, Book L., Ch. vl., in Vol. I., p. 19 (ed. 1694).

That *unwell* was formerly considered to be Hibernian appears from a letter of Lord Chesterfield's dated in 1755; and, in 1781, as I have elsewhere pointed out, William Cowper called it "the Irish term." However, Miss Elizabeth Carter used it in 1761 and 1764; and shortly afterwards, as could be evidenced, it became common enough. Coleridge has it in 1796, and Southey in 1797 and 1798. Yet, in the present century, it has been stigmatized as a "Yankeeism."

The verb *backen*, which also you remark on, is a familiar word here in Suffolk. F. H.

Marlesford, England.

"GOD SAVE THE MARK!"

To the Editor of The Nation:

Sir: This exclamation occurs twice in Shakspere, and the almost identical "God bless the mark!" twice. The passages are:

"The Jew, my master, who (God bless the mark!) is a kind of devil" (*Mer. of V.*, ii. 2).

"Of guns, and drums, and wounds (God save the mark!)" (*1st Hen. IV.*, i. 3).

"And I (God bless the mark!) his Moorship's ancient" (*Othello*, i. 1).

"I saw the wound, I saw it with mine eyes—(God save the mark!)—here on his manly breast" (*Rom. and Jul.*, iii. 2).

The commentators all (so far as my reading goes) agree that no satisfactory explanation has been given of this phrase. One conjectures that it may have been an exclamation used in archery, and another that it may have some reference to the mark or cross used instead of a signature; but they neither show that it was ever so employed, nor do they point out the relevancy of such meanings in the passages cited.

If we put aside the use by *Iago*, where it seems merely an exclamation of contempt and disgust, we find that by the other speakers it seems to be used as a deprecatory formula accompanying the mention of something maleficent, as the devil, and wounds. In the passage last cited, the context, "*here*, on his manly breast," shows that the *Nurse* touches her own breast to indicate the exact place of *Tybalt's* wound; but, before touching it (or as she touches it) she says, "God save the mark!"

Now we know that in superstitious times men believed that they lived in a perpetual beleaguerment of malignant powers or demons, always on the watch to harm them in body or soul; and a careless act, word, or gesture might give a disastrous opening. Against such mishaps Christians were taught that the handiest prophylactic was the sign of the cross, which put all demons at once to flight. So I conceive that when the *Nurse* touches her breast she makes a cross upon it—"God save the mark!" being equivalent to "God protect from harm the place I now cross"; and this custom I surmise to have given origin to the phrase. As the English gave up the habit of crossing themselves, the original significance was gradually forgotten, until the phrase was used much as writers and speakers of the present day occasionally use it, without any idea of what it means or what they mean by it.

A curious passage in Petronius seems to support this view, and indeed gave me the notion of this explanation. Trimalchio is telling a story of witches yelling around a house in which a youth has just died. One of the family, a bold Cappadocian, draws his sword, rushes out of the house, "et mulierem, *tanquam hoc loco* (*salvum sit quod tango*), mediam trajecit." Here Trimalchio evidently touches his own or his neighbor's body to indicate the spot where the witch was pierced, and uses at the same time a protective, or *averruncine*, formula to avert possible mischief.

Wm. Hand Browne.

Baltimore, November 23, 1891.

Notes.

G. P. Putnam's Sons' forthcoming publications include a sumptuous edition of Irving's 'Sketch Book'; 'Napoleon,' by W. O'Connor Morris, in the "Epochs of History Series"; the fourth volume of the Talleyrand Memoirs; 'Teufel, the Terrier,' by Charles Morley; and 'Improbable Tales,' by Clinton Ross.

'Letters of Charles Dickens to Wilkie Collins,' edited by Laurence Hutton; the 'Life of General Thomas J. Jackson ("Stonewall"),' by his wife, Mary Anna Jackson; 'From the Easy Chair,' selections by George William Curtis from his thirty years' store of papers in *Harper's Magazine*; 'Peter Ibbetson,' by George du Maurier; and 'Jasmin: Barber, Poet, Philanthropist,' by Samuel Smiles, are in the press of Harper & Bros.

Houghton, Mifflin & Co. will publish immediately 'Masterpieces of American Literature,' selected from thirteen authors.

D. C. Heath & Co. announce 'Business Law,' by Alonzo P. Weed.

The new London edition of the late Dr. Carpenter's 'The Microscope and its Revelations,' edited by Dr. Dallinger, will bear in this country the imprint of P. Blakiston, Son & Co., Philadelphia.

Two books for young men, 'Brave and True,' by Thain Davidson, D.D., and 'First Battles and How to Meet Them,' by Frederick A. Atkins, are to be issued by the Fleming H. Revell Co.

Mrs. Flora Haines Loughead has begun the serial publication of her own novels through C. A. Murdock & Co., San Francisco, 'The Man from Nowhere' leading off this "Gold Dust Series."

A History of the Holy Land, upon which Mrs. Oliphant has been engaged, is to be published by Macmillan, with illustrations from sketches made by Hamilton Aïdé.

Saxon & Co., London, have secured the rights of translation of a taking French story for boys, 'The Adventures of a Prehistoric Boy.' It is to be published in January, fully illustrated from designs by Félix Régamey.

The librarian of the Bodleian initiates the "Bodleian Facsimile Series" with a photolithograph of the unique and perfect 'Ars Moriendi' of 1491, either Caxton's or Wynken de Worde's production; and an historical tract printed in Rome in 1572, the year of the Massacre of St. Bartholomew, describing the solemn procession in that city under the Pope's direction "per la felicissima noua destruttione della setta Vgonotana." These facsimiles will be marketed at a shilling each through B. Quaritch and the Clarendon Press Depository.

We learn from the *Academy* that the Shelley centenary will be marked by the offer of a monument of Shelley in marble and bronze, either to the nation or some public body, as the gift of Lady Shelley. The anniversary is also to be made the occasion of the publication of the Shelley Concordance by Mr. Ellis. The Shelley Society, for its part, proposes to repeat the performance of "The Cenci," but over this project there seems to hang some doubt.

Mr. William Hamilton Gibson's engravings of the delicate things of the roadside and the fields and streams have long charmed the eyes of those who appreciate either nature or the fine hand of art, and a few of them have been enough to make single numbers of a magazine rememberable. He has now given a royal abundance of these treasures of the graver in a thick volume, 'Sharp Eyes: A Rambler's Calendar of Fifty-two Weeks among Insects, Birds, and Flowers' (Harpers), which is illustrated with 275 cuts, many of them of marvellous truth of delicacy in rendering, and all full of the spirit of animate nature. There is a generous text besides, descriptive of the habits, aspects, and curiosities of minute life, the natural history of the summer grass and air; and the story is told so as especially to interest the sharp eyes of young people. A better book to develop the young naturalist out of the schoolboy could hardly be put into the hands of youth; but the marginal picture comment outweighs the text, and the eye is continually diverted from reading to look on the things themselves. The volume is luxuriously printed on heavy paper, and is an example of the best work of the press from which it proceeds.

Another nature volume which is mainly interesting from its illustrations is Mr. W. H. Downes's 'Arcadian Days: American Landscapes in Nature and Art' (Boston: Estes & Lauriat). The text is from the pen of an observer of landscape with the prepossessions of an artist, and flows along with great placidity and self-enjoyment, and not without some charm for the like-minded reader. The only distinctive trait it has is, that it pleads for our own landscape as the proper subject of American painting, and quite deserving of such regard; and with this end in view the author dwells on the picturesqueness and the various beauty of a higher sort which New England ways afford, from the farms to the seashore. The illustrations are by Mr. A. H. Bicknell, and though they lack character, as a rule, in

several of them there are excellent simple effects, particularly of hillsides and roads. As a whole, they are too sketchy and rudely done to support Mr. Downes's suggestion as to the Americanization of our landscape art so forcibly as would have been desirable.

Estes & Lauriat renew this year their well-known line of reprints of classic works, illustrated with tinted photogravures or gelatine prints. In two volumes each they present Bulwer Lytton's 'Rienzi' and 'Last Days of Pompeii,' in the faultless typography of the University Press, Cambridge, with fifty plates respectively, appropriate to the text. Those which are not ideal restorations in the case of Pompeii have been specially made from views taken on the spot. Some of the Roman views, too, are evidently of recent date, and so are creditable to the publishers' enterprise, though one might have preferred glimpses of the state of the Forum, for instance, as nearly contemporary with the age of Rienzi as possible. The covers of both books are elaborately designed with strong color contrasts in good taste. A companion undertaking, in one volume of a larger size, is Scott's 'Lady of the Lake,' from the same press, and adorned in its turn with twenty-five plates, all scenic, and many of them fine. It is needless to say more than that here are three extremely attractive and sensible gift-books.

Mr. Harrison S. Morris edits a collection of poems of the sea and the seashore under the title 'Where Meadows Meet the Sea: A Collection of Sea Songs and Pastoral Lays' (Philadelphia: Lippincott). This is illustrated with twelve cuts by F. F. English, which reproduce in a simple way characteristic seashore scenes. The anthology itself is excellent, including nearly 150 poems from the best writers of this century, both English and American. America, it is true, is represented mainly by Walt Whitman, whose work in the comparison declares itself as not poetry, but nevertheless expresses with romantic feeling and occasional power characteristic traits of the ocean. The pieces of little merit are comparatively few, and the body of the volume is of high excellence.

Two pretty companion gift books in white and gold, 'Roses of Romance' and 'Flowers of Fancy,' are issued by Roberts Brothers of Boston, with illustrations by Edmund H. Garrett. The first volume is from Keats, and includes "La Belle Dame sans Merci," "Isabelle," "The Eve of St. Agnes," and "Lamia"; the second is Shelley's, made up of the "Cloud," "Skylark," "West Wind," and "The Sensitive Plant" and "Witch of Atlas." Nothing could be better than such texts, but the illustrations in their turn reach an equal degree of inferiority, being superlatively tasteless in design and slovenly in execution. Such work as the cut figuring the Witch of Atlas as "Arion on the dolphin's back" ought to be impossible at this late day.

Mr. Brander Matthews has done a service to students of the drama and of the history of the British theatre by collecting in a tasteful volume the 'Dramatic Essays of Charles Lamb' (Dodd, Mead & Co.), in which the scattered criticism and portraiture of that most conversable of essayists on the stage are gathered and set by themselves with excellent effect. Mr. Matthews leads off with a pleasant essay of his own—a task of difficulty, since one must hit a peculiar tone of felicitous agreeableness if his pen is to keep company with Lamb's and not suffer; but he has written admirably, and is at the same time light in touch, frankly critical, and sincerely appreciative. He places Lamb, as a writer on the theatre, with Colley Cibber, and declares the two without rivals. He shows the deficiencies of Lamb as a dramatic author in his own attempts, but speaks of the "damned piece," "Mr. H.," with more goodwill than it has hitherto met with, and takes an unctuous pleasure in recalling the fact that the farce was acted in Philadelphia by Mr. Wood's company in 1812 "with extraordinary success." Here is another instance, he evidently means to say, of the superior appreciation of an English author by our countrymen. The entire essay is interesting, and is characterized by that union of practical knowledge with the literary instinct which papers on theatrical subjects are usually most lacking in; and the volume as a whole appeals as much to lovers of the stage as to students of literature—perhaps more.

Mr. Hogg's 'Uncollected Writings of De Quincy,' previously noticed, is issued in a second edition by Macmillan.

Oriental reinforcement of Christmas enjoyment seems to be in order, even though coming from so distant a source as the Land of the Rising Sun. Sir Edwin Arnold's book entitled 'Japonica' (Scribners) is timely in its appearance, for in both inward spirit and outward dress it belongs to holiday publications. Lured to Japan, as he tells us, not by guide-books or volumes of travel, but by a grammar, Sir Edwin found "a whole Japanese syntax constructed on the refined and gentle as well as eminently Christian principle of exalting another and depreciating one's self." When just about to leave the land whose language is governed by Christianity in grammar, Sir Edwin received an invitation to furnish three articles for *Scribner's Magazine*. These were duly written, and are now reprinted in a sumptuous volume with Mr. Robert Blum's fine illustrations. Distilling the essence of the best European and American writings concerning Japan, whether descriptive, critical, or philosophical, adding his own brilliant and kindly, rather than keen or profound, observations, and flavoring all with the honey gathered by his own study of the native poetry, he presents us, as it were, with a pretty vase filled with sweet odors. His charming style and broad charity will surely swell the volume of travel towards the land whose praises are sung from the carmine head-line on the title-page to the colophon which, in an oval of Japanese script, is "Sir Edwin Arnold's Seal." Of Mr. Blum's illustrations it may be said that their charm is that of intense realism combined with poetic selection and grouping. An artist's eye has chosen the subjects, which are treated with power and, considering that no color is used, with remarkable effect. The dainty material and elegant mechanical execution make this book one of the most inviting of parlor-table books of the season.

'By Land and By Sea' is the title of a handsomely printed and illustrated book of travels by the late Harriet E. Francis of Troy, N. Y. Accompanying her husband, the Hon. John M. Francis, in his diplomatic mission at the courts of Greece, Portugal, and Austria-Hungary, this lady enjoyed excellent opportunities of travel and observation. Her keenness of insight is noticeable, and her story of incidents, with chats about history and legends heard or read by her, are in quality rather above that of the average of round-the-world tourists. There are ten "chats" and as many printed extracts of letters descriptive of scenery or people. Occasionally we find a misprint, misspelling, or information of uncertain value, but in general the work is entertaining. The abundant full-page illustrations are creditable to the taste of the author who selected them, as their execution is to the publishers (Nims & Knight, Troy).

'Swiss Pictures Drawn with Pen and Pencil' has appeared in a new edition (Fleming H. Revell Co.), with some new illustrations by Whymper, and a practical map in which the principal peaks as well as the mountain villages are conspicuously marked for the convenience of tourists. The pictures take up almost as great a part of the 216 pages as the letter-press, which is by the late Rev. S. Manning. The book was originally issued in 1866, and in the present edition an attempt has been made to bring it up to date by including places which have since become popular, and mention of some recent mountain railways—not the very latest, however. A useful feature is a table in the appendix, showing at a glance the height of the principal mountains and passes. Some of the pictures illustrate the disadvantage of introducing figures of city folks in landscapes: the mountains remain unchanged, as do the peasants, but the women no longer wear hoopskirts.

One of the most attractive and popular of German holiday books is Cotta's *Musenalmanach*, which was revived last year under the editorship of Dr. Otto Braun. There is a certain poetic fitness in the reappearance of this venerable annual after nearly a century's sleep, as indicating a possible literary fulfilment of the Kyffhäuser prophecy. The volume for 1892 comes to us in a festive garb, the very pink of bibliopegic art, and the 300 pages of contents are as fresh and as free from fustiness as the dainty exterior. In fine, it is a Rip van Winkle of marvellously youthful mien and quite modern attire, and has awaked out of its long slumber, like the seven sleepers of Ephesus, with no traces of age in its features and no cemeterial scent in the folds of its garments. Fiction is represented by Paul Heyse's "Vroni," the scene of which is laid in the Bavarian highlands. Heyse is unsurpassed in Germany as a writer of short stories, and this tragic tale is one of his best. The prose is followed by what Milton calls "numerous verse," of which "Die Hexenmühle," a narrative poem by Otto Roquette, "Das Maienfest," by Isolde Kurz, "Die Unschuldigen Kindlein," by C. F. Meyer, and "Herzensfrühling," by Ludwig Fulda, may be especially mentioned. Six heliotypic reproductions of paintings by Höcklin, Falkenberg, Max, Von Blaas, Hoff, and Rössler greatly enhance the beauty of the work.

In anticipation of more extended notice, two books of decided merit may be commended to lovers of literature as well as to students. Mr. Mackail's 'Select Epigrams from the Greek Anthology' (Longmans, Green & Co.) may fairly be called a work of art. It is by far the best anthology ever edited in English, evincing the nicest taste and scholarship in introduction, translations, and notes. The typography is everything that a "gentleman and scholar" could desire. Prof. Mahaffy's 'The Greek World under Roman Sway' (Macmillan) continues his 'Greek Life and Thought,' noticed some years ago in these columns, and displays the same freshness of treatment, the same research in a somewhat neglected and out-of-the-way field, enlivened at intervals by discussions of life and morals which have a perennial interest.

In 'English Social Movements,' by Robert A. Woods (Scribners), one finds a good deal of information about English labor organizations, new and old, the various Socialistic leagues and their aims and methods, the university settlements and reformatory schemes of the churches in London, and other similar subjects. The account aims to be objective,

and is consistently so almost throughout; occasionally the writer's sympathy with Socialistic doctrine comes to the surface. His evident open-mindedness lends significance for American readers to what he says in his preface: "I may express my increasing conviction of the substantial emptiness of the kind of criticism made upon the constitution of English society, which is intended to be an indirect felicitation of ourselves over our own social conditions. The American aristocracy is more powerful and more dangerous than the English. And it can no longer be taken for granted that workingmen are better off in the United States than in England. . . . We are beginning to see that the problem of lower New York is in some respects even more serious than the problem of East London."

Mr. Archibald H. Grimké's 'William Lloyd Garrison, the Abolitionist,' just added to the "American Reformers Series" published by Funk & Wagnalls, is the third attempt in English to abstract in one volume the four volumes of the Life edited by Garrison's children and published by the Century Co. A fourth attempt, by Mr. Goldwin Smith, is, as we have already announced, passing through the press. Mr. Grimké's possesses a peculiar interest in that the author has in his veins the blood of the race for whose redemption the *Liberator* was founded. A noticeable warmth of feeling and rhetorical exuberance proceeds from this cause, and will not be harshly criticised. Mr. Grimké has a good constructive sense, and has made a book which hangs well together. His narrative is animated throughout. He is not a mere eulogist, and does not approve Garrison's judgment or policy at all points, but is fair in defining them. The most serious omission is in the matter of non-resistance and the Non-Resistance Society, the latter not being even mentioned. This is to lose the key to Garrison's character at once as a man and as a reformer, and an indispensable clue to the understanding of his relation to political abolitionism in the guise of the Liberty Party. Mr. Grimké shows here more than elsewhere a want of grasp of his abundant material.

In "Excursions among Words," by Eugene Field in the Chicago *News*, much good advice is given to journalistic writers which we fear it is too much to hope they will follow. But the English language is a very dangerous subject to dogmatize upon. Mr. Field begins: "There is no such word as 'wended'; the past of wend is 'went.' A man cannot be said to have wended his way. He either went his way or has went his way." Perhaps this is some of Mr. Field's humor. More probably he had forgotten Scott's—

> "Then slower wended back his way
> Where the poor maiden bleeding lay."

Music is the comprehensive title of a new magazine edited and published by Mr. W. S. B. Mathews of Chicago. In size and external appearance it resembles the *Forum*. Mr. Mathews is well known to the musical world through his books 'How to Understand Music,' his 'Popular History of Music,' etc.; and the first issue of his magazine gives evidence that he takes his task very seriously. *Music* is intended to be "a convenient medium of intercommunication between the best minds of the musical profession in the United States and the world," and the editor thinks that music has made sufficient progress in this country to call for an organ similar in scope to the literary magazines, in which there will be room and pecuniary compensation for articles that would be excluded by their dimensions from the daily papers and the weekly musical papers, which are chiefly devoted to criticism of current events and to trade matters. The November number of *Music* has a timely article on Paderewski, with a portrait, and articles on the Dignity of Music, Music in the Columbian Fair, Music and the Individual, Some Pedagogic Needs in Music, book reviews, etc. Among the contributors to the December number will be Messrs. Upton, Liebling, Tomlins, Fillmore, and Dwight.

The November Proceedings of the Royal Geographical Society opens with an account of a journey in Persia, by C. E. Biddulph, the most interesting part of which relates to the great salt deposit known as the Darya-i-Namak. This is a tract of hollow ground more than fifty miles long by twenty broad, "covered with an incrustation of solid salt several feet in thickness in most places, and in some parts, it might be said, of almost unknown depth." There is apparently but a single path across it, and the passage must be made at night, as the dazzling reflection of the sun's rays prevents persons from seeing where they are going, and, once off the track, they are almost hopelessly lost. Mr. Biddulph crossed by moonlight, and found the surface like a frozen pond, except that "instead of being continuous, it was broken up into countless polygonal blocks, whose dimensions varied from six inches across to two or three feet or more." There was no vibration of the incrustation perceived, nor impression made upon it by the camels and horses; and an attempt to break off a block of salt with a hammer and an iron tent-peg was unsuccessful, the peg being bent nearly double. A few fragments were chipped off, which, after a day or two, became soft and friable and changed color from purest white to a slaty blue. Just before the further side of the deposit was reached, the caravan got off the track, and the animals sank almost to the girths "in a substance that resembled exactly melting snow." Among the other articles are some interesting "Notes on the Sabæans," an obscure Persian sect, who call themselves "followers of John [the Baptist]."

The late John Marshall, one of the most distinguished surgeons and comparative anatomists of England, and Professor of Anatomy to the Royal Academy, left at his decease last year a set of anatomical drawings of which he made use in his lectures to the Royal Academy. They remain the property of the family, as each professor is expected to furnish his own drawings. As the Professor was too mindful of the claims of humanity to leave behind him a fortune, his family would be glad to find a purchaser for the drawings. They are about eighty in number, and might well become the property of some institute. Mrs. Marshall's address is Bellevue House, Cheyne Walk, Chelsea, London.

—When M. Eugène Melchoir de Vogüé two or three years ago delivered his address upon his reception into the French Academy, we noted it as the first signal, shown from a high place, to mark the turn of a religious and literary tide. Ever since 1848 the tide had been setting towards naturalism in literature, while in religion and morals it seemed to be flowing towards an abyss of mere negation. If M. de Vogüé was not the first to see that an ebb was coming, and in fact had begun, he was at least the first to cry aloud that this was so. His views were soon taken up by others: by M. Paul Desjardins in the *Journal des Débats*, in *Figaro*, in the *Revue Illustrée;* by M. Eugène Hollande in the *Ermitage;* by M. Édouard Rod in a striking series of articles in the *Revue Bleue*, since collected into a book under the title of 'Les Idées morales du temps présent'; and by many other writers of less weight. Most of these welcomed, or deplored, the coming of a neo-catholicism, a religion of faith and hope and love accompanied by a certain revival—or recrudescence—of ecclesiasticism. How this would come about none knew; that it would come, none seemed to doubt. A new writer, however, has just appeared upon the scene, M. Henry Bérenger, President of the Association des Étudiants. In a fine study, which appeared in the *Revue Bleue* of October 10, entitled "Les Idées modernes dans les livres de M. de Vogüé," he takes up the whole question from a quite different point of view. It is a contribution to the discussion which deserves a careful reading, and which does not lend itself to any process of compression by which a fair notion of it could be given. He looks for no success in the experiment of putting the new wine into the old bottles over again, and expects no revival of Catholicism in France. M. Édouard Rod looks for such a revival, and so, too, apparently, does M. Jules Simon. But M. Henry Bérenger may perhaps comfort himself, if these excellent judges prove to be in the right, with the reflection that, after all, not even the Holy Roman Church is a finality to every religious mind, since many have passed through it, as also through the Greek and Anglican communions, to the Catholic Church of mankind.

—Prof. Rodolfo Lanciani has republished from the *Monumenti Antichi* of the Academy dei Lincei, Rome, a monograph entitled 'L'Itinerario di Einsiedeln e L'Ordine di Benedetto Canonico.' His publication will be of especial interest to the students of the topography and antiquities of the Eternal City. The "Itinerary" discovered at Einsiedeln dates from the eighth century, but, in the opinion of Prof. Lanciani, it is merely a copy of the names of localities and monuments on a much earlier map, and may therefore be accepted as throwing light on Rome during the fourth century. It gives eleven tours or itineraries for pilgrims and strangers to follow in their sight-seeing, setting down the places of interest on each side of the streets. The 'Ordo Benedicti' furnishes similar notes—but of a later period, it being a work of the twelfth century—for seven walks through the city. Prof. Lanciani has edited both these authorities with great care, collating, wherever material for collating exists, all references by early or mediæval writers to the buildings mentioned. He gives in facsimile several pages of the original manuscripts, as well as plans and pictures of the more important sites. Most valuable, perhaps, is his large plan of Rome, on which, by the use of black and red inks, he enables one to see at a glance the points visited by the traveller of Einsiedeln and by the Canon Benedict respectively. In this way, not only the changes in the nomenclature of particular monuments, but also the disappearance of old buildings and the appearance of new ones, are readily illustrated. As we should expect, many of the old Roman names—the thermæ of the emperors, the Circus Maximus, the palaces of Nero and Trajan—are omitted from the later itinerary. The Canon records many more churches and shrines, and even in cases where the monuments of the pagan city still remained—as the baths of Caracalla and of Diocletian—he deemed them unworthy of mention to the pilgrim who went to Rome to be edified by its Christian monuments. The later authority passes over the Roman Forum with slight mention, but from the earlier we learn, for instance, that the *cavallus Constantini* stood not far from the arch of Severus,

—We will not undertake to discuss the archæological details which Prof. Lanciani's monograph brings forward, but we will point out that his work, although it is primarily addressed to antiquaries, necessarily throws side-lights on topics of wider interest concerning the post-imperial history of Rome. To take a single example, the itinerary of the twelfth century starts from the Church of St. Anastasia—an indication, as Prof. Lanciani remarks, that the influence of the Byzantine tradition was felt long after the Western and Eastern Churches had drifted far apart. Again, these two lists of buildings—for guide-books in the modern sense they are not—furnish testimony on the much-mooted question as to when the spoliation and destruction of the edifices of imperial Rome began; they do not, of course, give particulars, but from the fact that we know that this or that building was still standing in the twelfth century, we know that it could not have been demolished by the Teutonic invaders. We can also guess, but with less certainty, as to the population of the city, when we know what parts of it were occupied and how thickly it was dotted with churches. Prof. Lanciani's monograph is published with all the luxury of type, paper, broad margins, and folio size in which foreign learned societies like to indulge. When will they learn, however, that a good index, like an honest heart, is better than all this outward finery?

—The Asiatic Society of Japan publishes a pamphlet of much interest to those engaged in the comparative study of institutions, entitled 'Notes on Land Tenure and Local Institutions in Old Japan.' The pamphlet is based upon the researches of the late Dr. D. B. Simmons, an American physician whose long residence in Japan had familiarized him with the customs of the people, and whose character and abilities were such as to have secured him an exceptional place in their regard. His death unfortunately prevented him from going very far with these investigations, and his memoranda were left in a chaotic state. Mr. John H. Wigmore has edited them, so far as it was practicable, adding much from his own knowledge and securing some contributions from Japanese scholars. The result is but a fragment, but it is fascinating in its suggestiveness. We catch glimpses of a society possessing many resemblances to that of England in prehistoric or early historic times, not only in its feudal customs, but also in the relations of the people to the soil which they tilled. There are indications that, as in England, the serfs of early times represented the conquered peoples, whether aborigines or earlier immigrants than their conquerors, and that the mass of the common people of to-day represent the descendants of the early serfs. Many details are given as to local institutions, the divisions of the land, the size and tenure of holdings, the administration of justice, etc., as well as some curious specimens of feudal laws and customs. The essay opens up a tempting field of study.

STEPHENS'S FRENCH REVOLUTION.—I.

A History of the French Revolution. By H. Morse Stephens. Vol. II. London: Longmans, Green & Co.; New York: Charles Scribner's Sons. 1891.

FIVE years have elapsed since Mr. Morse Stephens published his first volume. Readers interested in historical research began to fear that some calamity had arrested the progress of the work. It is with keen satisfaction that we now find that this fear was groundless. The two volumes taken together bear out the opinion which we formed when we first became acquainted with Mr. Stephens's writings, that his book when completed will be the leading English authority on the annals of the Revolution.

Few indeed are the critics who have any claim to criticise the details of Mr. Stephens's narrative, for the men who in England or America possess anything like his knowledge of the period with which he deals form a very small and select class. This notice is not, we must in fairness add, written by one who claims to belong to this chosen body of historical experts. But it is possible and desirable to form and express a judgment of Mr. Stephens's book, not from the point of view of specialists, but from the point of view of that large and more or less well-informed public for whose benefit and instruction his 'French Revolution' is written. All that we attempt is, to consider fairly the characteristics of our author's work and to "criticise" it in the true sense of that word—that is, to give an estimate of it which may avoid the impertinence and the irrelevancy at once of flattery and of censure.

There is a certain simplicity about Mr. Stephens's whole manner of work and mode of thinking which renders the task of criticism comparatively easy. A little reflection shows that his treatment of the French Revolution, especially in his last volume, is marked by one sterling merit which many readers will deem a defect, and by one fault which to many readers will undoubtedly seem a merit. Mr. Stephens's great merit is his serious and laborious honesty of purpose. Hence, a determination on his part, which might be called excessive if in such a matter excess were possible, to state facts in the plainest and simplest manner, and to avoid at any cost of temporary popularity the vice of sensationalism. To a generation who have delighted in Carlyle's highly colored pictures of revolutionary scenes, and in his rhetorical and occasionally bombastic moralizing on historical crises, or who have drawn their conceptions of the events which a century ago astounded Europe from the over-colored dramatization of Carlyle published by Dickens under the form of a novel, Mr. Stephens's pages will be grievously disappointing: but every lover of historical truth will feel grateful to him for his abstinence from every attempt either "to point a moral or adorn a tale." He has remembered, what we have all of us too much forgotten, that an historian is neither a dramatist nor a moralist, but is primarily an investigator. It may be frankly admitted that Mr. Stephens has really no turn for the much overrated art of word-painting, and it is just where the events he narrates are the most theatrical that his deficiencies as a narrator are most apparent. But, on the other hand, if he does not give his readers scenes, he gives them facts, and if he is least interesting where other writers most successfully excite the imagination or arouse the passions of students, he is able by the mere force of truth to give an interest to just those subjects which are of the highest importance for the understanding of a great crisis in European history, but which, because they do not lend themselves to dramatic representation, are most constantly overlooked.

A few examples, taken from scores of instances to be found in Mr. Stephens's pages, will give some slight idea of the way in which his honest and plain statement of fact adds to our knowledge. On no man has more misrepresentation been lavished than on Marat. That at the end of his life he was a sanguinary maniac is to our mind perfectly clear from Mr. Stephens's own narrative, though this is not exactly the conclusion at which he himself arrives. It is, however, also certain that Marat was no "horse leech," but a man of very considerable literary, philosophical, and, above all, scientific acquirements. He held medical degrees from many universities; he was a good classical scholar, acquainted with most modern languages. Before the Revolution, he held a good medical appointment connected with the court; he possessed the friendship of Franklin, and, before the outbreak of the revolutionary movement, had studied English society on the spot, and had, with a sagacity not found among many of his contemporaries, noted some at least of the defects of the English Constitution. Certainly, to understand this man "it is necessary to get rid of preconceived ideas. Suspicious and irritable, excitable and sensitive to an extreme, he attacked everybody, and attacked them with unaccustomed violence. But with all this he was in private life a highly educated gentleman. The extent of his attainments appears from his numerous works, and it must be remembered that he could not for years have been a fashionable physician and held a court appointment without being perfectly polite and well bred." About the perfect politeness and good breeding of Marat we may, with the highest respect for Mr. Stephens, entertain some doubt. Patients tolerate much from a physician who cures; eccentric brutality no less than urbane suavity has led more doctors than one to fortune. But it is clear enough that the popular picture of Marat is at best a caricature. He may, as we think he did, have turned into a morose and bloodthirsty agitator. But half the instruction of revolutionary crises is lost if we do not recognize the fact that the victim of Charlotte Corday was at the beginning of his career no brutal ruffian.

Take, again, our author's account of the September Massacres. He is not here at his best. The terrible tale needs to be told by a master of narrative. But even here we learn from him definite facts hardly ascertainable from the pages of most historians. We know precisely how long the massacres lasted and how many were their victims. "They began at midday on Sunday, September 2; they continued throughout September 3; the total number of the victims has been variously stated from 850 to 1,458 by serious historians, and probably may be fixed at about 1,100. . . . On the morning of September 4, Roland appeared . . . at the bar of the Assembly and remarked: 'Yesterday was a day upon the events of which a veil should be drawn. I know that the people, terrible in its vengeance, has yet made use of a certain justice.'" These statements may seem bald, but they give us the gist of the whole matter. Pages of eloquence might give us far less information, and also make far less impression. So it is in everything of which Mr. Stephens treats. The King's trial is not in his pages a grand scene, but we learn from him, what we do not learn from our sensationalists, the way in which men really voted, and the strange inconsistency which marked their conduct at a terribly perplexing crisis. We venture, however, to say, as we have already intimated, that it is in the dryer portions of his subject that Mr. Stephens's high qualities as an historian are best displayed. The history of the Republican army and navy, the nature of the Great Committee, the whole system of government by committees, wherein the Con-

vention was the unconscious imitator of the Long Parliament, the policy of alternate rash philanthropy and of unscrupulous tyranny which roused civil war in San Domingo, the composition of the Girondin party, the great part played by the so-called Men of the Plain, whose services to their country have been rewarded with oblivion—these and a score more of topics of which most Englishmen know nothing, and of which it behooves us all to know if we are to draw any useful instruction from history, are absolutely forced by our author on the attention of his readers. Nor does his merit end here. His love of facts is fatal to crude theories. It does much to modify received views; it does still more to destroy our writer's own theories. It is his highest praise that his honesty of statement enables us to correct what to many persons will seem the errors, in one respect, of his historical inferences.

Mr. Stephens's one fault is a crudeness of political judgment which leads him, we do not say to defend, but certainly to palliate, the Terrorists and their policy of terror. The novelty of the view taken by him of the Reign of Terror will recommend his history to all lovers of paradox, but it must in fairness be admitted that he is no paradox-monger. No one stands at a greater distance from writers such as Froude, Carlyle, or Victor Hugo. He has no special admiration for revolutionists. He is absolutely free from the delusion—and this is one of his greatest merits—that the Jacobins were men of any exceptional ability. "It is necessary," he writes, "to understand that these twelve men [the members of the Committee of Public Safety] were not exceptionally gifted, specially trained administrators. There were most probably hundreds of other men equally qualified to put an end to anarchy and to reorganize France, . . . but circumstances thrust these twelve men to the front." He does not, again, hold, if we understand him rightly, that the Terror was in the main the result of panic. What he maintains is, that France was failing to ruin for want of a strong government, that the Committee of Public Safety, with its absolute and unlimited power, was the kind of government which the country for the moment needed; that the Committee organized of set purpose a system of government through fear, that in the execution of this scheme they put thousands of innocent men to death, not because these victims of judicial murder had committed crimes, nor because their executioners believed them to be criminals, but because the rulers of France thought that fear of death was the best instrument for maintaining the discipline of the nation. Mr. Stephens further, as we understand him, holds that the Terror was, from a political point of view, justified by success, and that it may at least be doubted whether any other method would have saved the unity and the independence of France. It is difficult to represent briefly and fairly views from which a critic dissents, and which are to be gathered inferentially from expressions scattered up and down a long narrative. The following sentences, however, go a good way to justify our account of Mr. Stephens's judgment of the Terror:

"Many evil deeds," he writes, "were done during the Reign of Terror, much blood was wantonly shed, yet for the organizers of the system excuses can be made. They honestly believed that the steady succession of executions was necessary to maintain peace and good order in France, and that, to save much bloodshed from anarchy and civil war, it was necessary that some lives should be solemnly taken with judicial forms. This may not be a valid excuse to strict moralists, but it is an intelligible attitude to adopt."

The attitude is undoubtedly "intelligible"; so was the attitude of Catiline, of Tiberius, of Pilate, of Nero, of Charles IX., of Judge Jeffreys, and so has been, and always will be, the attitude of every tyrant, bigot, fanatic, or scoundrel whose name history hands down to execration. It does not need a "strict moralist" to condemn murder, or to denounce judicial murder as the very worst form in which the worst of criminals can take away the lives of his fellow-men. This, we are well assured, Mr. Stephens himself knows as well, and feels as keenly, as any of his readers. The point, and the only point worth discussing (for the question of morality is settled past discussion), is whether, on any view of expediency, the Terror admits of political justification. That the statesmanship of the Terrorists was execrable no one really denies; what we do deny is that it was statesmanship at all, and our great respect for Mr. Stephens's honest work makes it a duty to deal with it honestly, and say that, in his criticism of the Jacobin leaders, his political judgment is, on the facts as he himself narrates them, utterly at fault. It is, as we have pointed out, his special merit to have tested the revolutionary no less than the anti-revolutionary tradition by the criterion of plain facts and, as far as circumstances admit, of precise numbers. Thus he has given the English world for the first time the statistics of the Reign of Terror. Let us take the dates chosen by Mr. Stephens himself; let us assume that the true Terror lasted a little more, or a little less, than a year; that, in strictness, it existed from September, 1793, till the 27th of July, 1794 (9th Thermidor, year II.), and, in any case, ought not to be dated back further than the beginning of April, 1793. Let us now consider what, according to our author's own view, were the two leading features of this "crisis of the Revolution" which "is the period which distinguishes it from all other revolutions." The country was deprived of any real Constitution. Twelve men—the Committee of Public Safety—were the absolute despots of France. They, and persons acting under their orders, had for all practical purposes control of the property, the freedom, and the lives of every man and woman throughout France. They deliberately proposed, if Mr. Stephens's view be correct, to rule their countrymen by a system of abject fear. To make this barbaric method effective, "a certain number of executions per day, or per week," were carried out in order 'to intimidate those who were not contented with the existing state of affairs." What, then, was this certain number of executions, or, in plain truth, of judicial murders? They amounted to 17,540. Of these, 2,500 at least were perpetrated in Paris alone, and let it be remarked that the number of deaths went on increasing, week by week, like a rapidly spreading plague. From the 10th of June to the 27th of July, 1893, 1,376 persons were executed in Paris, at the rate, on an average, of 196 victims per week. To all this must be added an untold number of imprisonments and other acts of violence. Nor do we reach the tale of horror when we place before our imagination what may be called the specific atrocities of the Terror. As bad as open acts of oppression, or worse, are the menaces, the fears, the suspicions, the abject submission to intolerable wrong, which turned brave men into cowards, and freemen into slaves.

The Reign of Terror, we shall be told—and this is in fact what Mr. Stephens maintains—saved France. But for this view he gives in reality no proof whatever. The authority of the Committee of Public Safety meant two different things. It meant, in the first place, that concentration of executive power which from the beginning of the Revolution had been vainly demanded by every leader with any claim to statesmanship, and no one need dispute that the formation of a strong government was essential to the preservation of the country. It meant, in the second place, that the strength of the Government was used to carry out a plan of oppression and to enforce this system by organized terror. That this terror was expedient is a matter which neither is, nor can be, proved. The most elementary laws of human nature, and the condition of France in 1793, forbid the belief in the expediency of cruelty and murder. Every civilized ruler knows that the force of punishment in driving men to action is, after all, very weak. Mr. Stephens rightly dwells on the fact that, during the height of the Reign of Terror, men were, as they always must be, mainly occupied with their daily and private affairs. But this is in reality conclusive evidence of the small results produced by the infliction of the severest penalties. Punishment, moreover, owes such effectiveness as it possesses to its falling upon the guilty. It is absurd to suppose that the execution of thousands who are not guilty of any offence will be a terror to evil-doers.

But let any one who is not satisfied with inferences based upon the best established principles of penal legislation consider for a moment the state of France. Were the Frenchmen of 1793 caitiffs who needed to be driven into battle by the lash? Every one knows that this was not so. France abounded then, as she always has abounded, in men of high spirit and of rare military capacity. The Reign of Terror may well enough have been necessary to keep the Jacobins in power, but the authority of the Jacobins was not necessary to the salvation of France. It was the soldiers of the Republic who saved the country, and there is no reason for supposing that France would have been worse served by her sons had a fanatic like Robespierre, or a time-server like Barère, never had an opportunity of exhibiting to the world all the horrors that ensue when narrow-minded enthusiasm or unscrupulous self-seeking is combined with unlimited power. On Mr. Stephens's own showing, the Reign of Terror cost France over 17,000 citizens. To these we may fairly, in our own judgment, add the 1,100 prisoners slaughtered in the massacres of September, and we shall not be far from the mark if we assume that between 19,000 and 20,000 citizens were the victims of Jacobinism. But the mere number of murders necessary to support the Terror gives no real measure of the injury wrought to France by the excesses of revolutionary policy. It is the Reign of Terror which has divided France into hostile camps; it is the Reign of Terror, and the traditions it has engendered, which has exposed the French to the constant danger of alternating revolution and reaction; it is the Reign of Terror which, even now, makes it uncertain whether France will ever be the lasting home of rational freedom. Our one quarrel with Mr. Stephens is that his political insight is not equal to his historical knowledge. In a succeeding article we hope to waive all criticism and to show our readers on how many sides he has, by his diligence and his research, elucidated the history of the French Revolution. Meanwhile we would suggest that, oddly enough, his theory of apology

for the Terror is scarcely fair even to the Terrorists. Were their acts, after all, the result of policy? Panic, cowardice, and stupidity naturally beget cruelty. A poet may, it is possible, see further into this matter than an historian:

> "France had lit a light for all men,
> Preached a gospel all men's good;
> Celtic Demos rose a demon,
> Shrieked and slaked the light in blood."

THE NEW GERMANY.

Geschichte des deutschen Einheitstraumes und seiner Erfüllung. In den Grundlinien dargestellt von Dr. J. Jastrow. Gekrönte Preisschrift des Allg. Vereins für Deutsche Litteratur. Vierte Auflage. Berlin: Allg. Verein für Deutsche Litteratur. 1891.

Imperial Germany: A Critical Study of Fact and Character. By Sidney Whitman. John W. Lovell Co. 1891.

The Young Emperor William II. of Germany: A Study in Character Development on a Throne. By Harold Frederic. G. P. Putnam's Sons. 1891.

THE close of a period of doubt and strife in the development of a nation, the final or seemingly final settlement of a really vital question, always produces a new theory of the national history. From the point of view of the accomplished fact, the historian discovers that the whole movement of the national life has been towards precisely that crisis which has declared itself and that solution which has resulted from the crisis. 1688 created the Whig theory of English, 1789 the Democratic theory of French history. The close of our civil war and the formulation of its results in the Thirteenth and Fourteenth Amendments have enabled both foreign and American writers to find the leading motive of the past century of our own history. That the establishment of German unity should not have exerted a similar influence upon the historical literature of Germany would be inconceivable. The instinct of scientific synthesis is stronger among the Germans than any other people. "Too fragmentary," said Heine, half a century ago, "is the world and life. I will betake myself to the German professor. He knows how to put it all together, and makes of it an intelligible system." In Heine's time a philosophy of history which was very popular in Germany showed that the evolution of the world was through the national to the cosmopolitan idea; and that precisely because the Germans had so little of the "specific national" sentiment, Germany was marching in the van of human progress. But now that the Germans have obtained the national organization which their neighbors had achieved centuries before, cosmopolitanism has been relegated to a very distant future. The movement of the age is national, and Germany has caught up with the procession. The cosmopolitan sentiments of eighteenth-century Germans are now regarded as evidences of a morbid condition, and Goethe's broad humanism, admirable in itself, is considered a symptom of national disease. This view Von Treitschke has presented, with much invective against those of different opinion, in his occasional essays and in the introductory volume of his 'German History in the Nineteenth Century.' This view Von Sybel sets forth, more calmly but not less decidedly, in the opening chapters of his 'Founding of the German Empire.' To the defence of the same thesis Jastrow devotes his 'History of the German Dream of Unity and its Fulfilment.

Jastrow presents a philosophical theory of German history from the time of Tacitus to the present day. He undertakes to show how and why the Germans failed to achieve national unity under the old empire; how, nevertheless, through all the period of their divisions, the consciousness of national coherence was strengthening and the "dream of unity" taking shape; how then, between 1815 and 1850, the nation began to awake from the dream of a "great Germany," which should include all German-speaking men, and to accept the idea of a "narrower Germany," with a federal basis and a Prussian apex. In concluding, he considers the nature of the present German Empire, and endeavors to show how beneficent have been the results of political unity in every part of the national life. His view of German history is more interesting than that of the purely political historians, because he goes beneath the political phenomena and searches for the hidden springs of the national development. German legends and poetry, religion and art, reveal the popular sentiments and aspirations; these and the practical needs of trade and industry make much of the political history with which a superficial opinion credits the politicians. In these special fields the author is by no means wholly dependent on the results reached by others. He has long been known as an investigator in the domain of German *Culturgeschichte.*

Jastrow's view of the "mission" of Prussia seems at first glance to coincide with Von Treitschke's. The latter would not hesitate to accept the former's succinct statement of the situation at the middle of the nineteenth century:

> "The rise of the Prussian State had a double significance as regarded the fulfilment of the German dream of unity. It could point to the accomplished fact that 18,000,000 Germans had found within its frontiers that political unity which the other 18,000,000 were still seeking; and at the same time the stock of political power here accumulated was large enough to enable Prussia to assume the long-desired leadership of the nation" (p. 153).

But while Von Treitschke sees only the fact that in its two previous centuries of development the Prussian State had destroyed every independent political authority within its borders, Jastrow points out that the most important local organs, the cities, lost their independence indeed, but received a generous measure of autonomy. They were simply relegated to their proper place in the governmental system of the modern state. And while Von Treitschke hopes and believes that the monarchic element in the new Empire—that is, the imperial power exercised by Prussia—will ultimately destroy the independence of the single States, Jastrow believes that Prussia has reconciled the State-rights idea with the requirements of national unity, as it had previously reconciled self-government in the cities with the unity of the State. To Von Treitschke, Germany is on the road to absolute unity, "ein werdender Einheitsstaat," and federal government is merely a transitional form. To Jastrow the autonomy of the historic States within the Empire is only one degree less important than their union, and to him the federal form now existing is a presumably final form. It is interesting to see how completely each author's interpretation of history is determined by his political ideals. Without attempting to decide which theory is the more plausible, it may be pointed out that Jastrow's view must be much the more acceptable of the two in Saxony and South Germany; and it may be suggested to the Prussian historiographers that insistence upon Von Treitschke's theory will hardly contribute to the smooth working of the present federal institutions.

Jastrow, as we have said, presents a philosophical theory of German history. It should be added that he does not attempt to narrate that history; he assumes that the reader is familiar with it. That such a work should be included in the popular series published by the "Union for German Literature," and that it should have reached a fourth edition in six years, sufficiently disproves the recent assertion of the young Emperor, that his subjects are ignorant of German history. The book has deserved its success, not only by its intrinsic merit, but by a warmth of tone and clearness of statement that are rare in German scientific writing. To the student the forty pages of notes at the end of the volume, with lists of the most important works upon German political, social, and economic history, are of special value. In the present edition these lists are brought fully up to date.

Mr. Whitman's 'Imperial Germany' is dedicated to Prince Bismarck, and the "popular" second edition is prefaced by favorable "opinions" from Prince Bismarck and Count Moltke. It is not surprising that these authorities were pleased with the work, for Mr. Whitman sincerely admires the Prussian monarchy, the German Army, and the ex-Chancellor, and devotes a very eulogistic chapter to each. He finds much to say, also, in favor of paternal government, though he is too good an Englishman not to feel its disadvantages. His study of German conditions has convinced him that a *laissez-faire* policy would ill subserve German interests; and he would obviously like to see Government attempt in England some of the tasks which it performs in Germany, if it could be counted upon to perform them as well. Through all these chapters there runs a steady criticism of things English—so steady and so incisive that one ends by wondering whether Mr. Whitman, like Tacitus, was not moved to write his 'Germany,' in part at least, by the desire to make his own countrymen conscious of their evil estate. In the other portions of the book, which deal with the German people and their political, economic, and social characteristics, the author continues to criticise freely, but his strictures are directed in the main against the Germans. He is sympathetically conscious of their many admirable qualities, but in matters political he finds them disposed to carp unduly and lacking in patriotism; in matters of trade he praises their diligence, but denies to them the originality and inventiveness which characterize English and American manufacturers and merchants; and in matters social he conveys the impression that they are only three-quarters civilized. Like many of his countrymen, and all Americans, he finds the German wife too thoroughly "domesticated." He quotes Heine's saying, "The German husband has no wife, but a servant," and Bismarck's declaration that "our wives are the only ladies we are rude to," as having "more than a passing meaning."

Mr. Whitman's book is anything but objective: it is full of the personal impressions and feelings of the author. But these are by no means without value, for they are obviously the result of long scrutiny of German life by an unusually clear-eyed observer. No ordinary tourist or special correspondent could have written the chapters on "The German Aristocracy" and "The German Philistine." In a book which attempts to cover so wide a field, it is of course easy to pick flaws. In the chapter upon "The Intellectual Life," the list

of notables is open to criticism both as regards the names included and those omitted. The description of German education is superficial and unsatisfactory. But these are minor blemishes.

The style of Mr. Whitman's book is generally easy, if rather careless; but when he falls into metaphor the result is painful. On page 89 we read that "the backbone of the Prussian nation is loath to pin its faith to foreign models of parliamentarism." In the two following sentences the monarch appears as "a beacon-tower" and "a fountain of grace." On page 141 we are told, in a single sentence, that Bismarck's oratorical "periods are nervously jagged and lack rotundity," but that "they fly straight as a dart and . . . pierce the enemy through and through, and thence pursue their winged course right across the country, to be remembered as sledge-hammer blows of conviction," etc.

Mr. Harold Frederic's study of William II. is, from the literary point of view, a well-constructed and uncommonly well-written book. As a contribution to history it is worthless. The material is simple gossip—gossip of the clubs, the cafés, the legations—such as "our regular correspondent" furnishes once a week for a New York newspaper. Some of the statements are probably true, or half true; some are almost certainly false; but it is impossible to separate fact from fiction. Where the author goes back of current gossip to history, his statements are often inexact. He tells us, for example, that the formation of the Ultramontane or "Centre" party was due to the persecution of the Catholics by Bismarck. The fact is, that when this party first appeared in force in the Prussian and Imperial Diets, there had been no change either in the Prussian laws regarding religious associations or in their application; and that the laws and their interpretation were confessedly more favorable to the freedom of the Roman Catholic Church than those of many Catholic States of Europe.

Of course Mr. Frederic, with his trained literary instincts, has appreciated the necessity of building a book on different lines from a weekly letter. There must be a central idea and a plot. The plot which he has selected is one familiar to every reader of fiction. There is a hot-headed but well-meaning young man as the hero, and there is a struggle between his good angel and his bad angel. Bismarck, whom the author cordially detests, makes an excellent Mephistopheles; and all that is unpleasant in the young Emperor's acts or utterances is ascribed to the ex-Chancellor's sinister influence. The good angel, however, is rather an unsatisfactory makeshift. Perhaps the author, embarrassed by the fetters of fact, could find no better person to cast for this rôle; but it must be confessed that the good angel is slightly ridiculous. He is an honest German pedagogue named Hintzpeter, of whom the general public knows only three things. Hintzpeter directed the studies of Prince William until the latter went to the University. About the time that William succeeded to the throne, Hintzpeter published a psychological study of his ex-pupil which was received with general surprise, some annoyance, and a great deal of laughter. In 1889 Hintzpeter was sent by William to the coal-fields of Westphalia and the Rhine Province to investigate the grievances of the miners, tens of thousands of whom were striking. So much is generally known. What is not generally known is, that all that is noblest in William's ideas and aims was implanted in his youthful mind by Hintzpeter; that it is Hintzpeter who has now won him over to the defence of the workingman and the cause of Christian Socialism; that it is Hintzpeter who, by sheer force of nobility and goodness, forced the bad Bismarck out of office, as the angels in the second part of "Faust" drive *Mephistopheles* away with rose leaves. All this it has been reserved for Mr. Frederic to reveal to the world, on the authority of "men who know the Kaiser well."

A Memoir of the Life and Public Service of Joseph E. Johnston. Edited by Bradley T. Johnson. Baltimore: R. H. Woodward & Co. 12mo, pp. viii, 362.

It is hard to find a good reason for the existence of this book. A good memoir of Gen. Joseph E. Johnston would be warmly welcomed. He himself, in his well-known 'Narrative,' gave to the world the most full and authentic history of his military career from his own standpoint. Whatever of authentic details of his youth or his private life could be added to this, would be useful and interesting as illustrating his individuality of character and opinion. His private and public correspondence must contain much that ought not to be lost, because it would help to an understanding of him and the history of his time.

The volume in hand gives us little or no help in either direction. The military part is a not very reliable abridgment of the 'Narrative,' untempered and uncorrected by any apparent study of the official records, now easily accessible to everybody who affects authorship on topics connected with the civil war. A gloss of historical facts from the standpoint of an ultra-partisan in 1865 is certainly an anachronism in 1891. The personality of Gen. Johnston is left untouched except to apply to him, here and there, phrases of overwrought laudation. A few incidents of a more intimate character are found in brief chapters of "Reminiscences" by Gen. D. H. Maury and Col. Archer Anderson. It is impossible to believe that Gen. Johnston's relatives and friends can regard the work as in any sense an adequate memorial of him.

Instead of any information as to Gen. Johnston's opinions regarding the origin and the right of secession in 1861, we have a chapter giving the editor's ideas; in which, after repeating the somewhat familiar fact that Washington was a rebel, he proves him also a secessionist by a novel account of the formation in 1789 of the Constitution of the United States.

"Eleven States," he says, "seceded from the Confederation which by its terms was to be perpetual, and formed a new union which was to be more perfect than the perpetual union which had only lasted ten years. The prime mover in this secession, who presided over the secession convention at Philadelphia, and who signed the act of secession called the Constitution, was George Washington, known to the world and in the hearts of his countrymen as the father of his country"!

His own notion of the great rebellion is this:

"By 1861 the power of government had been usurped by one section, within the letter and in defiance of the spirit and intent of the law; and the minority, in the exercise of those rights by which Anglo-Saxon liberty had been protected and defended for a thousand years, withdrew from that Government, which was no longer their Government, and established a new Union, under an amended and improved Constitution, better suited to the new conditions of society, and better adapted to secure liberty to their posterity."

The editor has never heard that the gigantic struggle between the principles of free labor and slave labor had been going on for half a century, and has not even now learned that it cut any figure in the contest of 1861, for he does not mention it. He is equally ignorant that the preëminent and capital clause in the Montgomery Constitution, which he praises as "better adapted to secure liberty to their posterity," was in these words: "No bill of attainder, *ex-post-facto* law, or law denying or impairing the right of property in negro slaves shall be passed." These stand out upon the parchment with a lurid illumination which blinds all eyes to the rest, so that the world (excepting the editor) reads them alone; he is ignorant that they are there. The living generation of Southern statesmen have with one accord recognized the great truth of the century, that America has taken a long stride in true progress and civilization, so that nothing could induce them now to turn their faces in the direction they faced in 1861. It is a pity that any book can now be written about one of the Southern worthies without a clear recognition of this.

Conscious of the fact that his material relating to Gen. Johnston was insufficient to warrant its publication as a book, the editor has inserted a hundred pages of passionate attack upon Gen. Sherman for his march to the sea and through South Carolina. Johnston was not in military command during that period, and the matter has no more relation to Johnston's biography than to that of Lee or Stonewall Jackson. Here, again, one is forced to wonder at the Rip Van Winkle sleep the editor has indulged in. Since 1865, no man in the nation was more constantly in the popular eye than Sherman, no one was more transparent, no one was more free in speech or used fewer reticences. He went everywhere, South as well as North. Every man in the country (except the editor) knows that he was frank, impulsive, speaking the feeling of the moment with little care for apparent consistency, but acting in all important matters with high and fixed principles. His bluff words were accompanied by kind and sympathetic acts. Meanness, cowardice, cruelty, he abhorred. Peace being made, there was no one whom Southern officers found more ready to do them friendly offices. Johnston knew and felt this; he renewed cordial relations with him; he was one of the chief mourners at his burial. Yet, of all the men in the world, it is Sherman that the editor selects to pad his book with an irrelevant attack the most uncharitable, the most false to characteristics fixed by universal popular knowledge and solid reputation, the most absurdly inconsistent it was possible to make. Not only this, but if true it was most disparaging to Gen. Johnston that he should have renewed his friendship with such a man and followed him mourning to his grave. The climax becomes ludicrous when the effort is made to picture the negotiation at Durham Station, when Johnston surrendered, as evidence of bitter and unscrupulous hatred on Sherman's part towards the South—a negotiation for which Sherman broke with Stanton and Halleck, and declared that no one should violate the faith pledged to those who surrendered except over his body!

Sheridan is made the object of a briefer but not less angry attack, but, comically enough, Grant is warmly eulogized in contrast to his great lieutenants in the very matters for which they are denounced, and for which, in Sheridan's case, at least, he accepted the full responsibility of command, both in his official reports and in his personal memoirs. As if to show that it is the praise and not the abuse which is to be taken in a Pickwickian sense, the appendix gives the evidence that Grant

had interfered to release the editor from arrest for treason in 1866.

We have, perhaps, noticed this book at too great length, but it has seemed necessary to emphasize the fact that the time has passed when writings will be taken as historical which are mere appeals to passions supposed to be buried, and which, even in the circles to which they are addressed, will "make the judicious grieve."

Ocean Steamships. Chas. Scribner's Sons. 1891.

THIS handsome volume, which is fully illustrated, contains a series of articles printed from time to time in *Scribner's Magazine*, treating of the steamship, its development, construction, machinery, routes, and traffic. The plan is somewhat similar to that adopted by the same publishers for a work upon the American railway, and the articles have been revised since their publication in the magazine and brought down to the present day and to the latest record-breaking of the transatlantic liner.

With the exception of the last article of the book, the treatment of the ocean steamship is almost entirely confined to those engaged in transatlantic trade, and more particularly to steamers sailing to and from the port of New York. This limitation, however, is made only to a certain extent for local reasons, as the transatlantic routes from New York have, by their great importance, peculiar demands, and severe conditions, evolved the highest types of sea-going steamers afloat. Vessels created by the demands of this trade, but superseded by other ships of a later type, can be found performing service in other oceans, and travellers to China, Japan, or New Zealand from some ports of England or the Pacific Coast may find themselves once more upon the decks of a one-time "favorite" Cunarder or White Star liner.

The shortness of the period covering the development of the steamship can be better realized when we read that the same engineer, Mr. John Robertson, who in 1812 placed the engines in the *Comet*, the pioneer steamer in British waters, also superintended their erection in the South Kensington Museum in London as an antiquated object of curious historical interest. A collection of models representing the history of steam navigation in the United States would be an interesting feature for the Columbian Exposition at Chicago, and though a lack of symmetry might be suggested in the absence of an American ocean greyhound, still, models of the latest American cruisers and torpedo boats would show that the skill to create the greyhound was in existence, and the non-existence of this type of commerce-creator could usefully serve to point a moral and adorn a tale.

The marvellous economy which the inventive ingenuity of the present generation has created in the propulsion of the modern steamship can be somewhat appreciated when the statement is made that a half-sheet of note-paper will develop sufficient power, when burned in connection with the triple-expansion engine, to carry a ton a mile in a transatlantic steamer. How an economy so great as this is to be still further increased and to go hand-in-hand with increased speed, seems a very difficult problem for solution. Little more improvement can be expected in the model of hull; the solution lies more probably in improved machinery and steam generators, in modes of propulsion, and in the use of more efficient and compact fuel. The development of engines of the quadruple-expansion type may do something, new systems of forced draught may prove more efficient and less destructive than those in use, and the use of petroleum (or rather the residuum of petroleum) may be made more practicable and safe; but it is doubtful if more than two propellers will add much to existing speed and outweigh the disadvantages presented. To those who expect much from the new cruisers designed to use three propellers, let us commend the words of the Engineer-in-Chief of the U. S. Navy, who says: "Knowing that it was extremely improbable that shafting of the great size necessary to transmit this enormous power to twin-screws could be obtained in this country, either in reasonable time or with any guarantee as to its strength, the Bureau decided to depart from the usual practice and to divide the power into three parts instead of two, each being developed by a separate engine driving its own screw. . . . It is not supposed by the Bureau that three screws will prove a more efficient mode of propulsion than two; on the contrary, it believes that, except for the highest power, they will prove slightly less efficient, but its reasons for adopting them have already been given."

The first article of the book before us is upon the development of the steamship, by Commander Chadwick, U. S. N. This leads us from the steamers *Clermont* and *Comet*, the latter forty feet long on the keel, to the *City of Paris*, the *Teutonic*, and the twin-screw *Touraine* of 11,675 tons displacement. This increase of size is not likely to end here, as already ship-builders are offering to build a vessel guaranteed to cross the Atlantic in five days, having a length of 630 feet, and with 33,000 indicated horse-power. The fastest passage given is that of the *Teutonic* in August last, in 5 days, 16 hours, and 31 minutes, at the average rate of 20.35 knots an hour. It may be of interest to state that the speed and capacity of the *Teutonic*, and also of her sister ship, the *Majestic*, are such that she can steam from Portsmouth, England, to Bombay, by the way of the Cape of Good Hope, in twenty-two days without coaling on the way. The distance is over ten thousand miles, and the significance of the fact lies in the future utility of vessels like these as Indian transports, in the event of the route by the way of the Suez Canal being closed in time of war.

The article upon the building of the ocean greyhound, though by a non-professional, is clearly and well written, and cannot fail to be instructive. That of Lieut. Kelly, U. S. N., upon the ship's company is especially readable and spirited, written as it is with all the buoyancy and *bonhomie* so characteristic of its author. With the least promising of subjects, he has given us one of the best of the series. Mr. Rideing's article upon the dangers and the safety on board of the Atlantic liner brings out in prominence, as it should, the element of danger involved in foggy or thick weather, and should serve to calm the impatience of the passenger who is suddenly shut out of port by a heavy fog or snow-storm. No tradition of the sea is better founded than that shown by the antagonistic feeling existing towards those who profess to be good "fog pilots"; they are, indeed, a delusion and a snare. Much, very much, has been done to render steamship navigation safe; but nothing can eliminate the necessity for vigilance, or relieve the feelings of care and anxiety that at times press heavily upon the commander of an ocean steamer. The record of the year 1890, however, speaks eloquently of the efficiency and good management of the transatlantic service. Nearly 2,000 trips were made from New York, about 200,000 cabin passengers were carried to and fro, and nearly 372,000 immigrants landed without accident.

The inception of one of the great steamship lines of the world was due to an American—William Wheelwright—who was the father of the project which led to the establishment of the Pacific Steam Navigation Company, with its various routes and many steamers. Now that the unfriendly attitude of the Chilian people towards Americans of the North has become so prominent a topic of the day, it is of interest to note that of the three public statues erected to individuals in Valparaiso, one honors the memory of Wheelwright, to whom Chili owes so much for the promotion and introduction of steamship, railroad, and telegraphic communication.

With all of the achievements of the ocean steamship so graphically depicted in these pages, and with all of the interest and pleasure aroused by a contemplation of the wonderful improvements created by human ingenuity, comes an unavoidable regret that our own flag flies over so few ocean steamers, and over none that are peers of the modern transatlantic liners; and this in spite of the fact that our foreign commerce was never greater than now. A ship, either of the navy or mercantile marine, is peculiarly a representative of the nationality to which it belongs, and with the national pride that we all should have exists the desire to see the flag flying upon ships the equals of any afloat. Neither the skill nor the capital is now lacking to obtain or manage these, and it is to be hoped that the fiscal laws that prevent our steamship lines from equalling in efficiency and importance our great railways may speedily come to an end.

Seas and Lands. By Sir Edwin Arnold. Longmans, Green & Co.

THIS reprint of the letters sent by Sir Edwin Arnold to the *Daily Telegraph* of London during a trip to Japan for rest and recreation, appears in the form of a handsome ornamental octavo volume. The book is an excellent specimen of mechanical work, and is well illustrated and indexed. The letters describe the people and country, especially in and around the Canadian, American, and Japanese capitals. Ten are devoted to America and thirty to Japan. The author's style is bright, sparkling, and touched with the emotion of the moment, so that each letter, now transformed into a chapter, is exceedingly readable. Sir Edwin seems to be at home in addressing an audience of Harvard students, a company of Japanese editors, a bevy of Buddhist priests, or in lecturing in a missionary university. He is sure to say something that pleases each audience, though apparently not over-careful to make his various statements harmonize.

One example of several, which we noticed in his letters when first printed in the *Telegraph*, and which we expected to find pruned out in the published volumes, is his allusion at Harvard to the Pilgrim ship *Mayflower*. "Do you know," said he (p. 110), "that the *Mayflower* which brought your ancestors thither (*sic*) went down in Indian waters off Masulipatam?" This suggestive remark, in the form of a question—an echo of Sir George Birdwood's—was given further publicity by the American, Mr. Henry Stevens, in his volume on 'The Dawn of British Trade to the East Indies.' It is many months, however, since Sir George Birdwood, in his second edi-

tion of 'Old Records of the India Office,' has shown, on the testimony of a contemporaneous entry, that the *Mayflower* which foundered off the coast of Coromandel was a ship of between two hundred and eighty and three hundred tons. The consort of the *Speedwell* from Southampton to Land's End was probably an old ship in 1620, since she nearly went to pieces on the Atlantic, and had to be held together with a good piece of Dutch hardware from Delft. To say nothing of a vessel built of ordinary English timber lasting until 1659, the famous *Mayflower* was of but one hundred and eighty tons burden, or with less room on board than many an Erie canal boat.

While among us, Sir Edwin visited our "good grey poets," Whittier and Whitman, and his narrative of experiences with these and with humbler folk is thoroughly enjoyable, albeit the description of the Camden interior is said by the less other-worldly to be worthy of the author's warm imagination. In Canada, also, Sir Edwin came in contact with the singers, and graces his pages with their poetic gems. In Japan he lost his heart, and his strain of praise is constant and without a break. The women captivated him, and of the scores of illustrations, in the text or full-page, the majority picture women in every pose, of various estates, and in all kinds and quantities of array. Apparently he saw few or none of the shadows of life in Japan, and his rhapsody and pæan is one which Japanese husbands and fathers, to say nothing of the wives and daughters, would read with interest. Strange as it may seem, a good many of the native editors who listened to the flatteries of their brother of the pen, did not enjoy the sort of stroking which Sir Edwin gave them. Certainly in Tokio, these flatteries comported ill with the intense seriousness of the native editors, reformers, and literary men. It is true that the author's 'Light of Asia' was, as he states, translated into Japanese, but the original and the translation bear the same relation to each other as a living man to a ghost.

The real fact of the matter, and one which cannot be disguised, is, that the intellectual Japanese who has come to himself, and entered even partially into that estate of self-consciousness so characteristic of the European, is profoundly dissatisfied with the low estate of his country and people. He knows that all this fulsome talk of writers like Sir Edwin Arnold can atone but little for the intellectual poverty of his language and literature. Having entered into the new world of ideas born in Europe, he feels that compliments about his art, poetry, politeness, and the assurance that he and his daughter are the most charming beings on earth, have a touch of irony. He does not even hesitate to question their sincerity, or if he believe them to be genuine, as they often undoubtedly are, he regards them as condescension. His ambition is to see and think like an Occidental. To him, compliments about what he deems trivialities are little relished, or at least less so than might superficially appear. It may be, indeed, that the genuine appreciativeness of a small minority of foreigners, and the large popular demand for their cheap art-products, will stimulate the Japanese to set greater store upon their undoubted gifts and good qualities. To the intellectual and more earnest Japanese, however, the severe but kindly criticisms of Prof. Chamberlain, for example, are more welcome and helpful than lavish compliment.

The author's descriptions of nature, people, and politics make fascinating reading. More than any other visitor to Japan he dwells upon the art and poetry, the quaint conceits, lovely manners, and dainty decoration of the Japanese. He will delight thousands of readers, and none the less because of the charm of his style than because he gives but one side—the beautiful side—of a country and people whom to see is to like, if not to love. The final chapters of the book convey information concerning Japan's politics, army, Parliament, foreign relations, and need of treaty revision, which ought to be prized in England. On his homeward voyage past Sumatra Sir Edwin passed the Dutch blockading vessels. His version of the Acheen war and the present situation between Netherlander and Malay is characteristic of a thorough-going believer in the blessings of British rule in Asia.

The Ancestral Dictionary. Edited by John Osborne Austin. Providence: Published by the Author. 1891.

THIS is the third and the smallest of the works with which Mr. Austin has illustrated the genealogy of his native State, but it is in close relation with his great 'Genealogical Dictionary of Rhode Island' and his valuable 'Ancestry of Thirty-three Rhode Islanders born in the Eighteenth Century.' From folio he now descends to octavo form, and tabulates the pedigree for three generations of sixty-four persons, of whom five-sixths are Rhode Islanders, and the rest nearly all have Rhode Island affiliations. Twenty of them are still living, the editor among them; forty-three died in the present century (the first and fourth decades excepted), and but one in the last century. No reason is assigned for the selection, and it is clear that this sort of work could be multiplied indefinitely, like the Messrs. Munsell's series of 'American Ancestry.' In fact, one merit of this Dictionary is that it furnishes at the end a number of blank tables to be filled in *ad libitum* by the possessor.

Some of the better known of Mr. Austin's subjects are Gen. T. L. Casey, Rowland R. Hazard (1792–1874), Edward Harris, Sarah Helen (Power) Whitman, and Dr. Henry E. Turner. Altogether, the 64 in their ascent involve most of the prominent families of Rhode Island, as the 275 surnames of the index show. Miss Betsey Williams (1790–1871) represents, not alone, the stock of Roger Williams, whose descendants for five generations were so fully set forth in the 'Thirty-three Rhode Islanders.' Two at least derive also from the much-married and prolific daughter of Lewis Latham, that cheerful old centenarian (1555–1655), falconer to Charles I., whose progeny was exhibited in the same work. An authentic portrait of him has been selected by Mr. Austin for a frontispiece, and has a curious interest.

Nothing but praise can be bestowed on Mr. Austin's part in this convenient form of family record. His arrangement is clear and tasteful, and his accuracy extreme as always.

Delagoa Bay, its Natives and Natural History. By Rose Monteiro. With 20 original illustrations. London: G. Philip & Son. 1891. Pp. xii, 274. 8vo.

IT would be difficult to find a parallel instance to the life of which this book is a portrayal. For the sake, mainly, of collecting insects, the author, an English lady, spent five years in a cottage a little distance from Lourenço Marques, the Portuguese town at the head of Delagoa Bay, with none but Kafirs for her companions, sometimes absolutely alone, and enduring cheerfully very considerable toil and privation. Her self-sacrifice in the interest of science was, however, not without its reward, for in summing up her work she says: "Many new insects in all classes have fallen to my share, too many to be enumerated here. There is even a new *genus* among the grasshoppers." The earlier chapters of her book contain bright and animated descriptions of her house and its surroundings, and the record of a day's occupations. These consisted of at least seven hours of collecting, the remainder of the day being devoted to preparing the specimens, feeding her caterpillars and other captive animals, as well as providing for her own scanty wants. According to her account, the attractions of her home could not have been very great even to an enthusiastic entomologist, for it was the abiding-place of countless snakes, scorpions, centipedes, lizards, cockroaches, to say nothing of mosquitoes, spiders, flies, ants of all kinds, and swarms of fleas. As her excursions for insects were confined to the immediate neighborhood of her house, she saw comparatively little of the wild natives, so that her references to those living near the coast contain little that is fresh or worthy of note. A possible exception should be made of an interesting tradition related to her by a Kafir "boy," as to the cause of the subordination of the black to the white race. The greater part of the book, however, is devoted to a description of the appearance and habits of the birds and insects dwelling in the bush which surrounded her cottage, as well as of the numerous flowering plants. This is at times done admirably and with unusual literary skill, and again at times in the monotonous way characteristic of a scientific catalogue. There are only a few references to the Portuguese and their relations to the country, and these are all distinctly unfavorable. From pure lack of energy and enterprise, the Portuguese appear to be doing nothing effectually to develop the resources of an exceptionally rich territory, which is suffering chiefly from the lack of a sufficient population. The book is very attractive in its appearance, with peculiarly graceful headpieces to the chapters, showing the various insects of the region and their nests.

BOOKS OF THE WEEK.

Allin, Rev. T. Universalism Asserted. London: Elliot Stock.
Ball, Sir R. The Cause of an Ice Age. [Modern Science Series.] D. Appleton & Co.

"No better book can be found as a gift for a healthy GIRL or BOY."—*Boston Post.*

YOUNG FOLKS' CYCLOPÆDIA OF

GAMES AND SPORTS.

By J. D. CHAMPLIN, JR., and ARTHUR E. BOSTWICK. 837 pages, illustrated, $2.50.

The *Nation* says: "No such collection has ever appeared before."

N. Y. Tribune: "A mine of joy. . . . A positive treasure."

Literary World: "Admirable. . . . Destined to a wide sale. . . . A treasure in every household that believes in games or sports of any sort."

HENRY HOLT & CO., N. Y.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

Professor Royce's Libel.

A Public Appeal for Redress to the Corporation and Overseers of Harvard University.

BY

FRANCIS ELLINGWOOD ABBOT, Ph.D.

This pamphlet is exciting intense interest among college men, especially Harvard graduates. Price, 25 cents. To be had of your newsdealer, or

GEORGE H. ELLIS, Publisher,
141 FRANKLIN ST., BOSTON.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Letters of Credit.

We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

Mr. H. MISCHKE, 2 and 4 Barclay St.
(Astor House), New York, has now ready for the HOLIDAY SEASON a fine selection of oil paintings, water colors, photogravures, etchings, and engravings. Also a full line of books for children and adults, suitable for Christmas and New Year's presents.
ARTISTIC FRAMING A SPECIALTY.

"Mr. Tucker seems to have a sort of genius for getting hold of exceptionally good manuscript."—*Denver News.*

"Mr. Tucker is to be congratulated on the admirable discrimination which he shows in the works he gives to the public."—*Detroit News.*

"Mr. Tucker is un que among publishers. He evidently seeks for what is most piquant and virile in the latest foreign publications, and gives them to his readers well translated, and in a style worth preserving."—*St. Louis Republic.*

BENJ. R. TUCKER'S PUBLICATIONS.

NEW BOOKS JUST READY.

HOLIDAY STORIES.

By STEPHEN FISKE. Containing nine short stories characterized by crisp dialogue, lively incident, originality of conception, informality of style, insight into human nature, and a local American flavor—stories enjoyable at all times, but especially adapted to the holiday season. The work of a man whose long experience in journalism has eminently fitted him for story-telling. Just the thing to satisfy the demand for a holiday book that is *both beautiful and cheap.*

CONTENTS—I. Paddy from Cork.—II. The Sealskin Sacque.—III. Summer Boarders.—IV. An American Ghost.—V. The Unfortunate Heiress.—VI. Love on Instalments.—VII. Ten to Two.—VIII. A Happy Escape.—IX. Over the Ferry.

Price: In blue cloth, red edges or gilt tops as preferred, with beautiful cover specially designed, $1.00; in paper, 50 cents. 208 pages.

THE QUINTESSENCE of IBSENISM.

By G. BERNARD SHAW. Pronounced by the London *Saturday Review* a "most diverting book," and by the author "the most complete assertion of the validity of the human will as against all laws, institutions, *isms*, and the like, now procurable for a quarter."

Ibsen's works have been read very widely in America, and there have been almost as many interpretations as readers. This conflict of opinions will cause the liveliest curiosity to know what view is taken by Mr. Bernard Shaw, who is not only one of the keenest students of Ibsen, but one of the wittiest writers in England. He takes up the plays *seriatim*, subjects each to searching analysis, and extracts the quintessence of the whole.

Price: In cloth, 75 cents; in paper, 25 cents. Nearly 200 pages.

A NEW AND CHEAP EDITION OF

THE STRIKE OF A SEX.

By GEORGE N. MILLER. Over 14,000 copies of this novel already sold.

Price: In paper, 25 cents. 235 pages.

"Terrible in its truth, but moderate in its philosophy."—*St. Paul Globe.*

THE ANARCHISTS.

A Picture of Civilization at the Close of the Nineteenth Century. By JOHN HENRY MACKAY. Translated from the German by George Schumm. With a Frontispiece Portrait of the Author and a Study of his Previous Works.

CONTENTS: I. In the Heart of the World-Metropolis.—II. The Eleventh Hour.—III. The Unemployed.—IV. Carrard Auban.—V. The Champions of Liberty.—VI. The Empire of Hunger.—VII. The Tragedy of Chicago.—VIII. The Propaganda of Communism.—IX. Trafalgar Square.—X. Anarchy.

PRESS NOTICES.

New York Morning Journal: "'The Anarchists' is one of the very few books that have a right to live. For insight into life and manners, for dramatic strength, for incisiveness of phrase, and for cold, pitiless logic, *no book of this generation equals it.* It is 'a novel with a purpose'—oh, the dreariness of that name!—and yet it interests. Could greater praise be given it? It has no plot, as that word is understood in fiction; perhaps because it is not fiction. It is a view of society, as society is at the end of the Nineteenth Century; a view taken bit by bit by Carrard Auban, who had been a Socialist in France when the upholding of the principles represented by that title meant imprisonment. Auban was young; therefore he was a dreamer. The law forbids men to dream of certain things, and punishes those who disobey. Auban went to prison, where his voice could do no harm to the fabric of government. During his first day within a cell he dashed himself against the stone walls and cried out for freedom: in a month he blessed the police for his incarceration; solitude had taught him to think. Government was still to him a wrong, but Socialism was also a wrong, a greater wrong, for it was a greater government. Where, then, should he place himself? Time must answer that; society must teach him how society was to be attacked. He went to London. In the short intervals between the hours that he devoted to bread-getting, he walked the city from end to end; the marvellous city that is an epitome of the world; the city where 5,000,000 human beings snarl and struggle and bite each other, like dogs in a pit; the city where wealth is a magnificent dream, and poverty an agonizing nightmare; the city which every year sends millions of dollars to blacks who suffer from want of salvation, while within its circle whites suffer from want of food; the city of glory and greed, of palaces and pestilences; the civilized city of London. What Auban saw made him know his course. He could find but one remedy for these evils: Anarchy. So the story leaves him. It is the beginning of his real life. The end? That lies in the future. Anarchy has not yet been accepted, either in London or New York. The rich are too busy. The poor are also too busy."

St. Louis Republic: "The book is a prose-poem."

Price: Cloth, $1.00; paper, 50 cents. 315 pages.

BENJ. R. TUCKER, 224 Tremont St., Boston, Mass.

"The WEEKLY BULLETIN is a stroke of genius."—*Henry Holt, New York.*

THE WEEKLY BULLETIN

Of Newspaper and Periodical Literature.

It costs you but Fifty Cents a Year, and may save you a Thousand Dollars.

A PERPETUAL INDEX TO THE ENTIRE DAILY PRESS OF THE UNITED STATES AS WELL AS TO WEEKLIES AND MONTHLIES.

Valuable to All. *Invaluable to Specialists.*

THE BULLETIN'S PURPOSE.

The *Weekly Bulletin* brings into journalism a thoroughly novel idea—that of serving as a guide or index to all other journals. It is a Table of Principal Contents for the English periodical Press of the United States and the British Provinces of North America, including dailies, weeklies, and monthlies.

Through its agency the scientist, the inventor, the artist, the *littérateur*, the professional man, the mechanic, the merchant, and the man of the world can place themselves constantly in touch with those sources which may supply each respectively the materials for the lack of which he is suffering or thwarted in his aims.

The *Bulletin* ignores all petty news, and even all general news of such wide interest that it is sure to appear in nearly all the daily papers simultaneously. But all specialties are noted in the *Bulletin* by title, by the name of the author when known, by the name and date of the periodical in which they appear, by a rough estimate of length, and occasionally by a line or two of description.

HOW TO SECURE THE CLIPPINGS.

In order to enable readers to obtain such catalogued articles as they desire, the publisher sells *coupons at ten cents each, or nine dollars a hundred*, each one of which will be taken by him in payment for any article catalogued in any number of the *Bulletin* (excepting articles marked with an *, which require two coupons, and those marked with a †, which require three).

UNSOLICITED TESTIMONY.

Providence (R. I.) Book Notes: "Here is a way by which any one interested in any subject can keep run of all the articles which appear upon that subject throughout the country, and speedily obtain possession of them. The coupon scheme is excellent, as it furnishes an easy way of remitting small amounts by mail with perfect safety, and does not oblige a person to take vast amounts of postage stamps. Mr. Tucker's scheme deserves success."

C. W. Barteen, Syracuse, N. Y.: "I like the idea of your paper and the furnishing of clippings, and enclose $9.50, for which please send the paper one year and one hundred coupons."

John W. Pritchard, Editor of the Christian Nation, New York: "Your valuable paper is a $1,000-a year assistant to us."

J. C. Dana, Librarian of Public Library, Denver, Colorado: "Your 'Weekly Bulletin is very good, and will be invaluable for reference. Kindly send us six copies for one year."

Detroit News: "The *News* gives Mr Tucker credit for a very brilliant idea, and one that can hardly fail to be of enormous use to the literary world."

Horace W. Fuller, Editor of "The Green Bag," a magazine for lawyers: "I hasten to congratulate you on the successful *début* of your venture. The publication will prove of great value and assistance to editors as well as the great reading public."

SUBSCRIPTION PRICE, FIFTY CENTS A YEAR.

THE WEEKLY BULLETIN, Box 210, Boston, Mass.

Colorado Springs, Colo.

What is The Library of American Literature By E. C. Stedman and E. M. Hutchinson. ?

It will pay you to find out by writing to C. L. WEBSTER & CO., 67 Fifth Ave., New York.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-five years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. ts Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.

Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.

Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.

Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.

Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.

Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.

Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

THE NATION will be sent to new readers for examination, two months for 25 cents.

A NEW BOOK FOR BOYS.

By GEORGE MANVILLE FENN.

SYD BELTON:

THE BOY WHO WOULD NOT GO TO SEA. By GEORGE MANVILLE FENN, author of "Nat the Naturalist," "In the King's Name," "Dick o' the Fens," etc. With six full page Illustrations. 12mo. Cloth, $1.50.

The numerous readers of Mr. Fenn's books will find this volume as entertaining as the best of the author's previous stories.

APPLETONS' HAND-BOOK OF WINTER RESORTS.

For Tourists and Invalids. Giving complete information as to winter sanitaria and places of resort in the United States, the West Indies, The Bermudas, The Sandwich Islands, and Mexico. Masterpieces

OF

German Fiction.

Fourteen Novels and Humorous Sketches

By RUDOLPH LINDAU, FANNY LEWALD, ERNST ECKSTEIN ADOLPH WILBRANDT, PAUL HEYSE, and HANS HOPFEN.

700 pages. Very tasteful binding in blue cloth, silver and gold stamping. Gilt top. Price, $1.50.

"The tales are short and spicy, and constitute a most tempting literary fare."—*The Critic, New York.*

"The editing has been done with excellent taste."—*The Book-Buyer, New York.*

"This volume, which is gotten up in a fashion that at once commends itself to the eye and taste of the beholder, contains fourteen short stories taken from the works of seven German authors. Several of them are social studies of fashionable life in the various European cities. A few have a sombre cast, others are gay and sparkling, and not one of them is dull or uninteresting. The reader who is in search of a good book for a leisure hour will find this most enjoyable."—*Public Opinion, Washington.*

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

MATTHEW ARNOLD IN THE "NINETEENTH CENTURY."

"The New York Nation—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best newspapers anywhere."

THE NATION,

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American desirous of keeping abreast of the best political and literary thought of the day can afford to be without it. Subscription price, $3.00 a year, postpaid.

Address

PUBLISHER OF THE NATION,
208 Broadway, New York City.

Littell's Living Age.

As THE LIVING AGE approaches its jubilee, it is interesting to recall the prophecy made concerning it by Mr. Justice Story upon reading the prospectus in April, 1844. He then said:—

"I entirely approve the plan. If it can obtain the public patronage long enough, it will contribute in an eminent degree to give a healthy tone, not only to our literature, but to public opinion. It will enable us to possess, in a moderate compass, a select library of the best productions of the age."

That THE LIVING AGE has fully justified this forecast is proved by the constant praises which, during all the years of its publication, have been bestowed upon it by the press, some of the more recent of which are given below.

A WEEKLY MAGAZINE, it gives more than Three and a Quarter Thousand double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a completeness nowhere else attempted.

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

It is therefore invaluable to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature—indispensable because it embraces the productions of the

ABLEST LIVING WRITERS

in all branches of Literature, Science, Politics, and Art.

OPINIONS.

"If a cultured stranger from another world were to find himself in this one, and were to make a study of our literary advantages, he would be impressed especially, we are confident, by the abundance, variety, and high average quality of the contents of Littell's Living Age."—*The Congregationalist, Boston.*

"There is but one Living Age, though many have essayed imitations. While their intent has, no doubt, been worthy, they have lacked that rare discriminating judgment, that fineness of acumen, and that keen a preciation of what constitutes true excellence, which make Littell's Living Age the incomparable publication that it is."—*Christian at Work, New York.*

"No eclectic journal has ever deserved so well of the public. . . . It contains nearly all the good literature of the time."—*The Churchman, New York.*

"He who subscribes for a few years to it gathers a choice library, even though he may have no other books."—*New York Observer.*

"Certain it is that no other magazine can take its place in enabling the busy reader to keep up with current literature."—*Episcopal Recorder, Philadelphia.*

"It has, in the half century of its existence, furnished its host of readers with literature the best of the day, such as cannot fail to educate and stimulate the intellectual faculties, and create tastes and desires for loftier attainments. . . . The foremost writers of the time are represented on its pages."—*Presbyterian Banner, Pittsburgh.*

"For the amount of reading contained, the subscription is extremely low."—*Christian Advocate, Nashville.*

"The fields of fiction, biography, travel, science, poetry, criticism, and social and religious discussion all come within its domain and all are well represented."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"To read it is itself an education in the course of modern thought and literature."—*Buffalo Commercial Advertiser.*

"Coming weekly, it has a great advantage over the monthly magazines and reviews."—*San Francisco Chronicle.*

"In giving a comprehensive view of the best current literature, the product of the best writers of the day, it stands unrivalled."—*Canada Presbyterian, Toronto.*

Published WEEKLY at $8.00 a year, free of postage.

☞ To NEW SUBSCRIBERS for the year 1892, remitting before Jan. 1, the numbers of 1891 issued after the receipt of their subscriptions will be sent *gratis*.

Club-Prices for the best Home and Foreign Literature.

["Possessed of The Living Age and one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Phila. Ev. Bulletin.*]

For $10.50 The Living Age and any one of the American $4 monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, postpaid; or, for $9.50, The Living Age and *Scribner's Magazine* or the *St. Nicholas.*

Rates for clubbing The Living Age with more than one other periodical will be sent on application.

Sample copies of The Living Age 15 cents each.

FAVORITE WATER COLORS.

A collection of most desirable fac similes, selected from over 100 owned by the publishers.

The water-color paintings from which these are copied are all by prominent artists, and they have been reproduced in almost perfect fac-simile.

Each one of the reproductions is well worthy of framing, and when framed could hardly be distinguished from a water-color.

The artists represented are: H. W. MCVICKAR, PERCY MORAN, JAMES M. BARNSLEY, JAMES SYMINGTON, CHARLES HOWARD JOHNSON, and FRANCIS DAY.
Price, 1 vol., large folio, gilt top, in a box . $7.50

THE LAUREATE'S COUNTRY.

BY ALFRED CHURCH, M.A., lately Professor of Latin in University College, London.

A description of places connected with the life of ALFRED, LORD TENNYSON, *with a full-page photogravure portrait of the poet, and numerous illustrations from drawings by* EDWARD HULL. Thirteen of these are full-page photogravures, and 31 are vignettes.
1 vol., large folio, cloth, in a box.....$7.50

DRIFT FROM THE SEA SERIES.

Two charming gift books devoted to illustrations and verses of the sea, the ship, and the sailor, and to certain phases of life as symbolized by them.

I. DRIFT FROM THE SEA OF LIFE.

Illustrated by C. MCKNIGHT SMITH.
With 16 full-page plates in EXQUISITE COLOR-WORK in fac-simile of water-color sketches, accompanied by appropriate poetry of the sea, and with 16 additional leaves of marine illustrations in monotint, accompanied by poems by favorite authors.
1 vol., oblong 4to, boards, in a box.....$2.50

II. SONGS OF THE SEA.

Illustrated by REYNOLDS BEALE. Similar to "Drift from the Sea of Life," but with numerous beautiful full-page illustrations in blues and browns, accompanied by appropriate selections from well-known poems on the sea.
1 vol., large oblong 4to, boards, in a box.....$1.50

IDEALS OF BEAUTY.

Contains six large fac-simile of water-color sketches by MAUD HUMPHREY, *representing ideals of feminine beauty.* These fac similes have been so successfully reproduced that they can hardly be distinguished from the original water-colors. The fac-similes are accompanied by appropriate selections from the best poets, with exquisite vignette illustrations in black-and-white by various artists.
Large folio, bound in cover of dark green cloth, in a box..... $7.50

POINT LACE AND DIAMONDS.

By GEORGE A. BAKER.

A beautiful new edition of this book. Illustrated by 12 fac-similes of water-color designs by FRANCIS DAY, and also by numerous vignette illustrations in black-and-white by various artists.
Price, cloth, with attractive stamping in gold and silver, in a box..... $3.50
"Lace" binding, with back and half sides of white vellum cloth, stamped in gold and silver. With outer half sides in a beautiful pattern of white lace on a gold background, with "watered" effect. In a box..... $3.50
Silk, attractively stamped with gold. In a box 4.00

MOTHER GOOSE BOOKS.

MAUD HUMPHREY'S MOTHER GOOSE.

A most attractive work, and unquestionably the handsomest "Mother Goose" ever published. With 24 colored plates, accompanied by appropriate verses.
Large 4to, boards..... $2 50

FAVORITE RHYMES FROM MOTHER GOOSE.

This book is made up of selections from "Maud Humphrey's Mother Goose," with just half the number of colored plates in the larger book.
Large 4to boards..... $1 25

PUBLIC LIBRARY

The Nation

VOL. LIII.—NO. 1380. THURSDAY, DECEMBER 10, 1891. PRICE 10 CENTS.

BOOKS SUITABLE FOR HOLIDAY PRESENTS.

ILLUSTRATED EDITION OF

The Story of Colette. From the French of "La Neuvaine de Colette." A new, large-paper edition. With 36 illustrations. 8vo. Cloth, $1.50.

The great popularity which this book has attained in its smaller form has led the publishers to issue an illustrated edition, with original drawings by Jean Claude, both vignette and full-page.

The Faith Doctor. By EDWARD EGGLESTON, author of "The Hoosier Schoolmaster," "The Circuit Rider," etc. 12mo. Cloth, $1.50.

"One of *the* novels of the decade."—*Rochester Union and Advertiser.*

An Utter Failure. By MIRIAM COLES HARRIS, author of "Rutledge." 12mo. Cloth, $1.25.

"A story with an elaborate plot, worked out with great cleverness and with the skill of an experienced artist in fiction. The interest is strong and at times very dramatic. . . . Those who were attracted by 'Rutledge' will give hearty welcome to this story, and find it fully as enjoyable as that once immensely popular novel."—*Boston Saturday Evening Gazette.*

The Ice Age in North America, and its Bearings upon the Antiquity of Man. By Prof. G. FREDERICK WRIGHT, Assistant on the United States Geological Survey. With an appendix on "The Probable Cause of Glaciation," by WARREN UPHAM. With 148 Maps and Illustrations. New edition, enlarged. 8vo. Cloth, $5.00.

"Prof. Wright's work is great enough to be called monumental. There is not a page that is not instructive and suggestive. It is sure to make a reputation abroad as well as at home for its distinguished author, as one of the most active and intelligent of the living students of natural science and the special department of glacial action."—*Philadelphia Bulletin.*

Around and About South America. Twenty Months of Quest and Query. By FRANK VINCENT. With Maps, Plans, and 54 full-page Illustrations. 8vo. Cloth, $5.00.

"The author's style is unusually simple and straightforward, the printing is remarkably accurate, and the forty-odd illustrations are refreshingly original for the most part."—*The Nation.*

Poems. By WILLIAM E. H. LECKY, author of "The History of England in the Eighteenth Century." 18mo. White vellum, stamped in gold, $1.00.

"A dainty little collection. These poems are the productions of many years, and written in many different moods, and are here brought together with no pretence at any arrangement, but with a delightful variety of sequence. Each one is fragrant with the perfume of some familiar thought clothed in a new and fascinating garb."—*Princetonian.*

Fifty Perfect Poems. A Collection of Fifty Acknowledged Masterpieces, by English and American Poets, selected and edited by CHARLES A. DANA and ROSSITER JOHNSON. With 72 Illustrations, printed on Japanese silk paper. Large 8vo. Bound in white silk, $10.00.

"The judgment of the editors has not been constrained by the general popularity of a poem. Happily, their verdict and that of the public often agree."—*Cincinnati Commercial Gazette.*

". . . As to the binding, it is rich watered silk, printed in gold, a delight to the eye. 'Fifty Perfect Poems' is certainly the most notable gift-book of the season."—*Philadelphia Press.*

NEW EDITION OF

"English Odes" and "English Lyrics." Selected by EDMUND W. GOSSE, with Frontispiece on India paper from a design by HAMO THORNYCROFT, A.R.A., and numerous head and tail pieces from drawings by LOUIS RHEAD. 2 volumes. 16mo. Cloth, special design in gold, $1.50 each. Same, in parchment, $1.75 each.

The Music Series. Consisting of Biographical and Anecdotical Sketches of The Great German Composers; The Great Italian and French Composers; Great Singers; Great Violinists and Pianists. 5 volumes. 18mo. Bound in half white and red sides, $3.50 per set; half calf, $8.00.

NEW AND RECENT JUVENILE BOOKS.

Little Smoke. A story of the Sioux. By WILLIAM O. STODDARD. With 12 full-page Illustrations by F. S. DELLENBAUGH, portraits of Sitting Bull, Red Cloud, and other chiefs, and 72 head and tail pieces representing the various implements and surroundings of Indian life. 8vo. Cloth, $1.50.

"As far removed as possible from the absurd Indian stories which made part of the popular literature of a past generation. . . . . Mr. Stoddard evidently knows the Indians of the plains and the western frontiersmen thoroughly, alike in their good and their objectionable qualities, and he describes them fairly and impartially."—*N. Y. Critic.*

"The author has cleverly made use of the incidents of the great Sioux war, in which Custer fell, and in the young Indian who was a fast friend of the white boy captive, he has drawn an excellent character."—*San Francisco Chronicle.*

We All. A story of out-door life and adventure in Arkansas. By OCTAVE THANET. With 12 full-page Illustrations by E. J. AUSTEN and others. 8vo. Cloth, $1.50.

"A fascinating book for boys particularly, and older people also. . . . . The character sketches of poor whites and negroes are masterly, and the narrative develops humorous and thrilling incidents from cover to cover."—*Portland Transcript.*

"The author's own sunny personality is imparted to her stories, and every work of hers has smoothed away a wrinkle from the brow of mother earth."—*New York World.*

Midshipman Paulding. A true story of the War of 1812. By MOLLY ELLIOT SEAWELL, author of "Little Jarvis." With 6 full-page Illustrations by J. O. DAVIDSON and GEORGE WHARTON EDWARDS. 8vo. Bound in blue cloth, with special design in gold and colors. $1.00.

"This little book appears to have been carefully studied from trustworthy sources, and presents a picture of two admirable lives, simple and glowing enough to leave a lasting impression on the minds of young readers, and the more because of the touches of well-colored personal life woven into the historic story."—*Chicago Times.*

King Tom and the Runaways. By LOUIS PENDLETON. The experiences of two boys in the forests of Georgia. With 6 Illustrations by E. W. KEMBLE. 8vo. Cloth, $1.50.

"The doings of 'King' Tom, Albert, and the happy-go-lucky boy Jim on the swamp-island, are as entertaining in their way as the old sagas embodied in Scandinavian story."—*Philadelphia Ledger.*

Straight On. A story of a boy's school-life in France. By the author of "The Story of Colette." With 86 Illustrations by Edouard Zier. 320 pages. 12mo. Cloth, $1.50.

"For young and old. It would be difficult to tell which class will derive most pleasure from it."—*Boston Traveller.*

"Without doubt one of the prettiest books of its order of the season, and shows a marked originality of subject and treatment. The writer has a command of both humor and pathos."—*Philadelphia Telegraph.*

"A story of life in a French school, which every boy will be the better for reading."—*Boston Transcript.*

Syd Belton: THE BOY WHO WOULD NOT GO TO SEA. By GEORGE MANVILLE FENN. With 6 full-page Illustrations. 12mo. Cloth, $1.50.

Little Jarvis. The story of the heroic midshipman of the frigate "Constellation." By MOLLY ELLIOT SEAWELL. With 6 full-page Illustrations by J. O. DAVIDSON and GEORGE WHARTON EDWARDS. 8vo. Bound uniformly with "Midshipman Paulding." $1.00.

"Founded on a true incident in our naval history. . . . So well pictured as to bring both smiles and tears upon the faces that are bent over the volume. It is in exactly the spirit for a boy's book."—*New York Home Journal.*

"Not since Dr. Edward Everett Hale's classic, 'The Man without a Country,' has there been published a more stirring lesson in patriotism."—*Boston Beacon.*

Crowded out o' Crofield. By WILLIAM O. STODDARD. The story of a country boy who fought his way to success in the great metropolis. With 23 Illustrations by C. T. HILL. 8vo. Cloth, $1.50.

"There are few writers who know how to meet the tastes and needs of boys better than does William O. Stoddard. This excellent story is interesting, thoroughly wholesome, and teaches boys to be men, not prigs or Indian hunters."—*Detroit Free Press.*

The Log School-house on the Columbia. By HEZEKIAH BUTTERWORTH. With 13 full-page Illustrations by J. CARTER BEARD, E. J. AUSTEN, and others. 8vo. Cloth, $1.50.

"This book will charm all who turn its pages. There are few books of popular information concerning the pioneers of the great Northwest, and this one is worthy of sincere praise."—*Seattle Post-Intelligencer.*

☞ *Send for the Holiday Edition of Appletons' Monthly Bulletin, containing descriptions of a large number of new and recent books suitable for holiday gifts, with specimen illustrations, etc. Mailed free on request.*

Schools.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS. VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odéon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.

For references and circular address MRS. E. L. HEAD, Germantown, Pa.

COLLEGE FOR WOMEN.—THE FIN- est winter resort in the South; the most beautiful grounds of any boarding school in the Union. Appointments of Boarding Department first-class in every respect. Advantages in Music, Art, and Literary Departments unsurpassed. For catalogue, apply to the President.

JUST PUBLISHED.

Story of Our Continent. A reader in the Geography and Geology of North America. For the Use of Schools. By N. S. SHALER, Professor of Geology, Harvard University. 12mo. Cloth. vi+290 pages. Price by mail, postpaid, 85 cents.

Of unique value as a side light on either geography or geology.

Five Short Courses of Reading in English LITERATURE. With Biographical and Critical References. By C. T. WINCHESTER, Professor of English Literature, Wesleyan University, Middletown, Conn. 16mo. Cloth. v+99 pages, besides 22 blank pages for additional references. Price by mail, postpaid, 45 cents.

An extremely useful little book; exactly what all students in English literature need.

Reference History of the United States. For High Schools and Academies. By HANNAH A. DAVIDSON, M.A., Teacher of History, Belmont School, Cal. 12mo. Cloth. xii.+190 pages besides 22 blank pages for additional references. Price by mail, postpaid, 90 cents.

A full series of questions arranged topically and chronologically, with references to the best available authorities for answers.

GINN & COMPANY, Publishers, Boston, New York, and Chicago.

HOUGHTON, MIFFLIN & COMPANY.

UNCLE TOM'S CABIN.

By HARRIET BEECHER STOWE. *New Holiday Edition.* With eighteen full-page illustrations and over one hundred and twenty text illustrations by Edward W. Kemble. In 2 vols., 16mo, attractively bound. $4.00.

VENETIAN LIFE.

By WILLIAM DEAN HOWELLS. *Holiday Edition.* With colored illustrations (aquatints) from original designs by Childe Hassam, F. Hopkinson Smith, Rhoda Holmes-Nicholls and Ross Turner. 2 vols., 12mo, bound in the Venetian colors, white and gold, with slip covers in the style of "Marble Faun," $5.00.

THE ONE-HOSS SHAY.

With its Companion Poems, "How the Old Horse Won the Bet" and "The Broomstick Train." By OLIVER WENDELL HOLMES. A Holiday Book, with sixty illustrations by Howard Pyle. 8vo, full leather binding, $1.50.

SNOW BOUND.

By JOHN G. WHITTIER. *New Holiday Edition.* With a portrait of Mr. Whittier and eight photogravure illustrations by Edmund H. Garrett. Daintily bound from designs by Mrs. Whitman. 16mo, white and blue, $1.50.

OLIVER WENDELL HOLMES.

A New Riverside Edition of his Works, carefully revised for this issue by Dr. Holmes; 13 vols.: The Autocrat of the Breakfast Table, The Professor at the Breakfast Table, The Poet at the Breakfast Table, Over the Teacups, Elsie Venner, The Guardian Angel, A Mortal Antipathy, Pages from an Old Volume of Life, Medical Essays, One Hundred Days in Europe (10 vols. of prose), and Poetical Works (in 3 vols.). Each, crown 8vo, $1.50; the set, $19.50; half calf, $35.75; half calf, gilt top, $39.00; half levant, $52.00.

JAMES RUSSELL LOWELL.

(RIVERSIDE EDITION.)

With Notes and Portraits. Literary Essays (in 4 vols.). Political Essays (in 1 vol.). Literary and Political Addresses (in 1 vol.). Poems (in 4 vols.). In 10 vols., crown 8vo, gilt top, each, $1.50; the set, 10 vols., $15.00; half calf, $27.50; half calf, gilt top, $30.00; half levant, $40.00.

LATEST LITERARY ESSAYS AND ADDRESSES.

By JAMES RUSSELL LOWELL. Containing papers on Milton, Gray, Landor, Keats, Walton, Shakespeare, Richard III., etc. Crown 8vo, uniform with the *Riverside Edition* of Lowell's Works, $1.25. Also in Persian silk, a very attractive binding, $1.25.

CHRISTOPHER COLUMBUS,

And How he Received and Imparted the Spirit of Discovery. By JUSTIN WINSOR, editor of "The Narrative and Critical History of America," "Reader's Handbook of the Revolution," etc. With portraits and maps. 8vo, $4.00.

BETTY ALDEN.

By JANE G. AUSTIN, author of "A Nameless Nobleman," "Standish of Standish," "Doctor Le Baron and His Daughters," etc. 16mo, $1.25.

Betty Alden, the daughter of John Alden and Priscilla, is the heroine of a novel rich in descriptions of the early life of New England. It is full of the history and picturesque incidents of the Pilgrim story, and is one of the most popular of Mrs. Austin's very successful books about the old Plymouth Colony.

THE LADY OF FORT ST. JOHN.

By MARY HARTWELL CATHERWOOD, author of "The Romance of Dollard," etc. $1.25.

Fort St. John stood at the mouth of the St. John River in New Brunswick in the seventeenth century. The "Lady" of the fort is a charming character, of heroic fidelity and queenly grace. The story is powerfully written, and accurately portrays the epoch to which it relates. It is one of the strongest and most deeply interesting of recent novels.

JOSEPH HARDY NEESIMA.

By ARTHUR SHERBURNE HARDY, author of "But Yet a Woman," "The Wind of Destiny," "Passe Rose," etc. With portraits of Mr. Neesima and Hon. Alpheus Hardy. Crown, 8vo, $2.

ODES, LYRICS, AND SONNETS.

From the Poetical Works of JAMES RUSSELL LOWELL. Bound in a new and specially attractive style, in white, green, and gold, gilt top. 16mo, $1.00.

This is a new volume and an exceedingly rich one, containing the best short poems Mr. Lowell wrote, and it would be difficult to surpass them in English literature.

The Marble Faun.

Holiday Edition of HAWTHORNE'S famous work, with a Portrait and 50 Photogravures. 2 vols., 8vo, cloth, $6.00; full vellum, or full polished calf, $12.00.

The Song of Hiawatha.

With 22 full-page Photogravures and about 400 text illustrations and a Portrait of Longfellow. Buckskin, 8vo, $6.00.

Our Old Home.

With 31 Photogravures and a Portrait of HAWTHORNE. 2 vols., 16mo, gilt top, $4.00; half calf, $7.00; polished calf, $9.00.

The Vision of Sir Launfal.

With Photogravure Illustrations and a Portrait of Mr. LOWELL. $1.50.

On the Threshold.

An entirely new edition of Dr. MUNGER'S remarkably good and popular book, with a new chapter on "Purity." $1.00.

A New England Girlhood.

A very interesting story of her girlhood by LUCY LARCOM. *Holiday Edition.* $1.25.

Points of View (*A New Book.*) *Books and Men.*

Two tasteful volumes of remarkably bright and readable essays. By AGNES REPPLIER. $1.25 each.

Atlantic Monthly

For 1892 will contain:

Some Recent Books.

HEROES OF THE NATIONS.

V. Sir Philip Sidney, Type of English Chivalry in the Elizabethan Age. By H. R. Fox-Bourne, author of "The Life of John Locke," etc. Chief Contents:—Preliminary—During Philip Sidney's Boyhood (1554–1568)—Undergraduate Years (1568–1572)—A Visit to Paris (1572)—Foreign Schooling (1572–1575)—With Queen Elizabeth's Court (1575–1576)—Work as Ambassador (1577)—As Son and Courtier (1577–1578)—Meta Incognita (1576–1578)—In Court Livery (1578–1580)—The Areopagus (1578–1580)—At Wilton (1580)—At Court Again (1580–1582)—&c., &c. Previously issued in this series, NELSON, GUSTAVUS ADOLPHUS, PERICLES, and THEODORIC. 12mo, fully illustrated, each cloth, $1.50, half morocco, gilt top, $1.75.

Stories From the Arabian Nights.

Selected and edited by STANLEY LANE POOLE. The editor will prepare fresh translations from the Arabic of "Sindbad the Sailor" and "Aladdin and his Wonderful Lamp." (No. XXXIV. in the Knickerbocker Nuggets Series.) Three volumes, with frontispieces in photogravure and other designs. $3.00.

"No collection of stories has ever enjoyed, or in all probability ever will enjoy, the wide popularity of the 'Arabian Nights.' For nearly two centuries children have marvelled at the wonders of the Eastern fairy-land, and readers of mature years have delighted in the pictures of Arabian society in the Middle Ages, which the 'Thousand and One Nights' unfold."—*Extract from Preface.*

Writers and Readers. By GEORGE BIRKBECK HILL, D.C.L., editor of Boswell's 'Life of Johnson.' The volume comprises a series of lectures given in Oxford in 1891. 18mo. $1.50.

CONTENTS: Lectures I.–IV.—Revolutions in Literary Taste.—Lectures V–VI.—The Study of Literature as a Part of Education.

"A pleasant series of lectures on literary topics. . . . Dr. Hill is very edifying on the topic of revolutions in literary taste, and very instructive on that of the educational value of the study of literature."—*London Times.*

The Doctrine of the Episcopal CHURCH AS SET FORTH IN THE PRAYER-BOOK. Digested and Arranged by the Rev. HENRY R. PERCIVAL, M.A., Hon. S.T.D. 16mo. 75 cents.

BOOKS FOR YOUNG FOLKS.

Peter, a Cat o' One Tail: His LIFE AND ADVENTURES. Illustrated and told by LOUIS WAIN (Peter's Proprietor). Written by CHARLES MORLEY (a Pal of Peter's). Quarto, vellum, fully illustrated. 75 cents.

Teuful, the Terrier; or, the Life AND ADVENTURES OF AN ARTIST'S DOG. Told and illustrated by J. YATES CARRINGTON, and written by CHARLES MORLEY (a Friend of Teufel's). Quarto, vellum, fully illustrated. 75 cents.

RAIL AND WATER SERIES.

I.—UNDER ORDERS: the Story of a Young Reporter.

II.—PRINCE DUSTY: a Story of the Oil Regions.

By KIRK MUNROE, author of 'Camp Mates, etc. 12mo, illustrated. Each $1.25.

"It is a pleasure to open a juvenile book and find in it live people—characters that are neither impossible paragons of goodness nor chimerical examples of success. Such a book is 'Under Orders.' Boys who want to know what a reporter's life is will get a fair idea of it from this very interesting book."—*Buffalo Courier.*

HOLIDAY GIFT BOOKS.

FOR THE LIBRARY.

A Supplement to Allibone's Critical Dictionary

OF ENGLISH LITERATURE AND BRITISH AND AMERICAN AUTHORS. By JOHN FOSTER KIRK. Two volumes. Imperial 8vo. Nearly sixteen hundred pages. Cloth, $15.00; sheep, $17.00; half Russia, $20; half calf, $22.00; half morocco, $22.00.

Prospectus with specimen pages mailed on application.

"The most thorough, exhaustive, and valuable bibliographic encyclopædia ever compiled. The first volume was issued in 1854, and it has since then been a standard work of reference in every library of any importance, public or private, throughout the civilized world."—*Philadelphia Evening Telegraph.*

The New Chambers's Encyclopædia.

Vols. I., II., III., IV., V., VI., VII., and VIII. ready. Vols. IX. and X. to be published during 1892. Revised and rewritten. New type, new illustrations, new subjects, new maps. Concise, simple, clear, accurate, and easy of reference, it is well adapted for general use; when completed, it will be fifteen years later than any other encyclopædia in the market. Price per vol.: Cloth, $3.00; cloth, uncut, $3.00; sheep, $4 00; half morocco, $4.50.

Specimen pages mailed on application.

"There is no doubt that this edition will meet the public approval. It is suited in price, conciseness, comprehensiveness, elegance, and accuracy for the widest circulation. Its publication is a most important event. In point of scholarship there is no encyclopædia, not even excepting the Britannica, which will outrank this one. The chief charm of this edition is that its scholarship is put in shape to be taken and used profitably by the average reader. In the matter of maps, in which line we have examined the volumes with special care, we believe that no finer were ever published in a work of similar grade."—*Pittsburgh Christian Advocate.*

Worcester's Dictionary

Is, in the truest sense, the STANDARD DICTIONARY OF THE ENGLISH LANGUAGE, and it is so accepted by the great body of literary men. The truth of this statement may be readily ascertained by an inspection of our literary productions, particularly in regard to the spelling of certain words wherein dictionaries differ. It will be found that *in at least three-fourths of the standard works of the language and in most of the leading periodicals* the orthography is according to Worcester. In fact, the great literary interests of this country and of England are now substantially united in the use of the word-forms given in Worcester's Dictionary. Large quarto. Bound in sheep, $10.00; half Russia, $12.00. With patent index, 75 cents additional.

Specimen pages mailed on application.

Lippincott's Biographical Dictionary.

Contains Memoirs of the Eminent Persons of all Ages and Countries, and accounts of the various Subjects of the Norse, Hindu, and Classic Mythologies, with the Pronunciation of their Names in the Different Languages in which they occur. By JOSEPH THOMAS, M.D., LL.D. Large octavo. Bound in sheep, $12.00; half Russia, $15.00.

It is really a cyclopædia within itself, including every character that has strong claims to our notice, either from public notoriety or lasting celebrity, and from it may be gathered a knowledge of the lives of those who have made the world's history famous.

ILLUSTRATED EDITIONS.

History of the Reign of Ferdinand and Isabella.

By WILLIAM H. PRESCOTT, with Notes by JOHN FOSTER KIRK. Containing all the Steel Plates on India paper and Maps that have appeared in former editions. With Thirty Phototype Illustrations. Large type, printed on fine paper, and neatly bound. Two volumes. 8vo. Half morocco, gilt top, $10.00, net.

History of the Conquest of Mexico.

With a life of the Conqueror, Fernando Cortez, and a view of the ancient Mexican civilization. By WILLIAM H. PRESCOTT, with Notes by JOHN FOSTER KIRK. Shall Girls Propose?

AND OTHER PAPERS ON

LOVE AND MARRIAGE.

By a "SPECULATIVE BACHELOR."

1 vol., new and unique style, extra cloth, gilt top, 75 cents.

While this is an entirely serious treatment of a subject that is usually discussed with flippancy, the author enforces his arguments by a chaste and delicate humor which enlists attention without compromising his more sober purpose. This "Speculative Bachelor" is a well-known man of letters, and he answers the question, "Shall Girls Propose?" with a decided affirmative. The book appears opportunely with the forthcoming leap-year. Its literary merits will not fail to charm even readers who dissent from the author's opinions.

"The book, taken all in all, is a very clever composition, and can be read with interest by those that contemplate matrimony, those that have taken the plunge, and also by those that are still heart-free. It is written in an entertaining style, and the hackneyed subject of love is treated throughout in a novel manner."—*New York Commercial Advertiser.*

A NEW BOOK BY JULES VERNE.

Mistress Branican.

By JULES VERNE, author of "Cæsar Cascabel," etc. Translated from the French by A. ESTOCLET. Illustrated by L. Benett. Small 8vo, extra cloth, $2.00.

A new book by Jules Verne is its own best advertisement.

BY THE SAME AUTHOR.

Cæsar Cascabel.

By JULES VERNE. Profusely illustrated from the original plates and published by special arrangement with the author. 1 vol., 8vo, $2.50.

The White House at Inch Gow.

By SARAH PITT, author of "The Cost of a Mistake," "Bear and Forbear," "Fritters," "Dick's Hero," etc. With eight full-page illustrations by John H. Bacon. 1 vol., 12mo, extra cloth, ink and gold dies, inlaid, $1.50.

MAX O'RELL'S NEW BOOK.

A Frenchman in America.

BY MAX O'RELL,

Author of "Jonathan and his Continent," "John Bull, Jr.," etc.

With over 130 illustrations by E. W. KEMBLE.

1 vol., octavo, extra cloth, gilt top, $2 00.

"With such a combination of author and artist the success of the work is a foregone conclusion."—*Philadelphia Saturday Evening Post.*

"His book is brisk, witty, and readable."—*New York Sun.*

"Likely to be one of the most talked-of publications of the season."—*Boston Beacon.*

"Readable from beginning to end."—*Brooklyn Times.*

"Fresh and bright."—*Cleveland Plaindealer.*

Tom Tucker and Little Bo-Peep.

By THOMAS HOOD. With very numerous full-page and other colored illustrations by Alice Wheaton Adams. Quarto, lithographic covers, $2.00.

Old heads as well as young hearts will find enough to be merry over in this really beautiful book.

"The book is a capital one for holiday use."—*Boston Courier.*

The Nation.

NEW YORK, THURSDAY, DECEMBER 10, 1891.

The Week.

MR. CRISP of Georgia, the new Speaker of the House of Representatives, is a man of dignity, culture, and abilities of a high order. Our own preferences, while the contest was going on, were with the supporters of Mr. Mills, but they were grounded wholly upon the idea that Mr. Mills was entitled to the distinction by reason of his services in the cause of tariff reform. We have not believed at any time, nor do we now believe, that Judge Crisp is one whit less earnest in that cause than Mr. Mills, although his services have been less conspicuous. But it is said, or is believed, by some that Mr. Crisp represents radical and dangerous opinions on the silver question. If this were true, probably Mr. Bland of Missouri, who has led the free-coinage Democrats for more than twelve years, would have voted for Mr. Crisp, but in fact he voted for Mr. Mills. We consider this a decisive test, and the best assurance that can be obtained in advance that Mr. Crisp is not a dangerous character, and that his election is not an omen of evil. But there is a better guarantee still, and that is the necessities of the situation. If Judge Crisp is a cool observer of political events, if he has a mind broad enough to take in the entire horizon, he must see that the Democratic party is in danger of breaking in two on this silver question, and that the only way to hold it together is to make a political issue for next year on which all members of the party can agree, and to avoid making one on which they must inevitably split. If Mr. Crisp cannot see this, he is blind indeed. The lesson taught by the autumn elections is, that the Democrats cannot carry a single Northern State east of the Rocky Mountains by adopting a free-coinage platform, or by passing a free-coinage bill in the present House. The truth is, that the Democratic party has a halter about its neck, just as the Republicans had when the McKinley tariff was pending. It can hang itself on the first tree it comes to, as the Republicans did last year. Speaker Crisp is now the most influential personage in shaping the issues of 1892. Let nobody assume that he is going to wreck the fair prospects of his party either by a radical silver policy, or by a reactionary tariff policy, or by engineering his office for or against any Presidential candidate.

There has been one feature of the Speakership contest over which all right-minded men of both parties must rejoice. The sectional question has practically cut no figure in it. The elections of 1890 resulted in such sweeping Democratic victories throughout the North that, for the first time, a majority of the Democratic Representatives in the House come from this part of the country. In other words, if the Southern vote had been solid on the Speakership question, a union of the Northern Democrats upon any one of their number would have given him a majority of the party caucus. There was at first considerable talk as to the wisdom of taking the Speaker from the North, purely upon grounds of partisan advantage in the approaching Presidential contest. The theory was, that it might prejudice the chances of the Democratic ticket next year if a Southerner—and particularly a "Confederate brigadier"—should be made Speaker, and so given large control over the course of legislation during the session of Congress. There was a certain plausibility in this theory, and one does not need to go back a great many years to reach a time when it was as sound as it was plausible. But the situation is now entirely changed, and the strongest support which Mr. Mills received came from that corner of the North where the sectional issue used to carry most weight.

We find the following announcement printed prominently—"flying at the mast-head" is, we believe, the proper expression—in many Republican organs:

"THE HOPE OF THE PARTY.

"The hope of the party lies in the expansion of a stalwart Republican press. The Republican who reads or otherwise helps to support a Democratic journal to the exclusion of one of his own party newspapers is untrue to the Republican cause.

"Unanimously subscribed to by the National Republican League.

"J. S. CLARKSON, President.
"A. B. HUMPHREY, Secretary.

"NEW YORK, November 19, 1891."

It would be hard to imagine a more humiliating confession of the party's weakness. It is an undoubted fact, which Clarkson himself has admitted repeatedly, that a great many more people read Democratic or independent journals now than ten years ago; but an old newspaper man like him knows that they cannot be driven back by any such appeals as this. The trouble is not with the former readers of Republican papers, but with the makers of those papers. The "stalwart Republican press" of to-day is not what these readers want, and a man buys a newspaper for no other reason than that it is the sort of newspaper he wants. If he does not like it, all the pleadings of a "National Republican League" will never persuade him to subscribe for it.

If the American Consul at Valparaiso really advised Commander Schley, as a despatch to the *Evening Post* asserts, not to allow his men to go ashore in the then excited state of Chilian feeling, the Commander took on himself a heavy responsibility in giving "liberty" to any portion of the crew of the *Baltimore* in a place already notorious, even in quiet times, for "sailor fights." Secretary Tracy says in his report:

"Two weeks had passed since the surrender of Valparaiso to the Congressionalist leaders, and the city was quiet. Other foreign warships in the harbor had already given liberty to their crews, and no reason existed for withholding a like privilege from the crew of the *Baltimore*."

Two weeks from the close of a bloody civil war, in which the American Navy was accused of having sympathized with and aided the unpopular side, was certainly not enough to remove all danger of scrimmages. Other foreign ships might have given liberty to their crews, but there was no such feeling towards other foreign crews in the breasts of the Chilian mob, and this, with all respect to Secretary Tracy, *was* "a reason for withholding a like privilege from the crew of the *Baltimore*." Of course it might be said, and doubtless is said by the Jingoes, that the American Navy ought not to be prevented from doing on Chilian soil whatever other navies do, through fear of "a lot of dagoes." The answer to this is, that nobody comes so near insulting the American Navy as those who think it should show by some kind of bravado that it is not afraid of the Chilians. Chili is a small State, from the conquest of which, brave as the people are, the United States could not get enough glory to fill a sailor's tobacco-pipe. One of the luxuries of being as rich and strong as we are is the luxury of being forbearing and considerate in our treatment of the weak and unfortunate. The Chilians just now are both, and even if they are accusing our naval officers unjustly, we can well afford to overlook it while they are burying their dead and restoring their Government. Patience with them is still more incumbent on us if there be any foundation, even slight, for the belief that our men-of-war in any manner helped or encouraged Balmaceda.

The Chilian papers have published a telegram, found among Balmaceda's effects, which is of especial interest to Americans in general and Admiral Brown in particular. As that officer is supposed to be now in Washington, engaged in the easy task of proving how scrupulously neutral he showed himself in the course of the civil war in Chili, we should say that a prompt explanation of this telegram would be the next thing in order:

"VALPARAISO, August 21, 1891—9:36 A. M.
"MR. PRESIDENT: The American Admiral has left me only this moment, and he believes, as I do, that a reëmbarkation is not possible.
"VIEL."

It is necessary to recall the situation in order to understand the significance of this despatch. The day before, August 20, the insurgents, whose war-ships had been hovering off the coast for several days, were reported to be landing at Quintero Bay. In the afternoon Admiral Brown went up to that locality in the *San Francisco* observed the disembarkation, and returned to Valparaiso about five o'clock. He has denied that any infor-

mation about the Congressionalists was given out by himself or any of his crew, although a Valparaiso paper is in evidence to the contrary, as we have before shown. However that may have been, here is the testimony of this telegram to show that he himself was ashore very early the next morning, conferring with the Intendente of Valparaiso, and giving him most valuable information. We say most valuable, because it was highly important for Balmaceda to know whether the Congressionalists were really landing in force at Quintero, or were simply making a feint there, in order to get him to concentrate his troops at the wrong point and leave them free to strike elsewhere. Admiral Brown, according to this telegram, assured Viel, of course on the basis of what he had seen the afternoon before, that the disembarkation was a genuine one. After that, Balmaceda knew just where to mass his troops, which he at once proceeded to do, with results which all the world knows.

As these pieces of evidence reach the light, one after the other, it becomes more and more clear that the strict neutrality which our naval and diplomatic officers now indignantly say they observed throughout, is an afterthought. They were all infatuated with the idea that Balmaceda was going to win, and never dreamed of being called to account for what they thought would be happy strokes to extend American influence in Chili after the revolution was suppressed. What they are sure of is, that they did not mean to do anything to offend the winning side, and, as they now look back upon their shrewd efforts to make themselves and their Government "solid" with the side they were certain was going to succeed, they easily persuade themselves that their conduct was virtuous and neutral because it was intended to be so patriotic. How thoroughly they were all committed to Balmaceda's cause is well indicated in the talk of the *San Francisco's* officers even now. Since their return to this country, more than one of them has railed at the Congressionalists and their English friends in the most approved Jingo fashion. This shows what was the prevailing tone of the daily conversations in the mess-room.

However other people may hope the Supreme Court will decide the question of the constitutionality of the reciprocity clause of the McKinley tariff, now before it, the one man who ought devoutly to pray that the clause may be declared unconstitutional is President Harrison. If allowed to stand, it lays a duty upon him which is enough to fill with consternation any one not conscious of omniscience. It says that

"On and after the first day of January, 1892, whenever and so often as the President shall be satisfied that the Government of any country producing and exporting sugars, molasses, coffee, tea, and hides, raw or uncured, or any of such articles, imposes duties or other exactions upon the agricultural or other products of the United States, which, in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States, he may deem to be reciprocally *unequal* and *unreasonable*, he shall have the power, and it *shall be his duty*, to suspend, by proclamation to that effect, the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, for such time as he shall deem just, etc."

This is easy to read, but consider what it really means. It means that the President must make himself accurately acquainted with the tariffs and other forms of taxation of nearly every country on the globe. The glib "such country" of the statute expands itself, in fact, into forty-seven countries, embracing every South American republic, with the possible exception of Bolivia (Brazil, of course, is excluded by having made a reciprocity agreement), all the Central American countries and Mexico, British, French, and Dutch Guiana and British Honduras, Danish, Dutch, French, and British West Indies, and the British Possessions of North America, French and British Possessions in Africa and adjacent islands, British Possessions in Australasia, Dutch and British East Indies, all the leading countries in Europe except Russia, and, among the smaller Powers, Denmark, the Netherlands, Sweden and Norway, Italy, Portugal, and Turkey, together with Liberia, China, Japan, and the unnumbered isles of the sea. The reciprocity arrangements already completed with Brazil, Spain, and San Domingo, took several months each for negotiation, special commissioners being all that time engaged in considering the intricate problems connected with international exchanges; but under this law the President is expected to decide the matter off-hand, not for three but for forty-seven countries. No wonder that he has announced a cutting down of social entertainments at the White House. He may even have to give up the regular New Year's Day reception if this imperious law, telling him what is "his duty" "on and after January 1, 1892," is allowed to stand.

Gov. Hill's speech on bimetallism at Elmira on Friday evening would seem to be the product of one who had lost his wits, if we did not know that a great many men who are perfectly sane "wander in their minds" on this question, simply because they are not familiar with the history and underlying principles of the subject. Mr. Hill is not crazy, but, if he had charge of the national finances, everybody else would be so very soon. What the man can mean by the following paragraphs, which we find in the authorized report of his speech, we fail to understand:

"In other and better words, throughout the world, all silver and all gold, unified by free bimetallic coinage so long dislocated by its cessation in 1873, moved towards each other (while men's hopes of its competent renewal lasted) over two-thirds of the present breadth of that dislocation."

"I admit that a well planned, well-guarded, competent, free bimetallic coinage would instantly compass the whole breadth of that dislocation, and renew and establish a right ratio of the two money metals."

"But the menaced veto would probably prevent the recurrence now of that most extraordinary and instructive phenomenon which I have described, and thus obscure its true significance."

"Yet I would not shift the silver issue from an evil to its remedy. Let us deal with Mr. Sherman's domestic damming and drowning before we discuss his fears of foreign inundation from Indian bangles and China teapots after all silver in all nations stands, there as here, at the old historic rated level with gold, fixed by competent free bimetallic coinage."

There are plenty of cranks who write in this way, and some of them have seats in the United States Senate. It is discouraging to think that their number is to be augmented by one, and that one from the Empire State.

The eighth annual report of the Civil-Service Commission presents abundant evidence of the steady progress which the merit system is making, despite all the obstacles put in its way by the spoilsmen. Every year brings a few more offices within the operation of the law, by reason of the number of employees reaching the limit of forty; and "the classified civil service," which is the phrase applied to that part of it under the law, now contains 84,000, or about one fourth of the whole number. This total includes an overwhelming majority of the clerks in the great Washington departments and the bulk of the employees in the post-offices and custom-houses of all the large cities in the country. The most important extension of the system during the past year has been its application to the superintendents, teachers, matrons, and physicians in the Indian service—626 in all. There is no place where the reform was more needed. An important alteration of the rules has been that allowing the establishment of competitive examinations for promotion within the classified service, which, it is hoped, will "eradicate the lingering remnants of the patronage theory within the classified service proper." Since the report was written, the President has issued an order directing that in each department "a plan be at once devised and put in operation for keeping an efficiency record of all persons within the classified service, with a view to placing promotions wholly upon the basis of merit." Another notable change has been the abolition of the provision allowing the promotion of persons in the non-classified service to positions in the classified service after non-competitive examination. With these changes the system is theoretically almost perfect, and its practical operation is given unqualified praise by the Commission.

Conclusive proof of the impartiality with which examinations are conducted is afforded by the statement that "in all probability the great bulk of the white men appointed from the Southern, and especially from the Gulf, States during the last year were, in political faith, opposed to the present Administration." Moreover, the question of race, as well as of politics, has been eliminated by the examinations in the Southern States. A fair proportion of the men appointed from these States has been colored, and many of these successful colored applicants were graduates of the colleges or other higher institutions of learning established for their race.

"They were," the report says, "for the most part, well-educated, self-respecting, intelligent young men and women who, having graduated from their colored schools and colleges, found but few avenues open for the employment of their talents," and the Commissioners rightly consider it "impossible to overestimate the boon to these colored men and women of being given the chance to enter the Government service on their own merits in fair competition with white and colored alike." It is such evidence as this of the really democratic nature of the reform which helps forward the day of its complete triumph. It is, as the Commissioners say, "the cause of honest government and decent political life, the cause of Abraham Lincoln's 'plain people' —as against the cause of that most noxious body, the oligarchy of professional office-holders and office-seekers." The report quotes the emphatic testimony to the superiority of the system given during the past year by Secretaries Windom, Noble, and Tracy, presiding over departments which have many thousands of employees. Deserved praise, by the way, is given to Secretary Tracy for having himself applied the merit system to the navy-yards —a work which the Commission could not well have taken up. The only discouraging feature of the situation, indeed, is the way in which the Commission is hampered for lack of sufficient funds. The spoilsmen no longer expect to repeal the law, but they gratify their spite by cutting down the appropriations for the Commission as low as they can. But it is only a question of time when they will lack strength even for this species of mischief, as public sentiment grows more pronounced in favor of the system.

The report of Treasury receipts and expenditures for November completes the record for five months of the fiscal year. Those five months stand for the period during which the McKinley tariff has been in full force, the tin-plate clause not going into effect until July 1. As compared with the same months in 1890, the revenue from customs has fallen off $36,245,876, or at the rate of $86,989,100 annually. The total receipts of the Treasury are less by $39,464,092 than they were in the corresponding time last year, at which rate the diminution in the revenue for the entire year would amount to $94 233 816. How the Treasury manages to keep a big deficit off the books so far is entirely apparent from an inspection of the expenditures that are reported. They are held down $45,000,000 below what they were in the same months last year. Thus, on the score of pensions, where $66,348,454 was paid out in the first five months of the last fiscal year, only $48,200,458 has been paid this year, although the appropriation was increased. So it is all around. If the expenditures held back were a clear saving, no one could complain; but they represent deferred payments. The creditors will have to get their money some time. The appropriations for the current year call for an outlay at the rate of $227,000,000 in five months; but there has actually been paid out in that time only $144,196,862. If this goes on, the receipts for the fiscal year will be $188,000,000 short of the appropriations.

Mr. Goschen has made further explanations of his new plan for increasing the gold reserve of the Bank of England by the issue of one-pound notes. The present issue of Bank of England notes uncovered by gold is about £16,500,000. This is a variable quantity and an increasing one, since the act of 1844 gave to the Bank the right of succession to the note issues of all the country banks that should go into liquidation or surrender their circulation. In all such cases the Bank of England has the right to issue an additional amount of notes equal to those "falling in" by the demise of the country banks. Such notes are issued against Government securities. The remaining note issue, an average of about £21,500,000, is made against deposited gold, just like our own gold certificates. Mr. Goschen's plan for the issue of one-pound notes allows such notes to be issued on the basis of four-fifths gold and one-fifth Government securities; that is to say, for every 5,000 of such notes the Bank must have and hold £4,000 gold and £1,000 consols. Probably the reason for this is that the Bank must have some little profit in order to pay the expenses of the new business. It is no advantage to the Bank to buy gold with its notes if it cannot do anything with the gold but sit on it. But if it can draw a small rate of interest on one-fifth of the notes so issued, probably the business can be made self-sustaining. Another proviso is that, if the amount of notes of all kinds outstanding should reach £88,000,000, any further issue must be fully covered by gold. When this limit is reached, the state of the circulation will be about as follows:

Notes.	Gold.
£16,500,000 against securities	
21,500,000	£21,500,000
50,000.000—4-5 gold	40,000,000
£88,000,000	£61,500,000

This is 70 per cent. of gold and 30 per cent. of Government securities. It cannot be considered a radical measure, but its real import lies in the fact that this stock of gold is the ultimate banking-reserve of the United Kingdom, with upwards of £600,000,000 of deposits, all payable in gold on demand. For that amount of demand liabilities, £61,500,000 of gold does not seem too large, but it will probably be found ample. On the whole, Mr. Goschen's plan is an attractive one, and it has the further merit of putting a check upon the abrasion of gold coin, which has become a serious evil.

At recent sittings of both the Austro-Hungarian Delegations and the Austrian Reichsrath, Count Kálnoky and Count Taaffe have been endeavoring to allay the alarming war rumors which so suddenly gained credence in Vienna, and led to a panic on the Boerse recalling the crash of 1873. There was something ludicrous in Kálnoky's attempt to prove that the Emperor's speech to the Delegations had been misinterpreted not only in Vienna but also in Berlin, Paris, and London, and in his assurance that the present political situation was not fraught with imminent danger, but was a "relatively" satisfactory one. Even more difficult was the task of Count Taaffe, the Austrian Premier, who had to face no fewer than seven interpellations by the representatives of as many factions of the Reichsrath, on the subject of the panic. Its immediate cause was the statement of the Vienna *Tagblatt* that the Emperor had told one of the Polish leaders, Herr Jaworski, who pleaded for the local control of the Galician railroads, that strategic reasons made it necessary to place them under the control of the general Government, and that the famine in Russia and the result of the loan rendered the political situation a very grave one. The accuracy of this version of the Emperor's speech was maintained by the *Tagblatt* even after the Government had denied its truth, and Count Taaffe has ordered the prosecution of that journal, which is also being called to account by the authorities of the Boerse and by the Polish members of the Reichsrath, who somehow consider their honor involved in this matter.

This typically Austrian muddle is rendered complete by the fact that whatever importance the utterance of the *Tagblatt* possessed was due to its supposed relations to Taaffe, who seems to have occasionally used that otherwise insignificant sheet as his semi-official mouthpiece. The Poles, moreover, whose spokesman was among those who interpellated the Government, now find themselves to a certain extent in a position of antagonism to Taaffe, whose stanchest supporters they have hitherto been; without them, in fact, he could not obtain a working majority, even if he were to make his peace with the German Liberals. He attempted to placate the latter some time ago by the appointment of Dr. Steinbach to the Ministry of Finance, and it is not unlikely that he may now, after the declared failure of all his attempts to "reconcile" the Czechs, reconstruct his entire Cabinet in accordance with the demands of the German Liberals. The newspapers of that party, at all events, are greatly elated over the remark of the Minister of Public Instruction, Dr. Gautsch, in the course of a debate on school reform in the Reichsrath, that knowledge of the German language was indispensable to every intelligent Austrian citizen. This apparently harmless truism, uttered at the time when the excitement over the Emperor's speech was at its height, provoked a great outburst of indignation on the part of the Slovens, who aim at a political and lingual supremacy in Carniola and Carinthia equal to that which the Czechs arrogate to themselves in Bohemia. The Hotspurs of the party now threaten to insist on the full recognition of Slovenic "State right." One deputy even demanded the impeachment of the Minister for his seditious talk about the importance of the German language.

A NON-PARTISAN JUDICIARY.

THE conduct of our State courts in the various contested-election cases has been such as to strengthen public confidence in their ability to decide such contests without partisan prejudice. Three of the four judges who have had most to do with the cases have been Democrats; yet they have in all their decisions gone squarely against the claims and schemes of Gov. Hill and his chief agent, Assistant Attorney-General Maynard. It is through the decisions of these three judges that all efforts to steal control of the Legislature have been defeated, and the people of the State are indebted to them for the fact that all the contests will be decided finally in the courts, and decided justly.

The most sweeping decision rendered in any of the cases was that of Justice Barnard at Poughkeepsie, on Saturday, in the Deane-Osborne contest of the Fifteenth Senatorial District. This was the case in which Deane, the Republican candidate, who died soon after election, had a clear majority on the face of the returns, but was counted out, while Osborne was counted in, by the action of the Democratic majority of the County Canvassing Board in rejecting as illegal a number of Republican ballots which had a printer's mark on them. It was claimed by the Democrats that this mark was put on for the purpose of identifying the ballots, but it was perfectly obvious that it was due to carelessness in printing. Judge Barnard's decision is of great importance as defining the powers of canvassing boards. He said:

"A Board of County Canvassers has no power to refuse to count marked ballots. It is true that the Ballot-Reform Law declares ballots marked for a certain purpose to be void. The duty of the canvassers is to ascertain the votes given for the candidates only, and the law requires the marked ballots to be counted, and the accurate results of the votes declared, as if the ballots were not marked. There is a proceeding under which any candidate may test the legality of a marked ballot, but the County Canvassers cannot find the evil intent which destroys the ballot, and then refuse to count it. There has, therefore, been concededly an error in the count for Senator for the Fifteenth District. The marked ballots, if counted, would elect Mr. Deane, the opponent of Mr. Osborne. If Mr. Deane were alive, presumably he would apply for a writ of mandamus to correct the mistake. I think that his death did not deprive the people of all remedy. The result of the mistake remains, and the proper count is all that is necessary to reach a correct result. The death of Mr. Deane does not prevent any elector from setting the law in motion to correct the mistake. The order staying the State Canvassers is right. It is incident to the relief sought by the writ of mandamus. The State Board has a return which does not indicate the true result. It is proper that the Board should hold its hand until the true record reaches it. Motion granted."

At the very moment when Justice Barnard, a Democrat, was delivering this opinion, Gov. Hill was going through the farce of examining the Clerk of Dutchess County, before removing him, for refusing to sign the tabulation of returns which the Justice was declaring illegal. The Governor had removed one county clerk for such refusal, though the Supreme Court had issued a mandamus subsequently ordering him not to sign the tabulation, and a Democratic justice had concurred in issuing the mandamus. In giving his reasons for the first removal, the Governor declared the Dutchess County Clerk guilty before he had given him a hearing. By persisting in his determination to remove him, he has had to fly in the face of adverse decisions from two Democratic justices of the Supreme Court, and has thus made clearer than ever to the people of the State the partisan and illegal character of his plans for securing control of the Legislature.

The closing words of Justice Barnard's decision, quoted above, apply to the State Board of Canvassers, and are a direct contradiction of the legal opinions which they have obtained to the effect that they must adjourn within five days from the time of first assembling. The five days' period expired on Monday, but the Justice says that "it is proper that the State Board should hold its hand until the true record reaches it." As the corrected record could not reach it for several days, the State Board has followed the Justice's opinion and will remain in session indefinitely. Thus, as in the case of the Dutchess County Clerk, the Justice has given a decision which upsets completely Gov. Hill's plans and the opinions of his legal authorities.

The conduct of Justice Morgan J. O'Brien, whom the Governor designated to sit in extraordinary session at Syracuse, was precisely what every one who has followed his course on the bench expected it would be. He is reported, in an interview in the *Times*, as saying of the Governor's action: "The designation was one that was both embarrassing and displeasing to me. Yet I regarded the designation as obligatory on me and went, without knowing what questions were to come before the extraordinary special term." He and Justice Kennedy seem to have been inspired by only one motive in the awkward situation in which they were placed by the Governor's partisan conduct. They seem to have agreed that the only course for them to pursue was to uphold the dignity of the bench and protect it against partisan invasion from every quarter. At all events, they were in entire harmony in all their decisions, and the outcome of their joint labors was the reference of all the contested cases to the Court of Appeals for final decision. This action was of course a defeat for Gov. Hill and his agents, who were trying to count in an Assemblyman by throwing out votes on errors made by election inspectors in tabulating the returns, and was a complete approval of Justice Kennedy's proceedings in issuing a mandamus ordering the Canvassing Board to send back the returns for correction.

Taken altogether, the conduct of the courts in these cases furnishes a very conclusive answer to the main objection which is brought against the proposal for transferring the control of contested-election cases from the Legislature to the courts. That objection is, that it will lower the character of the judiciary by bringing it into contact with partisan politics. This objection was heard in England when the transfer was made there, and the judges themselves strongly opposed it on that very ground; but during the twenty years and more since the courts have been invested with the power, not a single complaint has been made that a decision has been influenced by partisan reasons. In every case the action of the Court has been accepted without question. The recent conduct of our New York judges gives the best possible evidence that the same results would follow the change here.

We believe, accordingly, that when Senator Saxton reintroduces in January next his joint resolution of last year, proposing a constitutional amendment transferring the control of contested election cases from the Legislature to the courts, he will be able to get a wider and more interested hearing for it than he was able to command at its first presentation. The vital portion of that resolution is the following:

"The election, return, and qualifications of any member of either house of the Legislature, when disputed or contested, shall be determined by the courts in such manner as the Legislature shall prescribe; and such determination, when made, shall be conclusive upon the Legislature. Either house of the Legislature may expel any of its members for misconduct; but every person who receives a certificate of election as a member of either house, according to law, shall be entitled to a seat therein unless expelled for misconduct, or ousted pursuant to a judgment of a court of competent jurisdiction."

If we had such a law as that in force now, there would be no wrangle in progress over the returns. Everybody would know that the courts would make the final decision, without partisan prejudice, and would await calmly the results of the judicial inquiries. The political manipulators of neither party would seek to induce a canvassing board to alter or tamper in any way with the result of an election, for they would realize the futility of such conduct if the final revision were to be made by a judicial authority rather than by a partisan majority in a legislative body. In the present contest, for example, every one conceded that the political party which gained control of either branch of the Assembly long enough to organize it, would be able to maintain and strengthen its control for the remainder of the session. It would be able to do this by deciding all the present contested cases in its own favor, and by unseating members of the opposite party whose right to seats might be questioned after the session began. In this country it is notorious that in every legislative body, from Congress down, in every contested election the result of which is of partisan importance, the decision is regularly made on partisan grounds. So extreme a partisan as Speaker Reed of the last Congress admits this frankly. In an article which he published several months ago in the *North American Review*, he strongly recommended the English example for American imitation, and said that our present method was "unsatisfactory in results, unjust to members and contestants, and *fails to secure the representation which the people have chosen.*"

Senator Saxton's method is the only one by which the change can be brought about, and he ought to have the earnest support of all friends of good government in persuading the Legislature to adopt his joint

resolution at the next session. It passed both houses of the last Legislature, and its passage by the present will leave it free to be voted upon by the people. There can be little doubt of its obtaining popular approval.

RAILWAY REGULATION.

It is becoming recognized by both friends and enemies of railways that laws which are enacted to regulate our transportation agencies are, from the very nature of the case, only experimental. The railway problem is as broad as commerce; and as commerce changes its form to accommodate itself to the shifting conditions of business, so must transportation questions assume new phases as one section of our country or another, one class of trade or another, finds itself forced to look about for relief against loss of business or of profits. It is gradually becoming clear to us that minute rules, defining what a railroad shall or shall not do, only defeat their own object, because by a slow though certain process they bring about worse evils than those they are intended to remedy, while at the same time they often check that natural relief which usually cures the ills of unhealthy trading.

An instance of the effect of trying to do too much is seen in the results of the recent English legislation on railway regulation. England has had laws about her railways for fifty years, culminating in the new bills which satisfy nobody; and this, too, after a long and exhaustive inquiry, besides a wearisome reiteration of the whole argument in detail before a Parliamentary committee. The general opinion as to the practical results is given in an article in the London *Economic Journal*. The writer states that the whole matter of maximum rates is a delusion, so far as its practical bearing upon railway charges is concerned, and in this opinion foreign sentiment will generally agree. Next it is said that in all the wrangling the interest of the consumer is entirely forgotten, which is also true. Then it is held that the rights of the conflicting trade interests can by no possibility be theoretically determined; that is, there is an element in railway charges which cannot be ascertained except through the working out of commercial forces, in this respect being like the prices of meat or of hardware. Even "undue preference" is a term which nobody has been able to define.

From these considerations the *Economic Journal* favors Governmental interference with railway charges only when some traffic is carried at a loss, or when there is direct personal discrimination, or when "experience as to other parts of the same railway or in similar circumstances shows that the rates are so high as to diminish the volume of traffic." This is much simpler than the English acts which attempt to fix the classification of goods and the maximum charges on them, yet nothing shows better the fog in which the whole subject is, with our limited experience, enveloped than this writer's suggested legislation. When shall we say that rates are "so high as to diminish the volume of traffic"? Who shall decide such a question, and by what standard shall the alleged necessary volume of traffic be ascertained? Such a conclusion is altogether contrary to the previous reasoning of the article. But what shall we say of our own act to regulate commerce, which fixes dogmatically a short-haul regulation that is sometimes right and sometimes wrong in principle, according to the circumstances of each case?

On the other hand, some regulation of railways is to be expected, and, indeed, is necessary, though it should be confined within limits which will allow play to proper commercial activities. In a paper read before the Bankers' Association at New Orleans, Prof. Hadley warned his hearers that important social and industrial as well as financial questions were involved in the buying and selling of railroad bonds and stocks. Yet, in the main, the author seemed to ascribe the fall in the values of railway securities to the operation of the Inter-state Commerce Law. Without doubt that law has had a bad effect upon railway net earnings, particularly the anti-pooling and the short-haul clauses; and without doubt the railways now need protection against unprofitable rates rather than the public against extortionate charges. Unquestionably, too, our banking interests, if rightly directed, are powerful enough to visit upon those States (or if necessary upon the nation at large) which pass confiscatory laws, the consequences of their own folly by checking the building of railway lines and the consequent development. Yet fairness requires the statement, not included in Mr. Hadley's paper, that besides the Inter-state Act, changes in traffic or financial conditions, and sometimes the folly of railway managers themselves, have helped to bring about the decline in values spoken of.

An instance given is that of the Rock Island, whose stock was quoted at 126 in 1887, as against 82 in November, 1891. The problem before the Rock Island five years ago was whether to build feeding lines west of the Missouri River, or suffer its through traffic to become absorbed by other systems which already had extensions there. In either case there would necessarily be a loss in net earnings for a time; but the fact that railway lines in Kansas were built in advance of their need is not a good criticism upon the act to regulate commerce. Then, too, as all know, the financial disturbances, beginning with the Barings liquidation and continuing to the present, have had a great effect upon prices of all kinds. Quotations of stocks and bonds would have fallen in the United States during the last year whether we had an Inter-state Commerce Law or not. In short, Prof. Hadley's paper lost much of its force because of the reasons for shrinkages in values which he did not discuss.

None the less are the bad clauses of the Inter-state Act to be condemned for the general reasons, if no other, which in the eyes of observers in England render English interference with railway charges nugatory or worse. A report to the Legislature of Nebraska a year ago stated that the people of that State were providing earnings for three times the railroad mileage really needed to carry their products; but, the report added, the communities which had these extra railroads and depended upon them would not give them up even if the result should be to reduce charges on the remaining lines which were too far away for these communities to use. There is in our railway problem a clear relationship between profits and facilities given to the public. We cannot have our cake and eat it; neither can we place heavy restrictions upon railways and expect important improvements from them. Nor are we sure that the laws of trade are not a better protection against unjust charges in the long run than any statute can be. But the operation of those natural laws should be open, free, and fair. Personal discriminations, such as have come to light before recent grand juries, should be stopped, no matter what the cost.

THE TREASURY GOLD.

The Treasury figures for the month of November show that the tide of gold receipts has at last begun to turn in the Government's favor. After having received for nearly half a year only a small part of its customs receipts at New York in gold, the Treasury has taken in during November over 40 per cent. in that metal. We give below the figures showing the percentage of gold in the receipts from duties at New York during the present year. About half of the Government's total revenue comes from the collection of duties in this city; and the proportion of gold in these receipts is likely to be at least as great as in receipts from other sources. For convenience of reference, we give at the same time the net holding of gold by the Treasury at the close of each month:

Month.	Per cent. of gold in N. Y. customs.	Net Gold in Treasury.
	Per cent.	Millions.
January	88.6	141.7
February	81.1	149.7
March	65.1	148.1
April	47.2	141.7
May	28.0	133.2
June	15.5	117.7
July	15.1	121.1
August	12.8	132.5
September	11.8	132.5
October	20.0	127.7
November	43.6	129.2

During 1890 the proportion of gold receipts had maintained itself at a good level, being usually above 90 per cent. There had been a drop, it is true, in the latter part of that year, the percentage in October and November being only 80. But in December, 1890, there was a gain, and, as our figures show, the present year opened in the month of January with nearly 90 per cent. of gold receipts. After January, however, there was a steady and ominous decline,

until the receipts in the summer months, from June through September, were on the average only to the extent of 12 per cent. in gold. October showed a slight gain, to 20 per cent.; but the month of November shows, for the first time in six months, an inflow of somewhere near one-half in gold.

The cause of this state of things is simple enough, and has been pointed out more than once in these columns. It is the redundancy of other kinds of money, more particularly of silver certificates and silver Treasury notes. It is true that the money which has taken the place of gold in the Government receipts does not consist of these silver issues only. The United States notes of the old legal-tender issue have also flowed in, and have in fact been the most important single agent in displacing the gold. But it is the steady large issue of the new silver notes which has brought about a redundancy of legal tenders, and so has caused them to be turned over to the Government for tax receipts. Moreover, so far as their intrinsic desirability or likelihood of easy conversion into gold is concerned, there is no longer any ground for preferring the greenbacks to the new notes. The notes, under the Act of 1890, are made a direct claim on the Government gold reserve; they are a legal tender, which the silver certificates under the Bland Act were not; they are in every way as good as the greenbacks now are. Both greenbacks and Treasury notes, it is needless to say, are less good than the greenbacks were before last year's silver act, because the increasing volume of these obligations, both bearing directly on the Treasury's gold, makes the certainty of convertibility into gold less for either one.

While the steady monthly issue of between four and four and a half millions of the new notes has undoubtedly been the chief cause of the redundant money supply and the consequent sinking of the gold receipts of the Treasury, other causes have contributed to bring about the result. The increase in the bank-note circulation, resulting from the continuance of the 4½ bonds at 2 per cent., has had something to do with it. The bank-note circulation, which has been steadily diminishing in years past, and doubtless will again diminish when the effects of the present bond extension have worked themselves out, has not gone down—indeed, it has slightly risen; so that one factor which formerly facilitated the absorption of the silver issues, and in due time will again facilitate it, has not for the time being been in operation. The year, moreover, until within a month or two, has been a dull one. In dull years, when business transactions shrink and the occasions for the use of money grow fewer money accumulates in bank reserves, and the loan market is heavy. Finally, the Treasury has certainly not followed a policy of excessive caution. It has been unwilling or unable to do what Secretary Manning did under somewhat similar circumstances in 1885 and 1886; namely, to hold the silver and hoard it, rather than try to push it into circulation. The Treasury has made some large payments, notably those for refunding the direct tax, in silver certificates, apparently endeavoring to force the silver currency into circulation. But, since the conditions were not favorable for its absorption, the silver, or the legal tenders displaced by it, flowed back into the Government's hands in tax receipts.

The condition of the banks of this city has shown clearly enough the redundancy of paper money in its various forms. Current funds which the country does not use find their way to New York, where the unneeded cash of the community is kept on deposit by the banks from all parts of the country. The holdings of specie and legal tenders by the associated banks were, in millions of dollars:

	Specie.	Legal-tenders.
On July 5, 1890	75.4	32.6
On Jan. 3, 1891	78.6	26.6
On April 11, 1891	76.7	33.0

Specie means practically all gold. Legal tenders include those of the old and of the new issue. The increase of the latter during the summer months is striking, and it is obvious enough why the Treasury got no gold in its receipts from customs during that time. The banks held on to their gold, and turned in to the Treasury the legal tenders which were accumulating on their hands.

The usual autumnal flow of money to the West has begun to carry away the legal tenders of the banks, while the return of gold from abroad has increased their gold holdings. Consequently, the gold receipts from duties in New York have begun to rise. The probabilities are that the month of December will show a still further gain in gold receipts, and that the period of danger for the Treasury is over for the time being; for the flow of currency to the West and South will continue for a month or two more. When the return movement begins, early next year, it will again become a question whether the Treasury will get a regular and sufficient inflow of gold in its revenue. If the present year proves to be like 1879–'80, when we had the same favorable conditions of good crops here and poor crops abroad, and if we are at the beginning of another upward wave of prosperity and activity — and this seems to be the outlook — there will probably be little difficulty in keeping the growing issues of Treasury notes in circulation. In such periods the transactions calling for the use of money expand, and a greater volume circulates with ease. Apparently, the United States will have their usual luck, and, for a while at least, will be saved by a stroke of good fortune from the consequences of reckless legislation. But it is ill predicting for the future. The boom may not come, and next spring may bring a new period of difficulty for the Treasury. Even if the boom does come, the evil day is only postponed. Prosperity and activity will in due time be succeeded by depression, and with depression we may be sure of seeing again the conditions which have prevailed during the greater part of this year, and which, if they prevail long enough and with sufficient intensity, must lead eventually to the suspension of gold payments by the Treasury and the break-down of the gold standard.

"*LOSSES*" *IN FOREIGN TRADE.*

ANOTHER illustration of the mischief done by Custom-house returns in hiding the real nature of economical facts has just been furnished by the report of the French Senate on the tariff. The report is highly protectionist. The Senate has taken the extravagantly protective bill passed by the Chamber, and aggravated it in every direction. For instance, the Chamber was afraid to increase the duty on oil seeds. It was afraid of the oil-manufacturers of Marseilles and Bordeaux, and of the candle and soap-manufacturers of the whole country, who employ a large force of laborers, and whose products enter so largely into the consumption of every French household. It was afraid, too, of the shipping interest, which does a great business in carrying to France the raw material of the oil industry. So it left these seeds on the free list. But the Senate said this was "illogical"—that as some seeds were taxed, oil seeds should be taxed, too—and it accordingly put a heavy duty on them.

The *Temps* points out that the whole report is based on the thesis of the Chairman of the Committee, M. Dauphin, who lays it down that "France has been for thirty years losing large sums through buying more than she sells." This is, of course, simply the old balance-of-trade theory stated in its simplest and baldest form. Mr. Blaine made us all familiar with it two years ago, when he actually gave in figures the losses we had sustained in the year 1889 from this cause in our trade with Cuba, Brazil, and other countries. These losses were as follows, as related by him to an audience at Waterville in August, 1890:

> "We lost $41,000,000 in Cuba, from which our imports were $52,000,000, and to which our exports were only $11,000,000. Forty-one millions is a pretty large sum to lose in one island in a single year. In the Republic of Brazil we lost $51,000,000; our imports from Brazil were $60,000,000, our exports to Brazil were $9,000,000. In Mexico we lost $10,000,000; our imports from Mexico were $21,000,000, our exports to Mexico were $11,000,000."

One's first impulse, of course, in reading stuff of this sort is to turn with disgust from such a display of ignorance on the part of a prominent public man. But, after all, both Mr. Blaine and M. Dauphin simply state in a peculiarly absurd shape the theory which underlies the whole protective system, and secures for it a large part of its popular support. Probably nothing does more to obscure in the popular mind the real nature of international exchange than the practice of looking at Custom-house returns of imports and exports as an account of the transactions between two nations as bodies corporate. When a man like Blaine or Dauphin takes

up the returns and finds that in a single year "the United States" sold "Cuba" $11,000,000, and bought of "Cuba" $52,000,000, and finds no record in these returns relating to the balance, he not unnaturally concludes that the "United States" are out of pocket to the amount of the difference. If he then asks himself how such enormous "losses" can be borne year after year without a collapse of some kind, he quiets his understanding with the reflection that "a nation" is so rich that it can stand anything.

The only remedy for this obliquity of vision—and we commend it earnestly to all persons engaged in teaching political economy, whether on the stump or in schools or colleges—is to dwell incessantly on the fact that custom-house returns do not represent the dealings of nations with each other, as nations; they represent the sum total of certain transactions of certain individuals of one nation with certain individuals of another nation. All foreign trade is trade between individuals. The Custom-house simply foots up the aggregate amounts of such portion of it as comes under its notice. Once a man gets this idea firmly implanted in his brain, the absurdity of such notions as Blaine's and Dauphin's becomes clear as noonday to him, for he says at once to himself, on seeing the difference reported by the custom-house between our sales to Cuba and our purchases from Cuba: "As this trade with Cuba is and has been from the beginning carried on by individuals, it is ridiculous to suppose that the difference in the custom-house returns between sales and purchases represents 'losses.' If losses, they would have had to be borne by individuals, and the Cuban trade would perish in a single year through the bankruptcy of everybody connected with it, and would never be renewed. Moreover, a loss of $41,000,000 with 'a single island,' and of $50 000,000 with Brazil, or $91,000,000 in all, would have produced a great panic in Wall Street, and ruined tens of thousands of people all over the country. As there has been no such panic, and as the trade with Cuba and Brazil continues to be carried on year after year by the same firms or individuals, I conclude that it is, no matter what the Custom-house returns say, really profitable, and that a considerable portion of it must escape the notice of the Custom-house authorities." Acting on this theory, he would look into the matter more closely, and find that we paid for the goods we got from Cuba only partly in exports directly to the island; that we paid for the rest in exports to England and other countries with which Cuba deals, and gave the Cubans bills drawn against these goods. The whole business would thus appear rational, legitimate, and profitable, and not the reckless outlay of young spend thrifts or lunatics, as it appears to the untutored mind of "the Man from Maine."

That men deemed fit to sit in the Legislatures of their respective countries, and familiar with the conditions of domestic trade, should seriously suppose that civilized men carried on foreign trade year by year at a heavy loss, is simply another illustration of the deluding power of words and figures. For nothing that Blaine or Dauphin has said about "losses" in foreign trade is more extraordinary than the doctrine of the benefits of "dearness" as preached not only by President Harrison and Maj. McKinley, but by Mr. Cabot Lodge, the historian and Scholar in Politics. Civilization has from the earliest ages consisted in a persistent effort on the part of the human race to make the desirable things of life more easy of acquisition—that is, cheaper. So that, when Mr. Lodge announced on the stump that he hated cheapness, he really announced that the labors of his fellow-men for five thousand years to make the world a more comfortable place to live in were odious to him.

POLITICS AND HISTORY AT VIENNA.

VIENNA, November 21, 1891.

THE architectural appearance of houses of parliament is not a matter of great weight in the study of institutions, but the workshop of a great legislature, the surroundings and conditions under which the law-making of a nation is carried on, have an interest of their own. The Capitol at Vienna, though excelled in grandeur by those of some other countries, has a dignity and finish which indicate national self-respect and honorable regard for the legislative body. Two chambers almost exactly alike, separated by a stately vestibule, contain the *Abgeordnetenhaus* and the *Herrenhaus*, or, approximately speaking, the House of Representatives and the Senate. On entering the *Abgeordnetenhaus*, one is for a moment under the impression that it is the House of Representatives at Washington. Through a flat-timbered ceiling light falls upon a vast array of seats arranged in semicircles; but the illusion is very brief, for the amphitheatrical arrangement of galleries by which a respectable minority of the people of the United States can look upon its Congress as in a cockpit, fails at Vienna. Two narrow galleries, like balconies in a theatre, admit a limited public, for whom there are perhaps two hundred seats and as many more standing-places. For entrance you obtain tickets gratis of the concierge, and become entitled to a numbered seat. Crowding is furthermore restrained by a device at the outer door which at once attracts the notice of the stranger. At the entrance and extending through the great portal into the street, you observe a curious labyrinth of iron railings. If occasion demands, the short route may be barred off, and every person be made to turn sixteen times in single file before arriving at the door. Whether this "crowd-compeller" is to prevent attacks upon the house, or is simply for the convenience of custodians, I did not learn, but if by chance factious citizens rushed upon the Parliament with rash intentions, there would be plenty of time here for cool reflection.

The seating capacity of the chamber is about three hundred and fifty, but the members are accommodated in less space than at Washington, the amount of desk-room being much more restricted and the chairs arranged after the manner of opera seats. Tasteful decorations of a simple kind, and a series of historical frescoes on the wall behind the Speaker's chair, give the place a warm and pleasant aspect. The Speaker, or rather the President of the Assembly, is flanked on either side by a first and second vice-president, who are almost continually in their places. At a slightly lower level stands a row of tables for secretaries and others, but the one in the centre immediately in front of the President is reserved for the so-called *Berichterstatter*. From this tribune chairmen of committees in charge of bills make their reports, instead of from their seats. In front of all stands a semicircle of desks for Ministers of State.

The general appearance of the members in session gives one a good impression of the intelligence and character of the assembly. The quorum necessary to conduct business, however, not being very high, and the duty of regular attendance apparently not weighing heavily on their minds, one must study the delegates in sections according to the questions in which they are interested. Some days since, a member opened his speech to some fifty colleagues with the words, "Honorable and totally empty House." For a European assembly, there would seem to be a great many young men, though youth is not a characteristic of the whole body. Schmolka, the President, is venerable with years, and many other white heads appear on the benches. To one coming from Switzerland, it is a little startling to see priests on the floor of the house, dressed in the robes of their order and wearing conspicuous gold rosaries about their necks. In that republic, which suffered so much from Jesuits that it has since mistrusted all ecclesiastics in politics, no clerical can be elected to Parliament, but at Vienna there are twenty in the House of Representatives alone, and to the Senate many high dignitaries of the Church belong by right.

The party divisions in Austria are almost bewildering. In the House of Representatives there are no less than sixteen party names, many of them derived from differences of nationality, others from political sentiment. Besides small groups of Italians, Rumanians, Ruthenians, Croats, Serbs, and Slovenians, there are strong representations of Poles and Czechs, who stand more or less in political antipathy to the Germans. In respect of policy there are, furthermore, German Liberals, German Nationals, German Clericals, Feudal party, Middle party, and Anti-Semites, if not other classifications. The largest single group, according to a recent list, is that of the German Liberals, numbering 109. I am speaking, it is perhaps needless to remark, of the divisions in the Austrian kingdom, not in the imperial Austro-Hungarian Parliament.

Under these circumstances, it is easy to understand that strictly party government does not rule. When Count Taaffe formed his cabinet in 1879, he took occasion to say that it was not and could not be a party ministry. Various men have held portfolios since that time, but quite a number have been in service for a long period, and the head of the Cabinet has not changed. Hence we have here a "business cabinet," which, in distinction from that of Switzerland, keeps in power because of political exigencies rather than definite tenure of office. Parties have thus far united sufficiently to keep the machinery in motion, but no one of them has sufficient power to give its own impress fully to the course of legislation. The result is somewhat like that claimed for proportional representation.

The system of representation in the House differs from that to which we are accustomed in America. The delegates represent not only certain territories, but also certain classes of interests. Of these class divisions there are four: Large landed-property, cities, boards of trade, rural communities—that is to say, certain members were elected by groups of

landlords, others by chambers of commerce, city precincts and rural precincts. The attempt is thus made to balance the representation of interests before election rather than by numerical weight after election. The result at present is that landed property receives by far the strongest representation. The great proprietors and the rural communities together have 215 members out of 353, and the effect is seen in the prominence given to agrarian legislation. In contrast to the statement often made in America that the farmers are chiefly represented by lawyers, it may be noted that nearly one-half of the Austrian delegates are actual owners of land. There is a continual increase in the number of teachers and professors elected, this also in many cases being an evidence of agrarianism, as professors in the agricultural schools are chosen to represent that class of interests. But the economists are also there, and, rather strange to say, one of the most active members and fluent speakers of the Liberal party is the eminent geologist, Prof. Suess, of the University of Vienna.

The questions which have recently been under discussion have not given much occasion for parliamentary sparring. The army budget is taken much as a matter of course. All parties are pretty well united in upholding the military as the mainstay of the united empire. Details, however, come in for criticism, and recently the Young Czechs gave vent to their feelings on the matter of nationality in the army. More regard should be given to national regiments, officers should speak the same language as the troops, and a national *esprit de corps* be cultivated. Whatever may be said in complaint of race partiality on the part of officers, Count Welsersheimb, Minister of National Defences, in a few words made two things perfectly clear, namely, that the mixture of peoples in Austria presented one of the most difficult problems of military administration, and, second, that it would be easy to create a half dozen national armies ready to march against each other.

The language question came forward again almost in the same week in the discussion of the educational budget, and discovered the Government decidedly in favor of German as the official language for all parts of the kingdom. There has been an impression abroad, I think because not much has been said about it recently, that the Czechs were gaining somewhat the upper hand, but the declarations of the Government on the subject do not give color to that view. The speech of Cultus Minister Gautsch attracted wide attention because of its distinctness. Every educated man in Austria speaks German, said he, and if the educated classes find it necessary to use that language as an international medium, it is only natural that the Government should do so. What is also remarkable to the observer from the gallery is that the Bohemian orators all have such excellent command of the German language. Herold, one of the most valiant warriors of the Czechs, is a German orator of exceptional excellence, and made, the day I heard him, a most trenchant attack on the Government in the language of which he was complaining. It does not seem as if the Slavic tongues would gain more than permission to exist at present. But the problem will not thus be settled by administrative command. Difficulties of a serious kind are in store, owing to the movement of Slavic population towards the capital. An immense flood of working people is demanding special recognition of the Czech language right at the centre of German Austria, and has in part obtained it.

The economic problems which lie in the path of Austria were exhibited one day quite incidentally in a lecture by Prof. Menger at the University, into whose class-room I had strayed for the purpose of hearing one of the leading exponents of political economy. In the course of an historical sketch of the great commercial movements of Europe, the influence of geographical situation was brought forward, and the unfavorable position of Austria particularly emphasized. The Alps in the south were as yet a serious hindrance to commercial activity, for freight transport was so expensive that it was often as cheap to send Mediterranean goods to the northern border by way of Hamburg as by way of the Semmering Pass. Trieste, under these circumstances, would never become a world-mart, nor Austria a main thoroughfare of commerce. Another hindrance to rapid advancement, according to his mind, was the easy-going, home-staying disposition of the people, in contrast with the enterprise of the Englishman. In Vienna, for instance, if a proprietor of a café had three sons, every one stayed in the city and opened a new café to compete with all the rest, and all the bakers' sons became bakers on the old spot. The speaker did not leave it doubtful that he thought it better for part of the population to emigrate.

To these unexpected side-lights on Austrian economics were added some pregnant hints as to the probable development of self-government in a lecture by Prof. Inama-Sternegg. Was the administration of local affairs likely to become centralized more and more in the hands of State officers, or would local government extend? He was of opinion that the true and probable course of development would be in the direction of local administration with central control, as in England, for whose system he had great admiration. These words from a man in high position in the statistical department of the Government seemed to me to betoken a favorable outlook for local popular liberty in Austria.

Political development, however, will have a hard struggle so long as the mediæval press laws continue to exist. In no constitutional State in Europe are the conditions for free expression of opinion so unfavorable. Anything "dangerous to public interests" may be confiscated by administrative order, and the door is so open to official discretion that a quotation from the Bible might occasion the suppression of an issue. This censorship not only extends over the published statement but also begins in preventive fashion before publication. Newspapers are accustomed to receive notice from State's-attorneys and police officials that certain matters are not to be touched upon, and the business is thus carried on in a manner in no sense judicial, but rather administrative and dictatorial. Moreover, the Government can regulate the criticism of its action by means of the license law. Official permission must be obtained before a newspaper can be started, and the character and political antecedents of the proposed publishers may easily move the bureau of censorship to decide that another new journal is unnecessary to the welfare of the country.

On top of all this comes the stamp duty. On the margin of every copy of every unofficial journal you may observe a black seal like our postal cancelling stamp, which indicates that a fraction of a cent has been paid to the Austrian Government. This brings into the treasury about 1,300,000 florins every year as a direct tax on the educational interests of the country. Furthermore, the semi-official papers which publish legal notices are exempt from this duty, and can thus thrive at the expense of the others. Then it requires a special license to sell newspapers. The newsboy is unknown. Only at the scattered kiosks and certain other well-defined places can the journals of the day be bought when not taken by subscription. The result is good for the cafés, whither everybody flocks to read the news, but not for the general spread of intelligence. The question has been again under discussion within the last few days in a committee of Parliament, but the outlook for improvement is not very bright.

It is a great satisfaction to find one of the oldest and largest universities in one of the finest existing academic buildings. The huge building on the Ringstrasse, however, does not accommodate all the 6,000 students; several of the natural sciences are obliged to find quarters elsewhere. I was more particularly interested in the work of the historical department, and sought out its abode in the apartments assigned to the Philosophical Faculty. Here was to be found, as in every German university, an "Historisches Seminar" in which practical work is carried on under the direction of various professors; but peculiar to Vienna, and only to be compared with one similar French institution, is the "Institut für oesterreichische Geschichtsforschung," a special Government laboratory for the study of Austrian history. Like the "École des Chartes" at Paris, the work of the Institute is largely palæographic, but perhaps less exclusively. It is a training-school for archivists and specialists, and but five regular members are admitted at once. Others, however, may be attached as working members, and herein lies the opportunity for students to perfect themselves in the science of historical investigation. It should, in reality, be called the Austrian Institute for the Study of History, for the scope of instruction is much wider than the annals of the empire. A suite of five or six rooms includes the private studies of three professors, the laboratory of the regular members, a lecture-room, and a study for "guests," or alumni who have come back for brief periods of special work. One room is devoted to the workers on the 'Monumenta Germaniæ,' by whom a portion of the *diplomata* is edited under the direction of Prof. Sickel. In another room an assistant was making electrotype copies of ancient seals, and, scattered about, were the libraries of facsimiles of documents and important printed works. The apparatus for the study of the history of art is at present also under the same auspices.

The investigation of history is, therefore, carried on here under the strictest discipline. The members of the Institute must have previously studied at least two years at the University, and are bound to continue their connection for a specified time. With this selected timber, under competent guidance, there cannot fail to be produced a series of keen investigators, who, if they do not all produce books, will know the value of the material as archivists or librarians. The moral, which I need not mention to my fellow-members of the historical profession, but which is not sufficiently clear to politicians, is that we sadly lack in the United States a body of archivists who are competent to make the materials of our history serviceable. Our great libraries are admirably managed, but there is much to be learned in the depositories of documents in the States and cities. The care of public archives ought not to be a political office, but a career.

I have called the attention of students of his-

tory to the Institute because it seems to be left out of sight in the general rush to German Universities. Of one hundred Americans last year at Vienna, ninety-eight studied medicine. Those who are particularly interested in methods of historical investigation will be rewarded by inquiring into matters here. The reading-room of the University library is an interesting sight in the evening. At well-lighted tables are over three hundred seats apparently all filled. The room is divided into spaces for the different faculties, with special attendants for each. There are about 380,000 volumes now in the library, increasing about 15,000 per year, and careful catalogues are at the disposal of the readers. The University is in Austria the beneficiary of the press-law, which demands for it a sample copy of every new publication in art as well as in literature. One gets the impression that these facilities are industriously used, yet out of 6,000 students the proportion one sees at work is not too great. J. M. VINCENT.

A SCHOOL CEREMONY IN JAPAN.

SENDAI, JAPAN, November 18, 1891.

WE generally think of the East as a land where people are never in a hurry; but when we proceed, as we often do, to draw the inference that it is also a place where nothing is done quickly, we are liable to err. While life here is on the whole of a more leisurely nature than ours, yet occasionally these people are as much faster than ourselves as generally they are slower. And, strange to say, we find some of these exceptions on formal occasions where we should expect to encounter the greatest length of ceremonial.

Take, for example, the exercises at the opening of a large school here during the last days of October. In the elaborate system of education drawn up by Viscount Mori, with the Imperial University as the culmination, he provided for a limited number of training academies in the grade next below the university. The only one of these north of Tokio was four years ago located here in Sendai, a town of more than 70,000 inhabitants, about 200 miles from the metropolis. A beautiful situation was chosen on a high level above the river running by the city, and commanding a fine view of the mass of mountains rising from bluff, hill, and peak near by on to range after range up to the dim blue heights that form the backbone of this empire from extreme north to farthest south. All these solemn natural monuments are soft and pleasing in their robes of green, and nothing gaunt, bare, or naked meets the eye as we take in the magnificent sweep from any part of the grounds. A wide and level campus of more than twenty acres, planted with shrub and tree, and partly covered with a lawn, contains, in the centre, all in a cluster, the long, rambling wooden buildings of both the academic and medical departments.

Two years ago these structures were sufficiently completed for class work to begin, but only a few weeks since had the architect's labors been finally brought to a close, and the educational abode made ready for the formal dedication. The event had been long expected by the people of this section, and preparations were actively made to honor it. Invitations in large numbers were sent out in the surrounding country to the teachers, to the upper officers of the Government, both local and imperial, to the higher officials of the Mombushô (Educational Department), and to prominent citizens; especially were those asked who had given anything to the school. It was through private donations that funds were obtained for the foundation, while the current expenses are borne by the central Government.

Contributions poured in to make a display in keeping with the importance of the occasion. Merchants, professional men, farmers, artisans, all classes offered of their means. A farmer engaged some regular performers to give an old-style dance on a platform erected in the street at the main entrance. A tailor in the city sent a wide board, painted with enormous Chinese characters of congratulation. The teachers subscribed a tenth of their monthly salary. The students collected a respectable sum from among themselves, and, besides, labored hard with their hands in constructing emblems illustrating the path of knowledge. The medical boys had a gigantic statue of Hippocrates. The academic boys put up a globe surmounted by a figure in the uniform of the school, to point out that the goal of our ambition must be knowledge of all things. The decorations were tasteful and pretty. Arches of evergreen were over both doorways, and spanned both gateways. The national banner, beautiful in its simplicity—a red rising sun on a white field—waved from every window. Farther out, on the campus, from two lines stretching from the ground till they met at the top of a high pole, were hung the flags of the different Powers that are on a treaty footing with Japan. Paper lanterns swung from a cord around the entire quadrangle, and in two rows up to the buildings in front and rear.

Considering all the anxiety, the long expectation, the trouble, the expense, the deep interest felt in the institution, as the only one of the kind in the northern half of the main island, it would have been pardonable, according to American standards, to extend the formal exercises over several days, or prolong them for three or four hours at the least, but the whole ceremony was finished in two meetings on the same day. The appointed day was bright and cloudless, and the dense mass of piled-up summits towards the west were decked in all the glories of autumn. The crowds began to throng in before ten o'clock for the lesser ceremony, the conferring of diplomas on the previous graduates of the medical department. There have been no graduates in the other department. The visitors were received and politely shown to the chrysanthemum room, the pine room, the bamboo room; these names designating rooms specially christened for this occasion. When all were assembled, the students were marched into the large public hall, not differing very much from such a hall in America except that it had a lobby running all around it. They stood in a dense mass on the floor in front of the platform. Most of the guests were seated in the gallery. Those of the highest rank sat near the stand, as did also the teachers.

The president of the school came in, mounted the rostrum, pulled out of his breast a roll of paper some sixteen or eighteen inches wide, read or rather intoned his speech embalmed in the Chinese characters that seemed as regular and faultless as though engraved. Before one got used to the sing-song cadence, he ended, gravely rolled up his manuscript, and introduced the Vice-Minister of the Educational Department in the fewest possible words. This gentleman ascended the step, spoke less than three minutes, and went down again. The dean of the medical department now climbed up, unrolled his ideographs, and, in the same monotonous chant as his superior, filled the time for three or four minutes. He carefully folded up his remarks, put them in his pocket, and stood silent before a table containing two large bundles of diplomas. When half the names of the graduates had been read out, one only of them stepped forward, bowed, received one of the bundles of diplomas for his fellow-students, bowed again, and disappeared in the group. The same procedure was observed for the second half. The band struck up, and, without any further words from the chairman, the audience dispersed, the whole time for speeches, diplomas, and all having been much less than thirty minutes.

In the afternoon at two, with the same formal arrangements as in the morning, came the main ceremony of the authoritative delivery of the buildings by the Vice-Minister of Education to the president of the school. The exercises differed only in being longer, in having more addresses and no diplomas. The speeches numbered nine. They were all entombed in the same exact, angular Chinese characters, were all read in the same droning voice, were all formal in sentiment, and were all short, the longest being less than ten minutes, and several being less than two. The speeches consisted chiefly of congratulations on the present and wishes for the future. The speakers represented all the various elements connected with the school. There were three officials from the educational department; the secretary of the provincial Government representing this locality; the president of the school, the dean of the medical department, a representative of the academic teachers, and a student from each of the two departments. The whole time from the moment the chairman called to order to the last word of the student orator was less than one hour, yet there was not the faintest shade of any hurry or confusion, and everything went on with entire good taste and dignity. But no time was wasted. The musical interludes were few in number and exceedingly short. There was also no cheering—not from indifference on the part of the students, but from force of Japanese propriety.

It excites one's surprise that these slow people are so swift where we swift people are so slow, but there is an explanation for this anomaly. With us such occasions as I have described are partly social and partly formal, but here they are almost entirely formal. Everything is cut and dried, and the limits are closely marked and rigorously observed.

After leaving the hall, the guests viewed the grounds and buildings, and at last wandered to the refreshment-rooms. Here the usages of the Japanese came in very tastefully to prevent all crush and jam. The kind of food and the manner of eating make it very easy to handle a large crowd. Waiters are hardly required, and yet all are served equally well. It is known beforehand about what number to provide for, and the food, with a pair of chop-sticks, is put up in neat little rectangular boxes of cleanest thin white-wood. These are handed out by the host. You go up, receive your box, bow, and retire to one of the long tables that are bare except for a row of teapots full of *sake* (wine). The nicest and correctest behavior is to open your box, take up your chop-sticks, dally with your food a little while, close your box, tie it up in your handkerchief, and carry it home with you.

At night the students had a torchlight procession through the town, in two bands, the medical boys from one direction, and the academic boys from another. This is not a native Japanese custom, but was borrowed from abroad, and it has certainly been improved on, at least so far as cleanliness is concerned.

Instead of our smoking, sputtering torches, the boys had each a paper lantern, giving a soft light without smoke or glare or oil or sparks. They went at a gentle trot down the streets and united the two bands on the campus. Here they ran, and swung their lanterns high in the air, winding and turning and twisting, now scattered, now all in a cluster, their lights held up high and all bunched together, ceaselessly moving and rubbing against each other, like a swarm of gigantic fire-flies. The sight was very pretty, and was heightened by the display of fire-works set off from a tower over in the farther dark corner. But soon the spitting and sputtering from the powder ceased, the short candles in the lanterns flickered and died out, and by nine o'clock only the stars twinkled from the serenity overhead. Thus ended a day of pleasure and joy unmarred by a single act of roughness or a single deed of desecration such as college boys are often thoughtlessly guilty of in other lands.

C. MERIWETHER.

Correspondence.

MR. WATERS AND "VERNON."

TO THE EDITOR OF THE NATION:

SIR: A friend has just sent me a copy of the *Nation* of the 26th inst., containing a communication from Mrs. V. I. C. Smith ("Vernon"), the reading of which has caused me a good deal of pain—pain at having so completely misunderstood her wishes with regard to the credit due to her for having first* given me the reference to the will of John Custis; pain, also, that through any lapse of mine the New England Historic-Genealogical Society should be a sufferer in any way. I was very desirous to give Mrs. Smith the credit of furnishing this reference, and would most gladly have done so if I had not understood her to say that she would rather not have me do it. Let me publicly express my regret for having unfortunately construed her wishes too literally. If she had only made known to me her grievance, either personally or through some common friend (and she has had plenty of opportunities for so doing), I would have done what I could to rectify my error in the pages of the *Register*. Would it not have been a more kindly course for her to take than to put me in a public pillory, as she has tried to do in her communication to the *Nation*?

I can honestly say I have never intentionally been remiss in acknowledging my indebtedness for help received in my work, as the frequent references to such help in my "Gleanings" bear witness. It has been my delight, rather, to call attention to the assistance English antiquaries were rendering me. Mrs. Smith entirely misconceives my character in supposing that Miss Walford's recent discovery at Maldon "must be very disappointing and disheartening" to me. On the contrary, I was very much delighted, as Miss Walford could testify. And I shall be equally delighted by every new fact bearing on the Washington problem, whether discovered by Miss Walford, Mrs. Smith, or anybody else, even though such new discoveries should lead to the utter overthrow of the theory which I have set up in my attempt to solve that problem. He must be a poor and ignoble antiquary who can be so committed to a theory as to prefer it to facts. Let me suggest that the best way to upset my theory is to discover another Lawrence Washington, besides the rector of Purleigh, who can be proved to have been at the same time a clergyman and a Master of Arts, and to have had a wife living in 1649-'50. Until such a discovery is made, my theory must hold the field as the only reasonable answer to the question who was the father of the earliest Virginian ancestor of Washington.

Mrs. Smith announces her discovery of a new fact, viz., that Sir John Washington of Thrapston, and not Sir William, was really the eldest son of Lawrence Washington of Sulgrave and Brighton. I shall be especially delighted when she produces the evidence that will prove that, since it will confirm a surmise that I formed two years ago on reading the will of Dame Margaret Sandys, who referred to a nephew, John Washington, as "my dear eldest brother's son" (see my paper on The Ancestry of Washington, p. 30). I could not see how that nephew could be any other than John, the son of Sir John. I did not allow that surmise to be put into print at that time, preferring to wait until other and more conclusive evidence should be found. I congratulate Mrs. Smith, therefore, if she has found such evidence.

In conclusion, let me again beg Mrs. Smith and the readers of the *Nation* to believe that I omitted to give her credit against my own wish, and in accordance with what I supposed to be her wish.

HENRY F. WATERS.

SALEM, MASS., November 28, 1891.

* My late deceased friend, Mr. Joseph Eedes, afterwards gave me the same reference. H. F. W.

CONCERNING CAVE DWELLERS.

TO THE EDITOR OF THE NATION:

SIR: In reply to Mr. A. F. Bandelier's communication in the *Nation* of November 26, allow me to say: When I wrote my article for the November number of *Scribner's Magazine*, I had not Mr. Bandelier's reports to the Archæological Institute of America at hand. I had to quote him according to memory. I remembered very well that Mr. Bandelier, in cautious terms, speaks of the cave-dwellers of the Sierra Madre; but as this question of cave and cliff-dwellers is a very delicate matter, and I was afraid that I might saddle him with more than he actually said, I preferred, under the circumstances, to leave it out, the more as I was under the impression that he alluded only to the semi-civilized Tarahumares. I must regret that Mr. Bandelier has attached a meaning to the word "but" which was entirely foreign to my mind, and believe me, if it had been in my power, I should have been only too glad to bring his authority to my support.—Very respectfully,

CARL LUMHOLTZ.

NEW YORK, December 2, 1891.

A MISTRANSLATION.

TO THE EDITOR OF THE NATION:

SIR: In your review of Moltke's War Memoirs you have noted no mistranslation more curious or—if the epithet be permitted—more inexcusable than this in the brief but interesting appendix relating to the battle of Königgrätz.

"The Master of the Ordnance, Feldzeugmeister [and why give the long title in translation and in original too?] Benedek, had, in his advance to the northward, to secure himself against the Second Prussian Army marching on the east over the mountains of *Schleswig*."

The original work is not before me; but since Schleswig is not near enough for an army there to cause immediate alarm to Austrian forces in northeastern Bohemia, but is several hundred miles away; since it is not east of Benedek's advance, but northwest of it; and since there are no mountains in Schleswig, one is led to explain it upon the hypothesis that the translators did not know that *Schlesien* meant Silesia.

You have said something this week upon the ethics of translation, and have manfully refrained from quoting "*traduttore traditore.*" Leaving the translators out of the question, do not such publishers as the Harpers owe it to their readers not to mislead them needlessly, so far as from Silesia to Schleswig? And let it be also suggested that there are proof-readers who would not have suffered such an immorality to "go without saying" something about it.

T. B.

ROCHESTER, November 28, 1891.

BOOKS IMPORTED BY MAIL.

TO THE EDITOR OF THE NATION:

SIR: In your editorial comments on the letter of your correspondent "A. Y.," which appeared in your issue of the 27th ultimo, you make an erroneous statement which you will doubtless be glad to correct. You say that "he [the importer by mail of a book] must not only pay 25 per cent. of its cost, but a sum equal to the duty as a fine." This is not the fact. The "payment of a fine equal to the duty" is required by the terms of the order—that is to say, the importer is fined (for having imported the book without having arranged in the manner provided for importations otherwise than by mail) to an amount equal to the duty, but is *not* required to pay the duty also. For many years this has been the uniform custom as to books so imported, as well as in many instances as to other articles received in the mails from foreign countries.

The Treasury order which gave rise to the wide-spread impression, both in this country and abroad, that books and other printed matter imported here from abroad would be "confiscated," was simply a blunder; and you will find, if you make inquiry, that it was not put in practice to any considerable extent, if at all.

If the continuance of this idiotic tax on knowledge is essential to the national revenues and glory, it must be admitted that this mode of collecting it is much less onerous, inconvenient, and costly to the book-importer than that which involves the delay and the charges for cartage, storage, and brokerage incident to importations otherwise than by mail. The concession made in the case of books valued at less than two dollars is also something for which we should be devoutly thankful.

HUMPH.

[Our statement was based upon the Treasury Department Circular of November 5. From its confused text it is difficult to get the impression that the amount of the duty only is to be collected under the new designation of a "fine"; but that this is the interpretation which the Department intends is made clear by the fact that a Collector of Customs who had assessed both duty and a fine equal in amount to the duty, was instructed to refund one-half of the sum thus collected. In effect, then, this mental "spurt" upon the part of our Treasury Department Solons results in leaving matters much as they were before, except that now the poor book-buyer, for indulging his unappreciated whim of

wishing to obtain a foreign book through the most convenient channel, must pay his 25 per cent. ad valorem as a penal due. It is still insisted that books imported by mail are subject to seizure, and the United States citizen who attempts to obtain a good book from abroad by post is put in the same category, as a law breaker, with one who tries to import lottery-tickets; but while the latter is not allowed to redeem his prohibited property, the former may be permitted, if the customs official sees fit, to carry away his book upon paying his fine, provided the cost of the book is not so great as to incur a fine of more than $25, in which case the book is declared to be not redeemable. Moreover, it seems that the offence cannot be repeated with impunity, for in accordance with a Treasury regulation of January 29, 1887, reissued to collectors of customs on June 27, 1891, with an injunction for a strict compliance with its provisions, it is declared that "no such release shall be made to any person who has previously violated the provisions of the laws and treaty stipulations by an importation prohibited."

This is, in truth, an "idiotic tax on knowledge," and so far is it from being essential to the national revenues that persons, apparently well informed, have insisted that it costs the Government more to collect the duty on books imported by mail than the whole duty amounts to. While doubtless glad to escape the payment of duty on books of less value than $2, we fear the long-suffering book-lover who wonders why the one government in the world which singles him out for petty persecution because of his thirst for knowledge should be that of his own country, will not be "devoutly thankful" for this bone now contemptuously thrown to him.—Ed. Nation.]

WOMEN TEACHERS AT THE UNIVERSITY OF ZURICH.

To the Editor of The Nation:

Sir: Those of your readers who are interested in the intellectual progress of women, may be glad to hear a short résumé of a discussion relating to the subject which took place last evening in the University of Zürich. The question laid before the Academic Senate was: "Ueber Zulassung weiblicher Privatdocenten." That the subject is not an indifferent one here is demonstrated by the fact that the various faculties were more fully represented than usual, and that the discussion lasted two hours. The first point raised for discussion, whether women were not legally excluded by the statutes of the University, which read, "Junge wissenschaftlich gebildete *Männer* können sich als Privat-docenten habilitiren," was left undecided, as it seemed to be a purely legal question. The majority of the Law Faculty, however, claimed that the term "men" was used here, as in other laws, for the sake of brevity, to include men *and* women. The minority insisted that those who made the statutes would not have used the term in a general sense.

The Committeee of the Senate, constituting a majority of the same, then moved that it is at present inopportune to permit women to enter the corps of teachers at the University. The opposition made the counter motion, that there is no reason why women should not be suffered to form a part of the University corps. The ensuing discussion resulted in a vote of 19 to 10 in favor of the first motion, the majority claiming that, though women have enjoyed the privileges of this and other universities during some twenty years, they have not in that time brought forth any scientific work of importance; the minority, that the greater part of the scientific work is done by men who are connected as *teachers* with the universities. The way to induce women to do scientific work was to give them the same conditions as are allotted to men.

The Rector of the University was in favor of the second motion, but, as presiding officer, could not vote. Further, one professor sent his written vote in favor of the same proposition, but it was not accepted.—Respectfully yours, A. L. G.

Zürich, November 21, 1891.

"BEEN" AND "GOTTEN."

To the Editor of The Nation:

Sir: The letter headed as above, in your 1369th number, invites a few remarks.

In connexion with *been*, by the bye, Mr. J. R. Lowell, in the Introduction to the *Biglow Papers*, Second Series, referring to verse ranging from the time of Sackville to that of Dryden, alleges that "*bin* seems to have been the common form." This, whether "form" is for "spelling" or for "pronunciation," I greatly doubt. For the rest, since Mr. Lowell says nothing of the sound of *been* which prevails among persons of culture in this country, can he have held it to be exclusively modern?

Alexander Barclay, in his *Shyp of Folys* (1508), vol. ii., pp. 160, 177, 319, 321 (ed. 1874), has, as rimes, *ben* and *wene*, *bene* and *sene*, *bene* and *bytwene*, *sene* and *bene*, *wene* and *bene*. In vol. ii., p. 321, he also rimes *iyen* (eyes) and *ben;* but, inasmuch as, in vol. ii., pp. 125, 185, he rimes *terrene* and *iyen*, *iyen* and *grene*, we may take it that *iyen* was, to him, virtually one with *een*, a monosyllable. For these references I have only dipped into Barclay for a few minutes.

William Roy and Jerome Barlowe, in their *Rede me and be nott wrothe* (1528), pp. 73, 119 (ed. 1871), rime *oversene* and *bene*, *clene* and *bene*.

William Baldwin, in the *Mirrovr for Magistrates* (1559), sig. H 1 *v.* (ed. 1563), rimes *seen* and *ben*.

In *Jack Jugler* (before 1563), *ben* and *ween* rime together. See Prof. F. J. Child's *Four Old Plays* (1848), p. 45.

Samuel Hieron (1604), in his *Works* (ed. 1624), vol. i., pp. 559, 564, rimes *seen* and *been*, *bin* and *seen*.

Lady Mary Wroth, in her *Urania* (1621), p. 419, rimes *queene* and *beene*.

I have made no quest in order to prove, as doubtless can be proved,—if rimes are probative,—that, prior to the sixteenth century, *been* had the pronunciation of the substantive *bean*, which it now has with good speakers in England; though there, as in America, the multitude ordinarily say *bin*.

James Sanford, in his *Epictetus* (1567), sig. A 5*v.*, rimes *men* and *ben*. In his *Agrippa*, (1569), fol. 115, 121, he puts, in prose, *benne*.

Abraham Fleming (1575), as quoted in Reginald Scot's *Discouerie of Witchcraft* (1584), p. 301, has, translating Vergil:

> "Some waters haue so powerfull *ben*,
> As could not onelie bodies change,
> But euen the verie minds of *men*,
> Their operation is so strange."

Whether, in the days of Sanford and Fleming, or in later days, it was noticeably usual to sound *ben* like *men* may, until established by quotations, be accounted disputable.

William Mitford, in his *Inquiry into the Principles of Harmony in Language* (1804), p. 27, says, regarding *been*, that, "in the Western Provincial dialect, the pronunciation is *ben*." From considerable personal experience of Gloucestershire, Somersetshire, and Devonshire, I am tolerably confident that this pronunciation, if now heard there at all, is heard but seldom.

In sum, more evidence than we now possess is required to account for the currency of *ben* in New England and elsewhere in America. Who can be positive that *ben* did not spring up there indigenously? *Sistern* existed hundreds of years ago; but, to the few among us who have used it, we may be sure that it was suggested by *brethren*. Hence it is not parallel to *ben*. But perhaps it is otherwise with *hit*, for *it*, a localism in the Southern States which is neither a survival nor a recent importation. On the other hand, it is certain that our now illiterate *cultur*, *featur*, *natur*, *ventur*, etc., descended by uninterrupted succession from times somewhat distant.

As concerns *gotten*, your correspondent X. writes: "In England, it would be considered as much an archaism as *holpen* or *washen*, and, in modern English books, occurs only as representing rustic speech." Is, then, *ill gotten*, to qualify *wealth*, or the like, an outworn expression, or one that anybody would object to? Moreover, though *gotten*, in any other connexion, is here vulgar as a colloquialism, it has not been wholly shunned by good English writers of modern days. It was not too old-fashioned for Dr. Johnson in 1773, or for William Cowper in 1790: but this is going rather far back. Among contemporary authors who indulge in quaintness, it still enjoys some measure of patronage. For instance, Sir George W. Dasent, in his *Annals of an Eventful Life* (1870), vol. i., p. 286, has "how *gotten*, no one knows"; and, in his *Tales from the Fjeld* (1874), p. 126, "He had *gotten* both Bruin's hide and Reynard's skin." Again, in the revised translation of the New Testament, it appears, for the first time, in *Acts*, xxvii., 21, and *Revelation*, iii., 17, in counterbalance to its expedient disappearance from *Matthew*, xi., 12, and *Revelation*, xv., 2.

Without question, I think, the perpetuation of *gotten*, as a perfect participle, is owing mainly to the influence of the Bible. Between Great Britain and America, millions of persons are reminded of it, by the Cantate, every Sunday afternoon or evening.

I conclude with transcribing a sample of passingly wild philology. Professor Schele de Vere, in his *Americanisms* (1872), p. 479, writes: "Even the shortened form *got*, instead of *gotten*, long made a special reproach, and considered an objectionable Americanism, has now its advocates in [*sic*] English." And he proceeds to quote Wordsworth for it. But who, one would like to be informed, ever thought *got* peculiar to the United States? And what Englishman was ever at the gratuitous trouble of doing battle for the word?

Your obedient servant, F. H.

Marlesford, England, November 16, 1891.

Notes.

Longmans, Green & Co. publish directly a book of 'Angling Sketches,' by Andrew Lang, illustrated by Mr. Murdoch Brown.

Macmillan & Co. have nearly ready 'In

Cairo,' by William Morton Fullerton, illustrated by Percy Anderson; and in preparation a book of researches in the Peloponnesus, by the same author.

Bates, Kimball & Guild, Boston, announce a portfolio of fifty drawings by Henry P. Kirby of New York, reproduced in plates 15x20 inches, and in two grades, if there is a sufficient call for the better, which will be on Whatman paper, numbered, and limited to 200 copies.

By a double slip of the pen we credited last week to another series than the 'Heroes of the Nations' the forthcoming volume on Napoleon by W. O'Connor Morris; and misnamed the work of Irving's selected for special adornment this season by the Messrs. Putnam. 'The Alhambra,' for such it is, has since come to hand in the so-called "Darro Edition." The two beautiful octavo volumes must be rated among the very best products of the Knickerbocker Press, and in their way have no superiors in the present season. Each page of text is framed in a red-and-gold border displaying a Moorish design borrowed from the Alhambra itself, and here the accuracy of the printer's registering is noteworthy. Then, for illustrations, there are thirty-one exquisite photogravures, some of them made specially for this edition, and all inserted separately from the text. The Moorish decoration extends, finally, to the white covers, stamped in green and gilt. Altogether, this is one of the holiday publications that may not be passed by—all the more because the price has been fixed at a very reasonable figure.

Victor Tissot's 'Unknown Switzerland' has got so far on the road to being a classic that it has reached if not passed its twelfth edition, from which it has been Englished by Mrs. Wilson. This chatty and easily read tale of travel has just been issued by A. D. F. Randolph & Co. in handsome style, with clear letter-press, and with nearly twenty photographic views of Alpine scenery. These are not so fine nor so even as the Spanish views just described, but they are at least mostly well chosen. The cover is tasteful—in the Swiss colors, with the Edelweiss for symbolic decoration.

Bikélas's well-known and much translated 'Louki Laras' has long been out of print in the translation of the late Marquis de Queux de Saint Hilaire. Firmin-Didot & Cie. have just published a quarto edition with seventy illustrations by the rising Greek artist Ralli. In these sketches of Greek life, the gardens, the country-landscape, the sea-coast and the small villages of Chios, the picturesque coast of Tenos and Mt. Burgos, the by-ways of Smyrna, and beleaguered Nauplia are peopled with the moving episodes of a simple story. The graceful if poverty-stricken minutiæ of Greek peasant life in 1821, at the time of the Greek Revolution, possess great charm. The wood-carver at his work, the village smithy in Chios, the primitive well with its revolving pans and the rude crane for making them turn, the islander standing up and bending forward to row, the graceful and primitive hanging-lamps, the old priest going up the pulpit steps—all these are faithfully drawn from the life, and many of them will shortly be seen no more. Louki Laras grinding coffee at Spetzas, keeping an open-air shop at Tenos, rescuing his lady-love from Chios in the disguise of an itinerant vendor of caviare, is made the means of preserving customs, costumes, and situations many of which have an historical interest.

A daintily enshrined collection of 'Odes, Lyrics, and Sonnets from the Poetic Works of James Russell Lowell' (Houghton, Mifflin & Co.) comprises thirty-eight pieces. Two of the odes and ten of the lyrics are found in the list of representative—presumably favorite—poems designated by Mr. Lowell in 1885 in a letter to the editor of the *Critic* which has just been published by that paper in its issue of November 28. None of his sonnets is admitted to the list, but the juster editor of the present volume gives, among others, the four masterly sonnets grouped under the title "Bankside" and commemorating Edmund Quincy, together with that earlier one to Wendell Phillips; and since the stanzas to W. L. Garrison are included under the lyrics, the anti-slavery phase of the poet is properly reflected in this delightful little anthology.

All lovers of angling and ichthyology will be glad to greet the delayed second number of Mr. Wm. C. Harris's great work on 'The Fishes of North America that are Caught on Hook and Line.' The text is a continuation of the trustworthy "introduction to the study of ichthyology and the distribution and classification of fishes," and is interesting to both the naturalist and the angler. The two fish portraits, chromo-lithographs colored as in life, are of the yellow perch and the rainbow trout. As these, with the remainder of the hundred yet to be issued, are reproductions of excellent paintings of the fish, made as they came fresh from the water, they are remarkably accurate and true to nature, and if the whole work of text and illustration is completed as it has been begun, it will form the most valuable contribution that has yet been made to American angling literature. Mr. Harris can tell well what he knows, and writes about every fish he describes from his own personal experience.

Prof. Albert S. Cook follows up his reissues of Shelley and Sidney on Poetry with a reprint of Cardinal Newman's paper, 'Poetry, with reference to Aristotle's Poetics' (Boston: Ginn & Co.), an interesting and valuable brief disquisition on the principles of poetry, with some particular criticism of Greek and English authors by way of illustration. Newman's command of the abstract in thought necessarily led him to idealistic conclusions, and his moral prepossession tinctured these with the principle that rightness in the individual is a condition of excellence in the poem: natures partially debased can achieve only a limited perfection in expression. The essay is not exhaustive, but it is suggestive; and in the general paucity of fundamental criticism in literature, Newman's observations, however fragmentary and in part vague, may well be put forward, though of course his work is not of the same class as Shelley's and Sidney's. Prof. Cook furnishes a few notes, but they are not needed; and the reader may as well refer to the paper in Newman's works.

A useful book for home readers or clubs will be found in 'The Study Class: A Guide for the Student of English Literature,' by Anna Benneson McMahan (Chicago: A. C. McClurg & Co.). The volume is the fruit of practical experience, and proceeds upon a proper method and in a right direction, to the end that students may make themselves acquainted with literature, and not with either language or criticism except in an auxiliary way. The opening papers on Choice, Method, Interpretation, and Composition give short hints and suggestions useful to the solitary student, and the main portion of the volume, which is small and handy, is made up of special question-papers on Shakspere, English Drama, English Poetry, Browning, and the English Essay. Each of these several topics is treated by itself as an "outline study." The most accessible and easily utilized books of reference are named at the end of the various papers. The volume is intelligently composed, and seems as likely to be of real service to home students in this branch as the best of these aids which we have hitherto seen.

Another volume of a like nature, though meant for younger readers, is 'Children's Stories in English Literature, from Shakspere to Tennyson,' by Henrietta Christian Wright (Scribners). The matter of this is somewhat mixed. So far as stories are selected and told, the success is sufficient; but these illustrations of the authors are interleaved with historical narrative of the course of English literature so written as to imply a maturer mind than the tales. The aim seems rather too ambitious; for English literature as a whole cannot be reduced to children's stories, and hence the method breaks down. The history, though told in words of one syllable, cannot be of much material good to very young minds; or, if such minds can be readily and profitably interested in it, then they are certainly beyond the point where Shakspere and Bacon must be reduced to the lowest terms of fiction in order to be read. The volume, which is readable, seems likely to be of most use for school graduates, who will obtain from it, without tedium or difficulty, a simple account of the course of English literature, relieved by narrative abstracts of some of the more famous works.

The second issue of the new edition of Peacock's novels, to which we recently referred at length, is 'Melincourt,' in two volumes (Macmillan). This is the work in which the author utilized Monboddo's speculations, condensing the latter's views of the humanity of the ourang-outang into the character of Sir Oran Haut-ton. This novel is noticeable rather for language, description, and occasional effective burlesque than for the more essential qualities of fiction; but the interest of eccentricity is half of Peacock's talent. The book was translated into French when it first appeared.

B. L. Bowen's 'Introduction to Modern French Lyrics' (Boston: D. C. Heath & Co.) is on the whole a commendable collection, though much valuable space has been wasted on "National and Revolutionary Songs," of which the "Marseillaise" and the "Chant du Départ" would have been sufficient samples. Lamartine, Hugo, and Musset could have been enriched; Béranger would bear diminishing.

Those who follow current French literature know the solid work of M. Ferdinand Brunetière, who, often dry and sometimes a little hard, nevertheless combines in a most unusual degree the insight and the learning of the true critic. He has just published the fourth series of his 'Études Critiques sur l'Histoire de la Littérature Française' (Paris: Hachette; New York: F. W. Christern). Among the essays it contains are one on the French novel of the seventeenth century, and another on the novels of Madame de Staël, together with a couple of papers on Rousseau and on Voltaire; an incisive discussion of the plays of Alexandre Hardy, the father of French tragedy; and an admirable consideration of Molière as a moralist, clear, cold, and not wholly convincing. At least it has not convinced M. Ganderax, who has replied to it in recent numbers of the *Revue Bleue*.

In the series of "Grands Écrivains Français" M. Rousse's 'Mirabeau' and M. Clédat's 'Rutebeuf' are the latest volumes; M. Édouard Rod's 'Stendhal' is now ready, and M. Paléologue's 'Alfred de Vigny' is to follow at once, when the series will number sixteen volumes.

The fourth volume of Moltke's 'Gesammelte Schriften und Denkwürdigkeiten' (Berlin: Mittler) contains his letters to his mother and brothers, Adolf and Ludwig, with portraits and brief biographical sketches of the persons to whom they are addressed. They extend over a period of sixty-five years (1823–1888), and discuss all sorts of interesting topics, social, domestic, political, and military, in a familiar and very fascinating manner. In 1850 Moltke wrote to his brother Adolf: "Prussia must confess that she has not a single friend in all Europe," admitting as a possible exception to this sweeping statement Napoleon III., who, however, "has merely a party and not a nation at his back." In 1853 he wrote to the same brother that the French empire "assumes more and more the character of a magnificent swindle," and thinks "the French must soon weary of this adventurer." The last letter in the volume, written to Ludwig in 1888, describes briefly the wedding of Prince Henry of Prussia and Princess Irene of Hesse, and mentions the entrance of the father of the bridegroom, the Emperor Frederic, "a tall, stately figure, still erect," although "with one foot on the throne and the other in the grave." An English translation of the letters is announced by the London house of Osgood, McIlvaine & Co.

Joseph Poole's 'Practical Telephone Handbook and Guide to the Telephonic Exchange' (Macmillan) may be said to give the essentials of telephony as now practised. It contains a large number of illustrations, and is brought down to a very recent date as regards forms of apparatus. Some of these have not, we believe, appeared before in any English work, and the author usually passes judgment upon each as a working instrument. The book covers the same ground as the larger and far more complete treatise of Preece and Maier already noticed, but it contains some new matter of real interest. It is clearly written, and will doubtless find favor as a useful manual.

The Geological Survey of Arkansas, under the direction of Prof. John C. Branner, has strongly accredited itself to the scientific and industrial world by the publication of a report on the occurrence and treatment of manganese ores, by R. A. F. Penrose. Mr. Penrose's thesis on the Origin and Nature of Phosphate Deposits, which gained him the degree of Ph. D. at Harvard several years ago, when he was also stroke of the Harvard crew, has since then been published as a Bulletin of the National Geological Survey. A similar broad discussion is now given to manganese, which has become of great importance in recent years from its use in the production of iron. This report will at once take its place as indispensable to all studious metallurgists and economic geologists.

The Second Annual Report of the Geological Survey of Texas is of miscellaneous contents. It contains reports by Mr. Dumble, State geologist, and by Messrs. Walker, Cummins, Comstock, and Steeruwitz. Much of the volume is technical, but the following extracts from Mr. Comstock's report may interest a larger public: "The history of the reported discovery of tin in central Texas is made up of a long series of blunders in determination of minerals which were regarded as cassiterite [an ore of tin] by ill-informed prospectors who had seen the real article, but who were prone to mistake it" for various other minerals. "There are several tracts in which the chances for the discovery of tin ore are at least hopeful" (p. 596). "It is probable that the region in which tin ore will eventually be mined, if ever commercially important, will be limited to a belt somewhat narrower than that indicated upon the map, . . . and as the outcrops are restricted and more or less confused by later deposition and disturbances, it is reasonable to expect that certain situations will yield better than others along the line" (p. 602). This as an official utterance can hardly be regarded as encouraging.

The report of the Secretary of Agriculture, 1891, is a fine specimen of an official campaign document, with its manifest endeavor on almost every page to demonstrate the farmer's indebtedness to the precious McKinley Bill; but the Secretary's complacent exposition of his "important measures" on behalf of the farmer is strikingly weak and inconsequential when he arrives at an explanation of the "rainfall experiments." After stating that $9,000 have been used up in ascertaining the feasibility of producing rain by means of explosions, he concludes: "Due preparation having been made, the experiments were conducted on an extensive scale during the past season in Texas. I have every reason to believe that, so far as the production of explosions is concerned, these experiments were eminently successful. As regards the object thereof, namely, the production of rain, I have no data yet at hand which would justify me in expressing any conclusions on the subject."

On Wednesday, November 11, in the large lecture-room of the South Kensington Museum, Miss Sellers presented, with many illustrations, Dr. Dörpfeld's theory of the Greek theatre. Especial interest attached to her account of a type of transition from the old Greek to the later Roman theatre. To suit gladiatorial and other shows, the level of the front part of the orchestra was lowered, leaving a stage behind at the old level. Dr. Dörpfeld finds this type of theatre especially in Asia Minor. Amable Ravoisié ('Exploration Scientifique de l'Algérie,' 1840-1842) describes just such a theatre found at Djemila (Cuicul) in Algeria. The stage was 2·8m. high, and entirely built of wood, reaching nearly to the level of the footing of the spectators in the lowest seats. When this transitional arrangement was superseded by the Roman amphitheatre, the seats were carried down into the lowered orchestra, and thus arose the final form of the Greek theatre described by Vitruvius as the theatre of the Romans, and differing but little in general plan from various theatres in use to-day.

'The American Annual of Photography' (Scovill & Adams Co.) exceeds in bulk any of its predecessors, and abounds in technical information and in plates illustrating various printing processes as well as the skill and taste of photographers. It contains also the usual lists of American and foreign societies, and of hotels having dark-rooms for tourists; a record of photographic patents for the year, and a current bibliography.

The Christmas number of the *Art Journal* (International News Co.) is wholly devoted to the work of Briton Riviere; the biographical sketch and criticism by Walter Armstrong, the illustrations numerous and by various engraving processes.

Mr. F. Gutekunst, Philadelphia, sends to our table another of his timely imperial panel photographs of public characters, namely, of Sir Edwin Arnold—a speaking likeness.

—The *Atlantic* contains some literary curiosities in the shape of a half-dozen letters from the correspondents of Joseph Severn, one from Ruskin being most characteristic of his pessimistic mood, and four from Seymour Kirkup pleasantly illustrating his eccentric individuality. The pen of Mrs. Preston and her coadjutor, Miss Dodge, which has been so agreeably employed of late in lighting up the dark places of the history of humane learning, furnishes a portrait of Servatus Lupus, Abbot of Ferrières in central France under Charles the Bald, some of whose private letters survive to show the tastes and life of a monkish scholar, and to illustrate incidentally the bond of learning between England and France after Alcuin. The most notable papers, however, are a singularly sympathetic analysis of the intellectual position of Dr. Hopkins in New England orthodoxy, and a sketch of the traits and practice of modern French art by Prof. Moore. The former of these has something to say of Jonathan Edwards by way of preparation, but is mainly devoted to the dogmatic difficulties of the New England divines, and the various dilemmas in which they found themselves. The keenest suggestion made is that Dr. Hopkins was really in the state of an uneasy, and perhaps unconscious, doubter who worked out his views under some obscure impulse, forcing him to seek a reconcilement between theological tenet and common sense; he acted as a solvent of the past in consequence, and, indeed, it was a curious nexus in the history of human thought which led from a "willingness to be damned for the glory of God" to the benevolent and humanitarian sentiment of Dr. Channing. Prof. Moore, in writing of French art, finds it lacking in the highest qualities, and less than it should have been as an outcome of the nation's artistic genius; but the most practical part of his criticism is the warning he ventures on for American students in Paris, that they meet there "with few enlightening and broadening influences," and that "nearly everything beyond the range and routine of the uniform technical drill is ignored." The full text of Lowell's question of the authenticity of "Richard III." is the literary gem of the number.

—*Harper's* chooses for its Christmas art subject the Annunciation, and uses a design of Rossetti's for the frontispiece, following it with illustrations after the old masters, in which the various conceptions and moods that the sacred incident has taken on in art are well shown. To the Christmas season, too, belongs the "Musical Pastoral," with Pyle's characteristic designs. As usual, the short stories are meant to harmonize with the traditional literature of the holidays, although the best of them, Aldrich's "My Cousin, the Colonel," is not a Christmas tale at all; the others are not, on the whole, successful, Mr. Millet's being quite below his habitual level, and Mr. Davis's being exposed to adverse comment in many ways, both in style and handling, and especially in taste. The happiest hit in the number is Mr. Besant's device of evoking old Stowe from his dust to tell the story of Tudor London, by which Shakspere's town is built up for us again as in a work of fiction. Mr. Lang does not succeed any better as a commentator on Shakspere in his paper on "Measure for Measure" than in his previous essays accompanying Abbey's designs, nor are the designs themselves less eccentric and mannered than the earlier ones. Mark Twain's anecdotes of what he calls "mental telegraphy" are very seriously meant, but they are certainly very trivial, and not to be distinguished from the hundreds of similar experiences which may be heard on any side by a patient listener. Mr. Ralph's paper on the Blackfeet also deserves mention, and Lowell's poem "His Ship," though illustrated by a design as far removed in feeling and taste from the text as is possible to be conceived, is very strongly and finely wrought, a real addition to his works.

—The *Century* is also a Christmas number, the season being especially observed in the pictures, and as the works chosen for reproduction are by modern artists, a most interesting result is obtained. We say this without prejudice to the four superb Raphaels which Cole's graver gives us, or to the lovely engravings of pastel portraits; but these are for the year round. Of the distinctively Christmas pictures, the Madonna of Dagnan-Bouveret is the most striking, and the originality of the design and the expressiveness of the Madonna's face easily distinguish it above the rest; whether there is anything of a sacred quality in it, anything that exceeds the human mood of motherhood, is, as Mrs. Van Rensselaer remarks, another matter. The frontispiece, also, by Frank Vincent Du Mond, a young American artist, is a design that arrests attention and shows both romantic and artistic feeling; though here again the question intrudes, as in Holman Hunt's pictures, whether sentiment does not allow itself a somewhat of pose and too nicely prearranged effect to consort quite perfectly with that simplicity and inevitableness necessary most of all in religious work. Besides these we have "The Arrival of the Shepherds," by Lerolle, unfortunately accompanied by some poor pastoral verses quite out of keeping, and destitute of that poetic truth which pastoral can never spare; "The Appearance of the Angel to the Shepherds," by Lagarde; "The Annunciation to the Shepherds," by Lepage; and "Holy Night," by Von Uhde. The grouping together of such a number of designs upon the old motive of the Christian painters makes a most effective comment upon the art spirit of the century. We have left ourselves space only to mention the series of Mozart portraits and the admirable portrait of Dr. Weir Mitchell, which introduces his new serial, and merely to refer to the text of the number, in which the papers upon the Bowery, Sherman's Letters, and Mr. Aldrich's little Christmas story with a moral, are most entertaining.

—Mr. Aldrich also appears in *Scribner's* with an elegiac poem on Lowell, distinguished by fine feeling and rich in phrase and line; a piece of memorial verse which must take its place with those others in which the New England poets have embalmed their friendships with such simple and genuine feeling and made a "Poets' Corner" in their books. The tale of "The Oak of Geismar" is the only Christmas feature of the number. The rest is of the ordinary fibre. Travel is represented by Egypt and Mexico, and in fiction Miss Jewett easily holds the first place, with a story of the Franco-Prussian War, in which there is good fighting, easily second. The art paper is upon Albert Moore, and is written by Mr. Harold Frederic in a vein of much contempt for the Royal Academy. The illustrations do not profess to show Moore's best work, but indicate well enough his aims and the "beautiful dreams" to which he is alleged to devote himself. These vary in their interest to our eyes, reaching from heavy voluptuousness on the one hand to a vital beauty of form and very graceful grouping on the other, but the appeal does not really change and is made to the senses; hence they do not escape that monotonousness which is inseparable from the things of sense.

— Miss Ruth Gentry, the holder of the European fellowship established a year ago by the association of women college graduates, has been admitted to the University of Berlin. Her position is that of *Hospitantin*, but the rights and privileges of a *Hospitantin* are exactly the same as those of a *Studentin*. The ground for her admission is not only her very extensive knowledge (her subject is mathematics), nor the fact that she is the official representative of the learned women of America, nor yet the fact that her cause was strongly urged by the eminent Berlin mathematician, Prof. Fuchs; it is rather that a precedent has been discovered, although no one, not even the Rector himself, has yet been able to find out the name or the date of the existence of that precedent. The Association of Collegiate Alumnæ is to be warmly congratulated upon this early and brilliant reward of its labors.

—International copyright matters are not progressing with all the smoothness that might be desired, and one source of friction is the perplexing state of copyright in Canada. The President's proclamation, of July 1, extends the benefits of our new copyright law to Great Britain and the British possessions, on the ground of reciprocity, thus granting copyright in the United States to the citizens of Canada. Thereupon it seems to have been assumed that our authors could register their works for copyright under the laws of Canada; but the Canadian authorities hold otherwise, and refuse to permit such registration, at which action—according to a contemporary—"United States authors and publishers are very dissatisfied, in fact indignant." The Canadian law is explicit in stating who may secure a statutory copyright in Canada, viz.: any person domiciled there or in any part of the British Possessions, or any citizen of any country which has an international-copyright treaty with the United Kingdom. As the United States is the one civilized country which has so far refused to enter into a copyright treaty with any other nation, it follows that an American author must be domiciled somewhere on British soil in order to secure copyright under the laws of Canada; and, furthermore, he must print or reprint his book in Canada. This last stipulation is an exact parallel of the provision in our own copyright law as to American manufacture, and it is not easy to sympathize with the indignation expressed at the frustration of attempts by United States authors and publishers to evade a requirement which is rigidly enforced in the case of a Canadian who desires to obtain copyright in the United States. Moreover, our own authors can readily secure a copyright in England which will also be good in Canada, although it will not enable them to exclude reprints made outside of Canada, which are permitted importation, under the law of 1868, upon the payment of a royalty to the author; and if the authorized English editions happen to be cheaper than the United States editions, the former will, of course, be likely to supply the Canadian market.

—That the type-setting stipulation in the new copyright law applies to works by *native* as well as *foreign* authors has not been realized by our publishers without some inconvenient surprises, and there is a sort of poetic justice in the fact that one of the first to realize it was a prominent publisher who had been most determined in his insistence on this stipulation in any copyright bill that was to become law, but who found it exceedingly awkward in the case of one of his own important books produced under joint English and American editorship which was to have been printed at Oxford. A good illustration of how seriously this exceedingly narrow-minded stipulation may affect and discourage an American author is afforded by Mr. Reeves's 'The Finding of Wineland the Good.' The chief value of this fine book lies in the fifty-five photographic reproductions of the vellum MSS. relating to the early discovery of America. These MSS. could, of course, be reproduced only at the place where deposited, being priceless, and not to be subjected to the risks incident to sending them away to be copied. The facsimiles are accompanied by a printed Icelandic text, and for the convenient and proper printing of this, it is quite safe to say, no printing establishment in the United States (not even excepting the Government Printing-office at Washington) is properly equipped. The work was consequently done at the Clarendon Press in Oxford, where considerable Icelandic printing has been produced, and where unusual facilities are possessed for accurate typography and scholarly proof-reading. In the proper production of a work of equal importance, and so creditable to one of their author citizens, most civilized governments would have been glad to have had a helpful hand, but under our illiberal law the fact that Mr. Reeves—although an American citizen—had his book manufactured without the limits of the United States debarred him from obtaining any copyright, and left him not only with no legally protected literary property in his book, but with no control over a possible improper use of its contents.

STEPHENS'S FRENCH REVOLUTION.—II.

A History of the French Revolution. By H. Morse Stephens. Vol. II. London: Longmans, Green & Co.; New York: Charles Scribner's Sons. 1891.

WHAT does Mr. Stephens's 'History of the French Revolution' add to our knowledge of the greatest among modern European crises?

This is the inquiry by which his claim to respect as an historian must be tested. He does not belong to the masters in the art of narration; his object is not, as was Tocqueville's, the establishment of results attained by historical criticism. But if he is not primarily either a narrator or a critic, he is an investigator; he devotes himself to research, his aim is the ascertainment of facts. He stands in the same position as does Mr. Gardiner. Just as Mr. Gardiner makes it his primary aim to discover and to let us know the events of the Civil War, and what the men who took part in it did and thought, so Mr. Stephens attempts to lay before us the transactions which make up the French Revolution, and to make us see what the King and his opponents, what monarchists, constitutionalists, republicans, Girondins, or Jacobins really said and thought, and, as far as we can conjecture from their acts, what were the motives and aims of their action. Of the pre-eminent success of Mr. Gardiner in the attainment of the object for which he has labored, it is hardly possible to say too much. It is conceivable that when the main features of the great Rebellion have been permanently ascertained and fixed by his labors, some master of style and of narrative may paint these features in a more effective form than the shape in which they are exhibited by Mr. Gardiner. But it is he who has cleared away errors and established truth. As you read his pages you do not adopt any startling paradox, but somehow or other your view of men and events is modified. Mr. Stephens has a far more difficult task to perform than that undertaken by Mr. Gardiner. He has not attained to the

ripeness of feeling or to the absolute and judicial impartiality which distinguish the author of the 'History of the Great Civil War.' But of Mr. Stephens no less than of Mr. Gardiner it may be confidently asserted that his labors do add most materially to the knowledge of his readers. When you put down his volumes, you feel, unless you are a specialist who has devoted years to the perusal of revolutionary literature, that you have learned something about the Revolution well worth learning. You may not agree with all your teacher's dogmas and conclusions, but his facts have told upon you. Established delusions are dispelled, ideas which you had only vaguely entertained are sometimes placed on a firmer basis, new notions are suggested, and old conceptions, when not shown to be false, are often placed in a new light.

No one, for example, after reading Mr. Stephens's 'French Revolution,' can believe for a moment in the insight or even the ordinary sagacity of Marie Antoinette. In England the eloquence of Burke, the rhetoric of Carlyle, even the invectives of her detractors, have, as any one will see who reads Mr. Stephens's pages, placed the Queen of France in a totally false light. That she had courage and dignity is certain; that, though guilty of many follies, she was innocent of vice, and was the victim of the foulest slanders, is also certain. But the idea that at any period of her life she displayed a sagacity or an insight into character which, but for the King's stupidity and indecision, might have saved royalty, is utterly unfounded. She was, politically, his bad angel; she did not know a capable man when she saw him; at every turn where advice was needed her advice was bad. She rejected a very fair scheme of escape proposed by Rochefoucauld-Liancourt, because she hated the Duke and would never place herself in the hands of the Constitutionalists. Lafayette was prepared to strike a blow, which might well have been a deadly blow, at the Jacobins, but the Queen chilled his zeal and said, "Rather would I perish than be saved by Lafayette and the Constitutionalists." Nor is there the least reason to suppose that she supported Dumouriez, who was at one moment prepared to stand by the Court against the Girondins. She was at heart a reactionist, and she had no conception of the means by which to carry out a reaction. The fairest account of the matter is that she was guided mainly by personal sentiment. But this predominance of private feeling over political considerations was not in the Queen's case, as it has been with many women, balanced by keen insight into individual character. Her sufferings will always make her fate pathetic, but to rational men who try to base their historical judgments upon facts, the Queen will, after the perusal of Mr. Stephens's pages, hardly remain either a heroine or even a striking personality.

Will Mme. Roland and the Girondins fare much better? This is a question difficult to answer. That the Girondins were incompetent statesmen, that they threw away chances which more capable leaders would have turned to good account, that they were fanatics without the remorseless energy which fanaticism sometimes gives to men of narrow intellect and cold hearts, and that upon them in the main rests the responsibility of plunging France into war, is in our judgment pretty conclusively established by Mr. Stephens. Whether the motives of most of the Girondins were not nobler than he is willing to admit, is to us a matter of considerable doubt. He, however, brings into light one fact which greatly complicates the difficulty of passing any verdict upon the conduct of the Girondins as a whole. They did not in reality form anything like a coherent "party," in the sense in which that term is used in modern times. They were wanting in organization; they had no recognized leaders; they had no means, or at any rate did not devise any means, for controlling the government of the country. At the King's trial, which formed in a sense the crisis of their fate, they were divided and can hardly be said to have pursued any consistent course. Mme. Roland's influence extended over only one clique of Girondins. Some of the most remarkable members of the party were not in any way swayed by her. Nor does her character, whether you judge of it from her 'Memoirs' or from Mr. Stephens's pages, give the least guarantee that, had her authority with the Girondins been greater than it was, her counsels would have saved them from ruin. Stern enthusiasm and, we must also add, supreme egotism were the leading traits of the Republican heroine; and certainly the Girondins did not, as a body, need the guidance of a prophetess to impress them with the belief in their own perfect virtue. Their permanent claim to honor is that, though often unjust enough to their opponents, and though not scrupulous in the means they adopted for the attainment of power, they did yet in a way believe in liberty and in justice. They fell owing to their faults, but also owing to their virtues; and if their resistance to oppression was feeble when it certainly ought to have been vigorous, we may well assume that their weakness arose in part from the difficulty of resisting the tyranny of the mob without running the risk of restoring the despotism of the Crown.

Neither Mr. Stephens nor any writer on the Revolution allows enough for a fact which ought to influence our judgment of every man, to whatever party he belonged, who took part in the revolutionary contest. This fact is the novelty of the revolutionary movement. A hundred years ago it was a new disease. All of us now know its symptoms and its course. Even in 1848, persons of no extraordinary sagacity had begun to understand the nature of the malady. Every one knew that violence would be followed by reaction, that moderate reformers would, after a few months or weeks of authority, become as hateful to their revolutionary followers as to their reactionary opponents. Many persons had even then suspected, what we all now know to be the fact, that an army well led was more than a match for the bravest of mobs. On these facts more than forty years ago statesmen, politicians, soldiers, and even revolutionists more or less based their conduct. Hence it was that Victor Emanuel could, by accepting reform, become the creator of a new Italy, and that Bomba, by first flattering and then betraying the Constitutionalists of Naples, came safely through perils quite as serious as the dangers with which Louis XVI. was unable to cope. But if our author is, in common with every writer who has treated of the revolutionary period, too forgetful of the amazement and confusion caused by the outbreak of what seemed a new political plague, though we now number it among the well-known diseases to which commonwealths are exposed, he assuredly excels every English writer with whom we could compare him in bringing out the unnoted aspects of notable events.

No one has ever taken such pains to show how much of the solid work done for the safety of France and for the benefit of mankind, during the whole of the Revolution, was achieved by men whose names are unknown out of France, and are not often recalled even by Frenchmen. Who, for example, in England or America knows anything about Dubois-Crancé? We will venture to say that, barring a few specialists, there are not to be found ten men in London or New York who could give a tolerable account of this remarkable man's achievements, or could even say in what line these achievements were performed. Yet he was, as Mr. Stephens shows us, something very like the reorganizer of the French Army. His reports laid the foundation of the system which, in the hands of able leaders, created the finest military force of the age. And let it be noted that Dubois Crancé is only one among hundreds who rendered essential service to the State without obtaining anything like lasting fame. None of us realize what an immense amount of good work was done under constant stress and pressure at times when nothing is noted by historians but conspiracies, slaughters, and executions. The real merit of the revolutionary committees was not that they terrified France, but that they concentrated the energies of the nation. People constantly talk as though romantic enthusiasm marked the opening of the Revolution, while astounding ability in affairs of administration and war was the special characteristic of the Napoleonic era. Mr. Stephens demonstrates the falseness of this way of looking at the past. The Revolution was, throughout, a time in which many men were under the influence of intense moral and intellectual excitement. France has never been poor in men of great gifts and of great patriotism, and there is both instruction and comfort to any philosophic mind in perceiving, as we are made to perceive by Mr. Stephens, that there was something much better to be found in the Convention than either rhetoricians or tyrants. There were a host of men who worked unknown, night and day, for the salvation of the country. Many more of them than most of us suppose were taken from the members of the so-called "Plain," and some of them at least supplied France with capable servants when the fury of the revolutionary storm had abated, and the need of the day was the restoration of order.

This habit of remembering what other people forget, which is one of Mr. Stephens's finest qualities, is admirably exhibited in his account of the émigrés, and in his sketch of the colonial policy of France and the results thereof. If any one wishes to know what the émigrés really were, how great was often their individual heroism, and how childish their political imbecility, he can take no better course than carefully to study Mr. Stephens's thirteenth chapter. He will then understand both how much France really lost by driving from her men who might, under happier circumstances, have handed down to future generations the graces and the virtues of the *ancien régime*, and, on the other hand, how impossible it was for the men of the emigration to come to terms with the new world of the Revolution. In 1814 or 1815, even such a Tory as Alison was startled at the tone of the restored émigrés. No English Tory could realize the passions and the incapacity of French reactionists. The details of colonial mismanagement and of colonial troubles are not in themselves interesting, but they are full of instruction. In every colony, from San Domingo to the French settlements in India, the revolutionary spirit makes its appearance. In the colonies, no less than in Paris, we see Frenchmen of all

classes filled first with what would now be called the enthusiasm of humanity, and next with rage at the failure of benevolent wishes to establish prosperity and peace. At the present day the faith and the despair, the heroism and the lawlessness of a revolutionary age are, to educated men at any rate, nearly unintelligible. It is as difficult for us to enter into the sentiment of 1789 or 1793 as it was for the revolutionists of the eighteenth century to understand the religious fervor of the Reformation. Yet whoever wishes to comprehend the failings and the virtues of a great era may, perhaps, partially achieve his end by following with sympathetic imagination Mr. Stephens's tale of the Revolution in the colonies. Whoever does this will, at any rate, make clear to himself that the desire to accomplish some great change in the whole state of society for the benefit of mankind, combined with absolute ignorance of the mode in which salutary reforms can be carried out, was, a century ago, a characteristic of Frenchmen in every part of the world. It was not hypocrisy, though it may have been something little short of blind folly, which led planters in the midst of their slaves to exult in the fall of the Bastille, and to drink toasts to the sovereignty of the people.

We have insisted for two reasons on Mr. Stephens's energy in following out just those topics which more showy writers neglect. The first reason is, that this industry in attending to what other people overlook is the characteristic merit of the two volumes our author has already published. You can find more information of value in them as to the mode in which France was really governed under the National Assembly, the Legislative Assembly, or the Convention than you can find in any other book published in the English language. We have criticised his views of the Terror with perfect candor, but our criticism, be it remembered, is made possible by the mass of information with which he himself has supplied us. Our second reason is, that the quality which already gives its great merit to Mr. Stephens's work is certain to be exhibited in his future volumes, and to give them a very special and peculiar importance. No delusion is, from an historical point of view, more baseless, or, from a political point of view, more noxious, than the idea that the Revolution terminated, so to speak, with the fall of Robespierre, or, at any rate, ended on the day when Bonaparte dispersed the Section with a whiff of grape-shot. Owing to this idea, the years which intervene between the death of Robespierre and the Coup d'État of the 18th of Brumaire are often looked upon as a period which, except from a military point of view, deserves only to be forgotten. In truth, there is scarcely a time in the history of France which better deserves the study of a philosophic historian or a thoughtful constitutionalist. Mr. Stephens will, we are assured, rescue this remarkable era from oblivion; he will enter upon a field which no English or American author has really occupied; he will deserve the thanks both of Englishmen and of Americans when he tells us, as no one can tell better, the true history of the first great attempt and first great failure to found in France a commonwealth which should be the home both of order and of freedom.

Art and Criticism; Monographs and Studies. By Theodore Child. Harper & Bros. 1891.

Of this volume it may fairly be said that it contains more art than criticism. For art, there are eighty-odd illustrations, mostly excellent reproductions of celebrated works of art, and a beautiful cover design, presumably by Luc Olivier Merson. For criticism, there is really very little. Mr. Child is a "journalist" and a voluminous writer on many subjects. His principal qualifications as an art critic are the possession of a fluent pen and the acquaintance of a certain circle of artists in Paris, whose opinions he frequently reflects. Evidence of any real knowledge of art he does not show; but according to his theory such knowledge is unnecessary, and he brands as dogmatism any expression of positive knowledge or opinion. The office of the critic is to give his "impression," nothing more. The person who "knows nothing of art but knows what he likes" is the true critic. The reader is to judge of the value of the impression "according to the esteem in which he might hold the intellectual personality of the writer," and might therefore consider Darwin's opinion of a picture as of more worth than that of a competent painter.

This is criticism made easy with a vengeance, and Mr. Child uses to the full the license he has allowed himself. In his opinion, the things most to be desired of a critic are sympathy, appreciation, admiration; and in the case of some of the members of that Parisian-American art-circle we have referred to, he has certainly shown the last of these qualities in an astonishing degree. He says of his essays, in the preface, that "their chief merit, supposing that they have merit at all, is the fact that they are free from verbiage," yet he rhapsodizes over some living painters, not of the first rank, with a flux of adjectives and superlatives that would seem excessive if applied to Titian or Velasquez. In one article we have "a vision of beauty" and a "lovely vision of floral color," and the word "vision" occurs twenty-five times in twenty-seven pages. Perhaps this critic's prettiest phrase is "the sensual fascination of a lilial neck."

Nine-tenths of the book is purely descriptive, and might have been written by any clever newspaper man who would take the trouble to get up his facts; and the few sentences that seem to show real insight are apt to be "lifted," without acknowledgment, from Whistler or Fromentin. Mr. Child has, however, attempted something like criticism in one article (that on Jean François Millet), and his argument in this case we will examine in justification of the severity of our judgment.

The article is, in the main, a protest against the admiration accorded to Millet. Mr. Child's principal contention is, that, "taking Millet's work as a whole, its chief interest is moral and literary rather than artistic," and this thesis he sustains by the most extraordinary reasoning. Of course he dwells on the lack of technical charm, on the "heavy, coarse, and painful execution" and the "woolly texture" which so long puzzled the critics; but, not content with pointing out Millet's faults, he proceeds to make his greatest merits part of the indictment. Hear him:

"In Millet's most serious work the peasant is one with nature—a type, an ideal silhouette in the grand ensemble; and the beauty he seeks is not the beauty of feature or of epiderm, but that more abstract and ideal beauty which exists in the well-ordered proportions of the skeleton, in freedom and flexibility of limb, and in the logical and physiognomic notation of professional gesture, attitude, and costume. The drawing of Millet is truly remarkable in its abbreviation and intense signification. Generally the faces are mere types; the folds of the dress are reduced to those which mark the projection of the shoulder, the elbow, the breasts, the hips, and the knee; the whole expression of the figure is concentrated in the general silhouette."

This would be a very fair résumé of one side of Millet's genius if it were intended for praise, but it is not, and as a train of thought intended to lead one back to the cuckoo-cry of "literary interest" it is little less than amazing. If synthesis, abstraction, grand simplicity and expressiveness are not "artistic" qualities, it will fare ill with the reputation of Michael Angelo.

It is hardly worth while to go on. Mr. Child first dismisses Millet's work in oil as inferior to his pastels, and then criticises the color of the latter as a mere indication and not complete! Most of his criticism is based on the "Angelus," which, as that picture is Millet's reputed masterpiece, might be excusable in a critic unacquainted with his other work who saw it for the first time, but is quite inexcusable in one who had the "Gleaners," and the "Knitting Shepherdess," and half a dozen other of Millet's best works before him. A man who can see no external or pictorial beauty in such a marvellous piece of painting as the "Gleaners," and who finds its "main interest" to be "literary rather than artistic," is absolutely incapable of any critical perception of art, and it need not surprise us that he finally sums up its great creator by saying that "when we compare him with his contemporaries, Delacroix and Théodore Rousseau, he sinks to a modest level which it *may be well not to attempt to qualify too precisely.*"

The only available excuse for such criticism, that it was written some years ago, Mr. Child has deprived himself of by expressly stating that "further study has not led the writer to change his opinions."

Stark's History and Guide to the Bahama Islands. Fully illustrated with maps, engravings, and photo-prints. By James H. Stark. Boston: Photo-electrotype Co. Pp. 243.

The author explains the need of this guide by the lack of information on the part of the general public as to that portion of the tropical lands which is nearest to our great seaports. Lying to the eastward of the track of vessels bound to Cuba, Nassau seems to be a remote spot, although only two hundred and fifty miles east of Florida, and but three days' sail from New York. We all knew about Nassau during the Rebellion as the headquarters of the blockade-runners. Mr. Stark now points out that the only surviving memento of those few flush years is the Royal Victoria Hotel, built by the Government, and still the finest hotel in the West Indies.

The history of the Bahamas is necessarily given only in outline, since they have so often changed masters that there is no continuity of interests, and the older local records are lost. The Spaniards held these islands, and the Buccaneers made them their stronghold for many years. Charles II. granted them to the Duke of Albemarle, the Earl of Craven, and their associates, who sent out colonists in 1672. The Spaniards broke up the colony and were in turn driven out by pirates, with the connivance of the English. Then in 1718 the pirates were disowned, the colonial authorities took control, and such of the desperadoes as would not repent and reform were exiled or hung. Thereafter came the colonial period of slavery and rich plantations, to be rudely ended when the American Revolution broke out. Commodore Hopkins of our infant navy made a raid on Nassau, hoping to capture a supply of gunpowder. He took possession of the town easily and carried off the Governor, who was afterwards exchanged for our general, Lord

Stirling. In 1781 the Spaniards captured the group; but in 1783 Andrew Deveaux, a royalist from South Carolina, led an expedition which again restored the Bahamas to English control. In 1784 about £14,000 was paid by the British Government to extinguish the rights of the early patentees, and the islands were allotted to the refugee Loyalists from South Carolina and Georgia. In fact, the silver mace now used by the island Assembly is the one formerly used in the Province of South Carolina.

Like all the other West Indian Islands, the Bahamas suffered a great check by the abolition of slavery, but less perhaps in proportion since fishing and wrecking constituted the profession of many of the inhabitants. After the few years of exceptional prosperity due to blockade-running, the islanders fell back on their old resources, sponge-fishing, turtle-fishing, and the cultivation of tropical fruits for export. The present Governor, Sir Ambrose Shea, has introduced the culture of the sisal plant, indigenous to the islands, but heretofore considered only a nuisance. He discerned the value of the fibre, and as a bounty of £4 10s. for every ton exported was granted in 1890 for seven years, capital has begun to flow into the islands. Above all there remains the great attraction which these islands ought to possess for tourists and invalids. The climate is ideal: frost has never reached Nassau, and in twenty-one years the extreme range of the thermometer has been from 64° to 82°. Being of coral formation, the soil is porous and malaria finds no foothold. As a knowledge of these facts is spread, it is reasonable to presume there will be an increase of travel, especially since steamship facilities are multiplying.

Mr. Stark's book makes good the promise of the title-page. It is a very good hand-book for the tourist, giving him information on present needs, and there are many bits of historical information packed away in corners. Here, for example, we learn the true history of the last years of Blennerhasset. So, also, Watling's Island, one of the group, was probably the landfall of Columbus. The maps and illustrations are of recent date, and the author points out to his fellow-yachtsmen the pleasures of a trip around these islands, from his own experience thereof. Mr. Stark, being English-born, was particularly qualified to learn and understand the ideas and ways of the present colonist, though as an American citizen he desires to make his countrymen avail of the advantages offered to settlers. A few sentences might well be omitted which refer to political matters in the United States; but, taken as a whole, the book is an interesting contribution to our knowledge of one of our nearest neighbors.

Land of the Lingering Snow: Chronicles of a Stroller in New England from January to June. By Frank Bolles. Boston: Houghton, Mifflin & Co. 1891.

THIS volume contains the rambles of a student in the vicinity of Cambridge, who, by excellent use of his holidays, including Sundays, saw the hills and fields in that neighborhood, paddled on the rivers, and, by the friendly assistance of the railroad, saw both the shores of the bay and even the mountains. He began in January; he was undiscouraged either by drifts or the storm itself, and his reward was one well worth having. The aspects of weather, and the face of the country under its varying skies, relieved only by such life as houses winter-long in the woods, necessarily occupied his attention in the earlier weeks, but he found much of interest to report of what goes on in nature's retreats in that season; and, with the slow coming on of spring, his narrative of adventure takes on the color of the hour, and reproduces with great truthfulness the charm of that reluctant approach, changing into the full onset of summer. If one part stands out from another, it is the story of the equinoctial storm which he witnessed on the Ipswich sands, which is a fine piece of description, and beside it is to be placed the account of his visit to Highland Light; but his own sympathy was plainly engaged rather by the inland country, by the Waverley Oaks, and Beaver Brook, and Concord River, the lands overlooked by Wachusett, and the slopes that lead up to Chocorua. As a naturalist, he attends principally to bird life. He is a good observer and a good describer, and he has the feeling of the true lover of nature, so that those who care for the varied beauty of eastern Massachusetts, or have a special liking for animate nature, will find his volume delightful in both its renderings and its sympathies. Harvard students in particular will find in it a guide both where to go and what to see.

A Master Mariner. Edited by Herbert Compton. [Adventure Series.] London. T. Fisher Unwin. 1891.

THIS is the autobiography of Capt. R. W. Eastwick, who was a remarkably fine specimen of the merchant-captain of the end of the last and the beginning of the present century, before steam had done away with all the romance of navigation. He died in 1865, at the age of ninety-three, forty years after the close of his seafaring career, and dictated this account of his adventures after he had become totally blind. He went to sea at the age of twelve, and in the next forty years he visited almost every quarter of the globe and encountered a great variety of perils. He was shipwrecked on the coast of Burmah in 1793, and again at Dunkirk in 1810, and, as a result of the latter misfortune, remained a prisoner of war until released by special order of Napoleon. In 1799 his ship, the *Endeavour*, was captured by a French frigate, and he was a prisoner on board the latter vessel while she was being shot to pieces by an English man-of-war. On this occasion he narrowly escaped death from the missiles of his fellow-countrymen. Again, in 1813, he was a passenger on the armed packet *Express*, which was captured in mid-ocean by the American privateer *Anaconda*. This was one of the many instances in which the American vessel was the better sailer, and, moreover, so much better armed that she was able to riddle the *Express* without coming within range of the latter's guns.

On the other hand, many of Capt. Eastwick's voyages were singularly fortunate, and he was blessed with a wife who was able to take the helm in an emergency, and of whom he proudly said that she was the only woman he had ever known who could resist the temptation to ask questions in moments of extreme peril. The risk of capture by hostile men-of-war made all freights extremely high during the Napoleonic period, and the profits reaped by lucky ship-owners and captains seem fabulous in these days of excessive competition. Ships would sometimes clear £30,000 in a couple of years, and, again, some unlooked-for political change would upset the best-laid plans. Buenos Ayres was a name of evil omen to Capt. Eastwick in 1806, as it has been of late to more ambitious merchants. Sir Horne Popham had just captured the city from the Spaniards when the Captain was asked to go out and establish a business house there, and was given a credit of £100,000—a sum which meant much more then than it does now. Unfortunately, when he reached the River Plate, he found that the British troops had been driven out of Buenos Ayres, and before he had time to dispose of his merchandise in Montevideo, they were compelled to leave the country altogether. Not only did the worthy Captain's speculation end in disaster, but also a scheme that was much in the minds of Englishmen at that time, namely, to establish a great settlement in South America which should compensate for the loss of the North American colonies.

The Master Mariner's story is well told, and may be recommended as a suitable Christmas present for a boy who is irretrievably bent on going to sea. It makes no secret of the objections to a sailor's career, and the tone is decidedly healthy.

Celtic Fairy Tales. Selected and edited by Joseph Jacobs, editor of 'Folk-Lore.' Illustrated by John D. Batten. London: D. Nutt; New York: G. P. Putnam's Sons. 1891. 8vo, pp. xiv., 267.

NOT long ago we reviewed in this journal Mr. Jacobs's collection of 'English Fairy Tales,' and now we have to say a word about the same enterprising author's 'Celtic Fairy Tales.' The difficulty, we are told, with the former was one of collection; in the present case it is one of selection, owing to the large number of Celtic stories now accessible in the works of Campbell, Lady Wilde, Curtin, Hyde, and others, some of which have been recently noticed in these columns. Mr. Jacobs estimates that some 2,000 Celtic folk-tales are in existence, of which about 250 have been printed. From these latter the book before us is made (two stories, vi. and xxiii., apparently appear here for the first time) on the same lines as the 'English Fairy Tales'—that is, "a Scotch incident has been interpolated into an Irish variant of the same story, or vice-versa,' and the collector has endeavored "to put himself into the position of an *ollamh*, or *sheenachie*, familiar with both forms of Gaelic, and anxious to put his stories in the best way to attract English children." A modern English ballad has again been turned into prose in order to give a legend which now exists in no other form.

In spite of the larger material at the editor's disposal, we cannot think that the 'Celtic Fairy Tales' is as interesting a book as its predecessor. For one thing, the stories, in spite of some softening, are too gruesome for young children, and the hero-tales are not as interesting as the ordinary fairy-tale. For older readers, however, the volume will prove an attractive introduction to Celtic popular tales, and Mr. Jacobs's notes will be found, as usual, bright and suggestive reading. This is especially the case with No. xvi., "The Story-Teller at Fault," where one of the incidents, the "air-ladder," is nothing more nor less than one of the feats of Indian jugglers reported by Marco Polo and other early travellers. In the notes to No. xxi., "Beth Gellert," the editor thinks he has at last settled that famous myth, which was originally an Indian story that wandered to the West through many a story-book and perhaps oral tradition. Mr. Jacobs shows how the legend was connected with Llewellyn, and that the cairn formerly shown as the monument of Beth Gellert was probably the monument of a "record" run of

a greyhound. Thus one by one our cherished legends die, and even the nursery will soon scoff at William Tell and Beth Gellert.

Not much new light is thrown upon the question of the diffusion of popular tales by the present collection. The editor estimates that of the twenty-six tales, four are from the East, five are European jests, three of the romantic tales seem to have been imported (two of these do not differ in character from the ordinary Indo-European folk-tale), three have possibly been diffused from Ireland or Scotland (here again the diffusion may have been the same as for the other Indo-European folk-tales), and the remaining eleven are, as far as is known, original to Celtic lands. It is, of course, difficult, if not impossible, to arrive at any very definite results in such a classification. Some of the stories which appear most local may, after all, be but a natural localization of a theme which has wandered through many lands, and it is hard to say of a Continental tale that it has been imported from Ireland or Scotland.

The present volume in its illustrations will compare favorably with the former one, and Mr. Batten has found in Celtic myths a congenial field for his pencil.

Physical Development and Exercise for Women. By Mary Taylor Bissell, M.D. Dodd, Mead & Co. 1891.

Chats with Girls on Self-Culture. By Eliza Chester. Dodd, Mead & Co. 1891.

Dr Bissell has had much practical experience in the field of which she writes, and her book is consequently a sensible and useful one. The brief explanations of the laws of growth, and of the influence of environment (including dress) upon growth, are a logical introduction to the enumeration of the ways in which growth and development are promoted by exercise. The last chapter, profusely illustrated, explains how such hygienic exercise may be taken, often by surprisingly simple means. Among the facts cited in support of argument, those given in the tables that show the effects of physical nurture upon the height of both boys and girls will be found especially interesting. Some experiments in measurement should go far towards convincing the hitherto unconvinced that fashion in dress, and not nature, has ordained that the breathing of one-half of the human race shall be of the clavicular, or partially used lung type, while that of the other more loosely clad half is of the diaphragmatic, or freely used lung type. In her review of the possible forms of outdoor and indoor exercise, Dr. Bissell touches upon the fact that tennis is a one-armed sport, with a consequent tendency to produce a one-sided development. Its votaries among her girl readers ought, however, to forgive her this admission, since she not only sanctions cricket, but urges swimming, rowing, riding (with reversed saddles, if possible), and other delightful forms of open-air exercise.

It is, in fact, girls to whom the book is directly addressed, though the title-page appears to indicate differently. To put upon youthful shoulders the responsibility of so many grave considerations in regard to health seems, however, a mistake. It is clearly the duty of every father and mother to know, in substance, the facts Dr. Bissell explains, or, failing such knowledge, to find a medical adviser who not only knows but respects them. But it can hardly be necessary, or even advisable, that girls should take note of the special muscular or organic development furthered by the exercise in which they find pleasure or recreation. Nor ought there to be a need of explaining to school-girls, as a matter of immediate application, that they require a space of so many hundred cubic feet per capita, in order to obtain proper ventilation; and a school in which it could be needful for "one or two intelligent and sensible girls, by means well known to girls of tact and determination," to undertake the duty of creating "a public sentiment in favor of fresh air," is a school to be severely avoided by conscientious parents. The book cannot fail to be of special service to a large class of older persons who grew up before the era of the Swedish movement and the Sargent apparatus.

If a copious supply of literature intended for their special use could make up to young women for a deficiency in some of the time honored means of education, such as well-trained teachers and college and university courses, they might be in a fair way to outstrip their brothers in mental and moral training. 'Chats with Girls on Self-Culture' is devoted to their inward and spiritual development, as the companion volume of the "Portia Series," just noticed, is to their physical. It is brightly and entertainingly written, and is entirely free from the didactic tone in which former generations of young ladies were accustomed to be addressed. Its failings, indeed, lean rather to another side. Self-culture is discussed under no less than nineteen different headings. Dull girls are the subject of one chapter and clever girls of another. The harrowing dilemma of choosing between the two chapters might well have been spared either sort of readers. Also, a separate chapter on "A Spirit of Love" could safely have been omitted by a lay teacher who elsewhere speaks of "moral culture" and of "the meaning of our culture to others."

Especially to be recommended are the chapters headed "How Shall We Learn to Observe?" and "How Shall We Learn to Think?"—neither of which can fail to be helpful to any girl thrown upon her own resources for improvement. The advice in regard to a choice of books leaves little to be desired; and if the readers of the "chats" are wise enough to follow out the suggestions for learning to make a judicious use of the daily papers, they will oftentimes find themselves better informed and better provided with subjects of intelligent conversation than their more fortunate college-bred contemporaries.

King Arthur and the Knights of the Round Table. By Charles Morris. Philadelphia: Lippincott. 1891.

The question of the liberty which an editor of a modernized version of an old English classic may properly take with the text, though quite as important as the same question in translations from foreign literature, has been very little discussed, perhaps because it seems so self-evident that he should make only such verbal changes in vocabulary and construction as are really necessary for the easy comprehension of the work by a modern reader. The 'Morte D'Arthur' is a work so noble that faults in rendering it into modern English would in any case not be readily passed over, and besides, its original form exists in texts not so difficult as to make much modernization necessary. Moreover, this work has been admirably done by Strachey. The task has been attempted, however, with a different aim by Mr. Morris. He has, of course, compressed the story, on the ground that its repetitions, especially in the fighting parts, are tedious; but, in addition to this, he has made other changes of a nature to pervert the spirit of the old romance, and this in important particulars. It would require too close an examination to bring this out in full; we content ourselves, therefore, with applying the test of the parallel column to two leading passages. The first is that noble reply of Lancelot to the damsel who reproached him for his single life:

"Faire damosell," said Sir Launcelot, "I may not warne the people to speake of me, they may speake what soever it please them. But to bee a wedded man I thinke never to be, for if I were, then should I be bound to tarry with my wife, and leave armes and turnements, battells and adventures. And as for to say that I take my pleasure with paramours, that will I refuse, and principally for dread of God. For knights that bee advouturous or letcherous shall not bee happy nor fortunate in the warres, for either they shall be overcome with a simpler knight then they be themselves, or else they shall by unhappye and their cursednesse slay better men then they be themselves; and so who that useth paramours shall bee unhappie, and all things is unhappie that is about them." (Wright's edition of the 1632 text. Strachey keeps closer to the Caxton original.)

"I cannot stop people from thinking what they will," said Lancelot, "but as for marrying, I shall not soon consent to be a stay-at-home knight, and as for Guenever's enchantment, it is only that of beauty and of womanly graciousness. What time may bring me I know not, but as yet it has not brought me a fancy for wedded life. I thank you for your good wishes fair damsel, and courteously bid you farewell."

The second example is Arthur's lament after the great battle:

"Ah, Sir Launcelot," said King Arthur, "this same day have I sore missed thee. Alas! that ever I was against thee, for now have I my death, whereof Sir Gawaine warned me in my dreame." (Wright's sedition of the 1632 text, practically identical with the Caxton original.)

"Alas! Lancelot," he said, "how have I missed you this day. Alas! that I ever turned against you, for had you been here this fatal end could never have been, nor those noble warriors left to be the prey of the wolves and jackals of the battlefield. Sorely have I erred, and sadly have I been repaid for my error. But now, alas! it is too late for regret or amendment, for the fellowship of the Round Table is at an end, and Arthur the King shall reign no more."

We have given examples of both omission and commission, as well as of the changes of the text. "Imperial Cæsar dead and turned to clay," is the comment that naturally rises to one's lips. But this is not all. Mr. Morris says in his introduction, "In attempting to adapt this old masterpiece to the readers of our own day, we have no purpose to seek to paraphrase or improve on Malory. To remove the antique flavor would be to destroy the spirit of the work. We *shall leave it as we find it*, other than to reduce its obsolete phraseology and crudities of style to modern English, abridge the narrative, etc." It is needless to say more.

Pharaohs, Fellahs, and Explorers. By Amelia B. Edwards. Illustrated. Harper & Bros. 1891. 8vo, pp. xviii, 325.

This is one of the beautiful books of the year. It is printed on heavy paper, in clear type, and is enriched by a series of well chosen illustrations. The frontispiece is an excellent likeness of the author. In the face of so much that is praiseworthy, it seems ungracious to note a serious defect—the book has no map. To be sure, the points in Egypt which have been newly identified are not numerous, and some

of the places which have been explored have been known for years, but at the same time a map which should give positive facts and serve even as a report of progress to date, is a desideratum.

The volume before us contains the lectures delivered by Miss Edwards about a year ago, under the auspices of the corporation of Columbia College, "with large additions, references, and notes." They have been slightly recast, but they retain, as Miss Edwards herself says, in some degree the colloquial form of the popular lecture. Evidences of this are seen in the occasional repetitions incidental to the original form, but they do not seriously mar the work as a whole. The presentation is that of an enthusiast who has given much time to ransacking recent literature for material. She has necessarily followed largely in the footsteps of others, and has reported delightfully the results at which they have arrived. She has likewise some knowledge of the hieroglyphic characters and of some of the inscriptions. But it is as a reporter that she has had most success. Where she has attempted to go alone she has done less well, and has sometimes fallen into the error of giving too free rein to imagination, with the result of making statements and propounding explanations which are scarcely acceptable.

One of the most important subjects treated is the influence of Egypt upon Greek art, architecture, and letters. We have become so accustomed to think of the two former as indigenous to the soil that the assertion of Egyptian origin and parentage is received almost with incredulity. To be sure, they developed independently after being transplanted, even in the Greek settlements in Egypt, but it is interesting to learn the nature of the stock from which such fruitage finally came. So also of the alphabet of the Greeks. To have the forms located some six centuries prior to the earliest remains previously known is of great significance in our study of epigraphy. Whether the final verdict will be that Greece derived as large a number of motives in art, architectural design, and ornamentations from Egypt as is claimed by the author, cannot now be told, but at all events she makes out a strong case. The treatment of the lotus in various forms and degrees is very instructive, whatever allowances must be made for the author's bias. Special attention may also be called to the chapter on portrait-painting, illustrated as it is by what is probably the best series of reproductions in the book. The reflex influence of the Greek upon the Egyptian in this matter is, however, scarcely made as clear as it should have been.

The author has fallen into the error, as we consider it, of representing the "religion" of Egypt as monotheistic in any just sense. She says truly that the word religion does not belong to the Egyptian worship. The demands of morality were high and exacting, if we may take the formulæ of the 'Book of the Dead' as standards by which to judge, but an "Egyptian religion" never existed. It consisted of a congeries of religious systems which existed side by side, even overlapping, and which were sometimes fused into or absorbed by one another. A national religion cannot be found. Hence comes the difficulty of gaining any idea of the actual religious systems of the land. The supremacy of the Sun-god Ra only once approached to a monotheistic representation; but the well-nigh universal sentiment was so opposed to such a conception that it is mainly due to chance that memorials remain of the king who attempted to displace the local deities and to supplant them by his own favorite. Champollion, early in the century, instituted the method of investigation and classification to which the latest writers seem to be of necessity returning. The fact remains that about all we can do is to make a list of the gods, and attribute to each his or her peculiar functions and powers. Not, however, until the "pyramid texts" of the VI. dynasty—those inscriptions executed so beautifully but couched in a form of the language which has thus far almost completely defied all efforts to unravel its orthography and its grammar—are satisfactorily deciphered, shall we be able to give a complete view even of the attributes which belong to a given deity.

To obtain a true idea of the religious observances of Egypt, we must have an eye to the changes which these underwent. Exactly the same is true of the language and the script. Miss Edwards's treatment of the language is singularly unsatisfactory. In speaking of the *letters*, it should have been noted that the multiforms are marks of changes of style or of long intervals of time. For instance, the forms of *n* (p. 245) are separated in introduction by many centuries. The vowels which are cited on the same page, only serve to mislead the ordinary reader, for they were not originally true vowels, but consonants with corresponding values. The explanation of the reasons why the study of the hieroglyphic writing is increasingly hard is true as far as it goes, but it is scarcely true that the grammar is so elementary and easy that its "simplicity" offers its greatest difficulty. The fact is, that we know so little about the real grammar and inflections of Egyptian that we are hardly conscious that difficulties exist. Even the simplest text presents problems which none have been able to solve satisfactorily. Even the individual signs are not all clear, and the author has not helped matters much by the explanations which she has put forward. Probably the most fanciful is that of the sign used to indicate "land." It is composed of four elements; two of them are explained wrongly, one doubtfully, and the fourth in a way which puts more into it than belongs to it. The statement that a "list of hieroglyphic characters is in fact a pictorial encyclopædia of all the objects . . . which were known to the Egyptians," opens an interesting query. The camel is mentioned in Exodus (ix, 3) as existing in Egypt at the time of the plagues, yet the monuments bear no witness to it till a date long subsequent to the Exodus. The question is whether the supposed existence of a few in the herd of Pharaoh will satisfy the Biblical narrative, or whether we have here an indication of a late date of composition or a late insertion by a "redactor." The claim of an Egyptian origin for the word "camel" is an extreme instance of the author's being carried away by her enthusiasm. The fact is, that the name does not appear till the Greek era, and then in a form which indicates its foreign origin.

We are told that the loftiest of all obelisks was raised by Hatasu, the queen-pharaoh, in the amazingly short period of "seven months," but as the limits indicated on the stone itself, as stated by the author, are the first day of the sixth month of the fifteenth year of her reign and the last day of the twelfth month of the sixteenth year, "seven" months appear about one year short of the real time. The difficulty is that certain details essential to a correct calculation of the interval have been omitted.

We had marked other points for notice, but what has been said already will suffice to show that the book, while good and instructive in the main, is not entirely free from minor faults.

Thomas Hooker: Preacher, Founder, Democrat. ["Makers of America."] By George Leon Walker. Dodd, Mead & Co. 1891.

THOMAS HOOKER'S right to have his story told in a series dealing with "The Makers of America" will not be questioned by any one who reads this book, nor by any one who has informed himself by other means of Hooker's place in our colonial development. Mr. Walker, the writer of this sketch, was well qualified by previous studies, undertaken a few years ago when he wrote a history of the First Church in Hartford for its 250th anniversary. The part of that concerning Hooker has been expanded into 200 pages, of which 70, an undue proportion, treat of his youth, education, preaching in England, and in Holland, whither he went in 1630. Mather may have exaggerated his dislike of the "Brownists," but it is highly probable that he reached his own doctrine of Independency apart from the Brownist influence. From Hooker's arrival in New England in 1633, when he was forty-seven years old, Mr. Walker's materials increase in value, and his narrative gains correspondingly in interest and importance. It was to be expected that, going over ground much of which has been gone over many times before, we should come upon many familiar incidents and quotations; and we do in fact, but not too frequently. It is from the aptness and the raciness of the quotations from old sermons, letters, and other documents that the book gets its most characteristic and agreeable flavor. That both Hooker and his assistant, Mr. Stone, should have spent two months away from their year-old colony, in 1637, considering the heresies of Anne Hutchinson, is eloquent for the importance of sound orthodoxy in their estimation; and that eighty-two opinions were condemned by the Synod shows that the scent for heresy was very keen.

Mr. Walker has such writers as Mr. John Fiske and Mr. Alexander Johnston to enforce his claim for Hooker as the founder of democracy in America, but he has little need of them when he can quote such a letter as that of Hooker to Winthrop, on page 121, and such headings of a sermon preached before the General Court as those given on page 125. His part in the first confederation of the colonies allies his work with the national constitutional development of a later time, as his shaping spirit in the first Constitution of Connecticut allies it with the democratic tendencies of Samuel Adams and like men, which saved the Constitution of 1787 from being the aristocratic thing desired by Hamilton and others of his mind. That a congregational system of church government should attract one committed to it to democracy in civil government, was almost inevitable. "The binding power of synods" was that feature of the Presbyterian polity which he could least endure, and we get a capital taste of his quality when he writes to his son-in-law, at the Cambridge Synod of 1646, "he that adventures far in that business will fynd hott and hard work, or else my perspective may fayle." Strangely enough, he was less jealous than the Presbyterians of State interference with the Church, and was even strenuous for the right of civil magistrates to summon ecclesiastical assemblies, so planting seed from which his

Hartford church reaped a full crop of thorns and thistles in due time. The relation of Hooker and other New England divines to the Westminster Assembly has just now a very special interest. He "liked not the business," and would not go to England to be one of a pitiful minority, but he contributed a 'Survey of the Summe of Church Discipline' to the great debate which for eleven hundred and sixty-three sessions drew its slow length along. The first copy did not prove an insurance to the vessel that carried it, for she was never heard of more, save as her ghost came sailing into New Haven after the passing of some years. A second was still uncompleted at his death in 1647, on the sixty-first anniversary of his birth, the 7th of July.

A chapter on Hooker's writings is mainly interesting for its proofs that he anticipated fully that doctrine which has been generally esteemed the peculiar property of Dr. Samuel Hopkins—that we should be willing to be damned for the glory of God. Hooker's phrasing of the doctrine was: "The soule that is truly humbled is content to be disposed by the Almightie as it pleaseth him." It is rather pleasant than otherwise to have Hopkins's fame relieved a little of the burden of that prophecy.

BOOKS OF THE WEEK.

Bendall, H., and Lawrence, C. E. Graduated Passages from Greek and Latin Authors for First-Sight Translation. Part I., Easy. Cambridge: University Press; New York: Macmillan.

Letters of Credit.

We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,

NO. 59 WALL STREET, NEW YORK.

BOOKS FOR SALE.—THE KLAMATH Indians of Southwestern Oregon (language, ethnography), two large vols, 4to, pp. 1528, cloth, $10.00. The Karankawa Indians, Texas Coast (ethnography, linguistics), $1 00. A Migration Legend of the Creek Indians (history, ethnography, linguistics), $2.00. Write to the author, ALBERT S. GATSCHET, 1330 F Street, N. W., Washington, D. C., and send for his catalogue of other books.

THE INTERNATIONAL INQUIRY CO., 19 Park Place, New York, desires the services of well-informed specialists in all departments of knowledge who are able to answer interrogatories similar to those in *Notes and Queries*, but covering also scientific, mechanical, commercial, and professional topics. Letters giving subjects which can be handled should be sent as above. Compensation as agreed upon

Make Two Hundred

CAKES with Royal Baking Powder and every one will be whiter, sweeter, lighter, finer flavored, more delicious and wholesome than cakes made with any other baking powder.

The last spoonful in a can of Royal Baking Powder will be found as good as the first, and the last cake will be as light as the first, because the Royal has keeping qualities which all others lack.

A spoonful of Royal will go further than a spoonful of any other powder because it is the purest.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

ALFRED BOWDITCH,
HENRY PARKMAN,
J. MURRAY HOWE,
} Trustees,
27 School Street, Boston, Mass.

Mr. H. MISCHKE, 2 and 4 Barclay St.

(Astor House), New York, has now ready for the HOLIDAY SEASON a fine selection of oil paintings, water colors, photogravures, etchings, and engravings. Also a full line of books for children and adults, suitable for Christmas and New Year's presents.

ARTISTIC FRAMING A SPECIALTY.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Professor Royce's Libel.

A Public Appeal for Redress to the Corporation and Overseers of Harvard University.

BY

FRANCIS ELLINGWOOD ABBOT, Ph.D.

A NEW EDITION DE LUXE.

Bulwer-Lytton's Novels.

LIMITED TO 1,000 COPIES.

The first and only fine illustrated edition of Lord Bulwer-Lytton's Novels ever made in Europe or America.

Bulwer stands foremost among novelists as a student and delineator of human nature, instincts, and passions, and he is also acknowledged to be the most versatile writer of his day and generation.

His popularity is increasing every year, and the publishers recognize the great demand for a good edition of his writings. This edition is embellished with over 300 photogravures on Japanese government paper from original drawings and paintings by the best illustrators in America, and photographs of the actual scenes and places referred to, gathered on the spot especially for this edition.

THE MANUFACTURE OF THE BOOK IS PERFECT.

The type is large and new, and set in a fine open page. The margins are ample, and the paper a beautiful natural-tint laid paper. The volume is a small 8vo, easy to handle, and the binding is vellum cloth, gilt tops, slightly trimmed. Complete in 32 VOLS., issued at the rate of about 2 vols. per month, at $2.50 PER VOLUME. Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

BRYAN, TAYLOR & CO.,
757 Broadway, New York.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S
Breakfast Cocoa

from which the excess of oil has been removed,
Is absolutely pure and it is soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

President Andrews of Brown University writes: "I consider 'Labberton's Historical Atlas and General History' a most excellent work for use in high schools and academies. With an energetic and enterprising teacher, it cannot but yield superior results."

CHARLES SCRIBNER'S SONS' NEW IMPORTATIONS.

Captain Gronow's Reminiscences and Recollections.

Being Anecdotes of the Camp, Courts, Clubs, and Society, 1810–1860. With Portrait and 33 Plates, colored by hand. By JOSEPH GREGO. 2 vols., 8vo, $10.00.

Captain Gronow was one of the brightest, most racy and interesting of *raconteurs*, and his anecdotes relate to one of the most eventful periods of history.

Dr. Parke in Equatorial Africa.

My Personal Experiences in Equatorial Africa as Medical Officer of the Emin Pasha Relief Expedition. By THOMAS HEAZLE PARKE, D.C.L., Hon. Fellow Royal College of Surgeons, Ireland, &c., Surgeon Army Medical Staff. With Map, Portrait, and numerous Illustrations from Drawings by PAUL HARDY STANLEY BERKELEY and LIEUT. STAIRS. Demy 8vo, cloth, $6.00.

"Mr. Parke's journal fills up a distinct gap in the narrative of the expedition. Not only have we at last an authentic and detailed account of the many months' stay at Fort Bodo, but all over Mr. Parke fills in many lacuna which have been left out even in the detailed narrative by Mr. Stanley himself. . . . "—*London Times.*

"It is a clear, condensed narrative of the Emin Relief Expedition, from a physician's point of view, and in this is its great value."—*New York Times.*

Lyrics from the Dramatists of the Elizabethan Age.

Edited by A. H. BULLEN. New Edition, with additions. Fcap 8vo, $1.50.

UNIFORM WITH

LYRICS FROM THE SONG-BOOKS OF THE ELIZABETHAN AGE. Edited by A. H. BULLEN. New Edition, fcap 8vo, $1.50.

The Bard of the Dimbovitza.

ROUMANIAN FOLK SONGS. Collected from the Peasants by HÉLÈNE VACARESCO. Translated by CARMEN SYLVA and ALMA STRETTELL. With an Introduction by CARMEN SYLVA. Crown 8vo, cloth, ornamental, $3.00.

"These poems have the wild melancholy and the fierce simplicity of all true popular ballads. . . . There are elements of the Greek joy in all beautiful sights and sounds, . . . but there is also a fierce love of battle and of blood, such as rings through the Nibelungen epic." . . .—*Frederic Harrison, in the Fortnightly.*

London—Past and Present.

Its History, Associations, and Traditions. By HENRY B. WHEATLEY, F.S.A. Based on "Cunningham's Handbook." Laid Paper, 3 vols., medium 8vo, $20.00.

"The work is so studded with quotations from the old poets and essayists, and with illustrations of bygone manners and historical events, that it may be taken up at any time for amusement as well as information. It is a sort of distillation from English history, anecdote, and biography, with a sprinkling of ancient gossip and scandal."—*Inverness Courier.*

The Afghan Wars.

1839–42 and 1878–80. By ARCHIBALD FORBES. With Portraits and Plans. A new volume in the "Events of Our Own Times" Series. 8vo, $1.75.

Direct Fast Express Route
TO THE MEDITERRANEAN.

First-class Passenger Steamer Service between
NEW YORK and GENOA, ITALY,
BY THE
NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Jan. 2, Feb. 6, March 12
WERRA, Dec. 10, Jan. 23, Feb. 27, April 2.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

Colorado Springs, Colo.

AT THE FOOT OF PIKE'S PEAK,
CLAIMS to be the FINEST WINTER HEALTH RESORT in the WORLD.

Why not investigate this claim?

A little book just published may assist. Sent free on application. Address

Books for Children.

Everybody is looking for books for children that will be not only fascinating but also healthful and beneficial and of permanent interest.

These requirements are precisely met by the

SEASIDE AND WAYSIDE SERIES.

BY MRS. JULIA McNAIR WRIGHT.

No. 1. for children from five to eight.
No. II. " " " six to nine.
No. III. " " " eight to twelve.

No. I. talks of Crabs, Wasps, Bees, and the "Sea-Babies."

No. II. tells about the Ants, the Flies, Beetles, and Star Fishes.

No. III. introduces the Plants, Birds, and Fishes.

Children like to think of animals as "real people." In these books they are introduced to the fairy land of science. The books scientifically accurate, prettily illustrated, and the stories charmingly told. All children are delighted with them.

Bound in cloth. For sale by all booksellers at retail prices: No. I., 50 cts.; No. II., 75 cts.; No. III., $1.00.

Published by D. C. HEATH & CO.,

3 EAST 14TH ST., NEW YORK.
5 SOMERSET ST., BOSTON.

The Problem of the Northmen.

Professor EBEN NORTON HORSFORD'S concluding volume, entitled 'The Landfall of Leif Erickson, A. D., 1000, and the site of his houses in Vineland.' The work contains heliotype facsimiles of every authoritative map bearing upon the question, and numerous photographs of Leif's houses and Norumbega. This work as a whole contains the evidence on the essential points of the Vineland story upon which the judgment of the author relies. One large quarto volume of 148 pages, paper cover, an edition of 50 copies only, at $7.50 on laid paper. Less expensive edition on thinner paper, 200 copies, $6.00. Published by

CHARLES SCRIBNER'S SONS

NEW BOOKS

WHYMPER'S ANDES

Travels Amongst the Great Andes of the Equator.

By Edward Whymper. With Maps and 140 Illustrations drawn by various artists and engraved by the author. 8vo, $6.00.

Mr. Theodore Roosevelt: "Mr. Whymper is not only one of the most noted mountaineers and cragsmen of his time, but he is also what many mountaineers and cragsmen are not, an agreeable writer. The story of his travels, of the hardships he endured and the triumphs he achieved is of interest not only to mountaineers but also to all lovers of manly adventure."

By Captain JOHN G. BOURKE, U. S. A.

With Portrait and Illustrations. 8vo, $3.50.

"Capt. Bourke, who was for years a member of Gen. Crook's staff, has given us a most entertaining book. It abounds with interesting reminiscences of border life, and, dealing as it does with a state of things which is rapidly passing away, it will be read with interest by thousands and prized by future generations."
—*Christian-at-Work.*

JAPONICA

By Sir Edwin Arnold. Fully illustrated by Robert Blum. Large 8vo, $3.00.

Sir Edwin Arnold's poetic and sympathetic study of the Japanese is one of the most artistic and handsome of the holiday books. In theme, style, illustrations and manufacture it will appeal to every refined taste, presenting a most thoughtful and graceful study of the fascinating people among whom the author spent a year. Robert Blum's illustrations are drawn with fine feeling for the picturesque and romantic aspect of Japanese life.

ACROSS RUSSIA

From the Baltic to the Danube. By Dr. Charles A. Stoddard, editor of the New York *Observer*. Illustrated. 12mo, $1.50.

"Mr. Stoddard is a good traveler; he sees well, and his descriptions of people and places are graphic and of large value. The volume has many fine illustrations."
—*Chicago Inter-Ocean.*

OCEAN STEAMSHIPS

By various authors. Fully illustrated 8vo, $3.00

"It gives a most graphic account of the great steamship business, of its development and its present management and appliances, and, with its elegant illustrations, fills a place hitherto vacant in the book world."
—*Boston Traveler.*

PATRICK HENRY

Life, Correspondence and Speeches. By William Wirt Henry. With Portrait. 1100 sets printed from type. 3 vols., 8vo, net $12.00.

"It has been a rare service that the author has rendered his countrymen in giving us this charming biography. It is a valuable contribution to our historical and biographical literature."—*N. Y. Observer.*

The Life of Austin Phelps.

By Elizabeth Stuart Phelps (Mrs. Ward). Illustrated, 8vo, $2.00.

"No biography issued this season will be read with greater interest. The book is fascinating."—*N. Y. Examiner.*

The Divorce of Catharine of Aragon.

The story as told by the Imperial Ambassadors resident at the Court of Henry VIII. By James Anthony Froude. 8vo, $2.50.

"Brilliantly written; his facts and arguments are marshaled with great ability; his narrative is intensely interesting."
—*N. Y. Tribune.*

Famous Women of the French Court.

Translated from the French of Imbert de Saint Amand. Each volume, with portrait, 12mo, $1.25

The popular success of these delightful books is now well known. They are sold singly or in groups as follows.

Marie Antoinette, 3 vols. in a box, $3.75.

Empress Josephine, 3 vols in a box, $3.75.

Empress Marie Louise, 4 vols. in a box, $5.00.

The set of 10 vols. in a box, $12.50.

"We can cordially commend these books to the attention of our readers. They will find them attractive in their arrangement, never dull, with much variety of scene and incident and admirably translated."—*The Nation.*

The Sabbath In Puritan New England.

By Mrs. Alice Morse Earle. 12mo, $1.25.

"One of the most entertaining books we have ever come upon, and of value to every student of history."—*Boston Courier.*

English Social Movements.

By Robert A. Woods. 12mo, $1.50.

This book is the result of the author's observations in East London and in the North of England. Its object is to sketch all the more important phases of the different social movements, which are arousing such wide interest in England.

OTHER IMPORTANT BOOKS ARE: "**The Business of Life**" by the author of "How to be Happy Though Married" (12mo, $1.25); a new volume of delightful stories, by Thomas Nelson Page, entitled "**Elsket**" (12mo, $1.00); a collection of poems, by Elizabeth Akers, entitled "**The Hightop Sweeting**" (12mo, $1.25); a new and enlarged edition of Dr. Henry Van Dyke's "**Poetry of Tennyson**" (12mo, $2.00), and a new book by Prof. N. S. Shaler, entitled, "**Nature and Man in America**" (12mo, $1.50).

JUVENILES

Among the Camps;

Or, Young People's Stories of the War. By Thomas Nelson Page. Illustrated. Square 8vo, $1.50.

In this volume Mr. Page has told some Virginia stories of the War, which will touch the heart of every reader, young or old.

The Boy Settlers.

A Story of Early Times in Kansas. By Noah Brooks. Illustrated. 12mo, $1.25.

"A volume that all spirited boys will admire. Its descriptions of frontier life are accurate and exciting."—*Boston Sat. Eve. Gazette.*

A New Mexico David,

And Other Stories and Sketches of the Southwest. By Charles F. Lummis. Illustrated. 12mo, $1.25.

"The author has in many thousand miles of walking through New Mexico acquired an astonishing amount of interesting data which form the basis of these stories."—*Christian Union.*

Stories for Boys.

By Richard Harding Davis. Illus. 12mo, $1.00.

"Crisp in style and animated in incident. For a wholesome, hearty boy, we can fancy no more entertaining volume."—*Newark Advertiser.*

Lyra Heroica.

A Book of Verse for Boys. Selected and arranged by William Ernest Henley. 12mo, $1.25.

"Mr. Henley has rendered boys a service they must certainly appreciate. It is a noble selection."
—*Boston Traveler.*

Children's Stories in English Literature.

From Shakespeare to Tennyson. By Henrietta Christian Wright. Uniform with "From Talesin to Shakespeare." Each 12mo, $1.25.

"Thoroughly fascinating."—*Boston Beacon.*

New Books by G. A. Henty.

The Dash for Khartoum: A Tale of the Nile.

Redskin and Cowboy: A Tale of the Western Plains.

Held Fast for England: A Tale of the Siege of Gibraltar.

Each handsomely bound and illustrated. 12mo, $1.50.

"Old and young can enjoy Mr. Henty. He is a natural story teller, pure and elevating in tone. Courage, honesty, pluck, sincerity and ambition must be stimulated in the boy reading his tales."—*Boston Times.*

Pilots of Pomona.

A Story of the Orkney Islands. By Robert Leighton. Illustrated. 12mo, $1.50.

"His plot is original and the whole story full of excitement and enthusiasm. The volume will be very popular."
—*Boston Herald.*

DODD, MEAD & COMPANY,

753 AND 755 BROADWAY, NEW YORK.

WILLIAM HOGARTH. A Memoir with Bibliography and Catalogue of Prints and Paintings. By AUSTIN DOBSON, with numerous illustrations and photogravure reproductions. Octavo, 400 pp., net, $7.50; large paper, $15.00.

A HISTORY OF THE MODERN STYLES OF ARCHITECTURE. By JAMES FERGUSSON, D.C.L., F.R.S., etc., etc. Revised and brought down to the present time, with many new illustrations by Robert Kerr, Professor of Architecture in King's College, London. Two volumes, octavo, with nearly six hundred illustrations, half roan, $10.00; half morocco, $15.00.

EASTERN AND INDIAN ARCHITECTURE. By JAMES FERGUSSON, D.C.L., F.R.S., etc., etc. A new edition from new plates, with several hundred illustrations. Two volumes, octavo, half roan, $10.00; half morocco, $15.00.

THE FINANCIER AND THE FINANCES OF THE REVOLUTION: A Life of Robert Morris. By Prof. WM. G. SUMNER of Yale University. Two volumes, octavo, cloth, $5.00.

IN THE GIUNTA SERIES.

PRISON LIFE DURING THE FRENCH REVOLUTION. From the French of the Duchesse de Duras, *née* Noailles. 12mo, cloth, cut or uncut, $1.25.

THE DRAMATIC ESSAYS OF CHARLES LAMB. Edited, with an introduction, by BRANDER MATTHEWS. 12mo, cloth, cut or uncut, $1.25.

THE JOURNAL OF MAURICE DE GUERIN. With a biographical and literary memoir by Sainte-Beuve. From the 20th French edition by Jessie Frothingham. 12mo, cloth, cut or uncut, $1.25.

THE CITATION, ETC., OF WILLIAM SHAKSPEARE. By WALTER SAVAGE LANDOR. With an introduction by Hamilton W. Mabie. 12mo, cloth, cut or uncut, $1.25.

Previously published in this series—PEG WOFFINGTON, by CHAS. READE; CHRISTIE JOHNSTONE, by CHAS. READE; FOUR FRENCH WOMEN, by AUSTIN DOBSON.

IN THE PORTIA SERIES.

TALKS WITH GIRLS ON SELF-CULTURE By ELIZA CHESTER, author of "Girls and Women." 12mo, cloth, $1.25.

PHYSICAL DEVELOPMENT AND EXERCISE FOR WOMEN. Illustrated. By DR. MARY TAYLOR BISSELL. 12mo, cloth, $1.25.

This series is intended especially for women. Additional volumes are in preparation.

STUDIES IN LITERATURE. By HAMILTON W. MABIE, author of "My Study Fire," "Under the Trees," etc., etc. 12mo, boards or cloth, $1.25.

Also ready the third edition of MY STUDY FIRE, with Frontispiece. 12mo, cloth, $1.25.

THE WORKS OF CHARLES DICKENS. An entirely new edition from entirely new plates. Illustrated with etchings and engravings by Cruikshank, Seymour, H. K. Browne (Phiz), Barnard, and others. Forty-eight volumes, 12mo, cloth, gilt tops, $60.00; half calf or morocco, $120.00.

SCHOULER'S HISTORY OF THE UNITED STATES. By JAMES SCHOULER. A new volume, bringing the work down to the Civil War. Volume 5, octavo, cloth, $2.25.

IN THE SERIES MAKERS OF AMERICA.

JOHN WINTHROP. By Rev. JOSEPH H. TWICHELL. 12mo, cloth, 75 cents.

ROBERT FULTON. By Prof. R. H. THURSTON of Cornell University. 12mo, cloth, 75 cents.

THOMAS HOOKER. By GEORGE L. WALKER, D.D. 12mo, cloth, 75 cents.

COTTON MATHER. By Prof. BARRETT WENDELL of Harvard University. 12mo, cloth, 75 cents.

SIR WILLIAM JOHNSON AND THE SIX NATIONS. By WM. ELLIOT GRIFFIS, D.D. 12mo, cloth, 75 cents.

GENERAL HOUSTON. By HENRY BRUCE, Esq. 12mo, cloth, 75 cents.

Previously published in this Series—GEORGE AND CECILIUS CALVERT, by WM. HAND BROWNE; JAMES EDWARD OGLETHORPE, by HENRY BRUCE. ALEXANDER HAMILTON, by Prof. SUMNER, of Yale University; FRANCIS HIGGINSON, by THOMAS WENTWORTH HIGGINSON. Other volumes will follow rapidly.

HOUSE AND HEARTH. Essays on the Domestic Relations. By HARRIET PRESCOTT SPOFFORD. 12mo, cloth, $1.00.

WATCH HO! WATCH! ON LIFE'S DEEP SEA. By ELISABETH N. LITTLE. Illustrated from designs in water colors. Oblong quarto, boards, $2.50; cloth, $3.50; morocco, $5.00. Also new edition of Log Book Notes, and Off the Weather Bow, by the same author.

FOUR FRENCH WOMEN. By AUSTIN DOBSON. An édition de luxe, with many illustrations in photogravure. Octavo, white cloth, gilt, $2.00; large paper, $5.00.

IN THE SERIES GREAT EXPLORERS.

SIR JOHN FRANKLIN AND THE NORTHWEST PASSAGE. By Capt. ALBERT MARKHAM, R. N. 12mo, cloth, with illustrations, $1.25.

Previously published in this Series—JOHN DAVIS, by CLEMENTS R. MARKHAM; PALESTINE, by Major CONDER; MUNGO PARK AND THE NIGER, by JOSEPH THOMSON; FERDINAND MAGELLAN, by GUILLEMARD.

THE COUNTESS RUDOLSTADT: a Sequel to Consuelo. By GEORGE SAND. Translated from the French by Frank H. Potter, Esq. Two volumes, 12mo, cloth, gilt tops, $2.50.

LORD ARTHUR SAVILLE'S CRIME, AND OTHER STORIES. By OSCAR WILDE, author of "Intentions" and other essays. 16mo, cloth, $1.00.

IN BISCAYNE BAY. A Novel, the scene of which is laid off the Florida coast. With thirty-five illustrations. Octavo, cloth, $2.50.

A SISTER TO ESAU. A Novel. By AMELIA E. BARR, author of "Jan Vedder's Wife," etc. 12mo, cloth, $1.25.

A ROSE OF A HUNDRED LEAVES. A love story. By AMELIA E. BARR, author of "Jan Vedder's Wife," etc., etc. Profusely illustrated by Frank M. Gregory. 12mo, cloth, $1.50.

THE HAUNTED POOL. By GEORGE SAND. With 14 illustrations after Rudeaux, and many head and tail pieces by Gregory. Octavo. Uniform with "The Abbé Constantin." Paper, $1.75; half cloth, gilt tops, or half leather, $2.50; half levant, $5.00.

A MARRIAGE FOR LOVE. By LUDOVIC HALEVY. Illustrated by Wilson de Meza. Octavo. Uniform with "The Abbé Constantin," etc. Paper, $1.75; half cloth or half leather, gilt tops, $2.50; half levant, $5.00.

NEAR TO NATURE'S HEART. By E. P. ROE. A holiday edition in small octavo, with portrait and many illustrations by Frederick Diehlman. Cloth, gilt, $2.50.

BATTLE-FIELDS AND HISTORY. By WILLIS J. ABBOT. A sequel to "Battle-Fields of '61" and "Battle-Fields and Camp-Fires." Quarto, cloth, with many illustrations, $3.00

WITCH WINNIE'S MYSTERY: A Sequel to "Witch Winnie." By ELIZABETH W. CHAMPNEY. With illustrations by Gibson. 12mo, cloth, $1.50.

ELSIE'S VACATION. A new volume in the Elsie Series. By MARTHA FINLEY. 12mo, cloth, $1.25. Set, 17 volumes, $21.25.

DODD, MEAD & CO., 753 and 755 Broadway, New York.

MACMILLAN & CO.'S

SELECT LIST OF ILLUSTRATED HOLIDAY GIFT BOOKS.

Now Ready, Uniform with 'The Makers of Florence'

MRS. OLIPHANT'S NEW BOOK. Crown 8vo, $3.00.

JERUSALEM, THE HOLY CITY.

ITS HISTORY AND HOPE.

By Mrs. OLIPHANT, author of 'Makers of Venice,' etc. With fifty Illustrations. Crown 8vo, cloth, $3.00.

An Edition de Luxe with many new Plates. 8vo, $6.00.

THE MAKERS OF FLORENCE.

DANTE, GIOTTO, SAVONAROLA, AND THEIR CITY. By Mrs. OLIPHANT, author of 'Makers of Venice,' 'Royal Edinburgh,' etc. With portraits, fifty illustrations, and many page plates reproduced from pictures by Florentine artists. 8vo, bound in buckram, gilt top, $6.00.

BEAST AND MAN IN INDIA.

A Popular Sketch of Indian Animals in their relations with the people. By JOHN LOCKWOOD KIPLING, C.I.E. With numerous Illustrations. 8vo, $6.00.

THE LIFE AND LETTERS OF SAMUEL PALMER,

nter and Etcher. Written and edited by A. H. PALMER. With numerous Illustrations. 8vo, $7.50.

THE STORY OF THE HILLS.

A BOOK ABOUT MOUNTAINS FOR GENERAL READERS.

By H. N. HUTCHINSON, author of 'The Autobiography of the Earth.' With Illustrations. 12mo, $1.50.

"Now that thousands of people go every summer to spend their holidays among the mountains, there must be many who would like to know something of the secret of the hills, their origin, their architecture, and the forces that made them what they are. For such this book is chiefly written."—*Preface.*

New and Cheaper Edition. 12mo, $2.25.

WESTMINSTER ABBEY.

By the Rev. W. J. LOFTIE, author of 'Windsor Castle,' etc. With illustrations. 12mo, cloth, $2.25.

*** This edition contains all the illustrations from the folio edition, published at $7.50.

Just Published. With 300 Illustrations. 8vo, $4.00.

SCHLIEMANN'S EXCAVATIONS.

An Archæological and Historical Study. By Dr. C. SCHUCHHARDT, Director of the Kestner Museum in Hanover. Translated from the German by Eugénie Sellers. With an Appendix on the recent discoveries at Hissarlik by Dr. Schliemann and Dr. Dörpfeld, and an Introduction by Walter Leaf, Litt.D. With Illustrations. 8vo, $4.00.

NEW BOOKS FOR THE YOUNG.

By the Rev. Prof. ALFRED J. CHURCH.

THE BURNING OF ROME.

A Story of the Days of Nero. With Illustrations. 12mo, cloth, $1.00.

"This story is a delightful one and will be welcomed by hosts of young people during the coming holiday season."—*Boston Traveller.*

THE STORY OF THE ODYSSEY.

With colored illustrations after Flaxman. 12mo, cloth, $1.

THE STORY OF THE ILIAD.

With colored illustrations after Flaxman. 12mo, cloth, $1.

STORIES FROM THE BIBLE.

SECOND SERIES. With illustrations after Julius Schnorr. 12mo, $1.25.

FIRST SERIES. With illustrations after Julius Schnorr. 12mo, $1.25.

BAREROCK,

Or the Island of Pearls. By HENRY NASH. Illustrated by Lancelot Speed. 12mo, cloth, $1.50.

A PAIR OF ORIGINALS.

By E. WARD, author of 'Fresh from the Fens.' With illustrations. 12mo, $1.25.

Mrs. Marshall's New Book.

WINIFREDE'S JOURNAL.

By EMMA MARSHALL, author of 'Under Salisbury Spire,' etc. With illustrations. 12mo, $1.25.

Mrs. Molesworth's New Book.

NURSE HEATHERDALE'S STORY.

By Mrs. MOLESWORTH, author of 'Carrots,' 'Children of the Castle,' etc. With illustrations by L. Leslie Brooke. 16mo, $1.25.

THE GATE BEAUTIFUL,

And Other Bible Teachings for the Young. By the Rev. HUGH MACMILLAN, author of 'Bible Teachings from Nature.' 12mo, cloth, $1.25.

TWELVE ENGLISH STATESMEN.

New Volume.

PITT.

By Lord ROSEBERY. Cloth, limp, 60 cents uncut edges, 75 cents.

The Pocket Library of English Literature.

Vol. I—Tales of Mystery.

MRS. RADCLIFFE—LEWIS—MATURIN.

Edited by GEORGE SAINTSBURY. 18mo, $1.00.

Wild Beasts and Their Ways.

Reminiscences in Asia, Africa, and America. By Sir SAMUEL BAKER, F.R.S., etc., author of 'Albert Nyanza,' etc. With numerous Illustrations. Large 12mo, cloth, extra gilt, $3.50.

Glimpses of Old English Homes.

By ELIZABETH BALCH, author of 'An Author's Love.' With numerous Illustrations. 4to, $3.50.

Stratford-on-Avon.

From the earliest times to the death of Shakespeare. By SIDNEY LEE. With 45 illustrations by EDWARD HULL. 12mo, cloth extra, $2.00.

"Historically and for Shakespeare's sake, it is an admirable volume."—*Boston Post.*

"It is a curiously interesting, charmingly written book."—*Chicago Times.*

The Ruined Abbeys of Yorkshire.

By W. C. LEFROY. With numerous illustrations by A. BRUNET DEBAINES and H. TOUSSAINT. 12mo, cloth extra, $2.00.

"No lover of the beautiful, the romantic and picturesque, who wants to know the meaning of the past, should fail to read this book."—*Boston Beacon.*

A New Book by Archibald Forbes.

Barracks, Bivouacs, and Battles.

By ARCHIBALD FORBES, LL.D. 12mo, cloth, $1.50.

Introductory Studies in Greek Art.

By JANE E. HARRISON, author of 'Mythology and Monuments of Ancient Athens,' etc. With Map and Illustrations. 12mo, $2.25.

SOME ASPECTS OF THE

Greek Genius.

By S. H. BUTCHER, M.A., LL.D. 12mo, $2.25.

New Volume of the Aldine Poets.

The Poetical Works of Thomas Gray.

English and Latin. Edited, with an Introduction, Life, Notes, and a Bibliography, by JOHN BRADSHAW, M.A., LL.D. With portrait. 16mo, 75 cents.

*** *All purchasers of Books are invited to send for Macmillan & Co.'s New Illustrated Holiday Catalogue, which will be sent free by mail to any address.*

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 17, 1891.

The Week.

PRESIDENT HARRISON informs Congress that Germany has opened her ports to inspected American pork products. He adds: "The removal of these restrictions in every instance was asked for and given *solely* upon the ground that we had now provided a meat inspection that should be accepted as adequate." This will be a great piece of news to the editor of the Bucyrus, O., *Journal*. That gentleman was the recipient of a letter mailed to him on October 14, 1891, by the Hon. James G. Blaine, in which that distinguished statesman assured him that Germany had "removed the prohibition on pork" as an equivalent for our leaving "her sugar on the free list." Thus is the mystery of reciprocity deepened, and thus, too, is the "perfect good understanding" which exists between President Harrison and his Secretary of State put beyond all dispute.

The indignation in Chili over President Harrison's Message is not hard to account for. The President has done, substantially, just what he protested against the Italian Government's doing in the New Orleans case—that is, he has accepted *ex parte* testimony as conclusive, in advance of the decision of the court having sole jurisdiction over the case. When Rudini was thundering away at Mr. Blaine last spring, the reply was made to him that the affair was undergoing judicial investigation, and that, meanwhile, the American Government could not accept the version of Consul Corti and Baron Fava. "The President is unable to see," wrote Secretary Blaine to the Marquis Imperiali, "how any Government could justly give an assurance of this character [that 'the guilty parties should be brought to justice'] *in advance of a trial* and a verdict of 'guilty.'" But in the case of the Valparaiso riot, the President is fully able to see how he can declare Chilians, and even Chilian officers, guilty in advance of a trial. The point is, that he has found his verdict in advance of that arrived at by the Judge in Valparaiso, and has practically served notice that he will disregard the decision of the latter in case it differs from his own. All this is well brought out in the circular letter of the Chilian Government addressed to all Chilian Legations. The same document also alludes to various letters of Egan's, of which the contents are said to be unknown in Washington. We greatly hope that a full collection of his letters and despatches will be included in that correspondence which President Harrison promises to lay before Congress.

It was worthy of note, and has an important bearing on our dispute with Chili about the *Baltimore* incident, and on any other dispute into which we may get over sailors' rows in foreign ports, that of 7,516 enlisted men belonging to the American Navy 3,997 are foreign born, only 3,519 native American. Of this total, only 4 310 are citizens of the United States. Of the remainder, 2,756 have made no declaration of intention, and 1,282 have never even resided in the United States. Of the crew of the *Baltimore*, only 148 are Americans; 187 are foreigners, picked up here, there, and everywhere. We have no doubt these latter will fight well when the occasion comes, and are well commanded and well disciplined; but it would be absurd for us to assume, in disputes with foreign Powers over these collisions with foreign police when ashore as "liberty men," that they are God-fearing Yankees, whose word about their own behavior it is safe to take against that of foreign Ministers, judges, and policemen, even to the point of war.

Referring in his Message to the legislative gerrymanders which "buttress" gerrymanders of Congressional districts, President Harrison cites a county in a certain State where "three districts for the election of members of the Legislature are constituted as follows: One has 65,000 population, one 15,000, and one 10,000." He could have instanced a far worse case than this in Connecticut, where the Republicans are in both legislative houses the beneficiaries of a "gerrymander" which is "buttressed" not behind a statute, but behind the more solid and enduring ramparts of a State constitution. As to the lower house of Connecticut, the President would have found one town with a population of 86,045 equalized with another town having a population of but 431; and as to the State Senate, a district which at the Presidential election of 1888 cast 17,649 votes, equalized with another district casting but 2,585 votes. How the system works in the upper house of Congress may be shown by the case of United States Senator O. H. Platt, who was reëlected last January by 141 Republican members of the Connecticut Legislature, representing towns and districts casting only 73,144 votes, while there were opposed to him 134 members representing 195,840 votes. If Senator Platt and his colleague, Senator Hawley, have occasion during this session to refer to the President's views in his Message on either "gerrymanders" or the suppression of the suffrage at the South, they will, of course, tell us all about this peculiar Connecticut "system," but for which their own seats would now be filled by two Democrats.

Much as there is to commend in the report of the Secretary of the Navy, there is one recommendation contained in it the wisdom of which is open to grave doubts: it is the recommendation to consolidate the revenue marine with the navy. This proposition, originating with Senator William E. Chandler when Secretary of the Navy, was wisely ignored by his successor in office, Mr. Whitney, but is now revived by Mr. Tracy. The consolidation, should it ever take place, means that the navy, thereafter, shall perform the duties now performed by the revenue marine. The practice of employing the strong arm of the Government to enforce the laws in times of perfect tranquillity is a dangerous one. The civil and the military services should be kept separate and distinct, and each should be confined to its own sphere of duties. Such has been our policy from the beginning. It is a safe policy, and one of the distinctions of Anglo-Saxon government.

It seems that a committee composed of the most prominent French artists has decided to organize at Paris, in the spring of 1892, an exhibition of the works of Meissonier, and that American owners of pictures by that painter are to be approached for the purpose of requesting loans to the exhibition. Meanwhile the French Minister at Washington has been instructed to recommend this request warmly to our Government, and to apply to the Treasury Department to ascertain whether pictures sent to Paris for the purpose of exhibition can be returned to their owners without the imposition of a second duty. Mr. O. L. Spaulding, Acting Secretary, responded, under date of September 10, to the effect that he has, "unfortunately, failed to find in the law any authority for the remission of duties accruing upon importations of foreign productions, even when they have been previously imported upon payment of duty," and he suggests an application to Congress to have a special law passed permitting the reimportation without duty of pictures loaned to the proposed exhibition. He writes, however, that any Meissonier paintings owned by institutions established for the promotion and encouragement of art in this country can be reimported free of duty under the same paragraph of the McKinley Act (section 759) that now permits them to come into this country without payment of duty as the permanent property of such institutions

---

We much fear that the French Minister will not set great store by Mr. Spaulding's polite assurance of the warm interest he feels in the proposed exhibition, and of his readiness to promote its success "in any practicable way." It must be simply impossible for an official of the Government of France to understand the position assumed by the United States towards foreign art, and we suspect that the Acting Secretary's somewhat effusive politeness was partly due to his feeling that the reply he was obliged to make to so reasonable a request would be pretty sure to be read with

contemptuous impatience. No foreigner can understand our tax upon foreign art as a "protective" tariff, and, viewed as a revenue tax, it must seem a niggardly method for a great and wealthy nation to take in order to refill its Treasury, in face of the fact that no European government is willing to admit itself so poverty-stricken as to be obliged to tax art; while the proposition to *retax* an American citizen's painting, when he has contributed to a loan exhibition, and thus helped to forward one of the most hopeful and helpful art movements of the present time, must seem to the art-loving Frenchman an exhibition of Western want of civilization. It is to be hoped that the interest which may be aroused in the proposed exhibition will lead, not to the mere enactment of a special law permitting Americans to reimport without payment of duties such pictures as they may loan to its promoters, but at least to a general law exempting from any subsequent payment of duty any work of art upon which there has once been paid duty upon its importation into the United States.

A fine example of the degrading effect of our pernicious tariff law is afforded by recent correspondence between Mr. James W. Queen, an instrument-maker in Philadelphia, and the Treasury Department. Mr. Queen alleges that it is the custom throughout the United States for professors in colleges to order microscopes from foreign makers for use in their laboratories, and at the close of the term to dispose of them to the students at a reduced price. For the "protection of home manufacturers," he thinks that no institution should be allowed to import such instruments to be so disposed of, and suggests that "periodical inspections" should be ordered by the Treasury Department so as to ascertain whether or not instruments imported are actually in use. The impudence of this suggestion is understood when it is realized that college professors, when importing such instruments, are required to file an oath that they "have been imported by the order and for the sole use of said college as its permanent property, and not for sale or distribution." Fancy a college president being obliged to take such an oath, and then to have periodically to submit to the indignity of a catechising as to how binding he may have considered it—all this that he may be persecuted into foregoing the very natural desire to have for use in his laboratory the very best instrument made, and be constrained to put up with those of an inferior quality manufactured in Philadelphia. We are glad to note that the Treasury Department exhibited no inclination to accept Mr. Queen's suggestion, but regret that he was encouraged to do some spying on his own account by the statement that, in the event of instances of positive violation of the law coming to the attention of the Department "through information *furnished by your firm* or otherwise," proper steps would be taken for the enforcement of the penalties provided by statute.

An example of the gross injustice of this law for the protection of second-grade instrument-makers was recently offered at the Boston Custom-house. A professor in one of the academies near Boston, returning from Europe, brought with him a microscope for his own use in the biological department. Under section 686 of the tariff law, which includes in the free list "professional books, implements, instruments, and tools of trade, occupation, or employment, in the actual possession at the time of persons arriving in the United States," he might very reasonably have expected to import this without duty, but on reaching the steamship dock in Boston a heavy duty was demanded. Appealing to the Collector, he found so firm a determination to force him to pay duty that he finally accepted a compromise whereby the offending instrument was permitted to be carried away without the extortion of a tax, upon his making a gift of it to the institution with which he was connected; but the Principal of the Academy was first required to take an oath that he accepted the instrument as a free gift to the school, for its sole use, and not to be sold or given away! It occurs to one to ask, in connection with the above occurrence, why the teacher should be thus taxed for the benefit of the instrument-maker. Is it of less importance for the well-being of the country that a college professor should be encouraged to equip himself in the very best way possible for teaching his boys, than that some one in Philadelphia should be enabled to make microscopes and sell them at a higher price than they can be bought for abroad?

The negroes of Washington consider that their grievances are so serious that they are holding mass-meetings, hoping to devise some means of removing the discriminations made against them, if not of abolishing race prejudice altogether. The revelations made at these meetings must be a rude shock to those who place their trust in legislation for the accomplishment of these ends. These negroes have been living in a city over which the President and Congress preside as a mayor and common council, and where the Federal laws touching civil rights have free course. Since the war the government of the city has been almost exclusively in the hands of those who enacted these laws against discrimination, and yet in Washington to-day, according to the undisputed evidence of those who spoke at those mass-meetings, there are separate free schools for the blacks, separate eating-houses, and it might have been added separate bathing facilities at the public beach, practical exclusion of negroes from restaurants and barber-shops, and their colonization in alleys and obscure streets.

These Washington negroes, too, it must be remembered, are the most deserving of their race. Many of them are members of the learned professions; more of them are Government employees. They make up one-third of the city's population, and though they have among their number a much larger portion of the vicious and lazy than have the whites, yet their average both for morality and for intelligence is high. Nevertheless they find it necessary to call mass-meetings to implore the well-to-do of their own race "to go out in the eastern part of the city and build up a square where colored people may secure homes, instead of having to go into the alleys," seeing that the real-estate men of the city, who are white, will have no dealing with them. But will the negroes who have money build houses in Washington for the people of their own race? One of the speakers, the Rev. Mr. Gray, declared that they would not. Another speaker, Mr. Pollard, said: "Visit one of the barber-shops conducted by a colored man and see how quick he will shave you." A third, who has an eating-house, frankly confessed that he had to keep two dining-rooms, one for the whites, the other for the blacks; that otherwise he could not earn a living.

The blockade of east bound grain along the Western railroads has in the past week grown to proportions which may fairly be called sensational. All reports during the last fortnight have agreed in describing an enormous increase in the grain offered to carriers from the farms. In the country elevators of Minnesota and Dakota alone the supply was swelled last week by half a million bushels, yet in the same time the stock in New York city fell off nearly half a million, and the grain afloat for Europe decreased by three and a half millions. That this grain was not held back at the farms was shown by the number of grain cars brought from the harvest-country into Chicago; a number which rose during the last two weeks from 6,453 in 1890 to 14,469 in 1891. It is naturally at this great centre of interior distribution that the transportation system has broken down most completely. Until a few days ago, the vessels on the great lakes have transported, by way of Buffalo, the bulk of the east-bound grain. But the setting in of winter, and the consequent close of lake navigation, suddenly threw the whole burden upon the Chicago and New York trunk lines. It was at once discovered that they had not cars enough, locomotives enough, or even switching facilities enough, to carry out their grain orders. High premiums over ordinary rentals were offered to get the use of cars owned by connecting lines; finally a familiar bit of railroad sharp practice was resorted to, and the Eastern companies which accepted through freight-cars for New York from the lines west of Chicago purposely neglected to return them, hoping to keep the cars, despite rentals and penalties, for their own necessary uses. One trunk line alone is said to have appropriated 3,000 cars by this method.

As a natural consequence, the Granger roads refused to let their own cars pass at all into the hands of Eastern lines, until

the heaping up of grain in Chicago had actually outrun the city's storage capacity, since which time the Western companies have been compelled by sheer necessity to hand over their grain cars to the trunk lines, because there was no elevator-room left in which to unload their freight. Meantime the merchants and middlemen who bought Chicago wheat a fortnight ago for delivery or export at New York, have been finding themselves saddled with an unpleasant contract. Ships for Europe have been waiting for days in the harbor, unable to get their contracted wheat; in some cases shippers have been loading them up with buckwheat, barley, and flaxseed, the only grain to be had. The whole situation seems to have been practically inevitable. When our recent wheat crops have averaged less than 450,000,000 bushels, with a relatively light demand at the seaboard, it can scarcely be expected that railways will keep on hand a supply of cars equal to transporting promptly a crop of nearly 600,000,000 bushels, with a heavy export demand. The number of orders recently placed at the shops for new cars is something enormous—20,000 are said to have been ordered in the last two weeks—and there may be good reason for accusing the railroad companies of dilatoriness. But the suddenness of the heavy grain movement has surprised everybody, and there is a considerable difference between buying equipment which will begin at once to pay for itself, and ordering, after a long season of enforced economy, cars which must be left idle in the yards, as the companies would have had to leave these a month ago.

The decision lately rendered by the Massachusetts Supreme Court regarding what is known as the Weavers' Fine Bill, is of much more than State interest. It was alleged that, in some mills, operatives were cheated out of a part of their wages by the imposition of unjust fines, which were levied on the false ground that their work was imperfect; and "organized labor" demanded of the Legislature the passage of a bill which should forbid the laying of any fine. The language of the act was thus explicit: "No employer shall impose a fine upon or withhold the wages, or any part of the wages, of an employee engaged at weaving for imperfections that may arise during the process of weaving." The manufacturers determined to fight the issue out in the courts, and the highest judicial tribunal in the State has now decided, with but one dissenting judge, that the act is unconstitutional. The opinion of the Court quotes from the Constitution of the United States the clause prohibiting any State legislation impairing the obligation of contracts, and from the Massachusetts Bill of Rights the clause which declares the right of acquiring, possessing, and protecting property to be natural and inalienable, and applies these principles to the case in hand. The Court holds that the right to acquire, possess, and protect property includes the right to make reasonable contracts, and that it is a reasonable contract to agree to pay full wages for weaving cloth with proper skill and care, and to withhold a part of such wages if the work is imperfect. It follows that a law which forbids the making of such contracts "is an interference with the right to make reasonable and proper contracts in conducting a legitimate business, which the Constitution guarantees to every one."

What is of some particular interest to us in the family quarrel now going on between Newfoundland and Canada is the fact that the ill-feeling was originated and brought to its climax by the recent discrimination of Newfoundland's people as a whole in favor of our nation. Despite the apparent failure of the late reciprocity negotiations between Newfoundland, Canada, and the United States, the people of the island have granted our fishermen practically all the privileges of free bait asked for by us in that conference, and this without any concession whatever on our part. It would not be easy to say whether the islanders were at the time more pleased at granting a favor to the United States or at outwitting Sir Charles Tupper, whose interference as Canadian delegate with the Washington negotiations they bitterly resented. The friction between Newfoundland and Canada has rapidly increased since that episode. Vexatious obstacles were deliberately placed by the Newfoundlanders in the way of bait purchases along the coast by Canadian fishing vessels. When recently the Canadian authorities, after vainly endeavoring to put an end to these annoyances, retaliated by placing a duty on all imports of fish from Newfoundland, the Newfoundland Ministry promptly retorted by putting in effect a discretionary piece of legislation, originally enacted merely for bluff, and decreeing that imports of food products from Canada to Newfoundland should pay twice as much duty as the same imports from the United States. The quarrel is silly in many ways, as are all "tariff wars," but it is an interesting bit of current North American history. Annexation to the Dominion, which a few years ago used frequently to be referred to as a possible plank in the platforms of Newfoundland's petty politics, is now so universally unpopular an idea that a particularly cautious and politic Cabinet, once, indeed, accused of leanings towards Imperial Federation, has thought it a judicious stroke to fling open defiance at Canada. All this may be of little present consequence in a colony with a total population of scarcely 200,000, but it may at some future time be a source of annoying perplexity to British ministers, whose habit in the past, as the Newfoundland people fully appreciate, has been to play off concessions of French claims in Newfoundland against French concessions of English claims in Africa.

Monday's despatches from Brazil report the annulling of another of the decrees issued by Fonseca in those happy weeks when his hands were not tied by Congress—the one leasing the Central Railway. This is the most extensive railroad system in the country, was built by State funds, and was substantially under State control. Its management has not failed to exhibit the disadvantages of State ownership. In addition to lax and expensive administration, and the filling of positions of authority by Government favorites, instead of experienced railroad men, the interference of this line with privately owned and competing systems has been very harmful. The smaller lines have been compelled to subordinate their interests to the need of getting as large a revenue as possible for the Treasury out of the great road. In the current budget the gross receipts from this source were estimated at $9,000 000. The Government has more than once refused to grant permission to build other lines which might in part compete with its own system, and has even prevented lines that do reach parts of the same territory from reducing rates on freight, out of regard to its own railroad profits. There has thus been reason for dissatisfaction with Government control of the road, and the proposition to lease it has been more than once advanced. In fact, Fonseca's Minister of Finance made such a proposition to Congress before its dissolution, though it did not find favor. But as soon as the Dictator had got rid of the troublesome representatives, he offered the lease, though on rather onerous conditions: one-half the rent for the whole period chosen—and the lease might be taken for a maximum of thirty-three years—was to be paid in advance. The present Government may have annulled the decree because the lease in itself was improper, or because the sentiment of the country is against leasing the road at all.

Among the many odd things of the day is the determination of the Sultan to send Mohammedan missionaries to China. Two Chinese Mohammedans have arrived at Constantinople, and have made a report to the Sultan on the condition of their fellows in China, and he has determined to establish regular relations with them by means of mission stations established in various parts of the Empire. It is announced, however, that these missions will be in no sense proselytizing agencies. Their object will be simply to comfort, help, and deliver the existing members of the Mussulman faith in the Central Flowery Land. Apropos of this, a writer in one of the English December monthlies, in an account of a visit to the French and English settlements on the west coast of Africa, testifies once more to the great work of civilization and social elevation which the Mussulman missionaries are doing among the negroes in that region, corroborating fully what is said about their success among the natives of India. The chief cause of this success is undoubtedly the absolute equality with his auditors in which the Mussulman preacher puts himself. For him no pony phaeton, or library, or drawing-room, or dining-room, or man servant, or maid servant. He is simply a half-clothed tramp, living on peasants' food and sleeping on the peasants' floor, but charged with a message which consumes him with its perennial fire.

THE CHILIAN COMPLICATION.

THE tone of the President's message on the subject of Chili, and more particularly on the mobbing of our sailors in Valparaiso, is taken to imply that he will recommend a declaration of war against that country in case satisfaction is not accorded to us for that lamentable affair. Of course, very much remains to be learned regarding the affair, and it is still to be determined what we should accept as satisfaction for the outrage—whether apology, or indemnity, or punishment of the offenders. Some embarrassment grows out of the fact that the murder of the Italians in New Orleans a few months earlier remains an unsettled question, and that the Government of Italy still declines to send a Minister to this country. It is necessary to square our negotiations with Chili more or less by our relations with Italy. A distinction is sought to be drawn by the President between the two cases, founded upon the fact that the sailors who were assaulted in Valparaiso were in the service of the Government and wearing its uniform, and that they were assaulted for that reason. It is not the killing that affects us so much as the insult. If it were the killing only, we should be compelled to take the same kind of medicine that we administer to Italy.

Of course, there must be a reason why our sailors are more exposed to mobbing in the streets of Valparaiso than the sailors of Germany or of England—some reason why they are more exposed in Valparaiso than the same sailors would be in Buenos Ayres or Callao. The hostile feeling that leads to mob violence does not spring out of the ground. It does not exist without a cause. Before we decide to go to war, we must see whether we had given any occasion for ill feeling on the part of Chili—not that ill feeling justifies mob violence and homicide, but because it has to be taken into account in any estimate of the causes which justify war.

The President's own statement of the *Itata* affair supplies a cause of irritation which cannot be overlooked. The pursuit and recapture of that ship after she had left our waters, on the assumption that she had violated our neutrality laws, was itself an unfriendly act. It has been pronounced illegal by the only court before which the case has yet been brought. Mr. Harrison says that the then insurgent authorities, who are now the Government of Chili, acknowledged the justice of our claim for the delivery of the *Itata*, and offered to give her up, with her arms and munitions, as soon as she should arrive in their waters. But this proves merely that the insurgents were at that time *in extremis*, and could not afford to have the United States Government for an enemy. Of course they would say anything or do anything, in such a pinch, to avoid trouble with foreign governments. Equally irrelevant is President Harrison's assertion that the policy which we pursued in the *Itata* affair was the same that we insisted upon, when our civil war was in progress, on the part of European nations. At that time we claimed whatever it was for our interest to claim, and we took what we could get. We protested against blockade-runners that carried arms and ammunition to our enemies. Foreign governments said: "International law does not forbid the selling or carrying of arms to belligerents. It does not forbid blockade-running; catch the blockade-runners if you can." We caught many of them, but many of them escaped. Neither for those that were caught nor for those that escaped did we ever make any claim on foreign Governments after the war. The building of Confederate war vessels in foreign ports was another matter altogether, having no similitude to the *Itata* case.

President Harrison, we repeat, has supplied a cause of irritation on the part of Chili—not a good cause for the assault upon our sailors, but still an explainable reason. That there may have been other reasons is highly probable. Sailors on shore, after long confinement on shipboard, are sometimes in an uproarious mood. Capt. John Codman, who has had large experience with them, wrote as follows to the Salt Lake *Herald*, under date of November 4:

> "We have Capt. Schley's statement that he allowed 150 sailors, who had been a long time pent up in their narrow quarters, to go ashore on liberty, and that they all behaved themselves in a most exemplary manner. As my old friend here, Major Jim, is wont to remark, 'Mebbe so, mebbe.' I have had thirty-three years' experience on the ocean, and have seen a great many sailors ashore on liberty, but have seldom seen a dozen of them together who would not get into a row, and who, for the most part, did not come off or were not brought off on board the worse for liquor. It would be a great mistake to suppose that all those sailors, firemen, and coal-heavers, of which the detachment was made up, were Americans. Taking the average of the crews in the naval and merchant marine, not one out of seven is American born, and not one out of four is even naturalized. Subject to good discipline as the *Baltimore's* crew undoubtedly were on shipboard, it seems highly probable that those Englishmen, Irishmen, Scotchmen, Danes, Swedes, Germans, and Italians threw off a great deal of restraint when they got on shore. We will assume, however, that if the attack was first commenced by the Chilians, it was cowardly on their part, inasmuch as they were armed while the crew of the *Baltimore* was defenceless. That is the worst feature in the case, and it leaves the blame to be about equally divided between Capt. Schley and the Valparaiso police."

We do not apprehend a war with Chili, but we cannot conceal from ourselves the thought that if Chili was something nearer our own size, the danger would be serious, and would be much augmented by the nearness of the Presidential election. The smallness of our antagonist is a restraint for us and a protection to herself. No possible ending of such a war could bring any glory to us.

SECRETARY FOSTER'S REPORT.

THE part of Secretary Foster's annual report which will be read with most interest is that relating to Treasury receipts and expenditures for the past fiscal year, and estimates of revenue and outgo for the year to come. We are immediately struck by his departure from the form of statement adopted by his predecessor. In Mr. Windom's account of the expenditures of the Government considerably more detail was observed; he grouped his totals under eleven heads, whereas Mr. Foster gives but seven, lumping together in one item of $110,048,167 expenses which the former had explained in their particulars. This makes it difficult, if not impossible, to compare the moneys paid out from the Treasury for particular objects with the sums voted by Congress for those objects, in separate bills. We do not say that such a result was designed by this change of form, but it certainly has come about. Furthermore, Mr. Windom took pains to point out that "the revenues and expenditures of the postal service form no part of the fiscal operations controlled by the Treasury Department," and though required by law to include them in his tables, he immediately deducted them so as to get at the real "ordinary revenues of the Government." But Secretary Foster leaves his "total receipts" at $458,544,233, with no intimation that the $65,931,785 credited to the postal service should be deducted therefrom.

This at once vitiates the comparison which he institutes between the receipts of 1890 and those of 1891. According to him, "the receipts for 1891, as compared with the fiscal year 1890, have fallen off $5,418,847." But the proper comparison is that of his grand total of $458,544,233, less the $65,931,785 credited to the postal service—that is, $392,612,448—with Secretary Windom's $403,080,982. This shows the real falling off in receipts to be $10,468 534 Of the surplus revenue which he arrives at, it is to be said that it is the smallest the Treasury has had since 1879. For the past eleven years the surplus revenue has averaged $103,000,000. Beside this, Mr. Foster's $37,000,000 looks small. It looks smaller yet, and, in fact, entirely disappears, when the total outlay, on the basis of which it is computed, is brought face to face with the sums actually voted by Congress for expenditure in the fiscal year ending June 30, 1891.

On March 3, 1891, Senator Allison asked leave to print in the *Record*, after he had taken time to prepare it, a table showing the appropriations for the years 1890-'91 and 1891-'92. Some surprise was expressed that the table was not then ready, as it had been in former years, but the desired leave was given, and Senator Allison's carefully prepared tables were printed. As he prepared them within less than four months of the close of the fiscal year 1890-'91, it is to be supposed that he knew what he was doing when he wrote down $463,398,510 as the "grand total, regular and permanent annual appropriations" which were "law" for 1890-'91. In fact, he gave all the separate bills with their amounts, so that there can be no doubt whatever of the amount that Congress voted to spend. But, as a matter of fact, Secretary Foster did not spend within $42,000,000 of that amount. If he had paid out all that the appropriations called for, instead of an apparent surplus of $37,000,000 he would have had a deficit of $5,000 000.

But where the Secretary gets bodily into fairy-land is in his estimates of the revenue and expenses for the fiscal year 1891-'92. He puts the revenue for that year at $433,000,000, and the outlay at $409,000,-

000. If this estimate of income had been made when the effect of the McKinley tariff on customs revenue could only be guessed at, there would have been more excuse for it. For example, Mr. Windom estimated the revenue for 1890-'91 $14,000,000 too high, but he had not had a year's operation of the McKinley Bill to go upon as Mr. Foster has. According to the figures for the five months of the fiscal year already passed, which must have been before him, his estimate is at least $11,000,000 too great. But that is not of so much importance as his estimate of expenditures. We must refer again to Senator Allison's table. That was not only carefully prepared, but it was prepared in view of the current charges of extravagance, and was intended to put as good a face upon the matter as possible. Now, it was his deliberate statement that enacted laws called for the outlay of no less than $525,011,618 in the year 1891–'92. Yet here comes Secretary Foster coolly estimating that the expenditures will be no more than $409 000,000! In other words, in addition to the $42,000,000 which he held up of the appropriations for 1890-'91, he proposes to hold up $116,000,000 in the current year. If he succeeds in doing that, we think that many more cases of Government rent unpaid will be heard of, and that there will be still greater numbers of enraged Congressmen wanting to know when the money will be forthcoming which was voted by Congress for public buildings and river and harbor improvements in their districts.

We must also call attention to the disposition which Mr. Foster has made of the funds deposited in the Treasury for the redemption of national-bank notes. By the Act of July 14, 1890, he was directed to treat those funds, then amounting to $54,000,000, as an available Treasury asset. He did so, and treated in the same way the $9,363,715 deposited by banks in the course of the year. Then he expended the entire fund, together with enough other cash taken from the Treasury to make up $134,947,635, in various payments of the public debt. In such payments $23,553,298 is mentioned to the account of redeeming national-bank notes. It is clear, therefore, that he has saddled the Treasury with a liability of $40,000,000 on the national-bank note redemption account. Of course, there is no likelihood that the banks will be surrendering their circulation to anything like that amount; but the fact remains that $40,000,000 which they have deposited for the purpose of redeeming their notes, and which has hitherto been regarded as a fund by itself, has been spent by Mr. Foster for other purposes. He will have to raise the money somehow and some time, just as he will have to pay the deferred appropriations sooner or later. It is all a part of the "after-us-the deluge" policy which characterizes the present administration of the Treasury.

THE SPEAKER'S RIGHTS.

An interview with Mr. Reed, the late Speaker, evidently carefully revised, appeared in the *World* last week, in which he again justified his own course in the last Congress, and fortified himself with an article by Mr. Stanton in the last *North American Review*. "Mr. Stanton proves," said he, "that my views [on the Speaker's right to count a quorum] are held by every parliamentarian in Europe." Turning to Mr. Stanton's article, we find that he cites M. Henri Brisson, who was President of the Chamber of Deputies for four years, M. Jules Grévy, the late President of the Republic, M. Buffet, who was at one time President of the National Assembly, as well as other high French authorities, to show that in France a quorum is made up of members physically present, whether they vote or not; but the fact of their presence is ascertained not by the President alone, *but by the Bureau*, which has to be unanimous in its decision. In Switzerland the presence of a quorum is ascertained by calling the roll. If a quorum answer, a quorum is held to be present at the vote. In Belgium the presence of a quorum is ascertained by a signed list, but if it does not show a quorum, the absentees are put to shame by the publication of their names, and if a member present refuses to vote, all the President can do is to "invite" him to give his reasons for abstaining. In Denmark a member who announces, on the call of the roll, that he does not mean to vote cannot be counted to make up a quorum. In Holland a voting majority is necessary to transact business: physical presence does not count. In Portugal no member is considered present who refuses to vote. In Norway absence from the Chamber is punishable by a fine, but the fact of absence has, of course, to be proved in the ordinary way. In Sweden no quorum is necessary for the transaction of business. In the German Reichstag the presence of a member is ascertained by calling the roll, and if 199 do not answer, no business may be transacted. In Italy there is no rule about "presence."

It will thus be seen that Mr. Reed is mistaken in supposing that his views about the Speaker's power in counting a quorum are "shared by every parliamentarian in Europe." Not one parliamentarian quoted by Mr. Stanton gives any countenance to them. For what did Mr. Reed claim? He claimed the right to *see himself with his own eyes* what members were present, without other evidence, and to count such members for the purpose of forming a quorum. No presiding officer in Europe has or claims any such power. In France, where the closest approach to Mr. Reed's practice is made, says M. Méline,

> "If, when a ballot is to be taken, a Deputy states that half of the members are not on the floor, the *President is obliged to consult the Bureau; and, if the Bureau is unanimous in declaring that a quorum is present*, then the ballot is valid; *but if the Bureau is divided on the question*, a roll-call is ordered for the purpose of finding out how many Deputies are really on the floor."

When we come to compare the other powers claimed and exercised for himself as Speaker by Mr. Reed with those claimed and exercised by presiding officers in Europe, European precedents become still more useless to him. The position of the Speaker of the House, as described by Mr. Reed, is that of a Prime Minister in England and other parliamentary countries—that is, he sits as the leader of his own party, and decides, in conjunction with the Committee on Rules, appointed by himself, of which he is chairman, what business the House shall do. He said:

> "The duty of the Speaker, as I interpret it, is to see to it, as the servant of the House, that the House has the nation's business in hand and does a good session's work. The Speaker and the Committee know what is to be done and about how much can be done, and they map out a programme. . . .
>
> "The duty of the Committee on Rules is not only to present good bills, but to avoid presenting bills at a time when they risk being beaten. They may do useful work for the country by holding off presentation of a good bill which risks defeat until the proper time of presenting it shall have arrived."

The European Speaker has nothing to do with "the nation's business." It is none of *his* business to see that "the House does a good session's work," or to "present good bills." He is a judicial officer, charged simply with the duty of interpreting and enforcing the rules of procedure in the transaction of business, and preserving order in the House. The work Mr. Reed undertook in the last Congress is done in all European countries by the head of the Ministry, who therefore occupies towards the Chair the position of a litigant in a court of justice. The idea of putting the leader of the party in power in the chair, to carry through legislation of a partisan character, like the Force Bill and the McKinley Bill, has never been broached in any parliamentary country.

The bearing of all this on the Speaker's power to count a quorum, and to "see" who is present, for the purpose of making a quorum, is obvious. The "seeing" of a partisan, charged with the carriage of party measures, is obviously inadmissible as evidence under any view of justice hitherto taken in the conduct of either judicial or parliamentary proceedings. Parliamentary institutions would not in any country long survive the adoption of the Reed view of a Speaker's duties. The presence of the leader of the victorious party in the chair, his pockets stuffed full of bills which he was determined to put through, with or without debate, under rules drawn by himself and supported by his followers, would speedily convert parliamentary legislation either into a farce or into an odious tyranny to which no minority would permanently submit.

THE NEW "MINISTRY TO THE POOR."

Considerable attention has been drawn to the decision arrived at two or three weeks ago by a church on Madison Avenue, in this city, to do everything possible to become a "people's church." The members and the pastor were dissatisfied with the meagre numbers touched by their church services, and resolved to devote some $15,000 to efforts towards bringing the people, presumably the unchurched and the poor, within their influence. No one can question the excellence of these intentions, yet they represent a sentiment and method which are rapidly passing away. In this city, indeed, it is as

well established as any fact can be, that the "people," in the sense of the poor, will not go to the churches on Fifth and Madison Avenues, no matter what inducements in the way of advertising and choral services and "breezy discussions of subjects of the day" are held out to them. The best of all proofs of this is that these churches nearly all maintain chapels for the poor, only three or four avenues away from their own doors. The very church referred to supports such a chapel, thus tacitly assenting to the idea either that the poor are not welcome within its walls, or that they will not come there.

It is undoubtedly true, moreover, that these outlying chapels, while doing a praiseworthy work, make but a small impression upon the great masses of non-church-going poor, whose lives remain practically untouched by elevating and reformatory influences. In other words, the plan of inducing the poor to come to the churches has led to results so insignificant that it may be called a failure, and the most hopeful outlook is now in the opposite scheme of getting the churches to go to the poor. We do not mean, of course, to go to them with more chapels, or even to build fine churches in the regions from which, in fact, the churches flee away, one after another, as if from a pestilence; but to go to them in person, through numerous representatives, for week-days as well as Sundays, to live among as well as to visit, to share their social conditions, so far as externals are concerned, and, in short, to seek to deal with them on a basis of equality instead of one of condescension.

Our readers may have noticed the annual meeting of the University Settlements Society, held this week, and may know of the Women's College Settlement in Rivington Street. These organizations represent the beginnings of a movement among us which has been long established in London and other cities of Great Britain. Its origin and growth, methods and results, are described in a lately published volume by Mr. R. A. Woods. Dating back to the Workingmen's College of Maurice, in 1860, where he used to secure the teaching services of young Cambridge graduates, and falling in with the University Extension movement which came a little later, it reached its characteristic and most important development in the determination of Edward Denison and Arnold Toynbee to work for the London poor by living among them. Out of that thought have grown the well-known Toynbee Hall and the Oxford House, with other institutions similar in aim, if not yet of like proportions, the main feature of which is the daily contact established between educated men and women and the poor.

Their work is religious only incidentally and secondarily, although we believe it is undeniable that a religious aim has been predominant in the minds of the founders and supporters of these University Settlements. But it is a religious aim grown wise enough to be willing to work by indirection. The first great gain is in the method of approach, and the persistent and powerful teaching by example. These young Oxford and Cambridge dons who are willing to take lodgings in Whitechapel, and come and go freely in the neighborhood, acquire their first influence by showing that it is not wholly true that the surroundings make the man, and that there are mental resources which make one superior to encompassing squalor and degradation. The effort to share these resources with the people ignorant of them naturally follows, and takes form in the various classes conducted, and in the literary and debating and social clubs which are formed. Manifestly, this is a very different thing from the traditional "missionary work" in cities, and opens the way for religious instruction from an entirely different side.

One valuable result achieved by the London University Settlements is the quickening in their neighborhoods of the sense of the duties and responsibilities of citizenship. Casting in their social lot for the time being with the people whose votes do so much to determine matters of local government, the residents are necessarily driven to appeal to the district electorate in order to effect district reforms and improvements. A good example of this is seen in the way a free library was secured for Whitechapel. Some years ago a vote was taken on the proposition to establish one, and it was overwhelmingly defeated. But recently the project was renewed, and, aided by the personal canvassing of 4,000 voters, conducted by more than a hundred representatives of Toynbee Hall, was adopted by a majority of almost four to one. A wide sphere of influence is certainly opened, in these directions, before our New York organizations. Tammany Hall, instead of Toynbee Hall, is responsible for the political education of the corresponding part of our citizens. The men of serious and worthy political, as well as educational and religious, ideals who go to live among them, are in the way of accomplishing greater changes in their way of looking at our civic problems than all the makers of party platforms and nominations, or all the preachers in Fifth Avenue churches, or, alas, all the newspapers.

The London University Settlements have also had a remarkable influence, indirectly, in changing the methods adopted by the churches themselves. The latter have been more and more led to subordinate their purely religious to their social and educational work; or at least to change the emphasis from one to the other. Many instructive examples of this are given by Mr. Woods, none more so than the following:

"A very striking instance of adaptation to the needs of environment is that of a ritualistic church, situated in a region where the people are largely criminal. The vicar maintains a model lodging-house of a very fine kind for men; but the lads' club is the special feature of his work. In his church building, the room consecrated to religious services is up stairs—there being only one other such case in England—and just below is the club-room, whose main feature is a fully-equipped prize-ring, suitably enclosed and raised from the floor for the sake of spectators. Here, two or three evenings in the week, upwards of a hundred lads, nearly all of whom have been in prison, gather to see and participate in tournaments in boxing. . . . In such a way as this many young fellows are brought under good influences who would probably be plying their trade of pickpocket at the street corners, if only the usual mild excitements of church clubs were offered."

If the Church were in want of a precedent for the adoption of the "ministry to the poor" which consists in endeavoring to help them by sharing their life, it could find it in its long-established methods of conducting foreign missionary enterprises. It sends of its choicest and most refined to live in huts and hovels in order to reach the most degraded beings on earth; yet has been singularly forgetful of the same power of personal contact in the case of the poor of its own land. Indeed, one reason given for the removal of a foreign-missionary headquarters in this city from a down-town location to Fifth Avenue was that there were so many unpleasant foreigners thereabouts that the ladies found it disagreeable to come there. Yet the whole work of the missionary organization was to send representatives to pass all their days in immediate contact with unpleasant foreigners abroad. It is as a sign of the growing sense of the inconsistency of such conduct that the University Settlements and kindred institutions in this city have a good part of their significance.

VIENNA'S NEW MUSEUM.

VIENNA, November, 1891.

THE new picture gallery at Vienna has just been opened amid great applause and rejoicing. On all sides one hears praises of the magnificence of the new building, and congratulations on the fact that pictures hidden away in garrets for generations have at length had wall space found for them. The gallery is crowded the five days out of seven when it is opened, and on Sunday morning people push and jostle each other at the main entrance in as great numbers and with as much impatience as at the doors of a favorite theatre. In its way it is as great a popular success as the "Cavalleria Rusticana," which fills every seat in the Opera-house at each successive repetition, or the last new gilded café where gay Vienna drinks its afternoon coffee. And the Viennese can afford to enjoy his new Museum, since he has not been taxed a penny for it; like all the other so-called improvements of the Ring-Strasse, it has been paid for out of that elastic fund of 140,000,000 gulden raised when the old fortifications and ramparts were pulled down and the ground they had occupied was turned into building-lots. Truly Vienna is a lucky city, as a distinguished Hungarian said to me when we visited the gallery together; he, no doubt, thinking, with a statesman's thrift, of the 220,000 gulden which he and his friends have voted for the one painting alone with which Munkacsy is to adorn the walls of the new Hungarian Parliament house in Budapest.

But Vienna would be still luckier if good design and appropriate ornament for the new Museum had been as easily found as money to pay for them. Of the exterior I need here say nothing, for it has been finished several years, and, with the Natural History Museum, of which it is the counterpart even to a hard-and-fast repetition of commonplace detail, has for some time past been a conspicuous feature of the Burg-Ring. But the interior, upon which the architect's fancy has been allowed freest play, has only within the last month been shown to a long-expectant public. Of its magnificence there can be no question; indeed, it would be better if it but failed in this respect to equal current reports. Unfortunately

there has been no exaggeration, and it is as gorgeous as many-colored marbles and much gilding can make it. The gorgeousness, however, is that of a London Holborn Restaurant or a Hoffman House bar. Expensive showiness, pretentious elegance, the characteristic of the architecture as of the life of the new Austro-Hungarian empire, rather than beauty, is the too well realized end of the prevailing scheme of decoration. The keynote to this scheme seems to be given in the conspicuous place, at the top of the main stairway facing the central entrance, chosen for Canova's Theseus: the same honors paid to it in an old museum might have a certain historical value, and then one would not have the statue removed; in a new gallery it is but a sad comment upon the art standard of the management. But the Theseus is not unworthy of the two lions flanking it on either side the great stairway—lions cut after the same model as exactly as if they had been cast in the same mould, expressionless, mechanical, the work of the stone-mason, not of the sculptor—aggressive proofs that bad ornament is far worse than none.

The cheap checker-board design, worked out in the most expensive marble floors and walls, the tawdry over-elaboration of ornament in the dome, the repetition of the same poorly drawn and designed figures in the panels in the walls of the two courts, are all irritating results of the same vulgar tendency of the modern Viennese, to make as much and as loud a show as possible. But by far the most glaring vulgarity of the decorator occurs in the arrangement of black marble columns, gaudily gilded, which support the ceiling painted by Munkacsy, and exhibited by him two years ago in the Champs-Élysées Salon. Of course his work is entirely killed by the violent contrast, with the result that for nine people who stare at the columns, one may look at the painting, and then only to wonder why it should be already so faded and washed out. The color of a Titian, the most stately or sumptuous composition of a Rubens or Veronese, could not stand such a test. Indeed, their paintings in the galleries fare no better, but are simply overpowered by the unbearable pea-green of the background—a color which surely none but a Viennese house-decorator would have dreamed of choosing for the walls of a picture gallery.

The excess of decoration is less serious a drawback in the galleries on the first floor than in those on the second and third. It is in these lower rooms that the wonderful collection of armor from the Belvedere, the antiquities from the same palace, and the jewels and coins from the Burg Treasury are now exhibited; and the color of the walls, the gorgeousness of ornament, do but bring out the armor in stronger relief, while so long as jewels and coins, crystals and precious plate are well placed in appropriate cases in a good light, their effect is neither enhanced nor destroyed by their other surroundings. This part of the building is altogether the most satisfactory. The rooms are spacious and airy, and the light could scarcely be better; it does not fail even on the days when Vienna tries to rival London gloom and grayness. And the arrangement of the different collections is apparently no less successful, though of course this is a point upon which only specialists in each department can speak with authority. Certainly, however, individual specimens are shown to best advantage, and in every case historical or artistic sequence seems to be carefully observed. Of course, the fact that the things exhibited are of enormous interest, even to the average man, has much to do with the attention they command. Few sovereigns are as generous as the Austrian Kaiser in giving the public the benefit of his most precious jewels and priceless treasures; absolutely no other collection of armor can compete in historical value and beauty with the famous one of Vienna. As a rule, if a collector gives examples of every period and country, he is content; but here there is hardly a suit, hardly a weapon, which did not belong to a famous man, king, or hero, thus adding a personal charm which those who otherwise care little for the subject illustrated cannot resist. Armor that, for its own merits, one might pass by with indifference, one stops to look at with a suspicion of sentiment when, for example, it happened to be the property of that Bourbon who fell beneath one of the phenomenal shots of Benvenuto Cellini—as recorded by himself. And so with almost every stand, almost every case. The arms themselves are the secondary consideration; the men who bore them, the fights in which they figured, the first. And this personal interest asserts itself in the other departments as well. Here is the famous Cellini salt-cellar made for Francis I., really less delightful in itself than in his naïve description of its beauty and his own greatness; here, the Albert Dürer sketch-book, open at water-color drawings of figures designed by him for the Triumph of Maximilian; here, the decorations worn by the Hapsburgs of centuries. But it is useless to make a new guide-book to such well-known collections. It is enough to say that they have lost nothing by removal to their present quarters.

It is to be regretted that the picture galleries up stairs on the second floor are so much less satisfactory. The rooms are as large and the light as good, and the series of cabinets, three corresponding to each room, are far more successfully divided and lighted than is usual with these smaller compartments. They are really as enjoyable in themselves as those of Dresden are exhausting. But the pea-green wall alone would more than counterbalance all these not-to-be-belittled advantages. It brings out the gilt frames in fine relief, but it kills the canvases within them as effectively as Munkacsy's ceiling is killed by the gilded marbles. Another mistake, not so deplorable, but still offensive enough, is the staring white bust placed in a dark niche over every door. In some of the rooms there are four doors, and, naturally, the white busts, and not the paintings, first attract the eye. In a picture gallery there should be absolutely nothing to distract attention from the pictures. As little common or artistic sense has been shown in the hanging. There is an attempt to group work together according to period, school, and nation, but with indifferent success. The Italians, it is true, have been kept very well to one side of the building, the Dutch, Germans, and Flemings to the other, the modern men to their own rooms. But beyond this there is little system. Venetians, Florentines, and Bolognese are scattered here, there, and everywhere in the Italian galleries. Of the Frenchmen, a few—Clouet, Vernet, and the eighteenth-century Millet—are stuck in a little corner of an Italian cabinet; while the rest—Watteau, Poussin, Duplessis, Rigaud—share a gallery with Velasquez. The size of a frame, too, often seems the chief reason for hanging a picture in a special place. The most unpardonable instance of this kind occurs in one of the Dutch rooms, where the line of uncommonly fine Rembrandts—the portrait of his mother, one of himself, an old man, and a youth singing—is broken by an aggressive canvas by Jan Lievens, a characterless portrait in a wreath of gaudy flowers, which has no other merit save that in size it exactly balances one of the Rembrandts.

But the worst feature of the gallery is the quantity of trash it contains. There might have been some hesitation in getting rid of worthless canvases so long as the collection remained in the Belvedere; but its removal to the new Museum was an opportunity for judicious weeding-out not given every day to a national or imperial gallery. Instead of making the most of it, however, more canvases have been unearthed from forgotten garrets and added to the already over-large series of rubbish. On a first visit to the Museum one is overwhelmed by the size of the galleries and the number of the pictures; but after a first round, one finds that there is comparatively little to see. In some of the Italian and Dutch and Flemish rooms, two or three paintings at the most can detain one; all are disfigured by the trivialities of obscure artists, by weak, pretentious canvases absurdly attributed to great painters, and by the failures which the latter, as well as the modern man, often enough turned out. It is, in a word, a gallery in which a Guido Reni is supreme, in which the Brummagem imitation is palmed off for the genuine masterpiece. At one time and another favoritism has reigned here, and a Director like Teniers has taken advantage of his position to fill the place with his own tedious performances and those of his friends; and, moreover, the gallery was imperial and had to be kept in the spick-and-span order worthy of an emperor. The trail of the cleaner's scrubbing and the restorer's paint-brush is over it all. There are Andrea del Sartos, all staring Paris greens, and Bordonis, all violent reds and blues and violets, that fairly set one's teeth on edge. There are Raphaels and Parmeggianos done up like new, and a couple of Rembrandts that look as if they had just come out of a bath and had had all character and beauty washed out of them. And who was it, I wonder, who got the commission to go around with that colossal pot of cobalt blue, and now give a good coating of it to a Bellini or a Perugino Madonna, and deepen the draperies of Lotto's Virgin; now touch up the sandals of Moretto's Justina and dash it over any and every other canvas that caught his eye as he passed; or perhaps put in a distant sky or a near bit of sea? It is perfectly inconceivable (but only too painfully evident) that such a piece of vandalism could have been perpetrated.

Modern art, though it fills six rooms on the second floor with oil paintings, and all the rooms above with water colors and odds and ends, might better have been left unrepresented altogether but for a little Troyon and a Makart; and the strangest part of it is that, while of course one comes to the familiar Defregger and Kaulbach, the names of the greater number of artists in this department are absolutely unknown. But perhaps the desire of the management to cover the walls at any cost has its worst outcome in the devotion of two rooms to the not very striking cartoons drawn by Vermayen to celebrate the return of Charles V. from Tunis; and of all the line in a third to the huge map-like battle scenes of Peter Snayers. These may be historical, but they are not art.

That in this labyrinth of mediocrity and worse the good work still holds its own is strongest proof of its greatness. And without question there is good work in Vienna, though

in such decided minority. It is not, however, found among the paintings of Rubens, Dürer, and the Venetian school, where the guide book bids you look for it. All the big Rubenses may have been painted by himself; there is a legend that the Emperor had him watched during the two weeks he gave to his "Four Quarters of the Globe." But, whether entirely his own work or principally that of his pupils, it makes little difference, since certainly the result cannot be compared to his great masterpieces as one sees them in Munich, for example; in Vienna, as in Dresden and many other galleries, it is to his small sketches, to his portraits, one must turn to find the painter, not the manufacturer. The Dürers may be many in number, but one would give them all for the portrait of Holzschuher in Berlin, of Bernard van Orley in Dresden; and as for the famous Trinity, only the little stretch of landscape at the bottom of the canvas is genuinely Dürer-esque, artistically interesting. But it is the Venetians who suffer most at Vienna, the giants among them being made to answer for the sins of the pigmies; the name of Titian, of Tintoretto, of Veronese is labelled on many a picture from which the master himself would have shrunk in disgust. There are, of course, some fine Titians—the man with crimson sleeves holding a statuette in his hand, the three treatments of the same head in one frame (perhaps not painted by him, though he would have been proud, not ashamed, to own it), the large sketch of landscape and figures, the fat man in black and fur, to mention no others; there are fine portraits by Tintoretto, and fairly good Palma Vecchios, and a Bellini and a Carpaccio of no small merit. But the fact remains that walls had better have been left bare than have been covered by the great mass of the work for which the Venetians are held responsible.

The glory of the gallery is really in the series of portraits by Velasquez: the little royal children, in their big hoops and stiff stomachers, with the sheen of their silks, the glitter of their silver lace, rendered as only he could do it; the Infanta Maria Theresa (there are no less than five pictures of her by him here), her rouged face disfigured by the ill-humor which he has made as familiar as the eyes and Austrian lips of his Philip; Philip himself, and his son, the little Don Balthasar Carlos, refined, simple, and strong; a group of Velasquez's own family, his studio and easel in the background; and, probably because they were not *pretty* enough to attract the restorer, only one of his pictures, that of a beggar boy, has been seriously tampered with. Rivalling the Velasquezes are the Rembrandts, the portrait of his mother and that wonderful singing youth alone making up for the dreariness of the rooms one must pass through to reach them. Vandyke also is well represented—that is, in his portraits; not in his uninteresting Madonnas and St. Georges and other Scriptural and allegorical compositions. And here and there one comes across a picture which asserts itself, despite pea-green walls and surrounding rubbish—pictures which differ one from the other as much as Moretto's Justina and the little Adam and Eve by Van Eyck, with the delightful Lilith, half woman, half blue and yellow chameleon; as that head of a Florentine, by an unknown master, which hangs in the first room, and the long, narrow, charmingly decorative panels by Schiavone; as the Cæsar's Triumph drawings by Mantegna, and the Judith, effective in its somewhat conventional, dramatic way, of Allori. There are good examples, too, of a man like Ruysdael, whose landscapes artistically have so little to interest the modern painter; and there are one or two instances, Peter Breughel the most notable, of an artist who in other galleries sinks into apparently well-merited obscurity, here coming to the fore, not so much because of artistic excellence as by the force of his own individuality.

But, when all is said, and even if I went still further into detail and wrote out a whole catalogue of the exceptions, it cannot be denied that bad and indifferent, restored and cleaned-up work is the rule. Here, in its gorgeous new quarters, instead of being impressed by the collection, one only wonders how it was that Vienna ever ventured to rank its gallery among the great ones of the world. And it is the same in all the other galleries of the town—in the Academy, in the Art and Industrial Museum, in the Lichtenstein Palace: everywhere, to an acre of rubbish you may find perhaps a few feet of decent work; everywhere a big, rather than a good, show is the ideal striven after. But what can be expected of people who, though they brag of their capital as a great art centre, deliberately took the beautiful old glass from the windows of St. Stephen's Church to replace it with hideous memorials to some popular hero or popular event—I neither know nor care which? They may now pride themselves on their gaudy new picture gallery, but to the real lover of art it can have little attraction until its walls are repainted and redecorated, until four-fifths of the rooms are closed, and the remaining fifth filled with the canvases which alone deserve to have survived the generation that produced them.

N. N.

CLARETIE'S LIFE OF LE SAGE.

PARIS, November 26, 1891.

THE author of 'Gil Blas' will always remain among the French classics. Le Sage may be said to be the first novelist of the eighteenth century. The fate of novels was very different then from what it is now: the public of the end of the nineteenth century may be defined as a novel-reading public; the success of a review, of a magazine, of a newspaper depends greatly upon the quality of its novels. We may have become very prosaic, very realistic, yet we live much in a world of pure imagination. We are not satisfied with the numerous sensations which are given to us daily by our own private affairs, by the affairs of the whole world, which are brought very near to us by the newspaper and the telegraph: we must have imaginary joys and hopes and fears. The combinations of each life, rich and varied as they are, do not satisfy us; we want other combinations, created by the invention of writers.

I often wonder how a man can sit before a table and write a novel; all has been said, all has been thought, the play of passions has no secrets for us. It was not so in the happy days when there were hardly any novels, when people contented themselves with studying history. History also is a sort of novel, as it never comes to us except through the imagination and the theories of the historian. Novel-writing began in France with what may be called the metaphysical or the historical novel, or a mixture of the two. Le Sage was the true creator of what we call the *roman de mœurs*, of the novel which pretends to be an exact description of ordinary life.

The biography of Le Sage has recently been written by M. Léo Claretie, a nephew of M. Jules Claretie, the member of the French Academy and the present Director of our French Theatre. His 'Essai sur Le Sage' was originally a thesis written for the doctorship in letters, but has now assumed the proportions of a volume—and a very readable volume it is. Le Sage was born at Sarzeau, near Vannes, May 8, 1668; his father was Claude Le Sage, sieur of Kerbistoul, royal notary, farmer of the tithes of the Abbey of Prières. He was educated at the College of Vannes, and went to Paris to study law. He never returned to Sarzeau, but, says M. Claretie, "Breton he remained all his life by character, pride, independence, probity, tenacity carried to obstinacy, and by superstition." Collé gives in his journal a characteristic anecdote which shows his pride: "Before 'Turcaret' was played, he had promised the Duchesse de Bouillon to read her the piece; it was thought that the reading would take place before dinner; some business detained him and he arrived late. The Duchesse de Bouillon received him with an appearance of impatience and pride, and told him, with an air of discontent, that she had lost an hour waiting for him. 'Well, madame,' said Le Sage coldly, 'I will make you gain two hours.' After this short speech he bowed and went away."

Le Sage, at the age of twenty-six, married Marie Elisabeth Huyard, daughter of a Parisian bourgeois; the mother of his wife was named Marie Carlos, a name which suggests a Spanish origin. Perhaps his mother-in-law gave him the first idea of 'Gil Blas.' As a lawyer, Le Sage had no success; he very soon gave himself entirely to literature. We shall say nothing of his 'New Adventures of Don Quixote,' which appeared in 1704. His first successful book was 'Le Diable Boiteux,' which came out in 1707, and had a second edition in the same year. Two gentlemen fought, sword in hand, at Barbin's shop (the famous Barbin, who sold his books on the steps of the Sainte-Chapelle) for the possession of the last copy of the second edition. Dancourt gave a play at the French Theatre, "Le Diable Boiteux," and soon afterwards another, "Second Chapitre du Diable Boiteux."

The 'Diable Boiteux' is the only novel of Le Sage's now read with 'Gil Blas.' The idea is ingenious: the devil takes off the roofs of the houses of Paris, and shows us the inner life of the capital; we have thus a true picture of every-day life such as had been shown so far only on the stage, in the comedies of Molière, Regnard, Dufresny, Dancourt. The public found in it, under a thin veil, the stories and scandals which amused it at the time; the style was clear, lively, witty, without affectation.

'Gil Blas' has a singular history. It did not appear as a whole, but in four parts; the two first were published, in two 12mo volumes, by P. Ribon, in 1715; there exist only two or three copies of the first volume, antedated 1714. I found one of these volumes, marked 1714, on the Quai Voltaire, not in a bookseller's shop, but in one of the little boxes which the *bouquinistes* put on the wall of the quai; the *bouquiniste* felt instinctively that the volume had some value, and sold it to me for a price which he thought was very high. The two first parts (1715) have become very rare. The third part was published in 1724 by the Widow P. Ribon, full nine years after the two first; the fourth part came out eleven years afterwards, issued by Jacques Ribon in 1735. The bibliophiles have only lately begun collecting their 'Gil Blas' with these four volumes, which are the true original parts of the works. It is extremely difficult to secure good copies of the four, as they are always found in old calf bindings, with pages soiled and torn. To this first original edition of 'Gil Blas' the biblio-

philes add the edition of 1747, published in four volumes by the Libraires Associés, an edition which was revised by the author. A good library ought to have both these editions.

I have often asked myself why there were such long intervals between the publication of the first parts and that of the two others. Was the reading public so limited? Did not 'Gil Blas' meet with the same success as the 'Diable Boiteux'? Did Le Sage get tired of his own work or grow discouraged? Did he search for new documents in Spanish literature, which was of such resource to him in all his works? The answer to these questions is not given in the volume of M. Claretie. We can only conjecture that 'Gil Blas' was the favorite work of Le Sage; that he polished it and repolished it incessantly. It was to him what the 'Caracterès' was to La Bruyère, who printed seven editions of his work in his lifetime, always adding new portraits, new reflections, new maxims. We see also in the biography of Le Sage that his time was continually taken up by other writings, and especially by the plays which he had to prepare during twenty-six years for the Théâtre de la Foire. This theatre was the temple of satire: Le Sage spent the greater part of his life upon small plays of all kinds—prologues, comic operas, Chinese pieces, satires, vaudevilles, parodies. He had many collaborators—Fuzelier, D'Orneval, and others. He received 4,000 livres a year for his collaboration. It was his daily bread. He wrote, besides, plays, which he never signed with his name, for the Italian Theatre.

The only play of Le Sage's which is still read (it was given at the French Theatre) is "Turcaret." It is a cruel picture of the *fermiers généraux*, of their cupidity, their inhumanity, their vulgarity. During the nine years which separate the publication of the two first parts of 'Gil Blas' and that of the third part, Le Sage shared in the making of forty-two comedies, prologues, and comic operas; in the period which separates the publication of the third and fourth parts we find his hand in thirty-eight plays and in three novels, 'Guzman d'Alfarache,' the 'Aventures de Robert Chevalier dit de Beauchesne,' and 'Estevanillo Gonzalès.'

These last novels are read no longer, or by very few people; they sometimes find a place, when they are in the original editions, in libraries made up of what we call "livres rares et curieux." M. Claretie gives amusing details on the adventures of a pretty girl of the Rue Mazarine, Marie Petit, who followed Favre when he had an official mission to Persia. On the way Marie Petit became the mistress of Ferréol, who bought the famous Circassian slave Aïssé, and who was at the time Ambassador of France in Constantinople. Ferréol wished that the mission to Persia should be given to his own secretary, Michel, and by his order Favre was poisoned. Marie Petit, in man's clothes, took with her the son of the victim, conducted him to Persia, and appeared herself before the Shah as the Ambassador of Louis XIV. On her return to France she was arrested, and in order to exculpate herself she wrote her Memoirs. Ferréol wrote his reports on her scandalous life in Persia, her abjuration of the Christian religion.

The Minister of Foreign Affairs asked Le Sage to make a narrative of the adventures of Marie Petit. M. Claretie gives us Le Sage's answer to the Foreign Office. It is a curious autograph, now in the collection of M. A. Bovet, who bought it in June, 1884, for 1,010 francs (a high price, but autographs of Le Sage are very rare). She acknowledges, he says, in her relation of her journey, that

"at Erivan she was looked upon as an houri, but protests that she did not make the happiness of the Mohammedans, not even of the old Khan who adored her. The love of this good lord had nothing material in it—quite in accordance with the opinion we have of the chastity of the Levantines; she even never had any criminal weakness for M. Favre, whatever may have been said. This Cleopatra of the Bourbonnais, happier than the Cleopatra of antiquity, has the privilege of charming men without corrupting their manners. . . . Conducting negotiations, she had no other object than the service of the King and of the nation. . . . The 'Memoirs' which you communicate to me, and in which I find a character of truth, have shaken all my ideas. The pen which I kept ready for the justification of a woman who did not seem to me so guilty, falls from my hand, and I see now in her an adventuress, whose life seems to me less worthy of being offered to the curiosity of men than of being concealed from it."

This ironical letter ends with a question: Le Sage asks what remains for him to do; but it is quite clear that he has no desire to become the historiographer of Marie Petit. In fact, the incident dropped there, and Marie Petit is still waiting for an historian.

M. Claretie attaches some importance to the 'Adventures' of the filibuster Beauchesne, and tries to resuscitate this now forgotten novel, which, he says, is as amusing as the novels of Jules Verne. I doubt, however, whether modern boys will like it as well; modern boys delight in semi-scientific works, and Beauchesne had no knowledge of electricity.

The biography of Le Sage is really the list of his works, which is a very long one; his life had no incidents. He was not a man of the world, he refused to become a candidate for the French Academy; he spent his time with a few friends in the cafés of Paris and was not seen in the salons; the cafés of the time were almost literary salons. He retired in his old age to Boulogne, where he was most respected, and where he died on the 17th of November, 1747.

Correspondence.

WHAT DID IOWA MEAN?

To the Editor of The Nation:

Sir: Four questions were distinctly presented to the voters of Iowa at the late election: First, Shall the prohibitory law be abandoned in favor of some form of local option and license? Secondly, Is the extreme protective policy of the McKinley Bill wise? Thirdly, Should there be free coinage of silver? Fourthly, Shall the Republican or the Democratic party control the districting of the State, and shall the Democracy have a chance to "Michiganize" the State for the coming Presidential election?

Immediately after the election it was generally asserted that the Democratic victory was wholly or mainly a decision against prohibition. But now that the full returns are at hand, in detail, it is plain that more than one question was answered. I know positively that each of the above four issues was considered to be supreme by some voters, and study of the detailed returns shows that each had influence. The fourth and third, however, cannot be easily isolated; but no one who talks with voters can doubt that many dissatisfied Republicans were held in the ranks by them. Republican speakers and organs insisted that if the Democracy should obtain control of the Legislature, the State would be gerrymandered and "Michiganized." This fear was used as a whip on those who disapproved of the party policy, and if the next General Assembly of the State is not controlled by the Democrats, it will be for just that reason. The silver question seems also to have prevented some such Republicans from voting, as they wished to do, for the Democratic candidates for State offices. The McKinley Bill was certainly condemned, as appears from the fact that many counties in which prohibition seems to have succeeded, and which will demand local option if the present law shall be repealed, showed heavy Democratic gains and Republican losses. The verdict, too, was unmistakably against the prohibitory law, but it cannot be maintained that that was the only decisive issue. Old Republicans and young men of Republican antecedents voted for Democratic candidates on account of dislike of both the prohibitory law and the McKinley Bill. And the condemnation of them was not as pronounced as was the feeling against them, because some did not wish to seem to favor unlimited coinage of silver, and others, who wanted the State prohibitory law repealed, dared not vote for the candidates who, if elected, would be sure so to do.

How, then, is this decision against the prohibitory law to be explained? First, it reveals the fact that very many old Republicans who favored the law and expected good from it at first, have been convinced that it is not the best weapon to use against the liquor curse now and here These voters are still thoroughgoing temperance men, but they think that they have learned by experience that prohibition is too largely a failure in Iowa. If this were all, I do not see that any one ought to be troubled, for we ought all to be able to distinguish between opposition to the drink evil and prohibition, which is only one of many forms of opposition. But I cannot hide from myself that another and much more serious fact was revealed. All evidence goes to show that a disproportionate number of young men voted against prohibition, and these young men meant to secure for themselves and others the privilege of drinking conveniently and legally, if they should please so to do.

It was by that sort of old-fashioned temperance work which our more advanced prohibitionists despise, as being far behind the times, that the majority of the voters of Iowa were taught to array themselves against strong drink, and then to embody their opposition in a law. But since the enactment of that law there has been a diversion of energy from the work of persuading young people one by one to take a stand against this evil by both their personal habits and their influence. Instead of that, we have had constant discussion of the law, with arguments to show that all other reliances are a delusion and a snare, and that all people who distrust the law are unsound on the main question; and the result is (was it not to have been expected?) that troops of young men signalize their arrival at voting age by going to the polls to cast a vote for what they consider "personal liberty." While we have been busy in defence of the law, they have been concluding that the right to drink comfortably, conveniently, socially, and legally is a thing worth voting for. N. V. N.

Story Co., Iowa.

MR. CLARKSON'S PECULIAR WAYS.

To the Editor of The Nation:

Sir: Mr. Clarkson affirms that "the hope of the party lies in the expansion of a stalwart

Republican press." It was therefore, no doubt, with purely patriotic views that he stole, a few years back, the mailing-list of the *Voice*. That a man capable of such an action should be able to hold up his head and should be considered fit to be President of the so-called "National Republican League," is a most striking proof of the degradation that has overtaken our political methods. M. C. L.

PHILADELPHIA, December 13, 1891.

THE MAYOR OF CLEVELAND AND HIS CABINET.

TO THE EDITOR OF THE NATION:

SIR: Having read the able arguments of "G. B." with interest and faith, and believing the ideas therein fully as valuable for local as for national application, I was pleased to see the following in the new municipal law for the city of Cleveland:

"Sec. 27. The Mayor and heads of the several departments shall each have seats in the Council, and the Mayor shall be entitled to take part in its proceedings and deliberations on all questions, and the heads of departments shall be entitled to take part in its proceedings and deliberations on all questions relating to their respective departments, subject to such rules as the Council shall from time to time prescribe, but without the right to vote; and such officers may be compelled to attend meetings of the Council in the same manner as the members."

The law has other good points, but has been in operation only about six months.—Respectfully yours, WILLIAM WALKER.

ALLEGHENY, PA., December 7, 1891.

WOMEN TEACHERS AT THE UNIVERSITY OF ZÜRICH.

TO THE EDITOR OF THE NATION:

SIR: In a recent letter I informed you of the result of the proceedings of the Senate of Zürich University regarding the bestowal of the "venia legendi" upon women. This week the governmental Council of Education discussed the matter from the legal point of view, and decided that no distinction can be made between men and women as such. Female as well as male candidates for the honor of "Privat-Docent" must bring proofs of their capacity to do scientific work, and hold a "test lecture" which shall be satisfactory to the respective faculty. The faculty is the highest authority on the question of qualification, so the way is open.—Yours respectfully, A. L. G.

ZÜRICH, December 3, 1891.

Notes.

IN April, 1891, a MS. was sold in Philadelphia purporting to be a set of prayers, or "Daily Sacrifice," in the handwriting of George Washington, though the script is very different from any known writing of Washington. It is now announced for publication, with an introduction on the religious life of Washington by the Rev. Charles F. Deems, and a special recommendation to ministers: "It is conceded that the prayers of George Washington will be of great value in your labors, they being a powerful argument in favor of religion, and may be the means of converting the unbeliever." It is a pity that some effort has not been made to convert those who do not consider the prayers as by Washington, before making one more addition to the mass of suspected Washington material.

J. B. Lippincott Co. will shortly issue the eighth volume of the new 'Chambers's Encyclopædia'; 'Ashes and Incense,' poems by Waltman Barbe; 'A North-Country Comedy,' by M. Betham Edwards; 'A Divided Duty,' by Ida Lemon; and 'The Tannins,' a monograph on vegetable astringents, by Dr. Henry Trimble.

Worthington Co.'s holiday list includes 'With Stanley in Africa,' a summary of this explorer's adventures by Capt. McClure; and 'Manners and Customs of Spain,' by James Mew, with etchings by R. de los Rios.

D. C. Heath & Co. have nearly ready 'Beowulf,' translated into modern metres by Prof. John Lesslie Hall of the College of William and Mary.

Ginn & Co. announce for January 'Ben Jonson's Timber,' edited by Prof. Felix E. Schelling of the University of Pennsylvania.

Leach, Shewell & Sanborn have in press Johnson's 'Rasselas,' edited by Prof. F. N. Scott of the University of Michigan, and a 'Plane and Spherical Trigonometry,' by Prof. E. Miller of the University of Kansas. This firm, by special arrangement, have become the American publishers of Dr. Kiepert's 'Atlas Antiquus.'

The recent excellent performance in this city by the Meininger players of Von Kleist's drama, "Die Hermannschlacht," leads us to mention a work by Richard Tieffenbach which will soon appear in Berlin, with the title, 'Ueber die Oertlichkeit der Varus-Schlacht'—a question of permanent interest not yet definitively decided.

A practically unknown corner of art history has been explored by Robert H. Lamborn, Ph.D., in 'Mexican Painting and Painters: A Brief Sketch of the Development of the Spanish School of Painting in Mexico,' of which a limited edition of 500 copies has been printed for the author. Dr. Lamborn passed some seven months in Mexico in the years 1881 and 1883, and made a collection of nearly eighty pictures of the Mexican branch of the Spanish school of the sixteenth, seventeenth, and eighteenth centuries, which is now deposited in the Pennsylvania Museum in Memorial Hall, Philadelphia. His interest thus aroused, he was surprised to find that this school was almost entirely ignored by the makers of dictionaries of art and biography, and his little monograph of seventy-six pages is the result of an attempt to fill the gap. It includes, besides a general disquisition on the development and decay of the Spanish-Mexican school of painting, short biographical notices of 121 painters and a catalogue of his collection. It is beautifully printed on heavy paper, and illustrated with two phototypes from originals in the author's collection, and an outline of the "Entombment" at Tzintzuntzan, attributed to Titian. It should be a valuable addition to the reference-books of our great libraries. Copies may, presumably, be had of the author, whose address is Washington, D. C.

'Symbolism in Christian Art,' by F. Edward Hulme, F.L.S., F.S.A. (Macmillan & Co.) is one of the thousands of books which are brought into existence every year without any apparent reason. As we already possess, in English, several good manuals upon the subject treated, the only excuse for the production of another would be that it is an improvement in some particular upon those which it follows, and this Mr. Hulme's book is not. It is not, on the whole, a bad compilation, but it is by no means free from errors, and its style is dry and unattractive. There are numerous illustrations, of mediocre quality.

'George Eliot; Her Early Home' (Raphael Tuck & Sons) is the title of an attractive gift-book, elaborately illustrated by different hands. Views of Nuneaton, Griff, and other places, taken on the spot, serve to show how closely the great novelist followed each detail in the descriptions which are scattered through her verse and prose, and are here collected as a text for the engravings. The march of improvement, while it is almost more deliberate in rustic England than anywhere else in the world, is gradually changing the appearance of George Eliot's favorite shire; but many of the cottages, manor houses, and churches which she has made familiar to her readers are still very much as they were in the days of her impressionable childhood, and they are admirably reproduced here. A mistake of the printer makes the date of her death 1860 instead of 1880.

There have been many editions of Sheridan's great comedy, with and without prefaces and illustrations, but we doubt whether the new issue of "The School for Scandal," illustrated by Lucius Rossi (Raphael Tuck & Sons), is not that with the largest page. Unfortunately, the typographical arrangement of the text in double columns is tasteless; and the black and white of the letterpress does not marry well with the gay colors of Rossi's polychromatic illustrations, which apparently are somewhat greasy lithographic reproductions of water-color drawings. The costuming is picturesque, but the figures lack character to such an extent, for instance, that it is not easy at first glance to distinguish *Lady Teazle* from *Maria*, and in like manner *Charles* and *Joseph* are inadequately differentiated. Still, as an example of the use of color in book-illustration, this edition of "The School for Scandal" is not without interest.

The satirical "romaunt of the town," 'Sybilla,' by T. C. DeLeon (Mobile: Gossip Printing Co.), takes on a holiday form, yet would not arrest attention but for the photographic illustrations, which consist of tableaus "made by ladies and gentlemen from our society" on occasion of the reading of the poem. These are more agreeably representative of Southern society than the text, if not worthy of Mr. De Leon's exaggerated praise in comparison with artistic compositions.

A. Witteman, 67 Spring Street, sends us two seasonable collections of characteristic views of New York and Brooklyn, generally well chosen, but too often ill-printed by the heliotype process. For pictorial effectiveness the New York cover view is unsurpassed.

A number of reissued classics are on our table and need hardly more than the finger-post. The 'Arabian Nights' squeezed into three volumes of the dainty "Knickerbocker Nuggets" series (Putnams) suggests the feat by which the genie returned into the casket. The selections are from Lane's version, and are accompanied by Stanley Lane-Poole's preface. A. C. McClurg & Co., Chicago, have issued very taking editions of 'The Scottish Chiefs' and 'The Children of the Abbey,' each in two volumes, handsomely printed, and bound in exceptionally good taste. Mrs. Gaskell's 'Cranford' cannot well be thought of as more fittingly or attractively attired than in the edition just brought out by Macmillan & Co. Mrs. Anne Thackeray Ritchie furnishes an introduction with some personal and local reminiscences, adapted rather for past readers. The illustrations are by Hugh Thomson, and are both ornamental and in keeping with the spirit of the book. The typography is admirable, and the cover is richly gilt after an appropriate design by Mr. Thomson.

Two thin volumes of Yule-tide stories and

two of "Christmas poems from round the world" make a series called 'In the Yule-Log Glow' (Lippincott). Mr. Harrison S. Morris, who is responsible for the selections and may be praised for them, has inserted pieces of his own in prose and verse, which show him to be a disciple of the author of the 'Christmas Carol.' The small library is prettily made within and without.

The fancy calendars seem fewer in number this year than usual, and the number might well be diminished in favor of a truer taste. Humor and grace and not a little good drawing are displayed in Pauline Sumter's 'All Around the Year' for 1892, issued by Lee & Shepard in Boston, children being the subjects of the twelve designs in color. Much larger and more pretentious, but also less meritorious, is 'A Year's Sunshine,' published by Raphael Tuck & Sons, after designs by Maud Goodwin, whose coloring and draughtsmanship both leave something to be desired. In book form we have 'Women's Thoughts for Women,' chosen and arranged by Rose Porter (A. D. F. Randolph & Co.). Each of the twelve months has its excerpts from a single writer, beginning with Mrs. Browning and ending with Miss Rossetti. In the case of George Eliot, sentiments borrowed from her characters have by this grouping (with the compiler's personal equation) the appearance of being the writer's own. Here there is nothing, perhaps, to complain of, but an odd effect might be produced by the same treatment of writers of fiction generally.

A fairly bewildering variety meets the eye of one who turns over the bound volume of *Harper's Young People* for 1891. The weekly issue doubtless has its influence in holding down the number of serials—never more than one long one is allowed to run at the same time; and the shorter contributions, thus made predominant, strikingly reveal their great range when massed under one cover. Adventure and extravaganza rule in the stories, and athletics furnish a text for many skilled advisers how to become experts in football, running, jumping, tennis, and the like; nor are the girls forgotten, though they do not fare as well as the boys. "Process" dominates in the illustrations, which are not of a high order, though an occasional animal drawing of Mr. Church's and all of Mr. Gibson's out-of-door work light up the pages.

St. Nicholas for 1891 makes two sightly volumes. The frontispieces furnish the best of the illustrations, three or four being notably good, and next after them come some of the artistic conceits going with fantastic stories. On the whole, the serious aims of the management are well maintained. The leading serial stories are by Mr. Trowbridge and Noah Brooks, and relate to boy-life of a vigorous and homely type. An interesting contribution is made by Mr. E. L. Welles in "My Autograph-Book"—interesting as testifying to the good-nature of celebrities in complying with a boy's request for their autographs, and, in the case of Thackeray's long letter, interesting in other ways.

One of the best of New Year's gifts is *Babyhood* (New York). "The mother's nursery guide, devoted to the care of children," the sub-title defines this valuable monthly magazine, of which the seventh bound volume has just come to hand. Time does less to impair the usefulness of back volumes of *Babyhood* than of most other periodicals, and a full set is much to be prized by any mother of a growing family. An admirable feature from the first has been competent medical direction, for which Dr. L. M. Yale is and has been responsible.

With the close of the year Mr. W. D. Howells will terminate his literary connection with *Harper's Magazine* and assume the chief editorial control of the *Cosmopolitan Magazine* of this city.

The Messrs. Goldthwaite, publishers of the *Geographical Magazine*, project another monthly, to be called *Minerals*.

The Ninth Annual Convention of the Modern Language Association of America will be held in Columbian University, Washington, D. C., on December 28–31 inclusive. At the regular sessions of the Convention the following papers will be presented: "The Gerund in Nineteenth Century English," by Prof. J. L. Armstrong (Trinity College, N. C.); "The Preparation of Modern-Language Teachers for American Institutions," by E. H. Babbitt (Columbia); "The Sounds of R," by Alexander Melville Bell (Washington); "Jean de Mairet: A Critical Study in the History of French Literature," by Julius Blume (Johns Hopkins); "Ignored Resources of French Literature for College Study," by Louise Both-Hendriksen (Brooklyn); "Diminutives in *-ing* in Low German," by A. F. Chamberlain (Clark); "Augustini Sendebrev til Cyrillus, and Jeronymi Levnet," by D. K. Dodge (Columbia); "The Isleños of Louisiana and their Dialect," by Alcée Fortier (Tulane); "Nathan der Weise (with special reference to the criticisms of Kuno Fischer)," by G. Gruener (Yale); "James Russell Lowell as a Prose Writer," by T. W. Hunt (Princeton); "Indo-European Parallel Roots with and without initial *s*, especially in the Germanic Languages," by G. Karsten (Indiana); "A Study of Lanier's Poems," by C. W. Kent (Tennessee); "The Phonology of the Patois of Cachy (Département de la Somme)," by T. Logie (Williams); "The Law Language in England from Edward I. to Henry VIII.," by B. F. O'Connor (Columbia); "The Jersey Dialect (Channel Islands)," by J. S. Shefloe (Woman's College, Baltimore); "Philology and Literature in American Colleges and Universities," by H. E. Shepherd (Charleston).

—We must briefly dismiss here some few remaining children's books of a not very brilliant season. 'The Story of the Iliad,' by Prof. A. J. Church,' and 'The Story of the Odyssey,' by the same author (Macmillan), are skilfully condensed from the original, keeping close to it almost invariably, reproducing the choicest passages with fidelity, and omitting episodes or details of doubtful use to young people. Boys or girls of twelve years or under ought to find either volume equally charming. Mr. Church would have made them still easier reading if he had avoided an occasional artificial phrase, and had dropped the solemn style, as Prof. Palmer does in his 'Odyssey.' The illustrations after Flaxman, colored in imitation of ancient vase-painting, are in harmony with the story and increase the attractiveness of these well-printed volumes. 'Mistress Phil,' by Mary H. Debenham (Thomas Whittaker), imitates Mrs. Ewing's style very noticeably, but the imitation goes no further. The story is set in the English town of Waltham, about the middle of the last century, and the author has taken care to avoid anachronisms, while making no pretence of being historical. Though designed, according to the publisher, "for prizes and rewards," the book is a pleasant one, and teaches its simple lesson of unselfish kindness in an unobtrusive way. Another book which still more plainly shows Mrs. Ewing's influence is 'The Knighting of the Twins, and Ten Other Tales,' by Clyde Fitch (Roberts Bros.). Here, however, there is little originality, and the effect of importing Mrs. Ewing's peculiarly English family life into such of the stories as pertain to this country is, of course, incongruous. It would have been well if, having carried his copying so far, Mr. Fitch had been able to copy Mrs. Ewing's self-restraint, too, and so avoid the sentimentality into which he sometimes falls, particularly when touching upon religious matters. The English antiquarian, the Rev. J. C. Atkinson, in 'The Last of the Giant-Killers' (Macmillan & Co.), offers a number of wonder-tales in which archæology, folk-lore, modern slang, and obsolete words are strangely jumbled together. "Had you rather be better than you seem or seem better than you are?" is the unmannerly question suggested by 'Rose and Lavender,' an English story by the author of 'Miss Toosey's Mission,' etc. (Roberts Bros.), so uncompromisingly does the sharp contrast between solid worth with an unattractive exterior, and folly masked by skin deep beauty, forbid a *tertium quid*. The poor heroine, moreover, is so overladen with her burden of homeliness, clumsiness, and dulness as to make the choice a sadly doubtful one to any but an extra stalwart conscience. 'The Abandoned Claim,' by Mrs. Flora Haines Loughead (Houghton, Mifflin & Co.), tells of three children of a San Francisco mechanic, suddenly thrown upon their own resources, who decide to take up Government land for a home. Their farming experience are well related, and make an interesting story, albeit things really run a little too smooth for probability. The tone is serious without being dull.

—Capt. Gronow's 'Reminiscences,' published originally a quarter of a century ago in four successive volumes, have been reissued in two handsome octavos under the title 'The Reminiscences and Recollections of Captain Gronow; being Anecdotes of the Camp, Court, Clubs, and Society, 1810-1860,' with a portrait and thirty-two illustrations from contemporary sources, colored by hand (Scribners). The contents are a series of social anecdotes, varying from half a page to two or three pages in length, in which the author unburdens his memory of the experience of fifty years spent in the midst of the most notable people and social conversation of his time. He passed from Eton to the Grenadier Guards, and lived the career natural to such a beginning, with much respect to "good form" and some eccentricities of his own. He narrates scenes, incidents, and sayings that were truly as much common property as portraits, according to his own view, and he observes the conventions of social good taste. He hits off the character of his work excellently when he describes his reminiscences as "fragmental and miniature illustrations of contemporary history"; he renders a picture of society in its individuality, and the value of the work lies in its multifariousness, its vivacity and clearness of impression, its saving the trifles which give picturesqueness and effect to the times, whether in fashions of thought and behavior or in personality. The illustrations are chosen with much care and skill, and are "strongly characterized, though not precisely caricatures," in order to harmonize with the spirit of a work which deals much with "eccentric personages, odd celebrities and incidents somewhat out of the common order"—so the illustrator, Joseph Grego, describes his method; and in fact these pictures are an added charm of the volumes, which must remain one of the important sources for the social life and manners of the first half of our century.

—We made passing mention, the other day, of Mr. J. G. Bartholomew's article in the *Scottish Geographical Magazine* for November on the mapping of North America. This writer states that "no complete and systematic survey has yet been organized in the United States," whereas, notoriously, a systematic topographic survey has been in progress under the Geological Survey for the past ten years, during which time some 650,000 square miles, or more than one-sixth of the entire area of the country, including Alaska, has been mapped upon scales comparable in every respect with those of European countries. For obvious reasons, this survey is being executed for industrial, and not immediately for military purposes, as has generally been the case in Europe. Mr. Bartholomew's oversight is the more remarkable as, in the same paragraph, the work of the Geological Survey is described. His list of maps of the United States, again, is said to contain "only recent and authentic maps" and "original survey publications." It appears, however, that his plan was to include only such as happened to come under his eye; and as there is little attempt at classification and no apparent attempt at selection, the result is curious, and well illustrates the proverbial ignorance of Europeans concerning this country. No distinction is made between the mother maps, as those made from original sources of information may be designated, and those compiled from them. Little distinction is made between topographic maps proper and maps made to serve special and specific purposes. Maps which have long ago been supplanted by later and better work occupy quite as prominent positions as these. Several of the most prominent of the compiled maps are omitted, while, on the other hand, the list is extended to include the diagrams of postal routes, maps of mines and mining districts, of land grants to railroads, etc. A series of maps published by Rand, McNally & Co. of Chicago are given prominence in a paragraph, while those of no other of the scores of map publishers of the country are named. There is no good reason why such a list should not have been extended to the dimensions of several volumes.

—Apropos of what has recently appeared in the *Nation* with regard to the correspondence of Paul Dudley and Cotton Mather with the Royal Society, a correspondent sends us the following note in illustration of the side lights that are thrown upon the history of the colonial period by letters to be found among the archives of the Royal Society. Dr. William Douglas had a strong dislike to Cotton Mather, and wrote in depreciation of his 'Magnolia,' from which, however, the author of a history of the Plantations did not scruple to annex much information:

"Writing from Boston on the 25th of September, 1721, William Douglas desires of Dr. Alexander Stuart his 'serious thoughts,' and those of his 'ingenious friends of the profession,' and particularly 'Dr. Meade's opinion of a practice called inoculation of the small-pox, communicated to the Royal Society by two correspondents from the Levant.' Dr. Douglas had lent the *Transactions* (Nos. 339 and 347) to 'a certain credulous preacher of this place called Mather.' Upon the arrival of the 'Small Pox (after nineteen years absence) here last spring, the clergy, spirited by Mather, preached up Inoculation. I not sufficiently assured [?] of its consequences did most possible to oppose this rash practice. We have in all to this time had above 60 persons inoculated of all ages, sexes, and conditions. One or two hundred dyed. Several have had the confluent sort accompanied with a fretor [?] peculiar to Inoculation. . . . From morning to night I am employed in tending small pox patients, and I reckon that before next Jan. I shall have seen more persons in that distemper than I could have seen in my lifetime in any part of Europe.' . . . About 10 000 persons in 'this Town who have not had the small pox, and at present writing about 100 decumbents. Please send your letter to the New England Coffee House, to be put into any Boston Ship's bag.'"

RECENT POETRY.

It is many years since there has come such a discovery, such a veritable *trouvaille* for the lover of wild music, as the book which bears the cumbrous title 'The Bard of the Dimbovitza: Rumanian Folk-Songs,' collected from the peasants by Hélène Vacaresco, translated by Carmen Sylva and Alma Strettell (London: Osgood; New York: Charles Scribner's Sons). We have had occasion ere now to praise Miss Strettell's remarkable versions from the Greek Anthology; and here, in dealing with a theme so different, she has shown the same power. These songs belong only to a certain district of Rumania, and were taken down by a young lady from the peasants on her father's estate, where she had to listen for them by cradles and by death-beds; had to learn spinning, that she might join the girls at their spinning-parties, and had to hide in the corn-fields to listen to the reapers. The result is like nothing else, neither the gypsy, nor the Romaic, nor the Arabian songs. It is as if one of those strange tribes of musicians who sometimes drift into Paris or Vienna came sweeping across the stage in strange garments, with flashing eyes and wild voices and chords hitherto unknown. There are "Luteplayer's Songs" and "Spinning Songs"; songs of the sword, of the shroud, of the fire, and of the blood. They deal with nature and time and eternity with a strange directness, like that of Emily Dickinson: the graves give up their dead; nay, the dead soldier lies absorbed in the one yearning hope that they will not yet put him actually in the grave till he has learned how the fight ended. Almost every poem has a delicate prelude, like that of a zither, giving some background from nature; or like the "remark" appended to an etching. The song of the fire, for instance, has this prelude (p. 10):

"I consumed the deep, green forest
With all its songs;
And now the songs of the forest
All sing aloud in me."

They sing aloud, indeed, through the whole book. Yet in what language can one find a vision more wild than this (p. 20)?

THE COMFORTERS.

He who sleeps by the fire doth dream,
Doth dream that his heart is warm,
But when he awakes, his heart
Is afraid for the bitter cold.
Didst thou mark how the swallows flew, how they flew away from hence?

My father is dead, and his cap is mine,
His cap of fur and his leathern belt—
Mine, too, his knives.
When I fall asleep, when I slumb'ring lie,
Then the knives spring forth, from their sheaths they fly,
And roam the fields.
I know not whither the knives have strayed,
But when morning dawns, at my window pane
I hear a tapping—I fling it wide,
And there are my knives come home again.
"Where have ye been?" I ask them then,
And they make reply: "In the hearts of men!
There was one so sick for love, and torn—
We healed its wound;
And another was weary and travel-worn—
We gave it rest.
For dear to us are the hearts of men,
And dear their blood;
We drink it as furrows drink the rain,
Then, tapping, come to thy window-pane:
Make way for thy knives, they have done their work.
Now wipe the blood with thy sleeve away—
Thy sleeve with the dusk-red broidered flowers—
And wash the sleeve in the river clean,
Then thrust us once more our sheaths between,
The sheaths on the leathern belt."

He who sits by the fire doth dream,
Doth dream that his heart is warm,
And when he awakes, his heart
Is afraid for the bitter cold.
Didst thou mark how the swallows flew, so swiftly away from hence?

Or as this (p. 22)?

AT A GRAVE.

Look not upon the sky at eventide,
For that makes sorrowful the heart of man;
Look rather here into my heart, and joyful
Shalt thou then always be.

To yonder grave there ofttimes came a woman,
And said to it: "Hast thou forgiven me?"
"Avaunt!" the grave made answer.
Then weeping she would go her way, but going
She ever plucked a flower from the sward.
Yet still the grave would grant her no forgiveness.
Then said the woman: "Take at least my tears."
"Avaunt!" the grave made answer.
But as she, weeping, turned away and went,
Behold, the grave-stone would uplift itself,
And the dead man gaze forth,
Sending a long look after her, that woman
Who weeping went her way.

Look not upon the sky at eventide,
For that makes sorrowful the heart of man;
Look rather here into my heart, and joyful
Shalt thou then always be.

Side by side with these weird visions there are the most delicate and graceful fancies. It is the Rumanian practice to paint a flower on the wall of every cottage where a maiden lives. Should she fall from virtue, the flower is effaced, and it is thought that no rain will fall and no flower grow beside that cottage again. Many are the songs which allude to this simple and primitive symbol. And to show how direct and tender is the sympathy with nature in these songs, read this, entitled "Hay" (p. 73):

Yesterday's flowers am I,
And I have drunk my last sweet draught of dew.
Young maidens came and sang me to my death;
The moon looks down and sees me in my shroud,
The shroud of my last dew.

Yesterday's flowers, that are yet in me,
Must needs make way for all to-morrow's flowers.
The maidens, too, that sang me to my death
Must even so make way for all the maids
That are to come.
And as my soul, so too their soul will be
Laden with fragrance of the days gone by.
The maidens that to-morrow come this way
Will not remember that I once did bloom,
For they will only see the new-born flowers.
Yet will my perfume-laden soul bring back,
As a sweet memory, to women's hearts
Their days of maidenhood.
And then they will be sorry that they came
To sing me to my death.
And all the butterflies will mourn for me;
I bear away with me
The sunshine's dear remembrance and the low
Soft murmurs of the spring.
My breath is sweet as children's prattle is;
I drank in all the whole earth's fruitfulness,
To make of it the fragrance of my soul
That shall outlive my death.

We have given but a faint impression of the wealth and variety and freshness to be found in this extraordinary volume. It seems to cheapen civilization, and it is certainly "a far cry" to return from it to civilization again. Yet another book from a widely different source—since what is farther from Rumania than Chicago?—gives us a fascinating nomad in its heroine, who might almost have been nurtured on these songs of the wild East. This book is Miss Harriet Monroe's 'Valeria, and Other Poems' (Chicago: Privately printed). Mark, for instance, the rhythmic cadence in this song of the travelling child-minstrel (p. 10):

"[She sings and dances wildly.]
Dance on, children of song, over the hills with me;
Haste down, out of the clouds, down to the sunlit sea.
Wild winds sweep us afar out of the heights they sway.
Ah, come! breath of the south, buried in blue—away!
Come, win kingdoms of light; crown ye with summer's praise.
Sing! dance! tune me your lutes, wreathe them with deathless bays.
Are ye beggars that rove, heirs of the proud world's scorn?
Nay, kings! dowered with wealth richer than gold of morn.
[Reënter the Prince, who listens unnoticed.]
On, on! Ours is the truth; deep in her heart we read,
We give glory to fame, life to the mighty deed.
Gods we—conquering Death, wreathing his brow with flowers,
Give earth all to her slaves—heaven and time are ours!"

The songs contained in a play are often the severest test of a poet, and it is fair to say that none of Valeria's other songs equal this; but the tragedy itself is one of rare conception and grasp, full of surprises, and capable, in the hands of a playwright, of being an effective acting play. The situation at the close of

the third act is peculiarly unexpected and dramatic; and nothing in the play is weak or imitative. The volume also contains, among its shorter pieces, Miss Monroe's "Cantata," sung at the dedication of the Chicago Auditorium, which certainly gives great hopes for her Columbian dedication ode, since her cantata is undeniably strong, varied, dignified, and in good taste. The whole tone of the volume is so well sustained—in keeping with its beautiful execution by the De Vinne Press—that one is surprised not to have heard more of Miss Harriet Monroe. She has evidently troops of friends, however, for the volume is prefaced, in the old-fashioned way, by a long list of subscribers.

Chicago also sends us, although by way of Philadelphia, a volume of 'Dramatic Sketches,' by Louis J. Block (Lippincott), which is far above the average work of young poets in serious thoughtfulness and steady poetic expression.

Among recent American volumes, that by Mr. R. W. Gilder, 'Two Worlds, and Other Poems' (Century Co.), naturally takes the lead, since his touch has grown uniformly steady, his taste is secure, and he shrinks from too daring flights. Yet his longer poems, as his Phi Beta Kappa Ode, well bear study, while he seems to have elevated into especial prominence the briefest of all, the title-poem of the book:

TWO WORLDS.

I.—THE VENUS OF MILO.

Grace, majesty, and the calm bliss of life;
No conscious war 'twixt human will and duty;
There breathes, for ever free from pain and strife,
The old, untroubled pagan world of beauty.

II.—MICHAEL ANGELO'S SLAVE.

Of life, of death the mystery and woe,
Witness in this mute carven stone the whole;
That suffering smile were never fashioned so
Before the world had wakened to a soul.

This is noble and condensed; and the author was perhaps right in giving it precedence, as we read that Wordsworth printed his 'White Doe of Rylstone' in quarto, to show his appreciation of its value. The unmeditative human heart may, perhaps, think that Mr. Gilder might well have given another whole department of his little volume to his poem on his Newfoundland dog, which surely stands out among dog-poetry as "Rab and His Friends" stands eminent among dog-prose (p. 37):

LEO.

I.

Over the roofs of the houses I hear the barking of Leo—
Leo the shaggy, the lustrous, the giant, the gentle Newfoundland.
Dark are his eyes as the night, and black is his hair as the midnight;
Large and slow is his tread till he sees his master returning,
Then how he leaps in the air, with motion ponderous, frightening!
Now as I pass to my work I hear o'er the roar of the city—
Far over the roofs of the houses, I hear the barking of Leo;
For me he is moaning and crying, for me in measure sonorous
He raises his marvellous voice, for me he is wailing and calling.

II.

None can assuage his grief, though but for a day is the parting,
Though morn after morn 'tis the same, though night after night comes his master,
Still will he grieve when we sever, and wild will be his rejoicing
When at night his master returns and lays but a hand on his forehead.
No lack will there be in the world of faith, of love and devotion,
No lack for me and for mine, while Leo alone is living—
While over the roofs of the houses I hear the barking of Leo.

'The Poet and his Self,' by Arlo Bates (Boston: Roberts Bros.), perhaps offers an awkward title for the leading poem; but the whole book has that strength of motive and maturity of utterance belonging to all this author's work. In some cases, as in "A Burial," Mr. Bates seems to us to have gone too near the boundaries of the repulsive, but his "Flower-Cycle" is charming, and the short detached poems 'From a Sketch-Book' afford each a picture, as this (p. 69):

A MARCH DAY.

A single boat lies on the glass-smooth bay,
As gray the water as spun flax, and gray
The sky as smoke; and gray as moss-grown stone
Crumbling on some old grave, forgot and lone,
The shore and boat and tree,
The stretches of beaches,
The long, sandy reaches,
The wavering dunes and the wide, windy sea.

Another thin volume, with a poem of real grasp and movement between its slender covers, is 'The Heart of the Golden Roan' (Boston: D. Lothrop Co.), by O. C. Auringer, an author residing at Northwood, N. Y., whose 'Scythe and Sword' showed remarkable intimacy with external nature. This poem is wholly different, the gallop of a horse from the mountains to the sea, rendered in an intricate measure most skilfully handled, the whole occurring in a half-ideal world:

THE NIGHT RIDE.

'Twas dark, when like a cloud
On fire, with thunder loud
Of tramping hoofs that ploughed the valley sod beneath us,
We launched into the night,
Whose arms to left and right
Spread to receive our flight, then closed, in gloom to sheathe us.

. . . . . .

So steadily, yet fleet!
The miles from under feet
Reeled backward in retreat, and massed themselves in distance;
The pine-plumes black in air
Streamed past like witches' hair,
The dark boles, lean and bare, seemed writhed in fierce resistance.

As one in dreams of night,
In fancied plumes bedight,
In ecstasy of flight swims the ethereal river,
So I flew on my way,
With spirit waxing gay
As some glad bird in May thrilled with ecstatic quiver,

Till I scarcely heard the beat
Of my stallion's nimble feet,
Or felt the touch of seat, or bridle-rein, or stirrup;
Saw not how onward bore,
Swift, swifter evermore,
My roan—blood to the core! without a cheer or chirrup.

The two volumes of early 'Poems' by John Ruskin (New York: Chas. E. Merrill & Co.) may well excite deep interest in the minds of his faithful admirers, and even among that increasing number who are revolting against his somewhat arbitrary sway. There is a curious fascination in looking through these somewhat commonplace lines—based successively on Scott, Byron, and Shelley—for the germs of that marvellous rhetoric which has charmed a generation. Of this we find no trace until it appears in a note in one of the later poems (ii., 232), which turns out to have been written when he was at work on 'Modern Painters.' Thus early, then, was it manifest that prose, not verse, was to be his vehicle. Too much praise cannot be given to the loving toil of Mr. W. G. Collingwood, who has not merely edited, but compiled the book, and has lavished on it a wealth of detail worthy of some patient German professor commenting a Latin classic.

Another volume deriving its chief interest from the writer's name is the 'Poems' of Mr. W. E. H. Lecky (Appleton); they are truthful and ethical, but not imaginative. The title-page bears on its reverse the new inscription, "Printed in America." Still another book has the yet remoter interest to be found in the name of the author's brother, this book being 'Daphne, and Other Poems,' by Frederick Tennyson (Macmillan). Those who recall the singular grace and beauty of the early sonnets of Charles Tennyson (afterwards Turner) will not be surprised that another of the brotherhood should share the magic gift; and certainly few volumes of sustained blank verse can show so much of the Tennysonian rhythm—the rhythm of "Oenone," for instance—as may be found in these pastorals on these immortal Greek themes. There is no reason, for instance, why Lord Tennyson should not have written with his own hand this passage of exquisitely modulated and varied blank verse from "Ariadne" (p. 73):

"All night the bark held on beneath the moon
And airs that only breathed upon the sea
Lovesighs, and only drew soft answers from it
That trembled back a subtle sympathy,
A soundless ripple, kissing the dark side
O'er which she leant, and heard at intervals
The silvery waters chiming, while the wake
Of the light vessel quiver'd like a flame
In the warm moonlight, vanishing away
Thro' darkest shadows toward her island home,
Whose distant mountain summits seem'd to frown
A silent warning on her silent fears."

Another blank-verse volume, 'The March of Man,' by Alfred Hayes (Macmillan), can claim no such charm of versification, although it expresses liberal and enlightened thought and is dedicated to the memory of Priestley.

Two volumes by women poets, both well known and popular, will be greeted with pleasure by their admirers. These are 'Lyrics and Legends,' by Nora Perry (Boston: Little, Brown & Co.), and 'The High-top Sweeting, and Other Poems,' by Elizabeth Akers (Scribners). As between these, we prefer Mrs. Akers's as being more spontaneous and simple, though sometimes commonplace; whereas Miss Perry, who is less often commonplace, carries with her a constant suggestion of artificiality. More pleasing than either is a volume by the late Caroline A. Mason, 'The Lost Ring, and Other Poems' (Houghton, Mifflin & Co.), since this lady is well known by her hymns and well represents the religious and domestic muse.

A book of real promise, by a new poet, Richard Hovey, is 'Lancelot and Guenevere: A Poem in Dramas' (United States Book Co.). The meaning of this phrase, "a poem in dramas," is not quite clear, but there is a preliminary drama, more ambitious than the main one, and to our thinking far less successful, since it tries the experiment, always dangerous, of weaving together various mythologies—Pan and Merlin, the Valkyrs and the Angels—without making the ultimate meaning sufficiently clear. But the triter subject of the Arthurian legend is handled with a power which really gives indication of good work to come; and the final situation, where the trustful Arthur heaps love and confidence upon the guilty pair, while they stand cowering beneath the shame of his misplaced generosity, is a noble dramatic conception.

RECENT LAW BOOKS.

A NOTABLE number of new editions has recently been published. The fourth edition of Story's 'Commentaries on the Constitution,' by Judge Cooley, appeared in 1873, and the fifth has now been brought out, after an interval of nearly twenty years, by Dr. Melville M. Bigelow (Little, Brown & Co.). The book now for the first time contains a table of cases. How many of the fifteen hundred or so cited have been added by the present editor, we have no means of knowing; nor is it a very important matter, as the reputation of the work rests on other grounds. Judge Cooley's notes have generally been retained. The first volume seems but slightly changed.

In the "Students' Series" the two best books, perhaps, are Cooley's 'General Principles of Constitutional Law' and Bigelow on Torts (Little, Brown & Co.), and we are glad to see new editions of both. Mr. A. C. Angell has added to the former several hundred new citations, which illustrate the development of the law in the last ten years. The latter is a revision rather than a new edition, and a new

chapter on malicious interference with contract is added. The introduction shows that the author still adheres to his definition of a tort as a "breach of duty fixed by municipal law for which a suit for damages can be maintained." This is substantially the same as the definition given in the third edition, and was there stated to be based on the idea that the duty involved in the notion of contract is one fixed by the *parties*. But can any legal duty be said to be fixed by the parties? The parties make the promise, or enter into the undertaking; the law itself raises the duty. The duty is to keep the promise, or to perform the undertaking, and this surely is imposed by law. We can easily conceive of a system of law in which contracts were not enforceable in courts of justice. There would still be an undertaking, but there would be no legal redress for breach of it. Dr. Bigelow's definition appears to us to cover contracts as well as torts, and hence to be misleading.

Judge Drake, in the preface of the seventh edition of his excellent work on Attachment (Little, Brown & Co.), mentions the interesting fact that, in giving it to the public, he becomes, at the age of eighty, the first American legal author who in his own lifetime has edited seven editions of any treatise of his own on any branch of civil jurisprudence. The cases cited have increased from 1,185 to 5,100, 700 being added in the present edition.

Such collections of cases as those of Messrs. H. W. Chaplin and Marshall D. Ewell ('Cases on Criminal Law,' 'Cases on Domestic Relation,' Little, Brown & Co.) are of little use to the practitioner, but are of great interest in another way. The use of cases as the chief means in legal study, set on foot at Harvard, is spreading so fast that in most of the law schools it threatens to produce a revolution such as has lately occurred in Columbia. There the conservatives have been defeated, and the force of a movement which has driven them to set up a law school of their own can hardly be overestimated.

Sir Frederick Pollock's name is a guarantee that his new series of 'Revised Reports' (Little, Brown & Co.) will be well edited. We must say, however, that, for the practitioner, full annotations referring him to the judgments in which the case cited has been criticised and discussed, seem to us a necessity of such a revision.

Mr. Russell H. Curtis's handbook, 'Important Federal Statutes Annotated' (Chicago: Callaghan & Co.), will be found of immediate value. It deals with the construction of the new Court of Appeals Act, the jurisdiction and practice of the Federal courts generally, and one or two other subjects. The plan pursued is that of giving the annotations under the sections to which they relate.

When the statutory revision of the laws relating to this city, prepared by three Commissioners, was in 1882 enacted by the Legislature, it was, Mr. Mark Ash says, in his volume on 'The New York City Consolidation Act, as in force in 1891' (Albany: Weed, Parsons & Co.), "supposed" that all laws passed afterwards relating to the city would be in the form of amendments to the Consolidation Act. Those who suppose that the Legislature at Albany will do what it ought to do, however, generally reckon without their host. Nothing pleases it better than to pass important laws covertly; and there is no surer way of accomplishing this result than by enacting an amendment without any reference to the act amended. So it has happened in the case of the Consolidation Act. The Legislature has in the last nine years passed "a vast number of laws which, although relating to New York city solely, do not in terms amend any of the sections of the Consolidation Act." Hence the necessity of a new edition of the Consolidation Act, and in the future, no doubt, of many more new editions, until, as in the case of the Code, a new consolidation is required. The edition is annotated with notes of all the judicial decisions. It also contains the Montgomerie and other early English charters, and a valuable Table of Laws, showing the sources from which the various provisions of the Consolidation Act have been taken. So far as we have had an opportunity of examining it, the work seems carefully and thoroughly done.

Mr. Henry Campbell Black's aim in preparing his 'Dictionary of Law' (St. Paul, Minn.: West Publishing Co.) has been, in his own words, to prepare a "concise yet comprehensive book of definitions," and not an "epitome or compilation of the body of the law." Vernacular words and phrases are admitted "so far as construed by the courts." English law, Feudal law, Roman law, and foreign law are all drawn upon. The result is a bulky volume of more than twelve hundred pages, containing a very full collection of terms. It seems likely to be a useful book. It might probably be reduced somewhat in size by leaving out a large number of words which appear to have been inserted merely because the definition of them has been involved in the decision of a case. But when they are words which judges and lawyers use exactly as the laity use them, it seems superfluous to include them in a law dictionary. "Dead head" is slang, or colloquial English, not a term of the law; its congener, "dead-beat," is properly enough excluded. "Fabricate," "fabricated evidence," "fabricated fact," mean to a lawyer exactly what they mean to a layman. We may say the same of "fair" (in the sense of just), "false news," "falsehood" (in the ordinary sense of a statement known to be untrue and intended to deceive), "fakir," "faro," "farrier," "farthing," "father," "father-in-law," "fathom," "female." We take these instances from the first few pages of a single letter. If such words are admitted, *any* word the meaning of which might be involved in a decision ought to be given; but this would necessitate the admission of the whole English vocabulary.

The difficulty with most law dictionaries is that their authors have generally endeavored to make them combine the functions of lexicons with encyclopædias. In the hope of making them useful to the practitioner, they are filled with essays on various topics of the law, which cannot possibly in a small compass be made to take the place of a text-book. Bouvier is full of such essays, but then Bouvier's name carried weight such as no succeeding lexicographer has possessed. Mr. Black has wisely endeavored to confine himself to definitions. He has included a long list of legal maxims. We note one or two definitions which do not seem entirely satisfactory. *Assault* is defined by Mr. Black as an "unlawful *attempt or offer* on the part of one man, with force or violence, to inflict a bodily hurt upon another. An *attempt or offer* to beat another without touching him, as if one lifts up his cane or his fist in a threatening manner at another, or strikes at him, but misses him." This definition certainly suggests that the *intent to do* physical harm is an essential part of an assault. Yet in criminal law (and most of the learning on the subject of assault comes from criminal cases) the opposite is held. In the case of the Commonwealth vs. White (110 Mass, 407) it appeared that the defendant was driving a wagon along a highway which H. and S. were repairing, that a dispute arose, in the course of which the defendant took up a gun and, aiming it at S. and H., said: "I have got something here that will pick the eyes of you." The gun was not loaded, but the Court said: "It is not the secret intent of the assaulting party, nor the undisclosed fact of his ability or inability to commit a battery, that is material; but what his conduct and the attending circumstances denote at the time *to the party assaulted*." In other words, acts denoting the threat of an attack constitute in law an assault, though no physical attack be in fact intended. Sweet's dictionary makes this distinction clear. *Family meeting* is spoken of as "an institution of the laws of Louisiana," no hint being given of its origin. The opposition between *Penalty* and *Liquidated damages* is not made clear. The definition of *Res adjudicata* is rather vague; it does indeed mean "a matter adjudged," but *all* matters adjudged are not by any means *res adjudicatæ*. *Republic* is defined as "a commonwealth; a state in which the exercise of the sovereign power is lodged in representatives elected by the people." Webster is given for authority, but the definition merely describes one kind of republic. It should of course include republics without representative institutions. Perfect accuracy of definition is in law, as elsewhere, almost an impossibility, but as we have come upon these in hastily turning over the leaves, it is safe to say that the work will bear a careful revision.

RECENT FICTION.

With My Friends. By Brander Matthews. Longmans, Green & Co.

Three Tales. By W. D. O'Connor. Boston: Houghton, Mifflin & Co.

Elsket. By Thomas Nelson Page. Charles Scribner's Sons.

Auld Licht Idylls. By J. M. Barrie. Cassell Publishing Co.

According to St. John. By Amélie Rives. John W. Lovell Co.

Phillida. By Maud Howe. John W. Lovell Co.

Edleen Vaughan; or, Paths of Peril. By Carmen Sylva. Cassell Publishing Co.

Blanche, Lady Falaise. By J. Henry Shorthouse. Macmillan & Co.

The Story of the Glittering Plain. By William Morris. Boston: Roberts Brothers.

Darkness and Dawn; or, Scenes in the Days of Nero. By F. W. Farrar. Longmans, Green & Co.

THERE used to be a superstition that the power of literary creation was a special gift of God, never allied with the critical faculty and quite incomprehensible to the man thus favored. He was supposed to have an irresistible impulse to write and then to "go it blind"; a child might know more surely than he whether his work was a success or failure. This pleasant superstition is rapidly disappearing. The modern littérateur loves to tell how he does his work and to strip his craft of mystery. He is entirely unselfish, and if any one else can't write, it is because he is a stupid fellow, not for want of instruction from one who can. No man more than Mr. Brander Matthews has labored to dispel illusions about imaginative writing and writers. All who take an interest in the matter know how he writes plays

and stories, and, by reading the prefatory essay of his last volume, 'With My Friends,' may learn much about the "Art and Mystery of Collaboration."

The stories following the essay are written in partnership, Mr. Matthews being in every case one of the firm. They illustrate some of the tendencies of collaboration pointed out in the preface, especially that towards very accurate construction and deeper consideration of manner than of matter. If the form was not in each instance so admirable, the insignificance of the fact or fancy would be evident. The style is the story, and, excepting the two written with Mr. Bunner, this clear, concise style is more closely associated with Mr. Matthews than with any of his partners. "The Documents in the Case" and "The Conversations of Dear Jones and Baby Van Rensselaer" are already well known; Dr. Johnson would have annihilated them in a brief, polysyllabic paragraph, yet it is not hard to imagine Shakspere chuckling over them, and seized with a mighty longing to return to earth and try his hand at the American variant of the English tongue. Two heads are for construction better than one, and a third might have suggested to the authors of "Edged Tools" that, since M. Blitzini was controlled by the "huffy spooks" only when behind the footlights, the two knowing spectators should, after the conjurer's disappearance, have slid the table down to the auditorium. His reappearance would have made a more satisfactory and no less surprising dénouement. The fantastic idea of "Three Wishes" is too feeble for fifty pages of elaboration. Mr. Anstey's fun is much more primitive than Mr. Matthews's, and we have enough faith in the ability of both to believe that either could alone have written a better story about Heywood and his Djinn.

To appreciate the debt which both writers and readers owe to Mr. Matthews for his clear expositions of the technic of his craft, it is only necessary to glance at the late W. D. O'Connor's 'Three Tales,' written when stories were made up with little thought given to form, by people who had not the Oriental's instinctive skill in narrative. There are two Christmas stories which show the influence of those qualities of Dickens which but slightly detract from greatness, yet are very tiresome in mediocrity. We can very well do without the writer who deluges us with sentimentality, and who has a mania for working up melodramatic contrasts between the rich and poor, the virtuous and vicious. Mr. O'Connor may have been the superlatively fine character described in Walt Whitman's preface, and he certainly was an estimable man, but that is no justification for dragging his tales forth from well-won oblivion.

Since time was, it has been granted that wicked English lords have an irresistible propensity to pursue pure and lovely maidens over paths where full-grown dragons sit spitting endless fire. To do that is to fulfil their destiny, or else discredit for ever a host of respectable writers of fiction. For a Viking's daughter to dwell by a good trout stream, in the midst of what Kipling calls heaven-climbing glaciers, is to court destruction. True as the needle to the pole, the wicked lord, who is always a phenomenal pedestrian, will point his boots over the glaciers; then the fate of the Viking's daughter is inevitable, sure to be written. It is written in 'Elsket,' by Mr. Page, perhaps more discreetly than by others, with less of lurid color and loud lamentation, but that is no excuse for an obviously superfluous performance. It is well that he relieves himself from the suspicion that he has "run to seed" by the excellent tale for which that suggestive phrase makes a title. Here he is in the realm of reality, where his imagination adds force and spirit to the things he has seen and known. Of all his tributes to the great sorrow of the South, none is more profoundly touching.

'Auld Licht Idylls' is full of grave and penetrating humor. The Auld Lichts seceded from the Established Church of Scotland nearly two centuries ago. The smallness of their numbers, ever diminishing, in a way supports their pet doctrine of original sin; to be an Auld Licht one needs to be also an original saint of impregnable austerity. They are a special creation, and though Mr. Barrie cites several instances of cravens coerced into "joining" by unremitting conjugal nagging, a moderate surveillance would surely discover that they were not dyed in the wool. Much of our modern humor is farcical, depending for effect on its gross extravagance, arbitrary and often local. The humor in this series of sketches, incorrectly called idylls, can be felt wherever English is spoken and read. Nobody could miss it, except perhaps an Auld Licht; and as to be preternaturally solemn is one of his abiding characteristics, he would probably read the book through without a smile. Should he suspect irony, he would lay it to a wee bit o' spite, for the author confesses in the first chapter that he is the precentor of the Free Kirk. Mr. Barrie does not deliberately make fun of the Auld Lichts, but treats them with perfect respect and courtesy, dwelling sympathetically on qualities which ought to command esteem. To live in uncompromising righteousness according to John Knox appears to "us others" a futile embittering of daily bread; yet, if we cannot admire all the repression of human desire and the renunciation of pleasure which it implies, we are as far past praying for as any Auld Licht minister could wish.

'According to St. John' is a foolish novel; if it were less so, we might be shocked by the use which is made of certain words recorded by that disciple whom Jesus loved—"Greater love hath no man than this, that a man lay down his life for his friends." The author's notions about morals have never appeared to be conspicuously sound, but since in this story she makes a distinct effort to be virtuous, almost chaste, we observe with regret her confusion about morals, in the widest meaning, in the perception of right and wrong. For instance, when her young person from Virginia, Jean, confesses to the dying Mrs. Farrance that she loves Mr. Farrance, and with agony reproaches herself for wrong done to her friend, Mrs. Farrance bids her not despair, but fetch her a despatch-box, which, being opened, reveals the picture of one whom Mrs. Farrance has ever loved; therefore is Jean exculpated with honor. In due and convenient season Mrs. Farrance dies, and the stricken husband obligingly marries Jean. To convince her of his love causes him some slight embarrassment. He owns up to still loving the late Mrs. Farrance, and, with the air of an infallible casuist, explains that this sentiment does not preclude love for Jean, for, "though my reason tells me that she has gone from me for ever, she is as real a presence to me as the spring about me." To which Jean responds that, though it is strange, she understands, thus making us mourn that she chose to play the fiddle instead of composing treatises on pure reason.

For the distortion of Scripture which impels Jean to make her quietus with a hypodermic needle, the author apologizes, saying that her confused and excited brain gave the words "a personal meaning which they never had." It is gratifying to be assured that Christ was not talking directly at the morbid young lady who so carefully arrays herself for death in a blue cashmere and bronze slippers; but who can picture the confusion of the brain that makes such an utterance the inspiration for such a deed! The nastiness of one person, Mme. Cici, would do credit to any of the French naturalists, and perhaps not one has attained to that perfection in description of brutal depravity, relevant to nothing, purely for its own sake, which is reached in the restaurant scene participated in by the youthful Jean, the disgusting Cici, her faithless husband, and a fair unknown.

'Phillida' Langdon is a child of the setting sun, but so subdued by travel and other kinds of education that no one could ever find her out. Amidst the flower of British aristocracy, she moves a queen. She loves Sir John Lawton and is beloved by him, a gentleman of long descent, exceptional personal beauty, and an unfortunate aptitude for loving "you, only you, for ever." Sir John's inexact method of expressing his emotions proves his undoing, for, when Phillida, overlooking the accident of an existing wife, is ready to cast in her lot with his, the wind blows her a letter written by another of his eternal loves. Thus disillusion comes to her, but not the force for renunciation, which is left for Sir John. At the critical moment, he is seized with remorse for an unaccomplished wrong and sails away. We feel that it was rude in him to leave a lady in the lurch, and rejoice that she plucks up spirit to love again more wisely. The American author has done 'Phillida' quite as well as an English lady-novelist could. Scrupulous attention is paid to all the small usages of high society, without that emphasis which, to use our own phrase, often gives the American away. The incidents are neatly run together; descriptions form gentle interludes, and the people, who have no sort of serious occupation, are good-natured as they well may be, and no more brilliant than is consistent with good form. When the author takes a plunge beneath the surface of things, her prophetic gloom might well cause the British aristocracy to shake in its shoes. She says that the class is doomed, and, when picturing its extravagance, offers us a metaphor about the brightness of the candle's last flicker and the brilliancy of an expiring flame.

Perhaps it is because familiarity breeds contempt that a Queen seeks literary models among commoners. In 'Edleen Vaughan' there is no person of title or of any pretension to ancestry excepting a benevolent bard, Llewellyn. The novel has a theme, maternal passion. However sensational or extravagant the incidents may be—and many are superlatively so—they are of value for illustrating the overwhelming, misplaced love of Edleen Vaughan for her ruthless son. The eternal sacrifice of women for their children is so common a spectacle that this woman's follies and sins, committed for her son's sake, are not improbable nor inconsistent with a gentle, loyal, and truth-loving nature. Fortunately, few women have so bad a son as Tom. His career is a "carnival of crime." He lies, steals, seduces, forges, and murders. Wherever there is anything unlawful going on, he is sure to be in it. He is a good-looking young man of agreeable manners, yet, if burdened with only half as many crimes, would be thoroughly detestable. The sense of what is conclusive for good or bad in character (a sense that seems dead in many good women

when they become novelists) shines clear and strong through the tangle of the plot; and in all the people, including the witch and the bard, human traits not visible to a superficial observer are revealed. It is a pity that the novel had not been cast in simpler lines, and that the author's literary training and taste are not so sound as is her sense or so true as her feeling. It would be difficult to write worse English than the prose; the songs and ballads attributed to Llewellyn have pretty sentiment and some spirit, and the expression is appropriately simple.

'Blanche, Lady Falaise,' is the sort of character Mr. Shorthouse delights to draw—that for which his pure, rather elegant style is peculiarly suited. Seeing life through the medium of an idealistic, spiritual nature, the sorrow which inevitably comes to her is keen, lasting, and pitiful, out of proportion to its cause, viz., disappointment in the character of a man who never was what she imagined him to be. Faced year after year with the facts of Damerle's existence, few women could have maintained an illusion about him—none, indeed, except a Lady Falaise exactly formed to fit the situation. The position of Lord Falaise, constantly reminded of his wife's infatuation for the man who had jilted her, has ludicrous features, but they disappear in contemplation of his patience, loyalty, and generosity. He is in every aspect noble, and if, as one of his friends remarks, he did believe that George, 27th Viscount Falaise, represented the supreme result of creative effort, he was not so very far wrong. The representation of the vigorous, popular, unprincipled preacher Damerle shows how flexible a really fine style may be, how equal to any emergency. The impression made by this short novel is the very best possible to a work of fiction: we feel that should we live for ever, we cannot pass an hour in better company.

The date of the action of Mr. Morris's 'Story of the Glittering Plain' is prehistoric, the method more casual, and the expression more archaic, than Malory's. If one were shut up with the book for several weeks in jail or quarantine, to follow the adventures of Hallblithe of the House of the Raven in quest of his beloved of the House of the Rose might provide a melancholy distraction. In such isolation and idleness one might invent an interpretation of the allegory, if allegory there be, or, at least, arrange a *précis* of events, and with its aid compose a tale no less rational than that of "The Land where the Jumblies Live." In default of any other *raison d'être*, we imagine that this artistic combination of imitation vellum, parchment, and antique lettering may be intended to take a place with other bric à brac on a drawing-room table.

Canon Farrar's 'Darkness and Dawn' is such a big book that the average reader may disapprove of it on sight; the average reviewer attacks it with a feeling of positive enmity against the author. The first chapter does not modify prejudice. The succinct description of the palace of the Cæsars, its splendor and its deathless shame, suggests a well-written text book; the reflections of Agrippina Augusta, revealing, as they do, a marvellous instinct for crime, confuses the mind accustomed to regard fraud, torture, and murder as slight obstacles to the achievement of desire. With the entrance of Nero the action begins, and apathy gives way to interest, which holds and increases even to the end of the sixty-sixth chapter, page 556. The author warms to his work, sweeping the enemy along, never letting go his hold until he has converted him into a stanch friend and most respectful admirer. Scholarship, dispassionate judgment, and a clear understanding of how much human character is affected by century and circumstance, are some of the rare yet requisite qualities which make an acceptable historical novelist. Canon Farrar displays all these with a skill in selection which lends freshness to the picture of an era very well known to many schoolboys, and not forgotten by those older folk who, at fifty, are vain of a knowledge which was ignorance at fifteen. Nero is, of course, the central figure, and, though he has not found his apologist, his shade cannot reasonably complain of injustice. Had the last of the Julian line been permitted to sing, fiddle, and write poor verses in obscurity, he would doubtless have been known to a limited circle as "a bad lot," but he would have escaped an infamous immortality. In the avowed object of the work (to illustrate the causes which led to the triumph of Christianity) there is a suggestion that some new light may be thrown on a subject which has been discussed through many centuries; but all that we see is the new faith rising on the ruins of the old, and there is no cause so obvious as that the faith which gave hope and comfort to the poor, the oppressed, and the sorrow-laden was bound to hold fast and to make its way by the ultimately irresistible force of the need of the majority.

JAPAN, CHINA, AND TIBET.

Jin riki-sha Days in Japan. By Eliza Ruhamah Scidmore. New York: Harper & Bros.

New China and Old. By Ven. Arthur E. Moule. London: Seeley & Co.

The Land of the Lamas. By William Woodville Rockhill. New York: The Century Co.

In the library of modern books on Japan, now numbering hundreds, even in English alone, the works of women writers are not least. In two instances, those of Miss Isabella Bird and Miss Alice Mabel Bacon, they may be ranked among the best. In her views of Japan, taken mostly while riding in a man-power carriage, Miss Scidmore does not pretend to look very far below the surface. Hence her book will probably not live much longer than the time taken to write it. It is a bright, lively, and entertaining picture of Japan in its transition state from a feudal and hermit nation to a modern State full of people, who have voluntarily taken upon themselves the problems of adapting western civilization to essentially Asiatic conditions. How the face of the country and populace are being graven by the wrinkles of experience is Miss Scidmore's congenial task to tell, and her story is told in pleasing style. Her range of travel and observation was limited almost entirely to central Japan. Tokio, with the circle usually described in the guidebooks; Fuji, Kamakura, Yokohama, and Nikko; Kioto, with its ring of neighboring cities; and the Tokaido, with its rosary of charming places famous for curios, are described in detail, the farewell view being from Nagasaki. Confined thus to the beaten tracks in Japan, the book is in form an indexed and illustrated octavo of nearly four hundred pages. The chief element of freshness in it is the author's sympathetic knowledge of the folk-lore and history of the land and people, derived from the writings of those authors who have illuminated by genuine research the life beneath surface and appearances. To these the author expresses gracefully her obligations.

As solidly handsome in outward form, as well as in interior contents, as Miss Scidmore's book is both externally and internally pretty, is Mr. Moule's 'New China and Old.' It is the result of thirty years' personal observations as an agent of the English Church Missionary Society. In form it is a well-made London book of over three hundred pages, beautifully illustrated and well indexed. With the white light of close and prolonged observation, and after many rose-colored impressions have been corrected by time and experience, the venerable ex-missionary writes with singular clearness and sanity, yet with kindly sympathy. His first chapter is a philosophical analysis of the causes of the amazing power of cohesion in the Chinese Empire. He then treats of life in an inland city, in an open port, in the country, and in the house of a Mandarin. He discusses ably and luminously not only Buddhism and Taoism, especially as they affect Chinese life, but also ancestral worship, superstitions, language and literature, and Christian missions. The clear thought and power, born of long familiarity, make these chapters very attractive reading to one who thinks of the Chinese as serious beings and not as curiosities. The author, after surveying the past history and present resources of missionary effort, acknowledges that as yet Christianity is hardly perceptible in China, when compared with idolatry and unbelief. Nevertheless, his experience has wrought hope, and hope that makes him not ashamed to ask younger men to follow in his faith and labors. For a grave, judicial, unenthusiastic but thoroughly trustworthy estimate of China, we know of nothing so worthy of recommendation as this book.

In reading Mr. Rockhill's book on 'The Land of the Lamas,' we not only turn our thoughts to the high places of the earth, but reach the highest range of good bookmaking. In external array the volume advertises attractively the resources and power of the Century Company. The 400 pages of thick paper and neatest print are well furnished with fresh illustrations, most of them from photographs. The text and appendices, with a rich aftermath of learned and suggestive notes, form the garnered fruit of long research, exploration, and literary toil. Two maps show the countries traversed and the author's routes. The sub-title is 'Notes of a Journey through China, Mongolia, and Tibet,' but only a small portion of the work is devoted to the well-trodden ground of China proper. In the bulk of the book, we have described, with the always interesting element of personal adventure, the less known portion of the Chinese Empire.

The personality of the author lends piquancy to the flavor of the book. He illustrated by his scholarly acquirements the best traditions of the American Legation in China—too little in the gross, it must be confessed, but brilliant with a few names that may be mentioned along with S. Wells Williams. Mr. Rockhill also accompanied our naval expedition to Corea in 1871 as Chinese Secretary to Minister Low, and fortunately escaped scatheless from the jingall-balls. We have looked in vain, however, for any detailed comparison between things Tibetan and Corean, notwithstanding that Dallet and other French authors insist that Corea borrowed Buddhism quite directly from Tibet. It is certain also that the "Reformed" Buddhists in Japan locate much spiritual treasure in the central Asian plateau. While, however, Mr. Rockhill in this respect

illustrates the modesty of a scholar—since his sojourn in Corea was only thirty-five days, and this on the deck of the frigate *Colorado*—he is rather cruel to the Theosophists. He tells us how he informed the lamas of the great interest felt in their country, tenets, and personnel by the modern esoteric Buddhists—presumably of Boston, London, and other places distant enough to lend enchantment. The lamas of Serkok were immensely amused, declared that none of the miracle-performing saints and sages of primitive ages were now living or had lived since ancient times. These Tibetans, who should have been genuine Mahatmas, looked upon the modern school of esoterists as "rankly heretical, and as something approaching an imposition on our credulity" (p. 102). We fear that Mr. Rockhill's book will be placed on the Index Expurgatorius of the Reformed Japanese, as well as of the European and American Buddhists.

Mr. Rockhill's journey was made in 1888 and 1889, after years of preparation in the study of Chinese and Tibetan, but his route included, in reality, only a comparatively small portion of the eastern plateau. Nevertheless, his book is not the hasty product of a tourist, but a rich contribution to the literature of science and exploration. Seven hundred miles of the journey was on ground never before trodden by a white man, as far as known. Except the journey of Huc and Gabet to Lassa in 1845, this journey of Mr. Rockhill is probably the most difficult and dangerous executed in Asia in the course of this century. Unlike the gay and garrulous Abbé Huc, who wrote with Gallic fancy and embroidery of facts, the American author has penned his narrative in the interest of accuracy and not of sensationalism. When Huc wrote in several instances that "We were met at the gates by the authorities, who granted us freely the hospitalities of the city," the average reader would not suspect that the Abbé suffered imprisonment.

Though Mr. Rockhill does not allow to all Tibet a population of over three and a half millions, yet he demonstrates that the natural wealth of the plateau is great. It is more than probable that he will be followed soon by the pioneers of commerce and believers in a stalwart policy for the opening of trade routes. Tibet is perhaps the last country still shut off from the influences of modern civilization, but, like China, Japan, and Corea, its invisible but lofty walls must fall. In spite of the author's modest plea in the preface that his purpose was to furnish facts rather than to "turn out a well-finished bit of literary work," his pages have a genuine charm. The Tibetans, despite the lama despotism and superstition, are wonderfully human. The supplementary notes discuss many points of interest in ethnology, comparative religion, and primitive culture.

Essays on English Literature. By Edmond Scherer. Translated by Geo. Saintsbury. Charles Scribner's Sons. 1891.

Edmond Scherer is the most brilliant foreign writer who has lately criticised our literature, and since Matthew Arnold, by his review of one of these essays, made their author widely known among ourselves, he has been highly regarded. Mr. Saintsbury's translation, therefore, will be very welcome to many who would like to know what M. Scherer had to say upon other authors than Milton. In this volume we have, besides the paper on Milton, essays upon Wordsworth, Sterne, Mill, Carlyle, Shakspere, Beaconsfield, Taine, and George Eliot. M. Scherer obtained his introduction to so wide and thorough an acquaintance with our language by the fortune of a partly English education. His understanding of it seems to be complete, and his range, at least in modern books, is large. He was besides well furnished as a critic, and brought to his subject a thoughtful mind, familiar with modern ideas and trained in modern methods. If any one not of our blood were capable of appreciating our literature, certainly he stood in a position to do so; but we think that what most strikes the mind is less his power of appreciation than the distinctness with which he makes out defects.

It is to be expected, of course, that when national works are brought before the world's tribunal, they will be measured by the standard common to all nations, and it is plain that the greatest works, those of broadest and most direct human sympathy, will gain thereby. On the other hand, those works which are characteristically national, those which are most intimately bound up with the special temperament and historic genius of the people, will suffer. The sympathy, the *rapport*, which exists between an author of genius and his countrymen is just the element which compensates for his defects as determined by the world's standard; and therefore the critic who lacks the temperament of the race by which alone the deepest insight is possible, is disabled from an appreciation of the value and meaning of national books to their own people. It seems to us that this is the reason why M. Scherer, in writing of Milton or Wordsworth or Sterne, varies essentially from any critic of the native strain. His keen analysis of 'Paradise Lost' is unexceptionable from the point of view of a nation which never felt the passion of Puritanism; his exposition of Wordsworth is not to be found fault with on the side of intelligence; but in both instances there is just that lack of temperament which prevents his appreciating that compensation which we just spoke of, made by these poets to their own people by virtue of the intimacy of their thought with the nation's. Their worth is heightened thereby above what it would be adjudged by a universal standard. With Sterne the case is somewhat different. Scherer overestimates him because sentimentalism was more developed in France than in England, and because those defects in Sterne, both of taste and character, which are most felt by an English reader, are less obnoxious to the Gallic mind. Upon George Eliot he lavishes his praise; but, as Mr. Saintsbury remarks, there were peculiarities in his own experience, as one who had abandoned his faith, which made her thoughts and her characterizations more near to him. Shakspere is a universal genius, and yet Englishmen have never been satisfied with foreign criticism of their author, except upon the side of learning; and M. Scherer himself in his two admirable essays writes best when he confines his remarks to the mistakes of others. Again, in the essay upon Taine, he is dealing rather with the method than with the special matter of English literature to which it was applied. He makes a protest against that critical theory which would explain all things by race and environment, and which neglects personality as a main, if not the chief, factor in creation. In those portions of the volume in which he himself traces the descent of English poetry in this century, admirable as is his criticism of individuals, he does not, to our mind, bring forward anything which is not perfectly obvious.

In pointing out these limitations, which so excellent a critic illustrates the more forcibly by virtue of his position, we have reference only to the general character of the work. Its usefulness lies very largely in the clearness with which it discriminates what is always and everywhere good in literature from what may be rejected by other nations, but nevertheless, though the author does not say so, may be highly valuable to the nation which produced it. No one can read such lucid expositions of the structure and methods of a great author's works without clarifying his rational judgment. M. Scherer, also, is particularly rich in thoughts by the way, in sidelights, and in axioms and judgments which belong to pure literature, and are as applicable in one land as in another. The temperate use which he makes of the historical method is in itself a lesson of restraint. Though he is not, in our judgment, a great critic in the sense in which Sainte-Beuve was, and has not the subtlety and fine grain of truth that distinguished Lowell, he stands, nevertheless, *longo intervallo*, beyond other foreign critics, and is one of few among them whose decisions or impressions respecting our literature deserve to be weighed.

The Princess Tarakanova. By G. P. Danilevski. Translated from the Russian by Ida de Mouchanoff. Macmillan & Co.

Lacking a great historical novelist, Russians have been content, for many years, to award to Danilevski all the praise which is his due in this field of work, and possibly rather more than his due, if we compare his achievements with any recognized standard. Danilevski's method is well illustrated in this volume which a Russian woman has translated in an admirable manner. 'The Princess Tarakanova' is not, properly speaking, a sustained narrative, but a series of pictures, wherein the personages are effectively grouped. It resembles a sensational drama "in two acts and eight tableaux." That the author arranged his tableaux cleverly is undeniable; and so thoroughly aware of his strong point was he that, not infrequently, he introduced what he considered fetching situations, without much regard to whether they were called for by what preceded them, or whether they exercised any influence upon what followed. A fine example of this procedure is offered by chapter xix. of the present volume, entitled "The Historiographer Miller." This trick, combined with a general abruptness, has had much to do with the inferior rank which Danilevski has always been consigned to, in any question of purely literary value. However, the gulf which separates him from the really great and universal geniuses of the Russian school is so patent to any well-informed reader that it need not be enlarged upon, further than to convey a hint of the place which the author has held at home, and so forestall possible misconceptions of motive in alluding to it, and animadversions of persons who do not admire the Russian school in general, and who would assuredly find a ground of attack upon it were he represented as being first-class in his native land.

The Princess Tarakanova, so Danilevski assumes, was really the daughter of the Empress Elizabeth and her morganatic husband, Count Alexis Razumovsky, which is the view best adapted to pathetic treatment. How the Princess has come to be brought up abroad is not disclosed, but, at the time the story opens, she is planning a visit to Russia, with the intention of taking the throne from Catharine II. Count Alexis Orloff entices her on board the Russian fleet at Leghorn, and she is carried a prisoner to Russia, where she dies

shortly after of consumption, in the fortress at St. Petersburg. The translator, in a very interesting preface, gives the opinion of the best historians on this case, which is that the Princess was a pretender, being a native of Prague or Nuremberg, who was known under different names in all the capitals of Europe for ten years before she undertook her expedition to Russia, and who was distinguished for her great beauty (and probably by a likeness to the Empress Elizabeth), as well as for her riotous conduct. Russia was spared the calamity of a successful invasion by this person, whoever she may have been, but the frontispiece, taken from a famous picture in Moscow, depicts the death attributed to her by popular legend, though not by recorded facts—from an inundation of the Neva. This frontispiece is the most noteworthy of the four well-executed illustrations with which the book is adorned, that labelled "Count Alexis Orloff" being in reality the portrait of his brother, Count Grigory, and the portrait of Catharine II. being one of the most unsatisfactory likenesses of her which it was possible to select out of the mass of beautiful and characteristic specimens in existence. It might stand for any one else as well.

Brief as is the episode on which the book is founded, slight as is the story, and conspicuous as are Danilevski's peculiarities, it furnishes very interesting and agreeable reading. Easy to peruse, as the famous historical novels are, it is easy to forget, as they are not.

Bishop Wilberforce. By G. W. Daniel. Boston: Houghton, Mifflin & Co. 1891.

For some inexplicable reason, the American publishers of the series "English Leaders of Religion," of which this volume is the third, make no sign on the individual volumes that they have any serial standing. But some such sign is necessary to justify this sketch of Bishop Wilberforce in addition to the full biography of him and Dean Burgon's sketch already within reach. Mr. Daniel's work is avowedly a composite photograph of his predecessors' books, and it has the hazy adumbration which the composite photograph has in most cases. In his anxiety to gloze over everything disagreeable, the writer has gone far to make an exceedingly dramatic subject dull and spiritless. Thus, for example, there is not a word about the secession of the Bishop's brothers Robert and Henry from the English to the Roman Church, though the event must have been a crucifixion for a man of Samuel Wilberforce's principles and prejudices. The part played by reaction in religious experience gets a capital illustration from that secession and Samuel's High-Churchism, seeing that their father, the great anti-slavery reformer, was, with Zachary Macaulay, one of "the Clapham Sect" of evangelical religionists. Happily, Samuel inherited something from his father's humanitarian zeal. The "Ten Hours' Factory Act" found in him a successful advocate on his first entrance to the House of Lords, and it was a glowing anti-slavery speech in 1840 that first made him known to Prince Albert and secured for him the royal favor until he sacrificed it in the Hampden controversy, six years later. In general, all things progressive were distasteful to him, so that one of the surprises is to find him a member of the "Sterling Club," "so called," says Mr. Daniel, and this is more surprising, "because its members were expected to be free from the unrealities that cling around those who are fettered by prejudice and conventionality." It was so called because John Sterling was the leading spirit.

When Wilberforce became Bishop of Oxford in 1845, Newman had just gone over to Rome, and the Hampden controversy, in which Newman had been a principal actor in 1836, was soon to enter on its second stage. The position was a trying one, and the success of the Bishop was not remarkable. He was a High Churchman, in both ecclesiastical theory and form, quite independently of the Tractarian movement, without being one of the High and Dry from whom Newman hoped as little as from the Evangelicals, especially as they were Erastians almost to a man. Wilberforce drew off from Newman more and more as the Tractarians developed their Romanizing tendencies, until Newman wrote him that his matter was not acceptable to their organ, the *British Critic*. But the average Churchman could not be expected to discriminate, and what with the suspicions of Low Churchmen and Broad Churchmen on the one hand, and of the Tractarians on the other, he often found himself between the devil and the deep sea. His theology and criticism and science were all of the most conservative and reactionary character. His theories were a matter of subjective speculation with which the facts must somehow be made to agree; if they would not, so much the worse for the facts. It could hardly be expected that the Bishop's eulogist would give us an account of his most notable discomfiture in 1860, when, at a meeting of the British Association, he made an eloquent assault on Darwin's 'Origin of Species,' and, asking Huxley whether he was related to an ape on his grandfather's or grandmother's side, received an answer not less memorable than Dean Stanley's to those who sneered at Bishop Colenso in Convocation. "If there were an ancestor," said Huxley, "whom I should feel shame in recalling, it would be a *man*—a man of restless and versatile intellect, who, not content with an equivocal success in his own sphere of activity, plunged into scientific questions with which he has no real acquaintance, only to obscure them with an aimless rhetoric, and distract the attention of his hearers from the real point at issue by eloquent digressions and skilled appeals to religious prejudice."

If Mr. Daniel was bound, as a loyal eulogist, to say nothing of this merited rebuke, he need not have been so careful in general to obscure the individuality of his hero. What he has partly shown us is that Wilberforce was the "Remodeller of the Episcopate,' a man who meant business, and not merely careless ease, nor even "the quiet and still air of delightful studies." He was an overseer of his clergy, and cracked his whip over them in a persuasive fashion. The book has no intellectual and little moral interest. It moves entirely on ecclesiastical lines. We find ourselves sighing for a little of that "want of tact and judgment" which made the Bishop's biography by Canon Ashley and R. G. Wilberforce an entertaining book. His witticisms that are reported go but a little way to justify his reputation as a fellow of infinite jest. The best is the best-known—his answer to the lady who boldly asked him why he was called "Soapy Sam." "Because, madam," he answered, "I am always getting into hot water and always come out of it with clean hands."

An Introduction to Spherical and Practical Astronomy. By Dascom Greene, Professor of Mathematics and Astronomy in the Rensselaer Polytechnic Institute. Boston: Ginn & Co. 1891. Pp. viii, 150.

In this small and convenient volume is contained nearly everything of astronomy that an engineer will need. Unfortunately, the few omissions, such as precession, aberration, parallax, and refraction (the last not quite excluded), with the few excessive abridgments, are of radical importance. By adding two more sheets to the book, so as to include sufficiently these subjects, and amending it in some other respects, it may in a future edition be rendered a work of exceptional merit. Professor Greene, in his preface, by way of excuse for the omissions, says: "It [the book] claims to be no more than an introduction to the subject, and aims to present its first principles in an elementary and practical form for the use of beginners." But, in the first place, a student has no time to go through such a subject as astronomy twice; and it is not practical teaching to omit any practical topic in such a branch, to be taken up at a later period. In the second place, the class of students resorting to Troy, though they be beginners, must not be put off with any inferior presentation of a science. Indeed, logic and completeness are of even more importance in elementary than in advanced treatises. A book such as this might easily have been, which should touch upon every necessary matter with logical severity, giving all that is needed and excluding all that is superfluous, would serve as an intellectual tonic for the young man, and operate in some degree as a corrective to the dissipating and demulcent influences of other modern text-books. Besides, in any subject, but above all in mathematics, it is a great advantage to keep the treatise which has been deeply conned, but which has been partly forgotten in after years, at one's elbow as a book of reference, and for that reason elementary works should be as nearly tabular in form as the nature of their subjects will permit, uniting the utmost brevity with completeness in certain systematic limits.

Prof. Greene's descriptions of instruments and the ways of using them are pretty good, but not full enough for practical needs. Thus, it is said that the adjustment of the principal focus of a transit instrument "may be verified by moving the eye so as to detect any parallax existing between the star and the wire." This does not sufficiently emphasize to the beginner the indispensableness of this operation; nor are the precautions to be observed in performing it pointed out. Nor is anything said about ascertaining the fixity of the parts of the telescope, the collimation of the objective, etc. Nor is the reduction of time observations set forth and illustrated in a practically adequate manner.

The mathematical deductions throughout the book are given with commendable clearness and brevity; but the treatment of the foundations of the method of least squares is decidedly antiquated. The principle of the arithmetical mean is assumed as self-evident. Such reasoning will not go down in our day, and to teach boys to be satisfied with it is a grievous wrong. It may, no doubt, be said that a book intended for boys who seek instruction solely as a means of livelihood should not notice mere speculative doubts, and should sedulously avoid opening temptations to purely intellectual engrossments, the joys of which their situation in life must forbid; and there is some truth in this. But there can be no advantage to anybody, in our swiftly progressive age, in being unable to distinguish bad reasoning from good. Good logic is the most fundamental thing which any kind of student can possibly be set to acquire.

The Development of Theology in Germany since Kant and its Progress in Great Britain since 1825. By Otto Pfleiderer, D.D., Professor of Theology in the University of Berlin. Translated, under the Author's supervision, by J. Frederick Smith. London: Swan Sonnenschein & Co.; New York: Macmillan & Co.

THIS huge octavo is the second volume of a "Library of Philosophy"; the first was Erdmann's 'History of Philosophy.' It is not, the general editor informs us, a translation in the ordinary sense, there being no German book to match; the translation is from Dr. Pfleiderer's MS., and has been revised by him. It is difficult to understand why the book was made and how Dr. Pfleiderer was persuaded to make it, for it is nearly all contained in vols. i. and ii. of his 'Philosophy of Religion,' of which there is an English translation. That begins with Spinoza, while this begins with Kant, and in general it is fuller than this, especially on the philosophical side. Where it is less full is in regard to the later developments of theology in Great Britain. To these, 100 pages are given in the present volume, and are its least valuable part. The theologian or clergyman must indeed be ignorant who does not know as much of recent British theology as is here set down. Doubtless Dr. Pfleiderer's judgment on its different men and books is interesting, but the information would have been much better addressed to German readers. Tulloch's 'Movements of Religious Thought' is given as one source of the author's information. It is a source much fuller than his stream. To find all our fault before proceeding to our praise, the length and breadth of the book are so great in proportion to its thickness that its contents might easily have been put into a duodecimo of 500 pages in good type, and its mechanism could not have been worse contrived for the reader's convenience. The index is a bare list of names; the table of contents is extremely general, and the running titles of the pages are no more analytical than these.

When every deduction has been made, the book is full of interesting matter. If Dr. Pfleiderer himself does not write in an easy, pleasant, streaming style, his translator has made it that for us. In Book i. we have six chapters on "The Basis of Modern Theology in German Idealistic Philosophy"; one each given to Kant, Herder, Schleiermacher, Fichte, Schelling, Hegel. The exposition is admirable; the manner is not polemical, but sympathetic, taking every subject at his best. "I dislike above all things," says Dr. Pfleiderer, "that method of writing history which presents nothing but the writer's subjective judgment of people, without so much as allowing them to say what their own opinions and views are." To this ideal he is true from first to last. He finds Kant lacking in the courage of his convictions in the Critiques of both the Pure Reason and the Practical, and most germinal and fruitful in his 'Critique of Judgment,' the speculative conception of which—a teleology based on external and internal experience—"runs like a golden thread through the whole of post-Kantian philosophy."

A second book treats "The Development of Dogmatic Theology under the Influence of Idealistic Philosophy," and a third, "Biblical and Historical Theology." The most noticeable points in the latter are the cordial acceptance of the results of Graf and Kuenen and Reuss which assign the priestly portions of the Pentateuch to the fifth century B. C.; the damaging estimate of Ewald, which discredits Dean Stanley's 'Jewish Church,' so largely based on Ewald; and the generous and hearty recognition of Strauss, especially in his new 'Leben Jesu' of 1864, which is too lightly passed over by the majority of English readers. In the concluding book, on British criticism and theology, nothing is more refreshing than the estimate of Westcott's 'Introduction to the Gospels' as belonging "to that class of apologies which, by their learning and air of superiority towards the main arguments of the critics, and occasional minor concessions on secondary points, are accustomed to make a great impression and really perform the service of retarding the progressive theological spirit of an age." If anything could better show than this the freedom of German as compared with British orthodoxy, it is the comparative estimate of the anonymous 'Supernatural Religion,' and Lightfoot's answer, which is set down as no answer at all to the significant part of his opponent's work. In conclusion there are words of lofty praise for Martineau and for Dr. Edwin Hatch's 'Organization of the Early Christian Churches,' the work of one too early lost to Protestant theology.

Principles of Political Economy. By Charles Gide, Professor of Political Economy in the University of Montpellier, France. Translated by Edward Percy Jacobsen. With an introduction and notes by James Bonar. Boston: D. C. Heath & Co. 1891.

IT is the fashion to describe writers that hold, or are supposed to hold, certain views in political economy as the "Orthodox School," and it cannot be denied that in France the title is not altogether inappropriate. The distinguished economists of that country have generally shown a disposition similar to that of the champions of religious orthodoxy, practically assuming that they are in possession of the truth, and regarding the propounders of new views as schismatics or heretics. While it may be true that the fundamental theories upon which their system is framed have been conclusively established by experience, there is ground for complaining that they have followed the "high *priori*" method rather too exclusively. The deductive method, as defined by Mill, is indisputably that appropriate to such a science as political economy, but they have employed a method that is more suitable to geometry than to sciences having to do with living beings. Hence there has arisen among them a certain haughty and exclusive spirit, as becomes the possessors of a somewhat esoteric doctrine, and they seem of late years to have been almost without influence upon the governmental policy of their country.

Against this state of affairs Prof. Gide's book is a protest, although a very mild and good-tempered one. Upon examination it does not appear that he has any new theories to propound, or, indeed, that his results differ materially from those reached by most economists of ability. His position, as Mr. Bonar says, is substantially that of the "classical school," if we substitute evolution and social union ("solidarity") for finality and individualism. But his work is marked by a generous breadth of view, taking in not only what ought to be, but what is, giving, as the author says, their due share of justice even to notions that do not command our assent, upon the principle of Shakspere's maxim:

> "There is some soul of goodness in things evil,
> Would men observingly distil it out."

As a result we have a review of nearly the whole field of economics, comprehensive, appreciative, and generally perspicacious. We cannot say that the author has in every case understood the strength or discerned the weakness of the positions that he criticises, but he has at all events kept himself free from bias, and the matter of his book is in refreshing contrast to the arid generalities that have usually constituted the bulk of most French text-books of political economy. The more recent discussions that have engaged the attention of professors of the science are intelligently stated, or their results summarized, and it is evident that the author's reading has been extensive. Moreover, his style is vivacious and agreeable, occasionally even eloquent, having, in fact, those elements that make the scientific treatises of the French so easy to read. It is not surprising that the book should have reached a third edition in France, or that it should, in Mr. Bonar's words, help many a young Frenchman to turn his attention to economic studies.

Nevertheless, we are not convinced that the economic literature of our own language is substantially enriched by this translation. There is nothing in the book that is not to be found in treatises with which we are already provided, and Prof. Gide is very far from having mastered his subject. He denounces as altogether a sophism the notion that cost of production and value stand to one another in the relation of cause and effect, yet he presently declares that the market value of a product that can be multiplied at will is the minimum cost of production. Indeed, his language upon this critical subject of value is generally confused. A like ambiguity may be observed in his use of the word "wealth." The argument that capital is not the result of saving is a mere quibble. Absurdly unqualified statements are common, such as that without legislative intervention not only the forests of Europe would have disappeared, but the art of working in wood also. Still more preposterous is the assertion that "mowing-machines, threshing-machines, reaping-machines, do not increase the crop of corn by one grain," to which it is added that mechanical discoveries virtually do not affect in the least the chief expenses of the workman, viz., food and housing.

We fancy that in such statements as these we detect the influence of the physiocrats, and, in spite of his critical attitude towards the classical school, Prof. Gide is not altogether free from its weaknesses. He does not hesitate, occasionally, to dismiss an argument with an arbitrary declaration of his judgment, and is prone to intermingle speculation with reasoning. Sometimes these speculations are almost puerile in their character; and, lest our readers should think our criticism too harsh, we will give a specimen of them in concluding. It occurs at the close of a grave discussion of money, under the title "The Decadence of the Precious Metals":

> "But now the attributes which raised them to their exalted station seem to be dropping off, one by one, like the jewels from off a diadem. Supplanted as instruments of exchange by the improvements effected in commerce and in credit, despised as articles of luxury by the fashion of our day, it may be that, after having been so long the very type of wealth, gold and silver are destined to be one day erased from the catalogue of riches!"

Den Struensee'ske Proces. Af N. Lassen. Særtryk af *Tidsskrift for Retsvidenskab.* Copenhagen. 1891. 8vo, pp. 219–303.

PROBABLY no single episode in the political history of Denmark has been so fully and so variously discussed as the brief ministry of Struensee and his relations to the unfortunate Queen Caroline Mathilde. Writers of almost every nationality have attempted to prove,

now the Queen's innocence, now her guilt, and Struensee's conduct has been subjected to the same severe scrutiny. During the first years after the catastrophe of 1772, few in Denmark doubted the guilt of both parties. Later a reaction set in, especially as regards the English Princess, the clearest indications of which are to be found in the pathetic poem of Ploug and the romantic tales of Ewald and Carl Bernhard. Caroline was represented as a persecuted saint, succumbing finally to the intrigues of her enemies, led by the Queen Dowager, Juliane Marie. In one of the latest works on this subject, Blangstrup's 'Christian VII. og Caroline Mathilde,' already noticed in these columns, the cause of Caroline's unfaithfulness, if unfaithful she was, is graphically shown in the detailed account of the King, the most despicable figure in the whole Danish line. While this and all earlier works are concerned either with the historical or the romantic features of the story, Mr. Lassen's treatise takes up Struensee's case from the purely legal standpoint, with the object of giving "an answer to the question of how far the sentence and punishment inflicted upon Struensee were just."

It may be well, before discussing the work, to recall briefly the events which led up to the trial. Johan Frederik Struensee was a German physician, son of the Bishop of Altona, whom Christian VII. had met on his travels in 1768 and appointed his medical attendant. The clever young German, for he was only thirty at this time, soon acquired a great influence over the weak monarch, whose early dissipations had entirely unfitted him for the conduct of state affairs. In September, 1770, the elder Bernstorff, who, as Minister of Foreign Affairs, had effected many important reforms, was removed from office, and in December of the same year the Privy Council, after having been deprived of all influence, was finally abolished, the power being concentrated in the Royal Cabinet, over which Struensee had full control. On July 14, 1771, the famous Cabinet order was issued by virtue of which the favorite obtained practically absolute power. During the succeeding months, one extreme reform followed another, many of which were of such a character as to gain their author numerous enemies both at court and among the people. His supposed relations to the Queen hastened his fall, and on the morning of January 17, 1772, after a court ball, the Queen and Struensee, together with the latter's confederate, Enevold Brandt, were seized by order of the Queen Dowager and Prince Frederick and thrown into prison. The Queen was confined in Kronborg until after her divorce, when she was taken to Celle in Hanover, where she died several years later. Struensee and Brandt were tried by a commission composed of some of the most prominent jurists of the time, and, being found guilty of having inflicted injury upon the King, were, in accordance with the law regulating such cases, condemned to lose their right arms and their heads, and their bodies to be quartered. The execution took place on April 28 in the presence of a large multitude.

After a brief introduction, in which he defines the scope of his work, Mr. Lassen proceeds to take up in turn each of the five points into which the accusation resolves itself, the first of these being Struensee's relations to the Queen. Unfortunately, the original papers referring to this portion of the trial have never been thrown open to the public. During the lifetime of the late Queen Dowager, who was a granddaughter of Caroline Mathilde, this was of course out of the question, and since her death the authorities have preserved the same secrecy. As, however, the chief items are known on excellent authority, the loss is not as great as it might seem. Mr. Lassen expresses no doubt whatever of Struensee's guilt in this matter. He gives satisfactory evidence of the improbability that his confession was obtained by force, and asserts in addition that the circumstantial evidence against him was sufficiently strong to condemn him in any court. Of Caroline's supposed death-bed assertion of her innocence Mr. Lassen makes no mention. On the question of the justice of the sentence under this head our author agrees with the ruling of the court, giving reasons which the limits of this article will not permit us to repeat, but which are certainly sound. No less certainly, in their endeavor to ruin Struensee by the introduction of this charge, the King's immediate relatives lowered the reputation of King and country in a most shameless manner. Ordinary tact and delicacy would have suggested a total ignoring in public of this whole question.

The second and no less vital point is the accusation that Struensee had usurped and abused the State power in effecting changes, notably the abolishment of the foot-guard, without the consent of the King. But, as Lassen pointedly remarks, "this decision is defensible only on the supposition that the King, by reason of his insanity, was incapable of forming sensible resolutions." Of this, however, there is no mention in the Court proceedings. On the contrary, the King is, after the fashion of the time, referred to in the most flattering terms. No absolute proof even is given that Struensee acted without the formal consent of the King. The arguments of the commission with regard to Christian's power to make changes that conflict with the letter of the law, are shown by Lassen to be wholly illogical, since, under the law of 1660, the King was raised above all such considerations. In view of this, it is hard to understand Lassen's statement that "if any one should draw the conclusion that Struensee was unjustly sentenced, I believe that this conclusion would be very premature." For we must regulate our judgment by the attitude of the Court towards the King, and not by the real mental state of the latter. Having been declared so excellent a ruler by this body, the King's capacity to form a correct judgment is thereby formally admitted, and the charge against the Minister falls to the ground. If the dissolution of the Privy Council and the issuing of the Cabinet order of July 14 were illegal, then the responsibility rested solely upon the ruler, Struensee acting merely as his agent. In trying to justify the decision of the Court, Lassen seems at the same time to convict it of the basest falsehood and flattery. The extracts from Struensee's and Brandt's testimony are exceedingly interesting as throwing light upon the mental condition of Christian during Struensee's government, but, regarded as a justification of the action of the Court, they seem to have "nothing to do with the case."

The other three points are properly treated at less length and need not detain us. In concluding, the author meets the charge of the extreme barbarity of the punishment, so often made by the defenders of Struensee, by declaring very justly that this was due to the spirit of the times and not to any unfair discrimination. In an age when the wheel and the iron virgin were no unusual instruments of torture, this execution cannot be regarded as barbarous, especially as, by the testimony of the attending clergyman, the severing of the arm and head were almost instantaneous. However we may differ from Lassen in matters of detail, his treatise must be regarded as one of the most valuable contributions to the history of a remarkable statesman.

La Monnaie et le Bimétallisme International. Par Émile de Laveleye. Paris. 1891.

THE author's Introduction has this paragraph:

"Ce que l'on commence à voir clairement—et c'est là un grand progrès—c'est que la monnaie métallique, étant de sa nature un instrument d'échange universel, doit être réglée par traités. Ce sont les États-Unis surtout qui ont reconnu cette verité, et c'est pour ce motif qu'ils ont pris, deux fois déjà, l'initiative des conférences monétaires."

We had supposed that this initiative had been prompted by quite different motives; we are sorry to learn that it was occasioned by mistaking a falsehood for a truth. Where are governments or nations that are trading with one another? The New York merchant and his Russian correspondent would have made mutually profitable arrangements long ago if they had not been forced to travel the "high *priori*" road of philosophic officialism. Acts of sovereigns, legislators, judges, or administrators in enforcing the use of any substance as a circulating medium are harmful or useless according as they do not or do establish those relations which traders would have brought about among themselves if they had been let alone. It is doubtless true that a great many of the world's inhabitants are suffering from the fact that silver is abundant, or that it is clumsy, or that it is too variable in value for the new commerce. The demonetization of cattle must have worked similar hardship ages since; but there is no direct evidence that the big warriors, to save themselves from loss, forced their good chief to load up his tribe with cattle on a falling market.

The disuse of silver by the commercial world, or the tardy acknowledgment of such disuse on the part of certain Governments, is the cause, in M. de Laveleye's opinion, of so many bad things that we are not surprised to find that it engendered the McKinley Bill. M. de Laveleye, of course, predicted something like this as long ago as 1881, in a letter to the Cobden Club. It is well for his reputation as a prophet that he was not a protectionist (except in the matter of silver); he might have written a letter to the Home Market Club and predicted an era of free trade.

If every creditor should insist to-morrow on receiving the gold nominated in his bond, every one would be so distressed that no one would go on doing so. This is our security against its being done. Most creditors, nowadays, accept, even when gold itself is specified, gold's value, whether it be lands, houses, or goods, or the promises of honest men that own these things. "But gold is increasing in value, and, in consequence, prices are going down." This appears to M. de Laveleye something quite terrible: "C'est le commerçant obligé de vendre moins cher qu'il n'a acheté." Really, even the peanut-boy will not regret having to take a dime instead of the expected quarter for his wares, when he finds that the price of gallery tickets has dropped overnight from a quarter to a dime.

Perhaps, when things get too bad, we may enact that the dollar shall contain less gold. Such things have been done to relieve a prince's necessity, to the great distress of his subjects. The subjects may not be able to see any harm in trying the experiment for their own advantage. Why would it not be as simple a way of paying off old debts as to enact

that when a gold dollar is mentioned, it shall mean a certain weight of some other metal? Perhaps the debtors will get a law passed that every creditor shall accept less than 100 per cent. This has also been tried, and is quite as easy as giving every one the alternative of paying in either gold or silver in some fetish ratio of 1:15½. Let those who are haunted with the dread that gold will become dearer, petition the Government to demonetize it, to make "mere merchandise" of it, to trample upon it. We can conceive no other punishment that will bring the monometallists to their senses and to remorse.

An Introduction to the Study of Mammals, Living and Extinct. By William Henry Flower and Richard Lydekker. London: Adam & Charles Black; New York: Macmillan & Co. 1891. 8vo, pp. 763.

A VERY fair knowledge of the mammalia may be secured from this book without toiling through the numerous special monographs on the group. It is by much the best introduction to the study of the subject within reach. One of the authors is of the highest rank among authorities on the recent forms; the other occupies a similar position with regard to the extinct. Under their hands, as might be expected, the errors so common in the works ordinarily called manuals do not appear; their mastery of the subject prevented mistakes in the choice of material when they found it necessary to draw from others. The first 146 pages are devoted to the introductory chapters, comprising discussion of the tegumentary, dental, skeletal, digestive, and sensory systems, and the distribution, geographical and geological. The quality of this portion, as in fact of the following pages of diagnoses and descriptions, is such as leaves the impression on the reader that its greatest lack is a greater quantity than was possible within the limits of the volume. The interpolation of the fossil forms, with a large number of excellent illustrations affording the means of direct comparisons with portions of the skeletons of the recent, has been very well managed; in consequence, the student gets a broad and comprehensive view of the subject that could not be acquired from works relating only to living types. No space is wasted on theory; the student is allowed to grow his own genealogical tree.

In the accounts of habits and modes of capture there is much to interest the general reader; and the pictures make considerable additions. Occasionally a drawing exposes a feature, probably due to an imaginative artist, not wholly in accord with what is known of the creature represented: for instance, the skunks frisking about like squirrels up in a tree. It might have been better, for American readers, to give the common names as used in this country as well as in England. Our elk is the animal locally called the wapiti; the European elk is our moose; our rabbits belong with the European hares, and so on. The usages are so fixed there is no hope of change, and the best we can do is to recognize the differences. We find Solenodon restricted to Cuba and Hayti, though also found in Central America. Specialists will not agree in regard to the principal groups in the classification adopted, and there are differences of opinion as to the rank assigned certain genera and species; but, on the whole, works on natural history are rare indeed in which the grounds for criticism are so few as in the volume before us.

Twelve Months in Peru. By E. B. Clark. Illustrated. Macmillan & Co. 1891.

THE author of this little work of 158 pages has enjoyed opportunities for the contribution of fresh knowledge concerning South America which seldom fall to the lot of women, and we regret to be compelled to say that her opportunities have been poorly improved. We have heard much about railroads and other enterprises in Peru, we have had the Cholos and the Indians well characterized, we know Lima by heart, and have seen the charming Limeña, wrapped in her *manta*, hurrying to mass in the soft light of the early morning; but we have never looked in upon the home life, have never understood the inner heart, of the women of Peru. That subtle analysis of national peculiarities which the finer feeling of a woman can make so well, has hitherto been wanting in every book dealing with South America. After gleaning the experience of 'Twelve Months in Peru,' we have seen no new vision, have caught no note which had not been distinctly audible before. The author must have penetrated secrets which remain for ever hidden to travellers of the other sex, yet she gives not the slightest initiation into them. She journeyed on mule-back far into the heart of the Andes, but we are left to imagine how she was equipped, how arduous or how easy she found it.

Some of her sketches of life in the mountains are racy and interesting, but lacking in detail, and the transitions are so abrupt as to mar each picture which she was about to create. The description of the Verrugas bridge, and the excitement of crossing the chasm while the bridge was in process of reconstruction, swung in a sort of cage from a cable, is one of the best things in the book. There are some bits of history and matter of a statistical order which are of easy access, and might better have been omitted. The author errs in connecting Guayaquil by rail with Piura, and in alleging a similar connection to exist between Truxillo and Payta. She may have heard of the suggestion of the Peruvian Corporation to connect the Payta-Piura line with the Pacasmayo-Magdalena line, and perhaps a continuation southward to the road which now connects Truxillo with Salaverry, and have confused this proposition with the existing state of affairs. We are also somewhat puzzled to understand why she should persist in perpetuating the popular misconception of the hills on the Isthmus of Panama, by calling them "rugged mountain ranges." The view of Lima is good. Aside from this, the pictures are not meritorious.

Robert Carter: His Life and Work, 1807–1889. Anson D. F. Randolph & Co. 1891.

IF any hostile criticism of this book were provoked by the general character of its contents, it would be disarmed by the modesty of the prefatory note, which assures us that it was written for Mr. Carter's friends, and that "it is not expected that those who did not know and love him will care to read it." His friends, however, were no narrow circle, for he made many in his business, and many more through his connection with the Scotch Presbyterian Church in this city, the Bible Society, and Princeton College, of each of which he was a trustee, and still others on wide and frequent journeys in America and abroad. As a publisher he was a man of the strictest probity, taking solid comfort in the publication of such religious books as Henry's 'Commentary' and D'Aubigny's 'History of the Reformation,' and delighting in the sale of Spurgeon's books as much because of the good he thought they would do as for the money they brought in. We have had so many disappointments among professing Christians, in politics and elsewhere, that his coreligionists may well be proud of such a man as this. Stanchest of Presbyterians, he was no narrow sectary, and could go and hear Cardinal Manning preach in Rome without misgiving. Some of the pleasantest pages are those which report his acts of kindness to fugitive slaves. When he left Scotland for America in 1831, a good woman advised him to take a wife with him, saying, "Ye'll get naething there but a Yankee, and they're a' black." The account of his boyhood and his youth has the charm that always attends humble fortune and the struggle against odds. The mother had much homely wit with her simplicity. Of certain newly rich people, who were hurt by their prosperity, she said: "Ah! when soles get to be upper leathers, they're awfu' stiff"; and, when her son wrote her that his being a foreigner might stand in his way, she said, "Hech, sirs! they have a guid face to ca' my son a foreigner." It was Mr. Carter's opinion that private fortune is a public trust, and having in his earlier career set apart one-tenth of his income for the good of others, he afterwards made it his rule to give away yearly an amount equal to his family expenses; and he would have been no true Scotchman if he had not found that by such an arrangement his family expenses were sensibly reduced.

BOOKS OF THE WEEK.

"No better book can be found as a gift for a HEALTHY GIRL or BOY."—*Boston Post.*

YOUNG FOLKS' CYCLOPÆDIA OF

GAMES AND SPORTS.

By J. D. Champlin, jr., and Arthur E. Bostwick. 837 pp. Illustrated. $2.50.

The Nation: "No such collection has ever appeared before."

N. Y. Tribune: "A mine of joy. . . . A positive treasure."

Literary World: "Admirable. . . . A treasure in every household that believes in games or sports of any sort."

Whitney's (W. D.) Introductory French Reader.

256 pages. 16mo. Teacher's price, 70 cents; by mail, 76 cents.

Easy, varied, and interesting selections of some length from authors of repute. They are intended to connect the earliest point in grammatical study where consecutive reading can be advantageously begun with that where a complete story or play can be managed with sufficient ease to maintain interest.

Hall (E. H.) & Beregn's (J. Y., Jr.) Text-Book of Physics.

Chiefly Experimental. 388 pages. 12mo. Teacher's price, $1.25; by mail, $1.37.

A complete elementary text-book based upon and reproducing the experiments required for admission to Harvard College, together with many introductory and connecting experiments, numerous problems, and the necessary theoretical accompaniment.

HENRY HOLT & CO., N. Y.

We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,

NO. 59 WALL STREET, NEW YORK.

BOOKS FOR SALE.—THE KLAMATH Indians of Southwestern Oregon (language, ethnography), two large vols. 4to, pp. 1528, cloth, $10.00. The Karankawa Indians, Texas Coast (ethnography, linguistics), $1.00. A Migration Legend of the Creek Indians (history, ethnography, linguistics), $2.00. Write to the author, ALBERT S. GATSCHET, 1330 F Street, N. W., Washington, D. C., and send for his catalogue of other books.

THERE IS NO MORE ACCEPTABLE gift than China or Glass. An artistic dinner service costs but $15. As for Glass our assortment is unrivalled.

WILHELM & GRAEF,
Broadway and 20th Street.

Government Baking Powder Tests.

UNITED STATES and Canadian Government food investigations show the Royal Baking Powder a cream of tartar powder superior to all others in leavening strength.

Statements by other manufacturers to the contrary have been declared by the official authorities falsifications of the official reports.

OLD LETTERS.

The subscriber will pay cash for old letters or documents written or signed by distinguished people of all kinds, American and foreign. He particularly desires letters of famous Americans, and especially those of the Colonial and Revolutionary periods. Also letters of Generals on both sides, Federal and onfederate, in the late civil war. If you have any old letters write to me at once.

WALTER R. BENJAMIN,
28 West 23d Street. New York City.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Mr. H. MISCHKE, 2 and 4 Barclay St.

(Astor House), New York, has now ready for the HOLIDAY SEASON a fine selection of oil paintings, water colors, photogravures, etchings, and engravings. Also a full line of books for children and adults, suitable for Christmas and New Year's presents.

ARTISTIC FRAMING A SPECIALTY.

THE DELUGE.

An Historical Romance of Poland, Russia, and Sweden. By Henryk Sienkiewicz, author of "With Fire and Sword." Translated from the Polish by Jeremiah Curtin, with a map of the country at the period of the story, and a photogravure portrait of the author. 2 vols., crown 8vo, cloth, $3.00.

This is a sequel to the remarkable historical story, "With Fire and Sword." The famous Zagloba, likened by critics to Falstaff, furnishes the humor of the story, as in "With Fire and Sword"; and the little knight Volodyovski, whose duel with Bogun was one of the great scenes of that extraordinary romance, occupies a prominent place. O her characters familiar to the readers of "With Fire and Sword" figure in the "Deluge," and many new personages are introduced.

With Fire and Sword.

An Historical Novel of great interest and power, now first translated into English from the Polish of HENRY SIENKIEWICZ and by Jeremiah Curtin. The Scene: Poland Russia. The Time: 1648-1651.

Crown 8vo, cloth, $2.00. Also, a new library edition. 2 vols., crown 8vo, cloth, gilt top, with portrait of the author, $3.00.

"We know nothing like it, and nothing that surpasses it in vitality, power, picturesqueness, and absorbing interest among novels of action."—*Boston Daily Advertiser.*

"The only modern romance with which it can be compared for fire, sprightliness, rapidity of action, swift changes, and absorbing interest is the 'Three Musketeers' of Dumas."—*New York Tribune.*

"One of the most brilliant historical novels ever written."—*Christian Union.*

"A great book."—*Pittsburgh Bulletin.* "Thoroughly enchanting."—*Boston Courier.* "There is an Homeric spirit in his descriptions."—*Providence Journal.* "There is not a tedious page in the entire magnificent story."—*Boston Home Journal.*

LITTLE, BROWN & CO.,
PUBLISHERS,
254 Washington Street, Boston.

A NEW EDITION DE LUXE.

Bulwer-Lytton's Novels.

LIMITED TO 1,000 COPIES.

The first and only fine illustrated edition of Lord Bulwer-Lytton's Novels ever made in Europe or America.

Bulwer stands foremost among novelists as a student and delineator of human nature, instincts, and passions, and he is also acknowledged to be the most versatile writer of his day and generation.

His popularity is increasing every year, and the publishers recognize the great demand for a good edition of his writings. This edition is embellished with over 200 photogravures on Japanese government paper from original drawings and paintings by the best illustrators in America, and photographs of the actual scenes and places referred to, gathered on the spot especially for this edition.

THE MANUFACTURE OF THE BOOK IS PERFECT.

The type is large and new, and set in a fine open page. The margins are ample, and the paper a beautiful natural-tint laid paper. The volume is a small 8vo, easy to handle, and the binding is vellum cloth, gilt tops, slightly trimmed. Complete in 32 VOLS., issued at the rate of about 2 vols. per month, at $2.50 PER VOLUME. Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

BRYAN, TAYLOR & CO.,
757 Broadway, New York.

BACK NUMBERS OF MAGAZINES and Reviews, both early and recent, *Nation* included; as also a choice collection of books and pamphlets. Catalogues free. A. S. CLARK, 34 Park Row, N. Y. City.

BACK NUMBERS, VOLUMES, OR sets of leading and scarce magazines, etc., for sale by H. WILLIAMS, 195 West 10th St., N. Y.

Clyde Fitch's Stories.

"Mr. Clyde Fitch may dismiss 'Beau Brummell' from his mind. He has done, at least, much better things in the volume of eleven tales called by the fetching title of the first one, 'The Knighting of the Twins.' There is a quality of humor and of pathos in these sketches which, Mr. Fitch may be assured, exceeds anything of the sort to be found in the play of 'Beau Brummell,'" says the Philadelphia Press.

"This quaint, bright, and novel little book comes just in time to carry Christmas joy to the stockings of all lucky little folk whose mothers are on the lookout for what is new and good in the field of child literature. The book has a charm and a flavor all its own. The illustrations, by Virginia Gerson, are elfinly quaint and appropriate," says the Boston *Transcript*.

One handsome square 12mo. Price $1.25. Sold by all booksellers and mailed, postpaid, by the publishers, ROBERTS BROTHERS, BOSTON.

Direct Fast Express Route
TO THE MEDITERRANEAN.
First-class Passenger Steamer Service between
NEW YORK and GENOA, ITALY,
BY THE
NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Jan. 2, Feb. 6, March 12
WERRA, Jan. 23, Feb. 27, April 2.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail. Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

EUROPEAN SUMMER AND WINTER Resort, University town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year, Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

STUDY AND TRAVEL.

Mrs. Benj. Fuller Smith announces that she will continue to receive into her family in Dresden, Germany, a limited number of young ladies desiring to study abroad.

Mrs. Smith travels with her party during the summer months and holidays.

Information concerning expenses furnished upon application. Trustworthy references given and required. Address Mrs. BENJ. FULLER SMITH, Care Messrs. Thode & Co., Bankers, Dresden.

Choice Books for Adults and Young People.

MY LADY LEGEND. Translated from the Swedish of Albrekt Segerstedt by Anna M. Rydingsvärd (Baroness von Proschwitz). 12mo, $1.25.

Dr. Segerstedt has been called the Hans Christian Andersen of Sweden. His stories are prose poems, with a vein of quaint humor and genial moral running between the lines.

"No more delightful nor appropriate volume for the season of good-will has appeared."—*Boston Transcript.*

WISDOM OF THE WISE. Pithy and Pointed Sayings of the Best Authors. Compiled by CAROLINE S. HUNT. 12mo, 75 cts.; full gilt, $1.00.

A very choice collection of epigrammatic sayings arranged under distinctive heads, as Beauty, Conversation, Truth, &c.

LEAVES FROM AN ARTIST'S FIELD-BOOK. By WEDWORTH WADSWORTH. Beautifully engraved by ANDREW. Oblong quarto, cloth, gilt, $4.00; full morocco, $8.00.

"With the delicate touch of the artist and the rare insight of the poet, Mr. Wadsworth has reproduced for us familiar sights and scenes, which, though familiar, can never tire."—*Boston Courier.*

THE FIDALGOS OF CASA MOURISCA. Translated from the Portuguese by ROXANA L. DABNEY. 12mo, $1.50.

This charming story introduces the reader into a new field of romance, and makes him familiar with Portuguese life and customs, both aristocratic and republican.

"The directness and vivacity of this tale remind us of Jane Austen."—*Literary World.*

THE STORY OF THE UNITED STATES OF AMERICA. Told for young people. By ELBRIDGE S. BROOKS. Illustrated, quarto, cloth, $1.50; boards, $1.25.

This "story" of the people who have made our country what it is, and of its noble rise and development, will kindle the liveliest interest and patriotism in the minds of young readers.

"Mr. Brooks has made an old story seem singularly new. Old New York and the Colonial days are artistically sketched. An admirable catholicity pervades the book, whose democracy and patriotism have a wholesome and stimulating ring."—*Brooklyn Times.*

THE STORY OF THE AMERICAN SOLDIER, OR THE AMERICAN SAILOR, OR INDIAN. 3 vols. By ELBRIDGE S. BROOKS. $2.25 each. Fully illustrated.

History in such readable form that it interests like a story.

Each one of these volumes is an epitome of all the important facts relating to the subject, presented in a way that fixes them in the mind better than dry, statistical records.

AN ADIRONDACK CABIN. By MARGARET SIDNEY. Beautifully illustrated. Quarto, cloth, $2.25; boards, $1.75.

A brilliant story of camp-life and summer jauntings.

"Full of the free out-of-door life of forest and lake and mountain."—*Boston Journal.*

"The information it gives concerning that famous region is invaluable."—*New Bedford Journal.*

ROB: A STORY FOR BOYS. By MARGARET SIDNEY. $1.00.

The story of a brave, honest, plucky boy, who overcame obstacles and won friends by his true, manly spirit.

At the bookstores, or sent, postpaid, by

D. LOTHROP CO., Publishers,
BOSTON.

THE WORKS OF
Alexander Winchell, LL.D.
S. C. GRIGGS & CO., Publishers

A peculiar excellence of Prof. Winchell's works is that while they command the assent of the learned, they also attract the general reader by the freshness of their subject-matter and the beauty of their style.

Preadamites;

Or, A Demonstration of the Existence of Men Before Adam. By ALEXANDER WINCHELL, LL.D. 1 vol., 8vo, 553 pp., with Ethnographic Maps and numerous Illustrations. Price, $3.50.

The new edition is enlarged by the addition of twenty-five pages of supplementary notes and citations, representing the movement of scientific opinion during the last ten years in relation to themes discussed in this work.

"A great mastery of the vast subject."—*Methodist Quarterly Review.*

"Dr. Winchell's work is executed with such learning and ability that it must at once take rank as an authoritative text book on the subject. It is not too much to say that it settles the controversy."—*Popular Science Monthly.*

"Exceedingly learned and profoundly interesting. . . . Dr. Winchell's discussion of the evidences bearing on the question of Preadamites will excite interest by the ability and boldness with which his advanced theories and demonstrations are maintained."—*Harper's Monthly.*

World Life;

Or, Comparative Geology. By ALEXANDER WINCHELL, LL.D. Third edition. 1 vol. Illustrated. Cloth. Price, $2.50.

A study of the formation, growth, and decay of worlds from their earliest existence as nebulous masses diffused through space to their development into sun and world systems and their final dissolution.

"There is something very fascinating in the book, so grand and simple are its generalizations, so vivid is its panorama of the mighty course of creation, so like a romance of the heavens does it read with its orderly evolution of *dramatis personæ* rising out of the limitless spaces, passing across the astronomical stage, and descending again into the depths whence they arose. It is a work of immense learning."—*New York Home Journal.*

Sparks from a Geologist's Hammer.

By ALEXANDER WINCHELL, LL.D. Third edition. 1 vol. Illustrated. Cloth. Price, $2.00.

"In these essays Dr. Winchell again proves his claim to be ranked with Prof. Proctor as one of the most brilliant and popular expounders of modern science."—*Canadian Methodist Monthly.*

Shall We Teach Geology?

A discussion of the proper place of Geology in modern education. By ALEXANDER WINCHELL, LL.D. 12mo, 227 pages. Price, $1.00.

"It furnishes the most systematic and exhaustive array of arguments that have yet appeared in favor of a more general recognition of the natural sciences, and geology in particular, in our public schools, and it should be read by all teachers and those interested in educational matters."—*Public Opinion, Washington, D. C.*

Geological Excursions;

Or, The Rudiments of Geology. By ALEXANDER WINCHELL, LL.D. 1 vol., 12mo. Cloth. Price, $1.25.

"A child may understand it, and yet a cultivated man will devour it. It is filled with illustrations very wisely conceived, and is more delightful, and certainly will prove more beneficial, than the best novel."—*Chicago Evening Journal.*

Geological Studies;

Or, Elements of Geology. By ALEXANDER WINCHELL, LL.D. 1 vol., 540 pages, 367 illustrations. Price, $3.00.

"In material it is complete; in suggestions for field study it is clear and definitely helpful; in outlining original class exercise it is unique; in illustrations no expense or efforts have been spared; in tables and groupings of valuable facts it is complete."—*New England Journal of Education.*

W. BAKER & CO., Dorchester, Mass.

The Best LITERARY REVIEW published. Only One Dollar a year, with membership in Readers' Union Library Association, and 300-page Catalogue, saving 30 per cent. on all books purchased. Sample copies ten cents.

READERS' UNION PUB. CO., Lansing, Mich.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-five years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

THE NATION will be sent to new readers for examination, two months for 25 cents.

ATLANTIC MONTHLY

for January contains

Don Orsino.

The First Chapters of a Remarkable Serial Story by F. MARION CRAWFORD.

James Russell Lowell.

A paper of very great interest by HENRY JAMES.

Boston.

An Essay, never before printed, by RALPH WALDO EMERSON

The Creed of the Old South.

A strong and frank statement of the political views held in the South before and during the War, by Professor B. L. GILDERSLEEVE.

Why Socialism Appeals to Artists.

An interesting paper by the famous English artist, WALTER CRANE.

The Greatest Need of College Girls.

A thoughtful and valuable essay, by ANNIE PAYSON CALL.

The Missing Interpreter.

A striking Short Story, by HERBERT D. WARD.

John Stuart Mill,

and the London and Westminster Review. Including several letters by Mr. MILL, edited by C. Marion D. Towers.

Birds and "Birds."

A delightful out-door paper, with songs inwoven, by EDITH M. THOMAS.

The Political Situation.

An article likely to excite no little comment.

$4.00 a year; 35 cents a number.

HOUGHTON, MIFFLIN & CO., Boston.

11 East 17th Street, New York.

"AN EXTRAORDINARY BOOK."—*Times, Phila.*

AMERICANS OF ROYAL DESCENT.

"A collection of Genealogies of American families whose lineages are traced to the legitimate issue of kings." New edition; 200 printed; 732 pages; 4,000 different surnames.

"Its references seem direct and are evidently trustworthy."—*Tribune, New York.*

"One of the most popular books in the Philadelphia and Mercantile Libraries."—*Press, Phila.*

"One of the most curious of recent books in the Astor Library."—*Evening Telegram, New York.*

"A unique book of American genealogy."—*Ledger, Phila.*

"It will soon become a bibliophilic rarity and treasure."—*The American.*

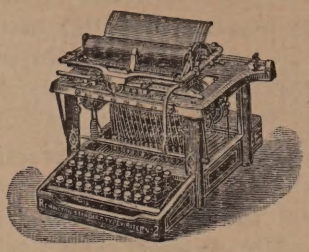
Book may be seen at Brentano's, Union Square, N. Y. We have a few for sale. Price, $15, delivered.

PORTER & COATES, Philadelphia, Pa.

The Remington Standard Typewriter

Wyckoff, Seamans & Benedict,

327 Broadway, New York,



Is to-day, as it ever has been, the Leading Typewriter. Carefully tested improvements are constantly added to this famous machine.

SEND FOR AN ILLUSTRAED CATALOGUE AND PRICE LIST OF OUR "PARAGON" TYPEWRITER RIBBONS.

Unmounted Photographs

Of Ancient and Modern Works of Art, embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen; larger sizes in proportion. Lantern slides to order. Send 15 cents for 1887 Catalogue and 1890 Supplement of 12,000 subjects.

Photographs mounted on plate paper for the illustration of books on art and travel. Correspondence invited.

The Nation.

NEW YORK, THURSDAY, DECEMBER 24, 1891.

The Week.

So many Republican newspapers are now edited by office-holders that anything like impartial comment upon an act of the Administration is to be expected from few journals of the party. What the subsidized organs think about the appointment of Elkins, but do not dare to say, finds expression in the remarks of two Republican newspapers, representing New England and the Northwest. Says the Manchester (N. H.) *Mirror:* "Mr. Elkins is a smart chap, but neither his character nor his reputation is such as to entitle him to a seat among the able and upright gentlemen who constitute the Cabinet. We fear the President has made his first serious mistake." Says the St. Paul *Pioneer Press:* "Mr. Elkins has shared with Dudley and Quay and others a position which may have been unmerited, but is none the less a disqualification, to some extent, for high and responsible office. It is for this reason that his selection at the present time will provoke surprise and disappointment. An appointment to so high a place should not be open to the criticism that will follow this. It can hardly be said that the nomination of Mr. Elkins is a fortunate one for the President or the party."

By the sudden death of Senator Plumb one of the most important personages in public life has been removed. Mr. Plumb had forged his way to the front as a Senate debater by sheer perseverance. When he first entered that body, he took a very humble rank among the members. By assiduous practice he became a formidable competitor of the ablest men there, and was really a power in the councils of the nation. His course in the last Congress, wherein he opposed the McKinley tariff in several very strong speeches, and finally voted against it, drew the attention of the country to him. This was a very bold step on his part, but the sequel proved that he had acted wisely. The State of Kansas was lost to the Republicans in the whirlwind that followed the passage of that measure, and Senator Ingalls lost his seat in consequence. Mr. Plumb, while adhering to the Republican party, had guided his own steps in such a way as not to offend the political elements that were opposed to McKinleyism. There is good ground for the belief that Mr. Plumb at the hour of his death was stronger at home than he had ever been before, and this solely on account of his opposition to the Tariff Bill.

The unanimous reëlection of Mr. Daniel to the United States Senate by the Legislature of Virginia is treated by the press of the State as a return to the practice of ante-bellum days, when a faithful public servant was kept in office term after term. In the early days "the Old Dominion" formed an effective barrier against the "rotation-in-office" doctrine. In the Seventeenth Congress, for example, eighteen of the twenty-two Representatives from Virginia were old members, five of them being in their third terms, while five others had served in from five to eleven Congresses. As late as the last Congress before the war, when the State was entited to twelve members, one had been elected three times, two four times, two six times, and one seven times. A change was produced by the reconstruction era, and what the Lynchburg *Virginian* calls "the general dislocation and upheaval of social and political ideas which followed the cataclysm of the war." Changes became frequent, and even the most worthy officials often had to fight hard for a continuance in public life. The pendulum is now swinging back, and Mr. Daniel's unquestioned reëlection is a sign of the times.

The anti-lottery section of the Democratic party in Louisiana have nominated a strong ticket, with an aggressive and experienced campaign leader at its head for Governor, and have also adopted a platform denouncing the proposed Constitutional amendment which continues the charter of the lottery and makes it a part of the Constitution. The "united and individual support" of all the members of the Convention is pledged to the principles of the platform. The Convention's action forces the lottery issue squarely upon the other wing of the Democratic party whose Convention has not yet adopted a platform, but has made its nominations. It is noticeable that the members of this wing are declaring that their two leading candidates are anti-lottery men, but it is certain that the nominee for Governor, Mr. McEnery, is a lottery man, and has acted in the past in the lottery's interest. They are also circulating a report that a compact has been arranged between the anti-lottery wing and the National Republican Committee, the terms of which are, that, in return for Republican support of the anti-lottery ticket this year, the anti-lottery Democrats will help carry Louisiana for the Republican Presidential candidates next year. All these reports have the peculiar lottery flavor, and are obviously false. The only way by which the McEnery ticket can be removed from suspicion will be for the Convention to adopt an anti-lottery pledge similar to that which the other Convention has adopted.

The idea seems to be widely accepted that the President is compelled to issue a proclamation on the first of January imposing duties on sugar, molasses, tea, coffee, and hides when imported from countries that have not made reciprocity agreements with us under the McKinley Act. The truth is, he can issue such proclamation or not just as he pleases, since the condition of issuing it at all is the state of his own mind. This will be seen by an attentive examination of the law, which reads thus:

> "Sec. 3. That with a view to secure reciprocal trade with countries producing the following articles and for this purpose, on and after the 1st day of January, 1892, whenever and so often as the President shall be satisfied that the Government of any country producing and exporting sugars, molasses, coffee, tea, and hides (raw and uncured), or any of such articles, imposes duties or other exactions upon the agricultural or other products of the United States, which, in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States, he may deem to be reciprocally unequal and unreasonable, he shall have the power, and it shall be his duty, to suspend by proclamation to that effect the provisions of this act relating to the free introduction of such sugar, molasses, tea, coffee, and hides, the production of such country, for such time as he shall deem just," etc.

It is easily seen that the proclamation is to be issued only in case the President is "in a state of mind." If he should be in a state of mind regarding Venezuela, for example, which declined to lower her tariff in our favor, he could impose duties on the sugar, coffee, and hides coming from that country. But if he should think that the reason assigned by Venezuela for not lowering her tariff (namely, that she could not spare the revenue), was a good and valid reason, then it would not be incumbent on him to issue any such proclamation, because in such case the Venezuelan tariff would not be reciprocally unequal and unreasonable. It is not unequal or unreasonable for any country to impose sufficient taxes to pay the cost of its own Government.

The case of the British West India Islands is somewhat peculiar. These are all crown colonies, but all of them, nevertheless, are allowed to frame their own fiscal systems. The population is about 5 per cent. white and 95 per cent. black or mulatto. The whites and a small percentage of the mulattoes are the governing class, and they arrange the tax laws so as to throw the bulk of the cost of the local governments on the working class, *i. e.*, the blacks and the imported East Indian coolies. This is accomplished by means of duties on imported food products. All or most of their food comes from the United States. The duties on these articles are paid mostly by the poor and ignorant blacks, who know nothing about taxation, and could not understand the subject even if it were explained to them. When the governing

classes of the islands say that these are revenue duties, and that they cannot be spared, they probably think so, but, as a matter of fact, they can be spared of the whites will consent to a land tax of sufficient amount to supplement the discarded duties on food. It is only a question which class shall pay the cost of carrying on the local government. The British West Indies are not the only countries where the rich throw the cost of supporting the Government on the poor by means of duties on imports; but we refrain from mentioning any other at present.

The dedication in Philadelphia on Thursday of the Drexel Institute of Art, Science, and Industry was an event of far more than local interest and concern. The institution is devoted to the work of preparing youth of both sexes for the activities of mature life through training in the practical and technical methods which they must follow in their chosen vocations. Thus the business department will provide training in stenography, typewriting, bookkeeping, business forms, accounts, correspondence, and the writing of English, with familiar lectures on the terms and operations of manufactures, commerce, finance, and law, and it will aim to prepare students for the higher forms of employment as clerks, bookkeepers, and secretaries. The department of mechanic arts will include a thorough course of manual training, which will be supplemented by carefully devised courses of instruction in drawing, mathematics, science, and other branches, with systematic training in the workshops and laboratories, and an opportunity to acquire a practical knowledge of steam and electrical machinery and appliances in connection with the mechanical plants in the building. The department of domestic economy will instruct girls and young women in everything pertaining to the organization and management of the household, its two years' course embracing cookery, millinery, and dressmaking; the building, sanitation, decoration, and management of the house; household economy, human physiology and hygiene, business forms and accounts, elementary economics, and physical training. The edifice which Mr. Drexel has erected for the Institute, with its site and equipment, has cost half a million dollars, and he has given one million more for its endowment in securities returning $50,000 a year. The benefaction is thus in every way most remarkable, and it is difficult to conceive a keener satisfaction than must be felt by the man who conceived the noble project and has carried it out during his lifetime.

The removal of the Premier of Quebec and his Cabinet for corruption will surprise no one who has followed the course of affairs in Canada since the charges which have led to this result were first made. The sudden disappearance of leading persons involved as soon as an uncovering of the scandals was threatened, and a strong line of testimony against the accused, formed a case against them which later denials and a sudden energy in the way of libel suits did little to weaken. While it would be going too far to ascribe the large crop of public scandals over which Canada is now blushing to the use made of that country by fugitive officials from this side the border, the evil influence of the employment of their country as a place of refuge by American thieves is conceded by Canadians. One of the finest residence blocks in Montreal was notoriously built out of the Broadway Railroad bribery fund, and is still known there as "Boodlers' Block." A fugitive excise officer from this city took an active part in one of the railroad bribery schemes exposed in Canada last summer, and contributed his experience to the work. The leading Canadian officers now in disgrace have had a career like that of our city public thieves —an entrance into office as men of small means, and a sudden development into men of wealth, with houses and diamonds to correspond. There is certain to be a good deal of race and religious feeling involved in the Quebec scandals, for the disgraced officers will appeal to their French tongue and their Romanist belief to obscure the case against themselves.

The full text of Mr Goschen's speech before the London Chamber of Commerce on the 2d enables us to form an opinion upon the whole matter with more distinctness than we could heretofore. His plan for an enlargement of the central gold reserve of the United Kingdom is briefly this: The Bank is to offer its £1 notes in exchange for gold; but in order to enable it to pay the expense of printing the notes, taking care of the gold, clerk hire, etc., it is allowed to issue £5 in notes against £4 of gold and £1 of Government securities (consols). It is assumed that the stock of gold in bank will be doubled by this operation, or raised from an average of £20,000,000 to £40,000,000. It is conceded by Mr. Goschen that a certain proportion of the gold now in the pockets of the people would be exported and lost to the country (as gold) by the operation. That is, the gold represented by the one-fifth of new notes issued against Government securities, being liberated from actual use as currency, would be sent to the best market. But it would not be given away. It would be returned in the form of goods. Then Mr. Goschen says that he would rather have £40,000,000 in a central reservoir than £50,000,000 in the pockets of the people. He would rather have the smaller sum in a place where it can be got at, than the larger in a place where it cannot be got at. In this position he is unquestionably right.

Of what avail will this larger sum be in case of a panic? The Bank in that event is to have the power to issue notes beyond the present legal limit—*i. e.*, in its own discretion, at a high rate of interest—the interest to inure to the benefit of the Government minus a sum sufficient to pay the Bank for its risk. This plan does not contemplate the suspension of specie payments for a single moment. The Bank must assume the entire risk of the overissue of notes, but the risk will be small if it has £40,000,000 gold in its vaults. Mr. Goschen speaks only of an internal panic —that is, a panic not accompanied by an export of gold. In the event of such a panic, an overissue of notes would be of no avail, since they would be presented for redemption as fast as issued. But the Bank would judge for itself whether the panic were external or internal or mixed, and would govern itself accordingly. The plan is well conceived, and was well received by those to whom it was addressed; Mr. Lidderdale, the Governor of the Bank of England, moving the vote of thanks to Mr. Goschen at its conclusion.

Our weekly contemporary *Bradstreet's* has fallen into an error respecting Mr. Goschen's remarks on the silver question in the above speech, which, it says, "only indicated that, should another international conference be arranged for, the position of England in regard to the adoption of an international ratio of the value of silver might not be so inflexible as was the case in the past." On the contrary, the speech declared in so many words that, whether there should be another conference or not, the position of England would not be changed one iota. So Mr. Ottomar Haupt, a bimetallist of some prominence in Paris, understands it, for he writes to the *Financial Times* expressing disappointment at the inflexible attitude of England as indicated in the speech. Mr. Haupt adds to his complaint the important information that Austria-Hungary "has now finally decided to adopt the single gold standard, for which purpose large purchases of the precious metal have been made." Another piece of information contributed by Mr. Haupt may have some interest for the bimetallists hereabout. He says that if another international conference should be held, bimetallism could only be adopted "on the basis of about the actual value of silver; and neither the ratio of one to fifteen and a half, as in the Latin States, nor that of one to sixteen, as adopted by America, would stand a chance of forming the future basis of the establishment of universal bimetallism. And precisely in this question of the choosing of the proper ratio are centred the greatest difficulties."

The death of the Duke of Devonshire will have more important political consequences than any Duke's death has had

for many a day. It takes Lord Hartington out of the House of Commons, and Lord Hartington and Sir Henry James were the two men who gave the Liberal Unionists in the House any weight, and secured for them much public confidence. Lord Hartington, however, was the leader. Sir Henry James was simply a highly respectable and rather half-hearted member of the rank and file. It was Lord Hartington's presence in the party, or set, which gave it an air of permanence. No one suspected him of personal ambition or disappointed hopes in breaking with Gladstone, as every one knew he was doomed to be a duke. Moreover, his advice was taken by all the members of the set as a final guide, because every one looks on him as preëminently a "safe man," which is the kind of man in public life the English most admire. His removal to the House of Lords will, to all intents and purposes, take him out of politics, for he is naturally indolent, and the House of Lords gives very little stimulus to exertion. Sir Henry James has no desire to lead, and nobody any longer trusts Mr. Chamberlain.

The latest curiosity of the English law as affecting the liability of writers and publishers is to be found in a decision of the Court of Queen's Bench in London, rendered on December 8. Messrs. Chapman & Hall had lately published a volume entitled 'African Stories,' written by a certain Major Ellis. In one of the tales a character named James Peacock was introduced, who was described as an ex-African merchant whose wealth had been acquired in an illegitimate manner. Thereupon came forward a veritable African merchant, Mr. James Pinnock, who maintained that he was referred to by many infallible signs in the story, and asserted, furthermore, that his fortune had been obtained in an entirely reputable way. He proceeded to take action against the publishers, inasmuch as the author was inconveniently absent in the West Indies, doubtless in quest of material for another volume. As soon as Messrs. Chapman & Hall learned that the book in question was giving offence, they at once broke off its publication and withdrew all copies issued to libraries. Moreover, it was not even alleged that the libel was intentional, yet libel it was, the jury said, and the plaintiff was given damages to the extent of £200. Expert testimony as to the nature of the offending volume was given in court by several authors—by Mr. George Meredith among others, he having read the tales in manuscript. He described the work as "an attempt by a writer of serious mind to be humorous." Mr. Meredith himself was not much taken with Major Ellis's humor, he said, but thought it might tickle the public. What the result might have proved but for the unfortunate sensitiveness of Mr. Pinnock, cannot, of course, now be said; but we must say, without knowing anything about the merits of the particular case, that the public has to suffer too many things at the hands of writers with a natural turn for the humorous, to make it regret very much this damper put upon an author who was trying to be mirthful against the grain.

The renewal of the charter of the Bank of France is close at hand, and the currency "cranks" are preparing their various plans for turning the bank-notes into something else than promises to pay gold on demand. Foremost among these, as here of late, are the farmers. The farmers in France have long been troubled by the difficulty of borrowing money from the banks, owing to their inability to give any easily convertible security. Their land may be good security in the long run, but it is very poor security for short loans, because it does not always find purchasers in case of default. Some means of making somebody lend the farmer money on such security as he can offer has, therefore, long been a great desideratum in French politics, and he has at last, as might have been expected, turned to the Government for relief. Some of the farmers would doubtless, like Peffer, like to have the Government "prepare" money, and "cover it into the Treasury." But others are more moderate in their aims. What they ask for is that it should be made a condition of the renewal of the Bank charter that the Bank should make long loans on agricultural paper endorsed by the "Syndicats Agricoles," which are societies of farmers not unlike our Farmers' Alliances. The Bank, however, refuses to lend on any paper which has not the characteristics of commercial paper; that is, it must not run for more than three months, and must be payable on a day certain, and, in case of non-payment, must entail the bankruptcy of the makers and endorsers. The farmers, however, are by no means satisfied with this, and the reason is that the "basing" idea has got a firm foothold among them. We are all familiar here with this idea. It used to be preached vigorously in the old greenback days, even by such orators as Wendell Phillips. That idea is, that promissory notes need not be made convertible when due, or convertible at all, provided they are "based" on something—that is, as long as something exists which the note is supposed to represent. Simpson expanded this "basing" idea when he proposed that the Government should get experts to estimate how much gold there was in a mountain, and then "base" notes on the contents of the mountain as thus estimated.

The action of the Spanish Government in extending all its existing treaties of commerce, without modification, until June, 1892, has an important bearing upon the reciprocity agreement with this country affecting our exports to Cuba and Porto Rico. Spain has held that she was bound to give to the nations with which she was in treaty relations the same advantages as those accorded the United States in the special reciprocity arrangement. Thus, only a few days ago the Governor-General of Cuba received the following despatch from the Minister for the Colonies: "In pursuance of a claim preferred by the Minister of the Netherlands, I remind your Excellency that merchandise and products coming directly from Holland, and embraced in the schedules annexed to the treaty with the United States, enjoy the same benefits as the American goods." Under this ruling, the United States have had no discrimination made in their favor as yet. Such a discrimination would have existed after February 1, 1892, the date at which all the Spanish treaties were to reach their term; but now the Government gives notice that it will extend them for five months longer, thus neutralizing the reciprocity convention for that added length of time. And it should be remembered that by next July a new Cuban tariff will be promulgated, in which Spain will be able to arrange the rates so as to put her own exports beyond fear of our competition.

Brazil's unique method of peaceful revolution has its advantages, but its rapid extension from one State of the country to another gives it almost a comic air. All that is necessary, apparently, is for a group of the dissatisfied to get together and indulge in threatening talk against the Governor, when the latter is expected at once to resign. This practice had become such a well-established rule of the game that the action of the Governor of Pernambuco on Saturday in calling out the troops and actually firing upon the rioters, might almost be called unfair play. He himself appears to have been filled with remorse at this breach of good faith on his part, as the insurrectionary party no doubt considered it, and hastened to file the desired resignation after what must be characterized, under the circumstances, as a perfectly unnecessary effusion of courage and blood. However, it is probable that the whole process has in reality less the appearance of comic opera than it would seem to have at this distance; it is very likely only the local completion of the revolution at the capital which made an end of Fonseca. Most of the Governors were his vassals, many of them having been directly appointed to their offices by him, and their forced resignations are doubtless to be looked upon as an expression of the popular desire to get rid of the last reminders of the Fonseca régime. Even so, the method is sufficiently startling to a law-abiding mind, and shows how many lessons in the art of republican government Brazil has yet to learn.

JUDGESHIPS AND OTHER OFFICES.

PRESIDENT HARRISON has once more earned the hearty commendation of the nation by the excellence of his judicial appointments. No President in recent times has been called upon to name so many judges in an equal period, and no President has maintained a higher level in his selections. The last Congress required him to man a new court of appellate judges, and the nominations for six of the places which he sent to the Senate on Wednesday week fully sustain the reputation which he had previously established for the exercise of uncommon discrimination.

The most striking feature of these nominations is the fact that two of the six appointees of a Republican President are prominent Democrats. Mr. William L. Putnam of Maine is by far the most conspicuous and eminent member of the party in that State, which has made him its nominee for Governor and would gladly have honored him with any office. His fitness for the bench may be estimated from the fact that he was offered a judgeship of the State Supreme Court a few years ago, and that the two Republican Senators from Maine earnestly recommended his appointment as Chief Justice of the United States when that office fell vacant during Cleveland's Administration. Mr. George M. Dallas of Pennsylvania is equally honored by the people of his State, without distinction of party. The Philadelphia *Ledger*, which mixes independence with its Republicanism, says of him :

"No member of the bar of his age is better known throughout the State of Pennsylvania. He represents and fulfils the best traditions of the Philadelphia bar. That he has proved himself a lawyer of the best type is the unanimous judgment of his contemporaries. He has distinguished himself in the trial and argument of causes, and he has done his duty successfully and well in public matters, and especially as a member of the Constitutional Convention; but he has chiefly impressed the members of the bar as a man having a peculiar aptitude for the judicial office. The people of the Third Circuit may be congratulated upon having been given a judge learned, upright, and impartial."

The Philadelphia *Press*, which takes its Republicanism "straight," is no less hearty. "The appointment of Mr. George M. Dallas," it says, "ought to be, and we believe will be, highly gratifying to the people of Philadelphia regardless of party. His success and eminence at the bar, and his appointment as Professor in the Law Department of the University of Pennsylvania, attest his capacity and learning as a lawyer."

The most important feature of these two selections, however, is not the fact that the Democrats chosen are excellent men, but that they are Democrats at all; that a Republican President gives one-third of these most responsible and distinguished offices to members of the other party. It was eminently the right thing to do. The Philadelphia *Press* tells the exact truth about Mr. Harrison's performance when it says of it:

"The country will approve of his moderation and self-restraint in refusing to take all the partisan advantage which the opportunity offered. That both parties are represented on the Federal bench makes strongly for the public safety and content. It promotes a healthy public opinion and belief in the essential non-partisanship and fairness of the Federal judiciary. The new Court of Appeals will stand stronger in the opinion of the public, and be regarded more generally with favor and respect, because in appointing its Judges the President has broken through the border wall of party politics."

But the more heartily the President is praised for giving the Democrats so large a representation on this important bench, the more severe must be his condemnation for having applied the contrary system of the most rigorous partisanship to the great host of less important offices which he has disposed of during the past three years. If it "makes strongly for the public safety and content" to have both parties represented on the Federal bench, so would it also to have both parties represented in minor departments of the Federal service. If such appointments "promote a belief in the essential non-partisanship and fairness of the Federal judiciary," and if "the new Court of Appeals will stand stronger in the opinion of the public, and be regarded more generally with favor and respect," because of them, so would the Postal Department throughout the country be benefited if in appointments to it the President had also "broken through the border wall of politics."

In fact, the argument for giving a third or a half of the minor offices to the opposite party is infinitely stronger than in the case of these high judgeships. Mr. Putnam and Mr. Dallas hold views diametrically opposed to those of Mr. Harrison on all of the great issues which divide parties, and they are given offices which enable them to enforce those views, and to affect the attitude which the Federal Government shall occupy regarding them; on the other hand, the overwhelming majority of the minor Federal appointees can exert no influence whatever upon the attitude of the Federal Government towards vital issues. Their duties are purely executive, and for the most part mechanical. They stamp letters, sort mail matter, add up columns of figures, manage petty offices—all of them duties with which partisanship properly has nothing in the world to do. The most eminent Democrat in Maine is given the most responsible office within the President's gift at this session, and yet there is not a little post-office in the State where it would be thought proper to retain the most efficient incumbent if he were a Democrat. A year ago the term of Gen. Corse as Postmaster of the metropolis of New England expired. His administration had been so remarkable for efficiency and non-partisanship that the business community of Boston besought his reappointment, and even such bitter Republican partisans as Senators Hoar and Dawes favored his retention. But Mr. Harrison refused to let him remain in this purely executive position, simply and solely on the ground that he was a Democrat, and had not expressed himself in condemnation of the course of his party throughout the nation. Even the cross-roads postmasters throughout the United States—40,000 of them—had to "go" if they were not Republicans, on the ground that it was essential to the successful administration of the Federal Government that every little office should be run by a man "in sympathy with the party in power." And then the President who thus surrendered tens of thousands of minor offices to the spoilsmen, recognizes the fundamental principle of civil-service reform by giving two out of six of the highest judgeships in the land to men who have not one particle of sympathy with the party in power!

The absurdity of the spoils system could not be portrayed more vividly than in this effective contrast. The nation will commend with the utmost heartiness Mr. Harrison's wise appointment of Democratic judges, by which it realizes more forcibly than ever before the folly of his refusal to keep in post-offices and other Federal offices the thousands of efficient men whom he has removed simply for being Democrats. The President has thus, unconsciously no doubt, given a great impetus to the cause of civil-service reform.

A REPUBLICAN BUSINESS MAN.

THERE can be no question that Stephen B. Elkins, whom the President has nominated for Secretary of War, is one of the most representative Republicans of his time. We doubt if there could be found in the country to-day a man who typifies more perfectly than he does the principles and tendencies of the latter-day Republican party. He is, as one of the Republican Boys of this city lately described himself to be, a "Republican from the crown of his head to the soles of his feet." For more than twenty years he has been devoting all his energies to the cultivation of Republicanism as he understands it—that is, has been making his politics and his business work together for the good of Stephen B. Elkins. The skill with which he has directed those energies is shown by the grand results. He is to-day a very rich man and a member of the Cabinet. The different steps by which he has reached these goals are so full of instruction that we shall trace them in their order, as briefly and dispassionately as possible.

He began his political business career in New Mexico when, in 1867, he became a member of the Legislature of that Territory. Two years later President Andrew Johnson appointed him District Attorney of the Territory, and he held the office till 1873, when he was elected a delegate from New Mexico to Congress. He served two terms in this capacity, becoming during his service greatly interested in mining ventures, all of which had special Congressional grants, or Territorial court decisions, or some other political complication which enhanced their value to Mr. Elkins and

other stockholders. One of his most famous ventures at this time was the Maxwell land grant, a Mexican boundary claim with a bill behind it. Mr. Elkins worked so zealously for this bill that it was passed, and the grant was afterwards sold to a Dutch syndicate for several million dollars. Prolonged litigation and ugly charges of irregular conduct followed the sale, but it was said that Mr. Elkins had severed his connection with the business before the scandals appeared.

In 1872 Mr. Elkins may be said to have entered upon his career as a national business Republican by becoming a member of the National Republican Committee, a position which he has held continuously ever since. He had about the same time become the warm personal friend and admirer of James G. Blaine. When the Star-route investigation began in 1881, after Garfield's inauguration, it was charged but not proved that Mr. Elkins, in his capacity as a Territorial Republican business man, had been connected more or less intimately with some of the objectionable contracts. Stephen W. Dorsey, another Republican business man, was shown to have been connected very closely with them, and in a statement which he made in 1884, Mr. Dorsey said :

"S. B. Elkins, United Bank Building, New York, has probably a larger knowledge than any other person of all the Star-route matters and the moneys paid. George E. Spencer demanded of the late J. W. Bosler and myself $12,000 to pay Mr. Elkins for the purpose of avoiding indictment and prosecution, and I replied that I would not pay a penny, and never did."

In 1884 Mr. Elkins took a most active part both in the nomination of Mr. Blaine for the Presidency and in the campaign for his election. After Mr. Cleveland entered upon the Presidency, and Mr. Bayard had become Secretary of State, there was found in the State Department a claim against Brazil for $50,000,000, made by one Jewett for an alleged discovery of guano beds in Brazil. Mr. Evarts, as Secretary of State, twice rejected the claim. The accompanying correspondence showed that Jewett had retained Mr. Elkins as counsel, and that Mr. Blaine, while Garfield's Secretary of State, on August 8, 1881, had written to Mr. Osborne, the United States Minister in Brazil, reversing Mr. Evarts's decisions and instructions in regard to the claims; and that Mr. Blaine had written also to Mr. Jewett saying that he had reopened the claim "at the request of Stephen B. Elkins, Esq., your attorney." In his letter to Mr. Osborne, Mr. Blaine said : "I am not sufficiently informed as to the law of Brazil to know how far its formal requirements as to the mere question of right and title would nullify this action by its Government, but I do know that in justice and in equity a responsibility has been incurred which cannot be escaped."

While the reopened claim was being thus pressed by Secretary Blaine and Mr. Elkins, President Garfield was lingering between life and death. After his death, Mr. Blaine was succeeded in office by Mr. Frelinghuysen. Nothing was done with the claim during the latter's term. When Mr. Bayard had considered it carefully, he said of it: "Such a claim, so stated, shocks the moral sense, and cannot be held to be within the domain of reason or justice. It would be an act of international unfriendliness for the United States to lend themselves in any way or to any degree in urging, much less enforcing, such a demand upon a country with whom we are, or design to remain, on terms of amity. I, therefore, return the protest as enclosed by you, and decline to transmit it to the United States Minister at Brazil, or to instruct him to present it officially or otherwise."

While the Bering Sea negotiations with Great Britain were in progress a few months ago, it was discovered that Mr. Elkins, as a member of the North American Commercial Company, had great financial interests at stake in preventing a settlement, and it was only with the greatest difficulty and after long delay that his interests were compelled to give way. It was intimated at the time that the President's son and other Republican business men were interested with Mr. Elkins in this enterprise, and a Washington correspondent hints that the President's son has been "let into" several other of the many good things which Mr. Elkins has control of, and that this kindness to the son has had some influence in securing the appointment.

We have touched upon only the chief incidents in the busy career of this eminent Republican business man, but enough has been given to show what his claims to the position are, and to foreshadow with sufficient clearness the kind of Secretary of War he will make.

A FURIBUNDAL NAVY.

THERE are times when it seems as if disinterested and faithful service of the country by men of honor, to whom money is by no means the highest good, is to be found only in the ranks of the army and navy. That these two services are the best schools of real patriotism just now, we fear there is no question. But it has to be borne in mind that the officers of both the army and navy are young men, and fighting men by profession, and naturally eager for active service, and, like military men all over the world, very ready to take offence, stand on their dignity, and exact satisfaction. For this reason every government which has an army or navy for real use, and not merely for show, finds itself obliged to keep a tight rein on any portion of either which brings it in contact with foreign nations. The army seldom does bring it in contact with foreign nations, but the navy does so constantly, and therefore a stimulated navy—that is, a navy fed, either by its superiors at home or by the press at home, on highly seasoned food, and urged to assert itself and "stand no nonsense," and make foreigners "stand round"—is one of the most dangerous possessions a nation can have, for it keeps the country constantly on the verge of an expensive quarrel, either with a Power which has to be fought because it is so big, or with a Power which has to be fought because it is so little. What naval officers, when let loose in times of excitement, can do in the way of reckless abuse of force, was well illustrated in the Jamaica troubles twenty years ago, when two young fellows—a lieutenant and a midshipman in the British navy—constituted themselves a drumhead court-martial, and hanged a highly respectable colored man whose sole offence was that he had been prominent in politics before the trouble began.

We are just now passing through a crisis which, we think, makes these observations peculiarly appropriate. After a good many years without a navy, we have begun to get one, and have already the nucleus of a formidable naval force with all the modern improvements. The public is naturally much pleased and very proud, and the naval officers have begun to recover from the humiliation so long inflicted on them by the old wooden ships. This has put the navy and a considerable portion of the public in what may be called a fighting mood. There is abroad a human, but not wholly respectable, desire to find somebody on whom our new armored ships and new guns may be tried without serious doubt as to the result; and Chili just now seems to have been selected for the *corpus vile*. The instructions issued by the Navy Department to the squadron at Valparaiso were in every way creditable, but, what with the influence of the Barrundia case and of the new navy, they were not strictly obeyed. Our officers did show their bias in favor of Balmaceda, with little or no attempt at concealment. Admiral Brown was very indiscreet in his movements; Commander Schley was very indiscreet in his correspondence, and more than indiscreet in sending a large body of sailors ashore at Valparaiso after being warned that the Chilian populace was very much excited. It was, under the circumstances, a real "wha daur meddle wi' me?" manifesto.

The threats that something terrible will happen to the Chilians if they do not submit to some sort of humiliation to which everybody knows we would not ask a first-class Power to submit, continue, and, as usual, a portion of the press is active in keeping the excitement alive. Every movement of our war ships, every launch of a new one, and every repair in the navy-yard is treated as preparation to fight Chili. As usual, the press has done nothing to enlighten or inform public opinion about the law or morality of the situation. It confines itself to stimulating the combativeness of the navy and the public.

Secretary Tracy, as far as we know, is keeping his head cool now, or doing nothing to aggravate the crisis, but a striking illustration of the kind of pressure he has to resist appeared in the columns of an

occasionally esteemed contemporary on Monday. Under the heading "Quite Ready for Chili," we find an interview with Secretary Tracy. Asked whether he had heard of a mob surrounding the American Legation in Santiago, he said he had not, and did not believe it. Asked whether he expected any trouble with Chili, he said he did not. Asked "what American line-of-battle ships are now within easy reach of Chili," he said: "The little *Yorktown* is at Valparaiso, and the *Boston* will be there in a few days. The *Baltimore* is now on her way up to San Francisco." This is all there was in the interview about Chili. It showed that the preparations for war with Chili are mainly being carried on in the newspapers, whose proper function really is, as preachers of morality, to try to keep war feeling down. This function would be discharged but for the extraordinary notion that the journalist's highest duty is to create a large demand for his newspaper. No notice of this is taken, as far as we know, in recent works on political science, but it is a prominent factor in modern politics.

EUROPEAN TARIFF CHANGES.

THE commercial treaties recently negotiated in such a way as to cover a large part of Europe, come as a striking fulfilment of a prediction made more than two years ago by an Italian economist. Writing in the *Giornale degli Economisti* of "Tariff Policy during the Last Thirty Years," he made out roughly a special character for each successive decade: the first, a period of gradually lowering duties, following the initiative of England; the second, the time of commercial treaties, in the negotiation of which France led off; and, third, the protectionist reaction of the last ten years, bringing back the features of the abandoned corn-laws, and reverting to the policy of international hostility and reprisals in trade. This reached its height in the commercial war between France and Italy, precipitated by the tariff laws enacted by the latter in 1887. It also led to the harmful French and German protectionist legislation. Writing when this war of tariffs was at its hottest, the economist we refer to, Signor Stringher, maintained that the condition of things thus brought about would be found intolerable, and predicted a return to the system of commercial treaties securing freer international exchanges.

That the new treaties which have already come stand for an abatement of the protectionist madness, is admitted on all hands. They may be complicated with political motives and questions of general international policy, but no considerations of foreign policy could make so many European statesmen seriously relax the protective system, as they are doing, if they continued to think that system the secret of national prosperity. Even in France, where the protectionists appeared a few months ago to be carrying everything before them, a most decided halt has been called. The first drafts of the new French tariff were enough to delight the heart of McKinley himself, and his French analogue, M. Méline, expounded the protectionist theory of increasing wealth by taxation with a sincerity and earnestness equal to the American's. No pernicious distinctions were to be allowed between raw materials and manufactured articles, and the great exporters were told that they would get along just as well with taxed wool and silk and cotton. But the hammering which the bill has had to take on its way through Chamber and Senate, the unanswerable assaults upon it by men like M. Léon Say, from the economic point of view, and by the protesting manufacturers and workingmen, from the practical standpoint, have knocked a good deal of the mischief out of it. All the proposed duties on raw materials have, we believe, either been abandoned or made up for by drawbacks to be paid to exporters, so that the Minister of Commerce, M. Jules Roche, could lately say in the Senate:

> "But a few months ago many voices were lifted up for the establishment of duties on raw materials. We have succeeded in getting that idea to be abandoned, in the interests of our national industries."

More than that, the immense value to France of her foreign trade has been freshly emphasized in the course of these tariff debates. In denial of the ignorant assertions of M. Dauphin and others that France had been marching straight to ruin through buying from other nations more than she sold them, careful statistics have been compiled which show that there has been a great advance in the value of both real and personal property during those fatal years when foreign commerce was encouraged. Even in the case of the much-pitied agricultural interests, M. Alfred Neymarck has shown that the value of farming lands increased from 61 to 91 milliards of francs between 1852 and 1882, while the value of domestic animals in the same time advanced more than 100 per cent. And as bearing on the future policy of France in the matter of international commerce, it has been too much forgotten that her new tariff system, in one of its features, leaves the door open for a great enlargement of foreign trade. We refer, of course, to the device of a maximum and minimum column, the latter of which, with its low duties, will be declared to be in force in the case of countries offering adequate concessions, on their part, to French exports.

The hope and expectation of the Government in this particular were made entirely clear in the speech of the Minister of Commerce referred to above, which was delivered on November 25. After declaring that it was "an essential condition of the existence of France to seek a foreign market, to make advances to the new countries just entering upon civilization," he proceeded to make the following significant statements:

> "The Government does not hesitate to declare that it will very soon introduce a bill to regulate this question; its object will be to grant the minimum tariff to the countries with which we actually have treaties. We have not wished to proceed with surprises or unexpected strokes, or to leave in uncertainty the nations to which the minimum has been conceded. Still less have we wished it to be supposed that the rules governing our international relations were to be suddenly modified."

A word should be added respecting the influence of these European commercial alliances and proposals on South American trade. Already it has been announced by the *Indépendance Belge* that Brazil and the Argentine Republic have taken steps to secure admission into the German-Austrian-Italian Commercial Union, or at least to obtain some of its benefits, as also to negotiate treaties of reciprocity with England. Such a course was inevitable on their part considering the substantial advantages to be gained in that way, and considering also how strong are the commercial and financial ties which bind them to Europe. It may be doubted, however, if the Brussels paper is right in saying that such measures are advocated as a means of retaliation upon France for her high tariff. It is true that there has been some discontent on this score. On October 27 President Fonseca sent a special message to the Brazilian Congress, calling attention, among other things, to the tax of 100 per cent. levied on Brazilian coffee in France. He thought that very unfair in view of the fact that the Brazilian duties on goods of French production did not exceed 40 per cent., and asked for authority to increase those rates. But France could easily obviate that objection by offering her minimum tariff in return for a proper equivalent, or even by making a special treaty, as Minister Roche said the Government would be ready to do in particular cases. At any rate, it is clear that European nations have not watched our reciprocity negotiations with folded arms, but have put themselves in a way to equal if not surpass any advantages we may have secured thereby in South American trade. The significant remarks of the German Chancellor on Friday leave no doubt that he considers the new commercial treaties a powerful weapon against our "Pan-American policy," as he called it.

THE FINANCIAL CONDITION OF ITALY.

ROME, November 30, 1891.

YOUR Italian correspondent, "J. W. M.," whose profound knowledge of Italian matters and intense sympathy with Italy are so well known to me that I am generally disposed to doubt my own views when they differ from hers, has given in the *Nation* of October 1 an historical summary of the financial condition of the kingdom, from which I have derived not a little instruction, and with which, as history, I am not competent or disposed to find the least fault. But in the examination of the present position I see certain facts which she seems to

have overlooked, and certain consequences which she has not anticipated. In all that she says of the progress of Italy I fully agree; in her eulogiums of the post-office management, as organization, I think she has not said enough, for the theory of the whole department is the most perfect I have ever come across, and the only drawback to the practice is that the operations are unreasonably slow, and the employees, overworked and underpaid, are provokingly tedious in their attendance on the public, and take ten minutes to perform an operation which in England would require but one. But in compensation you never lose a registered letter or object of value intrusted to the post. I have continually to complain of the loss of books coming by post from England, but never when posted in Italy. The officials are courteous and obliging to the last degree, and they give themselves far more useless trouble than they cause the people who make use of the post. The country is still very much behind in sanitation, travelling facilities, comfort and cleanliness in the inns and minor hotels, but it is necessary to have known it thirty years ago, as did "J. W. M." and myself, to understand the real progress made in almost all respects.

In certain details of the financial review, however, your correspondent leaves the statement incomplete rather than incorrect, and as it has been my business lately to investigate the subject at some length, I propose to fill out, rather than correct, her generalization. The *riscontrato* of which she speaks as a success, had hardly been put to the test when she wrote, and was not in any case the binding affair she had supposed. It was a weak and inefficient plan for meeting the weakest point in Italian finances, the condition of legal tender in the notes of banks which have only a local recognition. For instance, there are six banks which have the right of issuing circulating notes, the Banca Nazionale, Banca Romana, Banca di Napoli, Banca di Sicilia, Banca Toscana, and Banca Toscana di Credito; all the notes being legal tender in the province in which each series is issued, but not recognized in the others, the Nazionale alone being universal. These banks are forbidden by law to lend money on real estate or long-date securities; they are allowed to issue notes to three times the amount of their capital, and must have a metallic reserve of the same amount, though, when the enormous over-issue of the building crisis came on a few years ago, they increased their legal circulation from 1,100,000,000 francs to 1,500,000,000, as "J. W. M." says, and to legalize this excess, the present Ministry increased the proportion to four to one of capital, the cash reserve being still one to three.

The relation of the State to these banks is not, as your correspondent assumes, in the least like that of the English Government to the Barings. The Italian Government makes the notes of these six banks legal money, and we have no other currency. If these banks prove rotten, all the circulating medium in Italy is worth just one-third of its face, supposing the metallic reserves are all the law requires, which I should want to have verified before I would trust it. But a note of the Banca Romana, legal tender in Rome, is refused at Naples or Venice, because it can be refused, and because it is known that the Banca Romana has loaned, contrary to the law, 40,000,000 of lire on real estate which is not in all probability worth more than a small fraction of the loan, being houses unfinished or unsalable. Its reserve should be 23,000,000, and its outstanding notes are 70,000,000. If, therefore, the bank were brought to liquidation, it would be bankrupt. The other banks have dipped more or less in the illegal loans, and the amount is variously stated at from 200,000,000 lire to 500,000,000, to a large extent if not entirely in the same condition of immobile capital, *i. e.*, in various forms of real estate which cannot be realized on. The comparison with the Barings is, therefore, not good in point of law or of importance; nobody was obliged to accept the Baring securities, and the Barings had violated no law; they had been unfortunate, and, to avert the consequence of their misfortune, the Government advised their being assisted to liquidate on terms favorable but safe to all concerned.

The Italian Government, having called on the banks to put themselves in a condition of legality, they replied by proposing the *riscontrato*, a sort of clearing-house, but it was only volunteered on trial for a period at the discretion of the banks. The experiment has been tried now for three months, and, as I foresaw and foretold, only strengthens the position of the banks. The Banca Nazionale, which is legal all over the kingdom, pays out the notes of the Banca Romana instead of its own, and avoids responsibility. At the telegraphic office in Palermo, the other day, the officials refused to accept notes of the Banca Romana, and at Catania the branch of the Banca Nazionale refused to change the notes of the Romana which they had paid out over their counter only ten days before, and, even worse, they refused to accept the notes of the Romana, paid out at one wicket, for a draft on a distant city, when offered at another wicket. The *riscontrato* is an absolute mockery and delusion.

The weakness of the financial position in Italy is not in the official finance, because, as "J. W. M." says, if the taxes must be paid they will be paid, and can be. The burden of the present taxation is exaggerated and howled over by the classes who ought to pay and don't, much more than by those who pay their just proportion. I have heard proprietors admit that they do not pay the quarter of the taxes the law imposes; very few incomes or estates pay in the legal rate, and most of them are assessed at the half of their real value, many at a much smaller fraction. The taxpayers howl on principle, as if they were paying the full rates, and the assessors let them alone. It is safe to say that not a single professional income in Italy is stated at much, if any, more than the half of its actuality. The interest on the debt will be paid and the expenses of Government met; the shadow in the prospect is the condition of the banks, and the consequent solidity or the reverse of the circulating medium—we know nothing about these. It is this, and not the possibility of Italian insolvency, which raises the premium on gold and lowers the Italian rentes. There is no debt in Europe safer than the Italian, in my opinion, but no one is sure that the currency is secured against a crash. That gold is at only 3 per cent. premium, under such circumstances, is greatly in favor of the solvency of the country.

One element which all the statistics leave out of the account, and by the omission include a constant element of error, is the gold brought into the country by the visitors. The trade statistics show that the imports exceed the exports by thirteen million pounds sterling, and yet the premium on gold, until the last few months, has never risen above a fraction of one per cent., and the value of property, as shown by the returns of taxation, increases at the rate of a milliard a year. The solution is in the gold of the tourist and foreign resident, which, by a calculation I made two years ago, is not less than twenty millions sterling, and more recent researches by one of the principal embassies here, much interested in trade statistics, show that my estimate is rather below than above the reality. Italy is prospering and improving in almost every respect, and when we consider that she is scarcely thirty years out of foreign bondage, and that everything has had to be done, it must be admitted that she deserves all the praise she is likely to get even from her friends of the temper of "J. W. M."

W. J. S.

THE VICTORIAN EXHIBITION.

LONDON, December 4, 1891.

WHEN a Victorian was announced to follow the Tudor, Stuart, and Guelph Exhibitions, held during the last three winters in the New Gallery, its success—that is, not financially, but as a show of genuine interest—seemed doubtful. The result is even more depressing than one's expectations. The Victorian period in many ways has been as great as those which preceded it, but with its greatness the royal family has had little to do, and unfortunately royalty is given the most conspicuous place in these exhibitions. Besides, it was thought necessary to limit the time illustrated to the first fifty years of Victoria's reign, and the men and women represented, with the exception of the members of the Queen's family, to those who are no longer living. But the chief reason for the failure of the collection now exhibited in the New Gallery to rival its predecessors is the fact that, while its scope is professedly historic, the large proportion of pictures forces one to consider it from the artistic standpoint. The degradation of art in England during the Victorian era scarcely needed this new overpowering proof.

Low as has been the English art standard during the last fifty-odd years, there have been great artists at work in England, and art movements of no little importance have been started. The Pre-Raphaelite Revival, whatever one may think of its real value, was immensely interesting, and produced at least one painter of distinction. Of late years reaction against the conventions of the Royal Academy has led to the formation of the Glasgow School in Scotland, the New English Art Club in London. But, though one can trace the growth of sentimental, infantile story-telling from Landseer to Burton Barker, of what has been done in the actual world of art there is no sign in the Victorian Exhibition, since only the work of the portrait-painter is shown, and only the portraits of people of note—social or political, clerical or scientific, literary or artistic. By far the greater number and the more conspicuous are portraits of the royal family or records of royal events. In the case of Tudors and Stuarts, and even of Guelphs, this fact was no drawback, since Tudors and Stuarts and Guelphs, whether because they really cared (which is doubtful in the case of the latter), or whether they wanted royally the very best to be had in art, as in jewels or wine, succeeded in drawing to their courts some of the most accomplished painters of their day. Holbeins, Vandykes, and Reynoldses and Gainsboroughs were the glory of the last three exhibitions. But the Queen, ever since the beginning of her reign, and all her children in their turn, have shown a preference for the most commonplace and least artistic work. At home they have always patronized the Hayters and Friths; abroad they have found nothing better than a Van Angeli.

The result is that the pictures sent from Windsor and Osborne, from Buckingham Palace and Marlborough House, might be a collection from the Bayswater "Terraces" and Paddington "Gardens" of the city man: they are essentially middle-class, or, to use the Socialist's favorite slang, *bourgeois*. A painter must indeed be strong not to be discountenanced by royalty, and to paint the royal sitter as he really is. Holbein could stand the test: modern naturalists could not ask for bolder naturalism than his Henry VIII. Velasquez could still better, and it is amusing to contrast his Philip with the Philip of other painters of his time, of Rubens, for example, in the portrait at Munich. But lesser men in the royal presence always have fallen below their usual commonplace, and have produced not portraits in the least true to life, but a sort of "touched-up" photographs. When Princess Louise sat to Mr. Richmond, who is certainly better than Van Angeli, Richmond failed to give her portrait even that decorative quality which, with him, sometimes makes up for lack of realism. Caton Woodville is a clever black-and-white man; Sir James D. Linton is not quite so petty and puerile as Frith, and yet both, in painting royal ceremonies, have become as wooden and lifeless and dull as the dullest painter of the early Victorian period. There is not one royal portrait that can lift the royal collection above its middle-class level.

Nor can it be argued that this is the fault, not of the royal family, but of the condition of the art of portrait-painting in the last three-quarters of the nineteenth century. Have not Whistler and Sargent been painting in England? Are not the Holls and Wattses now in the New Gallery infinitely preferable to the inanities of Van Angeli? And abroad, has not every Salon, for the last thirty years or longer, given a far wider choice of good portrait-painters than the whole Continent offered to the Tudors? But the truth is, the reigning family do not like realism in portraiture, do not like good work. Once, as every one knows, the Prince of Wales allowed Bastien-Lepage to paint him, but when the French artist showed him how worthy a descendant in appearance, if in nothing else, he is of Henry VIII., he scorned the portrait, which, needless to say, does not hang on the walls of the New Gallery. The Queen may be remembered by after generations as a good mother—never as a patron of art.

Outside the royal family, matters are just a shade better, though the improvement is not general or great enough to redeem the show from dulness—that is, artistically speaking. Sir Thomas Lawrence painted portraits of many men—the Duke of Wellington and Sir Robert Peel, to mention no others—who were prominent during the first half of Victoria's reign; and, mannered and over-inclined to the "pretty business" as he was, he painted with a distinction never found in the canvases of the Hayters and Winterhalters, the Beecheys and Grants, who mark the lowest depths to which art has sunk in England. Coming down to a later period, one finds portraits by contemporary artists, by Holl and Ouless, Millais and Watts, Herkomer and Collier, which have been too recently exhibited in Royal Academies and other picture-shows to call for special criticism, and which certainly are a marked advance upon the earlier abortions. Here and there, on a screen or in a corner, one comes upon a smaller portrait of some little art value, as, for instance, a sketch of his wife by Rossetti, and his small drawing of himself. In the catalogue there is a Degas, a water-color of Pellegrini (the "Ape" of *Vanity Fair*), but as yet I have not been able to find it in the Gallery.

When all is said, however, the fact remains that in the exhibition there is but one great masterpiece which will live for all time, and which will be honored by future generations as we to-day honor the Holbeins and Vandykes, the Reynoldses and Gainsboroughs. This is Whistler's Carlyle, sent by the Glasgow Corporation, who, now that their haggling over its price is at an end, are proud enough of being its owners. The press view in the New Gallery was held the very day that news came of the French Government's purchase for the Luxembourg of the same master's portrait of his mother, together with the report that their offer of £160 was accepted by him just after he had refused one from a private individual for £1,500; and those who know Mr. Whistler can well believe it. It was instructive, just as one of his greatest pictures was thus allowed to go out of the country, to see how the English treat those that remain. The Carlyle is skied in a corner of a gallery where the centres of honor are reserved for Landseer and Millais! One might almost fancy a purpose in this eccentricity of hanging; had the directors wished to characterize an age in which bad work has been the rule and the great exceptions have been uniformly ignored, they could not have been more successful.

From the historical standpoint the exhibition is but slightly more satisfactory. Much of the history of Victoria's reign is contemporary history, and the principal figures in it are still alive, and, therefore, because of the limits set by the directors, excluded from the exhibition. How small a part royalty has had in public affairs of genuine importance is revealed in the royal pictures. The genius of the Victorian period has been domestic, as the British matron will tell you with complacent pride, and the canvases which represent royal events, with but few exceptions, reveal this domesticity. They are pictures of royal weddings and royal baptisms, as if marrying and giving in marriage and the perpetuation of the Hanoverian race had been the sole end and object of the royal house; and how fully these ambitions have been gratified is also commemorated in that awful group of the Queen and the royal family painted during the jubilee year. Otherwise, their only possible interest is as a record of fashions during a long period in which women took pleasure in making themselves hideous.

The introduction to the catalogue reminds the visitor that there have been two large and thirteen small wars during the period illustrated. But of these there is slight trace in the show, whose general character is most pacific, save in the cases full of Gordon relics. It is also strange that, though Victoria is the first Empress of India, and though the Eastern colonies have been extended during her reign, there is little, if anything, to suggest the fact; and this is the more to be regretted since a chance dagger here and a bit of embroidery there remind one that the East could have supplied the art element so sadly missing. The line of statesmen, beginning with Wellington and Peel and Lord Palmerston, and ending with Disraeli and John Bright, tells only half the story of the Victorian period, since Mr. Gladstone is absent and the Irish Home-Rule party without representatives. To attempt to give the political history of Great Britain during Victoria's reign, and to omit the Irishman, is indeed a case of the play of "Hamlet" with *Hamlet* left out. As Mr. Parnell, by his late death, has fulfilled one of the conditions for admission, and as his public life supplies the others, one would think a portrait of him might have been secured.

When it comes to literature, there is less fault to be found, though in this department, too, one is conscious of incompleteness. All the familiar portraits of Thackeray and Dickens are here, and all interesting enough in their way, especially that one of Thackeray as a baby with his father and mother, reproduced three or four years ago in *Scribner's*, and one of Dickens as *Captain Bobadil;* but, strangely enough, none are of any special merit as paintings. Here, too, are Wilkie Collins and Bulwer, in characteristic pointed shoes and long waving locks, and an unexpectedly proper and prim little George Borrow in high stock. Macaulay and Grote, Carlyle and Matthew Arnold, remind one of what has been done in a more serious branch of literature. Jeffrey of the *Edinburgh Review* seems out of his time away from the men whose reputations he made or unmade for a day, and Christopher North, even if he did not die until 1854, belongs practically to an earlier period. To find portraits of these men hanging in the same room with those of Browning and Rossetti is the best reminder of the many years the Queen's reign has lasted, while the presence of the two latter but emphasizes the absence of Tennyson and Swinburne, without whom Victorian poets are as incomplete as Victorian statesmen without Gladstone and Parnell.

One of the greatest surprises the exhibition has in store is a little sentimental, simpering George Eliot, painted by D'Albert Durade (whoever he may be), and startlingly unlike the better-known chalk drawing in the series by the elder Richmond, so much overrated in their day. With a face as strongly marked as George Eliot, Richmond could hardly efface all character, but even his Charlotte Brontë and Mrs. Gaskell have much of the conventional Book-of-Beauty type then fashionable. Many of his celebrated contemporaries are included in the series, which, however, now commands but little interest.

It is useless to go through a list of all the portraits. Hardly any men and women of fame or notoriety have been forgotten; too many nobodys have been remembered. A few call for more attention than others: for example, in the group of artists there are a small sketch of Charles Keene, his clay pipe in his mouth, a water-color of Fred Walker by himself, and three portraits of Turner, the first with his old-fashioned tall hat pulled well down over his eyes, an amusing contrast to that other, his own work, in which he is as beautiful as Sir Thomas Lawrence could have made him, and to the vigorous little sketch, by Linnell, of a middle-aged and not very striking-looking Turner. It is interesting, also, to have the famous Tractarian movement and what might be called the Rugbyite departure in the public schools recalled by portraits of Cardinal Newman and Thomas Arnold; while those of Faraday and Herschel, Darwin and Carpenter, George Stephenson and Lyell, with the models of locomotives and ocean steamers and of the Forth Bridge, explain anew the real reason for the failure of the Victorian exhibition. To have illustrated truly the Victorian age, the show should have been one of machines and scientific instruments and appliances, not of pictures.

By far the most delightful part of the exhibition is the least conspicuous—the collection of autograph letters and manuscripts in the balcony. Many of the letters have been print-

ed and are as well known as the portraits, but this does not detract from one's pleasure in seeing the originals. They have been carefully arranged, most of them showing very characteristic passages. It is quite as it should be that letters from Browning, who was so prominent a figure in London society, should be acceptances or refusals of invitations; that one from Mrs. Gaskell should be a stamped acknowledgment for payment of the copyright of 'Right at Last'; that Thackeray's should be opened at one of his illustrated pages, Calverley's at his admission of a "lurking fondness for absurdity." But it is still more impossible to go through this list without degenerating into a catalogue, since almost every notoriety and famous man and woman of the Victorian era is here again represented—from Disraeli to Gordon, from Capt. Mayne Reid to Dickens, from Charlotte Brontë to Miss Mulock. There are fewer manuscripts, but these are well chosen. Rossetti's "Rose Mary," Disraeli's 'Endymion' (and what a bulky manuscript it is!), Macaulay's big sprawling journal, Dickens's 'Christmas Carol,' Mrs. Browning's 'Aurora Leigh,' and Browning's far neater 'Isolando'—these give at least an idea of the delightful material which directors have been able to secure.

There are relics, of course. Relics have been principal features of these historical exhibitions, and in a great measure account for their popularity with the sentimental British public. There are many good Britons who will prize Disraeli's walking-stick and spectacles and the precocious art efforts of the infant Victoria more than anything else the show can offer them, unless it be the odds and ends in the Gordon cases. Fortunately, however, a large proportion of the relics are of Thackeray and Dickens—not merely their chairs and writing-desks, but their MSS. and notes and sketches; and these one can not only endure, but enjoy. As for the stamps and medals, the decorations and coins, one gladly leaves them to the specialist. Design for official purposes has been as artless as the painting of royalties during the Victorian age.

Correspondence.

THE HISTORICAL AMERICAN EXHIBITION AT MADRID.

To the Editor of The Nation:

Sir: One of the most interesting and instructive celebrations proposed for the year 1892 is the Spanish celebration, the chief feature of which will be an exhibition at Madrid, termed the Historical American Exhibition, the special object of which is to illustrate primitive American life and the history of the period of discovery and conquest. In selecting the prehistoric and early historic eras for illustration, the Spaniards will make their own exhibition complete in itself, without in the least competing with the Chicago Exhibition.

The plan of the exhibition is, within its limits, a very broad one, comprising five general divisions, viz.: Prehistoric America, the Historic Period, Indian Industrial Arts, Cartography, Nautical Instruments, etc., and the Fine Arts and kindred subjects. Under the head of prehistoric America, plans, models, reproductions, drawings, etc., are solicited of ancient caves and caverns, and anything that may help to show the use of these primitive places as human dwellings. Similar models, drawings, or photographs are desired of American menhirs, dolmens, and mounds, as well as lacustrine dwellings. All sorts of implements and objects relating to this period are desired, such as stone weapons, articles of bone and horn, pottery, ornaments, utensils of bone, wood, stone, and other materials, with fossil or animal bones throwing light on the archæology of this time. Examples of all the ages and periods of primitive life as they can be traced on the American continent are wanted.

In the historic period the objects desired include models of ancient American buildings, architectural remains, plans, models, and drawings of restored monuments. Examples of sculpture, bas-reliefs, architectural paintings, and other forms of painted decoration form another class. Under industrial art is included clothing and adornment of the aborigines and uncivilized Indians, with implements of war, offensive and defensive. Jewels of gold, silver, bone and ivory, pottery, household utensils, and articles used in transportation by water and land, constitute another division of this branch, while written documents in native tongues, pictures and photographs of Indians and effigies showing native costumes, models of Indian dwellings, and Indian crania, form a third division.

The department of cartography includes maps, plans, charts, and drawings, and all that concerns ancient cartography, with models of vessels anterior to the voyage of Columbus, as well as those he himself used. A section is devoted to nautical instruments, with the idea of illustrating the instruments, charts and maps in use at the period of discovery, while objects in personal use by Columbus and pictures of the same are also desired. The fine-arts department includes ancient architectural monuments, sculpture, paintings, industrial and artistic work following the discovery, American coins, literary and scientific publications, manuscripts, charts, and plans of all kinds from the discovery to the middle of the eighteenth century.

Most liberal inducements are offered to intending exhibitors from America. The exhibition will be held in the new Library and National Museum building in the Park at Madrid, which will be used for the first time for this purpose, the exhibition serving as a sort of inauguration of the structure, which has been a number of years in building. It will be opened on September 12, 1892, and will close on December 31st of the same year, thus preceding the Chicago exhibition, which it is designed, in a measure, to supplement. All objects, if securely and properly packed, will be forwarded gratis to Madrid, and returned to the exhibitor free of all expense, the exhibition not only bearing the cost of transportation, but also, when desired, attending to the arrangement and display of the objects without any charge. Those who desire special cases of their own may provide them, and special buildings may also be erected in the Park if the design is approved by the General Committee. All objects for the exhibition will be admitted duty free into Spain if they are withdrawn at the close of the exhibition, but two months will be allowed after the end of the exhibition before articles need be returned.

An international jury, proportionate to the number of the exhibitors from different countries and the importance of their exhibits, will examine the articles displayed and award the prizes. These will consist of a first prize of honor, a gold medal, a silver medal, a bronze medal, and honorable mention, each medal being accompanied with a diploma.

The exhibition covers, of course, the entire American continent, but to insure its complete success the active coöperation and assistance of citizens of the United States is especially desired. There is every reason why Americans should both be interested in this exhibition and take part in it. The conditions are liberal, the prizes ample, and the time is especially convenient to intending exhibitors at the Chicago exhibition, as objects may be exhibited both at Madrid and at Chicago. Nor is the novelty of the exhibition its least merit. Early American history has always been a favorite topic of study among European scholars, but it is safe to say that if this exhibition is carried out as it is planned, it will offer Europeans the first opportunity they have had to study primitive American life in its completeness. American collections are very rich in the materials most desired at Madrid, and it is most sincerely to be hoped that the gracious invitation of the Spanish people to participate in their Columbian celebration will meet with a generous and hearty support from American scholars and collectors.

Barr Ferree.

New York, December 16, 1891.

MATHEMATICAL STUDY ON THE CONTINENT.

To the Editor of The Nation:

Sir: I should like to add a few words of caution to your notice of last week with reference to the admission of an American woman to the mathematical lectures in the University of Berlin. It would, I think, be unfortunate if the impression were to get abroad that a student who had pursued the ordinary college mathematical course—even with the extensions now provided in most colleges of good standing as free electives or optional courses—would do well to continue her studies at a German university. The arrangement of the preparatory studies is so different that it would be a grave mistake for any one to expect to profit by German mathematical lectures unless, after undergoing a sound preliminary training, she had devoted a good deal of time to higher mathematical studies; only then is she qualified to profit by the different presentation of the subject that she will meet with in France or Germany.

Miss Ruth Gentry graduated in 1890 from the University of Michigan, having devoted to mathematics as large a proportion of her time there as possible, availing herself to the fullest extent of the numerous elective courses there offered. She then held the mathematical Fellowship at Bryn Mawr College for the academic year 1890–1891, during which time she pursued extensive courses of lectures and private reading in the Theory of Functions and Higher Analytical Geometry, with auxiliary courses in Elliptic Functions and Modern Algebra. Her reading had thus already interested her deeply in the work of Klein, Fuchs, etc., and it is a source of great gratification to all interested in her work, and in the prospects of advanced study for American women, that she now has the opportunity of hearing Professor Fuchs's theories expounded by himself.

Yours truly,

Charlotte Angas Scott.

Bryn Mawr, December 15, 1891.

WEAK FORMS OF *BEEN*, AND POPE'S RIMES.

To the Editor of The Nation:

Sir: In several recent numbers of the *Na-*

tion (pp. 181, 237, 447), the various pronunciations of the word "been" have been discussed without any scientific statement being given of the genesis and relation of the various forms. Prof. Wheeler ('History of Language,' p. 413) has hinted at the correct explanation.

The ME. pronunciation of the word was (using phonetic spelling) *bēn*. This close *ē* had by 1550 (cf. Palsgrave, 1530, in Sweet's HES. §818; and Löwisch, p. 52) approached very nearly to *ī*, and had generally reached that point by 1700 (cf. HES. §§818–820, 814, 816). We thus have two strong, or stressed, forms, an earlier *bēn* and a later *bīn*. For each of these a weak form arose in unstressed positions, namely *bĕn* for *bēn*, and *bĭn* for *bīn*. When thus phonetically two forms arise that do not find use in distinguishing meaning (as, early ME. *ōn* 'one'—'*ăn*' 'an') or function (as, *off* adv. —*of* prep.), generally one of the two in time supplants the other (for example, of late ME. *ōn* before vowels—*ō* before consonants, only the former, now written *one*, has survived). While both forms are still in use, a poet occasionally allows himself to employ in rime the weak form for the strong—the most innocent poetic license. The weak form *bĕn* early yielded to the strong form *bēn*, which then became *bīn; bĕn* survived and got the upper hand only dialectically, especially in some parts of America. The weak form *bĭn*, that was in time formed from *bīn*, has become general in America, while in Great Britain it would seem that the strong form *bīn* has pretty commonly held its own. I am not at all certain that the distinction of weak and strong forms is not still made by many Englishmen, who suppose they always say *bīn* because that is the sound they hear when they pronounce the word by itself, and so with stress.

I am puzzled by "X.'s" statement that "Pope makes *been* rhyme with *sin* about half the time." I can find only *been–sin* 151–323 (Globe ed.); against *been–seen* 85–149, *been–queen* 142–704, *between–been* 253–289, *seen–been* 395–117. This proves nothing for an *ĭ* pronunciation by Pope; for he has such undoubtedly imperfect rhymes as *seen–within* 287–55, 473–3, *mean, spleen–within* 298–143, *seem–him* 451–4. Lowell's statement, referred to by "F. H.," is: "*Ben* for *been*, of which our dear Whittier is so fond, has the authority of Sackville, 'Gammer Gurton' (the work of a bishop), Chapman, Dryden, and many more, though *bin* seems to have been the common form." This I can only understand on the supposition that when Lowell wrote it, the pronunciation *bīn*, despite his visits to England, had not attracted his attention, and, when he met in literature such rhymes as *seen–been*, he supposed them to be imperfect, just as he knew them to be when he found them in the writings of his neighbors (for example, in Holmes's "The Island Ruin").

We may justly be indignant that the writer of a study of the Rimes of Alexander Pope, which has just appeared in the publications of the Modern Language Association, did not prepare herself for her task by a study of the English of the last century. She would then never have done so absurd a thing as to base her classifications on the "authority" of a dictionary of living English. Though she states that "many of the words that have found their way into the list of false rimes may, in Pope's time, have been true," and that "this obsolete usage has in general been indicated in the lists," she gives us more than a dozen pages of "false rimes," and does not indicate a dozen such words. Poor Pope! He evidently could not rime any better than Chaucer could spell.

GEORGE HEMPL.

ANN ARBOR, MICH., December 12, 1891.

"GOD BLESS THE MARK!"

TO THE EDITOR OF THE NATION:

SIR: Mr. Browne's letter in No. 1379, regarding the exclamation, "God bless the mark!" alludes to only two meanings of the word *mark*, namely, what an archer aims at, and the cross as a signature. He probably does not accept either of these meanings for the phrase in question; but he neither rejects them, nor does he propose any other definition.

The true import of *mark*, which it seems of primary importance to ascertain, is plain from the following passage, which I think Mr. Browne would have quoted if it had occurred to him. It countenances his supposition that the exclamation was often accompanied by making the sign of the cross. It also shows Shakspere, like Scripture, to be his own best interpreter:

> "Never mole, hare-lip, nor scar,
> Or *mark* prodigious, such as are
> Despised in nativity,
> Shall upon their children be."
> (*Mid. N. Dream*, v. 2.)

"Prodigious" has here no reference to size, but signifies portentous or of ill-omen. In ages of faith, many such marks were recognized. *Gonzalo*, in a storm at sea, had great comfort from a fellow who had no drowning *mark* upon him, but whose complexion was a perfect gallows. One gallows-mark was a black mole, coffin-shaped, under the right ear. *King John* saw "a fellow by the hand of nature *marked* to do a deed of shame." So in "Lear," iii., 4, a squinting eye is as ill-boding as a hare-lip. Many an abnormal form in physique is chronicled in folk-lore as attesting moral obliquity. One specimen in a thousand of its wise saws we have in the doggerel:

> "Trust not the man whose eyebrows meet,
> For in his heart you'll find deceit."

Mark, then, in the phrase now in hand, originally meant some physical peculiarity believed to be ominous as to one's character or destiny. The divine blessing was invoked against such a mark—that is, it was asked to be poured out just where it was most needed. After the word *mark* came to be used in a wider sense, as it naturally did, embracing all signs of ill-omen, a blessing was begged to avert the evil which those signs boded. It is nothing strange to pray that a blessing may descend on the *mark*—the very place which needs it most. When *Shallow* needed *Falstaff* to speak for him, he cried: "God bless thy *lungs*, good Knight." So *Edgar*, when there was a tempest in *Lear's* mind, exclaimed, "Bless thy *five wits*," and again, he says, when *Gloster's* eyes had been gouged out, "Bless thy sweet *eyes*, they bleed."

This linguistic usage thickens other proofs which do demonstrate thinly the significance of an obscure saying, and may fortify Mr. Browne's notion that it was wont to be emphasized by the sign of the cross.

"God save the *sample!*" is the reading of the phrase as spoken by the *Nurse* to *Juliet* in the quarto of 1597. This word *sample* half disposed Grant White to think that *mark*, as found in other places, may mean such a mark as was made by a little girl's needle upon a sampler. But when so disposed he was strangely oblivious of his own statements that the copy for the sole edition showing the word "sample" was obtained by surreptitious and inadequate means—notes taken at the theatre during representation, etc., and that great corruption is manifest on its face.

JAMES D. BUTLER.

MADISON, WIS., December 16, 1891.

"A GENEALOGIST'S GRIEVANCE."

TO THE EDITOR OF THE NATION:

SIR: As a record-searcher and one well acquainted with Mr. Waters, I beg to demur to that part of Mrs. Vernona Smith's letter to you of the 6th ult. in which she imputes ungentlemanly behavior to him.

I am quite sure Mr. Waters is incapable of any such behavior, and my opinion will be endorsed by all those who have, like myself, been honored by his friendship. If he omitted to acknowledge his indebtedness to Mrs. Smith for any hint she gave him, it was, I am convinced, done inadvertently and without any discourteous intention.

Mrs. Smith's incidental declaration that she is *not* a "professional worker," has been read here with some astonishment.

WILLIAM BRIGG
(B.A. Cantab.).

ST. ALBANS, HERTS, ENGLAND, December 8, 1891.

MORE SPOILING OF THE 'BRITANNICA.'

TO THE EDITOR OF THE NATION:

SIR: What is to be said of the two latest enterprises to make spoil of the 'Britannica'—always the poor 'Britannica'!—one of which assumes the title of the 'Americanized Encyclopædia Britannica,' while the other boasts that, except the American copyright articles, it is "word for word identical with the expensive Edinburgh edition"? Writing to parties who are putting the former upon the market to learn if it was authorized by the Messrs. Black, I received the reply:

> "The publishers of the original work (which would have cost you [observe the argument!] $150) are not expected to countenance that which is a revision of, and an improvement upon, their own, and which we are enabled [*how?!*] to offer you at such a low price."

And when I put the same inquiry to the other parties, what reply did I receive?

> "Our edition is not authorized by the Blacks of Edinburgh, nor does it need to be. The twenty-five American articles contained in the Edinburgh edition were the only part of that edition subject to copyright in the United States. As we have had those twenty-five articles rewritten by equally eminent American writers and brought up to date, we are able to lawfully [!] publish the entire remainder of the work word for word."

The thought of any court of *honor*, or of any lawfulness not concerned with a question of *fine* or *imprisonment*, seems never to enter into this discussion.

And what is to be said when leading divines, superintendents of schools, presidents of colleges, mayors, and bankers, lend their names in praise of either enterprise? Can we never hope to escape that confusion of ideas which fails to see common dishonesty as such if only it favors education and the poor man?

Respectfully yours, H. D. C.

EASTPORT, ME., December 17, 1891.

Notes.

THE correspondence of the poet Cowper has been collected and arranged, with annotations, by Thomas Wright, of Cowper School, Olney, Bucks, England, and is nearly ready

for publication. Its magnitude may be inferred from the fact that about four hundred of the letters were not included by Southey in his edition, which, for the rest, was necessarily imperfect in respect to those it did contain. Mr. Wright desires to reëxamine every original if possible, and asks for the loan of any in private hands.

'The Platform: Its Rise and Progress,' by Henry Jephson, private secretary to Mr. Forster and Sir G. Trevelyan, beginning with the days when an open meeting for discussion of public affairs was condemned as scarcely less than overt treason, traces the slow growth of political speech-making and analyzes the elements in its development. The work will be published by Macmillan & Co. early in January. They have also nearly ready the 'Browning Cyclopædia,' which has been in preparation by Dr. Edward Berdoe, author of 'Browning's Message to His Time.'

Frederick Warne & Co. announce 'Electricity up to Date for Light, Power, and Traction,' by John B. Verity, and the new volume of 'Barker's Facts and Figures for the Year 1892,' edited by Thomas Whittaker.

D. C. Heath & Co., Boston, will soon issue the first four books of Goethe's 'Dichtung und Wahrheit,' edited by Prof. C. A. Buchheim.

An illustrated 'Handbook of New York City' is in preparation by Moses King, Boston.

Benj. R. Tucker, Boston, will shortly publish 'The Duchess of Powysland,' a new novel by Grant Allen. Mr. Tucker's *Weekly Bulletin of Newspaper and Periodical Literature*, by the way, has just been doubled in size, and will hereafter catalogue 650 articles in each issue.

The three-volume edition of Carlyle's 'French Revolution,' just issued by Porter & Coates, Philadelphia, is handsomely bound, and calculated to make a good appearance on the shelves. The typography is clear and open, but shows some shortcomings on the part of the proof-reader. The name Sieyès uniformly goes unaccented, even in the index, but on the tissue fly-leaf facing the Abbé's portrait, it is misaccented ("Sièyes"), just as Anacharsis Clootz's name is spelt to his face "Cloatz." The portraits constitute the chief excuse for this edition. There are upwards of fifty of them, with a few plates of famous scenes. No great pains have been taken in selecting them, and they have as a whole very little authenticity. One dozen photogravures from original canvases of repute would have been worth these five dozen haphazard copies of old prints. Still, the sense is gratified by these interspersed plates, and we mean no more than that they enhance but slightly the value of the fair print.

Another holiday reprint, in five volumes, is Mrs. Mary Cowden Clarke's 'Girlhood of Shakspere's Heroines' (A. C. Armstrong & Son). It is forty years since this series began to be published in English, yet the venerable author is still living, and furnishes a cheery preface to the present edition. There have been partial American reprints — in 1857, 1867, 1871—but the present is the fullest of all, and it alone is copyrighted. The books are handy in size, well printed, and bound in simple good taste in blue cloth, and have everything to recommend them as gifts and as possessions. In the last volume is given a bibliography of the works of Mrs. Clarke and her husband.

'Masterpieces of American Literature' (Houghton, Mifflin & Co.) has nothing of the appearance of "a text-book for reading in the first class of the grammar-schools," and properly so, since it is capable of giving pleasure in private reading. Nevertheless, it was ordered and approved by the Boston school authorities, and will very certainly be gladly availed of by school-teachers all over the country. Nine out of the thirteen authors were natives of Massachusetts, while Webster and Longfellow and John Boyle O'Reilly were adopted citizens of the same State, leaving only Irving wholly out of touch with it. The selections in some measure have a like local restriction, but have been determined partly with reference to rhetorical exercise. The volume contains the whole of 'Evangeline,' of 'Snow-Bound,' of the 'Vision of Sir Launfal,' of Lincoln's Gettysburg speech (in connection with Lowell's essay, etc.). There is a biographical sketch and other apparatus for each author.

Another "notion" not limited in its usefulness to "the Hub" is the 'Directory of the Charitable and Beneficent Organizations of Boston, together with Legal Suggestions, etc., prepared by the Associated Charities.' The third edition is before us (Boston: Damrell & Upham). This is a conspectus of organized charitable endeavor in a great city, which cannot fail to profit those who turn to it for suggestion and example.

E. P. Dutton & Co. send us 'Waymarks,' a collection of sermons by Bishop Potter, selected by him from his occasional discourses of the past twenty years, the last being the one delivered at the consecration of Bishop Phillips Brooks.

'Duplicate Whist,' by John T. Mitchell (Chicago: A. C. McClurg & Co.), gives an intelligent account of the variant forms of that increasingly popular form of the game, and adds, in an appendix, the code of rules adopted by the First American Whist Congress, together with a summary of the "Leads and Inferences of Modern Whist."

The composite character of Hadrian's wall, which bounded the Roman dominion in England, has long been a crux exciting no little controversy among antiquarians. The wall itself stands with a fosse to the north; immediately south of it is a military road, and south of this again there are successively a rampart of earth, another fosse with a mound on its southern side, and then another rampart. Various theories have from time to time been framed to explain this complex structure, and now, in a little volume entitled 'Per Lineam Valli,' Mr. George Neilson of Glasgow has proposed a new solution. He holds that the southern rampart and fosse were a temporary work to guard the laborers engaged in quarrying and building the wall, while the northern rampart was a subsequent device to serve as a defence against any roving or rebellious bands of Britons and to guard the military road. Mr. Neilson argues his case ably and clearly, showing abundant familiarity not only with the details of the ground traversed, but with the Roman writers on the military art. He writes brightly and pleasantly, moreover, and invests his somewhat technical subject with interest even to the uninstructed.

W. Ostwald's 'Solutions,' translated by M. M. Pattison Muir (Longmans), comprises a portion of Ostwald's well-known treatise on General Chemistry, and embraces the whole subject of solution in its various aspects. The translation has been made with the approval and even supervision of the author. The work, like the parent treatise, is in all respects admirable; in fact, it would be difficult to point out a more suggestive treatment of any subject in the whole domain of chemistry. Chemists who do not read German will certainly urge the translation of the entire work.

The 'Embryology of the Sea Bass (*Serranus atrarius*),' by Henry V. Wilson, is a good piece of work from volume ix. of the Bulletin of the United States Fish Commission. It includes 68 pages of text and 19 plates, the 151 figures of which illustrate the development from segmentation up to within a few hours of hatching. From his drawings Mr. Wilson would appear to have been very fortunate in handling his material. One thing may be noticed in passing: Mr. Wilson agrees with Balfour in discrediting the homology instituted by Eisig and adopted by Whitman and others, between the lateral line organs of fishes and the "Seiten Organe" of certain annelids. The discredited homology is an important one to advocates of a theory of vertebrate derivation from the worm.

The Mosquitos, or, as they style themselves, the Mísskitos, are an Indian people inhabiting the coast of eastern Nicaragua and of northeastern Honduras. They are largely mixed with negro and other foreign elements, and only upon the rivers and creeks of the interior do they show a purer blood. Many travellers have regarded the idiom of these people as a jargon or mixed language, but the missionaries of Herrenhut, who made their country, with its impenetrable woods and swamps, a permanent home, succeeded in acquiring the language of the natives in its fulness, and it proved incontestably to form a linguistic family by itself. Judge L. Adam of Rennes has gathered the literature of this language, and the result of his linguistic study is the publication, just issued, 'Langue Mosquito: Grammaire, Vocabulaire, Textes' (Paris: J. Maisonneuve), forming vol. xiv. of the American Linguistic Library. The texts are largely taken from the Bible stories of the Herrenhut missionaries, and are accompanied by a French translation, as are also the two love songs which Mr. Adam has been able to secure. The vocabulary is rich and fills nearly thirty pages, and the grammar contains full paradigms of several active verbs, which are inflected by personal suffixes, and show a large number of tense-forms.

M. Ernest Havet published three editions of the 'Pensées' of Pascal (1852, 1866, 1881), as well as an abridgment for the use of schools, taken from the first complete edition. M. Louis Havet has just brought out a new classical edition of this abridgment, conformed to the last complete edition, and published by Delagrave. The text he has taken directly from the edition of 1881, with all its improved readings. The notes are Ernest Havet's condensed, with some of the less important ones omitted. The text of the Life of Pascal by Mme. Périer is taken, with some critical changes, from the edition of 1684, and the Port Royal preface is now added from the 1669 edition.

To the slowly growing list of books about puppet-shows, M. Lemercier de Neuville, the inventor of the *Pupazzi*, has now added another, 'Histoire Anecdotique des Marionnettes Modernes' (Paris: Calmann Lévy; New York: F. W. Christern). M. Jules Claretie, the director of the Comédie-Française, contributes a pleasantly written preface, the most interesting anecdote in which is to the effect that when M. Claretie was in Spain last autumn, he went to a puppet-show, a *guignol*, a Punch-and-Judy—that is to say, an entertainment the performers of which were animated by the human thumb and finger, and not set in motion by wires from above; and here he was able to recognize the play these manual laborers performed as a modification of Molière's "Monsieur de Pourceaugnac." M. de Neuville gives

a list of the hundred and more plays he has written for his own *Pupazzi* in the past thirty years; and two pages of diagrams enable us to understand the modifications and improvements he has introduced one after another.

M. D. Jouaust, to whom credit is due as the publisher of many fine and some charming editions of books both old and new, has just retired from business in Paris. His publications have been, one may say, invariably in good taste, and it may be expected that, now they are going out of print, they will increase in value. The *Figaro* takes leave of him with the high compliment that he has known that "to illustrate a book is not to make an album of it." This is high praise; but if every publisher strove for it, what would become of the Christmas books?

R. Kukula and K. Trübner publish through the Trübner house of Strassburg a "Jahrbuch der Universitäten der Welt," under the title of *Minerva*, costing about a dollar. This yearbook contains a list of the personnel of all the universities and university libraries of the whole world, and will doubtless be found convenient and useful by many.

No. cv. of the excellent "Manuali Hoepli" (Milan) is Dr. Antonio Restori's brief history of Provençal literature ('Letteratura provenzale'). To the many who, without being specialists, are interested in the history of European literatures, this little book will be welcome. Scarcely any literature is so elusive as that of Provence. Experts have written on it in German, French, and English, but Diez is labored, Bartsch curt, Fauriel antiquated, and Meyer's well-known article in the 'Encyclopædia Britannica' scarcely more than a list of names. Dr. Restori, without attempting to give the result of original investigation, presents an orderly and accurate survey of the whole field, with an index and good bibliographical notes.

The committee appointed by the Government of Barbados to report upon the Records of that old English colony have adopted a suggestion made by Mr. Hawtayne, C.M.G., of British Guiana, that the Record Office in London should be asked to undertake the sorting, calendaring, etc., of the old papers which have been put away higgledy-piggledy, into some twenty tin boxes, in hopeless confusion. The Colonial Secretary of the Island, Mr. Knollys, C.M.G., who is chairman of the committee, has accordingly written to the Secretary of the Public Record Office, asking whether the skilled staff of that Department could be employed upon the proposed work. This cannot but be good news to the numerous persons in the United States and in Great Britain whose families have in past times been settled in Little England, as the islanders sometimes affectionately call Barbados.

Among the English officials whose connection with the public service will probably terminate on the last day of this year, in consequence of the operation of the age clauses of the Order in Council, there are some whose names are familiar on this side of the Atlantic. Sir Edward Hertslet, the Librarian of the Foreign Office, whose volumes of Treaties are known the world over, will, after more than fifty years' service, take repose at his home at Richmond, Surrey. It is also probable that Mr. Noel Sainsbury of the Public Record Office will sever his official connection. As the editor of those admirable *Calendars* of the Colonial Series of State Papers, Mr. Sainsbury has raised his own monument. Literary workers will miss him sadly, for he will take with him stores of information that have been gathered through years of loving work upon his special subject.

"F. M." writes to us from Hartford, apropos of a correspondent's recent statement, in these columns, that Rossetti's translation of Dante's Francesca passage is not included in his collected poems, that it is included in at least two cheap "pirated" editions, "one imprinted 'Hurst & Co., New York,' which I have owned for several years, and the other issued by the John W. Lovell Co., more recently. As both these are manifestly reprints of costlier foreign editions, the fragment must be included in at least one of those."

The sensitiveness of the Russian Government respecting the appearance of needing outside aid in its terrible famine crisis—its suspiciousness, too, and unfriendliness to organized relief on a large scale—combined with the distrust which foreigners must naturally feel of Russian officials into whose hands their contributions must fall, suggest Count L. N. Tolstoi as the proper recipient of such contributions from the benevolent. He is already busy in the work, he knows the peasants and their ways, and has their love and confidence. There is probably no man in Russia with whom the Government is less likely to interfere. His wife has written to the newspapers to suggest this way, and says that every kopeck so received will be used directly to feed the poor in the kitchens which her husband is setting up. His address is: Khamovniki 15, Moscow.

A reader of the *Nation* obligingly points out an obvious error on p. 431 (col. ii., line 15 from bottom), where "1893" stands for "1794." The sentence in which it occurs was a mere repetition of one above, but the proof-reader nodded.

—Mr. Jonathan Scott Hartley, N.A., S.A.A., who was for many years the instructor in anatomy of the Art Students' League, has prepared from his lectures a small handbook for art-students, called 'Anatomy in Art,' which may be had of the author, at No. 145 West Fifty-fifth Street. Such treatises on this subject as have hitherto been published have very generally had two faults: they have been written by surgeons rather than artists, and have been burdened by a mass of detail which is practically useless to the artist and only confusing to the student; and they have been too costly for the proverbially slim purses of art-students. This book is written by a professional sculptor of standing, who has omitted much useless and cumbering information, and confined himself to the description of those bones and muscles which affect the surface appearance and are, therefore, necessary to be known, and it is published at a reasonable price. We do not think the ideal book on anatomy for art-students has yet been written. In that book not only the descriptions but the plates should be confined to the few great fundamental truths of the figure. The plates should be rather diagrams than detailed drawings. Such a book is to be desired, but, in the meantime, Mr. Hartley's book is a step in the right direction, and we know of nothing better at present existing. The plates are reproduced from Fau's costly work, and are supplemented with drawings from Schadow's work on 'Proportion,' and with reproductions from photographs of the living model in action. Mr. Hartley has added a short treatise on "The Art of Modelling," which his great practical knowledge should make very useful to beginners.

—The little tract by Mr. E. C. Clark, Regius Professor of Civil Law, entitled 'Greek and Other Studies at Cambridge' (Cambridge: Macmillan & Bowes), reminds us that Oxford and Cambridge are definitely confronted with the Greek problem, that is to say, the question whether students shall be admitted and take their degree without Greek, substituting some equivalent in the modern languages. The question was formally raised about a year ago by the teachers of the preparatory schools; and it was to come before the University of Cambridge in the month of October. A great hue and cry was started at once in the *Times* and the magazines. The *Saturday Review* may be taken to represent the irreconcilables who will not yield an inch to the Philistines. It is true the "Philistines" are, in this case, a large number of University graduates who, if they know anything, ought to know their classics; and this fact has been pointed out in a sober and moderate article in the October *Contemporary Review*, written by Mr. J. E. C. Welldon, Headmaster of Harrow. Mr. Welldon himself, if his initials do not mislead us, is a translator of Aristotle's 'Politics'; and if that is the case, he must be a peculiarly hardened Philistine, who has resisted abundant means of grace. Mr. Welldon unfolds the necessities which lay at the bottom of the teachers' appeal—the multiplicity of subjects created by modern methods and discoveries, and the pressure which these bring to bear on both schools and universities; and again the significant fact that of all the boys attending the public schools in England, only one-half at present study Greek at all. The other half are turned away from the doors of the universities, though many desire to enter, but cannot spare the time for the "open sesame" of Greek. To this class the *Saturday Review* answers, "If you don't like the terms of the universities, stay away; but don't try to corrupt and debase their methods."

—This stanch position, too, is the one Mr. Freeman takes in a reply to Mr. Welldon just published in the *Contemporary Review*. Mr. Freeman has made as good use of his Greek as any man alive; and his words are very weighty. He is, in fact, the Achilles of the conflict; and the boys of Harrow must feel that no merely mortal schoolmaster can stand before him. For Mr. Freeman insists "not that Greek shall be thrown aside, but that it shall be better taught." With that frankness which is his peculiar gift, if not his grace, he even goes so far as to say that the headmasters in the public schools teach Greek very badly. He wants them to teach it "scientifically, that is, rationally and easily." His specific for this is to make the boys acquainted as early as possible with Grimm's law, and to show them from the very beginning of their study the relations and identities of kindred words in the Greek and in modern languages. He thinks that this method will brighten the path even of "Passmen," and will ease their painful career. Every one who has a word to say admits that the "Passmen" are in a very bad way; that their taste of the Pierian Spring is the merest bubble. It may be the "symbol and badge of an educated man," but it is far from being the "roof and crown of a liberal education." It is this fact, admitted by every one, which induces Prof. Clark to take a middle position in the controversy. He, too, is an "old classical man," a lover of Greek, who would not part with his Greek for any modern language. He is disposed to smile at the holy zeal of those who would save the "pass" course as a bulwark of sound learning. He would prefer to make it a real bulwark if

possible; and, in default of that, to substitute some genuine subject in modern languages. Like Prof. Goodwin, he believes heartily in the collegiate functions of the University. But he has more faith than Prof. Goodwin in the possibilities of the "Cottagers"—that large class who think that "the *raison d'être* of the University is to have a good time and plenty of athletics, under a certain amount of moral restraint." He has even a good word to say for the outcome of their taste for sports. He has a humane faith that, if the University will only bestir itself, it will find the means of awakening and appealing to the dormant talents of these Bounderbys of the educational world.

—Last comes an eloquent pamphlet of fifty-two pages, by Mr. J. K. Stephen, M.A. (Cambridge: Macmillan & Bowes), which defends compulsory Greek from all points of view, and which is chiefly valuable because Mr. Stephen offers himself as an example of a class of men who, if alternatives had been permitted in his day, would never have tasted Greek, and would therefore, by his own account, have lost a great boon and blessing. How thoroughgoing is his sense of this blessing may be seen from the following confession:

"I have said that I am not, and never was, never shall be, and never should have been a Greek scholar. But I began Greek before I was ten, and did not leave off studying it daily during term time until I was nearly twenty. I am afraid to reckon up the time which I must have devoted to reading Greek, and endeavoring to master the rudiments of Greek grammar. I think it highly probable that I have forgotten more Greek than I remember. I cannot point to any practical or pecuniary advantage derived by me directly from the study of Greek. But I can honestly say that I do not regret a single hour of those which I spent in the study of the language, nor is there any sort of knowledge which I would rather have imbibed than even that part of my boyish knowledge of Greek which I have forgotten."

It is evident that Mr. Stephen is under the spell and cannot be argued with. But his enthusiasm, which Mr. Charles Francis Adams would call fetishism, must be shared by a large number of University men who are not professional scholars. This is proved by the decisive vote which was taken October 29. The assemblage was the largest ever known in the Senate Hall of Cambridge, and the majority against considering an alternative for Greek was 525 to 185. This "latest Marathon" was a triumph beyond the dreams of the classical men. It declares emphatically that, for some time to come, those who covet the luxury of a degree from Cambridge (or Oxford) must get some tincture of Greek, and must put up with the occasional inconveniences of acquiring it. Mr. Freeman's complaint of badly taught Greek is probably true of England, and is much more true of the larger part of the United States. But the minor Greek course in English universities is indefensibly weak, and would probably be strengthened by being forced to compete with any solid alternative in modern subjects. There is nothing to be said for a subject which is superficially acquired and thoroughly forgotten. The movement was, therefore, not an assault on Greek culture; it was in the hands of the friends of the humanities. In our own country the corresponding movement was in the hands of the Goths and Vandals—the class who never knew the language and its historical position, or the class of whom it might be said, ἔκφυγον φίδάν.

—A correspondent writes to us from London: "The exhibitions of the New English Art Club are always the best worth going to in London, and this year its members have decided to give a winter as well as a summer show. The result, as one sees it now in the Dudley Gallery in Piccadilly, justifies their decision. However, it must be acknowledged that the great value of the present collection depends upon two large studies by Sargent, who belongs to the Club, and three canvases which come from outside—by Degas and Monet, who have been accepted as masters by the group of men calling themselves London Impressionists. Not another show in London just now can produce anything to rival these fine pictures. That which makes Mr. Sargent's contributions of special interest is the contrast they present one to the other, being striking revelations of the scope of his power, which his critics as a rule declare limited. He has been told again and again that he could not finish a picture if he wanted to, and now, by way of giving the lie to all these critics, he has sent to the Dudley Gallery a study of the nude dangerously academic in its finish, but showing a knowledge of drawing and modelling seldom surpassed. This finish, though his admirers do not care for too many examples of it, is appropriate enough in the painting of still life. But when it comes to an impression of movement, as in the 'Javanese Dancer,' then Mr. Sargent returns to the methods which he has long since made familiar, and his dancer has all the vitality and vigor, the actuality and go, of his 'Carmencita.' It is a very powerful impression and very fine in color, and, unfortunately for the other members of the Club, their work cannot well stand comparison with it. It is so rare to see a Degas in London that his study of ballet-girls is an event in the London art world. That which gives it a special interest is that it was begun as a black-and-white drawing for the *Illustrated News*, but the editor, heedful of the morals of his readers, would have none of it, and then Degas worked it over in oils and pastels, caring everything for the artistic effect produced, nothing for the means employed. Monet has been oftener seen and more successfully copied. But the fact that these two canvases are lent by Mr. Sargent will explain at once that they are not among his least distinguished. If the other exhibitors cannot yet rival the work of Sargent, Degas, and Monet, that they take it as a model is at least a hopeful sign in a country which believes in the Royal Academy and accepts the colored supplement of the 'Christmas Annual' for its standard of art."

NEW ENGLAND COLONIAL FURNITURE.

The Colonial Furniture of New England: A Study of the Domestic Furniture in Use in the Seventeenth and Eighteenth Centuries. By Irving Whitall Lyon, M.D., member of the Connecticut Historical Society. Fully illustrated. Boston: Houghton, Mifflin & Co. 1891. 8vo, pp. 285.

Dr. Lyon has, both modestly and wisely, entitled this large and beautiful volume a "study," because, while it is a most important contribution to our knowledge of the topics discussed, it is not exhaustive. As he intimates in his preface, first came the desire of collecting old furniture, then the wish to know more of the history and value of his specimens, lastly a willingness to assist others by placing his knowledge in a permanent form. He has certainly done admirable work, has pursued the best method, and will remain a pioneer in the field, whoever else may come forward to treat more fully of some portions which he has passed over lightly.

To acquire any thorough acquaintance with the origin, age, or merit of the older furniture of New England is a very difficult thing. In the first place, such furniture rarely bears upon it any exact date; secondly, the material is largely the same as that employed in Europe; thirdly, the patterns are necessarily European; and lastly, for the past ten years the fashionable demand for genuine old furniture has been largely met by direct importations from foreign countries. The result is, that the collector must still be mainly guided by the appearance of the article, and especially by the place where it is found, in order to decide when and where it was manufactured in colonial New England. Dr. Lyon has had the great advantage of being an early collector in the productive region of Connecticut. He has consulted and compared the acquisitions of a kindred collector in Massachusetts, and he is thus able to classify specimens and to assign an approximate age to many of the more prominent styles. He has also made a most careful investigation into the inventories on record in Boston and Hartford, and into the advertisements of dealers in furniture during the eighteenth century, with results of which we shall speak later.

As to extraneous evidence as to the age of certain pieces of furniture, little can be found. Family tradition is very unreliable, or at best can hardly extend beyond a century with much precision. Mention in wills and inventories, though of the highest value in showing the amount and kind of furniture in use in each generation since the settlement of the country, rarely serves to identify the existing relics. Dr. Lyon cites a chest dated in 1698, and has seen a few others of about the same period. A few desks and bureaus may be so inscribed; the one at which we write has a secret drawer, on the side of which is written, "Wm. Patten his Desk. Made by Wm. Danforth In the year 1760." Then, in another hand and ink, "Josa. Patten His Desk. Given to him by his Father in the Year 1800." But chairs, tables, and side-boards afford few temptations to the pen of the scribbler.

Secondly, as to material: it is evident that pine, black-walnut, and possibly hickory, are the only woods likely to be distinctive in New England. The English oak, as Dr. Lyon states, is naturally several shades darker than the American, but age or accident may render this no certain test. Again, the most common wood for expensive furniture has been, for more than a century, mahogany, which, being foreign to both Englands, gives no clue to the mechanic. Dr. Lyon has conferred a great favor on collectors by establishing the fact that black walnut was in use by cabinet-makers in Boston in 1668, and that from 1700 to 1760 it was in extensive use. In England, "Virginia walnut" was advertised in 1731. When, a few years ago, the old table long used by the Governor and Council of Massachusetts was deposited in the Old State House, it was found that its frame was made of black walnut. Although the tradition was strong that this table was in use before the Revolution, the cabinet-maker was in doubt because the frame was made of black walnut. He thought that this was a modern use of the wood, until research showed the fact, which Dr. Lyon emphasizes, that, between 1740 and 1760, black walnut was the wood most in vogue. As to mahogany, our author shows that it was in use in London in 1724, but it was for sale in Philadelphia in 1708, and in use for furniture in Boston in 1732.

Thirdly, as to patterns and designs: it seems to be past doubt that no distinctive style has ever originated in New England, at least during the colonial period. The first emigrants brought with them more or less furniture of English make. During the period of our dependence upon England she furnished the fashions and a certain amount of the articles, and our workmen naturally copied their English models. Dr. Lyon points out that the English designer, Chippendale, whose name is so often taken in vain by the dealer of to-day, published 'The Gentleman's and Cabinet-maker's Di-

rector' in 1754, and that his plates were doubtless used by our joiners. Yet his name does not occur in connection with any furniture here, and the attribution of this style to him is very, very modern. In 1787 Heppelwhite published in London designs for 'Secretaries and Bookcases'; in 1794 Sheraton published 'The Cabinet-maker and Upholsterer's Drawing-Book.' These guides are, therefore, comparatively modern, leaving a century and a half preceding, during which American joiners were producing furniture.

One thing is certain: our ancestors brought with them the tools and the knowledge for duplicating any work which they had seen at home. They found here at their very doors an unlimited supply of all kinds of wood free to all. They developed the art of working in wood in all its main branches, and "whittling" became a Yankee specialty. The stone cottages of England were here superseded by houses of wood, and ship-building became one of the main industries of New England. We cannot doubt that cabinet-making took root here early, and the wonder is not that so much remains, but that so much has disappeared. Only two explanations are possible: one, that pine was largely used and supplied all temporary wants; the other, that the ever-varying moods of fashion have caused the destruction of things no longer in vogue. We know that our principal houses, churches, and public buildings were designed from the best published authorities, and we may be sure that English fashions in furniture were rapidly transmitted hither. But much must have been left to the individual taste of the workman, and the variations, within certain limits, seem to have been endless. In fact, the one disappointment which the reader will have in Dr. Lyon's book is, that his numerous and excellent illustrations will rarely give exactly the same form of desk, bureau, side-board, or chair which may be under examination.

To return to the details of the volume: Dr. Lyon treats specifically of chests, cupboards, chests of drawers, desks, chairs, tables, and clocks. Receptacles are naturally divided into these classes, according to use, viz.: for holding clothing, for table utensils and ornaments, and for books or writing. The simplest piece of furniture is the chest, an article of great antiquity, and many such boxes doubtless were brought over by the first colonists. Then chests were made with one or two drawers, *e. g.*, "the chest with a drawer" mentioned in the inventory of the Rev. Nathaniel Rogers of Ipswich, in 1655, cited by Dr. Lyon as the earliest date known to him. The citations and illustrations of chests in this volume leave nothing to be desired.

To cupboards much attention is given, and our author has traced out the varieties with much patience and ingenuity. The examples figured are very interesting, and do full justice to what was the main pride of the halls of our richer citizens. Chests of drawers, bureaus, and dressing-tables are described in detail, and due note is made of the varieties. Chests of drawers with short legs were superseded by those with long legs, and these again become indistinguishable from tables with drawers. Desks in the same way begin with a mere chest with a sloping lid, a portable appliance to be placed on a table. Then legs were added, drawers appended, and the interior arranged with pigeonholes and drawers either obvious or secret. Then the bookcase was placed on top, and the secretary became a well-known piece of furniture.

The department of chairs would require a book to itself, if every variety should be recorded. Dr. Lyon gives some beautiful specimens and notices many interesting facts. The earliest chairs seem to be of simple, massive forms. The legs are square, or simply ornamented by round portions, the backs moderately high, the seats of leather, cloth, or rushes. High-backed and elaborately carved chairs of course occur more rarely, and bandy-legs seem to have been taken from Holland to England by William of Orange. The well-known claw-foot holding a ball is said to be primarily Chinese. Dr. Lyon finds "6 crow-foot chairs" in the inventory of Benjamin Ivory of Boston in 1737.

His illustrations and citations rather point to the conclusion that from 1650 to 1750 the form of chairs was simple, whether in square frames or round, but that the so-called "Chippendale" style reached us by the middle of the last century, and thenceforward the open-backed, airy, and elegant forms which characterize this mode were adopted by our artisans. Cane chairs, we are surprised to notice, are mentioned in Boston in 1689, while the earliest mention in England is only 1679. Windsor chairs appear in New York in 1758 and in Philadelphia in 1736. In figure 74 we have a specimen of a rocking-chair, the only one shown. In view of the fact that rocking-chairs are now called "American chairs" abroad, we wish the author had given more facts in regard to the invention of this form. Certainly rocking-chairs exist which date from colonial times as to the main portion, but rockers could of course be added at any time. Little is said about sofas or settees, though figure 81 displays a charming "double chair" which deserves to be copied.

Tables are discussed at full length, but beds not at all. We hardly understand the omission of beds, since these were articles of large size and cost, constructed in many styles, and are now indispensable in fitting out a "colonial" chamber. We hope that Dr. Lyon intends to write a special book on that subject, or a special chapter in his next edition.

Finally, much information is given about clocks. The earliest were hung from the wall and were moved by a chain and weight, and possibly a few spring clocks were brought here. But about 1690 the tall pendulum clocks were produced, costing much more than the others, and these are found on our inventories. So many persons are specially interested in old clocks that this chapter of Dr. Lyon's work will be widely appreciated.

We have purposely refrained from making many extracts from this book, holding it to be unfair to the author to give in a brief statement facts which have cost him so much time and labor. It is a storehouse for the antiquary, and, like Weeden's 'Economic and Social History of New England,' it shows what valuable information can be gleaned from the volumes of inventories in our older probate courts. Dr. Lyon's success suggests that some central historical society might well undertake the collection of photographs of articles of furniture of established antiquity, to be fortified by the evidence in each case. The glorious army of "Kodak fiends" might here be of great service, and a collection thus made would be of immense service in settling points which no one observer can fully reach. As it is, we do not doubt that the hearty welcome already given to Dr. Lyon's book will renew the popular interest in the study of the domestic architecture of colonial times.

GUSTAVE DORÉ.

Life of Gustave Doré. With 138 illustrations from original drawings by Doré. By the late Blanchard Jerrold. London: W. H. Allen & Co. Large 8vo, pp. viii, 415.

It is now nine years since Gustave Doré died. He was an officer of the Legion of Honor, had attained considerable wealth, and was probably more widely known than any other artist of his day. His name was a household word in two continents. Yet he died a disappointed and embittered man, and is proclaimed by his friends as a neglected and misunderstood genius. He was known the world over as the most astonishingly prolific illustrator of books that has ever lived; he wished to be known in France as a great painter and a great sculptor, and because the artists and critics of France never seriously recognized his claims to this glory, he seems to have become a victim of the mania of persecution, and his naturally sunny nature was over-clouded with moroseness and suspicion. No man has been more extravagantly lauded or more extravagantly condemned. Hailed by some as the emulator and equal of the great names of the Italian Renaissance, and considered a great moral force—a "preacher painter"—by others he has been denounced as "designer in chief to the devil," and described as a man wallowing in all foulness and horror, a sort of demon of frightful power. Both these extreme judgments are English. The late Blanchard Jerrold, an intimate friend and collaborator of the artist, takes, in the volume before us, the first view. Mr. Ruskin and Mr. Hamerton have taken the second. Doré's own countrymen have never accepted either. Just where, between them, the truth lies, as we see it, we shall endeavor to show in this article.

The main facts of Doré's life may be dismissed very briefly. He was born with a caul on the 6th of January, 1832, in the Rue Bleue at Strasbourg, near the Cathedral. About 1841 his father removed to Bourg, in the Department of Ain, where he was Chief Government Engineer of the Department. These two residences of the young artist are supposed to account for the mastery of Gothic architecture and of mountain scenery which his admirers find in his mature work. He showed very early in life a passion for drawing, and, as a small child, had always a pencil in his hand, which he begged to have "sharpened at both ends," that he might work longer without interruption. His father intended him for an engineer, but he was determined from the first to be an artist. He was of a gay and jovial disposition, given to pranks and practical jokes, and of an athletic temperament. Théophile Gautier afterwards called him a "gamin de génie." In 1847, when he was fifteen years old, being in Paris with his parents, he called upon Philippon, the publisher, and showed him some of his sketches. M. Philippon looked at them and sent a letter to Doré's parents persuading them to allow the boy to remain in Paris, and promising them to begin using his work at once and to pay for it. Thus, without any study of art whatever, be began his career, and in a few years had produced a prodigious quantity of work, and was a celebrated man before he was twenty. No one knows how many drawings he made. He "lived like an Arab," worked early and late, and with astonishing rapidity made thousands of drawings for the comic papers, besides early beginning the publication of independent books. One estimate, which Mr. Jerrold thinks excessive, credits him with having published 40,000 draw-

ings before he was forty! Mr. Jerrold himself reckons 266 drawings done in one year. His 'Labors of Hercules' was brought out in 1848, when he was sixteen, and before he was twenty-seven he had published his 'Holy Russia,' his 'Wandering Jew,' his illustrations to Balzac's 'Contes Drolatiques,' to Rabelais, and many other authors. His best work was done at an age when most artists are painfully acquiring the rudiments of their art. We all know the books that followed.

Meanwhile, he was determined to be known as a great painter, and, while flooding the market with his countless illustrations, was working at great canvases of Biblical subjects, which, though the French would not accept them, were hugely admired in the Doré Gallery in London. Later he tried sculpture also, and his last work was a monument to Alexandre Dumas, which he made at his own expense and presented to the city of Paris. He died in the beginning of the year 1883, worn out with excessive production—a great name, but an unsatisfied man.

Mr. Jerrold has divided his book into two parts, dealing first with Doré the illustrator, and then with Doré the painter and sculptor. It is an eminently natural arrangement, and, in our effort to arrive at Doré's true position in art, we cannot do better than to follow it.

Doré's earliest work was frankly that of a caricaturist. He had a quick eye, no training, and a certain extravagant imagination, and caricature was his inevitable field. He was, however, as Mr. Jerrold himself remarks, "a caricaturist who seldom raises a laugh." Not hearty fun, still less delicate humor, was his. In the higher qualities of caricature his contemporaries Daumier and Gavarni were vastly his superiors. An exuberance of grotesque fancy and a recklessness of exaggeration were his dominant notes. His earlier work, up to and including the Rabelais, is not really funny—to many minds it is even painful—but it is unmistakably caricature of a dashing, savage sort. To our mind it remains his best work and that by which he is most likely to live. At least it is the work that formed him and fixed his characteristics, and an understanding of it is essential to any judgment of him. The qualities and the defects of his later work—that which is most praised and most blamed in his production—are inherent in the work of this period, and are best explained by a reference to the latter.

Take, for instance, what has been denounced as his love of horrors and of foulness, his delight in blood and massacre. He is scored for this as if he were one of that modern French school, beginning, perhaps, with Regnault, who have revelled in the realistic presentation of executions and battles, and have sought to effect by sheer sensationalism what they could not by gentler means. It is surprising that his critics have not seen that Doré's battles are always, even to the end, the battles of a caricaturist. His decapitated trunks, cloven heads, smoking hearts, arms still fighting though severed from their bodies, are simply a debauch of grim humor. There is never the slightest attempt to *realize* carnage—only to convey, by the caricaturist's exaggeration, an *idea* of colossally impossible bloodthirstiness. One may not enjoy this kind of fun, but to take it seriously, as the emanation of a gloomy and diabolic genius, is absurd.

The same test is equally destructive of much of the praise Doré has received. He is constantly spoken of, even by severe critics of his painting, as a great illustrator who identified himself with the mind of one great writer after another. But Doré identified himself with no one: he was always Doré. Even in these early drawings he cannot keep to the spirit of the text, though the subjects suited him much better than many he tried later. There is a great deal of broad gayety and "Gallic wit" in the 'Contes Drolatiques,' but it was not broad enough for Doré, and he has converted its most human characters into impossible grotesques.

Another thing for which Doré is praised is his wonderful memory. Mr. Jerrold repeats more than once Doré's phrase, "I have lots of collodion in my head," and recounts how he could scarcely be induced to make sketches from nature, but relied upon his memory. He also speaks of Doré's system of dividing and subdividing a subject, and noting the details in their places, so that he could reproduce the whole afterwards. This question of work from memory is one of the most vital for an understanding of Doré, and one of general interest in all matters of art, and is worth attention. Of course a man who made hundreds of drawings every year could not work much from nature, and came to rely upon his memory. But what is the nature of artistic memory, and how does it perform its task? We think the truth is, that the artist who habitually works from memory fills in his details, *not from memory of the object, but from memory of the way he has formerly drawn similar objects*. He reverts to a series of formulæ that he has gradually accumulated. This man must have a cloak? This is the way a cloak is done. A hand? Nothing can be easier; the hand formula is ready. The stock in trade of the professional illustrator and caricaturist is made up of a thousand such formulæ—methods of expression that convey the idea readily enough to the spectator, but have little relation to fact. So it is that Doré never learned, in the true sense, *to draw*. He had made for himself a sort of artistic shorthand which enabled him to convey his superabundant ideas quickly and certainly to his public, but his drawing is what is called *mannered* in the extreme. It is not representation of nature at all, but pure formula and *chic*. He is said to be a master of drapery, but he never drew a single fold correctly. He is said to show great knowledge of Gothic architecture, but he never drew well a single column or finial. In his later years he studied anatomy with great perseverance, and advocated the necessity of dissection, saying, "Il faut fourrer le main dedans" (You must stick your hand in it); but the manner was formed, and he never drew a leg with a bone in it.

With this equipment he illustrated Don Quixote, Dante, the Bible. Is it strange that he shows no sympathy with the grand simplicity of Dante, or the subtle humor of Cervantes, and that we can only be thankful that he never completed his projected illustrations to Shakspere? Doré the illustrator was fecund beyond precedent, possessed a certain strange drollery, had a wonderful flow of ideas, but was superficial, theatrical, and mannered, and as far from expressing real horror as from expressing real fun. What shall we say of Doré the painter and sculptor?

Mr. Jerrold reports a discussion between Doré and Théophile Gautier in which the rôles of artist and man of letters are strangely reversed. "Gautier and Doré," he says, "disagreed fundamentally on the aims and methods of art. Gautier loved correctness, perfect form—the technique, in short, of art; whereas Doré contended that art which said nothing, which conveyed no idea, albeit perfect in form and color, missed the highest quality and *raison d'être* of art." What is plain from this is that Gautier was an artist and cared first of all for art, while Doré was never an artist, properly speaking, at all, and never understood the artist's passion for perfection. To Doré, what was necessary was to express himself anyhow—who cared if the style was defective, the drawing bad, the color crude? The idea was the thing. His admirers can defend him only on this ground, and they adopt of necessity the Philistine point of view. The artists of Doré's time and country were very clear in their opinion. "The painters," says Mr. Jerrold, "said he could not paint. . . . The sculptors admitted that he had ideas in his groups, but he was not sculpturesque." His friends protest against this judgment, and attribute it, *ad nauseam*, to "malevolence" and "envy." What if his technique was less brilliant than that of Hals, they say; what if his shadows are less transparent than those of Rembrandt (and they will make no meaner comparisons)? He is "teeming with noble thoughts," and these will put his work "on a level with the masterpieces of the Italian masters of the sixteenth century." "It is the conception, the creation—not the perfect painting of legs and arms and heads, the harmonious grouping, the happy and delicate combination of color—by which the observer is held spellbound." All these qualities, which his admirers grudgingly admit that Doré had not, are classed as "mere dexterity," and are not considered worth a second thought.

This is the true literary gospel of art, but it is one that no artist, and no critic who has any true feeling for art, has ever accepted or will ever accept. Thoughts, ideas, conceptions, may enhance the value of a work of art, *provided it is first of all a piece of beautiful art in itself*, but they have never preserved, and never will preserve, from oblivion bad painting or bad sculpture. The style is the artist if not the man; and of the two, beautiful painting with no idea at all (granting, for the sake of argument, that it exists), will ever be infinitely more valuable to the world than the lame expression of the noblest thoughts. What may be the real value of Doré's thoughts is therefore a question with which we have no concern. Whether they are truly sublime, as his worshippers declare, or merely theatrically effective, as we believe, is really of no importance whatever. The standard by which he must be judged is the standard of technical achievement, and by this standard he is condemned, without stay of judgment on the plea of grandeur of conception. As painter and sculptor, his lack of education and his great technical imperfections—his bad drawing, false light and shade, and crude color—relegate him for ever to a rank far below mediocrity. Such reputation as he has is the result of the admiration of those altogether ignorant of art, but possessed of enough literary ability to trumpet abroad their praises of "great conceptions," and will as surely fade away to nothing as the reputation of such simple painters as Van der Meer or Chardin will continue to grow while painting as an art is loved and understood.

DOBSON'S HOGARTH.

William Hogarth. By Austin Dobson. Dodd, Mead & Co. 1891.

THE name of Hogarth stands alone among those of artists; he cannot be classed with any school, English or foreign, in method, style or subject; he created his own field, as he chose his own fashion of education. As he followed

no one, so no one has followed him. Isolated, sharply defined, of exceptionally original vigor, it is not strange that both the man and his works have always formed an attractive subject for critics. No less than 108 titles are given in the Bibliography which fills thirty-nine pages and forms Part II. of the present work, covering a period of 160 years, from 1731 to the current year. They are of works of all degrees of magnitude, from the single sheet of a newspaper (as that of the issue of the *North Briton* of September 25, 1762, which contained the memorable attack of John Wilkes upon Hogarth) to the monumental folio containing the engraved plates from his works, or the fourteen volumes in German by Leichtenberg. Able critics—Horace Walpole, Lamb, Hazlitt, Hartley Coleridge, and Leigh Hunt, to say nothing of Thackeray, Dickens, and Dr. Brown—have left their records of the impressions made upon them by the works of this artist. Such an array of literary comment is certainly a proof of the strength of the man; but there was yet ample room and more, a crying necessity, for a book which should accomplish that which Mr. Dobson's does, namely: the presentation in a concise form of both the story of the artist's life and a complete history of his work in connected sequence, while also giving competent criticism both of the works themselves and of the previous accumulated criticism. Such a task can only be performed after the lapse of sufficient time, and the period had certainly been reached for this subject. The book is an amplification of that written by the author ten years ago for the "Great Artists Series," but, with the exception of the same admirable and interesting introductory chapter, has been entirely rewritten. The complete bibliography, lists of prints and paintings, and the excellent index, are all virtually new, and occupy nearly one-half of the volume.

Hogarth can never become hackneyed any more than can the great moral truths and phases of life which formed the almost exclusive subject of his pencil; and although the story of his life is meagre and contains no striking episodes, the man himself will always be interesting, and will command respect from his strongly marked character and the valiant earnestness with which he championed his ideas and prejudices. The autographic "Brief Sketch," left by the artist and inherited from his widow by her cousin, Mary Lewis, from whom it was received by John Ireland, the enthusiastic and sympathetic collector of Hogarth's works, in 1796, forms the basis of all that is known of the artist's life. He was born in London in 1697, and died there in 1764. He served an apprenticeship to a silver-plate engraver, but deserted this trade for engraving on copper plate, working mainly from his own inspiration, although he attended later the school of Sir James Thornhill, where he might draw from the life when he chose other assistance than came from his own unaided powers of observation. It is interesting to note that upon the death of Sir James Thornhill in 1734, Hogarth, who had made a runaway match with his handsome daughter, inherited his academy in Covent Garden, and, associating with himself a number of artists, opened a "Life School" in "Peter's Court, against Tom's Coffee House in S. Martin's Lane." "In this institution most of the artists of the reign of George II. and the early part of the reign of George III. were trained; and its usefulness only ceased with the establishment of the Royal Academy, to which 'its anatomical figures, busts, statues, etc.,' were transferred in 1768."

In 1735 Hogarth was mainly instrumental in obtaining an act of Parliament against piratical print publishers: the "act" is usually spoken of as Hogarth's, and the engravings of "The Rake's Progress," which appeared in June, 1735, are probably the first which bear the words "According to Act of Parliament," now so common upon engravings. In 1739 the Foundling Hospital, in which Hogarth took a warm interest, and for which he painted the portrait of Capt. Coram, the originator of the scheme, was established. This picture the artist considered his best single portrait, and posterity agrees with him. The Hospital contains other paintings by Hogarth, and he was a "Governor and Guardian" of the institution. Thus he initiated the practice of decorating the Foundling Hospital with paintings, and, other artists following in his footsteps, this place ultimately became possessed of a remarkable collection, "which made a visit to the Foundling the most fashionable lounge of the reign of George II., and, by a succession of circumstances, indirectly, but not less surely, brought about the establishment of the Royal Academy."

In 1748 he made a journey to France, and was arrested while sketching the "Calais Gate," but was shortly released. In 1753 he published his 'Analysis of Beauty'—a book which brought him but little credit and much animadversion, and which, although it contains a good deal of sound sense and shrewd observation, is poorly constructed and incoherent in idea as well as form. Its origin as given by the artist is piquant. In the portrait of himself, now in the National Gallery, he had represented upon his palette a serpentine line, with the words under it, "The Line of Beauty and Grace." "No Egyptian hieroglyphic," he says, "ever amused more than it did for a time"; and, adds Mr. Dobson, "so numerous were the requests which he received for a solution of the enigma that, after applying to several of his friends to take up the pen in his behalf, he finally made shift to explain his symbol in print himself." In 1749 he bought a "villakin" at Chiswick, on the banks of the Thames, and there he spent more or less of his summer time. His home still stands, as does also his formerly majestic mulberry tree. And in the churchyard at Chiswick he is buried.

This is the skeleton of what would be called his life; but his real existence must be read in the prolific work he left behind as the result of a long and constantly occupied career. Mr. Dobson gives a list of about two hundred prints engraved by Hogarth himself after his own works, and about as many more by other engravers after his designs—some of these possibly also in part by him. Besides these about two hundred and sixty paintings are enumerated. The record of this voluminous work is all set down in the most orderly manner in the present book, and, without going into tedious detail, Mr. Dobson gives the main facts relating to the creation and history of all the more important series as well as individual works, with such original criticism as is needful, and also very full citation in the text (but more especially in the admirable foot-notes, which abound) from earlier criticism. The treatment of the subject could scarcely be better, for here is gathered together and placed in simple, systematic form all that it is necessary to know of the artist and his work. The student will find here either what he seeks, or trustworthy indication of where to seek it. A large number of full-page illustrations adorn the book, among them twelve photogravures most admirably executed: one of these, the well-known portrait of the artist with his dog, in the National Gallery, forms the frontispiece. The book is a most attractive one with its heavy uncut leaves, faultless type and wide margins—all a fitting framework for the interesting story, charmingly told, which it contains.

We cannot follow Mr. Dobson in his particulars, but we may be pardoned for quoting the following passages from his introduction, which present, in a forcible and condensed form, a vivid picture of the nature of Hogarth's genius and the character of his work:

"He gives us," says the author, "unromanced and unidealized, 'the form and pressure,' the absolute details and accessories, the actual *mise-en-scène*, of the time in which he lived. But he has done much more than this. He has peopled his canvas with its dramatis personæ, with vivid portraits of the more strongly marked actors in that cynical and sensual, brave and boastful, corrupt and patriotic age. . . . He was a moralist after the manner of eighteenth-century morality, not savage like Swift, not ironical like Fielding, not tender-hearted at times like Johnson and Goldsmith; but unrelenting, uncompromising, uncompassionate. He drew vice and its consequences in a thoroughly literal and business-like way, neither sparing nor extenuating its details, wholly insensible to its seductions, incapable of flattering it even for a moment, preoccupied simply with catching its precise contortion of pleasure or pain. In all his delineations . . . we see Justice and Vengeance following hard upon the criminal. He knew, no doubt, as well as we, that not seldom (humanly speaking) the innocent are punished and the guilty go at large. What matter! that message should not be preached by him, at any rate. So he drew his 'Bogey' bigger, if possible, and drove his graver deeper in the copper. . . . What antecedents, what progress of circumstance, what special conditions produced this unique and individual artist in an era of mediocrities? . . . When all is said and done, the reader will probably find no more satisfactory reply to the question than this: that he was a great and exceptional genius, not to be entirely accounted for by any preconceived theory respecting his race, his epoch, or his environment."

The satiric and comic elements are those which first attract in the prints of Hogarth, and superficially he is probably considered a humorist pure and simple; but so closely interwoven are "bliss and woe" in the "thread of human life" that, under all, we may see, perhaps, "the bitter smile beneath the painted grin he wore." The little print called "Finis, or The Bathos," the last work he did, but a few months before his death, is a startling commentary on the facetious element in all his works. What could be more pathetic than this representation of chaos as the end of all effort? Both the "sublime" in art, which he had ridiculed without ceasing, and the naturalistic, which he had practised—virtue and vice—all things come alike to the same goal! One can scarcely lay down this book without the strongest feelings of respect and admiration for this valiant preacher against vice and shams, for his clear and strong intellectual quality, and for the untiring energy with which he occupied the years of a long life.

MILLER ON THE CONSTITUTION.

Lectures on the Constitution of the United States. By Samuel Freeman Miller, LL.D., late an Associate Justice of the Supreme Court of the United States. New York and Albany: Banks & Brothers. 1891.

In receiving this legacy of a great judge, the people of the United States may congratulate themselves on their parsimony in the compensation of their higher officials. It is well known that Mr. Justice Miller, like his col-

league in the Supreme Court, the late Chief-Justice Waite, died poor. At any time during his distinguished judicial career he could have gained a fortune by resigning his office and accepting employment from the numerous and eager litigants who would have hastened to retain him on his own terms. But, with a spirit of independence and of patriotic duty which characterized him through life, he preferred to continue in the discharge of his high functions at the sacrifice of his private interests. Too much engrossed in his public duties, and of too broad and generous a disposition to practise an economy not compatible with the dignity due to his station, he undertook, in order to increase his income, the task of delivering lectures to law students. Of the twelve lectures embraced in this volume, all but two were written for that purpose, and were read by him before a law school in the city of Washington in the winter of 1889 and the early spring of 1890.

The career of Mr. Justice Miller was one of the most remarkable in judicial annals. He was not educated for the law, but for medicine; and it was at an age when most men have not only made a definitive choice of a profession, but have also fairly got a start in the vocation of life, that he studied law and came to the bar. But he had found the true sphere of his activity. At the time when he abandoned medicine for the law, he was a citizen of the State of Kentucky, and, with his positiveness of conviction and frankness of expression, he was inevitably drawn into the agitation, then daily becoming more acute, on the subject of slavery. Like most men of the time and place who possessed the means, he was an owner of slaves. With him, however, opposition to the extension of slavery soon grew into a confirmed repugnance to slavery itself, and, taking his slaves with him, he went to Iowa and set them free. With this change of residence and of political and social conditions, we may regard his career as actually begun. His progress at the bar was sure and rapid. While he could scarcely have been widely read and learned in the law, he possessed a strong common sense, a force of character, and a firm grasp of principles, which could not fail to secure for him an influence over the courts, as well as over his brethren at the bar.

His elevation to the bench, after what must be considered as a comparatively brief period in the study and pursuit of his profession, took place when sectional feeling was intense and bitter, and when those who, in the political and legal controversies raised by the attempt at secession, had ranged themselves on the side of the Union, might have found a ready excuse, as many of them did, for exalting the restored national authority above previously accepted constitutional restrictions, and bearing down the opposition of those who contended for the right of local self-government. It can hardly be pretended that Mr. Justice Miller was lacking in a disposition to assert the supremacy of the national Government, or that he would have been compelled to yield to any man in the ardor or constancy of his desire for the establishment of that supremacy. Some of his earlier opinions contain vehement and passionate expressions of his feelings on that subject. At the same time, he had the wisdom to look to the end. While he abhorred the attempt to destroy the Federal Government by force of arms, he was equally opposed to the tendency to revolutionize it through the forms of law. Like Lincoln, he desired to restore "the Union as it was," and, after remedying the defects that made the attempt at disunion possible, he wished to inaugurate again the reign of the Constitution.

It was not long before he had occasion to assert and maintain these views. For the purpose of extirpating the causes of the war and safeguarding the future, the Thirteenth, Fourteenth, and Fifteenth Amendments were adopted, to secure freedom and political enfranchisement to those who had formerly been oppressed, and equal rights to all. The Supreme Court was soon called upon to determine the scope and effect of these amendments in the "Slaughter-house cases," which grew out of an act passed by the Legislature of Louisiana for the purpose of regulating the business of slaughtering animals for food within the limits of the city of New Orleans. As this end was sought to be accomplished in the act by the granting of an exclusive right of killing animals within those limits to a corporation, the butchers of the city brought suit to enjoin the corporation from exercising the right, on the ground that the Legislature of the State had, by the creation of a monopoly, invaded their rights, and thus infringed the new amendments. When the case came up for decision, the court was found to be divided. Four of the judges held that the act was violative of the amendments, and therefore invalid. Five of the judges, however, held otherwise, and among them was Mr. Justice Miller, who delivered the opinion of the court. The question on which the court was sharply divided was whether the amendments should be construed broadly, so as to curtail the general powers of the States under the Constitution as affecting rights of person and property, or whether they should be confined in their application by the consideration of the special purposes which they were designed to accomplish. Mr. Justice Miller held that they should be so confined ; and, after adverting to the fact that the real danger to the perpetuity of the Union disclosed by the civil war was in the capacity of the States alone, or in combination, to organize resistance to the general Government, he said:

"Unquestionably this has given great force to the argument, and added largely to the number of those who believe in the necessity of a strong national Government. But, however pervading this sentiment, and however it may have contributed to the adoption of the amendments we have been considering, we do not see in those amendments any purpose to destroy the main features of the system. Under the pressure of all the excited feeling growing out of the war, our statesmen have still believed that the existence of the States with powers for domestic and local government, including the regulation of civil rights—the rights of person and property—was essential to the perfect working of our complex system of government, though they have thought proper to impose additional limitations on the governments of the States, and to confer additional power on that of the United States. But whatever fluctuations may be seen in the history of public opinion on this subject during the period of our national existence, we think it will be found that this court, so far as its functions required, has always held with a steady and an even hand the balance between State and Federal power, and we trust that such may continue to be the history of its relation to that subject so long as it shall have duties to perform which demand of it a construction of the Constitution, or of any of its parts."

There is reason to believe that Mr. Justice Miller regarded the delivery of this opinion as one of the most important acts, if not, indeed, as probably it was, the most important act, of his judicial life. In his lecture delivered in June, 1887, before the alumni of the law department of the University of Michigan, on the subject of the Supreme Court, he gives an interesting exposition of the decision in the "Slaughter-house cases," and says:

"Although this decision did not meet the approval of four out of nine of the judges on some points on which it rested, yet public sentiment, as found in the press and in the universal acquiescence which it received, accepted it with great unanimity. . . . And while the question of the construction of these amendments, and particularly the Fourteenth, has often been before the Supreme Court of the United States, no attempt to overrule or disregard this elementary decision of the effect of the three new Constitutional Amendments upon the relations of the State governments to the Federal Government has been made; and it may be considered now as settled that, with the exception of the specific provisions in them for the protection of the personal rights of the citizens and people of the United States, and the necessary restrictions upon the power of the States for that purpose, with the additions to the powers of the general Government to enforce those provisions, no substantial change has been made. The necessity of the great powers conceded by the Constitution originally to the Federal Government, and the equal necessity of the autonomy of the States and their power to regulate their domestic affairs, remain as the great features of our complex form of government."

The lecture in which the passage just quoted is found forms the eighth in the series of twelve printed in the present volume. It is one of the two not read before the law class in Washington, the other being the discourse delivered by Mr. Justice Miller on the 17th of September, 1887, at Philadelphia, on "the celebration of the one hundredth anniversary of the framing and promulgation of the Constitution." This oration is so widely and favorably known that it would be superfluous to comment upon it here. It is sufficient to indicate the estimation in which its author was held by the bar as an expounder of the Constitution, that he was chosen to pronounce the oration on that occasion. But it may be said that it peculiarly evinces that spirit of respect for the law which was a controlling influence in Mr. Justice Miller's career:

"I but repeat," he said, "the language of the Supreme Court of the United States when I say that in this country the law is supreme. No man is so high as to be above the law. No officer of the Government may disregard it with impunity. To this inborn and native regard for law, as a governing power, we are indebted largely for the wonderful success and prosperity of our people, for the security of our rights. . . . Let me urge upon my fellow-countrymen, and especially upon the rising generation of them, to examine with careful scrutiny all new theories of government and of social life, and if they do not rest upon a foundation of veneration and respect for law as the bond of social existence, let them be distrusted as inimical to human happiness."

The ten lectures delivered before the law school in Washington respectively relate to "The Principles of Construction of the Constitution," "The Executive Branch of the Government," "The Separate Powers of the Senate and the House of Representatives," "The Power of Taxation," "Naturalization and Citizenship," "The Judicial Power of the United States," the "Regulation of Commerce among the States," "The Right of Trial by Jury," the "Impairment of the Obligation of Contracts," and the "Limitations upon the Powers of the States." It would be impossible within the compass of a review to attempt a critical discussion of these lectures, but it may be said that they present in clear and bold outline the great fundamental principles governing our constitutional system. The style is direct, energetic, and lucid, such as becomes one who speaks with authority.

But we should do injustice to this publication if we failed to notice the work of its

editor, Mr. J. C. Bancroft Davis, the accomplished reporter of the Supreme Court. The spirit in which he has performed his task cannot better be described than by quoting from his preface the following passage: "I have endeavored to present this work to the profession and the public in a manner worthy of the great judge who has passed away, so far as the limited time given me and my duties to the court would allow. . . . It has been to me a labor of love to follow in the footsteps of one whose great intellect, probity, manliness, and directness of purpose were recognized by the whole nation; whose amiable character was admired by all who knew him; and whose friendship I was permitted to enjoy for nearly a quarter of a century." To each lecture Mr. Davis has added an explanatory note, and, in order to make the work complete as at once a treatise and a text-book, he has also written a supplemental chapter containing references to minor provisions of the Constitution not discussed in the lectures. He has also embodied in an appendix a collated copy of the Constitution, with full references to the cases in which it has been construed or discussed, as well as collated copies of the Articles of Confederation and of Randolph's and Pinckney's drafts for a constitution. The presswork of the book is a credit to the publishers, and leaves nothing to be desired. We cannot doubt that this important work will receive, as it deserves, a warm and generous reception at the hands not only of statesmen and lawyers, but also of teachers and students of Constitutional history.

The Hours of Raphael in Outline. By Mary E. Williams. Boston: Little, Brown & Co.

WHERE are, or where were, the famous "Hours" of Raphael? is a question which has very often been asked; and the answer has generally been, No one knows; or, They say they were somewhere in the Vatican, but no one knows where. Miss Mary E. Williams, for many years a resident in Rome, undertakes to answer this question in the beautiful volume just published by Little, Brown & Co. Certainly all persons interested in the painting of the Renaissance, and more particularly in that of Raphael, would be devoutly thankful for any light thrown upon the origin of these well-known figures, and would welcome any convincing arguments which should finally dissipate the mist of uncertainty which has always enveloped them. Probably few of the minor works of art of this class have received more attention from the general art-loving public than these "Hours." Their grace and simplicity attract at once. The numerous reproductions, gotten up in the most inexpensive form, are bought in large numbers by travellers, and not a few sojourners in Rome have carried away these simple mementoes, thereby laying the train for long researches in a vain attempt to discover the whereabouts and authorship of the originals. Students of a higher class have always known them from the folio volume of engravings, published in Paris in 1804–6, which contains prints of the twelve "Hours" finished by the burin by ten different engravers, but without text and with no clue to the original designer.

This enshrouding mystery has added not a little to the fame and interest of the compositions. Has our author finally answered the question—or rather the questions, for there are two—Where were the "Hours"? and, Who painted them? Her volume contains sixteen folio plates, comprising the twelve figures of the "Hours," two repetitions with variations after Piranesi, and two plates of the ceiling which they are said to have originally adorned. The accompanying text is clear and remarkably interesting; it gives an account of all the known facts, as well as the author's deductions therefrom.

In the Royal Stamperia in Rome is a rare and highly prized engraving of the ceiling of the Sala del Camino, one of the suite of six rooms in the Vatican called the "Sale Borgia," from Alexander VI., a Borgia, who occupied them during his pontificate (1492-1503). This engraving was photographed for the first time for the reproduction which forms Plate 1 of the book now published. Neither the name of the engraver nor a date appears upon the engraving, but it was published by Montagnani, the well-known publisher of prints, who flourished in Rome about the middle of the eighteenth century, and it bears an inscription in Italian, translated by our author as follows: "Ceiling of the Sala Borgia in the Vatican Palace, where are expressed the Planets, the Hours of the Day, and the Signs of the Zodiac by the immortal Raphael Sanzio of Urbino." In this print the "Hours" as we know them appear, six on each side of the central panel. This would seem to prove with sufficient certainty the original position of the designs, and so to answer the first question, "Where were the 'Hours'?"

But to accept the attribution of them to Raphael upon the sole authority of this anonymous print, executed two hundred and fifty years after his death, is quite another matter. Neither does the author undertake to do this; she adduces other, at least circumstantial evidence. In 1500 the ceiling of the Sala del Camino was blown down and destroyed by a violent storm, the Pope being overwhelmed by the débris. Julius II. succeeded Alexander VI., and in 1508 summoned Raphael to Rome to decorate the stanze of the Vatican. This occupied him nine years, and after the death of Bramante in 1514 he continued the latter's work upon the loggie. Just at the angle of the arcades which form this feature of the palace, and directly under one of the stanze, is the Sala del Camino, the frescoes and ceiling of which had been destroyed by the storm of the year 1500. Leo X., who followed Julius II., began at least the decoration of this room, as is shown by the insertion of his name in each of its corners. This Pope never employed another master than Raphael.

From these facts alone it seems highly probable, if not quite certain, that the designs at least of the floating figures on the ceiling were by the great master. Moreover, in 1516, Leo X. had made Raphael superintendent of antiquities and excavations at Rome. The Baths of Titus were discovered with their rich treasures, among which are especially mentioned "the most beautiful mural paintings that had ever been seen." Did some of these inspire the artist in his Vatican decoration? It is known that he employed many of his pupils, and notably Giulio Romano and Pierino del Vaga, to superintend the execution of his designs for numerous frescoes, and that Giovanni da Udine, who showed a special aptitude for this work, was made director of the grotesques and stucco ornament of the Sala del Camino. Pierino del Vaga was employed upon the ceiling, and continued to work upon it from the master's designs till after his death in 1520.

The form in which the designs have come down to us seems to indicate that they were not originally intended for the position which they eventually occupied, and the author suggests that Raphael intended them for the thirteen (*sic*) spaces opposite the windows in the loggia. This was uncompleted at the time of Raphael's death, and its completion was postponed till long afterwards. Miss Williams suggests that the pupils appropriated the existing designs for the work more immediately in hand, to wit, the ceiling of the Sala del Camino. This, of course, is purely conjectural and of secondary importance. Apart from the proofs advanced, the author maintains that the internal evidence of the figures plainly shows them to have been by the hand of the master whose "autograph is clearly visible to those who are thoroughly familiar with his work." We cannot decide so confidently from the evidence of this volume, which consists of reproductions of tracings made by the author from outline prints engraved, we know not exactly when, but certainly about 250 years after the artist's death. These outlines, which are evidently most faithfully copied, are contained in a rare, if not unique, folio in the Romani Sarti library in Rome, and are by three engravers, two of them of unknown dates; the third, Ferdinando Mori, was born in 1775.

As was said in the beginning, the medium through which the "Hours" have been known of late years is the volume published in Paris in 1804–6. The story goes that Canova caused these engravings to be made, but from what originals? An article in the London *Notes and Queries* (title, author, and date not given) states that in the seventeenth century "appeared certain engravings in the style of Marc Antonio, the only artist who was allowed by Raphael to engrave his designs as soon as they were drawn and before he had begun to paint them, and in whose engravings some of the best works of Raphael (as his "Lucretia") still survive. These seventeenth-century engravings were universally called "Raphael's 'Hours.'" They thus (concludes Miss Williams) "form the connecting link between Canova and Raphael." These are all the known facts, and it seems to us that the conclusion may fairly be drawn, in view of the persistent tradition that Raphael was the artist, that the designs were by him.

The book is a very beautiful one. Every portion—cover, text, and plates—has been prepared with the greatest care and with the happiest result. The reproductions are admirable, especially those of the whole ceiling, in which occurs an endless variety of the most minute Renaissance detail, rendered with striking clearness and excellent tone. If any adverse criticism is to be made, it would be that some of the faces in the floating figures are a trifle heavy in touch; but this applies only to a part of them. We should have been glad, also, if the author had been able to give us some account of the present condition of the ceiling, and whether any vestiges of the figures remain. In point of fact, we believe that the whole ceiling has been whitewashed or stuccoed over, and that nothing of the original decoration is visible. Altogether, this folio volume will form, not only a valuable addition to the literature of art for students, but a charming possession for all lovers of graceful and interesting designs.

Direct Fast Express Route

TO THE MEDITERRANEAN.

First-class Passenger Steamer Service between

NEW YORK and GENOA, ITALY,

BY THE

NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Jan. 2, Feb. 6, March 12
WERRA, Jan. 23, Feb. 27, April 2.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

Rev. W. R. ATKINSON, D.D., Columbia, S. C.

Schools.

FRANCE, Paris, 69 Boulevard St. Michel.

MRS VAN PELT'S AMERICAN Pension.—These apartments are spacious, face the gardens of the Luxembourg, and being in a corner house, all the rooms are sunny. The proximity of the Sorbonne, where are given free lectures, the Ecole des Beaux Arts, the Odeon Theatre, which is the Classic National Theatre, and two of the best art schools, makes this locality especially desirable for students. Mrs. Van Pelt has secured the services of a refined lady (a thorough French and music teacher) who will assist her in making French the language of the family and will also accompany ladies to the lectures and assist them in taking notes. Those who do not wish to speak French will have a separate table.
For references and circular address
MRS. E. L. HEAD, Germantown, Pa.

THE BOSTON SCHOOL OF ORATORY. —The Leading School of Expression in America. First to teach the system of Delsarte. Send for catalogue to MOSES TRUE BROWN, M.A., Boston, Mass.

Care Messrs. Thode & Co., Bankers, Dresden.

THE CATALOGUE OF

HARVARD UNIVERSITY

For 1891–92 is for sale by F. W. Christern, 254 Fifth Ave., New York; Damrell & Upham, 283 Washington St., Boston; Charles W. Sever, Cambridge. 490 pp. Price, 75 cts.; postpaid, 85 cts.

FOREIGN BOOKS SENT BY MAIL, postpaid, on receipt of advertised price.
A. LEMOIGNE, Libraire Commissionaire,
12 Rue Bonaparte, Paris.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

BENJ. R. TUCKER,
224 TREMONT STREET, BOSTON, MASS.

Carbolate of Tar Inhalant.
Catarrh, Deafness, Bronchitis, Consumption, Asthma, cured at home. New pamphlet and full particulars free. Address, naming this paper,
DR. M. W. CASE,
809 North Broad Street, Philadelphia, Pa.

Direct Fast Express Route
TO THE MEDITERRANEAN.
First-class Passenger Steamer Service between
NEW YORK and GENOA, ITALY,
BY THE
NORTH GERMAN LLOYD STEAMSHIP CO.
TIME, LESS THAN ELEVEN DAYS.
To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY
The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;
FULDA, Jan. 2, Feb. 6, March 12.
WERRA, Jan. 23, Feb. 27, April 2.
The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.
The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.
From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.
Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.
Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to
OELRICHS & CO., 2 Bowling Green.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to LII., *i. e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering, state the volume-number wanted.

The Nation.

NEW YORK, THURSDAY, DECEMBER 31, 1891.

The Week.

In view of the sweeping and emphatic contradictions given by Assistant Secretary Soley on Saturday to the recent newspaper reports about the imminence of war with Chili, and the preparations of our Government for such a war, what are we to say to the persistent and wilful lying of our own press on this subject? And can there be more mischievous lying by the conductor of a newspaper than lying intended to spread abroad the impression that we were on the verge of justifiable hostilities with a friendly State, and that we should be entirely right in the eyes of God and man in bombarding its ports, slaughtering its people, and destroying its ships? Can a nearer approach than this to devil's work be made by an irresponsible blatherskite? One of the very worst offenders in this matter has been the New York *Times*. It has for many weeks permitted a very foolish and mendacious young man to send it despatches from Washington predicting war with Chili as all but certain, and describing in detail the vigorous preparations for it that our Government was making. On Wednesday of last week it made war almost certain under the heading, "Blaine's Bluster Ahead —The Chilian Controversy Begins to Look Warlike." On Monday we were told on one page that we were "Preparing to Meet Chili," and on another that we were "Quite Ready for Chili." On Saturday we were told about the "Ill-Will of Chili," and that "naval officials" were calling for "a display of our power." On Friday last we had a "Secret Naval Movement" on foot against Chili—and so on in wearisome iteration. Assistant Secretary Soley disposed of all this malignant rubbish in a word.

We believe there is now only one question pending between Chili and the United States which can cause any trouble. The case of the attack on the sailors of the *Baltimore* is pursuing its usual course in the courts. The "juge d'instruction," as the French call him, has done the work done here by our Grand Jury by making a preliminary examination of the case. His report is laid before the Public Prosecutor, answering to our District Attorney. He on this report and evidence draws the indictment, which is tried by four judges. Trial by jury does not exist in Chili. We believe, also, that an expression of regret over the occurrence was made by the Chilian Government long ago. We hope President Harrison has not been kept as much in the dark on this point as he was touching the proceedings in the *Itata* case. The one question which now contains any seeds of international trouble is the status of the refugees whom Egan is sheltering in the United States Legation. There is a considerable number of them, and probably two have committed ordinary crimes against person or property. The others are, in the strict sense of the term, political offenders—that is, men who took part in Balmaceda's attempt to overthrow the Government, or who, being at the time officers of the Government, aided him in his venture. The continuing shelter afforded to all these by our Legation is, we believe, a very doubtful use of a bad precedent, which our State Department has always condemned. This right of asylum in foreign legations has been allowed, as we said some time ago, in Spain and Spanish-American countries, at a period when revolutions were frequent and party passions very violent, and when the lives of the defeated were always in danger immediately after their defeat. Foreign legations took them in for a brief period, until the crisis was over and this danger to life had passed by. But this state of things exists no longer in Spain, and in only a few of the smaller South American States. Even if it did exist in Chili, it would furnish no excuse for converting a foreign legation into a *permanent* refuge for offenders against the laws of the country. Chili has not lost her rank as a sovereign and independent State through Balmaceda's attempt, any more than the United States lost theirs through the attempt of Jefferson Davis, and we should certainly have taken in very bad part the continued use, for months after the conflict was over, of the British Legation at Washington to shelter him and other leading Confederates from the pursuit of our constituted authorities.

What is making the trouble now about these refugees is Egan's contention, in which we believe he is backed at Washington, that he must have a safe conduct for them, to enable them to leave the country, before he can turn them out of the Legation. This is probably the most curious of all the demands we have made on "the sister Republic." It might be a perfectly proper demand to make on the Chinese, or Turks, or Moroccans, but it is a very odd condition for one civilized, law-governed Republic to seek to impose upon another. The Chilian answer is perfectly simple and impregnable. They are willing, for the sake of peace and quiet, to put up with the slightly veiled insult of making the American Legation an asylum for fugitives from their justice, but they cannot grant a safe conduct to these fugitives, because there is no officer of the Chilian Government, any more than of the American Government, authorized to grant it, under the Chilian Constitution, to citizens charged with indictable offences. Fancy President Harrison or Governor Hill giving such persons a license to run away from the Union or the State of New York, so as to avoid trial. What the Chilian Government can promise to these refugees, and does promise, is a fair trial according to the law of the land. Some of them are charged with simply impeachable offences, committed as officers of the Government. These the Chilians wish to try before the Senate, according to the Constitution. Others are charged with ordinary criminal offences. These they wish to try before the ordinary courts. The use of our greatly superior force to compel the Chilian authorities to nullify their own Constitution, would be a very queer enterprise for a republic. It would be made all the odder and more scandalous by the fact that our Minister, who is boarding these refugees, lies under the suspicion of having been their confederate or sympathizer in their late attempt against the Government of their own country.

Some of the Washington correspondents have constructed elaborate tables showing the number of committee chairmanships given by Speaker Crisp to "the North" and "the South" respectively. The Democratic membership is divided almost equally between the two sections, the North having a bare majority. On the basis of numbers, therefore, the North should get 29 and the South 27. In point of fact, Northern representatives have received 25 and Southern 31. Two things, however, are to be borne in mind. One is that most of the Southern Democrats are old members, while the larger part of those from the North are new men, and that precedent strongly favors those with a record of long service. The other is that the North gets the two most important chairmanships—those of the Ways and Means and Appropriations Committees—and that these are fully the equivalent of half-a-dozen committees near the foot of the list. So far as this aspect of his work is concerned, Mr. Crisp has done his work as fairly as could be expected, and the result is not open to criticism.

Fortunately, the time is past when it is a matter of consequence to the people whether North or South gets the larger share of the committee chairmanships. There is no longer any sectional issue which renders it important whether the one part of the country or the other has control of legislation. Even the "rebel brigadier" clap-trap has ceased to be effective. Indeed, the severest critics of Speaker Crisp's policy regarding the Ways and Means Committee will be found among Northern men. He has made a Northern Representative its chairman, but the fact

that Mr. Springer comes from the North is rightly regarded as unimportant. These critics consider Mr. Mills the man who should have been given the place by virtue of his past prominence as the tariff-reform leader, and they do not attach the slightest weight to the fact that he lives in Texas and fought in the Confederate army. It is really a striking proof of the decline of sectional feeling that many Northern men should condemn a Georgia Speaker because he has made an Illinois man, rather than a Texan, "leader of the House."

Speaker Crisp has made an excellent Committee on the Civil Service. Mr. Andrew of Massachusetts, the Chairman, is a firm believer in the merit system, and Mr. Coombs of Brooklyn, one of the new members, is an earnest advocate of reform. We do not recognize among the others a single one of those politicians who ridicule and denounce reform, and the Committee as a whole is undoubtedly favorable to the maintenance and extension of the system. The fact is not without significance that Mr. Crisp thought it wise to frame such a committee. He may not be enamoured of civil-service reform, but he is a shrewd enough politician to see that it would not be good policy to show it disfavor. The time has gone by both for sneers about "snivel-service reform," and for the appointment of a man like Gen. Butler as Chairman of the Committee on the subject. Even the worst spoilsmen now see that the movement cannot be stopped, and is already too powerful to be opposed safely. No less significant than Speaker Crisp's action in this committee matter is Secretary Foster's course in promulgating a set of rules which puts the whole system of promotions in the Treasury Department on the most advanced ground of civil-service reform.

Gov. Hill has clearly come to the conclusion that he does not need the support of the law-abiding portion of the people of this State in order to advance his political ambition. He has supplemented his conduct in refusing to surrender Connecticut fugitives from justice, and in inducing canvassing boards to disregard the election laws, by pardoning, immediately after sentence, the Onondaga Supervisor who was fined $250 and sentenced to the penitentiary for thirty days for contempt of court in refusing to obey the court's order to send back election returns to the inspectors for correction. The audacity of this last performance by the Governor is surprising even in him. The Supervisor was guilty of a very grave offence, and was justly punished for it by the court. This punishment would have been a most valuable warning to supervisors hereafter who should be tempted to repeat his offence—that is, to defeat the will of the people, as expressed in an election, by disregarding the requirements of the laws in canvassing the vote. From the beginning to the end of the post-election controversy in this State, Gov. Hill has openly defied the law. He has denounced one Supreme Court justice for declaring that the law must be enforced, and has attempted unsuccessfully to use another justice to undo the work of the first. He has removed from office two county clerks for refusing to do what Democratic justices of the Supreme Court have declared would have been an illegal action. And now he caps the climax by pardoning a lawbreaker before he can enter upon the punishment which was imposed upon him for his crime.

Mr. Matthew Hale's careful and moderate review of Gov. Hill's conduct in this matter will leave no doubt in any impartial mind that the Governor's course is both unprecedented and indefensible. Mr. Hale shows that no Governor has ever claimed before that the provision of the Constitution which vests the Executive with power to grant pardons after conviction, can be construed as authorizing him to give release from punishment inflicted by order of a court for disobedience of its own order. As to the question of the Governor's power to pardon a contempt for which, as a crime, the offender has been tried and convicted, there is no doubt whatever; but Mr. Hale shows that the question of pardoning a man who has not been tried, but who has been sentenced to punishment, under the Civil code, by the court, as a means of enforcing its own authority, is quite another matter. He quotes many authorities on this point, showing that the highest courts of the State have upheld the right of the courts to inflict summary punishment for contempt.

Mr. Hale calls attention, at the close of his review, to the extraordinary position which the Governor took when he published his reasons for pardoning Welch. In the memorandum which he filed, the Governor declared that Welch, or any other member of the Canvassing Board, was "entitled to commendation and not to punishment" for resisting the order of the court, since he (the Governor) believed that order to have been issued by a partisan judge. The Governor also admitted in the same memorandum that Welch had been acting under his guidance, or, as Mr. Hale puts it, that he himself, the Chief Executive of the State, had "instigated, aided, and abetted the contempt of court of which Welch was guilty," thus confessing himself guilty of a misdemeanor under the Penal Code. Mr. Hale thus sums up the case, adding to his summary his belief that the question will be carried to the Court of Appeals for final decision:

> "The claim of the Governor amounts therefore to this: a Governor who advises a party to a judicial proceeding to disobey the lawful mandate of a court may, under the pretence of an exercise of the pardoning power, prevent the court from enforcing its decree or order by the punishment of the person who has committed the act of disobedience in pursuance of the Governor's direction. It is hardly necessary to say that if this construction of the pardoning power is correct, the independence of the judiciary is at an end. Its orders can be enforced only by the forbearance of the Governor. If the Governor chooses (as the present Governor of New York has chosen) to set himself in opposition to the law, and in opposition to the courts, he can, by the exercise of the pardoning power, paralyze the arm of justice."

We regret to observe that the *Tribune* has a Democratic fabricator in its Washington bureau. He telegraphs to his paper that "the total annual appropriations for the current year, including deficiencies and miscellaneous, amounted to $402,537,-864." This is only a few thousand dollars higher than Senator Allison's statement of last March. Add in the $122,486,808 of the "permanent annual appropriations," the amount "submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and indefinite appropriations," and we easily pass the $525,000,000 mark. But the *Tribune*, having that sum in mind, has editorially assured us that "the fact had been many times made known by Republican journals that the appropriations to be actually expended within the coming year were not as large by many millions as Democratic fabricators had asserted." So much depends upon the point of view. When it is a question of Republican extravagance, our contemporary declares that it was no such thing, and that Senator Allison was a Democratic fabricator in giving the figures to prove it. But when Mr. Holman begins to talk about cutting down the appropriations by $118,000,000 at this session, the *Tribune* points admiringly to the Republican grand total, all of which it asserts to have been necessary. In either case, poor Mr. Foster's estimate of expenses for the current year—$409,000,000—looks small enough. He is acting as a sort of Chairman of the Appropriations Committee himself, and cutting down $116,000,-000 on his own responsibility. His method differs from Mr. Holman's in that the latter proposes to prevent the enactment of extravagant laws, while Mr. Foster is preventing their execution. But then, if he only had the money, he would gladly pay out all that the laws call for. He is merely straitened by circumstances, and not at all a niggardly man by nature, so we understand he assures the people whom he keeps waiting for their Government dues.

The Tin-Plate Consumers' Association now numbers 256 business firms and corporations, representing probably five hundred times as much capital as all the tin-plate makers in the United States. The first name in the list is Armour & Co., Chicago. It would be safe to say that this firm alone could buy out all the tin-plate establishments in the country without being seriously discommoded. It is safe to say, also, that the number of hands employed by the 256 members of the Association is as largely in excess of those

employed in the tin-plate industry as their capital is larger. These men say that they desire to treat the tin-plate question as a question of business, and not of politics. They say also that, as a matter of business, they have paid ten million dollars *more* than was necessary for tin plates used in their trades since the McKinley Bill was passed. They add that not one sheet of coke tin, which comprises over one-half of this country's requirements, has yet been made here, and that the present output of all kinds of tin plate does not constitute one per cent. of our entire consumption. We trust that the new Committee on Ways and Means will likewise treat the tin-plate question as a question of business and not of politics, and to this end will promptly send to the Senate a bill putting back the duty where it was before it was McKinleyed. Then let the Senate treat it as a matter of business also, and concur with the House. Then the Tin-Plate Consumers' Association will quietly disband, and its members can resume their disturbed relations with the Republican party. There is nothing like taking a business view of it.

An effort is making to secure better pay for the men employed in the life-saving service. They now receive but $40 per month, and that only for the eight months they are employed, while they are, of course, at a disadvantage in securing remunerative work for the other four months. They are obliged to provide their uniforms, as well as their underclothing, heavy coats, rubber boots, and tarpaulins, which must be of good quality and therefore must cost not a small sum. They are exposed to all sorts of weather when on shore duty, and to the peril of their lives in case their assistance is needed by vessels in distress. The record of the service is in every way most creditable—an almost unbroken story of the faithful performance of routine duty, interspersed at frequent intervals with displays of wonderful heroism. A bill has been introduced increasing the rate of pay to $75 per month, and there ought to be no question of its passage. The country favors economical appropriations, but it does not want to stint a class of its employees which includes so many heroes.

The London *Times* of December 14 gives the particulars of the embarrassment of the Portsea (Eng.) Building Society, briefly reported by cable. This Society was a coöperative concern, whose principal supporters were naval officers, pensioners, and the most thrifty class of workingmen. It was established as long ago as 1846, and had loaned to its members about $6,250,000. By the November statement the liabilities were £717,834 and the assets £738,444. The trouble was caused by rumors of bad management, followed by a "run" of members who wanted to withdraw their deposits. As an association of this kind keeps the largest part of its deposits loaned out to members, the directors decided to announce a suspension of business in order to see where they stood. Now it comes out that the failure is the old story again of directors who do not direct. These officers had allowed the Secretary, who had held the office for a long term of years, to manage the Society practically by himself, and when they looked into his accounts they discovered that £31,399 had been loaned by him without mortgage securities, and a large part of this to persons who were not members of the Society. This could not have been done had not the officers of the Society allowed it to branch out into a deposit and banking business. The building-and-loan-association form of coöperation is doubtless the safest coöperative scheme that has been devised. But when it is allowed to depart from its proper field of operations, it is certain to come to grief. In this country the State laws on the subject do not, we think, permit mismanagement of this sort, but they cannot guarantee security where, as in a recent Brooklyn case, the directors place the certain control of an association in one man's hands.

A great sensation has been produced in Germany by an article of Prof. Delbrück, in his monthly, the *Preussische Jahrbücher*, which criticises very sharply the inscription made by the Emperor in the Munich 'Golden Book'—"Suprema Lex, Regis Voluntas." The Professor is a Conservative, and was at one time tutor to the Emperor's brother, Prince Waldemar, so his words have great weight when he says:

> "The press points to the Constitution, asking, Where are the Constitutional Ministers? and storms at Byzantinism. The officials whisper to one another, with gloomy looks and sharp remarks. The professors weave into their lectures observations relating to public law, such as that the Germans had always a monarchy, but not an unlimited one. The clergy took the opportunity of preaching last Sunday on the text that the highest law was God's will. Even the semi-official papers are at a loss for excuses, which proves that at the bottom of their hearts they think the same. But why this storm—as it only has to do with a word, with nothing concrete, no intention, no plan, no symptom which might let us expect something new? We won't hesitate to say straight out that the excitement is so great because of an already existing feeling waiting for expression. This chance word is regarded only as an exposition of a subjective monarchical will which people are prepared to meet with resistance. In this lies a danger for the future which cannot be regarded too seriously."

This is extremely strong talk, but even stronger will probably be heard if there should be many more imperial vagaries. The Emperor's speech to the recruits informing them that they belonged to him "body and soul," and that he might have to call on them to kill their parents, was in the same vein, and, of course, hurts German pride, and raises the question in many minds whether anybody holding such views of kingly prerogative is fit to reign in a constitutional monarchy.

The Emperor, however, is probably safe in displaying his absolutism as long as the Franco-Russian cloud is on the horizon. In their present condition between France and Russia, the Germans cannot afford any contention with the commander of the army; and unless he loses his head altogether, William will probably be allowed to play a great many pranks in civil life as long as he keeps the military forces in a good state of preparation. The German correspondent of an occasionally esteemed contemporary, writing from Heidelberg, says this phrase, "Suprema lex, regis voluntas," is "a disfigurement of the old Roman phrase, 'Suprema lex, salus republicæ'"; but it is much more likely to be a slight adaptation to modern ideas by the Emperor himself of that maxim of the later Roman lawyers which runs: "Quod principi placuit legis habet vigorem"—"The Emperor's will has the force of law."

The refusal of the Queensland Parliament to vote a grant of money to the Nordenskjöld expedition to the south polar regions probably puts an end to another of the several Antarctic enterprises which have been projected during the last few years. Half a century has now passed since Sir James Ross, the last as he was the greatest of Antarctic explorers, unfolded some of the mysteries of the south polar ice-cap, discovered the volcanoes Erebus and Terror, and skirted for several hundred miles the shores of the great glacial continent. To the Arctic region, on the contrary, during the half-century, there have been probably not fewer than a score of expeditions, several of them attended by terrible loss of life and suffering; and at the present time Peary is wintering on the Greenland west coast, and Nansen is preparing for his perilous and rash "drift voyage" from the north coast of Siberia across the Arctic Sea. In the north polar regions, about the only realms now left for new discovery are the north points of Greenland, the scientific investigation of the Humboldt glacier, the outlining of the upper Greenland coasts, and a few facts relating to the ice-cap supplementary to those of Nansen during his transit of that country; while at the south the great polar continent yet remains to be delimited, its ice barrier possibly scaled, and its internal features sketched out. The proposal, at one or two commercial centres of Europe, to send whaling ships to the Antarctic Sea has also its flavor of utility and of profit in the exploration of that still mystic region. Assuming, what we are very far from asserting, that these dangerous polar voyages of exploration are justified, the reason why the Arctic region has still such superior magnetism for explorers remains a deep enigma, whether the subject is regarded from its common point of view of "pure science," or from that of its much more hypothetical utilities.

THE MORAL OF ELKINS.

No enemy of the spoils system—meaning by that the system of paying political debts by the bestowal of offices, without regard to the fitness of the payee—could desire a better illustration of the disadvantages and dangers of the system than the sending of Egan to represent us in Chili. We have never been able to extract from any organ of the Administration a single proper reason for his selection for this post. These organs maintain dead silence on that point. Of course, it was to Chili something in the nature of an insult to impose on her as American Minister a foreign fugitive. She might very properly have resented this by refusing to receive him. But she was naturally anxious not to get into unpleasant relations with a powerful neighbor, so she did receive him without a murmur. What made her action all the more conciliatory was that Egan was the second Irish politician she had been made to endure as American Envoy. Mr. Cleveland sent a Mr. Roberts, who was known here only as a Fenian, or some species of Irish malcontent, for, we suppose, the same reason—a desire to pay for Irish support; and Balmaceda, when he heard Egan was coming, is said to have asked, with some pathos, why Chili was specially selected to clear off the Irish debts of both American political parties.

The case of Roberts, however, excited little or no notice, because there was no trouble in Chili during his residence there. President Harrison was doubtless encouraged by this precedent when he sent Egan. If there has been no complaint about Roberts, said he to himself, so there will be none about Egan. And there would have been none but for the outbreak of the civil war. This at once called for the presence at Santiago of an American of high character, and of long experience in law and diplomacy, and thus immediately laid bare the rottenness of our present system of appointments in the diplomatic service. All such appointments, or all except that to London, are made on the assumption that our representatives abroad will have nothing to do; but whenever the assumption fails, it is apt to fail terribly, and we become objects of ridicule to the civilized world. The diplomatic agent of a great nation is very like the Texan's pistol, which, he said, he did not want once in six months, but when he wanted it he wanted it "mighty bad."

The truth is, that, with our rapidly extending foreign trade and our rapidly multiplying points of contact with foreign nations, the diplomatic service ought to be put on precisely the same footing, as regards efficiency, as the army and navy. We may not need the services of either once in half a century, but they are both organized and maintained on the theory that we may need their services at any moment. Every regiment and every ship is and has to be armed, drilled and disciplined, and officered as if war might break out next week. So, also, every one of our leading foreign Ministers ought to be selected on the assumption that serious crises may occur at any moment in the capital to which he is to be accredited.

All this admits of easy application to Elkins's induction into the War Department. This appointment has probably been made, like Wanamaker's, either for money had and received, or for money *in transitu*—that is, for some kind of service capable of being estimated in dollars and cents. The question of his fitness has probably not entered into consideration in selecting him, in the smallest degree. Moreover, he may stay in the office until the close of President Harrison's term without the smallest scandal or disturbance. The temptations which will assail him may be, from first to last, far below his figure—to use an arithmetical illustration—but one may come any day high enough to carry him off his feet, and we shall then have a scandal.

Places like the War Department have, in fact, to be filled on precisely the same theory of probabilities as places in business houses. All private business is managed on the assumption that any man may forge or steal, but that in selecting a particular man for a place of responsibility this probability must be reduced to its lowest terms by his character as proved and illustrated by his previous life. A notorious burglar *might* act as the president of a bank with complete probity for many years, but the probabilities, as ascertained by his antecedents, that he would not do so, would be so strong that stockholders or directors who put him in any such place would be looked on as insane.

The War Department is not a great place for a man like Mr. Endicott or Mr. Proctor, who desires nothing but to see that the small military affairs of the nation are honestly and efficiently managed. It does not present temptations of any kind which such men find the smallest difficulty in resisting; and even such men as Mr. Elkins may administer it for two years without calling forth either notice or censure. But anybody who *expects* a man of his tastes, tendencies, and antecedents to treat the place as a humdrum routine of commonplace duties, is guilty of the same disregard of probabilities that would be shown by a business man who hired a cashier without a reference. A man of Elkins's restless temperament and great energy and activity, in all of which he resembles closely his friend—quondam friend, it is now said—Mr. Blaine, is very likely to see numerous channels in which he can be useful, and to chafe under the position of a deadhead in any attractive enterprise. The casting of "anchors to windward" is not a military figure, but a soldier can always "hold the fort" till the siege is raised, mine the enemy's works, or communicate with friends outside by signal lights on the battlements, or by carrier pigeons.

A BEGINNING FOR TARIFF REFORM.

THE *Dry Goods Economist* considers that the time has come for the removal of all duties on wool, or, at all events, for the reduction of them to a nominal rate. "When such domestic consumers," it says, "as Glover Sanford & Sons of Bridgeport, the largest exclusive wool-hat manufacturers in the country, shut down and discharge four hundred hands because they can no longer obtain the foreign wools necessary for mixing with the native staple, and when hundreds of other manufacturers using blends of wool find themselves crippled and restricted to a greater or less extent by the same cause, the most inveterate advocate of high wool duties has to stop and think whether the policy successfully embodied in the McKinley Bill is, after all, best for American wool. And the more such men think, and the more the farmers think and investigate for themselves, the more clearly will they see that their true course is to remove all embargo from the coöperative, not competitive, foreign wools."

The article in the *Economist* probably reflects the mature opinion of the dealers in woollen goods, both foreign and domestic, unbiassed by political considerations. The agitation that has been going on in New England for four or five years points to the same conclusion. The magnitude of the interests involved gives to the wool problem a unique and special interest, and singles it out for special and early treatment by the new Committee of Ways and Means. If the policy of dealing with the tariff by special groups of articles instead of by the general bill is adopted, then it would seem best to begin with a measure of really commanding interest and importance, such as the clothing of the whole people. A bill dealing with the duties on wool and woollens could not be considered a trifling matter. It could not be "whistled down the wind." Nor could the Republican politicians say that it is impolitic to take up one branch of the tariff question alone to the exclusion of others, since they set the example with the very same article of wool in the famous act of 1867.

It should be borne in mind that by the tariff of 1857 all wools costing twenty cents or less per pound at the port of shipment were admitted free of duty. These were nearly all the wools in existence. We had practically free wool until the war tariff was adopted in 1861. Then a moderate revenue duty of 5 per cent. was put on those wools and a little higher rate on washed wools. These were purely revenue duties. In 1864 they were slightly increased with the duties on other articles, but still for revenue purposes only. It was not until 1867, the war having been ended two years, that high duties were put on wool for the express purpose of protection, and in this case the subject was taken up separate and apart from everything else. By this bill the duties on wool of the kind most largely

used were raised from 6 cents per pound to 10 cents per pound *and* 11 per cent. ad valorem. This was an increase of about 100 per cent. in the rate of duty. The duties on woollen goods were increased correspondingly on the principle of "compensation." It was assumed that four pounds of wool were required to make one pound of cloth. So the specific duty on wool was multiplied by four, and this, together with the new ad-valorem duty on wool, was added to the duty on woollens, the whole making one of the most disgraceful and disastrous chapters in American fiscal history.

The consequence of the new departure in wool tariffs is well known. Both wool-growers and woollen manufacturers entered upon one of the most gloomy periods that their respective industries ever saw in this country. The price of domestic wool declined to such an extent that millions of sheep were slaughtered. Mr. Allison of Iowa made a speech in the House in which he gave statistics to show that wool-growing had been practically brought to an end in his State by the tariff of 1867. After five years' experience of this tariff, the Bulletin of the National Association of Wool Manufacturers said: "There is one thing that all who are interested in the manufacture will agree to, that for the last five years the business in the aggregate has been depressed, that the profits made during the war have been exhausted mainly, and that it has been extremely difficult during all this time to buy wool and manufacture it into goods and get a new dollar for an old one." The policy which dictated the disastrous tariff of 1867 is still in force, somewhat intensified by the McKinley Bill of 1890, and now the crazy men who carried that measure through Congress are clamoring for a bill to exclude all foreign wools from the United States, of every name and description. We hope that the fighting will be forced upon them by a bill making all wools free of duty at an early day. There is no better place for tariff reform to begin.

LOTTERY EVILS AND METHODS.

A VERY clear insight into the questions at issue in the lottery struggle which is in progress in Louisiana is furnished by two articles in the January *Forum*. The writers in both instances are men of high character, residents of the State, and early leaders in the organized movement against the lottery. They speak with an authority and from a fulness of knowledge which makes their utterances of great value to all persons who wish to obtain a clear conception of the struggle which is to be decided at the polls in April next. The writer of the first article is Judge Frank McGloin of the Louisiana Court of Appeals, and the writer of the second is John C. Wickliffe, the editor of the *New Delta* newspaper, which was established a year ago in New Orleans to furnish the anti-lottery movement with an organ in the press, all the existing journals being completely in the lottery's interest.

Judge McGloin recalls the fact that the State owes the existence of the lottery evil at the present time to the carpet-bag régime, which, with H. C. Warmoth in the Governor's chair, had possession of the State in 1868, when the new charter was passed. Warmoth did not sign the charter, but neither did he veto it, allowing it to become a law without his signature. He is now opposing the proposed constitutional amendment rechartering it for twenty-five years, and, in his capacity as Collector of the Port of New Orleans, to which place President Harrison appointed him, is leading the anti-lottery wing of the Republican party, while some of his old carpet-bag associates are leading the other wing, and P. B. S. Pinchback, of Returning-Board fame, is one of the lottery magnates. Warmoth's present course is not looked upon without suspicion, for he is the natural ally of the lottery, and, while making the most vehement protests of hostility to it, may be working secretly in its interest.

The most interesting portion of Judge McGloin's article is the estimate which he makes of the lottery's profits. He declares that the terms of the company's advertisements show that "its dealings with its patrons have all along been conducted upon lines of absolute robbery." He says that the ordinary gambler is content with 15 per cent. of the stakes won by players in his establishment, but that the lottery gamblers take at least 47 per cent. He shows that the face value of the tickets which the company sells for its twelve monthly drawings is $28,000,000, and that the total of all its prizes is less than $15,000,000, leaving the company a profit of $13,000,000. He makes a very strong point on the fiscal policy of the State in allowing the company to conduct the lottery business in the State's name at such a profit, declaring that if the State is going into the gambling business, with all the odium attached, it ought to insist upon the lion's share of the profits for itself. He shows that the State does not even invite rival bids for so valuable a charter, and that when a gambler in Europe telegraphed voluntarily a bid for the new charter which was a quarter of a million dollars greater than the company's bid, the company at once raised its bid by that amount, and hurried the charter through the Legislature before other rivals could appear.

Concerning the effect of the lottery upon the morals of the people, the Judge speaks with great earnestness. "What sort of political economy is it," he asks, "which boldly counteracts the teaching of our firesides, that gambling is a vice to be abominated and shunned? How shall the rising generations be induced to contemn and fear this most insidious of temptations, when the State holds it constantly before them as the one great benefactor of the Commonwealth? How shall our children despise the gambler who is providing for their education, rearing the levees which keep out the floods, and supporting hospitals and asylums for orphans and the insane?" He adds that visible evidences of the demoralization already accomplished are plentiful:

> "Already our servant girls are becoming in considerable numbers practised and habitual thieves, putting our market-baskets under daily toll for lottery money. The number of defalcations large and petty is multiplying. The number of lottery offices has multiplied, and the roll of their habitual customers is growing steadily. Saddest of all, this roll numbers a multitude of women and of children, the latter including those of tender years. Your lottery-vender has no compunctions, nothing in the shape of commiseration. He will hand out the ticket to the poor starved woman, though he must guess that the twenty-five cents handed to him in return is taken from the scanty table of herself and children. He will write out the combination for the servant girl, though he be aware that the nickels she hands him are filched from the money intrusted to her for the purchase of food for her employer."

That the company has carried its points almost or quite uniformly by means of bribery, nobody who has watched the progress of legislation in its interest can have any doubt. The difficulty has been to obtain proof. Mr. Wickliffe gives two instances in which circumstantial evidence of indubitable character came to light in a somewhat dramatic manner:

> "Just after the adjournment of the Legislature which passed the Lottery Bill in July, 1890, one of the Senators, who had been an anti-lottery man, and who was the last man converted to the lottery side, died at the Hôtel Dieu in this city. He was a man who never had a dollar in his life. He was one of those men whom you have sometimes met that were born about $1,000 behindhand and who never caught up. He was deeply in debt, and had been so ever since he was a man. From his dead body was taken a money-belt which contained $18,000 in one-thousand-dollar bills, all new. Another, also, a member of the House, who was the same sort of a man, died very soon after the adjournment, and a large sum of money was found in his possession also."

Whenever a case gets into court, the assailants of the company are either induced to settle out of court, or the officers of the company refuse to obey the subpœna of the court, and flee beyond the court's jurisdiction until the case has been dismissed on a *nolle prosequi*. The company "has dozens of men who have been and are in public life upon its pay-roll, giving them stipulated sums per annum for services heretofore rendered. Those it can buy it buys; and those it cannot buy it seeks to destroy. It has no politics and knows no party. It numbers among its servants Democrats and Republicans. It has traded with all parties and has supported all parties." It is not difficult to understand, in view of these statements, why it is that all parties are so split up upon the lottery issue, for the greater the general confusion, and the larger the number of opposing candidates in the election, the greater will be the chances for lottery corruption to win in the end.

TALLEYRAND'S MEMOIRS.—VI.*

PARIS, December 10, 1891.

THE fourth volume of the Memoirs of Talleyrand is a collection of diplomatic documents, tied together by commentaries which have lost much of their interest at this distance from the events. They relate wholly to the London Conference which followed the Revolution of 1830, and which had for its object the settlement of the affairs of Belgium.

In the month of January, 1831, when the volume begins, the King of the Netherlands had accepted the principle of the independence of Belgium, but his conditions as to the delimitation of the new kingdom and the partition of the debt were found unacceptable. The Conference had, besides, a great problem to solve in the choice of a sovereign for the new kingdom. Hostilities were only suspended between Belgium and the Netherlands: Antwerp was blockaded, and the commerce of the Scheldt was interrupted; the Belgians, in their turn, blockaded Maestricht. Talleyrand had a very happy inspiration: at a moment when all seemed still uncertain, and when the various Powers represented at the Conference had very different hopes and aspirations, he contrived to unite them in a declaration of the neutrality of the future kingdom of Belgium. Article 5 of the protocol of the 20th of January, which he proposed, and which was unanimously accepted, declared that "Belgium, in the limits which will be traced in conformity with the basis of articles 1, 2, and 4 of the present protocol, shall form a State perpetually neutral. The five Powers guarantee it this neutrality, as well as the integrity and inviolability of the limits above mentioned."

This was a great diplomatic victory, and Europe still profits by it. During the war of 1870, Belgium remained neutral and inviolate. She is now building powerful forts in the valley of the Meuse, but these are merely the defence of her neutrality. King Leopold changed Antwerp into an entrenched camp; he thought that Belgium was not able to defend her territory against a large invading army, but she could shut up her own army in the entrenched camp of Antwerp, where it could wait for an English army of succor arriving by the Scheldt. Leopold always considered that England was bound to help Belgium without a moment's hesitation. The entrenched camp of Antwerp has lost much of its value, as it was built at a time when artillery had made little progress; it would now have to be armed with new forts, with cupolas; but the attention of the Belgian military authorities is directed at present more to the Meuse than to the Scheldt, for reasons which will be easily understood.

Let us return to the London Conference. Talleyrand was proud, and justly proud, of his achievements in this question of Belgian neutrality. He wrote to Gen. Sebastiani: "The recognized neutrality of Belgium places that country in the same position with Switzerland, and upsets, in consequence, the political system adopted in 1815 by the Powers—a system inspired by hatred of France. The thirteen fortresses of Belgium which constantly threatened our northern frontier, fall, so to speak, in consequence of this resolution." Talleyrand was very desirous that the Duchy of Luxembourg should enter the neutral zone; he fought on this point "like a lion" (despatch of Lord Palmerston to Lord Granville), but he could not carry it, as the Duchy belonged to an independent sovereign and to the German Confederation.

Talleyrand had the habit of forming for himself a diplomatic plan which he followed through the fluctuations of the negotiations without ever losing sight of certain main points. He never told all at once whither he was tending, but he knew whither. He had a sort of curious pliability as to forms, and great resolution as to the end. In the Belgian affair, which was for two years a sort of Gordian knot and the centre of the whole European policy, he made up his mind from the beginning, with his great foresight and good sense, on a certain number of points. He understood at once that, if France annexed Belgium to its own territory, or even if France gave to Belgium as its sovereign a son of Louis Philippe, there would be a general war, and such a war in 1831 or 1832, with the hostility of the great Powers to the new King of France, whom they considered as an usurper, could end only in the invasion of France and in great disasters. He was convinced that all the efforts of the Powers could never bring the Belgians to accept as their new King a Prince of Orange; he therefore chose from the beginning in his own mind as his candidate Prince Leopold of Saxe-Coburg, and he saw in this choice many advantages: he knew the Prince to be an able man, he knew that he would be the English candidate, and he needed the support of England in the Conference. He was very favorable to an *entente cordiale* between the new Constitutional Government of France and England. He was determined, at the same time, not to allow England to gain a footing in the Low Countries, not to have a sort of *tête de pont* on the Continent. "History," says he in one of his letters, "shows the difficulties which followed the occupation of Calais by the English, and also what favor was bestowed on Guise after he had delivered France from this shame. The lessons ought not to be lost upon us." This was written at a moment when it had been suggested that Antwerp might be declared a free town, like the Hanseatic towns; Talleyrand always insisted that Antwerp should be a Belgian town, and should belong to the new kingdom.

There was so much wisdom in his views, and Talleyrand understood so well the sentiments of the great Powers—how to set one over against another, how to use their jealousies and their apprehensions—that he soon became a sort of arbiter at the Conference. He had become a lion in society; all society was at the feet of the old statesman, who had seen so many men and things. We see him as he was then in a portrait which forms the frontispiece of the present volume—how different from the young Abbé de Périgord of the first volume; how grave and solemn now, with a long wig falling on his neck, his chin supported by and almost concealed in a necktie; his eyelid drooping over the inquisitive eye; his lips compressed. Talleyrand had to sit many times for his portrait. Lord Holland would have one, which was long to be seen at Holland House, and which was painted by Ary Scheffer. This is now in the collection of the Duc d'Aumale, Lord Holland having left it to the Duke in his will. It resembles very much the engraving which is in the fourth volume of the Memoirs.

Talleyrand had special difficulties during his mission to Brussels. Officially he had to deal only with the French Minister of Foreign Affairs, but the Parliamentary position was very unstable: there was no strong Cabinet, and the Ministers had no *lendemain*. He really could speak his inner thoughts only to the King, and Louis Philippe was in perfect harmony with him. Talleyrand was afraid of being accused of being in direct communication with him over the heads of the Ministers; he found an intelligent and safe go-between in Mme. Adelaide, the King's sister, who had a manly character and a manly intellect—a little too ardent at times—absolutely devoted to her brother, his best adviser and counsellor to the end; a princess imbued with the ideas of modern France, whose life has still to be written. The letters of Talleyrand to Mme. Adelaide are among the best in the volume; they are evidently Talleyrand's personal work, and have not been prepared or written by secretaries. He always calls her Mademoiselle, the name given under the old régime to the unmarried sister of the sovereign. They are written in the style which was current before the great Revolution, with all the delicacies of language of a gentleman and a little touch of personal sentiment. The Duc de Dalberg, a personal friend of Talleyrand's, kept him well informed on all the events in Paris; his letters are sensational and amusing, but do not show much political wisdom. He belonged to the class of *nouvellistes* whom La Bruyère had already painted—men who begin every conversation with the words, "Is there anything new?" and who make news when there is none. He was also a political Cassandra, for ever predicting catastrophes, and complaining of everything and everybody.

Though Talleyrand contributed powerfully to the creation of the kingdom of Belgium, assured its neutrality, and helped to choose its dynasty, he never really believed much in his own creation. In a confidential letter to Mme. Adelaide he says: "There is no good *point d'appui* to be found in people as light-headed and turbulent as the Belgians. Belgium will perhaps come to us, but that will be later; to-day it is a secondary interest. The *force des choses* draws her to France, but we must first make France, and France can be made well and surely only by mingling with the great Powers which to-day claim her society, for this is what I have done in London. Do not let us abandon this position." I have seen other letters still unpublished, in which the same idea is visible, the feeling that there was no such thing as a Belgian nation, no such country as Belgium, and that the provinces which called themselves Belgium would sooner or later, by the law of gravitation, fall into the sphere of influence of France, and finally be annexed to it. Sixty years have now passed since Talleyrand entertained these views, which, of course, he never produced officially, and Belgium has not justified his prophecy. The Belgians have really developed into a nation; they have made no revolution; they have remained faithful to the Coburg dynasty. During the same period the French have changed their government four times. What would have happened if they had not, can only be conjectured.

There are interesting details in this fourth volume on the parliamentary incidents which accompanied the introduction of the Reform Bill in England. Talleyrand was thoroughly acquainted with English society, and though he speaks of English affairs only in connection with his own objects, he enters here and there into details which have a general interest. The volume ends with the marriage of Prince Leopold to a daughter of Louis Philippe, Princess Louise. Thus all the conflicting interests seemed to be reconciled, and for a moment (but only for a moment) the famous words of Voltaire's 'Candide' might have been repeated: "Tout

*Memoirs of the Prince du Talleyrand. Edited by the Duc de Broglie. Translated by Mrs. Angus Hall. Vol. iv. G. P. Putnam's Sons.

est pour le mieux dans le meilleur des mondes possible."

ITALIAN WINE-MAKING.

MARSALA, December 6, 1891.

AMERICANS visiting Palermo for the Exposition cannot do better, if interested in vine-culture and wine-manufacturing, than take a train for Marsala and spend a few days in the province of Trapani in order to understand the entire history of the bright, clear, topaz-colored "Marsala" from its birth to its consumption on their own tables. It is a curious fact that in this province, where wine abounds, where every peasant and laborer drinks one or two glasses twice per day, you never meet a drunken person. All the prefects who come from other parts of Italy, the syndics, the employers of labor, bear testimony to the total absence of drunkenness; nor do the statistics which register but too many "crimes of bloodshed" show that any of these crimes have been committed under the influence of drink. Once this was the proud boast of all Italian provinces, and is recorded by T. A. Trollope, who spent more than forty years in Italy; but since the failure of the vintages, one year after another, and the substitution, by speculators, unchecked by Government, of villanous compounds of spirit distilled from maize, potatoes, etc., to which sugar and coloring matter, often poisonous, are added, and which are sold for wine, northern villages and towns are sadly deteriorated in this respect, and from Saturday night to Monday morning the streets resound with drunken cries and songs; while *there* most of the crimes on record are committed "under the influence of drink."

Sicily, once the granary of the Romans, has been for many years unable to compete with America and Russia in wheat. Once the largest cultivator of tobacco, the Sicilians have ploughed up their plantations since the Italian Government, extending its monopoly to the island, rendered its culture unprofitable and irksome, owing to the fiscal regulations introduced. Then, with the vine disease in France, came large demands for Sicilian wines, less for actual consumption than for the manufacture of French wines made from the juice of the Italian grape. Hence, wheat fields, sumach plantations, and, alas, olive, lemon, and orange groves, were ploughed up, and in five years the amount of land laid out in vineyards was nearly doubled. One-tenth of the entire island is vineland; of the Province of Palermo, one-sixth; probably one-fourth of the Commune of Marsala is devoted to the culture of vines. Indeed, the whole of the flat, stony country is honeycombed with vineyards, the vines being planted about a metre and a half apart, at right angles, each vine being in the centre of the hollow; the soil hoed four or five times a year, so as to keep the roots free of weeds, and so placed as to catch all the moisture of dew and rainfalls, exposed at the same time to the scorching sun rays of the summer months preceding the vintage. Here peasant proprietors are very numerous, as the capital required is not large. A peasant can build his own house cheap with the sandstone of the country—square stone buildings of one story, with slanting roofs, one, two, or three rooms sufficing, according to the size of the family. In the same room you see the *palmento*, or wine-press, one or two metres high, paved with brick or stone, with a clay pipe inserted in a hole for the must to run into the vats; on the opposite side of the room, the *torchio*, or squeezer, where the husks, put into rough rush baskets, are piled and squeezed; then the remainder are dried and sold for the extraction of cream of tartar. This is the home of the poorest peasantry; the men sleep in one room, the women in another; all live exclusively on the produce of the vineyard, so that the price of the must is the great question of the year.

In larger vine-farms the *palmento* is in the courtyard, and the pipe leads off the must into the cellars. The process is still very primitive. The wine-maker steps into the press with thick, heavy, hobnailed boots, holding a stick wherewith to balance himself, and treads out the juice till no more can be expressed. This first must is kept separate from the remainder obtained by the crusher, as the latter is not approved of by the tasters and purchasers, who detect it at once. It is while the grape-treading goes on that the peasant adds the *gesso*, or sulphate of lime, about which there is such a hue and cry just now, and which is forbidden by law save to the extent of two per thousand. It has been used from time immemorial to prevent the wine from turning acid in the fermentation. *Falstaff* in "Henry IV." exclaims: "You rogue, there is lime in this sack, too." The manufacturers of Marsala say that some difference ought to be allowed for their strong wines in comparison with the weaker wines of continental Italy, and are already complaining that the enforced absence of *gesso* detracts from the preservation of the must. It is certainly the only extraneous matter introduced into Sicilian wines, as the abundance is such that the country people never make the second wine, as in the north, by the addition of water and sugar. Indeed, since the decreased exportation, owing partly to the rupture of commercial relations with France, and partly, nay, chiefly, to the fact that the French have conquered the vine diseases and replanted their vineyards, there is often more wine than receptacles to hold it. As a rule, the small producers sell their wine when it is a few days old to the large wine-manufacturers, of which the chief in Marsala are the well-known firms of Whitehouse, Ingham Whitaker, and Florio, who, according to their own special receipts, make the wine known as Marsala under different names.

To John Woodhouse, the son of a Liverpool merchant, belongs the merit of the first *baglio*, or wine factory, at Marsala, which he established in 1773, sending to England in the following year sixty barrels of wine. During Nelson's command of the fleet, Woodhouse was his wine-purveyor, supplying the fleet in 1800 with 2,000 hectolitres of Marsala at one time. All the documents are carefully preserved in the archives of the house, and there is posted up the original contract between the Right Hon. Rear-Admiral Horatio Lord Nelson, K.B., Duke of Bronte in Sicily, with John and William Woodhouse, merchants of Marsala, 19th March, 1800, to furnish his Majesty's ships off Malta with five hundred pipes of the best Marsala wine. To this there is a postscript in Nelson's own hand: "The wine shall be delivered as expeditiously as possible, and also to be delivered within the space of five weeks from this date; a convoy will be wanted for the vessel from Marsala, but all risks are to be run by Messrs. Woodhouse. *Bronte Nelson.*"

The success of the Woodhouses soon attracted another Englishman to Marsala, and Benjamin Ingham of York soon vied with his rival, devoting the greatest attention to the amelioration of the manufacture of wine. Reading his rules to-day, we can only wish that they were applied rigorously to all wine-manufactories throughout Italy. They are strictly adhered to by all the great manufacturers of Marsala wine, but, alas, too much neglected by the small producers, who do not take any care about the cleanliness of their vessels, nor attend to the very necessary caution of propping up the branches of the vines when the grapes are ripening, so as to avoid the earthy taste of the wine.

Benjamin Ingham was the first to initiate the wine trade with the United States, Brazil, and transatlantic regions in general. He it was, also, who first noted the praiseworthy efforts of Vincenzo Florio, now a name of world-wide renown, and here called the "Father of Sicilian commerce." So far from showing any jealousy, Ingham joined with him in the attempt to create a navigation company, now the hope and pride of Sicily. Vincenzo Florio, nothing daunted by the old-established manufactories or *baglios* flourishing at Marsala, pitched his tent in the midst, *i. e.*, built his *baglio* precisely between those of Woodhouse and Ingham. And to-day, as I write from the terrace of the *baglio* Ingham Whitaker, side by side with that of Florio, now the property of the grandson millionaire, and can see the Woodhouse establishment beyond, a fresh proof of the affinity between the Italian and Anglo-Saxon natures is afforded. These three houses are rivals; each desires that his special Marsala shall supply native and foreign markets; yet there are no petty squabbles, no tricky manœuvres to undersell each other, and in all that relates to the workmen, who are well paid and cared for, to the fixing of the price of must, to the benefit of Marsala, the three firms work hand in hand. Not long since they spent 50,000 lire in paving the chief street of Marsala, subscribing in equal portions. Many foreigners who come to Marsala to buy the "virgin wine" complain that these big *baglios* put the prices too high, and that, but for the three managers of Ingham Whitaker, Florio, and Woodhouse, they would be able to purchase from the vine growers at far lower prices. This is one of the beneficial effects of the harmony reigning between the English and Italian houses. The price of "natural" wine has fallen off fearfully since 1884. At times it has been as high as 130 lire; last year it fell to 50 lire per butt of four hectolitres; this year it is fixed at 55 lire. The three managers meet and agree to what will be a fair price, and below that no one is able to go. If these big purchasers undersold or rather underbought each other, the poor vine-growers would be reduced to the pitiful state of the proprietors of the wine district of the Puglie, who, with some fifty millions of new wine in their vats, have to sell it at 20 and 30 lire per butt, and think themselves lucky if they find a market at that price.

These big *baglios*, with Giacone Anselmi and a few other smaller ones, have more or less the same system of making their wine. It is a far more difficult and delicate process than is generally imagined. That cleanliness is next to godliness is the rule of all, though in northern Italy the idea has taken root that fermentation removes all impurities, and that you may trust to the pouring must into a barrel to remove all foulness. All the cooperage is done in the establishments, the American white oak being now used exclusively. It is imported in staves, while the iron hoops are imported from Liverpool. The chestnut from the forests of the Apennines is the only Italian wood that can compete with it for tastelessness and durability.

Some of the grapes are grown on the estates of the three firms; many more purchased. The chief object of this is to obtain the first must, which, as soon as it is expressed from the grapes, is carried to immense copper cauldrons, well tinned, and there heated artificially till the must in three cauldrons is reduced to the capacity of one, and becomes a thick, clear syrup, sweet and bright. The Marsala as we know it is a composition of old wine, of which the *baglios* have each a separate store kept in enormous casks, never full to the brim lest the wine should lose its bouquet. Some of these wines are fifty-five years old, and as this is taken out for use the casks are replenished with wine never less than six years old. With the old wine is mixed the newer growths, and, according to the tastes of the various markets, more or less of the sweet liquor is added, more or less alcohol, which is entirely distilled from wine on the premises. In olden times much of the spirit was purchased from abroad, but since the imposition of enormous duties to the amount of three times the value of the spirit, the manufacturers find it safer and cheaper to distil their own. This also is heavily taxed, but not in so high a proportion. For the wine exported the tax is refunded, and here the English houses have the advantage, as most of their wines go abroad, whereas that of Florio, which is most popular in Italy, gets a drawback of only 20 or 30 per cent. on home-manufactured alcohol. The manufacture of Italian brandy is now begun by this enterprising Florio firm, so that pure brandy will soon be obtainable in Italy in place of the poisonous stuff now sold as French brandy. This will be made exclusively from wine distilled on the premises. It is not yet on sale, as the firm determined not to put any in the market under three years old, but it will doubtless oust French productions from the Italian markets.

The Ingham Whitaker firm is now composed of the three grandnephews of old Benjamin Ingham, and they may almost be considered Italians, as they reside in Palermo, where they have done much for the country of their adoption by setting on foot infant schools, and the *Educatorio Whitaker* for the training of Sicilian school-mistresses for infant and elementary schools. The present manager is Mr. Charles Forsyth Gray, British Vice-Consul, from whom I obtained a real insight into the system of manufacture. Perhaps one of the greatest arts of the trade is the faculty of tasting the wines at the various country vineyards. This once done by the manager in person, the firm sends its own casks to receive the wine, the firms often advance money to wine-growers in order to help them, and buyers and sellers are on most excellent terms. Apart from this Marsala manufacture, a new attempt is being made by small Italian firms to sell the natural wines of the year—the *vin di taglio*, as they are called. The French say that they no longer need Italian wine, but that they buy it under the rose is pretty well ascertained. A number of Swiss came over with the intention of setting up an establishment, but found it easier and cheaper to purchase from a firm which hitherto had dealt only in *vin di concio*. Lipari & Co. agreed to furnish pure Sicilian wine of the year at moderate prices, and they have already shipped thirty thousand hectolitres to Marseilles, whence it is *supposed* to pass to Switzerland. If this traffic increases, it will be of immense importance to the vine-growers who have abandoned, as was said, their old crops for this almost too exclusive culture of the vine. I am speaking now exclusively of Marsala, where these *baglios* form a distinctive feature in the landscape. All are huge edifices, situated on the sea with quays and wharfs in front; they are well secured by walls and gates, the outside walls loopholed, with towers at the corners well able to defend the enormous amount of wine in the magazines, valued in each at from $2,500,000 to $3,000,000. Until the last fifteen years the defence was sorely needed.

I have just had a last look at the Woodhouse stores to see the big round balls flung in by the Bourbons from their steamers *after* the landing of Garibaldi and his thousand from Piedmont and Lombardy on May 11, 1860, and am concluding my letter at the table where the two English captains were dining when the bombardment commenced. They, from the stone terrace running at the top of the buildings, signalled to the Bourbon commanders that they must cease their firing until they had gained their respective ships, the *Argos* and the *Intrepid!* Meanwhile, some old "wounded" and other comrades of various Garibaldian campaigns are preparing carriages for a thorough Garibaldian expedition, as, instead of taking the railroad, we are to go by highways and byways from Marsala to Salemi, from thence to Calatafimi, Alcemo, Partenico, passing through Monreale, to alight by the Admiral's bridge in Palermo.

To Marsala belongs the distinction of declaring the downfall of the Bourbon dynasty, and the proclamation of Garibaldi Dictator, while at Salemi was proclaimed the unity of Sicily with Italy under the constitutional government of Victor Emmanuel. J. W. M.

Correspondence.

PRACTICAL ILLUSTRATION.

To the Editor of The Nation:

Sir: If any of your readers want an object-lesson as to the meaning of the word "anarchy," they have only to turn their eyes to wards Washington. Taking the holidays into account, one month of the session has been consumed in making preparations to get ready to go to work. Not till after the New Year will the standing committees be even ready to receive business, which will then pour in upon them in a flood like the Atlantic Ocean, and with almost as little distinction of its component parts—"rari nantes in gurgite vasto." The simile will bear carrying out, except as to the word "rari" as applied to the participants.

The contest for the Speakership was not a question of the national parties of Republicans and Democrats. The Democrats had it all in their own hands, and they turned it into a faction fight among themselves. If I read the papers correctly, the man who won (and most significant it is) is not he who had the most of national reputation or might have been looked to to guard best the national interests, but the man to whom the private interests rallied most strongly. And how completely he is the slave of the private interests which elected him, to judge again by the comments of all the papers which are not wholly given up to party, is shown by the make-up of the standing committees. If one thing can be predicted with confidence of this Congress, it is that the country is about to receive a sharp lesson that it makes very little difference whether the majority in Congress is called Democratic or Republican, inasmuch as both alike are as wax in the hands of the lobby.

Whether the country, or any considerable part of it, will thereby be led to see that the real enemy to be encountered is the lobby, and that the conflict will require not only the whole strength of the popular will, but the organization of that will under national and official leaders, the first step towards which is to place on the floor of Congress national representatives in the shape of the officers of the Cabinet, is, of course, by no means so clear. G. B.

Boston, December 26, 1891.

PROF. MARSHALL'S DRAWINGS.

To the Editor of The Nation:

Sir: Allow me to thank you for the *Nation* of December 3, just received.

The paragraph in it relating to the art anatomy drawings belonging to my late husband, Prof. John Marshall, is, however, misleading, and I must ask you to have the kindness to correct it. It is inferred that I am obliged to part with these diagrams for pecuniary reasons, which is very far from being the case. They are really too valuable for instructive purposes to be allowed to lie idle, and this was the sole reason for my wishing to dispose of them.

If you will kindly insert this letter at your earliest convenience, you will much oblige

Yours truly, Ellen E. Marshall.

Belle Vue House, Cheyne Walk, London, S. W., December 14, 1891.

A TYPOGRAPHICAL ERROR IN 'CRANFORD.'

To the Editor of The Nation:

Sir: *De minimis lex non curat*—but the principle does not hold of the lovers of 'Cranford'; and who that knows it is not a lover of that delightful book? I opened the new edition of Messrs. Macmillan, so sympathetically and intelligently illustrated, and there (alas!) met my eye the old exasperating misprint, probably originally the emendation of some over-shrewd proof-reader. We all remember the *lion* with black currant eyes which witnessed to the sympathy and devotion of Martha, and we feel the gratification it was to her to see it appreciated when it reappeared "sliced and fried" the day after; but what sentimental interest is there in cold "loin" (page 264)?

Perhaps the good-natured publishers will revise their plates and give us this English classic without blemish.—I am yours, etc.,

A. B. N.

Harvard University, December 21, 1891.

BOBBIN AND LATCH-STRING.

To the Editor of The Nation:

Sir: I notice that in Perrault's original version of "Little Red Riding Hood" the grandmother says to the wolf, "Tire la chevillette, la bobinette cherra." This, I understand, means, "Pull the pin and the bobbin will fall." The English translation, "from the seventh edition," New York, 1797, reads, "Pull the bobbin and the latch will fly up." Of course two different modes of closing the door are indicated. In the first, there is a pin pushed or twirled, and the bobbin inside falls. What mechanism was this? In the second, evidently, a string is pulled from the outside, and the latch is lifted. I am desirous of knowing, since dictionaries avail not, the time when this form of latch went into use, and when the string was superseded by the lever-movement of a thumb-piece now in vogue. I am told that this string arrangement was in use during the present century, and a bobbin or bob or ball would naturally be tied

on the exterior end. Yet I seem to remember some reference to the custom of drawing in the string as a protection, and a button on the end would be inconvenient. On the other hand, surely the phrase of having the latch-string out is synonymous with hospitality.

I should like some information as to the use, *in print*, of the word "bobbin," as applied to the string or appendant to it, or of the phrases "to draw in the latch-string" and "to leave the latch-string out." In *Notes and Queries*, 3d S., iii., 46, a writer says that a young lady declared in his presence that she would never marry; but her grandmother replied: "It is no use holding the latch when nobody pulls at the string." This is a variation of the phrase, but clearly refers to the custom.

Yours respectfully, W. H. W.

Notes.

Ticknor & Co., Boston, invite subscriptions to 'The Norman Monuments of Palermo and Environs,' by Arne Delhi and G. H. Chamberlain, architects, in four parts, with fifty measured drawings, several cuts in the text, and many photographic views. The edition will be limited.

Thomas Hardy's new story, 'Tess of the D'Urbervilles,' which has been running in *Harper's Bazar*, will be published early next month by the Messrs. Harper.

'Abraham Lincoln' (Houghton, Mifflin & Co.) is Mr. Carl Schurz's striking *Atlantic* essay recast, and judiciously divested of the appearance of a review of Messrs. Hay and Nicolay's biography. As it now stands, it ranks, in matter and in style, among the very best short appreciations of the career and character of the great President. Within a little more than a hundred pages of open print, nearly everything essential is touched upon of historic incident or controversy in Lincoln's life, by one, too, who knew him and was an actor with him in the great drama of the civil war. Were there need to comment on this essay afresh, we should perhaps desiderate a brief list of Lincoln's abortive measures for avoiding the simple duty of emancipation, and we should object to the running justification of them along with his tardy progress to the inevitable step by reference to the necessity of his not outstripping the "plain people." This is really the excuse of a politician, not of a statesman, and how dangerous it is may be judged from our unhappy experience with greenbacks, silver, and pensions, and from the universal annals of demagogy. At the end of line 13, page 52, an intrusive *not* demands the attention of the publishers, who, we will remark in closing, would do a good service if they would also make a book, to be bracketed with Mr. Schurz's, of Horace Greeley's not less remarkable posthumous estimate of Lincoln in a late number of the *Century*.

Macmillan & Co. bring out Archibald Forbes's 'Barracks, Bivouacs, and Battles,' a reprint of a series of his most taking stories and experiences as a war correspondent which originally appeared in various English periodicals. His world-wide journeyings have taken him from the Himalayas to Zulu-land, and from the Balkans to the American Desert. Perfectly at home in camp-life of an English dragoon regiment or at the Czar's headquarters in Bulgaria, he gives real life to every incident and truest color to every experience. His imaginary tales have all the *verve* of the actual and the personal, and his veritable journeys are as exciting as any fiction. His chapters range from grave to gay, and abound in local instruction and information as to the most diverse lands and peoples.

Mr. Geo. Edward Mannering has given the form of a diary to his volume, 'With Axe and Rope in the New Zealand Alps' (Longmans), a very vivid account of five unsuccessful attempts to ascend Mt. Aorangi (ordinarily known as Mt. McCook), the highest point in New Zealand. The last attempt carried him very near the summit, but left just enough unaccomplished to whet the appetite of other explorers. No new light is shed by the author upon the general subject of glaciers, but the reader will receive from the perusal of the volume a new impression of their marvellous flexibility and power; while the illustrations (of which there are nineteen excellent full-page reproductions of photographs) are in themselves amply worth the price of the book.

Though not intimated in the book, 'A Summer in Alaska,' by Frederick Schwatka, published by John Y. Huber Company of Philadelphia, is a new issue of 'Along Alaska's Great River,' by F. Schwatka, published in 1885. Three new chapters are added, but the index is the old one, and does not contain any reference to the new matter. The date of the expedition, 1883, has been removed from the title-page and preface, and two maps left out.

P. Blakiston, Son & Co., Philadelphia, publish the seventh edition of 'The Microscope and its Revelations,' by the late Dr. Wm. B. Carpenter, F.R.S. The editor is the Rev. W. H. Dallinger, LL.D., recently President of the Royal Microscopical Society of London, well known for his important investigations of flagellate monads in connection with Dr. Drysdale. It would be impossible to find an Englishman better fitted to carry on the work of his deceased compatriot and friend. His delicate investigations called for the expert use of widest-angled lenses, aided by every resource which ingeniously devised accessory apparatus could lend. On every question of the construction of the microscope, whether of the stand, of the lenses, or of the accessories, he is an acknowledged authority. The first half of Carpenter's standard treatise has been rewritten, so as to include full exposition of the great improvements in the instrument which have marked the last twenty years, and a most interesting history of its earliest forms. In the second part, which gives the "Revelations of the Microscope," there was not room for so great change, though here too the additions by the editor are neither few nor small. The illustrations draw freely upon the resources of photo-micrography and are wonderfully abundant and excellent. The book is more than ever a standard, unrivalled in its kind, and is a necessity to every one who pretends to any scientific use of the microscope. It has grown to a stout octavo of over a thousand pages.

Some three years ago we commended warmly to our readers an article by H. Zimmer in the *Preussische Jahrbücher* for January, 1887, on the part played by Irish monks in early mediæval culture, and expressed the wish that it might be translated. Our wish has been gratified. We have before us 'The Irish Element in Mediæval Culture,' translated from Zimmer by Jane Loring Edmands (Putnams). This dainty little volume of 140 pages we commend no less warmly than we did the German original. In some features it is an improvement on the original. Mrs. Edmands has supplied an index, which will greatly facilitate ready reference; also, some additional notes, one or two of which are of considerable length, and illustrate Zimmer's position happily. So far as we have had occasion to compare original and translation, we have found the rendering at once faithful and easy. We congratulate Mrs. Edmands on her good work. We also hope that our non-German readers will avail themselves of the opportunity. The story of Irish missionary labors here told has the charm of romance.

We have been remiss in not mentioning sooner the 'Bibliographical Catalogue of Macmillan & Co.'s Publications from 1843 to 1889,' prepared for this eminent firm by their assistant, Mr. James Foster. It forms an octavo volume of 714 pages, and, in a chronological arrangement, displays the extraordinary product of this one firm with the most scrupulous detail as to title, edition, reprint, etc. An author-index provides a key to the treasure-house. We are not aware that another such bibliography exists; we are quite sure that the general level of the publications here recorded would with difficulty be matched by any publishing house in any part of the world. The 'Catalogue' has been as carefully and beautifully manufactured as any work on the list, and contains two portrait of Daniel and Alexander Macmillan.

The first volume of a supplement to Bartsch's 'Peintre-Graveur' has just appeared (Berlin: Albert Cohn; New York: Christern). It is by W. L. Schreiber, and is entitled 'Manuel de l'amateur de la Gravure sur bois et sur métal au xv. siècle.' No attention is paid to playing-cards or to book illustrations, but the author has found ten years none too long a time for his task. What is to come is a list of block-books and an historical essay on the origin and progress of relief engraving, completing five volumes, with a sixth of reproductions, at 15 francs per volume.

Although the Americans are now a good second to the French, there is still no city where the "posters," the pictorial advertisements displayed on the walls, are as artistic or as brilliant as they are in Paris; and this is chiefly because the chief Parisian designer of these lithographed placards is M. Jules Cheret, an artist of indisputable originality, taste, and *verve*. Several years ago M. Maindron published a book about pictorial posters, and since then the number has increased of those who collect these most perishable of all artistic productions. Where there are collectors, dealers to supply them are rarely wanting. The chief dealer in "posters" is M. Ed. Sagot, 18 Rue Guénégaud, Paris, who has just published a priced catalogue of 'Affiches Illustrées,' which is also annotated and illustrated with fifteen inserted illustrations by M. Cheret, by "Willette," and by M. Grasset. Subscribers to the catalogue receive also a superb two-sheet poster by M. Cheret, one of his most effective compositions. To M. Cheret is due also the cover of M. Sagot's catalogue, as *chic* a composition as the most ultra-Parisian could wish for.

'Ares Isländerbuch,' edited by Wolfgang Golter (Halle: Niemeyer), is the first number of the "Altnordische Saga-Bibliothek" which is to appear under the joint editorship of Gustaf Cederschiöld of Lund, Hugo Gering of Kiel, and Eugen Mogk of Leipzig. In an introduction of twenty-eight pages Dr. Golter gives an account of Are's life and works, his literary character and significance, and all available information concerning the manuscripts and editions of the 'Íslendingabóc.' This is followed by the Icelandic text, with critical and historical footnotes, and remarks on its transmission, extracts referring to Are from the 'Heimskringla,' frag-

ments from the older 'Íslendingabóc,' supplements to the manuscript from various sources, and a chronological table of the history of Iceland from its discovery by the Vikings in 860 till Are's death in 1148. There is also a list of the *lögsögomenn*, with their terms of office, from 930 to 1138, and a complete index of proper, geographical, and genealogical names. This library is to contain historical sagas, mythical sagas, and romantic sagas, such as the Mágus saga and the Parzevals saga, which are especially important for the comparative history of literature. An admirable beginning has been made with the 'Íslendingabóc,' which ranks high as an early specimen of historical composition, and is really remarkable for a period when such records consisted almost exclusively of dreary monkish chronicles.

Natura ed Arte is the title of a new fortnightly review just launched at Milan by Francesco Villardi, the editorship being at Rome.

The *Scottish Geographical Magazine* for December contains a suggestive paper on Acclimatization by Dr. R. W. Felkin, in which the conclusion is reached that it is possible for any European race to become acclimatized in any tropical region. This cannot be done at once, however; but the same procedure must be adopted which has proved successful with animals and plants, of transporting picked adults to certain intermediate stations. In this way northern Europeans might, step by step, generation by generation, become acclimatized in 100 years in tropical India or Africa. There follows an interesting account of the Machinga, one of the tribes inhabiting the Shiré Highlands in British Central Africa, by Mr. R. S. Hynde, a resident Scotch missionary. The system under which they live he describes as a transition stage between the matriarchal and the patriarchal. "Each person belongs to a clan and is not allowed to marry into his own clan." The children belong to the mother's clan, and a man's property and position descend not to his own son, but to the son of his eldest sister. A man when he marries settles in his wife's village, so that daughters, not sons, are a source of strength. Their language, which has some affinities with the Swahili or coast language, has been reduced to writing, and a grammar and vocabulary have been published, together with translations of portions of the New Testament and several school-books containing many of their folk-lore stories.

Lord Lamington's account of his adventurous journey through the northern Shan States to Tong-king is the only paper in the December Proceedings of the Royal Geographical Society. In much of the country traversed, the sparse population is apparently decreasing through the prevalence of dacoity, and a vast and almost impenetrable jungle is fast encroaching upon the once cultivated valleys. The most noteworthy result of the journey, however, was the evidence obtained of the advance of the French towards the Burmese frontier. Their posts were found even in territory long claimed by Siam, but are evidently difficult to maintain against the dacoits, or "pirates," as the French term them. Whether these "pirates" are really robbers, or simply patriots striving to throw off a hated foreign yoke, Lord Lamington diplomatically declines to say.

In the November number of the *Green Bag*, the Supreme Court of New Jersey being under consideration historically, it is stated that "every chief justice since the Revolution, with one exception (the present incumbent), has been a Presbyterian. The very great majority of the associate justices have also been Presbyterians, and many of them elders in their churches. Nearly all who were educated at colleges, graduated at Princeton."

L. Prang & Co. send us a 'Mother Goose Calendar,' with a background gracefully composed by Miss Laura C. Hills. But they ought not to ask, as they do in an accompanying "Art Note," "How many children know that Mother Goose was a real American grandmother, one Mrs. Goose, who lived at Boston at the beginning of the eighteenth century?" Nor to add the equally exploded fiction that "her son-in-law, who was a printer, collected her ballads in a book and sold it for two coppers."

The next meeting of the American Economic Association will be held at Chautauqua, probably on August 23-26.

The sixth International Art Exhibition will be held at Munich, Bavaria, in 1892, opening on the 1st of June and closing on the 31st of October. Works of art intended for exhibition must be announced on or before the middle of March, and sent in between the 1st and 15th of April. Applications must be made to the central committee of the Künstlergenossenschaft, Briennerstrasse, Munich, Bavaria, from whom all further information can be obtained. This exhibition occurs quadrennially, and should not be confounded with the recently organized annual exhibition, or so-called "Salon," to which it is vastly superior both in arrangement and in importance. We may add that the second annual exhibition, which closed on October 25, realized about 600,000 marks ($150,000) on the sale of works of art, and may, therefore, be regarded as fairly successful from a financial point of view.

—The ghost story has, for reasons lost in the night of time, been a standard and classic accompaniment of the celebration of the merry Christmas season by our race. The tendency of all editorial, "reportorial," "authorial" (as Mr. Wanamaker would say), and, as we may add, "publisherial," enterprises to-day is towards a certain enormousness. And Mr. Stead, as editor of his peculiarly enormous *Review of Reviews*, has fairly outdone himself in the character of his extra Christmas number. "Real Ghost Stories" is its title; and the number of apparitions which figure in the hundred pages of which it consists is something without a precedent. Not Gothic ghosts, either, half visible in the shadow of "haunted chambers"; no sheeted forms, no clanking chains, no accompaniment of terror-stricken dogs, no suggestion of unexpiated crimes and souls in torture, are here. The procession of supernatural visitants moves, on the contrary, at a rattling pace, in a bright, brisk, modern light, subdivided by head-lines, and escorted by corroborative documents and facsimiles of photographs of the seers, of the persons whose ghosts appeared, of the localities affected, and the like. The atmosphere of the daily newspaper, in short, is substituted for that of the feudal castle. It is always a lively day for a subject when Mr. Stead takes it in hand—*something* has got to happen. These ghosts are a case in point. Not content with drawing on the published literature, he has made himself a sort of Society for Psychical Research on his own account, and a very large proportion of the cases he presents are those of his own collecting. They make, on the whole, a striking array—all the more so for the portraits. Portraits are a great feature in Mr. Stead's intensely personal way of handling questions. It should be said to his credit that he usually takes pains to get good ones to copy. Prof. Sidgwick's, in this number, is very good, but Edmund Gurney's, by an exception, is from an abominable drawing, not from a photograph. Mr. Stead gives us, among others, striking pictures of the famous Léonie, M. Janet's somnambulist, in both her trance and waking states. This number of the *Review of Reviews* is well calculated to shake the settled incredulity of many about apparitions, and it will increase that willingness to reëxamine the evidence for "the supernatural" which is beginning to be so marked a feature in all countries to-day. The pamphlet is particularly strong in stories of the appearance of the "double"—a "superstition" which the theosophists have taken under their special protection, and for which, sooth to say, the evidence offered appears on the face of it to be far from contemptible.

—The latest volume in the series of *classiques populaires* published by Lecène & Oudin, is Édouard Rod's account of Dante. M. Rod has lectured at Geneva on modern Italian literature, and, like the late Edmond Scherer, has won his laurels as a trained scholar and critic in several modern literatures, but this is one of his first excursions into regions where he competes with the philologian and the historical specialist. The result is in the main satisfactory. In two hundred pages he tells us what is known about Dante's life, and summarizes briefly his minor works and the 'Divine Comedy,' without important error or omission, without entering into the discussion of mooted questions, and with a clear idea of what the general reader wants most to know. Indeed, the only rival of M. Rod's little book, from this point of view, is Mr. Symonds's 'Dante,' and even here, in spite of Mr. Symonds's larger knowledge, M. Rod's simplicity and self-control in the carrying of his plan often turn the balance in his favor. Dante may have been a mystic, he seems to say, but let us not write of him mystically. But neither Rod's sketch nor Symonds's is final, any more than Scartazzini's or Gaspary's. The modern man of letters, with all his trained skill of hand and suppleness of mind, must fail in the attempt, involving enormous powers both of sympathy and of application, to reproduce in miniature Dante and the century of which he was bone and flesh, and apart from which he is inconceivable. The specialists—Scartazzini, for instance—are too often devoid of general knowledge and of sympathy. They annotate authoritatively, but they cannot be brought to feel what from their stores of knowledge the student of general literature needs to know. Between the two stools the ordinary reader must still fall. Homer he may learn to understand, and Virgil and Shakspere, but not Dante. The road to him—in French, German, English, or even Italian—is still anything but a royal highway. In make-up M. Rod's essay is deficient, for it lacks an index, or even a detailed table of contents.

—The new edition of 'Lessing's Werke,' in twelve volumes, prepared by Prof. Franz Muncker of the University of Munich, and published by Goeschen (Stuttgart), is a model of elegance and a marvel of cheapness. It is printed on good paper with ample margins and large clean-cut type, and costs unbound only eighteen marks, or about thirty-seven cents a volume. It contains all of Lessing's writings that are of any interest or value to scholars of to-day. The text has been thoroughly revised

and corrected by a collation of the best manuscripts and original imprints, and will satisfy in this respect the demands of the severest criticism. In a biographical sketch of some thirty pages Prof. Muncker gives an admirable survey of Lessing's life, with a fair estimate of his character and influence, and assigns him his proper and doubtless permanent place in German literature. His treatment of the subject shows excellent taste and fine discernment, and never lets appreciation, however earnest and ardent, degenerate into fulsome and undiscriminating panegyric. Equally concise and commendable are the introductions by Karl Goedeke, which precede each volume or section of the work, and in which Lessing's point of view in relation to the several topics is clearly stated. These brief discussions of Lessing's attitude to literature, art, theology, poetry, and criticism serve to orient the reader and help him to a fuller understanding of what follows. Lessing, as Lowell has well said, "is no exclusive property of Germany," but "an ennobling possession of mankind," and "every year since he was laid prematurely in the earth has seen his power for good increase, and made him more precious to the hearts and intellects of men." The first volume has a well-executed portrait.

—We have had frequent occasion of late years to chronicle the labors of G. H. Balg in promoting the study of Gothic in this country. First came his translation of Braune's Grammar; next, his Glossary, begun in 1887 and finished in 1889; and now we are presented with Wulfila's Bible and the other remains of the language. The work may be procured of the author, Milwaukee, Wis., or of B. Westermann & Co., New York. It contains the Gothic texts entire, a glossary of 174 pages, and 72 pages of syntax. The present glossary is an abridgment of the previous one, but although smaller and therefore less rich in citations, it is much superior in certain features. The author has not only rectified his slips in the larger work, but he has given to it a more practical arrangement. The words, including the compound verbs, are in strict alphabetical order. The student will not have to hunt for each compound under its simplex. At the same time we think that the editor would have done well to append to each simplex a list of its compounds. This would not have cost him much space nor much effort. The Syntax is by far the best treatment of this subject that we possess. Our only general criticism of it would be that it fails to separate what is genuine Germanic syntax from what may be mere slavish following of the Greek. But perhaps the time has not yet come for the final separation. Evidently the author's chief concern has been to give the student the *facts* of the syntax with great fulness and precision. The interesting nominative absolute introduced in § 121 should have been mentioned also in § 13.

—Balg's text is based, of course, upon Bernhardt's, differing only for good reasons. Occasionally we miss a needed explanation. For instance, what are the mysterious marginal lg=33, ld=34, etc., beginning with Matt. v., 17? We conjecture that they designate the Ammonian sections mentioned by Bernhardt, p. xli. In at least one instance the editor's language is misleading. The note to John ix., 7, reads: "Swumfsl; swumsl *in C A for original* swumslf." The "original" might suggest to the student that "swumslf" was the primitive and etymological form of the word, which is, of course, impossible. Bernhardt's language on the point is not much happier, but it suggests at least a correcter meaning, viz., that the scribe wrote blunderingly "swumslf" and corrected to "swumsl." At any rate neither Bernhardt nor Balg is justified in "restoring" the *f*. Whether the student, at any stage of his study, can dispense altogether with the Greek-Itala text, is a moot point. We admit the force of the editor's personal justification (p. vi. of his preface). Yet we also believe that a practical compromise would have been possible—that is, the editor might have cited the Greek-Itala, either in foot-notes or in his glossary, in passages of more than ordinary difficulty. Those who know anything of the editor's private circumstances will read between the lines of his preface with a feeling of shame. It is not to the credit of our so-called higher learning that any one evincing such steadfastness of aim and generous self-devotion should be suffered to linger in unrewarded and chilling obscurity. A suitable position and adequate facilities in some one of our leading universities ought to be his portion. His plea for a more extensive knowledge of Gothic in this country has been anticipated in at least one institution, where Gothic is insisted on as a prerequisite to the study of English.

FROUDE'S 'DIVORCE OF CATHERINE OF ARAGON.'

The Divorce of Catherine of Aragon: the Story as told by the Imperial Ambassadors resident at the Court of Henry VIII. By J. A. Froude (being a supplementary volume to the author's 'History of England.') Charles Scribner's Sons. 1891.

ONCE more Mr. Froude calls upon us, in the fascinating language of which he is a master, to thread with him the labyrinth of intrigue connected with the divorce of Catherine of Aragon. The intrigue is of the very meanest, dirtiest, and in some parts of the obscurest kind, important only in its results, about which there can be no question. The investigation, therefore, which Mr. Froude invites us to renew, though it may have its attractions for lovers of historical scandal, promises little profit otherwise than as it may afford illustrations of character for the period, about the vilest in history (so far, at least, as courts and cabinets were concerned), which intervened between the fall of the Catholic morality and the rise of the Protestant morality in its place.

The divorce of Catherine of Aragon this episode is always called. But it should be remembered that what Henry sought, and the Pope refused, was not a divorce in the present sense of the term, but a declaration that the marriage of Henry with his brother's widow had been *ab initio* null and void. Supposing the marriage to have been good, the Pope had not, nor did anybody imagine that he had, power to dissolve it. Marriage in the Roman Church is a sacrament. The Pope could no more unmarry than he could unbaptize. It was not by open divorce, but by releasing parties from their marriages on the ground of alleged precontracts or fanciful affinities, that the Papacy, in its age of corruption, had practically introduced, for the classes wealthy enough to have recourse to its tribunals, a state of license. From the language held in Mr. Froude's History (vol i., p. 121), it appears that, strange as it may seem, he is under a complete misconception on this point, and imagines that the Pope was invested with a power of dissolving marriages which he was morally bound to exercise in cases where it was required by the supreme interest of nations, and which he ought to have exercised in the case of England, where, Catherine having ceased to bear children, there was no hope of a direct male heir to the Crown.

We cannot see that Mr. Froude supplies us with any fresh clue to the maze. Most of the new matter is derived from the despatches of Eustace Chapuys, the Imperialist Ambassador at the English Court. Chapuys being an Imperialist, and therefore an adverse witness, has been always discredited by Mr. Froude, who in his History set his evidence aside as that of "a bitter Catholic," and now quotes as decisive some words of Paget to the effect that the Ambassador is wanting in genuine wisdom, a vain babbler, and regardless of honesty and truth. That an envoy chosen by Charles V. for an important and difficult mission should not be strictly upright or veracious is likely enough; but it seems not so likely that he should be wanting in sagacity or reticence, nor is it probable that he lied to his master. We have pleasure in introducing to Mr. Froude's notice the recent work of Mr. Paul Friedmann on Anne Boleyn. Mr. Friedmann is not endowed with any particular grace of literary style; but he appears to us to possess habits of conscientious inquiry, to make an honest use of his authorities, and to be under the control of common sense and justice. We commend his volumes to those who may have uncritically accepted the portrait of Henry and the version of the history given by Mr. Froude. Mr. Friedmann challenges Mr. Froude's estimate of Chapuys, asserting that Mr. Froude advances no evidence for his assertions, that he makes Chapuys say of Henry VIII. the opposite of what he really says, that Chapuys may sometimes be wrong in his moral views, and may be given to repeating scandal, but that his statements of fact are always made on good authority. Mr. Friedmann also says that Mr. Froude's extracts are full of mistakes.

Henry wanted a male heir, and he wanted to marry Anne Boleyn, who would not, like the mother of the Duke of Richmond and perhaps other ladies, consent to become his mistress. Which of those motives first had birth in his mind, and which was the stronger of the two, it is alike needless and hopeless to inquire, though it would seem that at an early date Henry had conceived an interest in Anne which led to the interposition of his veto on her marriage with another. That of which we are as sure as we can be of anything relating to the internal springs of action, is that in this case scruples of conscience had little force. How came conscience, after its long silence, to speak so loud at the moment when the hope of a male heir had been abandoned and the connection with Anne Boleyn had begun? Was it conscience or the impatience of lust that commanded the King, before the marriage with Catherine had been dissolved, to outrage public decency by installing Anne in his palace and treating her as his affianced wife? Was it conscience which led him to use bribery and coercion in wringing from the universities of England and Europe opinions in favor of the divorce? It was at the time of the opening of the Legatine Court in England, when he was manifestly plying every engine to get rid of his hated wife, that he solemnly declared to the people, in his speech at Bridewell, that he loved Catherine with all his heart, and desired nothing better than to keep her as his consort, if only his conscience would permit him. Mr. Froude's attention has at last been called to

the letters of Henry to Anne Boleyn, preserved in Hearne, but he still blinks the fact that in them, with a report of the King's conscientious studies in casuistical divinity, is mingled the coarsest language of sensual love.

There is one piece of evidence which is not new, but which Mr. Froude feels for the first time constrained, probably because it has been pressed by Mr. Brewer, to look in the face. In contemplation of the marriage of the King with Anne Boleyn, a draft dispensation was prepared in England and transmitted to Rome for adoption by the Pope. In it are these words:

"In order to take away all occasion from evil-doers, we do in the plenitude of our power hereby suspend *hâc vice* all canons forbidding marriage in the fourth degree; also all canons *de impedimento publicæ honestatis* preventing marriage in consequence of clandestine espousals; further, all canons relating to precontracts clandestinely made but not consummated; also, all canons affecting impediments created by affinity rising *ex illicito coitu* in any degree, even in the first, so far as the marriage to be contracted by you, the petitioner, can be objected to or in any wise be impugned by the same. Further, to avoid canonical objections on the side of the woman by reason of former contract clandestinely made, or impediment of public honesty or justice arising from such clandestine contract, or of an affinity contracted in any degree, even the first, *ex illicito coitu;* and in the event that it has proceeded beyond the second or third degrees of consanguinity, whereby otherwise you, the petitioner, would not be allowed by the canons to contract marriage, we hereby license you to take such woman for wife, and suffer you and the woman to marry free from all ecclesiastical objections and censures."

To unprejudiced eyes the meaning of these words, read in the light of current belief, seems pretty plain. "Clandestine espousals" and "precontract" refer to the passages between Anne Boleyn and Lord Percy before Anne's connection with the King. The "affinity contracted in any degree, even the first, *ex illicito coitu*," is that created between the King and Anne by the King's illicit connection with Anne's sister, Mary Boleyn. That the words were so construed at the time is clear from the letter of Dr. Ortiz from Rome to the Emperor cited by Mr. Paul Friedmann (vol. i., p. 65, note). Mr. Froude confidently proposes to treat the clause as mere "legal verbiage"—as the lawyers would say, common form. Let him produce another instrument of dispensation in which the same legal verbiage occurs. Is it credible, he asks, that the framers of the dispensation should have been foolish enough to introduce such a scandal into a public document? The answer is that they were driven to it by necessity, and that if, knowing the scandal to be abroad, they had introduced into a public document words so suggestive without necessity, they would have been fools indeed. "The accusation," Mr. Froude says, "was heard of only in the conversation of disaffected priests or secret visitors to the Spanish Ambassador." This is his usual mode of dealing with unfavorable evidence. It appears plainly from a passage in his present volume, page 234, as well as from other sources, that the charge was common talk. If Pole mentioned it in the second edition of his manifesto, and not in the first, that does not necessarily prove anything more than that between the two editions he had satisfied himself of the fact, as he might if he became acquainted with the clause in the draft dispensation. Supposing the obvious construction of the words to be the true one, the worshippers of Henry VIII. are certainly in a pitiable dilemma, for, as he must have been cognizant of the contents of the draft, its language would amount to an actual confession on his part. There would then be an end of his character and of his cause unless Mr. Froude should find it possible to maintain that incest, combined with the most revolting hypocrisy as well as judicial murder, was one of the "piteous necessities" of a beneficent revolution.

The construction of the dispensation which commends itself to ordinary minds seems to derive strong confirmation from a clause in the Act 28, Hen. VIII., c. 7, regulating the succession to the crown after the divorce and execution of Anne Boleyn. The condemnation of Anne for adultery and treason, though it sent her to the block, did not, it will be observed, serve to bastardize her daughter. To effect that object of high-minded statesmanship, it was necessary that her marriage with the King should be pronounced void. This was done by Cranmer in a secret sitting for a cause communicated to him by Anne, but never divulged. It may be taken as certain that the veil of secrecy covered something revolting. Now, in the Act of Succession, among the clauses relating to the specific matter of the Act, is curiously inserted one general in form on the subject of prohibited marriages. This clause enumerates the regular prohibitions on account of consanguinity or affinity, ending with that of a wife's sister. It then proceeds thus: "And further to dilate and declare the meaning of these prohibitions, it is to be understood that if it chance any man to know carnally any woman, then all and singular persons being in any degree of consanguinity or affinity (as above written) to any of the parties so carnally offending shall be deemed and adjudged to be within the case and limits of the said prohibitions of marriage." This "dilation," it will be seen, exactly covers the case which would be created by the illicit connection of the King with one sister and his subsequent marriage with the other. If it was not with a view to this case and in order to invalidate the King's marriage with Anne, thus bastardizing her daughter, that the clause was inserted into the Act of Succession, what was the object of its insertion? An abyss of infamy would thus be disclosed, but this will not be very startling to any one acquainted with the ethics and habits of those days. Mr. Froude himself, who finds it impossible to believe that Henry VIII. can have had connection with two sisters, has no difficulty in believing that Anne Boleyn not only committed incest with her brother, Lord Rochfoyd, but herself, as the indictment states, solicited him to the crime.

Of the question of right between Henry and Catherine, Mr. Froude thinks that he can dispose satisfactorily in the following manner:

"The case itself was peculiar, and opinions differed on the rights and wrongs of it. The reader must be from time to time reminded that, as the law of England has stood ever since, a marriage with a brother's widow was not a marriage. As the law of the Church then stood, it was not a marriage unless permitted by the Pope; and according to the same law of England, the Pope neither has nor ever had any authority to dispense with the law. Therefore Henry, on the abstract contention, was in the right."

Henry had taken Catherine as his wife under the ecclesiastical law of Latin Christendom, the nations of which then formed a federation for ecclesiastical purposes, and of that law the supreme tribunal, acknowledged by all, was the Roman Court. How could the subsequent marriage law of Protestant England retrospectively affect the law under which the marriage had been contracted, or the rights of either party to the marriage? To say that the Pope never had in Catholic England any dispensing authority in ecclesiastical cases would be sheer effrontery. Justice in the Roman Court was subject to perversion by political influence, it is true; not a whit less, but still more subject to perversion by political influence was the justice of the Court substituted by Henry for that of Rome. Cranmer was a mere creature of the King and Cromwell, appointed by them, not to hear the case fairly, but simply to deliver the judgment put by them into his mouth. Had he hesitated for a moment, they would have turned him out of his Archbishopric. He was at their mercy, for, as they knew, he had contracted a clandestine marriage which was still uncanonical and a sufficient ground of deprivation. His predecessor, Archbishop Warham, seems to have been compelled to ignominious compliances by fear of a similar skeleton in his closet, the existence of which was probably known to Wolsey. Mr. Froude appeals to our sense of the beauty of the Anglican liturgy, of which Cranmer was the compiler. Suppose he was; does that prove his independence as a judge?

To supply anything that may be wanting in the cogency of his argument, Mr. Froude has the resources of an effective rhetoric:

"The naked truth—and nakedness is not always indecent—was something of this kind. A marriage with a brother's wife was forbidden by the universal law of Christendom. Kings, dukes, and other great men who disposed as they pleased of the hands of their sons and daughters, found it often desirable, for political or domestic reasons, to form connections which the law prohibited, and therefore they maintained an Italian conjurer who professed to be able for a consideration to turn wrong into right. To marriages so arranged it was absurd to attach the same obligations as belonged to unions legitimately contracted. If, as often happened, such marriages turned out ill, the same conjurer who could make could unmake. This function, also, he was repeatedly called on to exercise, and, for a consideration also, he was usually compliant. The King of England had been married as a boy to Catherine of Aragon, carrying out an arrangement between their respective fathers. The marriage had failed in the most important object for which royal marriages are formed: there was no male heir to the Crown, nor any prospect of one. Henry, therefore, as any other prince in Europe would have done, applied to the Italian for assistance. The conjurer was willing, confessing that the case was one where his abilities might properly be employed. But another of his supporters interfered and forced him to refuse. The King of England had always paid his share for the conjurer's maintenance. He was violently deprived of a concession which it was admitted that he had a right to claim. But for the conjurer's pretensions to make the unlawful lawful, he would not have been in the situation in which he found himself. What could be more natural than that, finding himself thus treated, he should begin to doubt whether the conjurer, after all, had the power of making wrong into right? Whether the marriage had not been wrong from the beginning? And, when the magical artist began to curse, as his habit was when doubts were thrown on his being the Vicar of the Almighty, what could be more natural also than to throw him and his tackle out of the window?"

Such passages will tell with nine out of ten of Mr. Froude's readers. The tenth will ask whether one who can launch into such declamation and tender such a description of the Catholic organization of Europe, is really writing history.

About the only redeeming feature in this scene of knavery, hypocrisy, and lying is the constancy of the injured wife and of her not less injured daughter under the persecutions to which they were exposed by the brutality of Henry and the spitefulness of Anne. Harassed

and insulted to drive her into ignoble compliances, Mary nobly replied that "God had not so blinded her that she should confess that her father had been an adulterer and her mother an adulteress."

Did Catherine of Aragon die a natural death or was she made away with? Her friends and the Imperial Ambassador suspected poison. That suspicion was, as we know, rife in those days, and is therefore always to be received with mistrust; but if the false report was common, so was the reality, and it is probable that Italian ingenuity had improved toxicology in advance of other science. The slow poisons of the Borgian era are no doubt mythical, but the practice seems to have been to administer poison in slow doses, so as to undermine the health of the victim, while analysis was unknown. Catherine's death was opportune; her friends were debarred from inspection of the corpse. Mr. Friedmann is disposed to think that there was foul play; but the verdict to which we incline, after reading the evidence set forth by him, is, Not proven.

In his account of Henry's behavior on the death of his injured wife, Mr. Froude now departs considerably from the account given in his History. In the History we are told "that when the news reached Henry he was much affected, and is said to have shed tears," and that "the Court was ordered into mourning—a command which Anne Boleyn only had the bad taste to disobey." It has now to be admitted that the King, on the arrival of the news, expressed relief; that, on the Sunday following, Elizabeth was carried to church with special ceremony; and that in the evening there was a dance at the palace, in the middle of which the King appeared with the child in his arms. The authority is Chapuys, who is accused of "bitterness," but whose statements as to the facts are not denied. They assume a still stronger character in the version of Mr. Paul Friedmann. The King, according to Mr. Friedmann, instead of ordering the court into mourning, appeared in his gayest attire.

Henry's passions caused a rupture with the Pope which ended in the liberation of England from the Papacy. In no other sense is he entitled to the credit of the Reformation. Nor is there the slightest reason for believing that if the Pope would have gratified his lawless wish, he would ever have countenanced reform. It must strike every one as singular that Mr. Froude, commencing his History in the middle of Henry's reign, did not give by way of preface some account of the earlier part of it. But he thus escapes the necessity of distinctly recording that Henry had come forward in theological controversy as the antagonist of Luther, and that when Sir Thomas More endeavored to warn him against the possible consequences of extreme exaltation of the Pope, he rejected the warning, saying, "He was so much bound to the See of Rome that he could not do too much honor to it," and that he would "set forth its authority to the uttermost, for he had received from that See his Crown Imperial." His favorite, Wolsey, was an example of the worst ecclesiastical abuses, holding as sinecures three bishoprics and a great abbey. A voluptuary, incontinent, and a gambler, Henry was not likely from his own spiritual impulses to become a leader of religious reform. Nor did he voluntarily promote the cause of religious liberty or do more than substitute one intolerant and persecuting despotism for another. He showed courage in defying the Papal thunders; no other credit can he fairly claim. The Reformation is in no way bound up with his cause or responsible for any of his crimes; nor can his acts when criminal derive any excuse or palliation from that source.

SIDGWICK'S ELEMENTS OF POLITICS.

The Elements of Politics. By Henry Sidgwick. Macmillan & Co. 1891.

To expound the chief general considerations that enter into the rational discussion of political questions in modern States, is the task to which Prof. Sidgwick has addressed himself in this volume. In most modern States, it is to be feared, the term "rational" must be somewhat broadly used to comprehend a large and interesting part of current political discussion; and it may be seriously contended that any view of political movements that disregards the irrational element is incomplete. The principles according to which the choice of a Governor for New York is made to depend upon the location, already chosen, of the World's Fair, or those which make a kindly feeling towards one of the precious metals a necessary qualification for the office of President of the United States, would seem to be only remotely rational in character, and yet the importance of the results in these cases cannot be denied. Still, it would obviously require much space to determine the laws of emotional politics, and as Prof. Sidgwick disclaims completeness for practical purposes in his treatment, we cannot complain that it is what he meant it to be. As he considers that the theory of politics has as its primary aim to determine what the constitution and action of government ought to be, its method can be only remotely historical. It is rather, in the main, deductive, based upon the general characteristics of civilized man and his surroundings. Politics, therefore, rests upon psychology: "The fundamental assumptions in our political reasonings consist of certain propositions as to human motives and tendencies, which are derived primarily from the ordinary experience of civilized life, though they find adequate confirmation in the facts of the current and recent history of our own and other civilized countries."

As instances of such assumptions, Prof. Sidgwick cites Bentham's maxim that, "*cæteris paribus*, each portion of wealth has corresponding to it a certain chance of happiness," and Mill's proposition, that "each person is the only safe guardian of his own rights and interests." It is unnecessary to say to those familiar with the other works of this author that he fully recognizes and allows for the limitations of these general statements, declaring, indeed, that our knowledge of a general truth relating to human action develops with our knowledge of its limitations and exceptions. Still, these propositions constitute the basis of his theory, as would be expected from his ethical and economic positions. After defining the concepts Government, Law, Right, and Obligation—a process which involves some incisive criticism of Austin's doctrines—he proceeds to lay down the principles upon which laws ought to be made and administered. Every one is agreed that the criterion is conduciveness to the general good, or welfare, and, in accordance with the results which are generally admitted to be pretty securely established by the 'Methods of Ethics,' this good is really the happiness of the individual human beings composing the community—including those that are to live as well as those living. For it may be the duty of one generation to sacrifice itself for that which follows, and even for the members of one political society to give up their own happiness for that of other parts of the race. Against utilitarianism so broad as this hardly any one can protest, especially as it is unavoidable that intuitional moralists should exclude States from the scope of their theory.

Dismissing the paternal theory of government as now occupying only a subordinate place, Prof. Sidgwick adopts the principle of individualism, that "what one sane adult is legally compelled to render to others should be merely the negative service of non-interference, except so far as he has voluntarily undertaken to render positive services; provided that we include in the notion of non-interference the obligation of remedying or compensating for mischief intentionally or carelessly caused by his acts, or preventing mischief that would otherwise result from some previous act." The principle of Socialism, on the other hand, involves the requirement that one sane adult, apart from contract or claim to reparation, shall be compelled to contribute positively by money or services to the support of others. It is to be understood that, as a moral ideal, what may be called ethical as distinguished from political Socialism is accepted by Prof. Sidgwick, for he considers it the duty of men to render the services which they render to others with a genuine regard to the interests of others; but for Government to make this duty compulsory is a different matter.

The analysis of the assumptions of individualism is a valuable contribution to the subject. It is pointed out that there is not only a psychological assumption—that men are likely to provide for their own welfare better than Government; but also a sociological assumption—that the common welfare is likely to be best promoted by individuals promoting their private interest intelligently. The chief qualifications that need to be made of these assumptions are that the appropriation of land by individuals may be indefinitely restricted by the community. The landless members of a community may have a claim to compensation for the opportunities of applying labor to land from which they are excluded by its appropriation. The scope of the work does not admit of practical suggestions for determining this compensation, but it is hardly necessary to say that the confiscation of vested rights is not regarded as an admissible expedient. Other qualifications arise from the necessity of providing for infants and incompetent persons; and the welfare of children requires extensive regulation of the relations of the sexes. Moreover, experience has shown that so far as certain wants are concerned, as those of a currency, a postal service, and roads, it is at least more convenient that Government should supply them. In principle these interferences of Government are Socialistic, though this term is now coming to imply generally a design of altering the distribution of wealth by benefiting the poor at the expense of the rich. But Prof. Sidgwick gives abundant reasons for believing that the realization of this ideal would arrest industrial progress, and that the comparative equality of incomes would be an equality in poverty, although he admits the evils of inequality and recognizes the attractiveness of the ideal. So much of Socialism at least as is involved in the provision by Government of opportunities for the development of useful qualities, he cordially approves.

Passing from the consideration of the community in itself, the author next examines the relations that arise when a number of communities exist; or, as he puts it, he considers how

the boundaries of external separation and the boundaries of internal subdivision are to be determined. Here the terms "State," "nation," "nationality," and "country" receive satisfactory definition, and secession and disruption are suggestively discussed. By a natural transition, international law is then taken up, and the author is seen at his best in his careful and discriminating analysis of the principles of international duty and of external policy, and in the technical discussion of international law and morality. With certain qualifications, the use of the term "international law" is defended against Austin's criticism, and the case for extending the resort to arbitration is stated, although the author does not venture to anticipate that it will bring in the reign of universal peace. The argument, however, that it may be, theoretically, for the economic advantage of a State to interfere with free trade when an improvement has taken place in another State in a manufacture carried on in both, does not seem to us to be altogether sound. For, even if the manufacture ceased in the State where no improvement had been made, this could only be through an increased export of its other products, which would tend to equalize the advantages of the increased cheapness.

The second part of the treatise is devoted to the inquiry how Government should be constituted for the proper performance of the functions which have been found to be appropriate for it. This inquiry is necessarily an extremely comprehensive one, the number of details to be considered being enormous, and the severe limitations as to space have required a degree of compression that is painful to the reader. We are somewhat apprehensive that those who followed with admiration the discussions in the 'Methods of Ethics' will miss the "sweet reasonableness" that was so markedly characteristic of that book. It cannot be denied that the tone of the author is frequently judicial, not to say dogmatic, many questions being decided by him, after a statement of the arguments, as if his opinion were conclusive. While no one will dispute the preëminent qualifications of Prof. Sidgwick for the position of supreme arbiter upon all ethical questions—qualifications arising not more from his scholarship than from the sympathetic character of his intellect and the scrupulous fairness of his disposition—it is probable that lawyers and statesmen, to whom this portion of the treatise especially appeals, will feel that some of the decisions might have been different had the author enjoyed greater practical experience. Reflections of this kind will probably oftenest arise during the perusal of the chapters upon the legislature and the judiciary.

On the other hand, it is to be remembered that the aim of the author is mainly to construct an ideal system, and that his recommendations are to a great extent predicated upon the existence of a structure of this kind. They should, therefore, be estimated with reference to their relations to the system as a whole, and in this light it is obvious that they may appear reasonable when they would not commend themselves if applied to a special phase of government. We would not be understood as implying that Prof. Sidgwick does not recognize and distinguish the different forms of government, for this is an important and admirable part of his book; but these forms are themselves criticised with reference to the supreme political end. The practical politician will therefore not find here a store of maxims ready for his use, nor will the reformer be able to appeal to the authority of this treatise, in support of any specific change, without mastering it as a whole. In view of its comprehensiveness, we have abstained from controverting any of its positions, although, of course, some of them will be vehemently criticised. But, aside from controverted matters, the book is of the highest merit, as containing a profound, exhaustive, and systematic examination of the whole field of politics. As Prof. Sidgwick says, since Bentham's time no English writer has attempted this comprehensive treatment, although perhaps the spirit of the late Prof. Lieber would fain protest against this claim.

MORE NOVELS.

Huckleberries, Gathered from New England Hills. By Rose Terry Cooke. Boston: Houghton, Mifflin & Co. 1891.

Adventures of a Fair Rebel. By Matt Crim. Charles L. Webster & Co. 1891.

Straight On: A Story for Young and Old. By the Author of 'Colette.' With eighty-six illustrations by Édouard Zier. D. Appleton & Co. 1891.

WHOEVER has tasted the delight of gathering and eating huckleberries on some rocky New England hillside, or in sweet-fern-scented pasture, will appreciate the fitness of the title chosen by Mrs. Rose Terry Cooke for her recent collection of short stories. All lovers of human nature relish the peculiar flavor of the old New England character—product of stern and rugged natural surroundings, ruled over by a capricious climate and somewhat twisted by the force of spiritual winds, prevalently easterly—and Mrs. Cooke has portrayed many differing types of this character with all their delightful inconsistencies. In the present volume, "Grit" and "Odd Miss Todd" illustrate that unexpectedness in human nature which relieves the monotony of existence everywhere, and causes the narrow horizon of village life to broaden out illimitably; while certain other stories in the collection show forth the steadfast courage, the shamefaced tenderness, and the dogged obstinacy (sometimes called "pure cussedness") which, in combination, produce the full-flavored human fruit of New England soil. Mrs. Cooke herself possesses the gift which she ascribes to some of her characters, of seeing beauty in its humblest manifestations, and she also possesses a rarer gift—the power of unsealing the eyes of others to behold this beauty.

One approaches an autobiographical novel of the civil war with a certain degree of wariness. The unoffending reader is generally forced to "sup full with horrors," and is treated to ex-parte statements which fill his mind with painful impressions and leave a residuum of bitterness. A pleasant disappointment, however, is experienced on reading the 'Adventures of a Fair Rebel.' The plot has often done service in stories of the civil war, but it still recommends itself, for its construction follows the lines of nature. A Southern girl, Rachael Douglass, meets her destiny in the shape of a young Federal officer, Captain Lambert, who saves her and her companions from the hands of freebooters while travelling through the mountains of North Carolina to Georgia. Desperate complications arise, not only from the fact that Rachel herself is an ardent rebel, but because the family of Captain Lambert, who received his mental and moral training at the North, among his father's relatives, are living in Georgia, and are heart and soul with the Confederacy. These complications are gradually untangled by the force of circumstances. In fact, towards the last, there is a weakening in the working out of the plot so that almost too much is left to circumstances. But the style is simple and straightforward, with fine touches here and there. The two old negroes, "Uncle Ned" and "Aunt Milly," are very lifelike, having none of the exaggerations which often make such portraiture mere caricature. The showing forth of the best aspects on both sides of the dreadful struggle is skilfully done, avoiding false sentiment, and maintaining an almost judicial tone, which does not, however, lessen the interest of the story as a story.

Those who have enjoyed 'La Neuvaine de Colette' will be eager to read another story by the same author. 'Straight On' lacks the *verve* which makes 'Colette' so irresistible, but the stories are so widely different in character that comparison, except on general lines, would be difficult. In outward aspect, the present volume seems especially designed for the young, but it is in fact, as its title-page suggests, intended for young and old. And a tale of courage and faithfulness under perhaps the most difficult of all conditions—cruel and unmerited suspicion—is good for all; possibly of even more service to the old than the young, for the natural buoyancy of youth floats many a burden which would weigh heavily upon maturer years. 'Straight On' is the motto given with intense earnestness by a dying father to his only son. Close daily companionship with his father for a dozen years had already prepared in the mind of the boy a substantial foundation for the exercise of heroic virtues, and amid most painful circumstances "straight on" he followed the fair ideal—that ideal of which the author says: "No friend is more faithful than an ideal that you strive to attain, no lever more powerful to raise all the soul's strength." It is good, too, to be reminded that, in thus striving after the ideal, qualities quite out of the sphere of the namby-pamby are called for. Philip Bailleul was a good fighter, on occasion, as some of his schoolfellows found to their cost. But while he gained the ready respect always accorded to a valiant use of the fists, he was obliged to wait long for a recognition of less tangible but none the less potent virtues. However, though Justice tarried long, she came with mighty strides at last, and not only rewarded the true, but brought the false to repentance, which is better. The numerous illustrations, by Édouard Zier, are full of spirit and add to the interest of the story.

Studies in the Wagnerian Drama. By H. E. Krehbiel. Harper & Bros. Pp. 198.

DURING the last two seasons of German opera at the Metropolitan Opera-house, Mr. Krehbiel delivered a series of lectures on the Wagner music dramas, with illustrations on the piano played by Mr. Seidl and Mr. Huss. These lectures have now been collected in book form, with numerous illustrations in musical type to take the place of the elucidations at the pianoforte. Although we have no German opera this winter, the publication of these lectures is not for that reason untimely; for many will find pleasant memories of past operatic enjoyments awakened by a perusal of them, and, as for timeliness, everything relating to Wagner, provided it be good, will be timely and welcome for many generations to come. The Wagner avalanche is still growing (there were 963 Wagner performances in Germany and Austria during the last operatic season, as against 893

during the preceding season), and the later and best of the music dramas have only just entered on their irresistible movement, to which only this objection can be made, that it threatens to crush everything else in the operatic world.

It is to facilitate the understanding of these later music dramas that Mr. Krehbiel's 'Studies' were written. With the earlier operas they deal but incidentally, the five chapters being taken up by essays on "Tristan and Isolde," "The Meistersinger," "The Niblung's Ring," and "Parsifal," with an introductory paper on "The Wagnerian Drama: Its Prototypes and Elements." In this it is shown clearly and forcibly that Wagner was not an iconoclast, without any affiliations with preceding composers, but simply a regenerator of the music drama, who gathered together what was most truthful and valuable in the practices of his predecessors, from the days of the Greek tragedians to the present, and, with some important additions of his own, welded them into the most perfect form of musico-dramatic art ever known. In view of the prevalent misconceptions on the subject of Wagner's vocal style, special attention should be directed to pages 11-13, where it is concisely shown how the *old* Italian masters of vocal art followed principles and made statements "which Gluck and Wagner only echoed when they came to urge their reforms."

Mr. Krehbiel takes it for granted that his readers are familiar with the plots of Wagner's dramas; this leaves him time for tracing some of the more subtle threads of the plots and explaining their ethical significance. There are also many digressive comparisons of Wagner's treatment of his legends with their versions at the hands of other poets, mediæval and modern. But the most valuable feature of these 'Studies' consists in the frequent illustrations showing how subtly the poem and the music are interwoven in Wagner's dramas, and how the typical motives undergo psychologic changes as the plot unfolds. The wonderful success of Wagner may be traced to the fact that his scores appeal alike to those who seek only for sensuous beauty in music, and those who also crave active intellectual stimulus in listening to it. A perusal of the present work will, no doubt, have the desired effect of converting devotees of the first class to enthusiasts of the second.

It is not usual to make an index to a collection of lectures or essays, but in the present case an index would have been an advantage, were it only to locate the incidental descriptions of particular scenes, some of which are very felicitous (the opening scene of "Rheingold," the "Waldweben" in "Siegfried," the Siegfried Funeral March, the stormy introduction to the "Walküre," etc.). The definitions are usually all that could be desired, and we do not remember to have ever come across so clear and concise an elucidation of the "alliteration question" as this:

"Wagner held that, as a poetical form of expression, rhyme is useless in music, because it not only implies identity of vowel sounds, but also of the succeeding consonants, which are lost by the singer's need of dwelling on the vowels. The initial consonant, however, cannot be lost in song, because it is that which stamps its physiognomy on the word; and, repetition creating a sort of musical cadence which is agreeable to the ear, Wagner desired alliteration to be substituted for rhyme in the chief parts of his verse."

Henrik Ibsen, 1828–1888. Et Literært Livsbillede af Henrik Jæger. Copenhagen. 1888. Pp. 296. 8vo.—The same, translated into German by Heinrich Zschalig. Dresden and Leipzig. 1890. Pp. 240. 12mo.—The same, translated from the Norwegian into English by William Morton Payne. Chicago: A. C. McClurg & Co. 1890. Pp. 275. 12mo.—The same, translated by Clara Bell, with the verse done into English from the Norwegian Original by Edmund Gosse. London: W. Heinemann. 1890. Pp. 252. 12mo.

Mr. Henrik Bernhard Jæger has taken high rank in Scandinavia as a critic and man of letters, and his biography of Ibsen—published on the latter's sixtieth birthday—has become the recognized authoritative life of the poet, and is likely to remain (together with Halvorsen's Bibliography) the chief source of reliable information concerning the personal and literary history of Norway's great dramatist. The work was written with Ibsen's sanction and partial collaboration, and one of the most interesting chapters in it is his account of his own boyhood. The German translation of Mr. Jæger's book was issued with his permission, and he has added an otherwise unprinted critical notice of "The Lady from the Sea," which work was not published when the original Life appeared. The translation seems to be a faithful but not always happy rendering of the original text.

Between the two English translations, which were published almost simultaneously, there is little choice. Both are sincere attempts at a faithful reproduction of the original, but Mr. Payne is too literal at times, forgetting that the best way to represent a foreign idiom to an English reader is not to give a word-for-word translation of it, but to employ an English equivalent. It was a mistake, also, to omit the bibliographical references contained in the original work, and there seems no good reason for the omission of some other matter, such, for example, as the dedication to the wife of Ibsen; while for the sake of completeness, Mr. Payne might have included, from the German translation, Mr. Jæger's chapter on Ibsen's last work, "The Lady from the Sea." In the English book (which is better edited) this chapter is replaced by one contributed by Mr. Edmund Gosse, containing an original notice of the drama, which was first published in the second edition of his 'Northern Studies.' Mr. Gosse has also undertaken to render into English the numerous quotations from Ibsen's verse. In this delicate task of reproducing Ibsen's poetry, neither the English nor the American translator has been entirely felicitous, but Mr. Payne has been rather more successful, on the whole, than Mr. Gosse, while being at the same time more true to the thought and form of the original. Both translations contain some slight errors which might have been avoided, one of which we will correct here. It is several years since Ibsen's son, Dr. Sigurd Ibsen, was an attaché of the Swedish-Norwegian legation at Washington.

Dawn of Art in the Ancient World: An Archæological Sketch, by William Martin Conway, sometime Roscoe Professor of Art in University College, Liverpool. London: Percival & Co.; New York: Macmillan. 1891.

This is an interesting and most serviceable little book, written in an entertaining manner, and evidently as the result of much thought as well as reading. The substance of it was made up from a brief course of popular lectures, in which it was the author's aim to take his audience from the starting-point of most histories of art, and carry them back as far as might be possible into the vast night of what we speak of vaguely as the prehistoric epoch, touching even upon the palæolithic age. The book is obviously not intended for those who desire special information on such subjects as the Lake Dwellers and the Reindeer Age; but for those interested in the philosophical side of art, who like to trace its evolution, and who wish to form at least some slight conception of the steps by which man arrived at the point where he began to construct permanent monuments, this will prove a welcome and suggestive little manual.

Naturally a subject of this kind is involved in theory. Much, if not most, of what we have gained in it thus far is the result of deductions which, however logically and cautiously made, are often of necessity based upon mere atoms of data, so that we cannot be too sure of what we have got; and there is no quality in Mr. Conway's book which we find so commendable as his moderation, and the conscientiousness with which he repeatedly warns his readers that, although the theories he is explaining are based upon good grounds, they are still but theories. This is a prime requisite in a popular expositor, and its presence gives the layman confidence at once.

With some of his conclusions, however, we do not find it possible to agree. This is notably the case with what Mr. Conway says of the part Egypt played in the development of ancient art. We think he greatly underrates her share. "Egypt," he says, "contributed so little and Chaldæa so much to the art traditions of the world"; and "architecture was *par excellence* the Egyptian art which influenced the Greeks." Neither of these statements seems to us borne out by the facts. Indeed, we are constantly surprised at finding him exactly reversing the relative importance usually assigned to Egypt and Chaldæa. In what did Chaldæa influence the rest of the world—or, we might better say, the later world—except in textile arts? Certainly not in her sculpture, of which we possess less than a dozen specimens, and these, though individual in character, are decidedly primitive. Even the Assyrian works show no derivation from them. Certainly not in her architecture, which was the outgrowth of a country devoid of building-stone. Her luxury was proverbial, and the gorgeousness of her stuffs was praised through the whole course of classical literature, but we do not find the Greeks acknowledging their indebtedness to her in any other form of art. Egypt, on the other hand, gave the impress of her individuality to the arts of the Ægean as far back as we can trace them. For all that we yet know to the contrary, it was she who invented the art of conventionalizing natural forms, and what has this meant in the history of decoration? Take one single example, the lotus, and note how that motive has been taken up, and adapted with every possible variation not only to architecture, but to pottery, jewelry, textiles, and in fact every form to which decoration could be applied, even down to our time. In sculpture, too, we believe that she played a very important part in the early development of Greek art—Greek tradition acknowledged it; Daedalos, the mythical father of Greek sculpture, was said to have been in Egypt, and the early "Apollo" statues, always with the left foot advanced, certainly bear more than a coincidental resemblance to Egyptian works. As to architecture, we will even go so far as to say that this was the art in which the Egyptians influenced the Greeks least of all. The statement that "but for the

architecture of Egypt the Parthenon could not have existed," will find but few supporters since Dörpfeld published his masterly little essay, proving almost mathematically, as it seems to us, that Doric architecture was of a purely indigenous origin and development, and that it was evolved naturally, and with surprisingly little foreign influence at any period, from the primitive Greek house of clay and wood.

However, Mr. Conway's statement of his views is always interesting and well put, and no one concerned with the evolution of art can fail to profit by its perusal.

The Life of Father Hecker. By Rev. Walter Elliot. New York: The Columbus Press. 1891.

THIS biography is written with such immense diffuseness that the author seems as one already in eternity and not in time. It would be worth while for many Protestants to look at it who take too much for granted that the Roman Catholic Church is this or that. It would enable them to see that she has not yet lost the faculty which Macaulay praised so warmly, when reviewing Ranke's 'History of the Popes'—the faculty for adapting herself to new and trying situations. A less rhetorical exhibition of democratic Romanism may be found in Bishop Kane's article, "The Catholic Church and Economics," in the October number of the *Quarterly Journal of Economics*—a programme as lofty and ideal as Mr. Henry Drummond's recent 'Programme of Christianity.' The Americanism of Father Hecker's biographer is exceedingly obstreperous. It seems that Father Hecker's "favorite topic in book or lecture was that the Constitution of the United States requires as its natural basis the truths of Catholic teaching regarding man's natural state, as opposed to the errors of Luther and Calvin." Certainly a system of universal suffrage does not seem to agree with a low idea of human nature. Mr. Elliot frequently returns to this, but there are some ugly facts for him in the historical associations of Calvinism with political freedom. May not the Roman Catholic's doctrine of passive obedience have more practical weight in politics than his doctrine of human nature? Father Hecker did not stop half way when he went over from transcendentalism to Romanism. The right of private judgment was as intolerable to him as to Newman, and the declaration of infallibility much more palatable to him than to the English Father. But some of Mr. Elliot's concessions to the *Zeit-Geist* are interesting and refreshing.

The most entertaining part of the biography is that relating to Brook Farm and Fruitlands, in both of which young Hecker made a trial. Mr. George William Curtis furnishes interesting reminiscences of him as he then appeared. There is a glimpse of him at the dough-trough with Kant's 'Critique of the Pure Reason' stuck up in front of him. In general his letters and journal are too subjective to be pleasant reading, and the passage from them to the reminiscences of his old age is often violent. Evidently the medium of his experience had a distorting influence, and belittled or deformed his old companions. This is particularly true of Emerson, who has never been treated so maliciously before, even if the description of "a transcendentalist" on page 155 is not meant precisely for him. Of Alcott he is more tolerant: "Whatever principles Emerson had, Alcott gave him." . . . "He [Alcott] had an insinuating and persuasive way with him. He must have been an ideal peddler." George Ripley is set down as "a complete failure," who, but for his cowardice, would have joined the Roman Church. It was clearly the right church for one who took so little root in himself as Father Hecker. He found in it an almost boisterous happiness.

BOOKS OF THE WEEK.

Bromley, I. H. "Our Chauncey." New York Printing Co.
Devens, A. L. Charles Devens: Memoir, Orations, and Addresses. Boston: Little, Brown & Co.

Owen; Free Dinners for School Children, J. Llewelyn Davies; City School Supervision, IV, Horace S. Tarbell; Practice Teaching in Normal Schools, IV, William J. Milne.

EDUCATION IN FOREIGN PERIODICALS.—School Savings Banks in England—Sir Philip Magnus on Manual Training in Relation to Health.

REVIEWS—EDITORIAL.

35 cents a copy; $3.00 a year (10 Nos.).

HENRY HOLT & CO., New York

A Brave Black Regiment.
Col. Robert G. Shaw.

Just Published. HISTORY OF THE FIFTY-FOURTH REGIMENT OF MASSACHUSETTS VOLUNTEER INFANTRY, 1863-1865. By LUIS F. EMILIO. With nine maps and eighty-three portraits. Cloth binding, $3.00 NET.

The representative character of the Fifty-fourth, as one of the first colored regiments; its bravery and heavy losses in action and the heroic death of its first commander, Col. Robert G. Shaw, while leading the charge on Fort Wagner, give a special interest to this volume.
